This is a laboratory section intended to provide hands-on training and experience with sound processing and analysis of animal vocalizations in the context of cognitive science, philosophy, and biology. Students will ask and answer questions surrounding language, meaning, mind, mental states, animal and human cognition. How does a science of content and language sexually proceed? How do we measure behavior for use as an indicator of cognition? What pragmatic constraints are found when we explore the natural world? What causes us to interpret certain symbols as systematic? The laboratory work begins with an understanding of different software for sound analysis with an emphasis on the bioacoustic experimental method. Frog vocalization exercises will familiarize students with the process of data categorization, analysis and comparison, and will be the foundation for understanding hypothesis testing within a Darwinian theoretical backdrop. Cetacean vocalization analysis will press students to move beyond comparison and analysis to consider and evaluate the standard evidence types used in cognitive science to measure the mind. Recommended preparation: PHIL 101 or COGS 201.

Offered as COGS 383L and PHIL 383L.

PHIL 390. Senior Research Seminars in History and Philosophy of Science (3)

Directed independent research seminar for seniors who are majors in the History and Philosophy of Science program. The goal of the course is to develop and demonstrate command of B.A.-level factual content, methodologies, research strategies, historiography, and theory relevant to the field of history of science and/or philosophy of science. The course includes both written and oral components.

Offered as HSTY 380 and PHIL 390. SAGES Senior Cap

PHIL 394. Seminar in Evolutionary Biology (3)

This seminar investigates 20th-century evolutionist theory, especially the Modern Evolutionary synthesis and subsequent expansions of and challenges to that synthesis. The course encompasses the multidisciplinary nature of the science of evolution, demonstrating how disciplinary background influences practitioners’ conceptualizations of pattern and process. This course emphasizes practical writing and research skills, including formulation of testable theses, grant proposal techniques, and the implementation of original research using the facilities on campus and at the Cleveland Museum of Natural History.

Offered as ANTH 394, BIOL 394, GEOl 394, HSTY 394, PHIL 394, ANTH 494, BIOL 494, GEOl 494, HSTY 494, and PHIL 494.

PHIL 396. Undergraduate Research in Evolutionary Biology (3)

Students propose and conduct guided research on an aspect of evolutionary biology. The research will be sponsored and supervised by a member of the CASE faculty or other qualified professional. A written report must be submitted to the Evolutionary Biology Steering Committee before credit is granted.

Offered as ANTH 396, BIOL 396, GEOl 396.
PHIL 399. Directed Study (3)
Open to students in either of the major programs and to minors.

PHIL 403. Topics in Philosophy of Science (3)
In-depth study of selected topics in general philosophy of science or philosophy of physical, biological, or social science. Topics may include: theories of explanation, prediction, and confirmation; semantics of scientific language; reductionism; space, time and relativity; philosophical issues about quantum mechanics; philosophical issues about life sciences (e.g., evolution, teleology, and functional explanation); explanation and understanding in social sciences; value in social science. Recommended preparation: PHIL 101 or PHIL 201 or PHIL 203.
Offered as PHIL 305 and PHIL 304.

PHIL 404. Science and Engineering Ethics (3)
This course prepares students to recognize ethical problems that commonly arise in the scientific and engineering workplace, to understand ethical concepts, to evaluate ethical arguments, and to critically examine responses to problems and their ethical ramifications. It addresses questions such as: What are the criteria of fairness in crediting contributions to research? How safe is safe enough? What are professional responsibilities, and how do they change over time? What is research misconduct? When is ignorance culpable? What is intellectual property and what protections does it deserve? When is biological testing of workers justified? What are responsible ways of raising concerns, and what supports do good organizations give for raising them? What treatment counts as harassment or as an expression of prejudice? What are good means for controlling it? What are scientists’ and engineers’ responsibilities for environmental protection? What is a “conflict of interest” and how is it controlled? What protections for human research subjects are warranted? What, if any, use of animals in research is justified? Recommended preparation: PHIL 101 or PHIL 102 or PHIL 205.
Offered as PHIL 304 and PHIL 404.

PHIL 405. Ethics (3)
Analysis of ethical theories and concepts of goodness, right, and obligation. Discussion of nature of justice, problem of justification of moral principles, and relation between facts and values. Recommended preparation: PHIL 101, PHIL 102 or PHIL 205.
Offered as PHIL 305 and PHIL 405.

PHIL 406. Mathematical Logic and Model Theory (3)
Propositional calculus and quantification theory; consistency and completeness theorems; godel incompleteness results and their philosophical significance; introduction to basic concepts of model theory; problems of formulation of arguments in philosophy and the sciences. Offered as PHIL 306, MATH 406 and PHIL 406.

PHIL 409. Philosophical Issues in Genetics (3)
A philosophical examination of the history and cultural connections of the science of genetics and its precursors. Genetics is a phenomenon of the twentieth century. Thus, it is new. Yet, its implications and dilemmas are enmeshed in old traditions and stereotypes, and the dynamics of cultural change. To explore the breadth of philosophical repercussions of genetics, this course will draw on science, technology, medicine, and their histories, but will also range wider to include aspects of the social history of racism and class relations, changing attitudes toward sexuality, the intricacies of big business and international cooperation, and other such diverse areas. Recommended preparation: PHIL 101 or PHIL 203 or PHIL 204.
Offered as PHIL 309 and PHIL 409.

PHIL 413. Philosophy of Mathematics (3)
Logical paradoxes and their effects on foundations of mathematics. Status of mathematical entities and nature of mathematical truths. Formalist, logicist, and intuitionist positions. Recommended preparation: PHIL 101 or PHIL 201.
Offered as PHIL 313 and PHIL 413.

PHIL 414. Animal Cognition and Consciousness (4)
This course examines the notions of intelligence, cognition, reasoning, consciousness, and mental content as they appear in the philosophical views and empirical studies of animals in individual and social contexts. We will review scientific findings that suggest striking likenesses and intriguing differences in the (apparent) thought processes of humans and animals, and ask whether the research techniques that brought these results are fully adequate to measuring such unobservable entities as conscious experience and thought. Techniques of measurement range from naturalistic observation, to the processing of vocalizations, to memory and problem solving tasks, and the imaging of brain processes through fMRI scans, etc. Students will participate in veterinary or shelter work to provide needed animal care while studying animal behavior using cognitive ethological methods. We will compare methods for measuring consciousness and intelligence in animals to those used for human beings, and ask questions about the possibility of machine consciousness and the emergent property of group consciousness. Offered as BIOL 314, COGS 314, PHIL 314 and PHIL 414.

PHIL 415. Selected Topics in Philosophy (3)
Examination of views of a major philosopher or philosophical school, a significant philosophical topic, or a topic that relates to philosophy and other discipline. Recommended preparation: PHIL 101.

PHIL 416. African Political Thought (3)
Introduction to select themes in the work of contemporary African philosophers, with special emphasis on political thought. In this course, students will learn something about factors affecting the creation and flow of knowledge and ideas about Africa and discuss the relative importance of the “nation-state” as an idea in Europe, pre-colonial Africa, and postcolonial Africa.
Offered as PHIL 316/416 and ETHS 316/416.

PHIL 420. The Phenomenological Tradition (3)
The background of phenomenology: Descartes, Kant, and Brentano. The epistemological rationale of Husserl’s phenomenology and its ontological implications; the powers and limits of the phenomenological method. Heidegger’s transformation of phenomenology to interpretive ontology of human existence. The development of interpretation theory as the foundation of all human existence. The development of interpretation theory as the foundation of all human sciences in Gadamer and Ricoeur. Recommended preparation: PHIL 101. Offered as PHIL 320 and PHIL 420.

PHIL 425. Philosophy of Feminism (3)
Dimensions of gender difference. Definition of feminism. Critical examination of feminist critiques of culture, including especially politics, ideology, epistemology, ethics, and psychology. Readings from traditional and contemporary sources. Offered as PHIL 325 and PHIL 425 and WGST 325.

PHIL 430. Topics in Ethics (3)
Examination of views in ethics of a major philosopher or philosophical school, a significant philosophical topic in ethics, or a topic that relates ethics to philosophy and another discipline. Recommended preparation: PHIL 101, PHIL 102, or PHIL 205.
Offered as PHIL 330 and PHIL 430.

PHIL 433. Philosophy of Religion (3)
Topics include: classical and contemporary arguments for God’s existence; divine foreknowledge and human freedom; the problem of evil and theodicy; nature and significance of religious experience; mysticism; varieties of religious metaphysics; knowledge, belief and faith; nature of religious discourse. Readings from traditional and contemporary sources. Recommended preparation for PHIL 433 and RLGN 433: PHIL 101 or RLGN 102.
Offered as PHIL 333, RLGN 333, PHIL 433, and RLGN 433.

PHIL 434. Political and Social Philosophy (3)
Justification of social institutions, primarily political ones. Such distinctions as that between de facto and legitimate authority; analysis of criteria for evaluation, such as social justice and equality; inquiry into theories of justification of the state; theory of democratic government and its alterna-
PHIL 435. Philosophy of Law (3)  
This is an examination of the general nature of law, the broad concerns of jurisprudence, the study of comparative law, and many of the issues raised in the literature of legal philosophy. Students will examine the principles of legal positivism, mitigated natural law, and rights theory. Selected readings and cases will illustrate these theories, which will also be examined in the context of rule selection by new governments in developing or revolutionary societies. The course also looks at the general nature of legal systems: how politics, morality, and individual views of justice and rights affect particular court cases and the course and development of law generally. Topics will include abortion, obscenity and sin, civil disobedience, affirmative action, surrogatehood, and the death penalty. This is unlike any other of the legal theory or jurisprudence courses, and those who have sampled legal theory elsewhere in a different form are welcome and encouraged to enroll. Recommended preparation: PHIL 101. 
Offered as PHIL 365 and PHIL 435.

PHIL 445. Epistemology and Metaphysics (3)  
Traditional problems of epistemology, such as definition of knowledge, justification of belief, nature of evidence and foundationalism, skepticism, the a priori, and the role of sense perception in knowledge. Metaphysical presuppositions and implications of epistemological views. Forms of realism and anti-realism. Recommended preparation: PHIL 101. 
Offered as PHIL 345 and PHIL 445.

PHIL 455. 19th and Early 20th Century Philosophy (3)  
History of philosophy after Kant up to and including logical empiricism. Interpretation and comparison of important philosophers and philosophical schools of the period in terms of common methods, problems, themes, doctrines, and ideologies. Emphasis on Schopenhauer, Hegel, Kierkegaard, Marx, and Nietzsche. Recommended preparation: PHIL 101. 
Offered as PHIL 355 and PHIL 455.

PHIL 456. Comparative Philosophy (3)  
Comparison of significant philosophers or philosophical schools of non-Western traditions with Western counterparts on metaphysical, epistemological, ethical, aesthetic, and sociopolitical theoretic issues. The non-Western traditions to be considered include the Indian and the Far Eastern, but not exclusively. Discussion, in context, of the problems of comparative hermeneutics. Readings will include original sources in English translation. Recommended preparation: PHIL 101.

PHIL 465. Philosophy of Mind (3)  
Traditional problems such as the relation of mind and body, knowledge of other minds, free will and determination, and nature of psychological explanation. Analysis of chief theories of mind. Analysis of mental concepts such as intention, action, decision, emotion, and will. Recommended preparation: PHIL 101. 
Offered as PHIL 365 and PHIL 465.

PHIL 467. Topics in Evolutionary Biology (3)  
The focus for this course on a special topic of interest in evolutionary biology will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution. ANAT/ANTH/GEOL/PHIL 467/BIOL 468 will require a longer, more sophisticated term paper, and additional class presentation. 
Offered as ANTH 367, BIOL 368, GEOL 367, PHIL 367, ANAT 467, ANTH 467, BIOL 468, GEOL 467, and PHIL 467.

PHIL 470. Philosophy and Literature (3)  
Affinities and tensions between philosophy and literature and issues that arise in their interface. Topics include: philosophical use of literary devices; literary use of philosophical ideas; literary philosophy and philosophical literature; and hermeneutics of literature and philosophy. Readings in philosophy and literature from both traditional and contemporary sources. Team-taught by faculty of the philosophy and literature departments. Recommended preparation: PHIL 101. 

PHIL 494. Seminar in Evolutionary Biology (3)  
This seminar investigates 20th-century evolutionary theory, especially the Modern Evolutionary synthesis and subsequent expansions of and challenges to that synthesis. The course encompasses the multidisciplinary nature of the science of evolution, demonstrating how disciplinary background influences practitioners’ conceptualizations of pattern and process. This course emphasizes practical writing and research skills, including formulation of testable theses, grant proposal techniques, and the implementation of original research using the facilities on campus and at the Cleveland Museum of Natural History. 
Offered as ANTH 394, BIOL 394, GEOL 394, HSTY 394, PHIL 394, ANTH 494, BIOL 494, HSTY 494, and PHIL 494.

PHIL 600. Tutorial (1–18)  
Tutorial.

PHIL 651. Thesis M.A. (1–6)  
For Ph.D. candidates in fields related to philosophy.

DEPARTMENT OF PHYSICS  
Rockefeller Building  
http://phys.case.edu  

The Department of Physics offers programs leading to the following undergraduate degrees: Bachelor of Arts, Bachelor of Science in physics, Bachelor of Science in mathematics and physics, and Bachelor of Science in Engineering with an engineering physics major. Associated with the Bachelor of Science in physics degree are optional concentrations in mathematical physics and in biophysics. The department also offers the graduate degrees Master of Science and Doctor of Philosophy, as well as a unique master’s degree in entrepreneurship.

All of these programs involve the study of the basic laws of nature and the properties of energy and matter in their various forms. The curriculum reflects the varied interests of the faculty and will prepare students for a wide range of future activities. At the undergraduate level, open electives and engineering physics concentration area courses tailor the programs to the student’s interests and career plans. Employment opportunities at the bachelor’s level include research, development, and technical assistance (engineering, computer programming, management) in industrial, government, and university settings.

A similar flexibility exists in the first few years of graduate study. The research leading to the Ph.D. degree normally centers on a specific area of physics. However, even at this stage, the broad background and training characteristic of a physics degree are emphasized.

DEPARTMENT FACULTY  
Daniel S. Akerib, Ph.D.  
(Princeton University)  
Professor and Chair  
Experimental astrophysics

Robert W. Brown, Ph.D.  
(Massachusetts Institute of Technology)  
Institute Professor  
Particle physics theory; cosmology; medical imaging; industrial physics

Gary S. Chottiner, Ph.D.  
(University of Maryland)  
Professor and Director of Undergraduate Studies  
Experimental physics of surfaces and thin films

Corbin E. Covault, Ph.D.  
(Harvard University)
Associate Professor
Experimental high-energy astrophysics
Diana I. Driscoll, Ph.D.
(Case Western Reserve University)
Instructor
Introductory physics
David E. Farrell, Ph.D.
(University of London)
Professor
Experimental condensed matter physics; superconductors; medical physics
Xuan Gao, Ph.D.
(Columbia University)
Assistant Professor
Experimental condensed matter physics; nanomaterials; correlated electrons in low dimensions
Kathleen Kash, Ph.D.
(Massachusetts Institute of Technology)
Professor and Associate Chair
Experimental condensed matter and mesoscopic physics; synthesis of novel semiconductors
Kenneth L. Kowalski, Ph.D.
(Brown University)
Professor
Theoretical and experimental particle physics
Walter R. Lambrecht, Ph.D.
(University of Ghent)
Professor
Theoretical condensed matter physics; electronic structure-based physics of materials
Harsh Mathur, Ph.D.
(Yale University)
Associate Professor
Condensed matter theory, particle-astrophysics theory
Rolfe G. Petschek, Ph.D.
(Harvard University)
Professor
Theoretical condensed matter; optical materials
Charles Rosenblatt, Ph.D.
(Harvard University)
Professor and Director of Graduate Studies
Experimental condensed matter; liquid crystals and complex fluids
John E. Ruhl, Ph.D.
(Princeton University)
Professor
Experimental astrophysics and cosmology
Jie Shan, Ph.D.
(Columbia University)
Associate Professor
Experimental condensed matter physics; ultrastable optics; terahertz spectroscopy
Thomas A. Shutt, Ph.D.
(University of California, Berkeley)
Agnar Pytte Professor; Associate Professor
Experimental astrophysics
Kenneth D. Singer, Ph.D.
(University of Pennsylvania)
Ambrose Swasey Professor of Physics; Director, Engineering Physics
Experimental condensed matter physics; nonlinear optics
Glenn D. Starkman, Ph.D.
(Stanford University)
Professor; Director, Center for Education and Research in Cosmology and Astrophysics (CERCA)
Theoretical cosmology, particle physics, astrophysics
Cyrus C. Taylor, Ph.D.
(Massachusetts Institute of Technology)
Albert A. Michelson Professor in Physics; Dean, College of Arts and Sciences
Theoretical and experimental particle physics; physics entrepreneurship
Philip L. Taylor, Ph.D.
(University of Cambridge)
Perkins Professor of Physics
Theory of solids, polymers and other materials
Norman Tien, Ph.D.
(University of California, Berkeley)
Professor and Ohio Eminent Scholar in Condensed Matter Physics; Dean, Case School of Engineering
MEMS for micro-optical applications in communications and biomedical systems
Tanmay Vachaspati, Ph.D.
(Tufts University)
Professor
Theoretical astrophysics, cosmology, particle physics
Secondary Faculty
J. Iwan Alexander, Ph.D.
(Washington State University)
Professor of Mechanical and Aerospace Engineering, Case School of Engineering
Fluid dynamics, energy research
Michael Dragowsky, Ph.D.
(Oregon State University)
Research Associate Professor
Nuclear and particle astrophysics experiment
Mark A. Griswold, Ph.D.
(University of Wuerzburg)
Associate Professor of Radiology, School of Medicine
Medical imaging, MRI
Eckhard Jankowsky, Ph.D.
(Dresden Institute of Technology)
Associate Professor of Biochemistry, School of Medicine
Proteins and enzymes; structural biology; regulation of gene expression
R. Earle Luck, Ph.D.
(University of Texas at Austin)
Worcester R. and Cornelia B. Warner Professor of Astronomy
Stellar and galactic chemical evolution; stellar spectrophotometry
J. Christopher Mihos, Ph.D.
(Australian National University)
Professor of Astronomy
Galactic structure; stellar populations; dark matter
Idit Zehavi, Ph.D.
(Hebrew University of Jerusalem)
Assistant Professor of Astronomy
Astrophysics
Lecturer
Edward M. Caner, M.S.
(Case Western Reserve University)
Director, Science and Technology Entrepreneurship Program
Science entrepreneurship
Adjunct Faculty
James H. Andrews, Ph.D.
(Case Western Reserve University)
Professor of Physics, Youngstown State University
Optical materials
Pierre Carles, Ph.D., Habilitation
(National Polytechnic Institute, Toulouse)
Associate Professor, Université Pierre et Marie Curie, Paris
Fluid mechanics; critical behavior; stability
Craig J. Copi, Ph.D.
(University of Chicago)
Adjunct Instructor; Senior Research Associate
Theoretical cosmology; particle physics; astro-
Undergraduate Programs

Theoretical condensed matter physics; polymers and biological physics
Volodymyr Duzhko, Ph.D.
(Technical University of Munich)
Visiting Assistant Professor

Experimental condensed matter physics; molecular optoelectronics and photovoltaics

UNDERGRADUATE PROGRAMS

Majors

Course requirements and typical schedules for the majors are summarized in the tables below.

BACHELOR OF ARTS IN PHYSICS

The B.A. physics major includes a large number of elective courses, making it easy for the student to pursue other interests or complete a second major while earning a degree in physics.

Teacher Licensure Option

A program in teacher certification (grades 7-12), based on the B.A. degree, is available for students interested in teaching physics at the secondary level. In addition to content (subject area) requirements, a 36 semester-hour sequence in professional education is required, comprising courses taken at Case Western Reserve University and at John Carroll University, and culminating in student teaching. (For details on education course work, see the program description for Teacher Licensure elsewhere in this bulletin.)

BACHELOR OF SCIENCE IN PHYSICS

The B.S. degree has two alternatives to the standard program: a mathematical physics concentration and a biophysics concentration.

B.S.E. DEGREE IN ENGINEERING PHYSICS

The B.S.E. degree in engineering physics supplies an excellent background for graduate studies in physics, but is also designed for students who value an engineering credential and who are considering a career in engineering, either through employment following the B.S.E. or through engineering graduate studies. This degree is awarded by the Case School of Engineering and includes the Engineering Core Curriculum. The technical electives in this program are concentrated in any of fifteen specific engineering areas.

B.S. IN MATHEMATICS AND PHYSICS

The B.S. in mathematics and physics is a single degree for students interested in both advanced mathematics and theoretical physics and in their relationships. This degree is distinct from the mathematical physics concentration in the B.S. in physics degree. The program is jointly administered by the Departments of Physics and Mathematics, and students may be advised by faculty members from either department.

All B.S., B.A. and B.S.E. candidates complete a year-long senior project in which they work one-on-one with a faculty researcher, write a senior thesis, and present their work in public.

Minor

Course requirements for the minor in physics are as follows:

1. PHYS 121 (or 115 or 123), PHYS 122 (or 116 or 124), and PHYS 221
2. Two or three* of the following courses: PHYS 196, 204 or 208, 309, 310, 313, 315, 316, 326, 331, 332, 324, 328 or 336

*The Case School of Engineering has a policy stating that “no more than two courses taken for the minor may be used simultaneously to satisfy the requirements of the student’s major field, including departmental requirements, technical electives and the Engineering Core.” Thus, engineering students may have to choose between using physics courses as technical electives or counting them as part of a minor in physics.

Graduate Programs

The Department of Physics offers programs of study and research leading to both the Master of Science and the Doctor of Philosophy degrees. Graduate assistantships are available for the full-time support of qualified students. All M.S. programs in physics, with or without a thesis, normally can be completed in less than two years. The requirements for the Ph.D. degree in physics include a flexible program of courses that typically is completed within three years, and a concurrent program of directed research with less course work and more research in each succeeding year.

Master of Science in Entrepreneurship

In addition to a traditional physics program, the department has created a Physics Entrepreneurship master’s degree program, which is part of the university’s larger Science and
Technology Entrepreneurship Program. This two-year program is designed to empower physicists as entrepreneurs. It enables students and graduates to build on their physics skills to start new high-tech businesses or to launch new product lines in existing companies. The program provides top-level academic instruction and real-world entrepreneurial experience while connecting students with the business executives and leaders, experts, and venture capitalists who are crucial to success in startup and growing ventures.

Doctor of Philosophy

For the Ph.D. degree, the student is required to pass a general qualifying examination in physics, which is normally taken after the first year of study, and a topical oral examination within one year of joining a research group. The student must then prepare a dissertation based on the results of independent research. There is no foreign language requirement. Research pursuant to any of the graduate degree programs in physics may be carried out in five areas:

Condemned Matter Physics. An extensive experimental and theoretical program in the electronic properties of solids; quantum liquids; mesoscopic physics; localization and quantum Hall effect; the physics of polymers, liquid crystals and complex fluids; thin films; fluids dynamics; materials synthesis; the physics of surfaces and interfaces; electronic structure of materials and their defects; vibrational properties of solids (phonons); magnetism and magnetic materials; nano- and organic electronics.

Particle Astrophysics and Cosmology. The experimental efforts in this area include the study of the nature of dark matter in the universe, observations of high-energy gamma rays and cosmic rays, and measurements of the cosmic microwave background. Theoretical studies include neutrino astrophysics, stellar evolution, the cosmic microwave background, extra dimensions, gravitational lensing, dark matter, large-scale structure, extra dimensions, topological defects, phase transitions, and early-universe cosmology. Other related work includes activities in general relativity.

The Center for Education and Research in Cosmology and Astrophysics (CERCA) comprises groups from the Departments of Physics and Astronomy and the Cleveland Museum of Natural History. The center organizes international conferences, hosts visitors and lectures, and supports students and faculty in their research. As it grows, it will provide postdoctoral research positions and will also prepare public programs on cosmology and astrophysics.

Elementary Particle Physics. Theoretical studies in the strong, weak, and electromagnetic interactions of the elementary particles, and in all areas of particle theory, gravitation, and cosmology.

Optics and Optical Materials. Both experimental and theoretical programs in nonlinear optics, integrated optics, ultrashot optics, and the optical properties of fluids, liquid crystals, polymers, and crystals, including semiconductors, semiconductor mesoscopic systems, photonic crystals, and nanoscopic systems.

Imaging Physics, Biophysics, and Inverse Problems. An experimental and theoretical program in aspects of non-invasive imaging, including magnetic resonance imaging and ultrasound; medical diagnostic techniques to measure iron in the liver; industrial and medical applications in electromagnetic field modeling.

REQUIREMENTS TABLES FOR PHYSICS PROGRAMS

Bachelor of Arts in Physics

The Bachelor of Arts degree with a physics major requires completion of the Arts and Sciences General Education Requirements (GER) and 120 total credits, of which 60 are specified by the Physics department as shown below. Courses specified for this major satisfy the 6-credit Arts and Sciences GER Sciences and Mathematics.

*Course usually taken in this year; F or S indicates it is offered only in the fall or spring.

2PHYS 303 + PHYS 352 satisfy the SAGES departmental seminar requirement. PHYS 351 is an approved SAGES capstone course.

3Or other approved computational course.

4The breadth requirements include 6 hours of Social Sciences and 6 hours of Arts and Humanities. This may increase by 3 credits if the required Global and Cultural Diversity course is not also one of the breadth requirement courses. Courses required for the B.S. in physics satisfy the 6-credit GER for Natural Sciences and Mathematics as well as the Quantitative Reasoning course requirement.

5The number of open electives may vary, depending on how many credits a student needs to reach the required total of 127.

Typical Schedule

Fall (Class Hours-Lab Hours-Credit Hours)
Spring (Class Hours-Lab Hours-Credit Hours)

* = wildcard, variable choice of letter or number

Bachelor of Science in Physics with Mathematical Physics Concentration

Students who are interested in theoretical physics and who have a strong background in mathematics may consider this concentration. The program is based on the B.S. in physics, but with certain substitutions in the course requirements. Several of the laboratory courses are replaced by advanced mathematics courses, and some of the undergraduate physics courses are replaced by graduate courses.
COLLEGE OF ARTS & SCIENCES

This program is not the same as the separate degree program, the B.S. in mathematics and physics, which is a coherent and parallel education in both mathematics and physics.

The following table shows the requirements for the Bachelor of Science in physics with mathematical physics concentration. Those courses in the standard B.S. program that are replaced are shown in brackets and are followed by their replacements.

6Course not also one of the breadth requirement courses. Courses required for the B.S. in physics satisfy the 6-credit GER for Natural Sciences and Mathematics as well as the Quantitative Reasoning course requirement.

6The number of open electives may vary, depending on the number of credits a student needs to reach the required total of 127.
Bachelor of Science in Physics with Biophysics Concentration

This concentration is directed towards students interested in the combined study of biology and physics. The degree is a track within the standard B.S. in physics, in which four physics courses and certain open electives are replaced by a "biogroup" of five courses and a technical elective. All substitutions must be approved by a physics faculty committee.

The following table illustrates the requirements for the Bachelor of Science in physics with biophysics concentration. Those courses in the standard B.S. program that are replaced are shown in brackets; their replacements are found either in the same entry or in the biogroup category.

1 Course usually taken in this year; F or S indicates it is offered only in the fall or spring.
2 Suggested technical electives include PHYS 315, 316, 326, 327, 328, 336, 365.
3 PHYS 303 + PHYS 352 satisfy the SAGES departmental seminar requirement. PHYS 351 is an approved SAGES capstone course.
4 Or other approved computational course.
5 B-group 1-5 are to be chosen from among approved biology, biophysics, biochemistry, and biomedical engineering courses, including certain prerequisites as needed (e.g., chemistry). BIOL 214 and BIOL 215 are suggested for B-group 1 and 2. The listing of credits includes numbers for the most likely choices of courses and, in parentheses, possible alternatives.
6 The breadth requirements include 6 hours of Social Sciences and 6 hours of Arts and Humanities. This may increase by 3 credits if the required Global and Cultural Diversity course is not also one of the breadth requirement courses. Courses required for the B.S. in physics satisfy the 6-credit GER for Natural Sciences and Mathematics as well as the Quantitative Reasoning course requirement.

The number of open electives may vary, depending on the number of credits a student needs to reach the required total of 127.

**Bachelor of Science in Engineering with Engineering Physics Major**

The engineering physics major allows students with strong interests in both physics and engineering to concentrate their studies in the common areas of these disciplines. The major...
prepares students to pursue careers in industry, either directly after undergraduate study or continuing graduate study in engineering or physics. Many employers value the unique problem-solving approach of physics, especially in industrial research and development.

Students majoring in engineering physics complete the Engineering Core as well as a rigorous course of study in physics. Students select a concentration area from an engineering discipline, and must complete a sequence of at least four courses in this discipline. In addition, a senior research project under the guidance of a faculty member is required. The project includes a written report and participation in the senior seminar and symposium.

### Typical Schedule

**Hours required for graduation:** 129

<sup>a</sup>Selected students may be invited to take MATH 123, 124, 227, and 228 in place of MATH 121, 122, 223, and 224.

<sup>b</sup>Selected students may be invited to take PHYS 123, 124 (Physics and Frontiers I, II Honors) in place of PHYS 121, 122.

<sup>c</sup>Engineering physics concentration courses are flexible, but they must be in a specific engineering discipline or study area and approved by an advisor. Possible concentration areas include aerospace engineering, biomedical engineering “hardware,” biomedical engineering “software,” chemical engineering, civil engineering (solid mechanics, structural and geotechnical, environmental), computer science, computer systems hardware, computer systems software, control systems and automation, electrical engineering, macro-molecular science, materials science and engineering, mechanical engineering, mechanical engineering, signal processing, systems analysis and decision making.

<sup>d</sup>PHYS 332, PHYS 327/427, EEAP 321, EEAP 420, EMSE 314, or EMSE. Students may choose to fulfill this requirement in their third year.

*Course usually taken in this year; F or S indicates it is offered only in the fall or spring.

*Other science sequence courses may be substituted if approved by the mathematics and physics (MP) committee.

*Of other approved computational course

The “MP group” of four courses corresponds to two physics courses and two mathematics courses. The physics courses are chosen from PHYS 250, 349, and 350. The mathematics courses are subject to approval by the MP committee and are hence referred to as “approved electives.” They may be chosen from the general list of mathematics courses at the 300 level or higher. It may also be possible to choose a course outside the Mathematics and Physics departments as a substitute in the MP group, subject to approval by the committee.

*An advanced physics course to be selected from the following list: PHYS 315, 316, 326, 327, 328, 336, 365.

*PHYS 303 + PHYS 352 satisfy the SAGES departmental seminar requirement. PHYS 351 is an approved SAGES capstone course.

*Students may take either the math or physics SAGES departmental seminar. The physics version consists of 1 credit of PHYS 303 plus two credits of PHYS 352.

*The breadth requirements include 6 hours of Social Sciences and 6 hours of Arts and Humanities. This may increase by 3 credits if the required Global and Cultural Diversity course is not also one of the breadth requirement courses. Courses required for the B.S. in Mathematics and Physics satisfy the 6-credit GER for Natural Sciences and Mathematics as well as the Quantitative Reasoning course requirement.

*The number of open electives may vary, depending on how many credits the student needs to reach the required total of 126.
can benefit from simple physical analyses. This discourse, ranging from the believability of ESP to Pseudo-Science (3)

PHYS 101. Distinguishing Science from Pseudo-Science (3)

There are many current issues arising in popular discourse, ranging from the believability of ESP to reincarnation, to “free energy” machines, which can benefit from simple physical analyses. This course will provide an introduction to the use of basic principles of physics to explore the viability of these ideas. A seminar format will be utilized with specific topics presented by students and by the instructor. Recommended preparation: PHYS 100, PHYS 115, PHYS 121, or PHYS 123.

PHYS 115. Introductory Physics I (4)

First part of a two-semester sequence directed primarily towards students working towards a B.A. in science, with an emphasis on the life sciences. Kinematics. Newton’s laws; gravitation; simple harmonic motion; mechanical waves; fluids; ideal gas law; heat and the first and second laws of thermodynamics. This course has a laboratory component.

PHYS 116. Introductory Physics II (4)

Electrostatics, Coulomb’s law, Gauss’s law; capacitance and resistance; DC circuits; magnetic fields; electromagnetic induction; RC and RL circuits; light; geometrical optics; interference and diffraction; special relativity; introduction to quantum mechanics; elements of atomic, nuclear and particle physics. This course has a laboratory component.

PHYS 121. General Physics I - Mechanics (4)

Particle dynamics, Newton’s laws of motion, energy and momentum conservation, rotational motion, and angular momentum conservation. This course has a laboratory component. Recommended preparation: MATH 121 or MATH 123 or MATH 125 or one year of high school calculus.

PHYS 122. General Physics II - Electricity and Magnetism (4)

Electricity and magnetism, emphasizing the basic electromagnetic laws of Gauss, Ampere, and Faraday. Maxwell’s equations and electromagnetic waves, interference, and diffraction. This course has a laboratory component. Recommended preparation: PHYS 121 or PHYS 123, or PHYS Elective MATH 122 or MATH 124 or MATH 126.

PHYS 123. Physics and Frontiers I - Mechanics (4)

The Newtonian dynamics of a particle and of rigid bodies. Energy, momentum, and angular momentum conservation with applications. A selection of special frontier topics as time permits, including fractals and chaos, special relativity, fluid mechanics, cosmology, quantum mechanics. This course has a laboratory component. Admission to this course is by invitation only.

PHYS 124. Physics and Frontiers II - Electricity and Magnetism (4)

Time-independent and time-dependent electric and magnetic fields. The laws of Coulomb, Gauss, Ampere, and Faraday. Microscopic approach to dielectric and magnetic materials. Introduction to the usage of vector calculus; Maxwell’s equations in integral and differential form. The role of special relativity in electromagnetism, Electromagnetic radiation. This course has a laboratory component. Prereq: PHYS 123, or PHYS Elective MATH 122 or MATH 124.

PHYS 137. The Scientific Frontier: Origins, from the Big Bang to Life on Earth (3)

This course will provide undergraduates, both science and non-science majors, with a general perspective of the modern state of our physical understanding of the universe, including outstanding puzzles at the forefront of modern science, focusing on the questions of origins: the origin of the universe, of our galaxy, of matter, of life, etc.

PHYS 166. Physics Today and Tomorrow (1)

This course will provide students with an opportunity to learn about the most exciting and timely research areas in physics, as well as other topics germane to being a professional physicist. These discussions will cover fields such as nanoscience, ultrafast optics, exotic materials, biophysics, cosmology, string theory and the role of physicists in developing new technologies. Each week a member of the faculty will meet with students to discuss a topic of current interest, how a physicist approaches the problem, and how physicists interact with others to find a solution. Other topics germane to being a professional physicist also will be discussed, including the relationship among academic, industrial, and governmental laboratories; ethics, and non-traditional careers for students trained in physics.

PHYS 203. Analog and Digital Electronics (4)

Elements of both analog and digital electronics from the practical viewpoint of the experimental scientist; AC circuits, linear and non-linear operation of op-amps, logic gates, flip-flops, counters, display, memory, transducers, A/D and D/A conversion. Laboratory work involves quantitative investigation of the operation of all these elements, together with projects that explore their combination. Recommended preparation: PHYS 122 or PHYS 124.

PHYS 203A. Analog and Digital Electronics for B.A. (2)

This course is the first half of the laboratory requirement for the B.A. degree in Physics and is the first half of PHYS 203. Elements of both analog and digital electronics from the practical viewpoint of the experimental scientist; AC circuits, linear and non-linear operation of op-amps, digital circuits including logic gates. This course includes weekly lecture and laboratory work in electronics; it may also include an additional weekly lecture, associated with PHYS 301, on topics such as error
PHYS 204. Advanced Instrumentation Laboratory (4)
Principles of experimental design; limits of resolution via band-width, thermal noise, background signals; data acquisition and control by computer; computer simulation; signal processing techniques in frequency and time domains; FFT, correlations, and other transform methods; counting techniques. Applications include lock-in amplifiers, digitizing oscilloscopes and data acquisition systems. Recommended preparation: PHYS 203 and PHYS 221.

PHYS 208. Instrumentation and Signal Analysis Laboratory (4)
AC circuit theory, Fourier series, discrete Fourier analysis; analysis in time and frequency domains, correlation, cross-correlation and other transform techniques; computer control of experiments via IEEE488 interface; advanced instrumentation; DMM, arbitrary waveform generator, multiplexing and digitizing oscilloscopes; experimental design; noise; design, construction, and testing of a lock-in amplifier. Recommended preparation: PHYS 221.

PHYS 221. Introduction to Modern Physics (3)
Concepts in special relativity, statistical mechanics and quantum mechanics. Applications to atomic structure, and selected topics in nuclear, condensed matter physics, particle physics, and cosmology. Prereq: PHYS 116 or PHYS 122 or PHYS 124.

PHYS 250. Computational Methods in Physics (3)

PHYS 301. Advanced Laboratory Physics I (3)
Problem solving approach with a range of available experiments in classical and modern physics. Emphasis on experimental techniques, data and error analysis, and the formal presentation of the work performed. Recommended preparation: PHYS 203 or PHYS 203A and concurrent enrollment in PHYS 303.

PHYS 302. Advanced Laboratory Physics II (4)
Several projects using research-quality equipment in contemporary fields of experimental physics. Each requires reading appropriate literature, choosing appropriate instrumentation, performing data acquisition and analysis, and writing a technical paper. Topics include particle counting techniques, neutron activation, gamma-ray spectroscopy, a range of condensed matter experiments including temperature dependent properties between 10 and 350 K, modern optics, ultrahigh vacuum surface science. Recommended preparation: PHYS 301.

PHYS 303. Advanced Laboratory Physics Seminar (1)
Students will discuss various issues associated with physics research. These include how to judge the quality of an experiment and data (error analysis), how to present your work in written and oral formats, safety and ethical concerns in the laboratory. Recommended preparation: PHYS 250. SAGES Dept Seminar

PHYS 310. Classical Mechanics (3)
Lagrangian formulation of mechanics and its application to central force motion, scattering theory, rigid body motion, and systems of many degrees of freedom. Recommended preparation: PHYS 221 and either MATH 223 or MATH 227.

PHYS 313. Thermodynamics and Statistical Mechanics (3)

PHYS 315. Introduction to Solid State Physics (3)
Characterization and properties of solids; crystal structure, thermal properties of lattices, quantum statistics, electronic structure of metals and semiconductors. PHYS 415 for graduate students in engineering and science. (May not be taken for departmental credit by graduate students in the Department of Physics.) Prerequisite may be waived with consent of department. Recommended preparation for PHYS 415; PHYS 331. Offered as PHYS 315 and PHYS 415. Prereq: PHYS 331 or PHYS 481.

PHYS 316. Introduction to Nuclear and Particle Physics (3)
The physics of nuclei and elementary particles; experimental methods used to determine their properties; models and theories developed to describe their structure.

PHYS 317. Engineering Physics Laboratory I (3)
Laboratory course for engineering physics majors. Emphasis is on experimental techniques, data and error analysis, and written and oral presentation of work. Four experiments drawn from classical and modern physics are carried out. These emphasize condensed matter, material and optical physics. Experiments include electric fields, resistivity of materials, optical interference, chaotic systems, and spectroscopy. Design of data analysis systems and software is required. Prereq: PHYS 208. Coreq: PHYS 303.

PHYS 318. Engineering Physics Laboratory II (4)
Laboratory course for engineering physics majors. Several projects using research-quality equipment in contemporary fields of experimental physics. Open-ended experiments each require reading appropriate literature, designing the experiment, performing data analysis, and writing a technical paper. Topics are drawn from areas of modern physics, and concentrate on condensed matter, material, and optical physics. Prereq: PHYS 317.

PHYS 324. Electricity and Magnetism I (3)
First half of a sequence that constitutes a detailed study of the basics of electromagnetic theory and many of its applications. Electrostatics and magnetostatics of free space, conductors, dielectric and magnetic materials; basic theory illustrated with applications drawn from condensed matter physics, optics, plasma physics, and physical electronics. Prereq: PHYS 116 or PHYS 122 or PHYS 124.

