

Women in Science & Engineering: Are We Making Progress?

Dr. Viola Birss

Canada Research Chair
Electrochemistry of Materials
for Fuel Cells and Related
Energy Applications,
University of Calgary

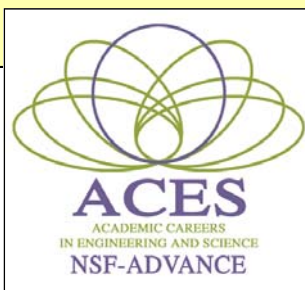

Date: Tuesday, April 12th

Time: Noon-1:30 PM

Location: Nord Hall 310B

Lunch will be served.

The fact that women have the interest and capability to do science is indisputable, as seen by the fact that undergraduate chemistry classes are now typically over 50% female, while women represent an ever-increasing fraction of graduate chemistry program enrollments. However, women still represent a far lower percentage of faculty members in science & engineering departments at North American Universities. This talk will examine some of the recent trends in terms of the representation of women in the science disciplines, and will focus on some of the key factors that continue to dissuade women from taking on these positions.

**Promoting the full participation of women
at all levels of faculty and academic leadership**

Hosted by the Department of Chemistry and ACES.