PHYS 325. Electricity and Magnetism II (3)
(Continuation of PHYS 324.) Electrodynamics, Maxwell’s equations, electromagnetic waves, electromagnetic radiation and its interaction with matter, potential formulation of electromagnetism, and relativity. Prereq: PHYS 324.

PHYS 326. Physical Optics (3)
Geometrical optics and ray tracing, wave propagation, interaction of electromagnetic radiation with matter, interference, diffraction, and coherence. Supplementary current topics from modern optics such as nonlinear optics, holography, optical trapping and optical computing. Prerequisite(s) may be waived with consent of department. Offered as PHYS 326 and PHYS 426. Prereq: PHYS 122 or PHYS 124.

PHYS 327. Quantum Electronics (3)
An introduction to theoretical and practical quantum electronics covering topics in quantum optics, laser physics, and nonlinear optics. Topics to be addressed include the physics of two-level quantum systems including the density matrix formalism, rate equations, and semiclassical radiation theory;
Distances to galaxies. The content of the distant universe (3)

PHYS 328. Cosmology and the Structure of the Universe (3)
Prereq: ASTR 222.

PHYS 329. Independent Study (1–4)
An individual reading course in any topic of mutual interest to the student and the faculty supervisor.

PHYS 331. Introduction to Quantum Mechanics I (3)
Quantum nature of energy and angular momentum, wave nature of matter, Schroedinger equation in one and three dimensions; matrix methods; Dirac notation; quantum mechanical scattering. Two particle wave functions.
Prereq: PHYS 221.

PHYS 332. Introduction to Quantum Mechanics II (3)
Continuation of PHYS 331. Spin and fine structure; Dirac equation; symmetries; approximation methods; atomic and molecular spectra; time dependent perturbations; quantum statistics; applications to electrons in metals and liquid helium.
Prereq: PHYS 331.

PHYS 336. Modern Cosmology (3)
An introduction to modern cosmology and an exploration of current topics in the field. The first half of the course will cover the mathematical and physical basis of cosmology, while the second will delve into current questions and the observations that constrain them.
Offered as PHYS 336 and PHYS 436.
Prereq: PHYS 221.

PHYS 339. Seminar (1–3)
Conducted in small sections with presentation of papers by students and informal discussion. Special problem seminars and research seminars offered according to interest and need, often in conjunction with one or more research groups.
Offered as PHYS 339 and PHYS 439.

PHYS 349. Methods of Mathematical Physics I (3)
Analysis of complex functions; singularities, residues, contour integration; evaluation and approximation of sums and integrals; exact and approximate solution of ordinary differential equations; transform calculus; Sturm-Liouville theory; calculus of variations. Additional work required for graduate students.
Offered as PHYS 349 and PHYS 449.
Prereq: MATH 224.

PHYS 350. Methods of Mathematical Physics II (3)
(Continuation of PHYS 349/449). Special functions, orthogonal polynomials, partial differential equations, linear operators, group theory, tensors, selected special topics. Additional work required for graduate students.
Offered as PHYS 350 and PHYS 450.
Prereq: PHYS 349.

PHYS 351. Senior Physics Project (2)
A two semester course required for senior BS and BA physics majors. Students pursue a project based on experimental, theoretical or teaching research under the supervision of a physics faculty member, a faculty member from another Case Western Reserve department or a research scientist or engineer from another institution. A departmental senior project committee must approve all project proposals and this same committee will receive regular oral and written progress reports. Final results are presented at the end of the second semester as a paper in a style suitable for publication in a professional journal as well as an oral report in a professional symposium.
SAGES Senior Cap

PHYS 352. Senior Physics Project Seminar (1)
This two semester seminar is taken concurrently with the student’s two semester senior project. Students meet weekly to discuss their projects and the research experience. The class will include dialogues about professional issues such as ethics, graduate school, jobs, funding, professional organizations, public obligations, writing and speaking. Assignments include proposals, progress reports and posters.
Coreq: PHYS 351 or PHYS 353.
SAGES Dept Seminar

PHYS 353. Senior Engineering Physics Project (2)
A two semester course required for BSE Engineering Physics majors. Students are expected to complete a research project in their concentration area under the supervision of a faculty member in science, engineering, or, with approval, a researcher at another institution or company. The project may be calculational, experimental or theoretical, and will address both the underlying physics and appropriate engineering and design principles. A program senior project committee must approve all project proposals and will receive regular oral and written progress reports. Final results are presented at the end of the second semester as a paper in a style suitable for publication in a professional journal as well as an oral report in a public symposium.
SAGES Senior Cap

PHYS 365. General Relativity (3)
This is an introductory course in general relativity. The techniques of tensor analysis will be developed and used to describe the effects of gravity and Einstein’s theory. Consequences of the theory as well as its experimental tests will be discussed. An introduction to cosmology will be given. Additional work required for graduate students.
Offered as PHYS 365 and PHYS 465.

PHYS 390. Undergraduate Research in Physics (3–6)
Research conducted under the supervision of a faculty member in the Department of Physics. Arrangements must be made with a faculty member and a written description of these arrangements must be submitted to, and approved by, the department before a permit will be issued to register for this course. A final report must be supplied to the department at the end of the semester.

PHYS 413. Classical and Statistical Mechanics I (3)
An integrated approach to classical and statistical mechanics. Lagrangian and Hamiltonian formulations, conservation laws, kinematics and dynamics, Poisson brackets, continuous media, derivation of laws of thermodynamics, the development of the partition function. To be followed by PHYS 414.

PHYS 414. Classical and Statistical Mechanics II (3)
A continuation of PHYS 413. Noninteracting systems, statistical mechanics of solids, liquids, gases, fluctuations, irreversible processes, phase transformations. Recommended preparation: PHYS 413 or consent of department.

PHYS 415. Introduction to Solid State Physics (3)
Characterization and properties of solids; crystal structure, thermal properties of lattices, quantum statistics, electronic structure of metals and semiconductors. PHYS 415 is for graduate students in engineering and science. (May not be taken for departmental credit by graduate students in the Department of Physics without prior approval.) Prerequisite may be waived with consent of department. Recommended preparation for PHYS 415: PHYS 331. Offered as PHYS 315 and PHYS 415.

PHYS 423. Classical Electromagnetism (3)

PHYS 426. Physical Optics (3)
Geometrical optics and ray tracing, wave propagation, interaction of electromagnetic radiation with matter, interference, diffraction, and coherence.
Supplementary current topics from modern optics such as nonlinear optics, holography, optical trapping and optical computing. Prerequisite(s) may be waived with consent of department.

Offered as PHYS 326 and PHYS 426.

**PHYS 427. Quantum Electronics (3)**

An introduction to theoretical and practical quantum electronics covering topics in quantum optics, laser physics, and nonlinear optics. Topics to be addressed include the physics of two-level quantum systems including the density matrix formalism, rate equations, and semiclasical radiation theory; laser operation including oscillation, gain, resonator optics, transverse and longitudinal modes, Q-switching, mode-locking, and coherence; and nonlinear optics including the nonlinear susceptibility, parametric interactions, stimulated processes, and self-action. Recommended preparation for PHYS 427: PHYS 331 or PHYS 481.

Offered as PHYS 327 and PHYS 427.

**PHYS 428. Cosmology and the Structure of the Universe (3)**

**PHYS 431. Physics of Imaging (3)**

Description of physical principles underlying the spin behavior in MR and Fourier imaging in multi-dimensional. Introduction of conventional, fast, and chemical-shift imaging techniques. Spin echo, gradient echo, and variable flip-angle methods. Projection reconstruction and sampling theorems. Bloch equations, T1 and T2 relaxation times, rf penetration, diffusion and perfusion. Flow imaging, MR angiography, and functional brain imaging. Sequence and coil design. Prerequisite may be waived with consent of instructor. Recommended preparation: PHYS 122 or PHYS 124 or EBME 410.

Offered as EBME 431 and PHYS 431.

**PHYS 436. Modern Cosmology (3)**

An introduction to modern cosmology and an exploration of current topics in the field. The first half of the course will cover the mathematical and physical basis of cosmology, while the second will delve into current questions and the observations that constrain the model. Offered as PHYS 336 and PHYS 436.

**PHYS 439. Seminar (1–3)**

Conducted in small sections with presentation of papers by students and informal discussion. Special problem seminars and research seminars offered according to interest and need, often in conjunction with one or more research groups. Offered as PHYS 339 and PHYS 439.

**PHYS 441. Physics of Condensed Matter I (3)**

Crystal structure, x-ray diffraction, band theory and applications. Free electron theory of metals and electrons in magnetic fields.

**PHYS 442. Physics of Condensed Matter II (3)**

Continuation of PHYS 441. Lattice vibrations, thermal properties of solids, semiconductors, magnetic properties of solids, and superconductivity. Prerequisite may be waived with consent of department. Recommended preparation: PHYS 441.

**PHYS 447. Physics of Liquid Crystals (3)**

Molecular interactions; order parameters; electrical, optical, and magnetic properties of the nematic phase; phase transitions; elastic and viscous properties; biaxiality; lyotropic phases; the role of chirality; defects in liquid crystals; interactions at interfaces; smectic order and smectic polymorphism; ferroelectricity, antiferroelectricity, and ferrielectricity; phases associated with complex molecular architectures; free-standing films and quasi 2D behavior; experimental techniques, including nanomanipulation; and liquid crystal devices.

**PHYS 449. Methods of Mathematical Physics (3)**

Analysis of complex functions: singularities, residues, contour integration; evaluation and approximation of sums and integrals; exact and approximate solution of ordinary differential equations; transform calculus; Sturm-Liouville theory; calculus of variations. Additional work required for graduate students.

Offered as PHYS 349 and PHYS 449.

**PHYS 450. Methods of Mathematical Physics II (3)**

(Continuation of PHYS 349/449.) Special functions, orthogonal polynomials, partial differential equations, linear operators, group theory, tensors, selected specials topics. Additional work required for graduate students.

Offered as PHYS 350 and PHYS 450.

The experimental basis for modeling the electroweak and strong interactions in terms of fundamental fermions, quarks and leptons, and gauge bosons, photons, the weak bosons, and gluons; particle accelerators and detection techniques; phenomenology of particle reactions, decays and hadronic structure; space, time and internal symmetries; symmetries; symmetry breaking.

**PHYS 460. Advanced Topics in NMR Imaging (3)**

Frontier issues in understanding the practical aspects of NMR imaging. Theoretical descriptions are accompanied by specific examples of pulse sequences, and basic engineering considerations in MRI system design. Emphasis is placed on implications and trade-offs in MRI pulse sequence design from real-world versus theoretical perspectives. Recommended preparation: EBME 431 or PHYS 431.

Offered as EBME 460 and PHYS 460. Prerequisite: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

**PHYS 465. General Relativity (3)**

This is an introductory course in general relativity. The techniques of tensor analysis will be developed and used to describe the effects of gravity and Einstein’s theory. Consequences of the theory as well as experimental tests will be discussed. An introduction to cosmology will be given. Additional work required for graduate students.

Offered as PHYS 365 and PHYS 465.

**PHYS 472. Graduate Physics Laboratory (3)**

A series of projects designed to introduce the student to modern research techniques such as automated data acquisition. Students will be assessed as to their individual needs and a sequence of projects will be established for each individual. Topics may include low temperature phenomena, nuclear gamma ray detection and measurement and optics.

**PHYS 481. Quantum Mechanics I (3)**

Quantum mechanics with examples of applications. Schroedinger method; matrix and operator methods. Approximation methods including WKB, variational and various perturbation methods. Applications to atomic, molecular and nuclear physics including both bound states and scattering problems. Applications of group theory to quantum mechanics.

**PHYS 482. Quantum Mechanics II (3)**

Continuation of PHYS 481, including quantum field theory. Prerequisite may be waived with consent of department. Recommended preparation: PHYS 481 or consent of department.

**PHYS 491. Modern Physics for Innovation I (3)**

The first half of a two-semester sequence providing an understanding of physics as a basis for successfully launching new high-tech ventures. The course will examine physical limitations to present technologies, and the use of physics to identify potential opportunities for new venture creation. The course will provide experience in using physics for both identification of incremental improvements, and as the basis for alternative technologies. Case studies will be used to illustrate recent commercially successful (and unsuccessful) physics-based venture creation, and will illustrate characteristics for success.

**PHYS 492. Modern Physics for Innovation II (3)**

Continuation of PHYS 491, with an emphasis on current and prospective opportunities for Physics Entrepreneurship. Longer term opportunities for Physics Entrepreneurship in emerging areas including, but not limited to, nanoscale physics and nanotechnology; biophysics and applications to biotechnology; physics-based opportunities in the context of information technology. Recommended preparation: PHYS 491 or consent of department.

Offered as EE 491/591. Prerequisite: PHYS 491 or consent of department.
PHYS 493. Feasibility and Technology Analysis (3)
This course provides the tools scientists need to determine whether a technology is ready for commercialization. These tools include (but are not limited to): financial analysis, market analysis, industry analysis, technology analysis, intellectual property protection, the entrepreneurial process and culture, an introduction to entrepreneurial strategy and new venture financing. Deliverables will include a technology feasibility analysis on a possible application in the student’s scientific area. Offered as BIOL 493, CHEM 493, and PHYS 493.

PHYS 522. Nonlinear Optics (3)

PHYS 539. Special Topics Seminar (1–3)
Individual or small group instruction on topics of interest to the department. Topics include, but are not limited to, particle physics, astrophysics, optics, condensed matter physics, biophysics, imaging. Several such courses may run concurrently.

PHYS 541. Quantum Theory of Solids I (3)
Elementary excitations in solids, including lattice vibrations, spin waves, helicones, and polarons. Quasi-particles and collective coordinates, BCS theory of superconductivity, Quasicrystals, Transport properties, Conduction electrons in magnetic fields and the quantum Hall effect. Green function methods of many-body systems. Recommended preparation: PHYS 442 or consent of department.

PHYS 544. Advanced Theory of Materials (3)

PHYS 561. Statistical Methods for Scientific Research (3)
This course will introduce students to traditional and novel statistical methods useful for experimental scientists. The emphasis will be on understanding theory and techniques that are used in research. We shall consider problems from astronomy, biology and particle-astro physics. The course will also cover topics of interest to engineers. Current collaborative research problems of the instructor will motivate some of the advanced statistical techniques. Topics to be covered include: Measuring uncertainty and probability distributions (low and high dimensional); point and interval estimation; curve fitting; likelihood and score type tests required for an experiment; posterior probabilities; dealing with small samples (which arise in search experiments); over- and under-coverage using confidence belts; and Monte Carlo simulation methods for planning experiments and evaluating the statistical significance of the results. “GGobi” and “R” open source software will be used for visualization (via dynamic and interactive graphics) and exploring high-dimensional data. Offered as BIOL 561 and PHYS 561.

PHYS 566. Cosmology (3)
Introduction to our current understanding of the origin and evolution of the Universe and connection between our understanding of elementary particle physics and cosmology. Specific topics will include: General Parameters of Cosmology: Expansion, Lifetime, and Density of the Universe, The Early Universe, Constraints on Elementary Particles, Dark Matter and Dark Energy, Nucleosynthesis, Cosmic Microwave Background, Inflation, Stellar Evolution, Gravitational Waves, Baryogenesis. Some background in general relativity and particle physics phenomenology is recommended.

PHYS 579. Special Topics: Frontiers in Research (3)
In-depth examination of a cutting-edge topic of current research. New topic is selected each semester.

PHYS 581. Quantum Mechanics III (3)

PHYS 591. Gauge Field Theory I (3)
Noether’s theorem, symmetries and conserved currents, functional integral techniques, quantization, Feynman rules, anomalies, QED, electroweak interactions, QCD, renormalization, renormalization group, asymptotic freedom and assorted other topics. Prereq: PHYS 581.

PHYS 592. Gauge Field Theory II (3)
(See PHYS 591.) Recommended preparation: PHYS 591.

PHYS 601. Research in Physics (1–9)

PHYS 651. Thesis M.S. (1–9)

PHYS 666. Frontiers in Physics (0)
Weekly colloquia given by eminent physicists from around the world on topics of current interest in physics.

PHYS 701. Dissertation Ph.D. (1–9)
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

DEPARTMENT OF POLITICAL SCIENCE

The study of political science is primarily concerned with governmental structures and processes in world societies, including who governs, why, and how. Faculty specialties in the department include American politics and governmental institutions; elections and political parties in the United States and abroad; violence and civil disorder; public policy analysis, including economic and welfare state issues; international relations conceived broadly; international political economy; religious and ethnic conflict; state-building; the politics of gender; political strategies; research methods; and comparative politics, with various regional concentrations. In its programs leading to the B.A., M.A., and Ph.D., the department makes a strong effort to relate the study of politics to students’ needs and concerns and to reflect in its courses both the excitement and seriousness of real-world politics.

The study of political science can build a foundation for many types of future employment. Many political science majors are preparing for graduate study or law school. Others intend to pursue careers in journalism, teaching, or public administration, or in private industry and business. Both the public and private sectors hold career possibilities for the political science major.

DEPARTMENT FACULTY

Joseph White, Ph.D.
(University of California, Berkeley)
Luxenberg Family Professor of Public Policy and Chair; Director, Center for Policy Studies and Public Policy Program; Professor of Epidemiology and Biostatistics, School of Medicine
American government; Congress; public policy; health and welfare policy
Karen Beckwith, Ph.D.
American government; public policy; health care and aging

Jonathan L. Entin, J.D.
(Northwestern University)
Professor of Law
American constitutional law; social science and the law

Andrew M. Lucker, Ph.D.
(Case Western Reserve University)
Adjunct Assistant Professor
American government; state politics and government; history of political science

Laura Y. Tartakoff, J.D., M.A.
(Case Western Reserve University; Fletcher School, Tufts University)
Adjunct Associate Professor
Constitutional law; civil liberties; comparative constitutionalism

UNDERGRADUATE PROGRAMS

Major
The major in political science leads to the Bachelor of Arts degree. The degree requires 30 hours of course work, distributed as follows:

1. POSC 109 (3)
2. Two POSC courses at the 200 level (6)
3. Six POSC courses at the 300 level (18)
4. POSC 396 Senior Project SAGES Capstone (3)

Students select courses based on their specific interests, with approval of the faculty advisor. No more than six hours of independent study (i.e., POSC 395 and/or POSC 396) may count toward the major. Independent study completed through the Washington Center program is excluded from this limitation.

Departmental Honors
Majors who maintain a grade point average of at least 3.3 overall and 3.8 in political science courses during the senior year, adhering to the departmental regulations governing the master’s degree program. If completed successfully, these hours will count simultaneously toward both degrees in political science.

The B.A. will be awarded upon completion of all requirements for that degree, including total hours. The M.A. will be awarded upon successful completion of the 30 hours of graduate-level courses and the M.A. examination.

Minor
A minor in political science consists of 15 hours (five courses) in the department, of which 9 hours must be at the 300 level. An elected minor sequence must be approved by a political science faculty advisor.

A minor in public policy is available to undergraduates in the College of Arts and Sciences and to undergraduates in the economics and management programs in the Weatherhead School of Management.

The public policy minor ordinarily includes:

1. ECON 205 or ECON 102
2. POSC 386, POSC 383, or POSC 306
3. One course from the following list of approved courses: HSTY 256, HSTY 358, POSC 308, POSC 310, POSC 323, POSC 385
4. Two courses in a specific policy field (e.g., health care, the environment, business and the economy, science and technology policy, nonprofit and charitable organizations, social policy, etc.), as approved by the public policy minor advisor

GRADUATE PROGRAMS

Master of Arts
Applicants to the Master of Arts program in political science are required to submit their undergraduate transcripts and three letters of recommendation from former instructors. The admission requirements also include a minimum score of 500 on the verbal and quantitative segments of the Graduate Record Examination (GRE) and 4.5 on the analytical section. The department strongly prefers that applicants have a minimum GPA of 3.2 overall and a minimum GPA of 3.4 in political science courses. For students from other
countries, the requirements are a minimum score of 550 on the paper version of the Test of English as a Foreign Language (TOEFL), or at least 215 on the computer version of the TOEFL; the minimum GRE scores indicated above; and transcripts of all undergraduate study, indicating completion of a Bachelor of Arts or Bachelor of Science degree program.

The Master of Arts in political science is a broadly based program in which the student is expected to acquire and exhibit general knowledge and skills. Therefore, within the 30 hours of graduate-level course work (400 level and above) required for the master’s, 12 hours must be distributed as follows:

1. 3 hours in the area of American government and politics
2. 3 hours in the area of comparative politics
3. 3 hours in the area of international relations
4. 3 hours of POSC 449 (Research Methods)

Students who receive permission (due to special circumstances) from the graduate coordinator may take an alternative research methods course outside the department.

Among the remaining 18 hours of electives, the student may take courses oriented toward a general Master of Arts, covering the four broad areas listed above. Alternatively, the student may specialize in one area—one of these four or some other—approved by the graduate coordinator. A maximum of 9 hours may be taken outside the Department of Political Science, with prior approval from the graduate coordinator, for specialized work related to the master’s degree for which no political science course is appropriate. A maximum of nine hours of independent study (POSC 601) may count toward the degree.

A minimum grade point average of 3.0 must be maintained throughout the Master of Arts program. A master’s student who fails to maintain a GPA of 3.0 will be placed on academic probation for one semester. If the GPA is not returned to the 3.0 minimum by the end of the probationary semester, the student will be separated from further study in the department.

Upon completion of no fewer than 30 hours and no more than 42 hours of master’s-level course work, the student must request scheduling of the political science Master of Arts examination. The examination will cover the fields of American government and politics, comparative politics, and international relations.

**Doctor of Philosophy**

Requirements for admission to the Doctor of Philosophy program in political science are the same as for admission to the Master of Arts program, with the following additions. The department strongly prefers that applicants without an M.A. in political science have a minimum GPA of 3.2 overall and a minimum GPA of 3.4 in undergraduate political science courses, and that applicants with an M.A. degree in political science have a minimum GPA of 3.4 overall in their M.A. work. Because the department faculty is small, applicants should determine, prior to applying, whether one or more members of the department faculty are active in the applicant’s field of interest. Ph.D. applications must specify the applicant’s field(s) of interest, as the Graduate Studies Committee will not recommend the admission of an applicant where the department faculty cannot support the applicant’s proposed course of study. Students who are accepted into the department’s M.A. program and then decide they would like to earn the Ph.D. are expected to apply to the Ph.D. program and meet the admission requirements. All Ph.D. students must complete 45 hours of graduate-level courses, plus at least 18 hours of POSC 701 (Dissertation) credit. The required 45 hours of doctoral courses taken before dissertation credits may be distributed as follows:

1. 12 hours in primary subfield (American, comparative, or international relations)
2. 9 hours in secondary subfield (one of the remaining two fields)
3. 6 hours in the remaining subfield
4. 6 hours in Research Methods (including POSC 449 Research Methods)
5. 12 hours of electives

A maximum of 9 hours of independent study (POSC 601) may be undertaken. University regulations require Ph.D. students to spend at least one academic year in full-time residence (two consecutive regular semesters with a minimum of 9 hours’ registration each semester).

Doctoral students whose M.A. in political science has been certified, and doctoral students with an M.A. in political science from Case Western Reserve, need complete only 18 of the 45 hours of doctoral course work. The graduate coordinator will set distribution requirements on an individual basis, reflecting the course work completed for the M.A. Doctoral students without a completed M.A. must pass the M.A. examination. They must take the examination upon completion of no fewer than 30 hours and no more than 36 hours of course work. A student who does not pass this examination may not continue in the Ph.D. program. See the description of the M.A. examination above for further information.

Upon completion of 45 hours of course work, the student must pass the Ph.D. comprehensive examinations in his or her primary and secondary subfields. After passing the examinations, a student must complete a dissertation, typically 150-400 pages in length, that draws on the student’s original research to make a contribution to the field of political science.

**Dual J.D./M.A.**

Students accepted to the School of Law may pursue a Masters of Arts in Political Science in conjunction with their J.D. degree. Completion of the program requires 97 hours of course work, and so would be expected to require seven semesters. Students wishing to enroll in the dual-degree program must be separately admitted to each program, but the department will waive the GRE requirement and accept the LSAT within the admissions process. Students must complete a total of 21 hours of credit within the political science department, including at least three credit hours in American politics, comparative politics, international relations, and research methods. Dual-degree students will normally begin study in the law school and defer enrollment in the M.A. program until their second year. They must pass the M.A. comprehensive examination upon completion of their political science course work.

**COURSE DESCRIPTIONS**

**POSC 109.** The American Political System (3)

Introduction to the study of American politics, addressing the questions “Who rules?” and “Who benefits?” in the American political system. Explores the nature of constitutional limits, the role of public participation, the impact of pressure groups, and the influence of various governmental institutions on American political life.

**POSC 260.** Introduction to Comparative Politics (3)

Comparative politics is the study of processes and institutions within countries. Prompted by real-world puzzles, comparativists investigate broad,
POSC 272. Introduction to International Relations (3)
Survey of the principles of international relations, politics, law and organization; the rise, development and change of the nation-state system; development of international cooperation; methods of studying international relations.

POSC 301. Decision-Making in American Cities (3)
Localities are the primary interface with government and provide the basic psychological place identification for most Americans. The course will explore this assertion in the context of urban America today. How are decisions made in cities? Who shapes these decisions and why? What role is played by shifting demographics, race, and poverty? What can the individual do to influence local decision-making?
Offered as POSC 301 and POSC 401.

POSC 302. State Politics and Policy (3)
State governments may make more decisions that affect the life of an average citizen than does the federal government. The study of state politics and policy includes the different ways states organize the basic political system (such as legislatures, executives, courts and parties); how state cultures, economies, and other factors shape how political institutions work; institutions of state governance that do not exist at the national level (such as the initiative and referendum); and the continual contest between state and federal governments to control policy, shift costs, and avoid blame. Offered as POSC 302 and POSC 402.

POSC 306. Interest Groups in the Policy Process (3)
Introduction to the institutions and processes that make up the political environment of nonprofit and other organizations in the United States, be-
making up the political environment of nonprofi t organizations in the United States, be-

POSC 308. The American Presidency (3)
The sources of, strategies of, and restraints on presidential leadership in the United States. Emphasis on problems of policy formation, presidential relations with Congress and executive agencies, and the electoral process.
Offered as POSC 308 and POSC 408.

POSC 310. The Legislative Process (3)
Legislative, representative, and other functions of Congress and state legislatures; legislative relations with the executive and with private interests; powers and limitations of the legislature as a policy-making institution.
Offered as POSC 310 and POSC 410.

POSC 320B. The U.S. Midterm Elections (3)
Analysis of the midterm elections in the United States. Covers congressional and state elections in all regions, focusing on the issues, personalities, campaign strategies, and voter trends in this key electoral battle held between presidential elections. Offered every four years in conjunction with presidential elections.
Offered as POSC 320B and POSC 420B.

POSC 320C. The Presidential Election (3)
Analysis of the upcoming presidential election in the United States. Focuses on the issues and personalities, polls and public opinion, campaign strategies, and electoral behavior. Offered every four years in conjunction with the United States presidential election cycle.
Offered as POSC 320C and POSC 420C.

POSC 321. News Media and Politics (3)
Analysis of the political role of the news media in American government and politics. Examines the fascinating relationship between reporters and politicians. Covers the overall structure and legal position of the media as well as the media’s impact on the American political system.
Offered as POSC 321 and POSC 421.

POSC 322. Political Movements and Political Participation (3)
Political Movements and Political Participation is concerned with the variety of ways citizens engage in collective activism in the United States and across national boundaries, and with the conditions under which citizens identify common concerns and join together in political movements to bring about change. The course begins with an examination of three general bodies of theory and research on political movements: resource mobilization, political opportunity structures, and cultural framing. We will also investigate frameworks of political participation for understanding the relationships among different expressions of collective activism and representation. In the context of these sometimes competing theories, we will consider 1) the conditions under which political movements are likely to emerge, as well as the circumstances in which collective political action is precluded; 2) how citizens come to recognize collective grievances and shared political identities; 3) the strategies and tactics of organized movements, and their likelihood of political success; and 4) the relationship between political movements, political parties, and the state.
Offered as POSC 322 and POSC 422.

POSC 323. Judicial Politics (3)
Rejecting the view that judges mechanically apply the law, the study of judicial politics seeks to understand the behavior of judges as political actors with policy goals. Topics include judicial selection and socialization, judicial policy change, judicial strategy (especially the strategic interaction of judges on multi-judge panels), the interaction of courts in hierarchical judicial systems, the policy impact of judicial decisions, and the courts’ interactions with coordinate branches of government (the executive, Congress, state governments, state courts). Primary focus will be on the federal judiciary, with some discussion of state judicial systems.
Offered as POSC 323 and POSC 423.

POSC 325. American Constitutional Law (3)
An introductory survey of U.S. constitutional law. Special attention given to the historical, philosophical, and political dimensions of landmark Supreme Court cases. Judicial review, federalism, separation of powers, due process, and equal protection. Supreme Court’s involvement in major political controversies: the New Deal, abortion, physician-assisted suicide, school desegregation, and affirmative action.
Offered as POSC 325 and POSC 425.

POSC 326. Constitutions in Practical Politics (3)
Overview of ancient Greek and Roman constituti-

POSC 327. Civil Liberties in America (3)
An introductory survey of U.S. constitutional law. Special attention given to the historical, philosophi-

POSC 328. Violence and the Political System (3)
Empirical analysis of various theories advanced
in the cross-cultural explanation of factors which cause and mediate the occurrence of violence--revolutions, terrorism, and civil disorder--within the political system.

Offered as POSC 334 and POSC 434.

POSC 341. Elections, Voters, and Political Parties (3)
Examination of American political parties, their activities, organization, characteristics, and functions. Candidate strategies and electoral history viewed within the context of voter orientations and predispositions, stressing linkages between citizen and party and between party and government.
Offered as POSC 341 and POSC 441.

POSC 342. Water (3)
This seminar will explore the history of the meaning of water—that is, the social, cultural, and/or political significance placed on water by individuals and governments in different times and places. It will also examine how humans have acted upon water, and how it has acted upon humans, with great consequences for human life. This seminar will look at the history of water in the context of science, technology and society; public health; political science; and environmental history. Case studies will be drawn from a wide chronological and geographical range; from the ancient world to Renaissance Italy, nineteenth century India, modern Britain, Egypt, and the U.S. The course provides a wide perspective on the themes of the history of human-water interactions, but will also focus closely on some critical cases. Seminar participants will write a research paper on the topic of their choice in the environmental history of water.
Offered as: HSTY 342, HSTY 442, POSC 342, POSC 442.

POSC 343. Public Opinion and American Democracy (3)
Examination of theories, concepts and empirical research related to attitudes and the political behavior of mass publics.
Offered as POSC 343 and POSC 443.

POSC 346. Women and Politics (3)
Women and Politics involves a critical examination of the impact of gender on the forms and distributions of power and politics, with primary reference to the experience of women in the United States. Major concerns of the course include what we mean by “sex,” “gender,” and “politics”; the relationship between women and the state; how women organize collectively to influence state policies; and how the state facilitates and constrains women’s access to and exercise of political power. The course is organized around four foci central to the study of women and politics. The first section of the course focuses on what we mean by “women,” “gender,” and “politics.” In this section, we will consider how these concepts intersect and the ways in which each may be used to deepen our understanding of the workings of governments and political systems, and of women’s relative political powerlessness. The second section of the course employs these concepts to understand the (re)emergence of the U.S. feminist movement, its meanings, practices, and goals, and its transformation across U.S. political history. In the third section, we turn to conventional electoral politics, focusing on women’s candidacies, their campaigns, and women’s voting behavior. In the final section of the course, we consider those general factors that might provide for increased gender equality and improved life status for women, in global, comparative perspective.
Offered as POSC 346 and POSC 446 and WGST 346.
SAGES Dept Seminar

POSC 348. History of Modern Political and Social Thought (3)
This course explores the responses of philosophers, economic theorists, culture critics, and public policy makers to changes in western society wrought by industrialization by focusing on their concerns with technological change.
Offered as HSTY 348 and POSC 348.

POSC 349. Political Science Research Methods (3)
This course examines approaches that political scientists use to understand events and processes. In doing so, the course provides students with skills helpful to completing senior projects, such as the ability to evaluate and conduct research. Through exercises and projects, students will take part in the research process from constructing a question to developing a research design to interpreting results. Students will learn and apply key techniques, including inductive and deductive reasoning, hypothesis construction, operationalization of concepts, measurements, sampling and probability, causal inference, and the logic of controls. They will produce materials common to the discipline, such as research designs. Offered as POSC 349 and POSC 449.
SAGES Dept Seminar

POSC 351. Modern Political Thought (3)
Examination of a limited topic in the study of modern political thought. Topics vary.
Offered as POSC 351 and POSC 451.

POSC 352. American Political Thought (3)
Examination of the unique contribution to the science of government made by American political thinkers.
Offered as POSC 352 and POSC 452.

POSC 354. Political and Social Philosophy (3)
Justification of social institutions, primarily political ones. Such distinctions as that between de facto and legitimate authority; analysis of criteria for evaluation, such as social justice and equality; inquiry into theories of justification of the state; theory of democratic government and its alternatives. Readings from classical and contemporary sources. Recommended preparation: PHIL 101.
Offered as PHIL 334, POSC 354, PHIL 434, and POSC 454.

POSC 355. Modern Political Ideologies (3)
Substance and nature of ideological thinking in the contemporary world via a survey of political "isms"—for example, liberalism, libertarianism, conservatism, fascism, socialism, and even more recent trends such as feminism, environmentalism, etc.
Offered as POSC 355 and POSC 455.

POSC 357. Democratic Politics: Theory and Practice (3)
Study of the theory and application of democracy. The concept of democracy will be examined from the Athenian model to contemporary debates over participatory and deliberative models. Then the concept will be applied to understanding issues of democratic practice and the study of politics in American, comparative, and international arenas. Finally, the course will address the potential effects, both good and ill, of technological innovation on democratic practices, such as "distance" participation, the Internet, and other communication technology.
Offered as POSC 357 and POSC 457.

POSC 358. Political Strategy (3)
This course examines practical applications of prominent political science theories. It is partly a how-to course covering a broad range of political activities, but the primary objective is to link practical issues with theories to help you understand why events happen the way they do. The course focuses on American politics, but the materials will be applicable to a wide range of situations. The course is a seminar requiring regular student presentations that will generate discussion about the readings and current events. Papers consist of analysis of current events, and require students to analyze the strategies used by prominent figures in the context of the theories we discuss in class.
Offered as POSC 358 and POSC 458.
SAGES Dept Seminar

POSC 361. State-Building and State Collapse (3)
Are nation-states the most effective means of organizing society? This course explores this question by examining the historical rationales behind the development of the nation-state, contemporary challenges to the nation-state, and potential alternatives to the nation-state. Possible challenges to the nation-state include multinational corporations, international humanitarian intervention, and regional integration. Alternative providers of state services include charities, companies, and mercenaries.
Offered as POSC 361 and POSC 461.

POSC 362. Politics of Central Asia (3)
Once an unfamiliar region to many people of the world, Central Asia took center stage in the fall of 2001 as a result of the U.S. campaign against terrorism. This course will introduce students to the politics of Central Asia, focusing on the region today composed of Uzbekistan, Turkmenistan, Tajikistan, Kyrgyzstan, and Kazakhkstan. We will review the nationalism, foreign relations, religion,
Elections involve more than a simple act of voting. The rules under which worldwide elections are held determine who controls the executive and how votes are converted into legislative seats. The mechanics of various electoral arrangements will be examined in detail and the consequences for the political system discussed in terms of strategies and desired outcomes on the part of contestents. Students will research individual countries and analyze recent elections from both qualitative and quantitative perspectives, including introduction to geospatial data for mapping variations in electoral behavior.

Offered as POSC 363 and POSC 463.

POSC 364. Dictatorship and Democracy in Modern Latin America (3)
Examination of political leadership in 20th-century Latin America, exploring the nature, causes, and consequences of dictatorship and democracy in the region, moving from the collapse of oligarchic rule and the emergence of populism in the 1930s and 1940s, to the end of democracy and establishment of military regimes in the 1960s and 1970s, and ultimately to the contemporary processes of democratization and economic liberalization.

Offered as ETHS 364, POSC 364, and POSC 464.

Global & Cultural Diversity

POSC 365. Science, Technology, and Government (3)
Traces the development and influence of federal technology and science policies from colonial times to the present, with emphasis on the 20th century.

Offered as HSTY 366 and POSC 365.

POSC 366. Government and Politics of Africa (3)
Comparative analysis of the political forces and organizations currently functioning in Africa, as well as a survey of the formal government institutions. Special emphasis on single-party rule, military rule, and the political ramifications of African socialism, tribalism, and the problems of national integration.

Offered as ETHS 366, POSC 366, and POSC 466.

Global & Cultural Diversity

POSC 367. Western European Political Systems (3)
Comparative analysis of sociopolitical systems of selected Western European industrial democracies, using North American systems as a point of comparison.

Offered as POSC 367 and POSC 467.

POSC 368. The People's Republic of China (3)
Now more than ever, the Chinese state and society are facing tremendous economic, social, and political challenges. This course presents an overview of the development of Chinese Communist theory and practice from 1949 to the present day. Among the topics covered are the Great Leap Forward, the Cultural Revolution, the economic reforms of the 1980s, the Tiananmen student protests, the Communist party's crisis of legitimacy, the Taiwan problem, ecological challenges, the new socialist market economy, and current social developments from domestic migration to youth culture and new forms of nationalism. The class involves a mixture of lectures and discussion and draws on a combination of primary and secondary sources, including current news reports, films, documentaries, and fiction in translation.

Offered as HSTY 383 and POSC 368.

POSC 369. Current Controversies in Latin American Politics and Society (3)
In addition to questions about race, religion, abortion, the drug industry, immigration, democracy, private property, and free trade, the course will tackle Latin America's apparent shift to the political and ideological left, Chavez's "Imperialism," and Cuba's humanitarian aid.

Offered as ETHS 369, POSC 369 and POSC 469.

Global & Cultural Diversity

POSC 370A. Political Economy (3)
Focus on debates concerning the proper relationship between political and economic systems, including conservative, liberal, and radical perspectives. The politics of international economics and the economics of international politics receive separate attention.

The course concludes with study of "modern" political economy and the application of economic theory to the study of political systems.

Offered as POSC 370A and POSC 470A.

POSC 370C. The United States and Asia (3)
Survey and analysis of U.S.-Asia relations in the post-WWII period. Focus specifically is on the interaction of politics and economics in the United States' relations with Japan, China, and Southeast Asian countries. Topics will include the role of Asia in U.S. Cold War policies, the dynamics of U.S.-Japan alliance politics, post-Cold War issues involving U.S. foreign policy toward Asia, a history and analysis of economic conflict cooperation, and an examination of the move toward Asia-Pacific "regionalism."

Offered as POSC 370C and POSC 470C.

Global & Cultural Diversity

POSC 370G. U.S. Intelligence and National Security (3)
Examination of the impact of the intelligence process on foreign policy making and superpower relations. Covers the life cycle of United States strategic intelligence from the collection of data to formulation of analytic judgments and the policy-level uses of intelligence. Emphasis on contemporary intelligence issues and processes, but includes the formative period of modern American intelligence in the World War II era.

Offered as POSC 370G and POSC 470G.

POSC 370J. International Law and Organizations (3)
Study of international organizations and international law as two means for regulating and coordinating nation-state behavior. History of the two techniques will be traced, covering 19th century efforts at cooperation, the League of Nations and the United Nations, regional and specialized global organization. The functions of international law in global politics will be stressed, with primary focus on the evolving role of law in dealing with global problems, e.g., war, the environment, economic cooperation, and human rights.

Offered as POSC 370J and POSC 470J.

POSC 370K. Nationalism, Ethnicity, and Religion in World Politics (3)
Examination of the post-Cold War surge in conflicts among nationalisms, ethnic groups, and religions with particular attention to the former Yugoslavia, Ireland, India, Africa, and the Middle East.

Offered as ETHS 370K, POSC 370K, and POSC 470K.

Global & Cultural Diversity

POSC 371. Natural Resources and World Politics (3)
Examination of the political causes and ramifications of the uneven distribution of the valuable natural resources for modern industrial societies. Strategic and military issues and the exploitation of the sea bed. Examination in some detail of selected commodity issues, including petroleum, copper and uranium.

Offered as POSC 371 and POSC 471.

POSC 372. The United Nations in the Post-Cold War World (3)
The United Nations has become the focus of a debate over its effectiveness as a global organization dedicated to promoting world peace. Some critics believe it is time for the U.N. to move forward in this regard, while others see the U.N. as an anachronistic, bloated bureaucracy sorely in need of reform. This course will consider the United Nations from the perspective of powerful states such as the United States, as well as from the perspective of weaker ones, and also will consider areas such as peacekeeping, human rights, economic development, political reform, and the U.N.'s involvement with non-state actors such as terrorists.

Offered as POSC 372 and POSC 472.

POSC 373. Politics of the European Union (3)
Study of the origins, operations, and prospects for the European Union. This can include the historical context for the effort to restrict national rivalries (which fueled two world wars) and create common interests; the diplomatic challenges in finding common ground; the tasks and processes of governance within the EU, including its Global & Cultural Diversity
governing institutions, enforcement of terms for European Monetary Union and the operations of its bureaucracies; the social pressures that create policy challenges (such as agriculture policy and immigration); broad tensions within the enterprise (e.g., “broadening” vs. “deepening”), and the EU’s potential place in international politics, especially the efforts to create a common foreign and security policy and the possible implications of the Euro for international political economy.

Offered as POSC 373 and POSC 473.

POSC 374. Politics of Development in the Global South (3)
Exploration of the post-War II emergence of the Global South nations of Africa, Asia, the Middle East, Latin America, and Eastern Europe arena.

Offered as ETHS 374, POSC 374, and POSC 474.

Global & Cultural Diversity

POSC 375. Nuclear Weapons and Arms Control (3)
National and international problems concerning nuclear weapons, and the past and present attempts both to control their spread and to prevent their use. Topics covered include the science and technology of fission and fusion warheads and delivery vehicles; history, domestic policies, and international relations concerning nuclear weapons; and arms control treaties and their verification.

Offered as HSTY 377 and POSC 375.

POSC 376. United States Foreign Policy (3)
Focus on U.S. foreign policy making with a dynamic network of executive and congressional actors and organizations; analysis of traditional and contemporary U.S. foreign policies from nuclear defense to current economic resource issues; future role of the United States in world affairs.

Offered as POSC 376 and POSC 476.

POSC 377. Politics of Russia (3)
Russia faces three problems: the creation of a sovereign state, the development of a new political system, and the restructuring of its economy. In this course we will challenge the assumption that the outcome of these three transitions will be a strong, democratic, capitalist country. We will ask whether civil war, organized crime, an immature party system, poor social services, and nomenklatura privatization bode poorly for these three transformations.

Offered as POSC 377 and POSC 477.

Global & Cultural Diversity

POSC 378. International Relations Theory (3)
This course is a seminar in international relations theory. As such, we will bring a wide range of theoretical perspectives to bear on issues and debates in the area of international relations by systematically studying the evolution of the world system. The seminar is roughly divided into a first half focusing on war and the political system, and a second half focusing on trade, finance and the economic system. Each section devotes particular attention to ethical problems associated with political and economic issues. This course should develop students’ ability to read and critically evaluate academic literature in the field of international relations, and enable students to produce a scholarly paper on one substantive area of the field.

Offered as POSC 378 and POSC 478.

SAGES Dept Seminar

POSC 379. Middle East: Politics, Economics, and American Policy (3)
Examination of continuing conflicts, major trends, and internal political and economic developments affecting U.S. policy in the Middle East region. Discussions include human rights, petroleum economics, and Islamic politics.

Offered as POSC 379 and POSC 479.

Global & Cultural Diversity

POSC 381. City as Classroom (3)
In this course, the city is the classroom. We will engage with the urban terrain. We will meet weekly off-campus, interact with community members, and interface—both literally and figuratively—with the city as a way to examine the linkages between historical, conceptual, and contemporary issues, with particular attention paid to race and class dynamics, inequality, and social justice. This course will have four intersecting components, primarily focusing on American cities since the 1930s: the social and physical construction of urban space, the built environment, life and culture in the city, and social movements and grassroots struggles.

Offered as HSTY 381, POSC 381, SOCI 381, HSTY 481, POSC 481, and SOCI 481.

POSC 383. Health Policy and Politics in the United States (3)
Overview of the principal institutions, processes, social forces, and ideas shaping the U.S. health system. Historical, political, economic, and sociological perspectives on the health system are explored as well as the intellectual context of recent policy changes, challenges, and developments. Students will acquire a sense of how health services are financed and delivered in the U.S. They will also learn how to assess its performance compared to that of other similar countries.

Offered as POSC 383 and POSC 483.

POSC 384. Ethics and Public Policy (3)
Evaluation of ethical arguments in contemporary public policymaking discourse. That is, approaches to evaluating not only the efficiency of policy (Will this policy achieve its end for the least costs?) but also the ethics of policy (Are a policy’s intended ends ethically justified or “good,” and are our means to achieve those ends moral or “just”?).

Overview of political ideologies that supply U.S. political actors with their ethical or moral arguments when proposing and implementing public policy, followed by an application of these differing perspectives to selected policy areas such as welfare, euthanasia, school choice, drug laws, censorship, or others.

Offered as POSC 384 and POSC 484.

POSC 385. U.S. Bureaucratic Politics (3)
Bureaucracy is one of civilization’s most important inventions. It is a way of coordinating very large numbers of people so as to do work, make decisions, and exercise power. Without it, much of modern life would be impossible. Yet “bureaucracy” is normally seen, in public discussion, as a problem, instead of as a solution. This course will consider both the reasons for and pathologies of bureaucratic organization. Its special focus is bureaucracy in American government. The course therefore will provide some introduction to the study of American public administration, but with special emphasis on how the work and performance of public bureaucracies in the United States is shaped by the specific tasks they are given and the distribution of power in the American political arena.

Offered as POSC 385 and POSC 485.

SAGES Dept Seminar

POSC 386. American Public Policy Process (3)
Focus on the concepts and strategies concerned with moving the public policy process to action. Agenda-setting, issue definition, and feedback techniques will be a particular focus. Assessing political change, support, and obstacles also will be covered, as well as how policy systems operate with regard to different types of issues, such as regulatory, distributive, and redistributive policies, and in different configurations ranging from subgovernment to issue networks and advocacy coalitions.

Offered as POSC 386 and POSC 486.

POSC 387. Comparative Public Policy in Advanced Industrial Societies (3)
The study of comparative public policy focuses on three obvious questions: First, how do policies differ among countries? Second, why do policies differ? For example, what explains the differences in policies about health or the environment or energy or pensions? Third, what difference does it make? Is one set of policies better or worse than others? How can we tell? This course will consider each of these questions, focusing especially on the differences between the United States and other advanced industrial countries, and how these questions affect political and social life in those countries.

Offered as POSC 387 and POSC 487.

POSC 389. Special Topics in American Politics and Policy (3)
Specific topic will vary but will consist of an in-depth investigation of a particular policy area or political phenomenon. Topics will involve policy controversies of some current interest.

Offered as POSC 389 and POSC 489.

POSC 395. Special Projects (1–6)
Study of a topic of particular interest, or an approved internship. The student must submit to the departmental office a project prospectus form, approved and signed by the faculty supervisor, no later than the end of the second week of classes. The prospectus must outline the goals of the project and the research methodology to be used and is
part of the basis for grading. The prospectus form is available from the departmental office. Open to juniors and seniors majoring in political science. Open to majors in other departments with consent of faculty. Recommended preparation: Departmental prospectus form.

POSC 396. Senior Project SAGES Capstone (3)
Capstone experience for political science majors or senior POSC minors as part of the SAGES program, providing opportunity to do an in-depth paper on a topic of particular interest to them. Students must obtain approval from a faculty project advisor and list that advisor on the registration form. The advisor must sign and student submit to department a prospectus including goals, schedule, and research methodology. This paper should demonstrate, and ideally even extend, the skills and expertise developed over the course of study in the department. Upon completion of the capstone, students will be expected to present their work in a public forum. Recommended preparation: Junior or Senior political science major or senior political science minor and departmental prospectus form. SAGES Senior Cap

POSC 401. Decision-Making in American Cities (3)
Localities are the primary interface with government and provide the basic psychological place identification for most Americans. The course will explore this assertion in the context of urban America today. How are decisions made in cities? Who shapes these decisions and why? What role is played by shifting demographics, race, and poverty? What can the individual do to influence local decision-making?
Offered as POSC 301 and POSC 401.

POSC 402. State Politics and Policy (3)
State governments may make more decisions that affect the life of an average citizen than does the federal government. The study of state politics and policy includes the different ways states organize the basic parts of American political systems (such as legislatures, executives, courts and parties); how state cultures, economies, and other factors shape how political institutions work; institutions of state governance that do not exist at the national level (such as the initiative and referendum); and the continual context between state and federal governments to control policy, shift costs, and avoid blame. Offered as POSC 302 and POSC 402.

POSC 406. Interest Groups in the Policy Process (3)
Introduction to the institutions and processes that make up the political environment of nonprofit and other organizations in the United States, beginning with an examination of the role of civil society in a democracy and continuing with the framing of issues, role of political entrepreneurs and organized interests, elections, the legislative process and strategies for influencing it, and the roles of executive institutions and the courts. Offered as POSC 306 and POSC 406.

POSC 408. The American Presidency (3)
The sources of, strategies of, and restraints on presi- dential leadership in the United States. Emphasis on problems of policy formation, presidential relations with Congress and executive agencies, and the electoral process. Offered as POSC 308 and POSC 408.

POSC 410. The Legislative Process (3)
Legislative, representative, and other functions of Congress and state legislatures; legislative relations with the executive and with private interests; powers and limitations of the legislature as a policy-making institution.
Offered as POSC 310 and POSC 410.

POSC 420B. The U.S. Midterm Elections (3)
Analysis of the midterm elections in the United States. Covers congressional and state elections in all regions, focusing on the issues, personalities, campaign strategies, and voter trends in this key electoral battle held between presidential elections. Offered every four years in conjunction with the election cycle.
Offered as POSC 320B and POSC 420B.

POSC 420C. The Presidential Election (3)
Analysis of the upcoming presidential election in the United States. Focuses on the issues and personalities, polls and public opinion, campaign strategies, and electoral behavior. Offered every four years in conjunction with the United States presidential election cycle.
Offered as POSC 320C and POSC 420C.

POSC 421. News Media and Politics (3)
Analysis of the political role of the news media in American government and politics. Examines the fascinating relationship between reporters and politicians. Covers the overall structure and legal position of the media as well as the media’s impact on the American political system.
Offered as POSC 321 and POSC 421.

POSC 422. Political Movements and Political Participation (3)
Political Movements and Political Participation is concerned with the variety of ways citizens engage in collective activism in the United States and across national boundaries, and with the conditions under which citizens identify common concerns and join together in political movements to bring about change. The course begins with an examination of three general bodies of theory and research on political movements: resource mobilization, political opportunity structures, and cultural framing. We will also investigate frameworks of political participation for understanding the relationships among different expressions of collective activism and representation. In the context of these sometimes competing theories, we will consider 1) the conditions under which political movements are likely to emerge, as well as the circumstances in which collective political action is precluded; 2) how citizens come to recognize collective grievances and shared political identities; 3) the strategies and tactics of organized movements, and their likelihood of political success; and 4) the relationship between political movements, political parties, and the state.
Offered as POSC 322 and POSC 422.

POSC 423. Judicial Politics (3)
Rejecting the view that judges mechanically apply the law, the study of judicial politics seeks to understand the behavior of judges as political actors with policy goals. Topics include judicial selection and socialization, judicial policy change, judicial strategy (especially the strategic interaction of judges on multi-judge panels), the interaction of courts in hierarchical judicial systems, the policy impact of judicial decisions, and the courts’ interactions with coordinate branches of government (the executive, Congress, state governments, state courts). Primary focus will be on the federal judiciary, with some discussion of state judicial systems.
Offered as POSC 323 and POSC 423.

POSC 425. American Constitutional Law (3)
An introductory survey of U.S. constitutional law. Special attention given to the historical, philosophical, and political dimensions of landmark Supreme Court cases. Judicial review, federalism, separation of powers, due process, and equal protection. Supreme Court’s involvement in major political controversies: the New Deal, abortion, physician-assisted suicide, school desegregation, and affirmative action.
Offered as POSC 325 and POSC 425.

POSC 426. Constitutions in Practical Politics (3)
Overview of ancient Greek and Roman constitutions, medieval principles, emergence of modern constitutionalism, and the constitutionalist vision of the American and French Revolutions. Examination of contemporary constitutional issues and developments in countries such as Canada, France, Germany, Great Britain, Ethiopia, India, and the United States.
Offered as POSC 326 and POSC 426.

POSC 427. Civil Liberties in America (3)
The Supreme Court’s interpretation of the First Amendment: liberty of religion through the establishment and free exercise clauses, freedoms of speech and the press, and the press, of assembly and association. The “pure tolerance” view examined against subversive speech, “fighting words,” libel, and obscenity. Survey of content-neutral regulation, symbolic expression, and current efforts to limit expression (campus speech codes and the feminist anti-pornography movement).
Offered as POSC 327 and POSC 427.

POSC 428. Topics in Civil Liberties (3)
Rights of the accused as outlined in the Fourth, Fifth, Sixth, and Eighth Amendments. Topics covered are (1) arrests, searches, and seizures, (2) the privilege against compelled self-incrimination, (3) the rights to counsel, confrontation, and jury trial, and (4) the prohibition against cruel and unusual
punishments. Case-specific approach but presents interplay of history, philosophy, and politics as background of each topic. Offered as POSC 328 and POSC 428.

POSC 429. Courts, Public Policy, and Social Change (3)
Examines the social impact of law and use of social research in the legal process, assesses efforts to use law to affect social reform, and empirical studies of legal processes and institutions. Recommended preparation: Graduate standing or consent of department. Offered as LAWS 285 and POSC 429.

POSC 434. Violence and the Political System (3)
Empirical analysis of various theories advanced in the cross-cultural explanation of factors which cause and mediate the occurrence of violence—revolutions, terrorism, and civil disorder—within the political system. Offered as POSC 334 and POSC 434.

POSC 441. Elections, Voters, and Political Parties (3)
Examination of American political parties, their activities, organization, characteristics, and functions. Candidate strategies and electoral history viewed within the context of voter orientations and predispositions, stressing linkages between citizen and party and between party and government. Offered as POSC 341 and POSC 441.

POSC 442. Water (3)
This seminar will explore the history of the meaning of water—that is, the social, cultural, and/or political significance placed on water by individuals and governments in different times and places. It will also examine how humans have acted upon water, and how it has acted upon humans, with great consequences for human life. This seminar will look at the history of water in the context of science, technology and society; public health; political science; and environmental history. Case studies will be drawn from a wide chronological and geographical range; from the ancient world to Renaissance Italy, nineteenth century India, modern Britain, Egypt, and the U.S. The course provides a wide perspective on the themes of the history of human-water interactions, but will also focus closely on some critical cases. Seminar participants will write a research paper on the topic of their choice in the environmental history of water. Offered as: HSTY 342, HSTY 442, POSC 342, POSC 442.

POSC 443. Public Opinion and American Democracy (3)
Examination of theories, concepts and empirical research related to attitudes and the political behavior of mass publics. Offered as POSC 343 and POSC 443.

POSC 446. Women and Politics (3)
Women and Politics involves a critical examination of the impact of gender on the forms and distributions of power and politics, with primary reference to the experience of women in the United States. Major concerns of the course include what we mean by “sex,” “gender,” and “politics”; the relationship between women and the state; how women organize collectively to influence state policies; and how the state facilitates and constrains women’s access to and exercise of political power. The course is organized around four core central to the study of women and politics. The first section of the course focuses on what we mean by “women,” “gender,” and “politics.” In this section, we will consider how these concepts intersect and the ways in which each may be used to deepen our understanding of the workings of governments and political systems, and of women’s relative political powerlessness. The second section of the course employs these concepts to understand the (re)emergence of the U.S. feminist movement, its meanings, practices, and goals, and its transformation across U.S. political history. In the third section, we turn to conventional electoral politics, focusing on women’s candidacies, their campaigns, and women’s voting behavior. In the final section of the course, we consider those general factors that might provide for increased gender equality and improved life status for women, in global, comparative perspective. Offered as POSC 346 and POSC 446 and WGST 346.

POSC 449. Political Science Research Methods (3)
This course examines approaches that political scientists use to understand events and processes. In doing so, the course provides students with skills helpful to completing senior projects, such as the ability to evaluate and conduct research. Through exercises and projects, students will take part in the research process from constructing a question to developing a research design to interpreting results. Students will learn and apply key techniques, including inductive and deductive reasoning, hypothesis construction, operationalization of concepts, measurements, sampling and probability, causal inference, and the logic of controls. They will produce materials common to the discipline, such as research designs. Offered as POSC 349 and POSC 449.

POSC 451. Modern Political Thought (3)
Examination of a limited topic in the study of modern political thought. Topics vary. Offered as POSC 351 and POSC 451.

POSC 452. American Political Thought (3)
Examination of the unique contribution to the science of government made by American political thinkers. Offered as POSC 352 and POSC 452.

POSC 454. Political and Social Philosophy (3)
Justification of social institutions, primarily political ones. Such distinctions as that between de facto and legitimate authority; analysis of criteria...
Once an unfamiliar region to many people of the world, Central Asia took center stage in the fall of 2001 as a result of the U.S. campaign against terrorism. This course will introduce students to the politics of Central Asia, focusing on the region today composed of Uzbekistan, Turkmenistan, Tajikistan, Kyrgyzstan, and Kazakhstan. We will review the nationalism, foreign relations, religion, ethnicity, and economics of the region.

Offered as ETHS 362, POSC 362, and POSC 462.

POSC 463. Comparative Analysis of Elections and Electoral Systems (3)
Elections involve more than a simple act of voting to express individual preferences. The rules under which worldwide elections are held determine who controls the executive and how votes are converted into legislative seats. The mechanics of various electoral arrangements will be examined in detail and the consequences for the political system discussed in terms of strategies and desired outcomes on the part of contestants. Students will research individual countries and analyze recent elections from both qualitative and quantitative perspectives, including introduction to geospatial data for mapping variations in electoral behavior.

Offered as POSC 363 and POSC 463.

POSC 464. Dictatorship and Democracy in Modern Latin America (3)
Examination of political leadership in 20th-century Latin America, exploring the nature, causes, and consequences of dictatorship and democracy in the region, moving from the collapse of oligarchic rule and the emergence of populism in the 1930s and 1940s, to the end of democracy and establishment of military regimes in the 1960s and 1970s, and ultimately to the contemporary processes of democratization and economic liberalization.

Offered as ETHS 364, POSC 364, and POSC 464.

POSC 466. Government and Politics of Africa (3)
Comparative analysis of the political forces and organizations currently functioning in Africa, as well as a survey of the formal government institutions. Special emphasis on single-party rule, military rule, and the political ramifications of African socialism, tribalism and the problems of national integration.

Offered as ETHS 366, POSC 366, and POSC 466.

POSC 467. Western European Political Systems (3)
Comparative analysis of sociopolitical systems of selected Western European industrial democracies, using North American systems as a point of comparison.

Offered as POSC 367 and POSC 467.

POSC 469. Current Controversies in Latin American Politics and Society (3)
In addition to questions about race, religion,abor-
tion, the drug industry, immigration, democracy, private property, and free trade, the course will tackle Latin America’s apparent shift to the political and ideological left, Chavez’s “Imperialism,” and Cuba’s humanitarian aid.

Offered as ETHS 369, POSC 369 and POSC 469.

POSC 470A. Political Economy (3)
Focus on debates concerning the proper relationship between political and economic systems, including conservative, liberal, and radical perspectives. The politics of international economics and the economics of international politics receive separate attention. The course concludes with study of "modern" political economy and the application of economic theory to the study of political systems.

Offered as POSC 370A and POSC 470A.

POSC 470C. The United States and Asia (3)
Survey and analysis of U.S.-Asia relations in the post-World War II period. Focus specifically is on the interaction of politics and economics in the United States’ relations with Japan, China, and Southeast Asian countries. Topics will include the role of Asia in U.S. Cold War policies, the dynamics of U.S.-Japan alliance politics, post-Cold War issues involving U.S. foreign policy toward Asia, a history and analysis of economic conflict cooperation, and an examination of the move toward Asia-Pacific “regionalism.”

Offered as POSC 370C and POSC 470C.

POSC 470G. U.S. Intelligence and National Security (3)
Examination of the impact of the intelligence process on foreign policy making and superpower relations. Covers the life cycle of United States strategic intelligence from the collection of data to formulation of analytic judgments and the policy-level uses of intelligence. Emphasis on contemporary intelligence issues and processes, but includes the formative period of modern American intelligence in the World War II era.

Offered as POSC 370G and POSC 470G.

POSC 470J. International Law and Organizations (3)
Study of international organizations and international law as two means for regulating and coordinating nation-state behavior. History of the two techniques will be traced, covering 19th century efforts at cooperation, the League of Nations and the United Nations, regional and specialized global organization. The functions of international law in global politics will be stressed, with primary focus on the evolving role of law in dealing with global problems, e.g., war, the environment, economic cooperation, and human rights.

Offered as POSC 370J and POSC 470J.

POSC 470K. Nationalism, Ethnicity, and Religion in World Politics (3)
Examination of the post-Cold War surge in conflicts among nationalisms, ethnic groups, and religions with particular attention to the former Yugoslavia, Ireland, India, Africa, and the Middle East.

Offered as ETHS 370K, POSC 370K, and POSC 470K.

POSC 471. Natural Resources and World Politics (3)
Examination of the political causes and ramifications of the uneven distribution of the valuable natural resources for modern industrial societies. Strategic and military issues and the exploitation of the sea bed. Examination in some detail of selected commodity issues, including petroleum, copper and uranium.

Offered as POSC 371 and POSC 471.

POSC 472. The United Nations in the Post-Cold War World (3)
The United Nations has become the focus of a debate over its effectiveness as a global organization dedicated to promoting world peace. Some critics believe it is time for the U.N. to move forward in this regard, while others see the U.N. as an anachronistic, bloated bureaucracy sorely in need of reform. This course will consider the United Nations from the perspective of powerful states such as the United States, as well as from the perspective of weaker ones, and also will consider areas such as peacekeeping, human rights, economic development, political reform, and the U.N.'s involvement with non-state actors such as terrorists.

Offered as POSC 372 and POSC 472.

POSC 473. Politics of the European Union (3)
Study of the origins, operations, and prospects for the European Union. This can include the historical context for the effort to restrict national rivalries (which fueled two world wars) and create common interests; the diplomatic challenges in finding common ground; the tasks and processes of governance within the EU, including its governing institutions, enforcement of terms for European Monetary Union and the operations of its bureaucracies; the social pressures that create policy challenges (such as agriculture policy and immigration); broad tensions within the enterprise (e.g., “broadening” vs. “deepening”), and the EU’s potential place in international politics, especially the efforts to create a common foreign and security policy and the possible implications of the Euro for international political economy.

Offered as POSC 373 and POSC 473.

POSC 474. Politics of Development in the Global South (3)
Exploration of the post-World War II emergence of the Global South nations of Africa, Asia, the Middle East, Latin America, and Eastern Europe arena.

Offered as ETHS 374, POSC 374, and POSC 474.

POSC 476. United States Foreign Policy (3)
Focus on U.S. foreign policy making with a dynamic network of executive and congressional actors and organizations; analysis of traditional and
POS 477. Politics of Russia (3)
Russia faces three problems: the creation of a sovereign state, the development of a new political system, and the restructuring of its economy. In this course we will challenge the assumption that the outcome of these three transitions will be a strong, democratic, capitalist country. We will ask whether civil war, organized crime, an immature party system, poor social services, and nomenklatura privatization bode poorly for these three transformations.
Offered as POSC 377 and POSC 477.

POS 478. International Relations Theory (3)
This course is a seminar in international relations theory. As such, we will bring a wide range of theoretical perspectives to bear on issues and debates in the area of international relations by systematically studying the evolution of the world system. The seminar is roughly divided into a first half focusing on war and the political system, and a second half focusing on trade, finance and the economic system. Each section devotes particular attention to ethical problems associated with political and economic issues. This course should develop students’ ability to read and critically evaluate academic literature in the field of international relations, and enable students to produce a scholarly paper on one substantive area of the field.
Offered as POSC 378 and POSC 478.

POS 479. Middle East: Politics, Economics, and American Policy (3)
Examination of continuing conflicts, major trends, and internal political and economic developments affecting U.S. policy in the Middle East region. Discussions include human rights, petroleum economics, and Islamic politics.
Offered as POSC 379 and POSC 479.

POS 480. Public Policy and Aging (3)
Overview of aging and the aged. Concepts in the study of public policy. Policies on aging and conditions that they address. The politics of policies on aging. Emergent trends and issues. Offered as ANTH 498, BETH 496, EPBI 408, GER0 496, HSTY 480, MPH 408, NURS 479, NURS 579, POSC 480, and SOCI 496.

POS 481. City as Classroom (3)
In this course, the city is the classroom. We will engage with the urban terrain. We will meet weekly off-campus, interact with community members, and interface--both literally and figuratively--with the city as a way to examine the linkages between historical, conceptual, and contemporary issues, with particular attention paid to race and class dynamics, inequality, and social justice. This course will have four intersecting components, primarily focusing on American cities since the 1930s: the social and physical construction of urban space, the built environment, life and culture in the city, and social movements and grassroots struggles.
Offered as HSTY 381, POSC 381, SOCI 381, HSTY 481, POSC 481, and SOCI 481.

POS 483. Health Policy and Politics in the United States (3)
Overview of the principal institutions, processes, social forces, and ideas shaping the U.S. health system. Historical, political, economic, and sociological perspectives on the health system are explored as well as the intellectual context of recent policy changes, challenges, and developments. Students will acquire a sense of how health services are financed and delivered in the U.S. They will also learn how to assess its performance compared to that of other similar countries.
Offered as POSC 383 and POSC 483.

POS 484. Ethics and Public Policy (3)
Evaluation of ethical arguments in contemporary public policymaking discourse. That is, approaches to evaluating not only the efficiency of policy (Will this policy achieve its end for the least cost?) but also the ethics of policy (Are a policy’s intended ends ethically justified or “good,” and are our means to achieve those ends moral or “just”? ). Overview of political ideologies that supply U.S. political actors with their ethical or moral arguments when proposing and implementing public policy, followed by an application of these differing perspectives to selected policy areas such as welfare, euthanasia, school choice, drug laws, censorship, or others.
Offered as POSC 384 and POSC 484.

POS 485. U.S. Bureaucratic Politics (3)
Bureaucracy is one of civilization’s most important inventions. It is a way of coordinating very large numbers of people so as to do work, make decisions, and exercise power. Without it, much of modern life would be impossible. Yet “bureaucracy” is normally seen, in public discussion, as a problem, instead of as a solution. This course will consider both the reasons for and pathologies of bureaucratic organization. Its special focus is bureaucracy in American government. The course therefore will provide some introduction to the study of American public administration, but with special emphasis on how the work and performance of public bureaucracies in the United States is shaped by the specific tasks they are given and the distribution of power in the American political arena.
Offered as POSC 385 and POSC 485.

POS 486. American Public Policy Process (3)
Focus on the concepts and strategies concerned with moving the public policy process to action. Agenda-setting, issue definition, and feedback techniques will be a particular focus. Assessing political change, support, and obstacles also will be covered, as well as how policy systems operate with regard to different types of issues, such as regulatory, distributive, and redistributive policies, and in different configurations ranging from subgovernmental to issue networks and advocacy coalitions.
Offered as POSC 386 and POSC 486.

POS 487. Comparative Public Policy in Advanced Industrial Societies (3)
The study of comparative public policy focuses on three obvious questions: First, how do policies differ among countries? Second, why do policies differ? For example, what explains the differences in policies about health or the environment or energy or pensions? Third, what difference does it make? Is one set of policies better or worse than others? How can we tell? This course will consider each of these questions, focusing especially on the differences between the United States and other advanced industrial countries, and how these questions affect political and social life in those countries.
Offered as POSC 387 and POSC 487.

POS 489. Special Topics in American Politics and Policy (3)
Specific topic will vary but will consist of an in-depth investigation of a particular policy area or political phenomenon. Topics will involve policy controversies of some current interest.
Offered as POSC 389 and POSC 489.

POS 495. Independent Study (3)
Graduate level independent study taken for a grade.

POS 601. Individual Investigation (1–6)
The student must submit to the departmental office a project prospectus form, approved and signed by the faculty project supervisor, no later than the end of the second week of classes. The prospectus must outline the goals of the project and the research methodology to be used and is part of the basis for grading. The prospectus form is available from the departmental office.
Prereq: Predoctoral prospectus form, graduate standing, and consent of department.

POS 701. Dissertation Ph.D. (1–9)
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

DEPARTMENT OF PSYCHOLOGY
103 Mather Memorial
www.case.edu/artscl/psych
Phone: 216-368-2686; Fax: 216-368-4891
Robert L. Greene, Chair
E-mail: robert.greene@case.edu

The Department of Psychology offers programs leading to both undergraduate (Bachelors of Arts) and graduate (Master of Arts and Doctor of Philosophy) degrees. Programs in psychology can be selected in preparation for graduate work in the field, as background for a variety of human service-oriented professions, or to obtain general knowledge and understanding of behavior that is applicable in many different career fields.
DEPARTMENT FACULTY

Robert L. Greene, Ph.D.
(Yale University)
Professor and Chair
Human memory and cognition

Amin M. Connell, Ph.D.
(Emory University)
Jesse Hauk Shera Assistant Professor
Internalizing problems; coping skills during adolescence

Heath A. Demaree, Ph.D.
(Virginia Tech)
Associate Professor
Cerebral and psychophysiological bases of emotion

Douglas K. Detterman, Ph.D.
(University of Alabama, Tuscaloosa)
Louis D. Beaumont University Professor
Human intelligence and mental retardation

Anastasia Dimitropoulos, Ph.D.
(Vanderbilt University)
Assistant Professor
Genetic mental retardation syndromes; compulsive behavior in MR/DD; functional neuroimaging

Julie J. Edline, Ph.D.
(State University of New York, Stony Brook)
Associate Professor
Social relationships; transgression; moral and religious issues

Joseph F. Fagan III, Ph.D.
(University of Connecticut)
Lucy Adams Leffingwell Professor of Psychology
Development of and individual differences in cognition, perception, and intelligence

Norah C. Feeny, Ph.D.
(Bryn Mawr College)
Associate Professor
Evaluation of interventions for anxiety (e.g., post-traumatic stress disorder) and mood disorders

Grover C. Gilmore, Ph.D.
(Johns Hopkins University)
Professor; Dean, Mandel School of Applied Social Sciences
Perceptual development and aging; visual information processing; memory; psychophysics

Bonnie M. Lawrence, Ph.D.
(Washington University)
Assistant Professor
Sensorimotor transformations; response selection; working memory; MRI research

T. J. McCallum, Ph.D.
(University of Southern California)
Associate Professor
Older adults; caregiving; ethnicity; stress and coping

James C. Overholser, Ph.D.
(Ohio State University)
Professor
Adult psychopathology; depression; suicide; personality disorders

Amy Przeworski, Ph.D.
(Pennsylvania State University)
Assistant Professor
Anxiety disorders; emotion regulation; cultural factors in family interactions

Sandra W. Russ, Ph.D.
(University of Pittsburgh)
Professor
Creativity; affective development in children; personality assessment; coping mechanisms in children

Elizabeth J. Short, Ph.D.
(University of Notre Dame)
Professor
Cognitive psychology; applied developmental; learning disabilities

Lee A. Thompson, Ph.D.
(University of Colorado, Boulder)
Professor
Human behavior genetics; child development

Lecturer
Jennifer L. Butler, Ph.D.
(Case Western Reserve University)
Social psychology

Adjunct Faculty
Jane R. Buder-Shapiro, Ph.D.
Adjunct Assistant Professor; Private Practice

Cameron Camp, Ph.D.
Adjunct Professor; Myers Research Institute

Sandra Caramela-Miller, Ph.D.
Adjunct Assistant Professor; Cuyahoga County Coroner’s Office

Dennis Drotar, Ph.D.
Adjunct Professor; Cincinnati Children’s Hospital Medical Center

Robert Goldberg, Ph.D.
Adjunct Assistant Professor; Cleveland Veterans Administration Medical Center

Vanessa Jensen, Ph.D.
Adjunct Assistant Professor; The Cleveland Clinic

Susan M. Knell, Ph.D.
Adjunct Assistant Professor; Spectrum Psychological Associates

Marilyn Malkin, Ph.D.
Adjunct Assistant Professor; Private Practice

Aarti Pyati, Ph.D.
Adjunct Assistant Professor; University Counseling Services

Jeffrey Rosenbaum, Ph.D.
Adjunct Assistant Professor; Children’s Aid Society/Beech Brook

Philip Safford, Ph.D.
Adjunct Professor; Emeritus, Kent State University

Ethan Scharf, Ph.D.
Adjunct Assistant Professor; Spectrum Psychological Associates

Jes-James Sellers, Ph.D.
Adjunct Assistant Professor; University Counseling Center

Jeremy Shapiro, Ph.D.
Adjunct Assistant Professor; Advanced Therapy Center

Harry Sivic, Ph.D.
Adjunct Assistant Professor; Northeast Behavioral Healthcare

Kenneth Weiss, Ph.D.
Adjunct Assistant Professor; Veterans Administration Medical Center at Brecksville

Lucene Wisniewski, Ph.D.
Adjunct Assistant Professor; Cleveland Center for Eating Disorders

Eric Youngstrom, Ph.D.
Adjunct Associate Professor; Associate Professor of Psychology, University of North Carolina Chapel Hill

Secondary Faculty
Richard E. Boyatzis, Ph.D.
Professor of Organizational Behavior, Weatherhead School of Management

Alan Castro, Ph.D.
Senior Instructor; University Hospitals Case Medical Center

Carin L. Cunningham, Ph.D.
Associate Professor of Pediatrics, School of Medicine

Howard Hall, Psy.D., Ph.D.
Associate Professor, School of Medicine/Rainbow Babies and Children’s Hospital

Rebecca Hazen, Ph.D.
Assistant Professor, School of Medicine/Rainbow Babies and Children's Hospital
Leslie L. Heinberg, Ph.D.
Associate Professor, The Cleveland Clinic
Carolyn Landis, Ph.D.
Assistant Professor, School of Medicine/Rainbow Babies and Children's Hospital
Britt A. Nielsen, Ph.D.
Assistant Professor of Psychiatry, School of Medicine
Lynn Singer, Ph.D.
Professor, School of Medicine/University Hospitals
Terry Stancin, Ph.D.
Professor, School of Medicine/MetroHealth Medical Center
Mariann Suarez, Ph.D.
Assistant Professor of Pediatrics, School of Medicine
Thomas P. Swales, Ph.D.
Assistant Professor, School of Medicine/MetroHealth Medical Center
Gerry Taylor, Ph.D.
Professor of Pediatrics, School of Medicine
Kathleen Wells, Ph.D.
Professor, Mandel School of Applied Social Sciences
Carol Sue White, Ph.D.
Associate Professor, School of Medicine/MetroHealth Medical Center
Abraham Wolf, Ph.D.
Associate Professor of Psychiatry, School of Medicine
James M. Yokely, Ph.D.
Assistant Professor of Psychiatry, School of Medicine
Clinical Instructor; Hill House
Lisa Damour, Ph.D.
Clinical Instructor; Private Practice
Matthew A. Fuller, Ph.D.
Clinical Instructor; Veterans Affairs Medical Center
William Hale, Ph.D.
Clinical Instructor; University Counseling Services
Maureen Kreick, Ph.D.
Clinical Instructor; Private Practice
Maryann McGlenn, Ph.D.
Clinical Instructor; University Counseling Services
Pamela Nilsson, Ph.D.
Clinical Instructor; University Counseling Services
Richard Pazol, Ph.D.
Clinical Instructor; University Counseling Services
Joy Pengilly-Wyatt, Ph.D.
Clinical Instructor; University Counseling Services
David Pincus, D.M.H.
Clinical Assistant Professor of Psychiatry, School of Medicine
Robert Smith, Ph.D.
Clinical Assistant Professor; Private Practice
Terry Tobias, Ph.D.
Clinical Assistant Professor; Private Practice
Richard Weisberg, Ph.D.
Clinical Instructor; Access Behavioral Care

UNDERGRADUATE PROGRAMS

Major
Psychology majors must complete 30 hours of course work in the department.

Required courses:
- PSCL 101 General Psychology I (3)
- PSCL 282 Quantitative Methods in Psychology (3)

Three additional courses chosen from:
- PSCL 315 Social Psychology (3)
- PSCL 352 Physiological Psychology (3)
- PSCL 353 Psychology of Learning (3)
- PSCL 355 Sensation and Perception (3)

Elective courses in the department. Psychology majors must complete 30 hours of course work in the department.

Departmental Honors
Junior majors with a 3.0 overall GPA and a 3.25 GPA in psychology are encouraged to apply to the department's honors program. This program consists of one three-credit course, PSCL 395, in which students carry out, under faculty supervision, an independent project in their area of interest. Satisfactory completion of a paper based on this research qualifies students to receive their degree with Honors in Psychology noted on their academic transcript. PSCL 375 (Research Design and Analysis) is a prerequisite to PSCL 395.

Integrated Graduate Studies
The Department of Psychology participates in the Integrated Graduate Studies program. Interested students should note the general requirements and the admission procedures in this bulletin and may consult the department for further information.

Minor
(15 hours)
Required Course:
- PSCL 101 (3 hours)
Electives:
A minimum of four courses (12 hours) are chosen by the student in consultation with his/her advisor. Practica and independent study are available to minors but cannot be used to satisfy the minor requirement.

Graduate Programs
The Department of Psychology offers full-time programs leading to a Ph.D. in clinical or experimental psychology. These programs give students a thorough grounding in basic areas of psychological fact and theory and prepare them for careers as researchers, teachers, and practitioners. The Master of Arts degree can be earned in the department as part of work toward a doctorate.
Clinical Psychology. The department’s program in clinical psychology, which has been approved by the American Psychological Association, emphasizes the scientist-practitioner model. Students participate in an integrated curriculum of basic and applied courses, research activities, and practicum and pre-internship placements. The program’s goal is to prepare students to make meaningful contributions to the science and profession of psychology by instructing them in broad applications of clinical skills and research methods.

Experimental Psychology. Doctoral training in experimental psychology prepares the student for an academic career in teaching and research. It offers concentrations in developmental psychology, adulthood and aging, cognitive psychology, mental retardation research, and social psychology. Faculty members help students develop flexible programs of study, according to individual interests.

Additional information about graduate work in psychology is available at the departmental website: www.case.edu/artsci/pscl.

COURSE DESCRIPTIONS

PSCL 101. General Psychology I (3)
Methods, research, and theories of psychology. Basic research from such areas as psychophysiology, sensation, perception, development, memory, learning, psychopathology, and social psychology.

PSCL 102. General Psychology II (3)
The applications of psychological research in normal problems of adjustment. Topics include: coping with anxiety, romance and marriage, and interpersonal behavior.

PSCL 230. Child Psychology (3)
Basic facts and principles of psychological development from the prenatal period through adolescence. Recommended preparation: PSCL 101.

PSCL 282. Quantitative Methods in Psychology (3)
The theory and application of basic methods used in the analysis of psychological data. Not available for credit to students who have completed STAT 201 or ANTH 319.

PSCL 313. Psychology of Personality (3)
The development and organization of personality; theories of personality and methods for assessing the person; problems of personal adjustment.

PSCL 315. Social Psychology (3)

PSCL 317. Health Psychology (3)
Examines psychological processes that affect physical health. Covers the physiological factors affecting the immune system, chronic physical disorders, pain, compliance with prescribed medical treatments, the effects of stress and coping, the effects of the patient-physician interaction, and the psychological aspects of the hospital and the health care systems. Recommended preparation: PSCL 101.

PSCL 321. Abnormal Psychology (3)

PSCL 325. Psychotherapy and Personality Change (3)
Three methods of psychotherapy (behavioral, psychoanalytic, and client-centered) are discussed. The therapy techniques and the manner by which personality change is effected are examined. Recommended preparation: PSCL 101.

PSCL 329. Adolescence (3)
Psychological perspectives on physical, cognitive, and social development. Recommended preparation: PSCL 101.

PSCL 334C. Seminar and Practicum: Hospitalized Children (3)
Supervised field placement and attendance at staff conferences in various child and adolescent settings. Regular seminar meetings. Prereq: PSCL 230.

PSCL 335C. Seminar and Practicum: Hospitalized Child (3)
Supervised field placement and attendance at staff conferences in various child and adolescent settings. Regular seminar meetings. Prereq: PSCL 230 and Junior or Senior Status.

PSCL 338. Seminar and Practicum in Adolescents (3)
Supervised field placement and attendance in early childhood, child, and adolescent settings including preschools, schools, hospitals, and neighborhood centers. This class is used to fulfill requirements by the Ohio Department of Education teacher licensure program. Recommended preparation: PSCL 101, EDUC 301, EDUC 304, and permission of program director. Offered as EDUC 338, PSCL 338, and SOC 338.

PSCL 344. Developmental Psychopathology (3)
This course will focus on the interplay of biological, psychological, familial, and social determinants of disorders ranging from autism to delinquency and bulimia. Recommended preparation: PSCL 230 or PSCL 321.

PSCL 350. Behavior Genetics (3)
Examines the impact of both nature and nurture on human behavior. Basic quantitative genetic methodology will be covered. Current family, twin, and adoption studies in the areas of personality, intelligence, alcoholism, criminality, and psychopathology will be reviewed. Recommended preparation: PSCL 101.

PSCL 352. Physiological Psychology (3)
The nervous system as it relates to behavior. Recommended preparation: PSCL 101.

PSCL 353. Psychology of Learning (3)
The basic methods in the study of learning. The major theories proposed to account for the learning process. Development of the fundamental concepts and principles governing the learning process in both humans and lower animal. Recommended Preparation: PSCL 101.

PSCL 357. Cognitive Psychology (3)

PSCL 369. Adult Development and Aging (3)
An overview of concepts and research relating to adult development and aging. The lifespan perspective will be used in examining major developmental paradigms. Personality and cognitive lines of development will be traced across the lifespan. Data from both longitudinal and cross-sectional studies will be analyzed. Both normal and pathological aging will be discussed. Special emphasis will be given to areas of cognitive deterioration in aging. Implications for optimal adult development and aging will also be discussed.

PSCL 370. Human Intelligence (3)
Survey of individual differences in human intellect including construction and administration of intelligence tests, theories and models of intelligence, and the role of heredity and environment in intelligence and the development of intelligence. This course will also examine the relationships of cognitive abilities to intelligence and human to artificial intelligence. Recommended preparation: PSCL 101.

PSCL 375. Research Design and Analysis (3)
Conceptual and methodological issues confronted by the behavioral scientist conducting research. Major experimental designs and statistical procedures. Intuitive understanding of the mathemati-
PHYSICAL OPERATIONS. Recommended preparation: PSCL 282.
SAGES DEPT SEMINAR

PSCL 379. Neurodevelopmental Disabilities (3)
Ways in which neurobehavioral development can go awry, the causes of such deviations, and their consequences. The course builds on basic psychological and neuroscience concepts to explore the manner in which developmental disabilities occur, ways of preventing disabilities, and approaches to ameliorating and managing disabling conditions. Recommended preparation: PSCL 101 and PSCL 230.

PSCL 382. Psychological Measurement (3)

PSCL 388. Human Sexual Behavior (3)
Sex is approached as a form of personal and interpersonal behavior. A broad range of theories from social psychology will be used to explain human sexual behavior, and these will be evaluated by using facts and findings from recent research studies. Topics include sexual relationships, gender differences, promiscuity, rape and coercion, finding and choosing sex partners, sexual risk-taking, harassment, sexual identity and orientation, cultural influences and differences, evolution of sexual motivations, prostitution, pornography, and love. Recommended preparation: PSCL 101 and PSCL 315.

PSCL 390. Seminars in Psychology (1–3)
Surveys of special subject areas. Topics vary in response to faculty and student interests. Small group discussion. Prerequisite depends on content.

PSCL 393. Experimental Child Psychology (3)
The development of behavior from birth to adolescence. Growth of basic processes such as perception, learning, memory, intelligence, and language in the light of current theoretical models. Recommended preparation: PSCL 101.

PSCL 394. Psychology Capstone Seminar: Current Problems (3)
This seminar course will revolve around the identification and critical examination of current problems in society. Insights gained from psychological research will be applied to better understand these problems. Successful completion of the course will require critical analysis of published research, integration of information from different areas of psychology and from different disciplines, an oral presentation, and a final written research report including a literature review. Prerequisite: PSCL 375.
SAGES Senior Cap

PSCL 395. Capstone and Honors Program (3)
Supervision in carrying out an independent research study in the student’s area of interest. Prerequisite: PSCL 375.
SAGES Senior Cap

PSCL 397. Independent Study (1–3)
Individual study involving specific programs of reading, research, and special projects. Prerequisite: PSCL 101.

PSCL 398C. Child Policy Externship and Capstone (3)
This course provides students with externships in child policy. These externships give students an opportunity to work directly with professionals who design and implement policies that impact the lives of children and their families. Agencies involved are active in areas such as childcare, education, juvenile justice, and physical and mental health. Students apply for the externship. Selected students are placed in a local child policy agency. An individualized learning plan is developed in consultation with the Childhood Studies Program faculty, the supervisor in the agency, and the student. Offered as ANTH 398C, CHST 398C, PSCL 398C.
SAGES Senior Cap

PSCL 401. Sensation and Perception (3)
Role of sensory and perceptual processes in adjustment. Theories and experimental work dealing with such topics as nativism vs. empiricism, perception without awareness, perception and personality, effects of drugs on personality, effects of drugs on perception, pathology of perception. Limited to graduate students.

PSCL 402. Cognition and Information Processing (3)
Aspects of cognition beyond the area of sensation and perception, involving symbolic processes, especially problems of meaning, conceiving, reasoning, judging, and thinking.

PSCL 403. Physiological Foundations of Behavior (3)
Fundamental neurological processes controlling behavior.

PSCL 404. Learning Theory (3)
The research literature in learning: theoretical formulations of contemporary learning theorists. Limited to graduate students.

PSCL 405. Personality Theory (3)
General problems and systematic points of view in the analysis of personality. Limited to graduate students.

PSCL 407. Research Design and Quantitative Analysis I (3)
Intermediate research design and statistical analysis used in psychological research. Statistical inference from single variables, elementary principles of probability, correlation and regression. Recommended preparation: PSCL 282.

PSCL 408. Research Design and Quantitative Analysis II (3)

PSCL 409. Advanced Social Psychology (3)
Major theories, methods, and problem areas of social psychology. Psychological development of the individual group structures and dynamics.

PSCL 410. Developmental Psychology (3)
The research literature and theoretical formulation in the area of developmental psychology. Limited to graduate students.

PSCL 412. Measurement of Behavior (3)

PSCL 417. Multivariate Data Analysis (3)
Major statistical techniques used in experimental and survey research containing more than one dependent variable. Techniques discussed include multiple regression, canonical correlation, multivariate analysis of variance, discrimination analysis, cluster analysis and factor analysis. Recommended preparation: PSCL 408.

PSCL 418. History and Systems (3)
Historical antecedents of modern psychology.

PSCL 424. Clinical Interviewing (3)
Introduction to diagnostic and therapeutic interviewing.

PSCL 425. Methods of Assessment I (3)
Limited to graduate students in clinical psychology. Required preparation: Graduate standing in psychology with department permission.

PSCL 426. Methods of Assessment II (3)
Methods of psychological assessment, emphasizing personality and family function in childhood and adulthood. Recommended preparation: Limited to Grad students in Clinical Psychology. Requires approval of the director of clinical training.

PSCL 429. Practicum in Assessment I (1)

PSCL 430. Practicum in Assessment II (1)
Recommended preparation: Approval of the director of clinical training or concurrent enrollment in PSCL 426.
PSCl 431. Supervised Field Placement Year 2 (0)
Supervised training in clinical psychology in agency, hospital, or university settings. Required in Fall and Spring terms of all second year students in the clinical psychology training program. Recommended preparation: PSCL 425, PSCL 426.

PSCl 444. Developmental Psychopathology (3)
This course will focus on the interplay of biological, psychological, familial, and social determinants of disorders ranging from autism to delinquency and bulimia. Recommended preparation: PSCL 230 or PSCL 321. Offered as PSCL 344 and PSCL 444.

PSCl 451. Special Topics in Psychology (1)
These 1 credit mini-courses should provide enjoyable opportunities for students to explore interesting material related to clinical psychology that has not been covered in other required courses. A primary goal is to stimulate interest and discussion in the area. Thus, students will not be expected to write term papers or take any exams. In terms of background reading, students should be provided with roughly one journal article per hour of class meeting. The course is graded pass/np pass, and grading will be based on class attendance and class participation.

PSCl 453. Seminars in Psychology (1–3)
A special problem or topic. Content varies with student and faculty interest. Recent offerings: creative thinking in research, community psychological, evaluation of community processes, experimental and computer methods, consultation, and psychoanalytic ego psychology.

PSCl 469. Psychology of Aging (3)
Normal psychological development in later life; psychological development in the oldest old; definitions and assessment of successful aging.

PSCl 497. Graduate Independent Study (1–3)
Independent research and reading programs with individual members of the faculty.

PSCl 501. Seminar: Pediatric Psychology (1–3)
Seminar on current research topics, research design and methodological issues related to pediatric psychology. Introductory lectures provide an overview of research populations, methods, and practical issues appropriate to research with pediatric populations.

PSCl 502. Seminar: Pediatric Psychology (1–3)
Seminar examining specific topics in pediatric psychology. Topics will deal with issues of infant development. Infants at risk for disability, neuropsychology and learning disabilities, and childhood psychopathology. Recommended preparation: Limited to Graduate students in Psychology department.

PSCl 524. Advanced Psychopathology (3)
Theoretical issues and current research data bearing on major patterns of psychological disturbance.

PSCl 525. Ethical and Professional Issues in Psychology (3)
Consideration of legal and ethical principles in research and practice in clinical psychology and contemporary controversies in professional psychology. Recommended preparation: Graduate standing in Psychology.

PSCl 557. Principles of Intervention (3)
Review of principles of psychological change, models of intervention, and process/outcome research related to intervention.

PSCl 529A. Practicum in Intervention I: Behavior Therapy (1)
Recommended Preparation: Graduate standing in clinical psychology.

PSCl 529C. Practicum in Intervention I: Psychodynamic (1)
Recommended preparation: Graduate standing in clinical psychology.

PSCl 530A. Practicum in Intervention II: Behavior Therapy (1)
Recommended preparation: Graduate standing in clinical psychology.

PSCl 530C. Practicum in Intervention II: Psychodynamic (1)
Recommended preparation: Graduate standing in clinical psychology.

PSCl 531A. Seminar in Intervention I: Behavior Therapy (2)
Theoretical issues and research on psychological interventions. Recommended preparation: Graduate standing in clinical psychology.

PSCl 531C. Seminar in Intervention I: Psychodynamic (2)
Theoretical issues and research on psychological interventions. Recommended preparation: Graduate standing in clinical psychology.

PSCl 532A. Seminar in Intervention II: Behavior Therapy (2)
Theoretical issues and research on psychological interventions. Recommended preparation: Graduate standing in clinical psychology.

PSCl 532C. Seminar in Intervention II: Psychodynamic (2)
Theoretical issues and research on psychodynamic intervention. Recommended preparation: PSCL 531C and graduate standing in clinical psychology.

PSCl 535. Child and Family Intervention (2)
A course for advanced clinical graduate students that covers psychodynamic and cognitive behavioral approaches for working with children and adolescents and systems approaches for working with families.

PSCl 536. Advanced Child and Family Intervention (2)
A course for advanced clinical graduate students that covers evidence-based approaches to child and family therapy as well as parent training. Special emphasis on empirically guided treatment planning and outcome evaluation.

PSCl 537. Child and Family Case Seminar I (1)
Clinical graduate students in child and family field placements present and receive group supervision on ongoing cases.

PSCl 538. Child and Family Case Seminar II (1)
Clinical graduate students in child and family field placements present and receive group supervision on ongoing cases.

PSCl 539. Supervised Field Placement Year 3 (0)
Supervised training in clinical psychology in agency, hospital, or university settings. Required in Fall and Spring terms of all third year students in the clinical psychology training program. Recommended preparation: PSCL 531A, PSCL 532A.

PSCl 540. Supervised Field Placement Year 4 (0)
Supervised training in clinical psychology in agency, hospital, or university settings. Required in Fall and Spring terms of all fourth year students in the clinical psychology training program. Recommended preparation: PSCL 531A, PSCL 532A.

PSCl 601. Special Problems (1–18)
(Credit as arranged.)

PSCl 651. Thesis M.A. (1–18)
(Credit as arranged.)

PSCl 700. Internship (0)
Full-time predoctoral internship in clinical psychology. Required of all students in clinical psychology program. Registration requires written consent of director of clinical psychology training and must be for one calendar year.

PSCl 701. Dissertation Ph.D. (1–18)
(Credit as arranged.)

Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

PUBLIC POLICY PROGRAM
113 Mather House
www.case.edu/artsci/public_policy
Phone: 216-368-2424
Joseph White, Director
E-mail: joseph.white@case.edu

CASE WESTERN RESERVE UNIVERSITY
Undergraduate or graduate courses with public policy content are offered through the Departments of Anthropology, Geological Sciences, History, Political Science, and Sociology in the College of Arts and Sciences; through the Department of Economics and other departments in the Weatherhead School of Management; through the School of Law, the School of Medicine, and the Frances Payne Bolton School of Nursing; and through the Mandel School of Applied Social Sciences and the Mandel Center for Nonprofit Organizations. Students can engage with policy issues both through courses and through the extracurricular programming of the Center for Policy Studies and other university bodies.

A minor in public policy is available to undergraduates in the College of Arts and Sciences and in the economics and management programs in the Weatherhead School of Management. The course requirements are in four categories, listed below. Substitutions can be made under exceptional circumstances, at the discretion of the program director.

PROGRAM ADVISORY COMMITTEE
Joseph White, Ph.D.
Luxenberg Family Professor of Public Policy, Department of Political Science; Director, Center for Policy Studies; Director, Public Policy Program

Robert H. Binstock, Ph.D.
Professor of Epidemiology and Biostatistics, School of Medicine

Brian Gran, Ph.D., J.D.
Associate Professor of Sociology

David C. Hammack, Ph.D.
Hiram C. Haydn Professor of History

Susan Helper, Ph.D.
AT&T Professor of Regional Economic Development, Department of Economics, Weatherhead School of Management

UNDERGRADUATE PROGRAMS

Minor
(15 Hours)

Course requirements for the minor are as follows:

1. The policy process: one course from POSC 386, 383, or 306
2. Economic analysis: one course from ECON 205 or 102
3. Policy making institutions: one course selected from HSTY 256, 358, 400; POSC 308, 310, 323, 384, 385
4. Two courses on a particular field of public policy, selected with the approval of the program director. A list of courses that have been approved in the past is available on the Public Policy program’s Web site.

DEPARTMENT OF RELIGIOUS STUDIES

111 Mather House
www.case.edu/artsci/rlgn
Phone: 216-368-2210; Fax: 216-368-4681
Peter J. Haas, Chair
E-mail: peter.haas@case.edu

The academic study of religion at Case Western Reserve University is multicultural, non-sectarian, and both disciplinary and interdisciplinary. Students examine a range of past and present cultures and societies using methods and approaches drawn from the humanities, arts, social sciences, and sciences, all of which sharpen critical and evaluative skills. Religious beliefs, institutions, and practices are studied with emphasis placed on the critical problems and possibilities inherent in current theories, methods, and technologies.

The Department of Religious Studies offers a major and a minor—as well as a departmental honors program—for students pursuing the Bachelor of Arts degree. Both the major and minor programs acquaint the student with the texts and traditions of major religions, as well as cultural and social aspects of these religions. Majors are encouraged to participate in study abroad programs.

Where appropriate, courses are designed to utilize Internet and other technological resources, cultural institutions in University Circle, and the cultural diversity of Greater Cleveland. Several 300-level courses may be taken for graduate credit by fulfilling additional course requirements, and qualified students may pursue the M.A. degree under the Integrated Graduate Studies program. The Department of Religious Studies also contributes courses to and supports a number of the college’s interdisciplinary programs and centers, such as Asian Studies, Environmental Studies, Ethnic Studies, Women’s and Gender Studies, International Studies, and Judaic Studies.

The academic study of religion, combined with appropriate courses in other fields, provides an excellent background for any professional career that involves interaction with diverse populations—including law, engineering, medicine and health care professions, journalism, and social work—and for graduate studies in a number of fields. A major in religious studies provides a well-rounded liberal arts education or can be combined conveniently with a second major. A minor in religious studies complements and broadens any field chosen as a major.

DEPARTMENT FACULTY

Peter J. Haas, Ph.D.
(Brown University)
Abba Hillel Silver Professor of Jewish Studies and Chair; Director, Judaic Studies Program

Alice Bach, Ph.D.
(Union Theological Seminary)
Archbishop Paul J. Hallinan Professor of Catholic Studies

Joy R. Bostic, Ph.D.
(Union Theological Seminary)
Assistant Professor

Timothy K. Beal, Ph.D.
(Emory University)
Florence Harkness Professor of Religion

Deepak Sarma, Ph.D.
(University of Chicago)
Associate Professor

Lecturers

Ramez Islambouli, M.A.
(Case Western Reserve University)
Islam; Islamic thought; Islamic law

Judith Neulander, Ph.D.
A minor in religious studies requires at least 18 credit hours, to include the following:

1. RLGN 102: Introduction to the Study of Religion (3 credit hours)
2. Nine hours of elective credit, chosen in consultation with a departmental advisor. The courses should demonstrate study of diverse religious traditions.
3. RLGN 299-399: Method and Theory in the Study of Religion and Major/Minor Seminar (6 credit hours)

**COURSE DESCRIPTIONS**

**RLGN 102. Introduction to the Study of Religion (3)**
Introduction to the academic study of religion and of the religious dimensions of life. Open to all students but prerequisite for majors and minors in Religion.

**RLGN 105. Aspects of Jewish and Middle Eastern Religions and Cultures (1)**
This mini-course explores a variety of topics in Jewish and Middle Eastern religions and cultures. A one-credit course, repeatable up to three times, taught by distinguished Rosenthal Fellows visiting from Hebrew University in Jerusalem. Intended for students and others interested in an introduction to religion and culture. Participation in lectures and discussions and a final exam are required.

**RLGN 115. Ethical Problems in Local Perspective (3)**
This course examines contemporary ethical problems—including abortion, racism, suicide, capital punishment, bioethics, and just war theory—in light of their impact on the local Cleveland community. Most of us are aware of the national conversation around these issues; this course explores how local communities and institutions address and deal with these ethical problems. Recommended preparation: Priority given to first and second year students.

**RLGN 203. Jewish Religious Heritage (3)**
The beliefs, doctrines and institutions of classical Judaism; their origin and development.

**RLGN 204. Introduction to Asian Religions (3)**
Principal Asian religious traditions based on a study of classical sources. Classical Chinese thought, Hinduism, and Buddhism. Readings include selections from the works of Confucius, Mencius, Mo Tzu, Lao Tzu, Chuang Tzu, the Mahabharata, the Bhagavad Gita, and the early Buddhist canon. Global & Cultural Diversity

**RLGN 206. Religion and Ecology (3)**
Historical and cross-cultural introduction to religious perspectives on nature and ecology, including Jewish, Christian, Hindu, Buddhist, and Native American texts and ritual practices. Themes include: ecology of chaos and complexity, urban ecology, wilderness, and ecological crises.

**RLGN 207. Women and Religion (3)**
Examination of feminist perspectives on religion, such as the status of women in Western and non-Western religions, the nature and purpose of religious beliefs and practices from the standpoints of religious and non-religious feminists, the current status of feminist philosophies of religion, and the efforts of feminists to transform traditional religions and to create new religions. Offered as RLGN 207 and WGST 207.

**RLGN 208. Introduction to Western Religions (3)**
Basic introduction to the three great monotheistic religions of the Western World: Christianity, Judaism, and Islam. All three of these religious traditions trace their roots to the faith of Biblical Israel as revealed by a series of prophets including Noah, Abraham, and Moses. Each absorbed the philosophy and science of the Greco-Roman world and went on both to influence and struggle with each other. Many of the religious problems of the contemporary world, from Afghanistan to the Middle East to Yugoslavia, can be traced to tension within and between these religious groups.

Global & Cultural Diversity

**RLGN 209. Introduction to Biblical Literature (3)**
This course is an introduction to the academic study of biblical literature, including Hebrew Scriptures ("Old Testament") and the New Testament. The literature will be studied in light of both ancient and contemporary historical contexts, with a particular emphasis on the roles it plays in American culture and politics today. Class sessions will be discussion oriented and will involve close, careful analysis and interpretation of texts. No background in religion is necessary. Evaluation will be based on class preparation and participation, regular short writing assignments, two exams, and a major paper.

**RLGN 210. Introduction to the Philosophy of Religion (3)**
An introduction to the central questions in the philosophy of religion, such as “Can there be more than one true religion?” These questions will be examined from a number of perspectives, including those presented by modern theologians and philosophers of religion.

**RLGN 212. Introduction to Christianity (3)**
An introduction to the history, thought and culture of Christianity and its diverse traditions. Course will include field research with local Christian religious institutions.

**RLGN 215. Religion In America (3)**
Survey of religious histories in North America, from the trans-Bering migrations to the present. Drawing from a variety of approaches such as social history, ritual studies, and institutional and
doctrinal histories, this course charts the religious development of various groups including Native Americans, African Americans, Euro-Americans, and others.

Global & Cultural Diversity

RLGN 216. Hinduism I: The Vedic, Epic and Puranic Periods (3)
This course will provide an introduction to the Vedic, Epic and Puranic periods in the development of Hinduism. We will read a range of primary sources produced during these times. These texts were composed between 1500 BCE and the 5th century CE. The course has an emphasis on research and writing. We will not be examining contemporary issues or practice. The goal of the class is to gain detailed understanding of the kind of world(s) that were envisioned in these forms of early “Hinduism.”

Global & Cultural Diversity

RLGN 217. Buddhism (3)
The development of Buddhism. The life and teaching of the Buddha, the formation of the early Buddhist church, the schools of Hinayana Buddhism and Abhidharma philosophy, Nagarguna and the emergence of Mahayana Buddhism, the spread of Buddhism to China, the transformation of Buddhist thought in China, Zen Buddhism, the spread of Buddhism to the West.

Global & Cultural Diversity

RLGN 218. Islam: Faith and Politics (3)
An overview of the relationship between Islam as a religion and Islam as a political system and the effect of this relationship on Islamic society from its origin to the present time.

Global & Cultural Diversity

RLGN 219. Islam in America (3)
An examination of the experience of Islam in America and its various religious, educational, and social manifestations. Beginning with a history of Islam in America, the course will address topics such as Islam’s relationship with slavery in America, American Islamic law and theology, ritual practice, Sufism, and the Islamic community in Cleveland.

Global & Cultural Diversity

RLGN 221. Indian Philosophy (3)
A survey of Indian philosophical thought with emphasis on the Vedas, early Hindu, and Jain literature.

Offered as PHIL 221 and RLGN 221.

Global & Cultural Diversity

RLGN 222. African-American Religions (3)
This course is an exploration of the rich diversity of African American religions from the colonial period to the present. Attention will be given to key figures, institutional expressions, and significant movements in African American religious history. Major themes include African traditions in American religions, slavery and religion, sacred music, social protest, Black Nationalism in religion, Islam, African American women and religion, and black and womanist theologies. Course requirements will include field trips to local religious sites. Offered as ETHS 222 and RLGN 222.

RLGN 223. Religious Roots of Conflict in the Middle East (3)
The course is about the rhetoric and symbols used by various voices in the Middle East in the ongoing debate about the future shape of the region. For historical and cultural reasons, much of the discourse draws on religious symbolism, especially (although not exclusively) Islamic, Jewish, and Christian. Because of the long and complex history of the region and the religious communities in it, virtually every act and every place is fraught with meaning. The course examines the diverse symbols and rhetorical strategies used by the various sides in the conflict and how they are understood both by various audiences within each community and among the different communities.

Global & Cultural Diversity

RLGN 226. Hinduism II: The Medieval and Modern Periods (3)
This course will provide an introduction to the medieval and modern periods in the development of Hinduism. We will read a range of primary sources produced during these times in addition to examining rituals and other practices that were developed concurrently. We will also focus on Diaspora Hinduism. The course has an emphasis on research and writing. Prereq: RLGN 216.

RLGN 231. Jews in the Modern World (3)
Investigation of the impact of modernity on the Jewish community. In particular the course will examine the influence of the Emanicipation and Enlightenment on the social situation of the Jews in Europe and America and the corresponding changes in Judaic religion, philosophy, social structure, and culture. Attention will be paid to the creation of a modern Jewish identity in the secular culture of the post-Modern world.

Offered as HSTY 238, JSTD 231, and RLGN 231.

RLGN 233. Introduction to Jewish Folklore (3)
Exploration of a variety of genres, research methods and interpretations of Jewish folklore, from antiquity to the present. Emphasis on how Jewish folk traditions and culture give us access to the spirit and mentality of the many different generations of the Jewish ethnic group, illuminating its past and informing the direction of its future development. Offered as ANTH 233 and JSTD 233.

Global & Cultural Diversity

RLGN 235. Religion and Visual Culture (3)
Cross-cultural introduction to complex relations between religion and seeing. Study of visual culture, sacred iconography, calligraphy, film, mass media, and avant-garde fashion. Extensive use of cultural resources in University Circle.

RLGN 238. Alternative Altars: Folk Religion in America (3)
Taking a multidisciplinary approach, students will become familiar with the distinction between conventional and unconventional religions, with the history and personalities associated with new belief systems in America, and with the means, motivations and methods of generating faith communities. Students will come to understand the role of cultural anxieties, new technologies, changing roles, globalization and other social tensions in the formation and duration of alternative altars.

RLGN 240. The Heavens in Religion and Science (3)
Review of the relationships between scientific descriptions of the natural world and the religious and ethical implications drawn from those in Western civilizations. Introduction to the close cooperation between religion and science in the West until the modern period and review of the breakdown of that relationship in the past 200 years.

RLGN 251. Perspectives in Ethnicity, Race, Religion and Gender (3)
This course is designed to introduce students to the study of ethnicity. Basic concepts such as race, gender, class, and identity construction will be examined. Students are encouraged to use the tools and perspectives of several disciplines to address the experiences of ethnic groups in the United States. Offered as ETHS 251 and RLGN 251.

Global & Cultural Diversity

RLGN 254. The Holocaust (3)
History of racism in European society from 18th to 20th century; investigation, from perspectives of history, psychology, literature, philosophy, and religion, of how bureaucracy could exterminate six million Jews; responses of individuals, groups, institutions, and nations to deliberate extermination of nearly a whole people.

Offered as HSTY 254 and RLGN 254.

Global & Cultural Diversity

RLGN 259. Tricksters, Conjurors, and Gods: Religion in West Africa and Diaspora (3)
This course will present a portrait of West African religious history framed in the religious themes common to the rest of the world. We will focus upon the traditional religions that provided the philosophical, religious, and the ethical basis of the African cultures. Focusing primarily on traditional West African religions and their related myths, rituals, divinities, and religious art, the course will consider African indigenous religions as well as those beliefs, traditions, and ritualism that have become part of the religious life in the diaspora in the Americas.

Offered as ETHS 259 and RLGN 259.

Global & Cultural Diversity

RLGN 260. Introduction to the Qur’an (3)
This course explains the complexities of the Qur’an
and provides an entree into a text that has shaped the lives of millions for centuries. In addition to a comprehensive introduction to the Qur'an, the course will examine problems of translation and the major subjects addressed in the Qur'an: Muhammed and revelation, God and the Last Judgment, prophets in general, and the Qur'an as a law book. Also discussed will be the relations of Muslims to the other Peoples of the Book, namely Jews and Christians.

Global & Cultural Diversity

RLGN 266. Bible in Fiction - Fiction in the Bible (3) Examination of use of biblical themes, tropes, and characters in modern fiction and popular culture, e.g., films, librettos, songs. Readings include Genesis, Exodus, Numbers, Judges, 1-2 Samuel, haggadic Midrashim, Jewish folktales, and modern fiction.

RLGN 268. Women in the Bible: Ethnographic Approaches to Rite and Ritual, Story, Song, and Art. (3) Examination of women in Jewish and Christian Biblical texts, along with their Jewish, Christian (and occasionally Muslim) interpretations. Discussion of how these traditions have shaped images of, and attitudes toward, women in western civilization. Offered as RLGN 268 and WGST 268.

RLGN 270. Introduction to Gender Studies (3) This course introduces women and men students to the methods and concepts of gender studies, women's studies, and feminist theory. An interdisciplinary course, it covers approaches used in literary criticism, history, philosophy, political science, sociology, anthropology, psychology, film studies, cultural studies, art history, and religion. It is the required introductory course for students taking the women's studies major. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 270, HSTY 270, PHIL 270, RLGN 270, and WGST 201.

Global & Cultural Diversity

RLGN 272. Morality and Mind (3) Recent research in cognitive science challenges ethical perspectives founded on the assumption that rationality is key to moral knowledge or that morality is the product of divine revelation. Bedrock moral concepts like free will, rights, and moral agency also have been questioned. In light of such critiques, how can we best understand moral ethics, cognitive science, and evolutionary biology? Offered as COGS 272, RLGN 272.

RLGN 280. Religion and Politics in the Middle East (3) An in-depth look at the relationship between politics and religion in the Middle East. Students will spend the first week on the Case Western Reserve campus and the last three weeks in Israel, where time will be divided between classroom teaching, guest lectures, and "field trips" to important sites. Students will have the opportunity to interact directly with members of the region's diverse religious groups within the political, social, and cultural contexts in which they live. A final research paper will be required. Knowledge of Hebrew is not necessary. Offered as JDST 280 and RLGN 280.

Global & Cultural Diversity

RLGN 283. Muhammad: The Man and the Prophet (3) The life of the Prophet Muhammad (c.470-632 CE) was as crucial to the unfolding Islamic ideal as it is today. An examination of how he attempted to bring peace to war-torn Arabia by evolving an entirely new perspective of the human situation, guidance for human lives, and humans' relationship with God. The course will include Western perceptions of Islam, especially in light of September 11, 2001.

Global & Cultural Diversity

RLGN 299. Method and Theory in the Study of Religion (3) This is an advanced course in method and theory in the study of religion and is designed for majors in Religious Studies. The goal is to strengthen the foundation in religious studies first obtained in RLGN 102 and to prepare students for projects to be completed and presented during the second semester in RLGN 399. (or RLGN 395 for honors). Class time will be devoted to lectures and discussions of a variety of authors, methods and topics. Particular readings will be assigned by the designated instructor. Students are expected to attend class regularly, complete assigned reading and participate in class discussions. Prereq: RLGN 102 and 9 credits in other RLGN courses.

RLGN 301. Ritual in Religion (3) Drawing from a broad range of approaches and academic fields, this seminar offers an introduction to the study of ritual. The course has three main goals: (1) to help students become familiar with important theories of and approaches to ritual studies; (2) to explore a number of ritual practices from different cultures, from ancient priestly rites in the Bible to contemporary cockfights in Bali; and (3) to study and discuss several representations of ritual in contemporary literature and film.

Global & Cultural Diversity

RLGN 305. Sanskrit Religious Texts (3) Introduction to the Sanskrit language and culture through the reading of selected texts taken from the ancient religions of South Asia. Offered as CLSC 305 and RLGN 305.

RLGN 306. Interpreting, Buddhist Texts (3) Readings in translation of major texts from the Buddhist tradition. Special emphasis on problems of textual interpretation, historical context, Buddhist conceptions of the sacred, and Buddhist ethics. Prereq: RLGN 102 or RLGN 204 or RLGN 217 or RLGN 303 or RLGN 341.

RLGN 309. Advanced Sanskrit Religious Texts (3) This class is a continuation of RLGN 305/CLSC 305, the introduction to the Sanskrit language and culture. In RLGN 309/CLSC 309 students will learn advanced Sanskrit grammar and syntax. Previous knowledge of Sanskrit is required. We will finish the lessons from Devavanipravesika that we began in the introductory course. We will then translate sections for the Bhagavad Gita. Offered as CLSC 309 and RLGN 309. Prereq: RLGN 305 or CLSC 305.

RLGN 310. Folklore and Myth in Japanese Film (3) Representations of folklore, myth and the uncanny in Japanese film primarily in the post-war era.

RLGN 312. The Mythical Trickster (3) Few literary figures have as wide a distribution, and as long a history, as the mythical Trickster. He is at once sacred and profane, creator and destroyer; and incorrigible duper who is always duped. Free of social and moral restraints he is ruled instead by passions and appetites, yet it is through his unprincipled behavior that morals and values come into being. How are we to interpret this amazing creature? Using folkloristic theories and ethnographic methods, we will come to understand the social functions and symbolic meanings of the cross-cultural Trickster, over time and across space.

RLGN 315. Heresy and Dissidence in the Middle Ages (3) Survey of heretical individuals and groups in Western Europe from 500 - 1500 A.D., focusing on popular rather than academic heresies. The development of intolerance in medieval society and the problems of doing history from hostile sources will also be explored. Offered as HSTY 315 and RLGN 315.

RLGN 316. Modern Religious Thought: 1800 to the Present (3) A survey of some major religious thinkers of Eu-
rope and North America from roughly 1800 to the present. A chronological examination of classical texts of theology and philosophy of religion of this period, with consideration of significant themes: Given the advance in modern rational thought, how can we understand traditional religion? What is the relationship between religion and reason? Religion and history? Religion and culture? Religion and experience? Is the attempt to modernize faith misguided or necessary to prevent faith from being captive to outmoded cultural assumptions?

RLGN 319. The Crusades (3)
This course is a survey of the history of the idea of “crusade,” the expeditions of Western Europeans to the East known as crusades, the Muslim and Eastern Christian cultures against which these movements were directed, as well as the culture of the Latin East and other consequences of these crusades. Offered as HSTY 319 and RLGN 319.

The major focus of this seminar will range from the ongoing questions of peace and justice in Israel and occupied Palestine to the land and border questions; Green line, crossing points, the wall; to interpretations from biblical to contemporary texts, reflecting a multiplicity of agendas. Our primary focus will be the analysis of recent research and scholarship on issues of mass violence, contested space and land, gender, race and ethnicity, religious sectarianism, colonialism/imperialism. Through our readings we will identify the bias and concerns of various interpretive communities involved in the ongoing struggles in this very small area. With two peoples claiming the same land for different reasons, can this conflict ever be resolved? Recommended preparation: One course about the Middle East. Offered as ETHS 359 and RLGN 320.

RLGN 325. Justice, Religion, and Society (3)
The ways in which several 20th-century American religious figures, both North and South American, have interpreted their religion as requiring them to struggle for a better society by using direct action to deal with issues of poverty, peace, and social justice. Introduction to writings of prominent social justice activists such as Dorothy Day, Daniel Berrigan, Thomas Merton, and others. Course includes service learning within the Cleveland area via association with structured institutions and programs engaged in social justice and urban poverty issues in order to investigate these from the inside.

RLGN 330. Classical Jewish Religious Thought (3)
The thought of some major biblical and Rabbinic writings and of the classic age of medieval Jewish philosophy. Offered as JDST 330, PHIL 332, and RLGN 330.

RLGN 333. Philosophy of Religion (3)
Topics include: classical and contemporary arguments for God’s existence; divine foreknowledge and human freedom; the problem of evil and theodicy; nature and significance of religious experience; mysticism; varieties of religious metaphysics; knowledge, belief and faith; nature of religious discourse. Readings from traditional and contemporary sources. Recommended preparation for PHIL 433 and RLGN 433: PHIL 101 or RLGN 102. Offered as PHIL 333, RLGN 333, PHIL 433, and RLGN 433. Prereq: PHIL 101 or RLGN 102.

RLGN 341. Religion and Postmodernism (3)
Consideration of the impact of postmodern thought on the study of religion. Examination of how recent critical theory informs our understanding of religious texts and religious themes in contemporary literature, arts and film. Utilizing the theories of Foucault, Derrida, Kristeva, and others, the class will explore such postmodern concerns as narrative, textuality, the author, ideology, gender, and rhetoric. Offered as RLGN 341 and RLGN 441.

RLGN 343. Mysticism (3)
A mystical experience can be broadly defined as a direct experience of the sacred. The course will begin with an exploration of the language of mystical experience and assess how mystical experiences can be studied “objectively.” Then we will examine mysticism in major religious traditions through primary texts with some commentary for guidance. In the final classes we will compare the significance of mystical phenomena, as well as common themes and divergent views, across the traditions.

RLGN 345. Religion and Horror (3)
This seminar explores relations among religion, horror, and the monstrous in ancient scripture and contemporary horror. Course readings, discussions, and research projects approach the subject from two distinct but related directions: first, a focus on elements of horror and the monstrous in biblical and related ancient mythic and ritual texts; second, an examination of religious dimensions in the modern horror, especially as found in representations of monsters in literature and film. Offered as RLGN 345 and RLGN 445. Prereq: RLGN 102.

RLGN 350. Jewish Ethics (3)
An exploration of Jewish moral and ethical discourse. The first half of the course will be devoted to studying the structure and content of classical Jewish ethics on issues including marriage, abortion, euthanasia and social justice. Students will read and react to primary Jewish religious texts. The second half of the course will focus on various modern forms of Judaism and the diversity of moral rhetoric in the Jewish community today. Readings will include such modern thinkers as Martin Buber and Abraham Joshua Heschel. Offered as JDST 350, RLGN 350, and RLGN 450. SAGES Dept Seminar

RLGN 352. Language, Cognition, and Religion (3)
This course utilizes theoretical approaches found in cognitive semantics—a branch of cognitive linguistics—to study the conceptual structures and meanings of religious language. Cognitive semantics, guided by the notion that conceptual structures are embodied, examines the relationship between conceptual systems and the construction of meaning. We consider such ideas as conceptual metaphor theory, conceptual blending, image schemas, cross-domain mappings, metonymy, mental spaces, and idealized cognitive models. We apply these ideas to selected Christian, Buddhist, and Chinese religious texts in order to understand ways in which religious language categorizes and conceptualizes the world. We examine both the universality of cognitive linguistic processes and the culturally specific metaphors, conceptual blends, image schemas, and other cognitive operations that particular texts and traditions utilize. Course Offered as RLGN 352/RLGN 452 and COGS 352/452.

RLGN 366. Religion and Film (3)
Study of the cultural use of biblical figures, especially in film: movies as myth; place of myths in American culture; how cinematic images continue the polarization of biblical images and intertwine them with the American myth. Offered as RLGN 366 and RLGN 466.

RLGN 372. Anthropological Approaches to Religion (3)
The development of, and current approaches to, comparative religion from an anthropological perspective. Topics include witchcraft, ritual, myth, healing, religious language and symbolism, religion and gender, religious experience, the nature of the sacred, religion and social change, altered states of consciousness, and evil. Using material from a wide range of world cultures, critical assessment is made of conventional distinctions such as those between rational/irrational, natural/supernatural, magic-religion, and primitive/ civilized. Recommended preparation: ANTH 102. Offered as ANTH 372, RLGN 372 and ANTH 472.

RLGN 373. History of the Early Church: First Through Fourth Centuries (3)
Explores the development of the diverse traditions of Christianity in the Roman Empire from the first through the fourth centuries C.E. A variety of New Testament and extra-Biblical sources are examined in translation. Emphasis is placed on the place of Christianity in the larger Roman society, and the variety of early Christian ideals of salvation, the Church, and Church leadership. Offered as HSTY 303 and RLGN 373.

RLGN 374. Reformation Europe, 1500-1650 (3)
Origins and development of Protestantism, the Catholic Counter-Reformation, and the interaction between secular power and religious identity in Christian Europe.
Offered as HSTY 309 and RLGN 374.

RLGN 388. Topics in Religion (3) Critical assessment of selected topics of historical or current interest. Project must be accepted by a member of the department faculty prior to registration. Offered as RLGN 388 and RLGN 488.

RLGN 392. Independent Study (1–3) Up to three semester hours of independent study may be taken in a single semester. Must have prior approval of faculty member directing the project.

RLGN 395. Honors Research (3) Intensive study of a topic or problem leading to the writing of an honors thesis. By department approval only. Maximum six credits.

RLGN 399. Major/Minor Seminar (3) Capstone course primarily for majors and minors in Religion. Allows students to interact with peers and faculty, reflect critically, and integrate their learning experiences. Prepares students to continue their learning in the discipline and in the liberal arts. Subject matter varies according to student and faculty needs and perspectives. May be repeated once for up to six credit-hours. Recommended preparation: RLGN 102 and one other RLGN course. SAGES Senior Cap

RLGN 433. Philosophy of Religion (3) Topics include: classical and contemporary arguments for God’s existence; divine foreknowledge and human freedom; the problem of evil and theodicy; nature and significance of religious experience; mysticism; varieties of religious metaphysics; knowledge, belief and faith; nature of religious discourse. Readings from traditional and contemporary sources. Recommended preparation for PHIL 433 and RLGN 433: PHIL 101 or RLGN 102. Offered as PHIL 333, RLGN 333, PHIL 433, and RLGN 433.

RLGN 441. Religion and Postmodernism (3) Consideration of the impact of postmodern thought on the study of religion. Examination of how recent critical theory informs our understanding of religious texts and religious themes in contemporary literature, arts and film. Utilizing the theories of Focault, Derrida, Kristeva, and others, the class will explore such postmodern concerns as narrative, textuality, the author, ideology, gender, and rhetoric. Offered as RLGN 341 and RLGN 441.

RLGN 445. Religion and Horror (3) This seminar explores relations among religion, horror, and the monstrous in ancient scripture and contemporary horror. Course readings, discussions, and research projects approach the subject from two distinct but related directions: first, a focus on elements of horror and the monstrous in biblical and related ancient mythic and ritual texts; second, an examination of religious dimensions in the modern horror, especially as found in representations of monstrosity in literature and film. Offered as RLGN 345 and RLGN 445.

RLGN 450. Jewish Ethics (3) An exploration of Jewish moral and ethical discourse. The first half of the course will be devoted to studying the structure and content of classical Jewish ethics on issues including marriage, abortion, euthanasia and social justice. Students will read and react to primary Jewish religious texts. The second half of the course will focus on various modern forms of Judaism and the diversity of moral rhetoric in the Jewish community today. Readings will include such modern thinkers as Martin Buber and Abraham Joshua Heschel. Offered as JDST 350, RLGN 350, and RLGN 450. SAGES Dept Seminar

RLGN 452. Language, Cognition, and Religion (3) This course utilizes theoretical approaches found in cognitive semantics—a branch of cognitive linguistics—to study the conceptual structures and meanings of religious language. Cognitive semantics, guided by the notion that conceptual structures are embodied, examines the relationship between conceptual systems and the construction of meaning. We consider such ideas as conceptual metaphor theory, conceptual blending, image schemas, cross-domain mappings, metonymy, mental spaces, and idealized cognitive models. We apply these ideas to selected Christian, Buddhist, and Chinese religious texts in order to understand ways in which religious language categorizes and conceptualizes the world. We examine both the universality of cognitive linguistic processes and the culturally specific metaphors, conceptual blends, image schemas, and other cognitive operations that particular texts and traditions utilize.

Offered as RLGN 352/RLGN 452 and COGS 352/452.

RLGN 466. Religion and Film (3) Study of the cultural use of biblical figures, especially in film: movies as myth; place of myths in American culture; how cinematic images continue the polarization of biblical images and intertwine them with the American myth. Offered as RLGN 366 and RLGN 466.

RLGN 488. Topics in Religion (3) Critical assessment of selected topics of historical or current interest. Project must be accepted by a member of the department faculty prior to registration. Offered as RLGN 388 and RLGN 488.

RLGN 601. Special Research (1–6) Project must be accepted by a member of the department faculty prior to registration. Prereq: Graduate standing.

RLGN 651. Thesis M.A. (1–9) Project must be accepted by a member of the department faculty prior to registration.

DEPARTMENT OF SOCIOLOGY

Sociology offers an essential perspective for understanding the dynamics of the social world, including interpersonal relationships, individual lives, and the broader social forces that affect them. Sociology courses explore social change and conflict, crime and deviant behavior, and social-psychological topics such as family relationships, values and health, as well as innovations in social practices and policies that are designed to respond to social problems and challenges. Sociologists explore how economic and cultural forces interact with factors such as gender, race, ethnicity, and age to shape social practices and customs and individual experience. Sociologists conduct research using a broad array of quantitative and qualitative methods in order to illuminate the nature of the social world.

The Department of Sociology places special emphasis on the ways that health and human development and aging are shaped by social forces, and on health policies and health disparities throughout the life course. Study in sociology also offers a variety of practical and hands-on experiences, including courses that involve field research or service learning in medical, educational, geriatric, and other settings. The creative and rigorous thinking skills that one develops in learning to do sociological analysis provide excellent preparation for advanced work in almost any field.

A major in sociology provides a strong background for students considering careers in a broad array of fields, including the health and social service professions, criminal justice, social research, public administration and program development, market research, communications, and business careers. A sociology major also provides excellent preparation for law school, medical school, social work, and other fields of graduate study. Surveys show sociology majors to be among those with the highest rates of acceptance to professional schools. A minor or a second major in sociology also provides excellent preparation to students majoring in other social and behavioral sciences, natural sciences, or humanities.

The Department of Sociology offers programs leading to the Bachelor of Arts, Master of
DEPARTMENT FACULTY

Dale Dannefer, Ph.D.
(Rutgers University)
Selah Chamberlain Professor of Sociology and Department Chair
Aging and the life course; theory; work and family; research methods

Gary Deimling, Ph.D.
(Bowling Green State University)
Professor
Family sociology; sociology of aging; medical sociology; research methods

Brian Gran, Ph.D., J.D.
(Northernwestern University; Indiana University-Bloomington)
Associate Professor
Sociology of law; political sociology; comparative sociology; health care policy

Susan W. Hinz, Ph.D.
(Vanderbilt University)
Associate Professor
Medical sociology; social inequality; sex and gender; work and family

Eva Kahana, Ph.D.
(University of Chicago)
Pierce T. and Elizabeth D. Robson Professor of the Humanities
Sociology of aging; medical sociology; social factors in stress and coping

Jessica Kelley-Moore, Ph.D.
(Purdue University)
Associate Professor
Health disparities; sociology of disability; sociology of the life course; race/ethnicity

Emilia McGucken, Ph.D.
(University of Akron)
Senior Instructor
Criminology; juvenile delinquency; deviance; theory; urban sociology

David Warner, Ph.D.
(Pennsylvania State University)
Assistant Professor
Demography of work and retirement; health inequalities; gender and the life course; marriage and marital quality; event history and multistate life table methods

Secondary Faculty

David E. Biegel, Ph.D.
(University of Maryland, Baltimore)
Henry Zucker Professor, Mandel School of Applied Social Sciences
Family; social networks; caregiving; mental health

Robert H. Binstock, Ph.D.
(Harvard University)
Henry R. Luce Professor of Health, Aging and Society, School of Medicine
Public policy and aging; health care policy

Kathleen Smyth, Ph.D.
(Case Western Reserve University)
Associate Professor of Epidemiology and Biostatistics, School of Medicine
Medical sociology; research methods; sociology of aging

Kurt Stange, M.D., Ph.D.
(University of North Carolina)
Professor of Epidemiology and Biostatistics, School of Medicine
Epidemiology; preventive health care; biostatistics; disability prevention in the elderly

Aloen Townsend, Ph.D.
(University of Michigan)
Associate Professor, Mandel School of Applied Social Sciences
Adult development and aging; research methods and statistics; mental health; families and formal service systems

Adjunct Faculty

Sandra L. Barnes, Ph.D.
(Georgia State University)
Professor of Sociology, Vanderbilt University
Urban sociology; race/ethnicity; sociology of religion; statistics; methodology; African American studies; inequality

Gunhild Hagestad, Ph.D.
(University of Minnesota)
Professor of Sociology, Agder University College
Senior Researcher, NOVA
Life course; gender; social policy

Linda Noelker, Ph.D.
(Case Western Reserve University)
Associate Director of Research, Benjamin Rose Institute
Sociology of aging; family sociology; sex and gender

UNDERGRADUATE PROGRAMS

Major
The major in sociology has been designed to serve the different educational goals of undergraduates: general education, pre-professional training, postgraduate employment, and preparation for graduate school. The major requires a minimum of 30 hours of course work. All majors complete the common core requirements (12 hours):

- SOCI 101 Introduction to Sociology: Human Interaction
- SOCI 300 Modern Sociological Thought
- SOCI 305 Social Research Methods
- STAT 201 or PSCL 282 Statistics

Majors also complete 18 hours of electives, consisting of any six courses in sociology. SOCI 375 (Independent Study) is available to selected majors in their junior or senior year.

Majors have the option of choosing a general sociology curriculum or one of four concentrations: 1) Crime and Delinquency, 2) Health and Aging, 3) Social Inequality, and 4) Gender, Work and Family. Students may choose four courses within any of the following specializations for a concentration in that area:

CRIME AND DELINQUENCY CONCENTRATION

- SOCI 204 Criminology
- SOCI 320 Delinquency and Juvenile Justice
- SOCI 328 Urban Sociology
- SOCI 333 Deviance
- SOCI 349 Social Inequality
- SOCI 360 Sociology of Law

HEALTH AND AGING CONCENTRATION

- SOCI 203 Human Development—Medical and Social
- SOCI 311 Health, Illness and Social Behavior
- SOCI 313 Sociology of Stress and Coping
- SOCI 319 Sociology of Institutional Care
- SOCI 361 The Life Course
- SOCI 365 Health Care Delivery
- SOCI 369 Aging in American Society

SOCIAL INEQUALITY CONCENTRATION

- SOCI 203 Human Development—Medical and Social
Minor
The minor consists of 15 credit hours in sociology, including:

1. SOCI 101 Introduction to Sociology: Human Interaction
2. SOCI 300 Modern Sociological

GRADUATE PROGRAMS
The Department of Sociology offers graduate training leading to the Doctor of Philosophy degree. Students may petition for a Master of Arts degree once they fulfill the requirements outlined below. Sociology of Aging and Medical Sociology are the major areas of emphasis in the department.

Master of Arts
To receive the Masters of Arts degree, a student must successfully complete 27 credit hours of course work. Required courses for the degree are SOCI 400 and 406 and either 401 or 407 plus 469 and 443 and four general electives in sociology. In addition, the student must pass one written comprehensive examination in Sociology of Aging, Medical Sociology, or Research Methods.

Doctor of Philosophy
The Doctor of Philosophy degree is awarded upon the completion of all requirements of the School of Graduate Studies and the following departmental requirements: Completion of 63 credit hours past the Bachelor of Arts degree, including 18 credits of 701 (dissertation hours). Required courses are SOCI 400, 401, 406, 407, 443, 469, two additional electives in research methods, two additional electives in medical sociology, two additional electives in aging, and three general electives in sociology. In addition, students must pass two comprehensive examinations—aging and medical sociology—and successfully defend the dissertation.

A predoctoral training program in Health Research and Aging, sponsored by the National Institute of Aging, has been offered in conjunction with the Elderly Care Research Center of the Department of Sociology.

COURSE DESCRIPTIONS
SOCI 101. Introduction to Sociology (3)
This course examines the basic principles that underlie how sociologists look at the world: “The Sociological Imagination.” It addresses the basic questions: How is social order possible and how does change occur? The course is designed as a foundation for further study in the field of sociology and related disciplines. It introduces the student to the role that culture and social institutions play in modern society and examines important concepts such as socialization, deviance, social control, patterned inequalities and social change. These concepts are discussed in the context of both contemporary and historical social theories. Additionally, the student will be introduced to the methods of inquiry used by practicing sociologists.

SOCI 113. Critical Problems in Modern Society (3)
Focus is on major social problems present in large, complex, industrial societies. Topics include environmental problems, poverty, drug addiction, social deviance, and alienation.

SOCI 203. Human Development: Medical and Social (3)

for a long-term study of very old residents of a retirement community. This research seeks to understand health promotion, proactive adaptation, and maintenance of wellness in late life. Major research projects focusing on medical sociology deal with life-threatening illness, caregiver burden, and physician-patient interactions. The center serves as a laboratory for student research. Collaborative and cross-national research involves colleagues from other disciplines at universities in Israel, Hungary, Britain, and Germany.

Cancer Survivors Research Program
The Cancer Survivors Research Program (CSRP) investigates important research issues in psychological oncology. Formally started in September 1998, the CSRP had been funded for ten years by the National Cancer Institute. Dr. Gary Deimling serves as program director and principal investigator and is assisted by colleagues in the Department of Sociology and the Case School of Medicine. As with many other research programs within the department and the university at large, the CSRP also serves as a teaching facility by training graduate students in the many methodological and theoretical aspects of sociomedical research. The program allows students in the sociology Ph.D. program to gain hands-on experience in a formal research setting while putting their course work into practice.
Social influences on health and illness across the lifespan. Social determinants of health and behavior, and delivery of health care. Guest lecturers from the medical school and other health care providers address professional practice issues across the lifespan. Issues include: new approaches to childbirth; adolescent substance abuse: myths and realities of AIDS; risk factors of diseases in middle age; menopause, cognition and aging-Alzheimer’s disease; problems in care of elderly; medical ethic of death and dying.

SOCI 204. Criminology (3)
What is crime and to what extent does crime affect you? This course will investigate the nature and extent of crime, theories on the causes of crime, types of crime and criminals, and the efforts society makes to cope with and prevent criminal behavior.

SOCI 208. Dating, Marriage, and Family (3)
What is the family today? How has it changed over the last century? How will it change in the future? This course aims to answer these questions as it explores the influences of work, education, government, health and religion on today’s changing families. The course considers the factors that affect mate selection. It also examines parenting, roles of husbands and wives, and family dysfunction and divorce.

SOCI 222. Gender in U.S. Society (3)
The focus of this course is on unique and convergent experiences of men and women in U.S. society. Different social expectations and opportunities encountered by men and women in the context of marriage and the family, work settings, and in informal organizations will be addressed. Legislation and social policy dealing with gender issues will be considered.

Offered as SOCI 222 and WGST 222.

SOCI 228. Sociology of Sexuality (3)
This course analyzes the issues of sex and sexuality from a sociological point of view. It is centered on the notion that what we consider to be ‘normal’ or ‘natural’ about sex and sexuality is, in reality, socially constructed. One’s viewpoint on the issues surrounding sexuality are influenced by the social context in which they live, as opposed to the purely biological viewpoint that presupposes some sense of normalcy or naturalness regarding sexual relations. A range of topics will be covered, including readings that discuss the variations of sexuality and the notions of sexual “deviance” in order to explore the cultural and societal variation that exists along the lines of gender, race, ethnicity, sexual orientation, age and disability.

Offered as SOCI 228 and WGST 228.

SOCI 255. Special Topics (1–3)
Courses taught as special topics seminars focus on selected areas of study in sociology. They tend to be more specialized and emphasis is placed upon a sociological examination of one social institution (such as the media) or on one historical period (such as the ‘60s).

SOCI 262. Disability and Society (3)
This course considers and examines the relationship between disability and society. The course covers how we define, represent, and react to disability in modern society. This includes and analysis of stigma and discrimination. We also explore the timing and experience of disability from a life-course perspective. Finally, we examine the political, social, and economic influences on disability, including the Disability Rights movement.

SOCI 269. Young and Old Face the 21st Century (3)
Examines prospects and problems of the young and old as a window into the 21st century. An intergenerational perspective is used to highlight opportunities for cooperation and conflict between young and old who face the future together. This approach represents a shift in thinking about aging as relevant only to the old, to a view that aging is relevant to the future of all individuals, families, and societies.

SOCI 275. Lives in Medicine: Becoming and Being a Physician (3)
This course applies a sociological approach to medical profession. Medical sociology emerged as a distinct field of study in the 1950s in part due to prominent studies of medical education such as The Student Physician by Robert K. Merton and Howard Becker’s Boys in White. Since then, sociologists and other social scientists have written extensively about how issues of race, gender, aging and ethnicity are tied to issues of medical education, medical training, medical socialization and physician decision-making. Using a life course perspective, this course will examine how lives in medicine change over time; in particular, we’ll study changing workforce patterns, physician satisfaction, and burnout. Other topics to be covered include contemporary ethical issues and alternative professional health careers. The course provides an overview of how medicine and medical practice have a profound influence on—and are influenced by—social, cultural, political and economic forces. In short, you’ll become familiar with how scholars outside of medicine cast a sociological gaze on the profession.

SOCI 300. Modern Sociological Thought (3)
The most profound commentary of industrial society began in the middle of the nineteenth century with thinkers such as Durkheim, Marx, and Max Weber. Students will read the work of these scholars as it appeared in the original sources. They thoughtfully address concepts such as social integration and alienation, crime and punishment, and the social impact of modernization. The course is of special relevance to students in the social sciences, but is also recommended for students in other fields who wish to understand the social context in which professional lives will be conducted. Prereq: SOCI 101 and Sophomore standing.
This course will focus attention on human stress throughout the lifespan and its role in personal health and well-being. There have been exciting advances in recent years in understanding the nature of stress in everyday life as well as elements of extreme stress. Trauma is experienced by many people due to normative events such as illness and bereavement or natural and man-made disasters such as crime or war. Coping strategies and social supports which ameliorate negative impact of stress will be considered.

Offered as SOCI 313 and SOCI 413. Prereq: SOCI 101 and Sophomore standing.

SOCI 314. Qualitative Methods/Field Research (3)

Students explore the theoretical foundations of qualitative social research. The course is designed to introduce and provide experience with a range of data generation strategies and analytic skills. The ethnographic techniques of semi-structured interviewing and participant-observation receive particular attention.

Offered as SOCI 314 and SOCI 414. Prereq: SOCI 101 and Sophomore standing.

SOCI 319. Sociology of Institutional Care (3)

This course focuses on converging issues of theory, research, and practice in general hospitals, mental hospitals, nursing homes, hospices, and correctional institutions. The ecology of institutions and the adaptation of individuals within institutions will also be considered. There will be field trips to institutional facilities.

Offered as SOCI 319 and SOCI 419. Prereq: SOCI 101 and Sophomore standing.

SOCI 320. Delinquency and Juvenile Justice (3)

The primary focus of this course is on acquainting the student with the nature and the extent of juvenile delinquency. Accordingly, theoretical approaches to delinquency causation and the prevention, control, and treatment of delinquent behavior in society are addressed. Important aspects of juvenile justice procedures, policy, and practice are examined, and the early history of the juvenile justice system and the many changes occurring over the years are discussed.

Prereq: SOCI 101.

SOCI 325. Departmental Seminar in Sociology: Great Books (3)

This course fulfills the SAGES requirement of a Departmental Seminar. It focuses on close readings of contemporary classics in sociology, analytical writing and intensive seminar-type discussion. The course examines theoretical perspectives and methodological issues in sociology such that students are able to investigate, analyze and present research findings in written form. Research is always an inherently collaborative process, and thus the course will utilize seminar-style discussions to formulate and examine ideas. The seminar will focus on topics generated by critical reading of books that inform our understanding of large and small group processes as well as individual experiences. Students will be introduced to the sociological imagination as an overarching frame work to examine groundbreaking classical and contemporary books on topics such as health and aging, gender, work and family, social inequality and crime and delinquency, guided by the instructor of record. Readings will provide a sociological perspective for understanding and assessing macro- and micro-level interactions as well as encourage and stimulate critical thinking.

SAGES Dept Seminar
Prereq: SOCI 101 or permission of program director.

Global & Cultural Diversity

SOCI 326. Gender, Inequality, and Globalization (3)

Using a sociological perspective, this course examines how major societal institutions, including the economy, polity, medicine, religion, education and family, are structured to reproduce gendered inequalities across the globe. Attention is given to the intersections of race/ethnicity, social class, gender and sexuality in social systems of power and privilege. Of critical importance is how gender figures in the relationship between Economic North and Economic South countries. We will elucidate how gender norms vary by culture and exert profound influence on the daily, lived experiences of women and men. The course will be informed by recent scholarship on feminism, women's movements, and globalization.

Offered as SOCI 326 and WGST 326. Prereq: SOCI 101 or permission of program director.

Global & Cultural Diversity

SOCI 328. Urban Sociology (3)

The goal of this course is to acquaint the student with the realities and the possibilities of our urban society. Theories and applications of urban sociology interpreting city life and structure are reviewed. The transformation of the urban landscape, the emergence of cities, urban life, urban problems, and urban planning are explored. Issues related to finances, schooling, transportation, the infrastructure of the city, growth and decline, urban poverty, the homeless, crime, pollution, as well as the policy issues and questions such concerns provoke are studied. Key aspects of social science theories and research findings about the nature of spatial, economic and social relationships in cities in developed and developing countries will be analyzed, illuminating some of the processes of urban growth, social transition, and change.

Prereq: SOCI 101.

SOCI 333. Sociology of Deviant Behavior (3)

Sociological approaches to causes of deviant behavior, and social psychology of deviance are studied. Illustrations range from juvenile delinquency to scientific misconduct and cover both criminal and noncriminal forms of deviance.

Prereq: SOCI 101.

SOCI 336. Institutional Care: Research and Reform (3)

This course is designed to provide an introduction to the nature of long term care in the U.S. and to contemporary issues of reform and culture change. It also provides an introduction to techniques for studying nursing home culture, and for assessing culture changes. The issues and problems of long term care are well documented and the need for changing practices of long-term care is so widely recognized and deeply felt that several initiatives for “changing the culture” of long term care have gained national notoriety and rapid momentum. While laudatory, such efforts are inevitable criticized on numerous grounds, including cost, philosophy and vision, and lack of research evidence to support claims of success. The course is designed to provide an introduction to these debates in the scientific literature and in popular culture, and will provide an opportunity to develop skills in structured observation and action research.

Offered as SOCI 336 and SOCI 436.

SOCI 338. Seminar and Practicum in Adolescents (3)

Supervised field placement and attendance in early childhood, child, and adolescent settings including preschools, schools, hospitals, and neighborhood centers. This class is used to fulfill requirements by the Ohio Department of Education teacher licensure program. Recommended preparation: PSCL 101, EDUC 301, EDUC 304, and permission of program director.

Offered as EDUC 338, PSCL 338, and SOCI 338.

SOCI 345. Sociology of Mental Illness (3)

Focus is on social construction of mental health and illness and sociology of emotions. Social determinants of psychological distress will be discussed along with social stigma associated with mental illness. Institutional and community options for care of the mentally ill will be considered along with the impact of recent social movements of deinstitutionalization and independent living.

Offered as SOCI 345 and SOCI 445. Prereq: SOCI 101 and junior/senior standing.

SOCI 347. Sociology of Education (3)

This course provides an introduction to the field of sociology of education, which might be more properly called sociology of schooling. We will examine the development of schools historically and competing paradigms for understanding the place of school in society. Major theoretical perspectives concerning the nature and consequences of schools for individuals and for societies will be reviewed. Issues of individual opportunity - including how it is organized by race, class, and gender - will be covered, as well as issues institutional dynamics - including tracking, testing and so-called crisis and reform.

Offered as SOCI 347 and SOCI 447. Prereq: SOCI 101 and junior or senior standing.

SOCI 349. Social Inequality (3)

Theory and research on contemporary inequality is considered in terms of income, wealth, education, occupational standing, occupational prestige,
status categories, racial, ethnic, religious, age, and gender groupings. Offered as SOCI 349 and SOCI 449. Prereq: SOCI 101 and Sophomore standing.

SOCI 355. Special Topics (3)
One or more sections each semester focusing on selected areas of study in sociology. Offered as SOCI 335 and SOCI 455.

SOCI 360. The Sociology of Law (3)
This course will focus on the role of rights in the U.S. legal system and society. In particular, we will consider three questions. The first is how do rights fit in the legal system and society? Second, how have different social groups used and thought about rights? Third, how do legal actors like judges and lawyers think about rights compared to non-lawyers? Offered as SOCI 360 and SOCI 460. Prereq: SOCI 101 and Sophomore standing.

SOCI 361. The Life Course (3)
Individual experiences and transitions over the life course are considered as the result of societal, cultural, psychological, biological, and historical influences. Developmental issues of childhood, adolescence, young adulthood, middle years and late life are discussed in the context of social expectations, challenges, and opportunities. Emphasis is placed on theoretical readings. Offered as SOCI 361 and SOCI 461. Prereq: SOCI 101 and Sophomore standing.

SOCI 365. Health Care Delivery (3)
Health care in the U.S. may be approaching a critical crossroad. Limiting care to older persons and the chronically ill has been proposed as a means to combat rising costs and limited access to health care. What are the alternatives to health care rationing? Socialized medicine? National health insurance? This course deals with issues of cost, quality, and access to health care in the United States and other societies. It considers how solutions by other societies can provide directions for the organization of health care in the U.S. Offered as SOCI 355 and SOCI 455. Prereq: SOCI 101 and Sophomore standing.

SOCI 369. Aging in American Society (3)
Considers the position and participation of aged adults in American society. Sociological perspectives through which to interpret the aging process and old age: social policies; intergenerational relations; lifestyles and how they affect participation of the aged in American society; dying and death serve as major themes. Offered as SOCI 369 and SOCI 469. Prereq: SOCI 101 and Sophomore standing.

SOCI 370. Sociology of the Family (3)
This course provides the theoretical and methodological foundation for conducting family research. It also reviews the most current research in the sociology of the family arena such as intergenerational issues, ethnicity and gender, and family transitions. Offered as SOCI 370 and SOCI 470. Prereq: SOCI 101 and Sophomore standing.

SOCI 372. Work and Family: U.S. and Abroad (3)
Covers the impact on human lives of the interface between work and family; the different ways gender structures the experience of work and family depending upon racial and ethnic background, social class, age, and partner preference; the impact of historical context on work-family experiences; work-family policies in the United States and other countries. Offered as SOCI 372, WGST 372, and SOCI 472. Prereq: SOCI 101 and Sophomore standing.

SOCI 374. Using Law to Designate Public/Private Boundaries for Social Policies (3)
This course studies law and the public-private dichotomy. With a basis in important research on the sociology of law, it considers three questions: 1) What is the impact of "law" on the boundary separating the public and private sectors? 2) How does "law" designate which actors and institutions belong to the public and private sectors? 3) Is the public-private dichotomy adequate for sociological analyses of law and its influence? If not, what alternatives to the public-private dichotomy can we offer? Offered as SOCI 374 and SOCI 474. Prereq: SOCI 101.

SOCI 375. Independent Study (1–3)
Prereq: SOCI 101 and SOCI 300.

SOCI 377. Population Dynamics and Changing Societies (3)
Population and social structure are inextricably linked, as changes in one elicit changes in the other. Social demography, as a discipline, examines these linkages through the systematic study of the size, composition and distribution of populations and their relationship to the social, political and economic organization of societies. This course will pay particular attention to mortality, morbidity and health, fertility, family and household organization, and migration as the major processes of population change. The population dynamics of the United States will be emphasized, with select comparisons to developing and developed countries. Offered as SOCI 377 and SOCI 477.

SOCI 381. City as Classroom (3)
In this course, the city is the classroom. We will engage with the urban terrain. We will meet weekly off-campus, interact with community members, and interface—both literally and figuratively—with the city as a way to examine the linkages between historical, conceptual, and contemporary issues, with particular attention paid to race and class dynamics, inequality, and social justice. This course will have four intersecting components, primarily focusing on American cities since the 1930s: the social and physical construction of urban space, the built environment, life and culture in the city, and social movements and grassroots struggles. Offered as HSTY 381, POSC 381, SOCI 381, HSTY 481, POSC 481, and SOCI 481.

SOCI 392. Senior Capstone Experience (3)
SOCI 392 represents the completion of an independent study paper involving exploration of a sociology topic to be chosen in consultation with the student's capstone advisor. The student will interact regularly with the faculty advisor who will review their progress on the project. This project allows for original thought and for the tailoring of the research to the student's interests. The student will integrate theory, methods and social issues as he/she applies critical thinking skills and insights to the analysis of some aspects of a subject chosen from any of the following subfields and concentrations: Gerontology, Social Inequality, Medical Sociology, Crime and Delinquency, The Life Course, Education, Work and Family, Sociology of Law, and Deviance. The Capstone Project has both a written and an oral component. Following the submission of the Capstone paper, the student will give a presentation of the project at the Senior Capstone fair, or another forum chosen by the department. Prereq: SOCI 101, SOCI 300, SOCI 303, and Stat 201, or PSCL 282. SAGES Senior Cap

SOCI 397. Honors Studies (3)
Intensive investigation of research or conceptual problem; original work under supervision of faculty member. Limited to senior majors. Prereq: Senior status.

SOCI 398. Honors Studies (3)
Intensive investigation of research on conceptual problem; original work under supervision of faculty member. Limited to senior majors.

SOCI 400. Development of Sociological Theory (3)
This course examines in detail the works of major sociological theorists of the 19th and 20th centuries. It is intended to integrate their ideas with the social and historical milieu from which they were born. Questions of intergroup conflict vs. cooperation, interactions between economic, familial, religious, and political institutions, and the development of the self as a function of larger social processes are addressed. Such celebrated figures as Marx, Weber, and Durkheim, as well as modern thinkers will be presented and discussed. Prereq: Graduate standing.

SOCI 401. Contemporary Sociological Theory (3)
Current viewpoints in sociological theory are explored using contrasting theoretical perspectives.

SOCI 406. Sociological Research Methods I (3)
The first of a two-semester series in social research
methodology. Students will learn how to interpret and conduct social science research. The two-semester course covers problem formulation, the logic of causal inference, measurement models, research designs, sampling, data collection, and data analysis.

SOCI 407. Sociological Research Methods II (3)
The second of a two-semester series in social research methodology. (See SOCI 406.)
Prereq: SOCI 406.

SOCI 410. The Individual in Society (3)
This course focuses on the relationships between individuals and the societies in which they live. Influences of values and culture on individuals’ selves and identities are discussed as well as how individuals attach meaning to personal life experiences and histories in the context of society at large.
Offered as SOCI 310 and SOCI 410.

SOCI 411. Health, Illness, and Social Behavior (3)
This course considers the role of social factors (e.g., poverty, occupational and family structure) on health and illness. Discussion will concentrate on the role of health promotion (e.g., anti-smoking campaigns), social behavior and lifestyle in health and health care use. Considerable attention is given to understanding health careers and professions and their role in the health of societies and individuals.
Offered as SOCI 311 and SOCI 411.

SOCI 413. Sociology of Stress and Coping (3)
This course will focus attention on human stress throughout the lifespan and its role in personal health and well-being. There have been exciting advances in recent years in understanding the nature of stress in everyday life as well as elements of extreme stress. Trauma is experienced by many people due to normative events such as illness and bereavement or natural and man-made disasters such as crime or war. Coping strategies and social supports which ameliorate negative impact of stress will be considered.
Offered as SOCI 313 and SOCI 413.

SOCI 414. Qualitative Methods/Field Research (3)
Students explore the theoretical foundations of qualitative social research. The course is designed to introduce and provide experience with a range of data generation strategies and analytic skills. The ethnographic techniques of semi-structured interviewing and participant-observation receive particular attention.
Offered as SOCI 314 and SOCI 414.

SOCI 419. Sociology of Institutional Care (3)
This course focuses on converging issues of theory, research, and practice in general hospitals, mental hospitals, nursing homes, hospices, and correctional institutions. The ecology of institutions and the adaptation of individuals within institutions will also be considered. There will be field trips to institutional facilities.
Offered as SOCI 319 and SOCI 419.

SOCI 436. Institutional Care: Research and Reform (3)
This course is designed to provide an introduction to the nature of long term care in the U.S. and to contemporary issues of reform and culture change. It also provides an introduction to techniques for studying nursing home culture, and for assessing culture changes. The issues and problems of long term care are well documented and the need for changing practices of long-term care is so widely recognized and deeply felt that several initiatives for “changing the culture” of long term care have gained national notoriety and rapid momentum. While laudatory, such efforts are inevitable criticized on numerous grounds, including cost, philosophy and vision, and lack of research evidence to support claims of success. The course is designed to provide an introduction to these debates in the scientific literature and in popular culture, and will provide an opportunity to develop skills in structured observation and action research.
Offered as SOCI 336 and SOCI 436.

SOCI 443. Medical Sociology (3)
Course covers theories, research methods, and problems in sociology of medicine. Topics include social epidemiology, health and illness behavior, and sick role. Structures and functions of delivery systems and their interrelationships with other social institutions are discussed.

SOCI 445. Sociology of Mental Illness (3)
Focus is on social construction of mental health and illness and sociology of emotions. Social determinants of psychological distress will be discussed along with social stigma associated with mental illness. Institutional and community options for care of the mentally ill will be considered along with the impact of recent social movements of deinstitutionalization and independent living.
Offered as SOCI 345 and SOCI 445.

SOCI 447. Sociology of Education (3)
This course provides an introduction to the field of sociology of education, which might be more properly called sociology of schooling. We will examine the development of schools historically and competing paradigms for understanding the place of school in society. Major theoretical perspectives concerning the nature and consequences of schools for individuals and for societies will be reviewed. Issues of individual opportunity - including how it is organized by race, class, and gender - will be covered, as well as issues institutional dynamics - including tracking, testing and so-called crisis and reform.
Offered as SOCI 347 and SOCI 447.

SOCI 449. Social Inequality (3)
Theory and research on contemporary inequality is considered in terms of income, wealth, education, occupational standing, occupational prestige, status categories, racial, ethnic, religious, age, and gender groupings.
Offered as SOCI 349 and SOCI 449.

SOCI 455. Special Topics (3)
One or more sections each semester focusing on selected areas of study in sociology.
Offered as SOCI 335 and SOCI 455.

SOCI 460. The Sociology of Law (3)
This course will focus on the role of rights in the U.S. legal system and society. In particular, we will consider three questions. The first is how do rights fit in the legal system and society? Second, how have different social groups used and thought about rights? Third, how do legal actors like judges and lawyers think about rights compared to non-lawyers?
Offered as SOCI 360 and SOCI 460.

SOCI 461. The Life Course (3)
Individual experiences and transitions over the life course are considered as the result of societal, cultural, psychological, biological, and historical influences. Developmental issues of childhood, adolescence, young adulthood, middle years and late life are discussed in the context of social expectations, challenges, and opportunities. Emphasis is placed on theoretical readings.
Offered as SOCI 361 and SOCI 461.

SOCI 465. Health Care Delivery (3)
Health care in the U.S. may be approaching a critical cross-road. Limiting care to older persons and the chronically ill has been proposed as a means to combat rising costs and limited access to health care. What are the alternatives to health care rationing? Socialized medicine? National health insurance? This course deals with issues of cost, quality, and access to health care in the United States and other societies. It considers how solutions by other societies can provide directions for the organization of health care in the U.S.
Offered as SOCI 355 and SOCI 455.

SOCI 469. Aging in American Society (3)
Considers the position and participation of aged adults in American society. Sociological perspectives through which to interpret the aging process and old age; social policies; intergenerational relations; lifestyles and how they affect participation of the aged in American society; dying and death serve as major themes.
Offered as SOCI 369 and SOCI 469.

SOCI 470. Sociology of the Family (3)
This course provides the theoretical and methodological foundation for conducting family research. It also reviews the most current research in the sociology of the family arena such as intergenerational issues, ethnicity and gender, and family transitions.
Offered as SOCI 370 and SOCI 470.

SOCI 472. Work and Family: U.S. and Abroad (3)
In this course, the city is the classroom. We will engage with the urban terrain. We will meet weekly off-campus, interact with community members, and interface—both literally and figuratively—with the city as a way to examine the linkages between historical, conceptual, and contemporary issues, with particular attention paid to race and class dynamics, inequality, and social justice. This course will have four intersecting components, primarily focusing on American cities since the 1930s: the social and physical construction of urban space, the built environment, life and culture in the city, and social movements and grassroots struggles.

Offered as HSTY 381, POSC 381, SOCI 381, HSTY 481, POSC 481, and SOCI 481.

SOCI 496. Public Policy and Aging (3)
Offered as ANTH 498, BETH 496, EPBI 408, GERO 496, HSTY 480, MPH 408, NURS 479, NURS 579, POSC 480, and SOCI 496.

SOCI 500. Advanced Social Theory (3)
This course focuses on problems and issues relevant to contemporary social theorizing. As such, it deals with the rational roots of mainstream sociological thought and its relation to practice. Attention will also be paid to critical theory, hermeneutics, and current feminist thinking.
Prereq: SOCI 400 and SOCI 401.

SOCI 509. Problems of Data Analysis (3)
Research in social epidemiology, health service research and other applied fields increasingly demands an understanding of social research methodology. This seminar exposes students to state of the art analyses of social science data including: data preparation, factor analysis, regression and structural equation modeling. Students are provided the opportunity to interpret and critically evaluate the methodology used in journal articles, with an emphasis on data analytical techniques. Students will analyze data sets using SPSS and EQS.
Prereq: STAT 401 or SOCI 406, and SOCI 407.

SOCI 600. Reading and Research (1–9)
Individual study and/or project work.

SOCI 701. Dissertation Ph.D. (1–18)
Individual study.

GENERAL BULLETIN 2009-2011

DEPARTMENT FACULTY

Jill E. Korbin, Ph.D.
(University of California-Los Angeles)
Interim Chair; Professor of Anthropology

Jiayang Sun, Ph.D.
(Stanford University)
Professor

General statistics and applications; methodologies in statistical computing and data mining; semi- and nonparametrics; biased sampling; bump hunting and mixtures; statistics in astronomy, neuroscience, imaging, and information technology research

Patricia Williamson, Ph.D.
(Bowling Green University)
Instructor
Bayesian analysis; estimation; hypothesis testing

Wojbor Woyczynski, Ph.D.
(Wroclaw University, Poland)
Professor
Stochastic models; probability; random fields; nonlinear diffusion; turbulence

Associate Faculty

J. Sunil Rao, Ph.D.
(University of Toronto)
Associate Professor; Professor of Epidemiology and Biostatistics, School of Medicine
Statistical aspects of data mining; statistical methods for analysis of DNA microarrays

Lecturers

Paula FitzGibbon, M.S.
(Miami University)
General statistics and applications; program evaluation for nonprofit organizations; survey questionnaire design

Danhong Song, Ph.D.
(Bowling Green University)
Statistical genetics; linkage analysis and association study
Adjunct Faculty
Manfred Denker, Ph.D.
(University of Erlangen)
Adjunct Professor
Nonparametric statistics; probability theory; complex dynamics
Harold S. Haller, Ph.D
(Case Western Reserve University)
Adjunct Professor
Statistical quality control; experimental design
Bo Hu, Ph.D.
(University of Wisconsin-Madison)
Adjunct Assistant Professor
Model selection; longitudinal analysis
Hemant Ishwaran, Ph.D.
(Yale University)
Adjunct Associate Professor
Data mining; mixture models; nonparametric Bayes; genomic data
Mary Rieger, Ph.D.
(University of California, Berkeley)
Adjunct Professor
Statistical education
Yaomin Xu, Ph.D.
(Case Western Reserve University)
Adjunct Assistant Professor
Statistical Genetics and Bioinformatics

UNDERGRADUATE PROGRAMS
Students in statistics begin with a foundation in mathematics. Then they add statistical theory, plus intensive modern data analysis and a concentration in a field of their choice. The goal is to develop an appreciation of each facet of the discipline and a mastery of technical skills. This prepares students to enter a research setting or to work in an interdisciplinary collaboration.

For the undergraduate student looking toward graduate school, the course of study within these guidelines easily incorporates additional mathematics in preparation for the more abstract mathematical level of graduate courses. The more specialized option in actuarial science expands the basic program in statistics to incorporate topics from operations research and numerical analysis which are fundamental to actuarial theory and computation. This actuarial option includes the course work necessary to prepare for Courses 1-3 of the Society of Actuaries Exams.

All undergraduate majors begin with a foundation in mathematics and a core of courses in mathematical statistics, courses in statistical methodology and courses in modern data analysis. Each student’s program is individualized by: (1) the choice of an applied field of concentration according to the student’s own talents and interests, and (2) the choice of appropriate statistics electives, drawn from offerings by the Statistics department and from suitable offerings by other departments at the university. The senior project option allows students to work in a research setting or to participate either in interdisciplinary collaboration or in industrial consulting along with a statistics faculty member.

MAJORS

BACHELOR OF ARTS

The B.A. degree offers flexibility and the chance to pursue a wider range of interests. It also offers the possibility of expanding the interdisciplinary aspect of the program to complete the requirements for majors in two fields. For example, students may combine statistics with computer science, biology (molecular, organismal, or ecology), psychology, economics, accounting, or management science.

The B.A. degree in statistics requires a minimum of 56 hours of approved course work, including 27 hours in statistics and the remainder in related disciplines and a substantive field of application. The specific requirements are as follows:

1. MATH 121, 122, 223, 224, and 201 or equivalent
2. ENGR 131 or EECS 251 or approved alternate, plus an additional higher-numbered course in computation from EECS offerings or EPBI 414
3. STAT 325 and 326, STAT 345 and 346
4. At least 15 hours of courses in statistical methodology, to be chosen from courses numbered 300 and higher offered by the statistics department, or approved courses in statistical methodology or probability taught in Biostatistics, Electrical Engineering and Computer Science, Economics, Mathematics, Operations Research, Systems Engineering, etc. At least 6 hours must be in STAT.
5. Two approved courses (or more) numbered 300 or above in an approved discipline outside statistics
6. A combined total of 12 hours (or more) in ASTR, BIOL, CHEM, GEOL, or PHYS which may be counted toward a major in that field, including at least one of PHYS 121 and 122, CHEM 105 and 106 plus 113, CHEM 107 and 108 plus 113, BIOL 110 and 210 plus 211, or BIOL 110 and 220 plus 221. Students are strongly encouraged to include advanced expository or technical writing courses in their programs.

BACHELOR OF SCIENCE

The B.S. degree adds a laboratory science requirement. For students seriously interested in basic science, a natural science is the logical choice as a focus for the application, and the B.S. degree is the logical choice of program.

The B.S. degree in statistics requires a minimum of 68 hours of approved course work, including 27 hours in statistics and the remainder in related disciplines and a substantive field of application.

COMBINED B.S.-M.S. PROGRAM

The combined bachelor’s-master’s degrees in statistics require a minimum of 21 hours beyond the bachelor’s degree requirements. In total, 42 hours must be in statistics, including an M.S. thesis or M.S. research project, with the remainder (either 41 or 26 hours for the B.S. or B.A., respectively) in approved course work in related disciplines and a field of application.

In addition to the B.S. or B.A. requirements, a combined degree program must include:

1. STAT 455 and three semesters of STAT 491
2. One semester of STAT 495
3. M.S. research project (STAT 621) or M.S. thesis (STAT 651)
4. At least 6 additional hours of courses in statistical theory and methodology (making a total of 21 hours, including at least 4 STAT courses numbered 400 or higher), to be chosen from Statistics Department offerings numbered 300 and higher, or approved courses in statistical methodology or probability taught in Biostatistics, Computer Science, Economics, Mathematics, Operations Research, Systems Engineering, etc.
5. Two approved courses (or more) numbered 300 or above in an approved discipline outside statistics. Students are strongly encouraged to include advanced courses.
expository or technical writing courses in their programs. Students may pursue a B.A. with a double major in statistics and a related field from within the College of Arts and Sciences. In this case, the substantive field requirement (No. 5 of the B.A. requirements above) is waived.

**BACHELOR’S DEGREE OPTION IN ACTUARIAL SCIENCE**

The actuarial program leading to either a B.A. or a B.S. in statistics requires 30 hours in statistics and actuarial studies and must satisfy the requirements for the appropriate degree program, with the following modifications of requirements 4 and 5 of the B.A. or B.S. program:

4. At least 12 hours in statistical methodology, to be chosen from courses numbered 300 and higher offered by the statistics department, or approved courses taught in biostatistics, electrical engineering, computer science, economics, mathematics, operations research, etc. At least 6 hours must be in STAT courses; STAT 243 and 244 may be counted.

5. STAT 317 and STAT 318. Students ordinarily can expect to be prepared to take Courses 1-3 of the Society of Actuaries Exams upon graduation.

**Minor**

A minor in statistics requires a minimum of 15 hours of approved course work. The minor must satisfy the requirements below and must include a minimum of 9 credits in courses from statistics department offerings.

1. STAT 243 and 244 or STAT 345 and 346 or other approved sequence
2. One of the following: STAT 208, 312, 313, 332, 333, or 325
3. Two approved elective courses numbered 300 or above

**GRADUATE PROGRAMS**

The department offers programs leading to the Master of Science and to the Doctor of Philosophy degrees. Graduate assistantships both with teaching responsibilities and with research duties are available to qualified applicants. The dual core of the M.S. program is mathematical statistics and modern data analysis, with the option of a special Entrepreneurial Track. Expanding from this core, students develop technical facility in a variety of statistical methodologies. This breadth of competence is designed to equip graduates to go beyond the appropriate choice of method for implementation and to be able to adapt these techniques and to construct new methods to meet the specific objectives and constraints of new situations.

**Master of Science**

The M.S. degree in statistics requires a minimum of 27 hours of approved course work in statistics and related disciplines and an M.S. research project or a thesis. Each student’s program is developed in consultation with the director of graduate studies or a senior faculty mentor and must satisfy the following requirements:

1. STAT 425 and 426
2. STAT 445 and 446
3. STAT 455
4. STAT 495 or STAT 491 (3 credits)
5. M.S. research project (STAT 621) or M.S. thesis (STAT 651)
6. A minimum of 6 hours of approved graduate-level statistics electives

The goals of this program are: (1) to give each student a balanced view of statistical theory and the application of statistics in practice or in substantive research, and (2) to have the student develop a broad competence in statistical methodology. The required core course work reflects this balance. The first two requirements are for full-year sequences in data analysis and theory; the third develops the theory underlying linear modeling. The requirement for applications of statistics will be satisfied through intensive participation in the consulting forum; the selection of an M.S. research project provides additional exposure. Graduate students are also required to participate in a forum or seminar to gain experience in written and oral presentation.

The remainder of each student’s program is individualized to address the more specialized statistical demands of the selected field of concentration or the focus of multidisciplinary work. Each student may choose either the applied research project or the thesis option, depending on individual interests. In either case, the student can expect to work with a faculty mentor in undertaking a significant task, the results of which will be suitable for publication or for presentation at professional society meetings.

A student coming to school from a position as a professional statistician might choose a statistical problem arising in the workplace as the basis for an M.S. research project. A student intending to continue graduate work toward a Ph.D. might choose an M.S. research project to explore the intimate relationship of statistics to substantive fields. Alternatively, either student might choose the thesis option to tailor a methodology to a new setting or to make a first essay at mathematical statistical research.

**ENTREPRENEURIAL TRACK**

The Master of Science in Statistics-Entrepreneurial Track (MSS-ET) is a professional degree designed to provide training in statistics focused on developing data analysis and decision-making skills in industrial/government/consulting environments where uncertainties and related risks are present. It expands our basic Master of Statistics program by creating a professional track that includes some business training. The Entrepreneurial Track provides instruction and real-world business experience to students who have a background in statistics and a vision for new and growing ventures. The MSS-ET program requires a minimum of 27 hours.

The required New Venture Creation and Technology Entrepreneurship courses will be offered by the Weatherhead School of Management. Students on internships will sign up for the consulting forum sequence. In addition, students are required to participate in an intensive (up to 30 hours) one-week annual workshop on the industrial use of statistics from the management perspective. This non-credit workshop will take place during the fall or spring undergraduate breaks.

**Doctor of Philosophy**

The focus of the doctoral program is on research, and the plan of study emphasizes the theory of statistics. Graduates will be able both to extend the theoretical basis for statistics and to bring statistical thought to scientific research in other fields. The objective of preparing students to collaborate in interdisciplinary work demands breadth as well, so advanced knowledge of a substantive field and participation in the collaborative experience are also integral to the program.

Students planning to enter the doctoral program in statistics should obtain information from the departmental office. Plans of study are prepared individually by the graduate student and a faculty advisor to develop the talents and interests of each student.
STAT 201. Basic Statistics for Social and Life Sciences (3)
Designed for undergraduates in the social sciences and life sciences who need to use statistical techniques in their fields. Descriptive statistics, probability models, sampling distributions. Point and confidence interval estimation, hypothesis testing. Elementary regression and analysis of variance. Not for credit toward major or minor in Statistics.

STAT 207. Statistics for Business and Management Science I (3)
Organizing and summarizing data. Mean, variance, moments. Elementary probability, conditional probability. Commonly encountered distributions including binomial, Poisson, uniform, exponential, normal distributions. Central limit theorem. Sample quantities, empirical distributions. Reference distributions (chi-square, z-, t-, F-distributions). Point and interval estimation; hypothesis tests. Recommended preparation: MATH 122 or MATH 126 or equivalent.

STAT 208. Statistics for Business and Management Science II (3)

STAT 243. Statistical Theory with Application I (3)

STAT 244. Statistical Theory with Application II (3)

STAT 312. Basic Statistics for Engineering and Science (3)
For advanced undergraduate students in engineering, physical sciences, life sciences. Comprehensive introduction to probability models and statistical methods of analyzing data with the object of formulating statistical models and choosing appropriate methods for inference from experimental and observational data and for testing the model’s validity. Balanced approach with equal emphasis on probability, fundamental concepts of statistics, point and interval estimation, hypothesis testing, analysis of variance, design of experiments, and regression modeling. Note: Credit given for only one (1) of STAT 312, 313, 333, 433. Prereq: MATH 122 or equivalent.

STAT 313. Statistics for Experimenters (3)
For advanced undergraduates in engineering, physical sciences, life sciences. Comprehensive introduction to modeling data and statistical methods of analyzing data. General objective is to train students in formulating statistical models, in choosing appropriate methods for inference from experimental and observational data and to test the validity of these models. Focus on practicalities of inference from experimental data. Inference for curve and surface fitting to real data sets. Designs for experiments and simulations. Student generation of experimental data and application of statistical methods for analysis. Critique of model; use of regression diagnostics to analyze errors. Note: Credit given for only one (1) of STAT 312, 313, 333, 433. Prereq: MATH 122 or equivalent.

STAT 317. Actuarial Science I (3)
Practical knowledge of the theory of interest in both finite and continuous time. That knowledge should include how these concepts are used in the various annuity functions, and apply the concepts of present and accumulated value for various streams of cash flows as a basis for future use in: reserving, valuation, pricing, duration, asset/liability management, investment income, capital budgeting, and contingencies. Valuation of discrete and continuous streams of payments, including the case in which the interest conversion period differs from the payment period will be considered. Application of interest theory to amortization of lump sums, fixed income securities, depreciation, mortgages, etc., as well as annuity functions in a broad finance context will be covered. Topics covered include areas examined in the American Society of Actuaries Exam 2. Recommended preparation: MATH 122 or MATH 126 or equivalent. Offered as STAT 317 and STAT 417.

STAT 318. Actuarial Science II (3)
Theory of life contingencies. Life table analysis for simple and multiple decrement functions. Life and special annuities. Life insurance and reserves for life insurance. Statistical issues for prediction from actuarial models. Topics covered include areas examined in the American Society of Actuaries Exam 3. Recommended preparation: STAT 317 and one of the following: STAT 207, 312, 345, or equivalent. Statistical data and testing using S-plus computing language. Linear and multiple regression. Emphasis on model selection criteria, on diagnostics to assess goodness of fit and interpretation. Techniques include transformation, smoothing, median polish, robust/resistant methods. Case studies and analysis of individual data sets. Notes of caution and some methods for handling bad data. Knowledge of regression is helpful. Offered as STAT 325 and STAT 425. Prereq: STAT 207 or STAT 243 or STAT 312 or EPBI 431 or EPBI 441 or EPBI 458.

STAT 326. Multivariate Analysis and Data Mining (3)
Extensions of exploratory data analysis and modeling to multivariate response observations and to non-Gaussian data. Singular value decomposition and projection, principal components, factor analysis and latent structure analysis, discriminant analysis and clustering techniques, cross-validation, EM algorithm, CART. Introduction to generalized linear modeling. Case studies of complex data sets with multiple objectives for analysis. Recommended preparation: STAT 325/425. Offered as STAT 326 and STAT 426.

STAT 332. Statistics for Signal Processing (3)
For advanced undergraduate students or beginning graduate students in engineering, physical sciences, life sciences. Introduction to probability models and statistical methods. Emphasis on probability as relative frequencies. Derivation of conditional probabilities and memoryless channels. Joint distribution of random variables, transformations, autocorrelation, series of irregular observations, stationarity. Random harmonic signals with noise, random phase and/or random amplitude. Gaussian and Poisson signals. Modulation and averaging properties. Transmission through linear filters. Power spectra, bandwidth, white and colored noise. ARMA processes and forecasting. Optimal linear systems, signal-to-noise ratio, Wiener filter. Completion of additional assignments required from graduate students registered in this course. Offered as STAT 332 and STAT 432. Prereq: MATH 122.

STAT 333. Uncertainty in Engineering and Science (3)
Phenomena of uncertainty appear in engineering and science for various reasons and can be modeled in different ways. The course integrates the mainstream ideas in statistical data analysis with models of uncertain phenomena stemming from three distinct viewpoints: algorithmic/computational complexity; classical probability theory; and chaotic behavior of nonlinear systems. Descriptive statistics, estimation procedures and hypothesis testing (including design of experiments). Random number generators and their testing. Monte Carlo Methods. Mathematica notebooks and simulations will be used. Note: Credit given for only one (1) of STAT 312, 313, 333, 433. Graduate students
are required to do an extra project.
Offered as STAT 333 and STAT 433.
Prereq: MATH 122 or MATH 223.

STAT 345. Theoretical Statistics I (3)
Topics provide the background for statistical inference. Random variables; distribution and density functions; transformations, expectation. Common univariate distributions. Multiple random variables; joint, marginal and conditional distributions; hierarchical models, covariance. Distributions of sample quantities, distributions of sums of random variables, distributions of order statistics. Methods of statistical inference. Recommended preparation: MATH 122 or MATH 223.

STAT 346. Theoretical Statistics II (3)

STAT 395. Senior Project in Statistics (3)
An individual project done under faculty supervision involving the investigation and statistical analysis of a real problem encountered in university research or an industrial setting. Written report.

STAT 401. Statistics for Social and Life Sciences (3)
Principles and practice of data presentation and basic models including analysis of variance and multiple linear regression. Content includes analysis of discrete data in contingency tables, sensitivity and specificity, odds ratios, tests of goodness of fit, display and summarization of data, hypothesis testing, and interval estimation. Taught in case-based format with individual and/or collaborative student projects. Primarily for graduate students in nursing and health sciences. Not for credit toward undergraduate major or minor in Statistics or for credit toward any graduate degree in Statistics. Recommended preparation: STAT 201.

STAT 412. Statistics for Design and Analysis in Engineering and Science (3)
For graduate students (primarily) and advanced undergraduates in engineering, physical sciences, and life sciences. After basic statistical concepts are reviewed, the remainder of the course consists of a comprehensive introduction to statistical methods of designing experiments and analyzing data. The general objective is to train students in statistical modeling and in the choice of experimental designs to use in scientific investigations. A variety of experimental designs are covered, and regression analysis is presented as the primary technique for analyzing data from designed experiments, and in discriminating between various possible statistical models. The course is oriented toward graduate students engaged in or embarking on research.
Prereq: MATH 122.

STAT 417. Actuarial Science I (3)
Practical knowledge of the theory of interest in both finite and continuous time. That knowledge should include how these concepts are used in the various annuity functions, and apply the concepts of present and accumulated value for various streams of cash flows as a basis for future use in: reserving, valuation, pricing, duration, asset/liability management, investment income, capital budgeting, and contingencies. Valuation of discrete and continuous streams of payments, including the case in which the interest conversion period differs from the payment period will be considered. Application of interest theory to amortization of lump sums, fixed income securities, depreciation, mortgages, etc., as well as annuity functions in a broad finance context will be covered. Topics covered include areas examined in the American Society of Actuaries Exam 2. Recommended preparation: MATH 122 or MATH 126 or equivalent. Offered as STAT 317 and STAT 417.

STAT 418. Actuarial Science II (3)
Theory of life contingencies. Life table analysis for simple and multiple decrement functions. Life and special annuities. Life insurance and reserves for life insurance. Statistical issues for prediction from actuarial models. Topics covered include areas examined in the American Society of Actuaries Exam 3. Recommended preparation: STAT 317 and one of the following: STAT 207, 312, 345, or equivalent.
Offered as STAT 318 and STAT 418.

STAT 425. Data Analysis and Linear Models (3)
Basic exploratory data analysis for univariate response with single or multiple covariates. Graphical methods and data summarization, model-fitting using S-plus computing language. Linear and multiple regression. Emphasis on model selection criteria, on diagnostics to assess goodness of fit and interpretation. Techniques include transformation, smoothing, median polish, robust/resistant methods. Case studies and analysis of individual data sets. Notes of caution and some methods for handling bad data. Knowledge of regression is helpful.
Offered as STAT 325 and STAT 425.

STAT 426. Multivariate Analysis and Data Mining (3)
Offered as STAT 326 and STAT 426.

STAT 427. Statistical Computing (3)
Basic topics in statistical computing; floating point arithmetic; seminumerical computation including generation and test of random numbers, Monte Carlo methods, variance reduction methods, stochastic models and simulation studies; numerical computation including numerical linear algebra, optimization and root-finding, numerical integration; some graphical and symbolic computations, special topics in statistical computing: resampling methods, EM algorithms, Gibbs sampling and projection pursuit.
Prereq: STAT 345 or STAT 425 or permission of department.

STAT 432. Statistics for Signal Processing (3)
For advanced undergraduate students or beginning graduate students in engineering, physical sciences, life sciences. Introduction to probability models and statistical methods. Emphasis on probability as relative frequencies. Derivation of conditional probabilities and memoryless channels. Joint distribution of random variables, transformations, autocorrelation, series of irregular observations, stationarity. Random harmonic signals with noise, random phase and/or random amplitude. Gaussian and Poisson signals. Modulation and averaging properties. Transmission through linear filters. Power spectra, bandwidth, white and colored noise. ARMA processes and forecasting. Optimal linear systems, signal-to-noise ratio, Wiener filter. Completion of additional assignments required from graduate students registered in this course. Offered as STAT 332 and STAT 432.
Prereq: MATH 122.

STAT 433. Uncertainty in Engineering and Science (3)
Phenomena of uncertainty appear in engineering and science for various reasons and can be modeled in different ways. The course integrates the mainstream ideas in statistical data analysis with models of uncertain phenomena stemming from three distinct viewpoints: algorithmic/computational complexity; classical probability theory; and chaotic behavior of nonlinear systems. Descriptive statistics, estimation procedures and hypothesis testing (including design of experiments). Random number generators and their testing. Monte Carlo Methods. Mathematica notebooks and simulations will be used. Note: Credit given for only one (1) of STAT 312, 313, 333, 433. Graduate students are required to do an extra project. Offered as STAT 333 and STAT 433. Prereq: MATH 122 or MATH 223.

STAT 437. Stochastic Models: Time Series and Markov Chains (3)
Introduction to stochastic modeling of data. Emphasis on models and statistical analysis of data with a significant temporal and/or spatial structure. This course will analyze time and space dependent random phenomena from two perspectives: Stationary Time Series: Spectral representation of deterministic signals, autocorrelation. Power spectra. Transmission of stationary signals through linear filters. Optimal filter design, signal-to-noise ratio.

Prereq: STAT 312 or equivalent.

STAT 439. Integrated Numerical and Statistical Computations (3)
This course will embed numerical methods into a Bayesian framework. The statistical framework will make it possible to integrate a priori information about the unknowns and the error in the data directly into the most efficient numerical methods. A lot of emphasis will be put on understanding the role of the priors, their encoding into fast numerical solvers, and how to translate qualitative or sample-based information—-or lack thereof—-into a numerical scheme. Confidence on computed results will also be discussed from a Bayesian perspective, at the light of the given data and a priori information. The course should be of interest to anyone working on signal and image processing statistics, numerical analysis and modeling. Recommended Preparation: Math 431. Offered as MATH 439 and STAT 439.

STAT 445. Theoretical Statistics I (3)
Topics provide the background for statistical inference. Random variables; distribution and density functions; transformations, expectation. Common univariate distributions. Multiple random variables; joint, marginal and conditional distributions; hierarchical models, covariance. Distributions of sample quantities: distributions of sums of random variables, distributions of order statistics. Methods of statistical inference. Graduate students are responsible for mathematical derivations, and full proofs of principal theorems. Recommended preparation: MATH 122 or MATH 223, or concurrent registration in EPBI 431. Offered as EPBI 481 and STAT 445.

STAT 446. Theoretical Statistics II (3)
Point estimation: maximum likelihood, moment estimators. Methods of evaluating estimators including mean squared error, consistency, “best” unbiased and sufficiency. Hypothesis testing; likelihood ratio and union-intersection tests. Properties of tests including power function, bias. Interval estimation by inversion of test statistics, use of pivotal quantities. Application to regression. Graduate students are responsible for mathematical derivations, and full proofs of principal theorems. Recommended preparation: MATH 223 or STAT 445. Offered as EPBI 482 and STAT 446.

STAT 448. Bayesian Theory with Applications (3)
Principles of Bayesian theory, methodology and applications. Methods for forming prior distributions using conjugate families, reference priors and empirically-based priors. Derivation of posterior and predictive distributions and their moments. Properties when common distributions such as binomial, normal or other exponential family distributions are used. Hierarchical models. Computational techniques including Markov chain, Monte Carlo and importance sampling. Extensive use of applications to illustrate concepts and methodology. Recommended preparation: STAT 445.

STAT 453. Time Series and Wavelets (3)
Stationary discrete-time and continuous-time models. Search for hidden periodicities in data. Fast Fourier transform; smoothing and filtering; spectra and periodograms. Multiple series; cross spectra and cross periodograms. Prediction problems. Time-frequency localization and the uncertainty principle, windowed Fourier transforms. Introduction to wavelet and multiresolution analysis. Prereq: STAT 353 or STAT 346 or STAT 433 or STAT 446 or permission of department.

STAT 455. Linear Models (3)

STAT 491. Graduate Student Seminar (1–2)
Seminar run collaboratively by graduate students to investigate an area of current research, the topic chosen each semester. All graduate students participate in presentation of material each semester. Satisfies requirement for every full-time graduate student to enroll in a participatory seminar every semester while registered in any graduate degree program. Recommended preparation: Graduate standing.

STAT 495A. Consulting Forum (1–3)
This course unifies what students have learned in their course work to apply their knowledge in consulting. It recognizes the fact that the essence of the statistical profession is continuing interaction with practitioners in the sciences, engineering, medicine, economics, etc. The course presents the views of prominent experts in the field as obtained from the literature and other sources. The responsibilities of the consultant and the client are discussed. Sample consulting problems are presented and strategies for solving them are provided. Prereq: STAT 325 or STAT 425.

STAT 495B. Consulting Forum With Practicum (3)
This course is designed to provide a hands-on experience with statistical consulting under the guidance of the instructor. It will include discussion of practical aspects of consulting such as the entrepreneurial nature of this activity. The students will become involved in actual consulting projects generated in a collaborative environment. Statistical problems, together with their substantive background, will be presented by individuals from the private sector (e.g., from industry) and/or Case Western Reserve faculty and students. Selected problems will be addressed in a collaborative fashion; i.e., by a team involving graduate students from the Statistics Department, the course instructor, and scientists. Some of these problems may lead to collaborative research or entrepreneurial ventures. Prereq: STAT 495A, STAT 325, or STAT 425 or consent of department.

STAT 525. Advanced Data Analysis (3)
Topics drawn from resampling methods (including bootstrapping), MCMC (Gibbs sampling), nonparametric curve and surface fitting, kernel density estimation, projection pursuit, mixture models, time series (time permitting), approaches to model uncertainty, models for repeated measures and structural-functional models, statistical inference for large systems, modern data analysis techniques. Recommended preparation: STAT 426 or permission of department.

STAT 538. Stochastic Models: Diffusive Phenomena and Stochastic Differential Equations (3)

STAT 545. Advanced Theory of Statistics I (3)

STAT 546. Advanced Theory of Statistics II (3)
STAT 555. Generalized Linear Models (3)

STAT 571. Advanced Topics in Statistics (1–3)
For advanced graduate students. Topics in specialized areas of statistical theory and methodology, with emphasis on recent advances in theory, developments of new methodology and definition of new research questions. Topics may change from year to year. Number of credit hours for the class will be predetermined each semester based on the material to be presented.

STAT 576. Advanced Topics in Modeling (1–3)
Advanced topics in specialized areas of statistics and stochastic modeling designed to define new research directions drawing on recent advances in theory and model formulation. Focus on statistical issues arising in the application of statistical or stochastic models to new substantive research efforts. Topics may change from year to year. Number of credit hours for the class will be predetermined each semester based on the material to be presented.

STAT 601. Reading and Research (1–9)
Individual study and/or project work.

STAT 621. M.S. Research Project (1–9)
Completion of statistical design and/or analysis of a research project in a substantive field which requires substantial and/or nonstandard statistical techniques and which leads to results suitable for publication. Written project report must present the context of the research, justify the statistical methodology used, draw appropriate inferences and interpret these inferences in both statistical and substantive scientific terms. Oral presentation of research project may be given in either graduate student seminar or consulting forum.

STAT 651. Thesis M.S. (1–18)
(Credit as arranged.) May be used as alternative to STAT 621 (M.S. Research Project) in fulfillment of requirements for M.S. degree in Statistics.

STAT 701. Dissertation Ph.D. (1–18)
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

STAT 655. Generalized Linear Models (3)

Ohio Teacher Licensure Programs
Teacher education may be chosen as a second major by students whose primary major is in a field in which Case Western Reserve has teacher licensure agreements with John Carroll University and programs approved by the Ohio Department of Education. The teacher education major requires 35 credit hours in professional education, 15 hours taken at Case Western Reserve and 20 hours taken at John Carroll University.

Adolescence/Young Adult teacher licensure is available in integrated language arts, integrated social studies, mathematics, integrated life sciences, chemistry, and physics. In addition, the program offers dual-field licensure in physical science, which includes both chemistry and physics, to students pursuing the B.A. in either discipline. Multi-age licensure is available in French, Spanish, or Latin. For information concerning specific subject area requirements, turn to the departmental descriptions for Biology, Chemistry, Classics (Latin), English, History, Mathematics, Modern Languages and Literatures (French, Spanish), and Physics.

The education course requirements are as follows:

1. Courses at Case Western Reserve University (15 hours):
   - PSCL 101 General Psychology (pre-requisite for EDUC 304) (3)
   - EDUC 301 Introduction to Education (3)
   - EDUC 304 Educational Psychology (3)
   - EDUC 338 Seminar and Practicum in Adolescents (3)
   - EDUC 255 Literacy Across the Curriculum (3)

2. Courses at John Carroll University (20 hours)
   - EDUC 186 Instructional Technology (2)
   - EDJC 337 Adolescent Education Special Methods (3)
   - EDJC 427 Adolescent Education Special Topics (3)
   - EDJC 405C Adolescent Education Seminar (3)
   - EDJC 444C Adolescent Student Teach-
Students seeking licensure in French, Spanish, or Latin will register for the following instead of EDJC 405 and 444C:

EDJC 405D Multi-Age Education Seminar (3)
EDJC 444D Multi-Age Student Teaching (9)

Students must maintain a 3.0 GPA in all professional education courses, a 2.7 GPA in the specific content area, and a cumulative overall GPA of 2.5 to be recommended for Ohio teacher licensure.

As noted above, Case Western Reserve University also offers teacher licensure programs in art education and music education at the undergraduate (Bachelor of Science) and graduate (Master of Arts) levels. For further information on Art Education, see the Department of Art History and Art description in this bulletin; for Music Education, see the Department of Music description.

DEPARTMENT OF THEATER AND DANCE
Eldred Hall
www.case.edu/artsci/thtr
Phone: 216-368-4868; Fax: 216-368-5184
Ron Wilson, Chair
E-mail: ron.wilson@case.edu

Mather Dance Center
http://dance.case.edu
Phone: 216-368-2854; Fax: 216-368-6936
Karen Potter, Director
E-mail: karen.potter@case.edu

The Department of Theater and Dance offers education and participation in all aspects of drama and dance, with course offerings in acting, dance technique, choreography, stagecraft, costume, scene design, directing, and playwriting. Students have the opportunity to perform on stage as well as to serve on the technical crews in dance concerts and mainstage theatrical productions each year. The high ratio of faculty to students ensures that students will be able to work closely with highly skilled professionals. The department treats all performances as educational experiences and welcomes the participation of all students regardless of their academic majors and career goals.

Actor education in the theater arts program prepares majors for acting career opportunities in the American theater. Graduates are currently employed nationally and regionally. The MFA Acting Program, a collaboration between the University and The Cleveland Play House, represents a unique alliance between one of the oldest theater programs in the United States and the nation’s first regional theater.

Graduates of the dance program are currently employed as modern dance company members (regionally and nationally), company directors/choreographers, dance production managers, and dance educators in state and private universities. Others have pursued specialized advanced training and work as dance therapists.

The department is affiliated with the National Theater Institute (NTI) in Waterford, Connecticut. This prestigious program offers our students the best in concentrated theater training, and its Moscow semester provides a unique cultural perspective as well. Students may participate in NTI programs during the fall or spring semester; full credit is available with no loss of scholarship aid.

Many of our students go abroad for either one semester at the British American Drama Academy (BADA) or for a full year in other programs. BADA offers a conservatory-based intensive program in all aspects of actor training, with full credit transfer and no loss of financial aid. For more information on this and other opportunities, consult Catherine Albers, director of undergraduate theater studies.

Many of our students go abroad for either one semester at the British American Drama Academy (BADA) or for a full year in other programs. BADA offers a conservatory-based intensive program in all aspects of actor training, with full credit transfer and no loss of financial aid. For more information on this and other opportunities, consult Catherine Albers, director of undergraduate theater studies.

DEPARTMENT FACULTY
Ron Wilson, B.G.S.
(University of Nebraska)
Professor; Director, Undergraduate Theater Studies
Acting; audition laboratory; business of the business; acting for the camera

Russ Borski, M.F.A.
(University of Minnesota)
Associate Professor
Stage and lighting design; portfolio; production

Catherine Albers, M.F.A.
(Case Western Reserve University)
Associate Professor; Artistic Director, Mather Dance Ensemble
Contemporary dance technique; choreography; dance wellness; production and technology

Shanna Beth McGee, M.F.A.
(University of Georgia)
Associate Professor
Voice

Karen Potter, M.F.A.
(Case Western Reserve University)
Associate Professor; Director, Dance Program
Contemporary dance technique; choreography; pedagogy

Adjunct Faculty
Michael Bloom, Ph.D.
(Stanford University)
Adjunct Associate Professor; Artistic Director, The Cleveland Play House

Mark Alan Gordon, M.F.A.
(Ohio University)
Adjunct Associate Professor; Associate Director, MFA Acting Program
Acting; script analysis

Visiting Faculty
Jeffrey Ullom, Ph.D.
(University of Illinois, Champaign-Urbana)
Visiting Assistant Professor
Dramatic literature, history

UNDERGRADUATE PROGRAMS
THEATER ARTS
Major
The Bachelor of Arts program in theater offers concentrations in general theater, acting, design/technical theater, dramatic writing, and directing.

The basic course requirements for all theater majors are as follows:
1. THTR 101, 102, 103, and 201 (12 hours)
2. At least 4 but not more than 8 hours of THTR 385/386 and 6 hours of English above the 300 level. The department strongly recommends ENG 324 and 325.
Additional course requirements for each concentration are as follows:

**GENERAL THEATER (27 HOURS)**
THTR 223, 224, 228, 229 (SAGES Seminar), 330, 352, 380, 327, 329, 312 or 424 or 440
Total hours, not including THTR 385/386: 42

**ACTING (31 HOURS)**
THTR 228, 229 (SAGES Seminar), 231, 232, 306, 311 (1 hour), 330, 375, 376, 327 or 329, and 382 (Senior Capstone)
Total hours, not including THTR 385/386: 43

**DESIGN/TECHNICAL THEATER (30 HOURS)**
THTR 105, 223, 224, 228, 229 (SAGES Seminar), 330, 352, 380, 327 or 329, 424 or 440
Total hours, not including THTR 385/386: 42

**DIRECTING (30 HOURS)**
THTR 223, 224, 228, 229 (SAGES Seminar), 327 or 329, 330, 331, 380, ARTH 272, MUSC 221
Total hours, not including THTR 385/386: 42

**Departmental Honors in Theater**
Majors wishing to take a Bachelor of Arts degree with honors in theater must make written application to the director of undergraduate theater studies no later than May 1 of the junior year. Students must have a minimum 3.25 overall grade point average and a minimum 3.75 grade point average in theater. Acceptance into the honors program is contingent upon faculty support and recommendation by the director of undergraduate theater studies and the department chair.

Those accepted register for THTR 397 and 398 (Honors Studies) during their senior year, for a total of 6 hours. The honors project is defined as a production project in acting, design, playwriting, directing, or management/ outreach. A supporting paper discussing the concept, execution, and performance of the project must be filed with the director of undergraduate theater studies no later than one week following the project presentation. Preparation of the project will be supervised by a department faculty member.

This project may be accepted for Honors only if it receives a grade of A from both the project advisor and the director of undergraduate theater studies. The grade of A must be received both semesters. Students who qualify will receive the notation “Departmental Honors in Theater” on their diplomas. Information about the structure and specific requirements of the honors project is available from the director of undergraduate theater studies.

**Minor**
A minor in theater requires 18 hours. The requirements for each concentration are as follows:
1. General Theater: THTR 101, 103, 223 or 224 or 352, 228, 229 (SAGES Seminar), and 327 or 329
2. Acting: THTR 101, 102, 231, 228, 229 (SAGES Seminar), and 375
3. Design/Tech: THTR: 105, 228, 229 (SAGES Seminar), 312, 316, 330
4. Dramatic Writing: THTR: 101, 228, 229 (SAGES Seminar), 312, 316, 330
5. Directing: THTR 228, 229 (SAGES Seminar), 223 or 224, 327, 330, 331
6. Dance

**DANCE Major**
The basic course requirements for all department majors with a concentration in dance are as follows:
1. DANC 121 or 122, 203, 204 and THTR 101 (12 hours)
2. At least 4 but not more than 8 hours of DANC 385/386 and 6 hours from Anatomy, Art, English, Music, or Philosophy, at or above the 300 level are recommended
Additional course requirements for the dance concentration (28-31 hours) are as follows:
1. DANC 303, 304, 355 (SAGES Seminar), 403, 404, 414, 423, 451, 460 or 461, and one of the following: 413, 415, 416, 445 or 446. A department senior capstone course must also be taken. Recommended is DANC 396.
2. (Students may elect to substitute THTR 224 or 352 for DANC 423 and 451, with their advisor’s approval.)
3. Total hours, not including DANC 385/386: 40-43

**Departmental Honors in Dance**
All majors are encouraged to apply for Honors Studies, DANC 397 and 398, in their final year. This adds 6 hours to the total.

**Minor**
The minor in dance requires 19 hours. The course requirements are as follows:
DANC: 103, 104, 203, 204 (460 or 461), 303, 304

**GRADUATE PROGRAMS**

**Master of Arts (Dance)**
Although the graduate dance program is geared toward the Master of Fine Arts degree, appropriate candidates may select or be encouraged to pursue the Master of Arts degree. The course work for the M.A. may be similar to that for the Master of Fine Arts, enhanced by related studies in the theater arts program and in other departments. The candidate’s program of study will be designed by the primary dance faculty. As required by the School of Graduate Studies, students must maintain a minimum grade point average of 2.75.

M.A. candidates must complete a minimum of 30 hours, following a program similar to that suggested below. The principal faculty advisor may suggest modifications.
1. 9-12 hours of technique classes, from DANC 417/18, 403, and 460/461
2. 6-9 hours of choreography, from DANC 413, 414, 415, and 416
3. 12 hours of eurythmics, from MUSC 501
4. 2-6 hours of kinesiology and topics in dance medicine, science, and wellness, from DANC 445/446
5. 3 hours of suggested advanced electives: i.e., DANC 535 (Pedagogy) or 455 (History)
6. 3 hours of Music Resources: DANC 505
7. 2-4 hours of project-oriented seminars, from DANC tr. 601, 423 or 451

The program recommends Plan B, with re-
requirements including a non-performance, non-production thesis on a topic approved by the primary program faculty. The thesis must be a substantial and contributive work with potential for publication or presentation. The M.A. thesis must be completed no later than one academic year beyond the completion of the course requirements.

Master of Fine Arts (Acting or Contemporary Dance)

The Master of Fine Arts degree, available with concentrations in acting and contemporary dance, is a terminal pre-professional degree. Candidacy for the Master of Fine Arts program requires an undergraduate degree with (ideally) a major in theater or dance, equivalent training and experience, or demonstrable potential for work at the M.F.A. level. In addition, each candidate must provide evidence of technical skill and creative ability in his or her area of concentration.

At the end of each semester in residence, the student’s skill and creative ability are evaluated in light of his or her work in the department. Only students who have clearly demonstrated growth and excellence are permitted to remain in the program. The award of the M.F.A. degree is contingent upon the student’s academic progress and upon the assessment on the part of the faculty that the candidate possesses the potential to work in the field of theater or dance on a professional level.

Requirements for the M.F.A. degree include:

1. A minimum of 60 semester hours of graduate work beyond the bachelor’s degree
2. A cumulative grade point average of 3.0 for all course work on the graduate level
3. Completion of the course requirements for the M.F.A. Thesis Portfolio
4. Successful completion of the Third Year Internship at The Cleveland Play House, or performance in the Mather Dance Center mainstage season

Specific requirements for the MFA degrees in acting and in dance appear below.

M.F.A. IN ACTING

In 1996, The Cleveland Play House and Case Western Reserve University joined forces to create a new program in professional actor training. The students begin their involvement with the Play House in their first semester, and their level of involvement steadily increases until, in the third year, they become professional apprentices in the Play House company.

Course requirements for the M.F.A. in acting are as follows:

1. 18 semester hours of acting, including script analysis, implementation of acting theory, characterization, Modernist playwrights, and Shakespeare
2. 12 semester hours of movement, chosen from mask work, period styles, stage combat, and commedia
3. 9 semester hours of voice, chosen from voice production, articulation, and interpretation
4. 6 hours of speech, using Edith Skinner techniques, dialects, verse and lyric drama, and Shakespeare
5. 6-9 semester hours of performance theory, projects, and professional seminars
6. 6 semester hours of creative thesis

M.F.A. IN CONTEMPORARY DANCE

1. The M.F.A. degree requires 60 hours. Specific course requirements are as follows:
2. 18-24 semester hours of dance technique
3. 11-12 semester hours of choreography
4. 4 semester hours (two each) of light and costume design
5. 2 semester hours of eurythmics, MUSC 501
6. 3 semester hours of contemporary dance history
7. 3 semester hours of music resources
8. 12-15 semester hours of kinesiology, pedagogy, or allied fields, chosen in consultation with advisor
9. 6 semester hours of creative thesis

COURSE DESCRIPTIONS

DANC 103. First-Year Modern Dance Techniques I (3)
Comprehensive perspective of theory established, through active participation, to serve individual development of normative movement principles in a broad spectrum of applications including theater movement dance, and sports. Content is directly and fundamentally serviceable to subsequent specialized training applications of the actor, dancer, musician, athlete, physiotherapist, and educator.

DANC 104. First-Year Modern Dance Techniques II (3)
Continuation of DANC 103.

DANC 121. Dance in Culture - Ethnic Forms (3)
A lecture class designed to introduce dance as an art form and the many roles it plays in a variety of cultures. Focus will be on ethnic forms and primal cultures.

DANC 122. Dance in Culture - Theatrical Forms (3)
Introduction to an historical and cultural overview of many different forms of dance from various cultural backgrounds, historically selected to demonstrate diversity and represent different periods in history. Basic craft elements of the structures of dance will be introduced to provide a foundation for viewing dance and developing a personal aesthetic.

DANC 160. Introduction to Ballet Technique I (3)
This introductory-level course offers the beginning ballet student the basic tenets and principles of ballet technique. Classwork will involve strong emphasis on proper alignment of the body, dynamic timings, and a command of ballet terminology.

DANC 161. Introduction to Ballet Technique II (3)
Continuation of DANC 160. Prereq: DANC 160 or consent of department.

DANC 189. Improvisation I (1)
Continuation of DANC 160. Prereq: DANC 160 or consent of department.

DANC 203. Second-Year Modern Dance Techniques I (3)
For the performing arts student, normative movement principles are formally extended in both theory and application to include individual correction, modification of adaptation as foundational training needs of the actor, dancer, and singer. Prereq: DANC 103 and DANC 104.

DANC 204. Second-Year Modern Dance Techniques II (3)
Continuation of DANC 203. Prereq: DANC 103 and DANC 104.

DANC 260. Second-Year Ballet Technique I (3)
In-depth exploration of principles and foundations of ballet technique as preparation for the specialized training needs of dancers.

DANC 261. Second-Year Ballet Technique
II (3)
Continuation of DANC 260.
Prereq: DANC 260 or consent of department.

DANC 303. Third-Year Modern Dance Techniques I (3)
For the dance major and advanced non-major. Durational formalities of dance technique as a contemporary American art form structure the aesthetic and technical challenges of development.
Prereq: DANC 204.

DANC 304. Third-Year Modern Dance Techniques II (3)
Continuation of DANC 303. Recommended preparation: DANC 303 or consent of department.

DANC 355. History of Modern Dance (3)
Origins and development of contemporary dance in its historical context.
Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, or FSCS. Prereq or Coreq: FSTS 100.
SAGES Dept Seminar

DANC 385. Rehearsal and Production (1-3)
Practicum for students participating in production work in the Department of Theater and Dance. Supervised laboratory experience in technical theater, construction techniques, scenery, costumes, lighting, and props; production; ticket office operations; promotion, publicity and public relations; house management; wardrobe responsibilities; stage management; assistant directing; and other production positions relating to the mainstage performances in Mather Dance Center. Students are recommended to take one credit hour per production, with a maximum of 8 credit hours allowed during their undergraduate career.

DANC 386. Rehearsal and Performance (1)
Practicum for students participating in performance in the Department of Theater and Dance, relating to the mainstage productions at Mather Dance Center. This course may be repeated, for a maximum total of 2 credits.

DANC 397. Honors Studies I (3)
Individual projects in dance.

DANC 398. Honors Studies II (3)
Individual projects in dance.

DANC 399. Independent Study in Theater Arts (1-3)
Independent research and project work in areas of dance and pedagogy.

DANC 403. Fourth-Year Contemporary Dance Technique I (1-3)
A logical progression of advanced technique. Performing skills assessed and developmentally stressed. Sections from repertory works learned.
Prereq: DANC 303.

DANC 404. Fourth-Year Contemporary Dance Technique II (1-3)
Continuation of DANC 403.
Prereq: DANC 403.

DANC 405. Improvisation I (1)
Movement and dance structures designed to engage responsivity in group dynamics applied to challenge specific technical components which include time and effort, shape, and kinetic awareness.

DANC 406. Improvisation II (1)
Continuation of DANC 405.

DANC 408. Fourth-Year Modern Dance Techniques II (1-3)
Continuation of DANC 407.

DANC 413. Space and Choreography (1-3)
Principles governing the dynamics of concrete and imagistic space applicable to stage values defined, differentiated, and tested through applied studies. Exercising the dual role of choreographer/performer, the sequencing is designed to enlarge active perception of space values, spatial dynamics, and relationships with spatial determinants. Introduced are the psychological principles involved in the development of one’s own creative process; involvement of these principles integrates the subsequent work in the choreography and production sequences.

DANC 414. The Craft of Choreography (3)
An in depth investigation of choreographic craft elements is presented through lecture, practical involvement and specified studies. Emphasized are tools to discover primary movement vocabulary, development of vocabulary through per-mutative investigations and the co-ordering of movement vocabulary into phrases, structural units and larger sections.

DANC 415. Choreography and Music (3)
Combining craft resources with emphasis on use of music. Music selections, historically categorized, are chosen for the purpose of analyzing metric and structural characteristics in accord with which choreography will be created.
Prereq: DANC 414.

DANC 416. Choreography and Theatrical Elements (3)
Use of properties, costumes, and scenic elements in both “first-and-second-function” (Northrop) or “literal” and “abstract” applications challenge the functional and aesthetic appropriateness of conjoined choices. Dance structures fully developed under supervision. Successful results may be programmed for performance and tested for applicability to the Production sequence.
Prereq: DANC 414.

DANC 417. Advanced Contemporary Dance Technique I (1-3)
Performing skills enlarged to include rehearsal and performance of full repertory works. Adaptability, versatility, and fidelity to choreographic intention stressed.
Prereq: DANC 404.

DANC 418. Advanced Contemporary Dance Technique II (1-3)
Continuation of DANC 417.
Prereq: DANC 417.

DANC 423. Light Design for Theatrical Dance (2)
Elements of stage light design and technology for theatrical dance. Lectures and laboratory experience on color, instruments, and computerized design.

DANC 445. Kinesiology for Dance (1-3)
Seminar and laboratory for assessment of kinesiological and biomechanical principles as related to dance. Assessment will be implemented to affect cross-training protocols.

DANC 446. Topics in Dance Medicine, Science, and Wellness (1-3)
Review and application of continually emerging information from the fields of Dance Medicine and Wellness Program is encouraged to facilitate continued application of principles developed in DANC 445.

DANC 451. Costume Design and Construction for Dance (2)
Lecture and studio course in selecting fabrics, draping techniques, construction, and design for concert dance.

DANC 455. History of Modern Dance (3)
Origin and development of modern dance in its historical context.

DANC 460. Ballet Technique for Modern Dance Students I (1-3)
Ballet Technique for Dancers will focus on developing the ballet skills required of the Modern Dance major. The technical level of the class will range from intermediate to advanced where applicable in barre work as well as center. Consent of department is required.

DANC 461. Ballet Technique for Modern Dance Students II (1-3)
Ballet Technique for Dancers will focus on developing the ballet skills required of the Modern Dance major. The technical level of the class will range from intermediate to advanced where applicable in barre work as well as center. Consent of department is required.

DANC 485. Rehearsal, Performance and Production (1-3)
(See DANC 385.)
DANC 505. Music Resources for Contemporary Dance (3)
Resources in the various periods and styles of music for the dancer/choreographer. Study of the choreographic use of music.

DANC 509. Seminar: Introduction to Performance Theory (3)
Research seminar designed to acquaint the dance student with the major theoretical writings of performance theory. Readings on the creative process and archetypal mythology. Exploration of anthropological, psychological, and cultural sources of art and the theatrical impulse.

DANC 535. Contemporary Dance Pedagogy (3)
The study and investigation of the approaches and methods of teaching contemporary dance. Detailed study is made of kinesthetic, oral, and creative factors in teaching of dance. Opportunity to assist and teach under supervision.

DANC 601. Special Projects (1-3)
Credit as arranged.

DANC 610. Professional Internship (1-4)
Involvement in intensive internships with professional dance companies in the Cleveland area bridging academic and professional lives. Internships range from six weeks to one semester.

DANC 640. M.F.A. Thesis Production I (3)
Preproduction conception in area of specialization researched and documented under appointed advisor, in accord with production syllabus, and subcommittee approval.

DANC 641. M.F.A. Thesis Production II (3)
Production implementation, post production evaluation/defense, and advisory assessment.

DANC 644. M.A. Project (1-12)
Research and development of a Master of Arts project in Theater.

THTR 100. Introduction to Performance (3)
A course designed to provide the non-major or undeclared liberal arts major limited experience with a basic understanding of performance and the theater. Fundamentals in improvisation, vocabulary, and scene study are stressed. This course fulfills THTR 101 should the undeclared student select theater as his or her major or minor.

THTR 101. Acting I: Fundamentals (3)
This course is designed to expose the theater major or minor to the development of the actor’s basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work.

THTR 102. Acting II: Exploration of Craft (3)
This course continues the work begun in THTR 101 with emphasis on action, emotional life, and text analysis as the essential elements of the actor’s work. Prereq: THTR 101.

THTR 105. Introduction to Stagecraft (3)
An introduction to scenic construction and painting, hands-on oriented to workshop skills.

THTR 123. Theater in Culture: From Shaman to Steam Engine (3)
An introductory exploration of theater forms and practice from their origins in ritual to the scripts and staging of 19th century Europe. In addition to material presented in lecture/discussion format, the class will attend local University and professional theater productions. This course fulfills General Education requirements and is intended for non-theater majors and minors.

THTR 124. Theater in Culture: From Steam Engine to Cyberspace (3)
Using selected dramatic texts from the 19th century to present day, the course explores the roles of production participants and audiences in their historical, cultural, and contemporary contexts. Material is presented in lecture/discussion format, augmented by live theater performances and audio-visual resources.

THTR 201. Movement for the Actor (3)
The course focuses on developing a kinesthetic awareness of the body and its use as a theatrically expressive instrument. Exercises will encompass development of flexibility, strength building, alignment, motor skills, and concentration. Prereq: THTR 101 or THTR 102.

THTR 223. Introduction to Scenic Design (3)
An introduction to visual design for the stage through established theories and knowledge of the theater as a physical space. Approaches practical problems of scenic design as well as professional potential of the field.

THTR 224. Introduction to Lighting Design (3)
A “grounds up” guide to theatrical lighting for the stage. Focus made upon instrumentation, choices made in the design process, aesthetics of presentation. Combines theory with practical application.

THTR 228. Theater History I (3)
Acquaints the student with theatrical and dramatic realism in Europe, the United States, and Russia (1880s through 1960s). Offered as THTR 228 and WLIT 228.

THTR 229. Theater History II (3)
Focuses on the theatrical traditions of Europe and the United States from the beginning of the eighteenth century to the beginning of the twenty-first in an effort to look at the history and literature of Western theater from the point of view of the society in which it originated. This course also examines how theater reflects the assumptions of a culture and how theater artists use their medium to express their belief or disbelief in those systems. Offered as THTR 229 and WLIT 229.

THTR 316. Screenwriting (3)
Theory and practice of dramatic writing, in the context of examples, classic and contemporary. Recommended preparation: ENGL 203 or ENGL 213 or ENGL 214 or ENGL 303 or ENGL 304. Offered as ENGL 305 and THTR 316.

THTR 321. Acting III: Contemporary Technique (3)
An exploration of advanced contemporary acting technique based on the work of Michael Chekhov. Provides advanced acting students with the tools necessary to work effectively and consistently with contemporary texts, with emphasis placed on psychological gesture and geste. Prereq: THTR 101 and THTR 102.

THTR 322. Acting IV: Classical Technique (3)
An exploration of techniques to approach classical theater, with emphasis on the works of Shakespeare. Presents the challenges of working with heightened language in classical texts, and provides skills necessary to transfer modern acting methods to these more poetic plays. Prereq: THTR 102.

THTR 326. Acting V: Camera Technique (3)
Acting for the Camera class with emphasis on how it differs from onstage work. Interviews, scenes, and exercises will be used to highlight the differences and similarities. Emphasis on contemporary table work. Prereq: THTR 231 or THTR 232.

THTR 380. Topics in Theater (3)
The course will offer varying topics such as theater history (national and international), theater criticism, world-theater, and special areas of dramatic literature that will not be covered in the general theater courses. This course will expose students to a wider range of dramatic ideas.

THTR 388. Acting and Directing (3)
A discussion and practicum exploring the problems faced by an actor in various audition situations. Development of an audition repertory for the actor for stage, video and film. Prereq: Senior Theater major.

THTR 389. Advanced Playwriting (3)
Theory and practice of dramatic writing with special focus on the craft of writing a full-length play. Offered as ENGL 314 and THTR 314. Prereq: ENGL 305 or THTR 312.

THTR 391. SAGES Dept Seminar
Coreq: FSTS 100.
film, in which reading and practicum assignments will culminate in the student submitting an original full-length screenplay. Offered as ENGL 316 and THTR 316. Prereq: THTR 312.

THTR 327. American Theater and Playwrights (3)
Designed to provide students an overview of the development of theater in the United States and to familiarize them with the work and themes of selected American playwrights. Offered as AMST 327 and THTR 327.

THTR 329. Dramatic Literature (3)
Dramatic text analyzed in the context of theatrical production. Major analytical tools introduced.

THTR 330. Play Directing I (3)
This course will begin a two-semester study of the art and craft of stage direction of plays. Topics covered will include history of the profession, directorial theory and practice, development of skills such as text analysis, design and concept, and general problem solving. Prereq: THTR 101 and THTR 102, and upperclass status.

THTR 331. Play Directing II (3)
This course will continue with the basic concepts learned in THTR 330 and will expand them in regard to actual production. Topics will include directing mechanics, ground planning, blocking, and visualization, staging and working with actors. The course will culminate in a faculty supervised directing project for public performance. There are three evening labs for this course. Prereq: THTR 330, and upperclass status. 

SAGES Senior Capstone

THTR 334. Shakespeare: Histories and Tragedies (3)
Close reading of a selection of Shakespeare’s tragedies and history plays (e.g., “Richard the Third,” “Julius Caesar,” “Hamlet,” “King Lear”). Topics of discussion may include Renaissance drama as a social institution, the nature of tragedy, national history, gender roles, sexual politics, the state and its opponents, theatrical conventions. Assessment may include opportunities for performance. Offered as ENGL 324, ENGL 424, and THTR 334.

THTR 335. Shakespeare: Comedies and Romances (3)
Close reading of selected plays of Shakespeare in the genres of comedy and romance (e.g., “The Merchant of Venice,” “Twelfth Night,” “Measure for Measure,” “The Tempest”). Topics of discussion may include issues of sexual desire, gender roles, marriage, the family, genre conventions. Assessment may include opportunities for performance. Offered as ENGL 325, ENGL 425, and THTR 335.

THTR 352. Costume Design and Construction (3)
Design and ornamentation of stage costumes and accessories. Laboratory. Recommended preparation: THTR 123 and THTR 124 or consent of department.

THTR 370. Modern Acting Theories in Practice (3)
From Boleslavski to Bogart, this course is designed to offer the advanced undergraduate student an introduction to a wide range of modern acting theories through reading, seminar discussion, and comparison of select theories in extended scene study. Readings and exercises are drawn from the works of Stanislavski-based theorists and practitioners as well as leading anti-realist texts. Texts reflect both character-based approaches and movement-based approaches to modern actor training. Prereq: THTR 101 and THTR 102 or DANC 103 and DANC 104.

THTR 375. Voice for the Stage I (3)
Development of the actor’s vocal instrument. Work in articulation, range, and flexibility. Prereq: THTR major or consent of department.

THTR 376. Voice for the Stage II (3)
Continuation of THTR 375. Prereq: THTR 375.

THTR 380. Stage Management (3)
Designed to acquaint student with the numerous skills and techniques needed to encompass the demands of historical dramatic texts. The work will center around period movement for the theater.
and to achieve a level of mastery over articulation appropriate dialect using the Skinner narrow IPA set, current speech skills, to teach them a stage-appro-

THTR 479. American Stage Speech (2)
Designed to evaluate the graduate student actors’ current speech skills, to teach them a stage-appropriate dialect using the Skinner narrow IPA set, and to achieve a level of mastery over articulation and diction. Prereq: Course limited to first-year M.F.A. candidates in Acting Program.

THTR 485. Rehearsal and Production (1-3)
Practicum for students participating in production work in the Department of Theater and Dance. Supervised laboratory experience in technical theater, construction techniques, scenery, costumes, lighting, and props; production; ticket office operations, promotion, publicity and public relations; house management; wardrobe responsibilities; stage management; assistant directing; and other production positions relating to the mainstage performances in Eldred Theater. Students are recommended to take one credit hour per production, with a maximum of 8 credit hours allowed during their undergraduate career.

THTR 501. Text Analysis for the Actor (2)
An introduction to the craft of reading a theatrical text from an actor’s point of view. Methods for analyzing the action and dialogue of a play will be applied to dramatic text so that the actor can learn to transform a one-dimensional text into a three-dimensional performance.

THTR 509. Seminar: Introduction to Performance Theory (2)
Research seminar designed to acquaint the theater student with the major theoretical writings of performance theory. Readings on the creative process and archetypal mythology. Exploration of anthropological, psychological, and cultural sources of art and the theatrical impulse.

THTR 512. Graduate Audition Lab (1-2)
THTR 530. Ensemble Technique (1-2)
A practicum course structured to explore the use of ensemble dynamic techniques in a rehearsal/performance environment, as well as to develop a set of exercises which encourage and sustain the actor’s channels of interpersonal communication during a range of rehearsal and performance situations. Prereq: Must be candidate in M.F.A. Acting program.

THTR 531. Acting: Research and Performance I (3)
The various elements of the actor’s process considered on advanced levels. Integration of rehearsal discoveries into a practical performance situation. Limited to M.F.A. candidates.

THTR 532. Acting: Research and Performance II (3)
The various elements of the actor’s process considered on advanced levels. Exploration of rehearsal techniques for characterization. Limited to M.F.A. candidates.

THTR 533. Acting: Research and Performance III (3)
Sequential courses designed to explore the various elements of the actor’s process on advanced levels and to integrate the discoveries made into a practical performance situations. Limited to M.F.A. candidates. Prereq: THTR 531 or THTR 532.

THTR 534. Acting: Research and Performance IV (3)
Sequential courses designed to explore the various elements of the actor’s process on advanced levels and to integrate the discoveries made into a practical performance situation. Prereq: THTR 531 or THTR 532 or THTR 533.

THTR 540. The Business of the Business (2)
This course covers the basic knowledge needed for an actor to plan and manage a career in the theater. Included is discussion of union rules and applications for AEA, AFTRA, and SAG. Discussion of basic marketing techniques, including development of an individual marketing plan for each student. Guest lecturers might include IRS experts on the actor’s special needs, casting directors, and commercial agents.

THTR 576. Advanced Voice Technique (3)
Vocal instruction individualized to the particular needs of advanced M.F.A. Acting students. This may include the exploration of dialect skills, developing the skills for extraordinary uses of the voice, or continued exploration of skills necessary for classic and poetic texts. Required of M.F.A. candidates in the Acting program. Prereq: THTR 473 and THTR 474.

THTR 579. American Stage Speech II (3)
This course will continue the work begun in THTR 479 American Stage Speech, continuing the work on IPA, articulation, and general speech clarity for the stage. Exercises from the Berry and Rodenberg Schools of thought will be used in addition to the speech basics of Skinner. Prereq: THTR 479.

THTR 580. Stage Dialects (2)
This survey course will examine the use and application of major stage dialects in the American theatre using a phonetic tool set as a basis for understanding sound substitutions. The student will also study the ways in which rhythmic changes and resonance and tension shifts affect the dialects. Prereq: Graduate standing.

THTR 581. Classical Speech and Text (2)
This course will study ways in which the actor’s speech instrument is used differently in classical texts, particularly those of Shakespeare. Students will study tools for analyzing a line of text in order of understanding how to use the words and sound of the line.

THTR 601. Special Projects (1-3)
(Credit as arranged.)

THTR 610. Professional Internship (1-4)
Involvement in intensive internships with professional theaters in the Cleveland area bridging
academic and professional lives. Internships range from six weeks to one semester.

THTR 620. Advanced Role Analysis Preparation I (3)
Study and performance of scenes involving methods of approaching various types of plays and the specific problems they present to the individual actor. Analysis, action, characterization, and subtext. Open only to M. F. A. Acting students.

THTR 621. Advanced Role Analysis Preparation II (3)
Continued study and performance of scenes involving methods of approaching various types of plays and the specific problems they present. Prereq: THTR 620.

THTR 630. Performance Studio (3)
A performance laboratory, ensemble-based practicum in which the student works to integrate effectively a wide range of performance skills culminating in a studio production. May be taken two times in the last two semesters of graduate study. Prereq: THTR 534.

THTR 642. Thesis Portfolio I (1)
Course designed specifically for candidates in the Master of Fine Arts program in Acting. Graduate students enroll for the course during their third year of study, although work spans three years of study, based on roles the M.F.A. actor has created. A portfolio is prepared, according to requirements set forth in the department’s M.F.A. Handbook, and is presented to the faculty during the spring semester of the third year, in a formal oral defense. Satisfactory completion of the portfolio and its oral defense are among the requirements for awarding the Master of Fine Arts degree. Course limited to M.F.A. candidates in the Acting program.

THTR 643. Thesis Portfolio II (1)
Course designed specifically for candidates in the Master of Fine Arts program in Acting. Graduate students enroll for the course during their third year of study, although work spans three years of study, based on roles the M.F.A. actor has created. A portfolio is prepared, according to requirements set forth in the department’s M.F.A. Handbook, and is presented to the faculty during the spring semester of the third year, in a formal oral defense. Satisfactory completion of the portfolio and its oral defense are among the requirements for awarding the Master of Fine Arts degree. Course limited to M.F.A. candidates in the Acting program.

WASHINGTON STUDY PROGRAM
111 Mather House
http://politicalscience.case.edu/undergrad-washst.htm
Phone: 216-368-2696
Alexander P. Lamis, Director
E-mail: alexander.lamis@case.edu

The Washington Study program provides students with the opportunity to complete a full-time, research-intensive internship in Washington, D.C. By participating in a semester-length program during the fall or spring (WASH 002A), students earn 9 credit hours; for a summer internship (WASH 002D), they earn 3 credit hours (WASH 002D). In addition, students earn 3 credit hours by developing a portfolio based on their internship experiences (WASH 002B). The credits earned can be counted as general electives or applied to a student’s major or minor, with the prior consent of the individual department(s).

As part of the Washington Study program, students participate in a seminar and attend a weekly lecture/discussion group (WASH 002C).

To be eligible for the program, a student is expected to be a junior or senior and have at least a 3.0 GPA. The program director, the student’s major advisor, and the appropriate dean must approve each application. Students must ensure that their participation will not prevent them from meeting on-campus residency or other university requirements.

WOMEN’S AND GENDER STUDIES PROGRAM
223 Mather Memorial
www.case.edu/artsci/womn
Phone: 216-368-2702; Fax: 216-368-2676
Susan W. Hinze, Director
E-mail: susan.hinze@case.edu

The goal of the Women’s and Gender Studies Program is to educate students in interdisciplinary approaches to feminist theories of women, gender, culture, and society. Students are exposed to a variety of forms of critical thinking in relation to (1) the social construction of knowledge and philosophy; (2) approaches to science and medicine informed by “feminist empiricism” and “feminist standpoint” theories; (3) historized and cross-cultural accounts of gender and gender inequality; (4) literary criticism; (5) contemporary theories of art, performance, language, jurisprudence, social science, and religion in the context of women’s experience; and (6) studies of the body as a focal point for theorizing relations among the arts and sciences.

Women’s and Gender Studies is an interdisciplinary program that prepares students to think critically and creatively within a framework employing gender as a central category of analysis. The program is set up to test and challenge the technologies and limitations of gender roles in a multitude of cultural and historical settings. It is designed to familiarize students with the analytical and hermeneutic tools of research and interpretation, and to create awareness of the ethical, political, and aesthetic dimensions of gender in history and culture.

PROGRAM FACULTY

Susan W. Hinze, Ph.D.
Associate Professor of Sociology; Director, Women’s and Gender Studies Program

Eileen Anderson-Fye, Ed.D.
Assistant Professor of Anthropology

Alice Bach, Ph.D.
Archbishop Paul J. Hallinan Professor of Catholic Studies, Department of Religious Studies

Karen Beckwith, Ph.D.
Flora Stone Mather Professor, Department of Political Science

Diana Bilimoria, Ph.D.
Professor of Organizational Behavior, Weatherhead School of Management

Susan S. Case, Ph.D.
Associate Professor of Organizational Behavior, Weatherhead School of Management

Margaretmary Daley, Ph.D.
Associate Professor of Modern Languages and Literatures

Gilbert Doho, Ph.D.
Associate Professor of Modern Languages and Literatures

Kimberly K. Emmons, Ph.D.
Assistant Professor of English

Christopher Flint, Ph.D.
Associate Professor of English

T. Kenny Fountain, Ph.D.
Assistant Professor of English

Atwood D. Gaines, Ph.D.
Professor of Anthropology

Mary Grimm, M.A.
Associate Professor of English

Anne Helreich, Ph.D.
Associate Professor of Art History

Laura E. Hengehold, Ph.D.
Assistant Professor of Philosophy

Jill Korbin, Ph.D.
Professor of Anthropology
1. WGST 201 Introduction to Gender Studies (cross-listed as HSTY 270/ENGL 270/PHIL 270/RLGN 270)

2. One of the following courses:
   WGST 301 Women, Creativity and the Arts
   WGST/ANTH 365 Gender and Sex Differences in Cross-Cultural Perspective
   ENGL 371 Topics in Women’s and Gender Studies
   WGST/HSTY 318 History of Black Women in the U.S.
   WGST/HSTY 353, 354 Women in American History I and II
   WGST/SOCI 326 Gender, Inequality and Globalization

ELECTIVE COURSES (24 HOURS):
Student select eight courses from among the approved Women’s and Gender Studies courses, at least two each from arts, humanities, and social sciences.

Minor
The program in Women’s and Gender Studies also offers an undergraduate minor. Fulfillment of the minor requires completion of eighteen credit hours, including WGST 201 (Introduction to Gender Studies).

To help ensure a comprehensive course of study in a particular area of interest, each student's combination of courses and the structure of an independent study must be approved by the program advisor.

COURSE DESCRIPTIONS

WGST 201. Introduction to Gender Studies (3)
This course introduces women and men students to the methods and concepts of gender studies, women's studies, and feminist theory. An interdisciplinary course, it covers approaches used in literary criticism, history, philosophy, political science, sociology, anthropology, psychology, film studies, cultural studies, art history, and religion. It is the required introductory course for students taking the women's studies major. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 270, HSTY 270, PHIL 270, RLGN 270, and WGST 201.

Global & Cultural Diversity

WGST 207. Women and Religion (3)
Examination of feminist perspectives on religion, such as the status of women in Western and non-Western religions, the nature and purpose of religious beliefs and practices from the standpoints of religious and non-religious feminists, the current status of feminist philosophies of religion, and the efforts of feminists to transform traditional religions and to create new religions.
Offered as RLGN 207 and WGST 207.

WGST 222. Gender in U.S. Society (3)
The focus of this course is on unique and convergent experiences of men and women in U.S. society. Different social expectations and opportunities encountered by men and women in the context of marriage and the family, work settings, and in informal organizations will be addressed. Legislation and social policy dealing with gender issues will be considered.
Offered as SOCI 222 and WGST 222.

WGST 228. Sociology of Sexuality (3)
This course analyzes the issues of sex and sexuality from a sociological point of view. It is centered on the notion that what we consider to be ‘normal’ or ‘natural’ about sex and sexuality is, in reality, socially constructed. One's viewpoint on the issues surrounding sexuality are influenced by the social context in which they live, as opposed to the purely biological viewpoint that presupposes some sense of normalcy or naturalness regarding sexual relations. A range of topics will be covered, including readings that discuss the variations of sexuality and the notions of sexual “deviance” in order to explore the cultural and societal variation that exists along the lines of gender, race, ethnicity, sexual orientation, age and disability.
Offered as SOCI 228 and WGST 228.

WGST 268. Women in the Bible: Ethnographic Approaches to Rite and Ritual, Story, Song, and Art. (3)
Examination of women in Jewish and Christian Biblical texts, along with their Jewish, Christian (and occasionally Muslim) interpretations. Discussion of how these traditions have shaped images of, and attitudes toward, women in western civilization.
Offered as RLGN 268 and WGST 268.

WGST 301. Women, Creativity and the Arts (3)
WGST 301/EETH 301 is one of two core courses for the program in Women’s and Gender Studies and an elective course for the ETHS minor. All WGST majors are to take one course concentrating on the subject of women and the arts specifically. This course also fulfills the cultural diversity requirement. In this course, students will focus on two areas of study: a) women and creativity and b) women and activism through the arts. A history of women in the arts will be covered, but the general focus of the course is on women in the arts since the 1960s in particular, and on artwork that reflects or provokes social change. “Arts” are defined in the broadest of sense. That is, students will study women's production in painting, photography, graphic design, sculpture, dance, film, music, and theater. A variety of learning techniques will
be applied: Students will look at feminist theories on art, be introduced to the notion of cyberfeminism, study actual artwork and its reproductions, understand the role of art in feminist activism and how women "create" differently from men, and work closely with several feminist artists/activists through various programs on campus and the community in order to facilitate the planning and carrying out of artistic production. Subsequently, students will interact with children in Cleveland schools in conjunction with these artists giving master classes, and be exposed to art exhibits abroad through videoconferencing with the Algerian Cultural Center in Paris and locally through University Circle Institutions. Offered as WGST 301 and ETHS 301.

WGST 312. Women in the Ancient World (3)
The course offers a chronological survey of women's lives in Greece, Hellenistic Egypt, and Rome. It focuses on primary sources as well as scholarly interpretations of the ancient record with a view to defining the construction of gender and sexuality according to the Greco-Roman model. Additionally, the course aims to demonstrate how various methodological approaches have yielded significant insights into our own perception of sex and gender. Specific topics include matriarchy and patriarchy; the antagonism between male and female in myth; the legal, social, economic, and political status of women; the ancient family; women's role in religion and cult; ancient theories of medicine regarding women; paederasty and homosexuality.
Offered as CLSC 312 and WGST 312.

WGST 318. History of Black Women in the U.S. (3)
Chronologically arranged around specific issues in black women's history organizations, participation in community and political movements, labor experiences, and expressive culture. The course will use a variety of materials, including autobiography, literature, music, and film.
Offered as ETHS 318, HSTY 318, and WGST 318.

WGST 322. Feminist Theory, Women's History, Gender History (3)
A reading seminar designed to expose students to current theory and methods in feminist history, as well as feminist scholarship more generally. It includes a variety of topics representative of interests and concerns shared by feminist historians, as well as a range of methodological approaches and theoretical debates. The course aims to impart a sense of the ways in which feminist theory has been applied to and has transformed historical scholarship.
Offered as HSTY 322, WGST 322, HSTY 422, and WGST 422.

WGST 325. Philosophy of Feminism (3)
Dimensions of gender difference. Definition of feminism. Critical examination of feminist critiques of culture, including especially politics, ideology, epistemology, ethics, and psychology. Readings from traditional and contemporary sources.
Offered as PHIL 325 and PHIL 425 and WGST 325.

WGST 326. Gender, Inequality, and Globalization (3)
Using a sociological perspective, this course examines how major societal institutions, including the economy, polity, medicine, religion, education and family, are structured to reproduce gendered inequalities across the globe. Attention is given to the intersections of race/ethnicity, social class, gender, and sexuality in social systems of power and privilege. Of critical importance is how gender figures in the relationship between Economic North and Economic South countries. We will elucidate how gender norms vary by culture and exert profound influence on the daily, lived experiences of women and men. The course will be informed by recent scholarship on feminism, women's movements, and globalization.
Offered as SOCI 326 and WGST 326.

WGST 335. Women in Developing Countries (3)
This course will feature case studies, theory, and literature of current issues concerning women in developing countries primarily of the French-speaking world. Discussion and research topics include matriarchal traditions and FGM in Africa, the Tunisian feminist movement, women, Islam, and tradition in the Middle East, women-centered power structures in India (Kerala, Pondicherry), and poverty and women in Vietnam, Laos, and Cambodia. Guest speakers and special projects are important elements of the course. Seminar-style format, taught in English, with significant disciplinary writing in English for WGST, ETHS, and some WLIT students, and writing in French for FRCH and WLIT students. Writing assignments include two shorter essays and a substantial research paper.
Offered as ETHS 335, FRCH 335, WLIT 335, WLIT 335, FRCH 435 and WLIT 435.

WGST 352. African Feminisms (3)
This course traces the history of African feminism from its origins within traditions through to a more contemporary theoretical analysis of gender, marriage, and motherhood seen from a Afrocentric perspective. Approaches studied are those that pertain to anthropology, history, literature, sociology, and culture. African feminist theory of scholars such as Filomena Steady, Cheikh Anta Diop, Buchi Emecheta, Ifi Amadiume, Obioma Nnane-ka, Oyeronko Oyeuwmi, and Calixthe Beyala will be studied and there will be some comparative analysis of Western theories to show how African feminisms are clearly distinct. Theories on these feminisms will be presented, and in the process, students will look at cases of women in Cameroon, Nigeria, Ghana, Kenya, and Senegal. It is commonly believed that African women are defined for a long time according to constructs of Western anthropology. This course will thus look at social institutions such as woman-to-woman marriage, matriarchy, and various women's rituals in order to identify African constructs of gender, family, kinship, marriage, and motherhood.
Offered as ETHS 352 and WGST 352.

WGST 353. Women in American History I (3)
The images and realities of women's social, political, and economic lives in early America. Uses primary documents and biographers to observe individuals and groups of women in relation to legal, religious, and social restrictions.
Offered as HSTY 353, WGST 353, and HSTY 453.

WGST 354. Women in American History II (3)
With HSTY 353, forms a two-semester introduction to women's studies. The politics of suffrage and the modern woman's efforts to balance marriage, motherhood, and career. (HSTY 353 not a prerequisite.)
Offered as HSTY 354, WGST 354, and HSTY 454.

WGST 365. Gender and Sex Differences: Cross-Cultural Perspective (3)
Gender roles and sex differences throughout the life cycle considered from a cross-cultural perspec-
WGST 372. Work and Family: U.S. and Abroad (3)
Covers the impact on human lives of the interface between work and family; the different ways gender structures the experience of work and family depending upon racial and ethnic background, social class, age, and partner preference; the impact of historical context on work-family experiences; work-family policies in the United States and other countries. Offered as SOCI 372, WGST 372, and SOCI 472.

WGST 373. Advanced Topics in American Women's History (3)
This advanced seminar is designed to allow students to investigate aspects of American women's history that are not deeply explored in other courses. The two central purposes of the course are to move students forward in their study of American women's history and to provide advanced study for graduate students and other students interested in women-focused topics. The topic is subject to change, but may be any of the following or something similar: women and medicine, images of women in popular culture, growing up female, women and political movements, women and war, etc. Recommended preparation: HSTY 353/453 or HSTY 354/454. Offered as HSTY 373, WGST 373, and HSTY 473.

WGST 383. Gender Issues in Feminist Art: The 20th/21st Century (3)
An in-depth thematic approach to issues affecting works of art by and about women. Focus on the late 20th century. Emphasis on a specifically modern use of feminine myths, subjects and modes of production, and feminist criticism. Offered as ARTH 383, WGST 383 and ARTH 483.

WGST 396. SAGES Capstone (3)
Capstone experience in the fields of Women's and Gender Studies for an in-depth, independent project of particular interest to the student. Students are strongly encouraged to work with a WGST program faculty member, but some projects may be supervised by faculty in other areas or by other qualified professionals. All capstones require a WGST faculty advisor's approval of the proposal prior to registration. Open to juniors and seniors majoring in Women's and Gender Studies. Prerequisite: WGST 201; Junior or Senior standing with major/minor in WGST. SAGES Senior Cap

WGST 399. Independent Study (1-3)
Independent research project in the fields of Women's and Gender Studies. Project proposals must be approved by a WGST faculty advisor. Students are strongly encouraged to work with a WGST program faculty member, but some projects may be supervised by faculty in other areas or by other qualified professionals with a WGST faculty advisor's approval. Credit varies with the scope and depth of the project. Prerequisite: WGST 201.

WGST 422. Feminist Theory, Women's History, Gender History (3)
A reading seminar designed to expose students to current theory and methods in feminist history, as well as feminist scholarship more generally. It includes a variety of topics representative of interests and concerns shared by feminist historians, as well as a range of methodological approaches and theoretical debates. The course aims to impart a sense of the ways in which feminist theory has been applied to and has transformed historical scholarship. Offered as HSTY 322, WGST 322, HSTY 422, and WGST 422.

WORLD LITERATURE PROGRAM

104 Guilford House
www.case.edu/artsci/worldlit
Phone: 216-368-3950; Fax: 216-368-2870
Florin Berindeanu and Susanne Vees-Gulani, Co-Directors
E-mail: florin.berindeanu@case.edu; susanne.vees-gulani@case.edu

The World Literature program seeks to educate students as citizens of a global community. World literature is a discipline that draws together literatures and cultures of a wide variety of countries and regions, including Western and non-Western ones. It emphasizes literatures and cultures of the past (ancient Greece and Rome, for example) as well as those of the present. It understands "minority" or "third-world" literatures as being just as worthy of study as European literatures; it recognizes the importance of the "classics" of both the West and East. The program requires study in a language other than English, thus emphasizing that literature and language are intimately related.
ELECTIVES (12 HOURS):
1. Four courses, chosen in consultation with the World Literature faculty advisor

All literature courses at the 200 and 300 levels offered by the Departments of Modern Languages and Literatures, Classics, and English are approved as World Literature courses.

UNDERGRADUATE HONORS
The honors program in world literature is for especially talented and dedicated majors. Requirements for honors are: 1) a GPA of at least 3.5 in the major, and 2) an honors thesis completed over the course of two semesters in the senior year, devoted to the investigation of a literary or cultural topic. Honors students enroll in WLIT 397 and 398 and write their thesis under the supervision of a WLIT faculty advisor. The thesis must be approved by a second faculty member and receive a grade of B or better. Students who qualify receive their degrees “with Honors in World Literature.” A registration/proposal form for students electing honors must be completed by the end of the second week of classes in each of the two semesters.

Minor
(15 HOURS)
The minor in world literature requires the foundation sequence WLIT 211-212 and nine credits of electives, chosen in consultation with the World Literature faculty advisor. These are normally chosen from World Literature, Modern Languages and Literatures, English, and Classics offerings. At least one of the electives must be a course in a literature originally not in English, although it may be in translation.

GRADUATE PROGRAM
In cooperation with the Departments of English and Modern Languages and Literatures, the program offers the Master of Arts degree in world literature, emphasizing Francophone and Anglophone literatures. Interested students should consult one of the program directors.

COURSE DESCRIPTIONS
WLIT 203. Gods and Heroes in Greek Literature (3)
This course examines major works of Greek literature and sets them in their historical and cultural context. Constant themes are war, wandering, tyranny, freedom, community, family, and the role of men and women within the household and the ancient city-state. Parallels with modern life and politics will be explored. Lectures and discussions. Offered as CLSC 203 and WLIT 203.

WLIT 204. Heroes and Hustlers in Latin Literature (3)
This course constitutes the second half of a sequence on Classical literature. Its main themes are heroism vs. self-promotion, love vs. lust, and the struggle between democracy and tyranny. These topics are traced in a variety of literary genres from the period of the Roman republic well into the empire. Parallels with modern life and politics will be drawn. Offered as CLSC 204 and WLIT 204.

WLIT 211. World Literature I (3)
Survey of literature from antiquity to 1600. May include Western and non-Western texts by Homer, Virgil, Ovid, St. Augustine, Dante, Boccaccio, Rabelais, Cervantes, Sel Shonagon, Basho, and the Bhagavad Gita.

WLIT 212. World Literature II (3)
Survey of literature from 1600 to present. May include Western and non-Western texts by Swift, Voltaire, Rousseau, Tolstoi, Baudelaire, Austen, Mann, Kafka, Lesperont, Marmon Silk, Soyinka.

WLIT 225. Japanese Popular Culture (3)
This course highlights salient aspects of modern Japanese popular culture as expressed in animation, comics and literature. The works examined include films by Hayao MiyaZaki, writings by Kenji MiyaZawa, Haruki Murakami and Banana Yoshimoto, among others. The course introduces students to essential aspects of modern Japanese popular culture and sensibility. Offered as JAPP 225 and WLIT 225.

WLIT 228. Theater History I (3)
Acquaints the student with theatrical and dramatic realism in Europe, the United States, and Russia (1880s through 1960s). Offered as THTR 228 and WLIT 228.

WLIT 229. Theater History II (3)
Focuses on the theatrical traditions of Europe and the United States from the beginning of the eighteenth century to the beginning of the twenty-first in an effort to look at the history and literature of Western theater from the point of view of the society in which it originated. This course also examines how theater reflects the assumptions of a culture and how theater artists use their medium to express their belief or disbelief in those systems. Offered as THTR 229 and WLIT 229.

SAGES Dept Seminar

WLIT 235. Asian Cinema and Drama (3)
Introduction to major Asian film directors and major traditional theatrical schools of India, Java/Bali, China, and Japan. Focus on the influence of traditional dramatic forms on contemporary film directors. Development of skills in cross-cultural analysis and comparative aesthetics. Offered as ASIA 235 and WLIT 235.

WLIT 245. Classical Japanese Literature in Translation (3)
Readings, in English translation, of classical Japanese poetry, essays, narratives, and drama to illustrate essential aspects of Japanese culture and sensibility before the Meiji Restoration (1868). Lectures explore the sociohistorical contexts and the character of major literary genres; discussions focus on interpreting the central images of human value within each period. Japanese sensibilities compared to and contrasted with those of Western and other cultures. Offered as JAPP 245 and WLIT 245.

WLIT 255. Modern Japanese Literature in Translation (3)
Focus on the major genres of modern Japanese literature, including poetry, short story, and novel (shosetsu). No knowledge of Japanese language or history is assumed. Lectures, readings, and discussions are in English. Films and slides complement course readings. Offered as JAPP 255 and WLIT 255.

WLIT 285. The Hispanophone World (3)
A survey of the imaginative literatures in a variety of genres from the Spanish-speaking world, including texts authored by Hispanics living in the United States. The selections will help students gain a greater understanding and appreciation of the impact and adaptation of Spanish language and culture among widely diverse populations of the world over the past centuries. Counts towards Spanish major as related course. No knowledge of Spanish required. Offered as SPAN 285 and WLIT 285.

WLIT 290. Masterpieces of Continental Fiction (3)
Major works of fiction from the 19th century and earlier. Offered as ENGL 290 and WLIT 290.

WLIT 291. Masterpieces of Modern Fiction (3)
Major works of fiction of the 20th century. Offered as ENGL 291 and WLIT 291.

WLIT 295. The Francophone World (3)
The course offers an introduction to the Francophone World from a historical, cultural, and literary perspective. The Francophone World includes countries and regions around the globe with a substantial French-speaking population (and where French is sometimes, but not always, an official language): North America (Louisiana, Quebec, and Acadia); North Africa (Tunisia, Morocco, Algeria, and Egypt); the Middle-East (Lebanon, etc.)
Syria); the Caribbean (Martinique, Guadeloupe, Haiti); South-East Asia (Vietnam); and Europe (France, Belgium, Switzerland, and Luxembourg). FRCH 295 provides a comprehensive overview of the Francophone World, while focusing on a particular area or areas in any given semester. In this particular semester we will focus on the Caribbean, the Maghreb, and select countries of Sub-Saharan Africa (Senegal, Cameroon). Our inquiry will include the study of their colonization histories, of the Independence period (broadly speaking, the 1960s), and of the post colonial era through film, literature, and readings of significant political/theoretical texts. Offered as ETHS 295, FRCH 295, and WLIT 295.

WLIT 300. The City in Literature (3)
Focus on major cities of the world as catalysts and reflections of cultural and historical change. Interdisciplinary approach utilizing the arts, literature, social sciences. Examples include Berlin at the turn of the century; Paris in literature and film; Tokyo in history and literature. Offered as WLIT 300 and WLIT 400.

WLIT 308. The Paris Experience (3)
Three-week immersion learning experience living and studying in Paris. The focus of the course is the literature and culture of the African, Arab, and Asian communities of Paris. Students spend a minimum of fifteen hours per week visiting cultural centers and museums and interviewing authors and students about the immigrant experience. Assigned readings complement course activities. Students enrolled in FRCH 308 do course work in French. WLIT 308 students have the option of completing course work in English. Graduate students have additional course requirements than those of undergraduates. Offered as FRCH 308, WLIT 308, FRCH 408, and WLIT 408.

WLIT 314. Love Poetry from Sappho to Shakespeare (3)
Introduction to the love poetry of ancient Greece and Rome and its impact on the later European tradition in such poets as Petrarch, Chaucer, and Shakespeare. Readings will focus especially on questions of generic convention, audience expectation, and the social setting of love poetry in the different ages under consideration. No knowledge of the original languages required. Offered as CLSC 314 and WLIT 324.

WLIT 315. Mysticism and Literature (3)
This co-taught seminar will explore and compare mystical elements in selected literary and theoretical works from the West and the East. Comparisons will focus on a number of interrelated sub-themes such as mind, language, alienation, innocence, experience, life, death, cosmogony, cosmology, good, evil, God/gods, and nature (the ecosystem). Offered as WLIT 315, MLIT 415.

WLIT 316. Greek Tragedy (3)
This course provides students the opportunity to read a significant number of ancient Greek tragedies in modern English translations. We shall read, study, and discuss selected works by Aeschylus, Sophocles, and Euripides, and attempt to understand the plays as literature composed for performance. We shall study literary elements within the plays and theatrical possibilities inherent in the texts. As we read the plays, we shall pay close attention to the historical context and look for what each play can tell us about myth, religion, and society in ancient Athens. Finally, we shall give occasional attention to the way these tragic dramas and the theater in which they were performed have continued to inspire literature and theater for thousands of years. Lectures will provide historical background on the playwrights, the plays, the mythic and historical background, and possible interpretation of the texts as literature and as performance pieces. Students will discuss in class the plays that they read. The course has three examinations and a final project that includes a short essay and a group presentation. Offered as CLSC 316, WLIT 316, WLIT 416.

WLIT 335. Women in Developing Countries (3)
This course will feature case studies, theory, and literature of current issues concerning women in developing countries primarily of the French-speaking world. Discussion and research topics include matriarchal traditions and FGM in Africa, the Tunisian feminist movement, women, Islam, and tradition in the Middle East, women-centered power structures in India (Kerala, Pondicherry), and poverty and women in Vietnam, Laos, and Cambodia. Guest speakers and special projects are important elements of the course. Seminar-style format, taught in English, with significant disciplinary writing in English for WGST, ETHS, and some WLIT students, and writing in French for FRCH and WLIT students. Writing assignments include two shorter essays and a substantial research paper. Offered as ETHS 335, FRCH 335, WLIT 335, WGST 335, FRCH 435 and WLIT 435. SAGES Dept Seminar Global & Cultural Diversity

WLIT 338. The Cameroon Experience (3)
Three-week immersion learning experience living and studying in Cameroon. The focus of the course is the culture, literature, and language of Francophone Cameroon, with some emphasis on Anglophone Cameroon. Students spend a minimum of fifteen hours per week visiting cultural sites and attending arranged courses at the University of Buea. Students will prepare a research paper. Course work is in French. To do course work in English, students should enroll in WLIT 338 or ETHS 338.
Offered as ETHS 338, FRCH 338, WLIT 338, ETHS 438, FRCH 438, and WLIT 438.

WLIT 339. Japanese Women Writers (3)
Contributions of women writers to the literature of pre-modern and modern Japan; investigations of how their works exemplify and diverge from ‘mainstream’ literary practices. Emphasis on the social and cultural contexts of the texts. Offered as JAPN 345 and WLIT 345.

WLIT 355. Modern Japanese Novels and the West (3)
This course will compare modern Japanese and Western novelists, drama, and novels. Comparisons will focus on the themes of family, gender and alienation, which subsume a number of interrelated sub-themes such as marriage, home, human sexuality, ama (dependence), innocence, experience, death, God/gods, and nature (the ecosystem). Offered as JAPN 355, WLIT 355.

WLIT 363H. African-American Literature (3)
A historical approach to African-American literature. Such writers as Wheatley, Equiano, Douglass, Jacobs, DuBois, Hurston, Hughes, Wright, Baldwin, Ellison, Morrison. Topics covered may include slave narratives, African-American autobiography, the Harlem Renaissance, the Black Aesthetic, literature or protest and to assimilation. Maximum 6 credits. Recommended preparation: ENGL 150 or USFS 100.
Offered as ENGL 363H, ETHS 363H, WLIT 363H, ENGL 463H, and WLIT 463H.

WLIT 365. German Literature in Translation (3)
Goethe defined “World Literature” (Weltliteratur) as “Intellectual Trade Relations” (geistiger Handelsverkehr). This course gives students the opportunity to study German literary works in translation and thus to trade intellectual relations with a literary culture previously unknown to them. Counts toward the German major only as a related course. No knowledge of German required. Offered as GRMN 365 and WLIT 365.

WLIT 365E. The Immigrant Experience (3)
Study of fictional and/or autobiographical narrative by authors whose families have experienced immigration to the U.S. Among the ethnic groups represented are Asian-American, Jewish-American, Hispanic-American. May include several ethnic groups or focus on a single one. Attention is paid to historical and social aspects of immigration and ethnicity. Maximum 6 credits. Recommended preparation: ENGL 150 or USFS 100.
Offered as ENGL 365E, WLIT 365E, ENGL 465E, and WLIT 465E.

WLIT 365N. Topics in African-American Literature (3)
Selected topics and writers from nineteenth and twentieth-century African-American literature. May focus on a genre, a single author or a group of
WLT 385. Hispanic Literature in Translation (3)
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel Garcia Marquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required. Offered as ETHS 385, SPAN 385, SPAN 485, WLT 385, and WLT 485.

WLT 387. Literary and Critical Theory (3)
A survey of major schools and texts of literary and critical theory. May be historically or thematically organized. Maximum 6 credits.
Offered as ENGL 387, WLT 387, ENGL 487, and WLT 487.

WLT 388. Translation (3)
Literary translation forms the basis of most readers' familiarity with world literature. In an age of globalization, translation will be of increasing importance. The practice of translation has long been the province of creative writers. This course complements and draws together creative writers and students of foreign languages, showing that their practices overlap. Students should have knowledge of one language other than English to the 202 (intermediate) level.
Offered as WLT 388 and WLT 488. Prereq: Language other than English to the 202 level.

WLT 390. Topics in World Literature (3)
In-depth examination of specific critical and literary theories and of their relevance for literature and culture studies. Authors, works and instructor may vary. Offered as WLT 390 and WLT 490.

WLT 391. Introduction to Text Semiotics (3)
Introduction to Text Semiotics addresses both students of literature and students in Cognitive Science. Most of the authors included in the reading list extend their linguistic approach towards fields that intersect literature, psychology, philosophy, aesthetics, and anthropology. The scholarly traditions of text analysis and structural theory of meaning, including authors from classical formalism, structuralism, structural semiotics, and new criticism will be connected to cognitive theories of meaning construction in test, discourse, and cultural expressions in general. The focus of this course, taught as a seminar, is on empirical studies, specific text analyses, discourse analyses, speech act analyses, and other studies of speech, writing, and uses of language in cultural contexts. This course thus introduces to a study of literature and cultural expressions based on cognitive science and modern semiotics—the new view that has been coined Cognitive Semiotics.
Offered as COGS 391 and WLT 391.

WLT 395. French Literature in Translation (3)
Topics vary according to student and faculty interest. May include Francophone literature, literature and cinema, women writers, contemporary literature. Counts toward French major only as related course. No knowledge of French required. Offered as FRCH 395, WLT 395, FRCH 495, and WLT 495.

WLT 397. Honors Thesis I (3)
Intensive study of a literary, linguistic, or cultural topic with a faculty member, leading to the writing of a research paper. Prereq: Senior status.

WLT 398. Honors Thesis II (3)
Continuation of WLT 397. Prereq: WLT 397 and senior status.

WLT 399. Independent Study (1-3)
For majors and advanced students under special circumstances.

WLT 400. The City in Literature (3)
Focus on major cities of the world as catalysts and reflections of cultural and historical change. Interdisciplinary approach utilizing the arts, literature, social sciences. Examples will include Berlin at the turn of the century; Paris in literature and film; Tokyo in history and literature. Offered as WLT 300 and WLT 400. Prereq: Graduate standing.

WLT 408. The Paris Experience (3)
Three-week immersion learning experience living and studying in Paris. The focus of the course is the literature and culture of the African, Arab, and Asian communities of Paris. Students spend a minimum of fifteen hours per week visiting cultural centers and museums and interviewing authors and students about the immigrant experience. Assignments and readings complement course activities. Students enrolled in FRCH 308 do course work in French. WLT 308 students have the option of completing course work in English. Graduate students have additional course requirements than those of undergraduates. Offered as FRCH 308, WLT 308, FRCH 408, and WLT 408. Prereq: Graduate standing. Global & Cultural Diversity

WLT 415. Mysticism and Literature (3)
This co-taught seminar will explore and compare mystical elements in selected literary and theoretical works from the West and the East. Comparisons will focus on a number of interrelated sub-themes such as mind, language, alienation, innocence, experience, life, death, cosmogony, cosmology, good, evil, God/gods, and nature (the ecosystem). Offered as MLIT 315, MLIT 415.

WLT 416. Greek Tragedy (3)
This course provides students the opportunity to read a significant number of ancient Greek trag-
edies in modern English translations. We shall read, study, and discuss selected works by Aeschy-
lus, Sophocles, and Euripides, and attempt to un-
derstand the plays as literature composed for per-
formance. We shall study literary elements within the
plays and theatrical possibilities inherent in the
texts. As we read the plays, we shall pay close at-
tention to the historical context and look for what
each play can tell us about myth, religion, and
society in ancient Athens. Finally, we shall give
occasional attention to the way these tragic dra-
mas and the theater in which they were performed
have continued to inspire literature and theater
for thousands of years. Lectures will provide his-
torical background on the playwrights, the plays,
the mythic and historical background, and possi-
ble interpretation of the texts as literature and as
performance pieces. Students will discuss in class
the plays that they read. The course has three ex-
aminations and a final project that includes a short
to and a group presentation. Offered as CLSC
316, WLIT 316, WLIT 416.

WLIT 435. Women in Developing Countries
(3)
This course will feature case studies, theory, and
literature of current issues concerning women in
developing countries primarily of the French-
speaking world. Discussion and research topics
include matriarchal traditions and FGM in Africa,
the Tunisian feminist movement, women, Islam,
and tradition in the Middle East, women-centered
power structures in India (Kerala, Pondicherry),
and poverty and women in Vietnam, Laos, and
Cambodia. Guest speakers and special projects
are important elements of the course. Seminar-
style format, taught in English, with significant
disciplinary writing in English for WGST, ETHS,
and some WLIT students, and writing in French
for FRCH and WLIT students. Writing assign-
ments include two shorter essays and a substantial
research paper.
Offered as ETHS 335, FRCH 335, WLIT 335,
WGST 335, FRCH 435 and WLIT 435.
SAGES Dept Seminar
Global & Cultural Diversity

WLIT 438. The Cameroon Experience
(3)
Three-week immersion learning experience liv-
ing and studying in Cameroon. The focus of the
course is the culture, literature, and language of
Francophone Cameroon, with some emphasis on
Anglophone Cameroon. Students spend a mini-
mum of fifteen hours per week visiting cultural
sites and attending arranged courses at the Univer-
sity of Buea. Students will prepare a research pa-
ter. Course work is in French. To do course work
in English, students should enroll in WLIT 338 or
ETHS 338.
Offered as ETHS 338, FRCH 338, WLIT 338,
ETHS 438, FRCH 438, and WLIT 438.
Global & Cultural Diversity

WLIT 463H. African-American Literature
(3)
A historical approach to African-American litera-
ture. Such writers as Wheatley, Equiano, Doug-
las, Jacobs, DuBois, Hurston, Hughes, Wright,
Baldwin, Ellison, Morrisonis. Topics covered
may include slave narratives, African-American
autobiography, the Harlem Renaissance, the Black
Aesthetic, literature or protest and to assimilation.
Maximum 6 credits. Recommended preparation: ENGL
150 or USFS 100.
Offered as ENGL 363H, ETHS 363H, WLIT
363H, ENGL 463H, and WLIT 463H.
Global & Cultural Diversity

WLIT 465E. The Immigrant Experience
(3)
Study of fictional and/or autobiographical narra-
tive by authors whose families have experienced
immigration to the U.S. Among the ethnic groups
represented are Asian-American, Jewish-American,
Hispanic-American. May include several ethnic
groups or focus on a single one. Attention is paid
to historical and social aspects of immigration and
ethnicity. Maximum 6 credits. Recommended prepa-
reration: ENGL 150 or USFS 100.
Offered as ENGL 365E, WLIT 365E, ENGL
465E, and WLIT 465E.
Global & Cultural Diversity

WLIT 465N. Topics in African-American
Literature (3)
Selected topics and writers from nineteenth and
twentieth-century African-American literature.
May focus on a genre, a single author or a group of
authors, a theme or themes. Maximum 6 credits.
Recommended preparation: ENGL 150 or USFS 100.
Offered as ENGL 365N, ETHS 365N, WLIT
365N, ENGL 465N, and WLIT 465N.
Global & Cultural Diversity

WLIT 465Q, Post-Colonial Literature (3)
Readings in national and regional literatures from
former European colonies such as Australia and
African countries. Maximum 6 credits. Recom-
mended preparation: ENGL 150 or USFS 100.
Offered as ENGL 365Q, ETHS 365Q, WLIT
365Q, ENGL 465Q, and WLIT 465Q.
Global & Cultural Diversity

WLIT 466G. Minority Literatures (3)
A course dealing with literature produced by eth-
nic and racial minority groups within the U.S.
Individual offerings may include works from several
groups studied comparatively, or focus on a single
group, such as Native Americans, Chicanos/Chi-
canas, Asian-Americans, Caribbean-Americans.
African-American works may also be included.
May cover the entire history of the U.S. or shorter
periods. Maximum 6 credits. Recommended prepa-
reration: ENGL 150 or USFS 100.
Offered as ENGL 366G, WLIT 466G, ENGL
466G, and WLIT 466G.
Global & Cultural Diversity

WLIT 468A. Film History, Theory, and
Criticism (3)
This course is an introduction to the three major
approaches to cinema that together constitute the
field of film studies. The course will be broken into
three units: film theory; film criticism; and film
history. Screening one film per week, we will con-
sider each film in light of the particular unit’s and
week’s focus. Recommended preparation: ENGL
150 or USFS 100.
Offered as ENGL 368A, WLIT 368A, ENGL
468A, and WLIT 468A.

WLIT 468C. Topics in Film (3)
Individual topics in film, such as a particular na-
tional cinema, images of women in film, film com-
edy, New Wave film, literature and film. Maxi-
mum 12 credits.
Offered as ENGL 368C, WLIT 368C, ENGL
468C, and WLIT 468C.

WLIT 485. Hispanic Literature in Transla-
tion (3)
Critical analysis and appreciation of representa-
tive literary masterpieces from Spain and Latin
America, and by Hispanics living in the U.S. Texts
cover a variety of genres and a range of liter-
ary periods, from works by Cervantes to those of
Gabriel Garcia Marquez. The course will examine
the relationship between literature and other forms
of artistic production, as well as the development
of the Hispanic literary text within the context of
historical events and cultural production of the pe-
riod. Counts toward Spanish major only as related
course. No knowledge of Spanish required.
Offered as ETHS 385, ETHS 485, SPAN 385,
SPAN 485, WLIT 385, and WLIT 485.
Prereq: Graduate standing.

WLIT 487. Literary and Critical Theory (3)
A survey of major schools and texts of literary and
critical theory. May be historically or thematically
organized. Maximum 6 credits.
Offered as ENGL 387, WLIT 387, ENGL 487,
and WLIT 487.

WLIT 488. Translation (3)
Literary translation forms the basis of most read-
ers’ familiarity with world literature. In an age of
globalization, translation will be of increasing im-
portance. The practice of translation has long been
the province of creative writers. This course com-
plements and draws together creative writers and
students of foreign languages, showing that their
practices overlap. Students should have knowledge
of one language other than English to the 202 (in-
termediate) level.
Offered as WLIT 388 and WLIT 488.
Prereq: Graduate standing.

WLIT 490. Topics in World Literature (3)
In-depth examination of specific critical and lit-
erary theories and of their relevance for literature
and culture studies. Authors, works and instructor
may vary.
Offered as WLIT 390 and WLIT 490.
Prereq: Graduate standing.

WLIT 495. French Literature in Transla-
tion (3)
Topics vary according to student and faculty inter-
est. May include Francophone literature, literature and cinema, women writers, contemporary literature. Counts toward French major only as related course. No knowledge of French required. Offered as: FRCH 395, WLIT 395, FRCH 495, and WLIT 495.
Prereq: Graduate standing.

WLIT 590. Seminar in World Literature (3)
Topics vary depending on student and instructor interests; may include Postcolonial literature; Latin American literature and film; African Anglophone and Francophone literature.
Prereq: Graduate standing.

WLIT 595. Independent Research (1-3)
For graduate students under special circumstances.
Prereq: Graduate standing.

WLIT 601. Independent Study (1-18)
For graduate students under special circumstances.
Prereq: Graduate standing.
MANDEL CENTER FOR NONPROFIT ORGANIZATIONS

11402 Bellflower Road
Cleveland, OH 44106-7167
Phone: 216-368-2275
Fax: 216-368-8592
http://www.case.edu/mandelcenter/

Founded in 1984, the Mandel Center for Nonprofit Organizations, at Case Western Reserve University, is one of the pre-eminent nonprofit management academic centers in the world. The center offers nationally recognized graduate programs focused on developing the nonprofit community and its leaders, conducts cutting-edge research on the nonprofit sector, offers executive education and other non-credit professional development programs, and sponsors a leading journal featuring nonprofit management researchers’ work. The Mandel Center is a university-wide academic center distinguished by the quality of its faculty, by the strength of its ties with nonprofit leaders, and by its close relationships with its four partner schools at Case Western Reserve University – the College of Arts and Sciences, the School of Law, the Mandel School of Applied Social Sciences, and the Weatherhead School of Management. The Mandel Center’s mission is to strengthen – through education, research, and community service – the effectiveness of nonprofit leaders and managers and the organizations they serve.

In pursuit of that mission, the Mandel Center offers the Master of Nonprofit Organizations (M.N.O.) degree, an executive M.N.O. degree option, a Certificate in Nonprofit Management (CNM), and several dual degree and credential programs in cooperation with its four partner schools. The Mandel Center also collaborates with the Executive Doctor of Management (E.D.M.) program at the Weatherhead School of Management to offer practice-oriented nonprofit studies at the doctoral level. The Mandel Center founded and continues to sponsor Nonprofit Management and Leadership, the first and foremost journal of nonprofit management in the United States. Finally, the center provides leadership development services to the community of nonprofit organizations in the form of executive education, peer-to-peer learning, distinguished public lectures, and professional development programs for professionals working in nonprofit organizations.

FACULTY

Laura B. Chisolm, J.D.  (Case Western Reserve University)  
Professor of Law  
School of Law

Steven P. Feldman, Ph.D.  
(Wharton School of the University of Pennsylvania)  
Associate Professor of Management Policy  
Weatherhead School of Management

Robert L. Fischer, Ph.D.  
(Wharton University)  
Research Associate Professor  
Mandel School of Applied Social Sciences

David C. Hammad, Ph.D.  
(Columbia University)  
Hiram C. Hayden Professor of History  
College of Arts and Sciences

Jean Kilgore, Ph.D.  
(Case Western Reserve University)  
Senior Lecturer, Marketing and Policy Studies  
Weatherhead School of Management

David Miller, Ph.D.  
(University of Pittsburgh)  
Associate Professor of Social Work  
Mandel School of Applied Social Sciences

Duncan Neuhauser, Ph.D.  
(University of Chicago)  
Charles Elton Blanchard, M.D. Professor of Health Management  
School of Medicine

Paul F. Salipante, Jr., Ph.D.  
(University of Chicago)  
Professor of Labor and Human Resource Policy  
Weatherhead School of Management

Joseph White, Ph.D.  
(University of California, Berkeley)  
Lucenberg Family Professor of Public Policy  
Chair, Department of Political Science  
College of Arts and Sciences

EMERITUS FACULTY

Arthur Blum, D.S.W.  
(Western Reserve University)  
Grace Longwell Coyle Professor Emeritus  
Mandel School of Applied Social Sciences

Pranab Chatterjee, Ph.D.  
(University of Chicago)  
Grace Longwell Coyle Professor Emeritus

Mandel School of Applied Social Sciences  
Robert P. Lawry, J.D.  
(University of Pennsylvania)  
Professor Emeritus  
School of Law

John A. Yankey, Ph.D.  
(University of Pittsburgh)  
Leonard W. Mayo Professor Emeritus of Family and Child Welfare  
Mandel School of Applied Social Sciences

AFFILIATE FACULTY

Diana Bilimoria, Ph.D.  
(University of Michigan)  
Associate Professor of Organizational Behavior  
Weatherhead School of Management

Steve Bullock, M.B.A.  
(College of St. Thomas)  
Adjunct Instructor  
Mandel School of Applied Social Sciences

Barbara Clemenson, E.D.M.  
(Case Western Reserve University)  
Adjunct Instructor  
Mandel School of Applied Social Sciences

Fred Collopy, Ph.D.  
(Wharton School of the University of Pennsylvania)  
Professor of Information Systems  
Chair, Department of Information Systems  
Weatherhead School of Management

Mandel School of Applied Social Sciences

David Crampton, Ph.D.  
(University of Michigan)  
Associate Professor of Social Work  
Mandel School of Applied Social Sciences

Paul H. Feinberg, LL.M.  
(New York University)  
Adjunct Professor of Law  
School of Law

Brian Gran, Ph.D.  
(Northwestern University)  
Associate Professor of Sociology  
College of Arts and Sciences

John Kleinhenz, Ph.D.  
(University of Notre Dame)
Programs provide the management skills and knowledge needed to address a range of issues confronting nonprofits today. The Mandel Center offers a master's degree in nonprofit management, one of the only specialized degrees of its type in the world. The center also offers an Executive Option master's degree for established professionals, a certificate in nonprofit management, and a dual degree or certificate with the Mandel School of Applied Social Sciences, the Weatherhead School of Management, and the School of Law.

Professional Development
The Mandel Center serves nonprofit leaders with a number of professional development opportunities. The center directs its offerings at the intersection of community needs and the distinctive and substantial knowledge base of the Mandel Center’s Program Faculty. The center works closely with professionals in the field to ensure that its programs contain content that is relevant and easily applicable to the dynamic environment in which today's nonprofits operate. As a result, the center’s professional development programs provide a greater depth of understanding of a topic not only through substantive content grounded in the latest research, but through application techniques and support that enables participants to apply their knowledge to make meaningful positive changes in their workplace. For more information, visit www.case.edu/mandelcenter/professionaldev.

Research
Research efforts are supported by faculty who are national leaders in the field of nonprofit management. This research is published in leading academic journals, including Nonprofit Management and Leadership, which the Mandel Center founded in 1990 and continues to sponsor. Nonprofit research projects and papers are also shared through conferences, seminars, lectures, symposia, and special publications. For more information, visit www.case.edu/mandelcenter/research.

NONPROFIT MANAGEMENT EDUCATION
With a Mandel Center degree or certificate, a student will gain the skills needed to meet the persistent demands of nonprofit leaders today. The center’s faculty consists of highly skilled professionals who have a wealth of expertise from both an academic and community perspective and the center’s teaching approach is dynamic and interactive with an emphasis on management skills and knowledge needed to address a wide range of issues confronting nonprofits today.

Master’s Programs

**MASTER OF NONPROFIT ORGANIZATIONS (M.N.O.)**
The Master of Nonprofit Organizations degree consists of 60 credit hours of academic work taken over two years of full-time study, or approximately 48 months of part-time study. Part-time students may accelerate their progress depending upon the number of courses they take in any given semester. Classes are offered primarily in the evening and on weekends to accommodate working professionals. The M.N.O. is based on a multidisciplinary curriculum consisting of four thematic areas: Nonprofit Purposes, Traditions, and Contexts; Analytic Thinking for Nonprofit Leaders; Generating and Managing Resources for Nonprofit Organizations; and Leading Nonprofit Organizations. Students take 33 hours of required courses and 27 hours of elective courses. This structure allows the student broad latitude to customize his or her program of study to meet professional interests and needs.

Electives may also be selected from courses offered by other schools at Case Western Reserve University.

MASTER OF NONPROFIT ORGANIZATIONS EXECUTIVE OPTION

The M.N.O. - Executive Option is a professional degree option designed for nonprofit managers and practitioners with at least 10 years of professional experience and five years or more of management and/or supervisory experience. The M.N.O. - Executive Option is based upon the Master of Nonprofit Organizations curriculum.

The M.N.O. - Executive Option consists of 45 credit hours typically taken over 18 months of full-time study or approximately three years of part-time study. Classes are offered primarily in the evening and on weekends to accommodate working professionals. M.N.O. - Executive Option students typically take 30 hours of required courses and 15 hours of elective courses. Students who have taken prior coursework in the required areas may, with faculty approval, replace specific required courses with other elective courses.

Admission to this option will be considered only at the time of initial admission into the Mandel Center's master's degree program. Students may not apply for this option once they have matriculated into the 60-hour program.

Certificate Program

CERTIFICATE IN NONPROFIT MANAGEMENT (CNM)

The Certificate in Nonprofit Management is a non-degree professional certificate consisting of 15 credit hours of graduate-level coursework: one required course, Introduction to the Nonprofit Sector (MAND 401), and four courses drawn from the Mandel Center course list (see above). CNM students may elect to attend one or more sessions of Nonprofit Leadership Dialogs: Major Trends and Issues (MAND 411) with prior permission of the instructor.

Classes are offered primarily in the evening and on weekends to accommodate working professionals. The typical student takes one year to complete the program. CNM courses may be chosen from the center’s multidisciplinary curriculum, which encompasses four thematic areas: Nonprofit Purposes, Traditions, and Contexts; Analytic Thinking for Nonprofit Leaders; Generating and Managing Resources for Nonprofit Organizations; and Leading Nonprofit Organizations. A CNM student may select courses from any of the curricular themes and may customize a program of study to meet professional interests and needs.

DUAL DEGREE OPTIONS

The Mandel Center currently offers dual degree programs to enable students to combine the Master of Nonprofit Organizations degree (M.N.O.) with a degree from the Mandel School of Applied Social Sciences (M.S.S.A./M.N.O.), the School of Law at Case Western Reserve University (J.D./M.N.O.), or the Department of Music in the School of Graduate Studies (M.A./M.N.O.).

ALL DUAL DEGREE STUDENTS:

a. must be admitted to each degree program separately, and
b. must receive both degrees simultaneously to be granted credit for specific courses taken in the other program.

Please contact the Mandel Center or the appropriate professional school for specific curriculum, sequence options, and complete information about dual degree programs.

M.S.S.A./M.N.O.

This program combines the Master of Nonprofit Organizations (M.N.O.) degree with the Master of Science in Social Administration degree (M.S.S.A.). It provides career preparation for students with interests in nonprofit management, social service, and the social work profession.

New students can apply to both programs simultaneously or separately. Students who choose to begin their studies in the M.S.S.A. program must apply to the M.N.O. program prior to completing their first semester of M.S.S.A. courses. M.S.S.A./M.N.O. students continue to register at their initial school of enrollment throughout the dual degree program.

For more information on the M.S.S.A. degree, please visit http://msass.case.edu/academic/.

J.D./M.N.O.

This program combines the Master of Nonprofit Organizations (M.N.O.) degree with the Juris Doctor degree (J.D.). It provides preparation for students interested in, for example, practicing law within a nonprofit organizational setting; working as a program officer in a foundation; serving as a leader or manager of a nonprofit organization; working in the area of nonprofit public policy and advocacy; or working in the field of planned giving.

New students can apply to both programs simultaneously or at separate times. Students who choose to begin their studies in the J.D. program must apply to the M.N.O. program prior to completing their first year at the School of Law. J.D./M.N.O. students continue to register at their initial school of enroll-
MANDEL CENTER FOR
NONPROFIT ORGANIZATIONS

ment throughout the dual degree program.
For information on the J.D. degree, please visit http://law.case.edu/curriculum/.

M.A./M.N.O.
This program combines the M.N.O. degree with the Master of Arts in Music History (M.A.). It provides preparation for students who desire to blend a strong background in music and the arts with management in nonprofit organizations.

Students in either program must be admitted within the first year of study to the other program in order to be admitted to dual degree status. New students may apply to both programs simultaneously or at separate times.

For more information on the M.A. degree, visit http://music.case.edu/musicology/ma.php/.

DEGREE/CERTIFICATE OPTIONS
The Mandel Center currently offers degree/certificate programs with the Weatherhead School of Management (M.B.A./CNM), the Mandel School of Applied Social Sciences (M.S.S.A./CNM), and the School of Law at Case Western Reserve University (J.D./CNM).

All degree/certificate students:

a. must be admitted to each program separately, and
b. must receive both credentials simultaneously to be granted credit for specific courses taken in the other program.

Please contact the Mandel Center or the appropriate professional school for specific curriculum, sequence options, and complete information about certificate programs.

M.B.A./CNM
M.B.A. students with a career focus in the management of nonprofit organizations may obtain a Certificate in Nonprofit Management (CNM) by completing 15 credit hours of Mandel Center courses (9 of the 15 credit hours may be counted as M.B.A. electives). By enrolling in one additional course in two of the last three semesters of the M.B.A. program, full-time students may complete the M.B.A. and the CNM without extending their course of study or incurring additional tuition fees. M.B.A. students must apply to the degree/certificate program no later than the end of the first year in the M.B.A. program (or at the end of the first semester in the accelerated M.B.A. curriculum).

Students wishing to propose any modification in the recommended sequence of study on the basis of prior course work, past experience, or professional interest must present a request, in writing, for consideration by the Weatherhead M.B.A./CNM faculty advisor.

For more information on the M.B.A. degree and for a complete listing of Mandel Center courses that are eligible for both the M.B.A. and the CNM, visit:
http://weatherhead.case.edu/academics/master/mba/certificates/nonprofit/.

M.S.S.A./CNM
The M.S.S.A./CNM combines the Master of Science in Social Administration degree (M.S.S.A.) with the Certificate in Nonprofit Management. It provides career preparation for students with interests in nonprofit management, social service, and the social work profession.

The program consists of fifteen credit hours of Mandel Center courses. MSASS students interested in the M.S.S.A./CNM should contact their advisor or the Mandel Center for more information.

M.S.S.A. students should apply to the degree/certificate program no later than the end of their first semester in the M.S.S.A. program.

For more information on the M.S.S.A. degree, visit http://msass.case.edu/academic/.

J.D./CNM
The J.D./CNM combines the Juris Doctor degree (J.D.) with the Certificate in Nonprofit Management. It provides preparation for students interested in, for example, practicing law within a nonprofit organizational setting; working as a program officer in a foundation; serving as a leader or manager of a nonprofit organization; working in the area of nonprofit public policy and advocacy; or working in the field of planned giving.

The program consists of five courses. Law of Nonprofit Organizations (LAWS 234) is required and the remaining four courses are chosen in consultation with the J.D./CNM faculty advisor.

Students should apply to the degree/certificate program no later than the end of the second year at the School of Law.

For more information on the J.D. degree, please visit http://law.case.edu/curriculum/.

For more information on the center’s certificate or master’s programs, call 800-435-6669 or contact:

http://www.case.edu/mandelcenter/grad/

ADMISSIONS INFORMATION

Master of Nonprofit Organizations (M.N.O.) Degree
The following are required to apply for the M.N.O.:

a. Completed application for admission. The form can be completed online, printed in hard copy, and mailed to the Admissions Office. The application should be signed and the applicant should keep a copy of the form for his or her records.
b. $25 application fee
c. Personal essay
d. Two (2) letters of recommendation from individuals qualified to comment on the applicant’s nonprofit experience and/or the applicant’s ability to master graduate level work, as well as his/her interpersonal and communication skills.

Please use the recommendation forms included in the Mandel Center application packet or download the recommendation form (PDF) found on the Mandel Center’s web site at http://www.case.edu/mandelcenter/grad/admissions/RecommendationForm.pdf. See the instructions on the recommendation form for mailing to the recommenders.
e. Current resume or vitae
f. Baccalaureate degree evidenced by official sealed transcripts (the sealed transcripts must be sent directly to the Mandel Center from each institution attended) *

International students must provide official transcripts that have been translated into English, and, if the grading system at the student’s academic institution cannot be compared with the United States system, the transcript must be evaluated by a service qualified to convert foreign academic credentials into their U.S. equivalents (e.g. World Education Services).

g. GMAT score (www.mba.com). For the program recipient of the GMAT score, choose “Case Western Reserve University - Weatherhead School of Management - Master of Nonprofit Organizations” from the GMAT Program Database (which is done at the
time of the test), An applicant cannot be fully admitted until the official scores have been received by Weatherhead.

h. TOEFL score (international students only) (www.toefl.org). Official scores must be received by the Weatherhead School of Management (Code: 1105) before an applicant can be admitted.

i. Free Application for Federal Student Aid (FAFSA) - complete this form if applying for Mandel Center scholarships and/or federal loans.

M.N.O. - EXECUTIVE OPTION

The admission requirements for the M.N.O. - Executive Option are the same as those for the M.N.O. with the following differences:

a. The applicant must articulate in the personal essay why he/she is qualified for the M.N.O. - Executive Option.

b. The applicant must submit three (3) letters of recommendation. At least one letter must be written by an individual who has supervised the applicant in his/her managerial career, and who can discuss the scope of the applicant's managerial duties and the effectiveness of the applicant as a manager.

c. The applicant must meet with Mandel Center faculty members to determine whether he or she has the requisite level of experience to meet the M.N.O. - Executive Option requirements.

CERTIFICATE IN NONPROFIT MANAGEMENT (CNM)

The application procedures for the CNM are the same as those for the M.N.O., except that a GMAT score is not required.

DUAL DEGREE AND DEGREE/CERTIFICATE PROGRAMS

Applicants to a dual degree or degree/certificate program must make separate application to and be admitted by each of the separate programs (see Dual Degree Program and Degree/Certificate Program pages).

*Dual degree or degree/certificate students who have completed a semester or more of coursework in their initial school of enrollment at the time that they apply for the M.N.O. or CNM must also provide the Mandel Center Admissions Office with a copy of their transcript from that school.

ENTRANCE SEMESTERS AND APPLICATION DEADLINES

Applicants for the M.N.O. or CNM may enter the program in the fall, spring, or summer semesters. The deadline for the fall semester is June 1, for the spring semester is December 1, and for the summer semester is May 1. Applicants are admitted on a rolling admissions basis.

WAIVER POLICY

A total of six credit hours are eligible for waiver, subject to the following requirements:

Courses to be waived must have been taken from an accredited institution within five years of the date of application to the M.N.O. degree program. A grade of at least a B must have been earned. A Mandel Center faculty member must make written approval of the waived course. Courses will not be waived based upon work experience. A student must register for and complete at least 54 credits toward the M.N.O. degree in residence at the university in addition to courses waived. A waived course may reduce degree requirements.

TRANSFER CREDIT

Courses granted transfer credit must be approved as applicable to the M.N.O. program. Courses must be taken at an accredited institution and be approved prior to enrollment. A grade of at least B must be earned and these grades are not counted in the cumulative grade point average. Transfer credit is limited to six credits.

SUBSTITUTION

An additional nine credits may be approved for substitute credit. Substitute courses replace required M.N.O. courses but do not reduce the total number of credits required to complete the program. Substitute courses must be selected and approved in accordance with a clearly defined written proposal consistent with student interests/needs and the M.N.O. program mission.

For more information on the admissions process, call 1-800-435-6669 or contact:

Director of Recruitment
216-368-6025
E-mail: mcnoadmissions@case.edu
http://www.case.edu/mandelcenter/grad/

CAREER DEVELOPMENT AND MANAGEMENT

The Mandel Center provides career assistance and internship and mentoring opportunities. In addition, nonprofit job openings are posted on Case CareerLink, the online career management system available through Case Western Reserve University’s Career Center.

Internships are optional experiences that enable students to gain valuable professional experiences, often by working on a special project, in a nonprofit setting. An internship is designed to last a minimum of one semester, during which the student works from 10-20 hours per week.

The mentor program is another optional experience that enables a student to be matched one-on-one with a prominent nonprofit executive in the Cleveland area. This is an opportunity to discover the realities of the workplace, network with professionals who share similar interests, obtain valuable and personalized guidance from a seasoned professional, or to work side by side with one’s mentor. Students can participate in the fall and/or spring semesters.

In addition, the Mandel Center is fortunate to have a staff with in-depth knowledge and extensive and varied employment histories in the nonprofit sector locally, regionally and nationally. Students may contact the Mandel Center for personalized support and discussion around career goals, objectives and opportunities.

For more information, please visit http://www.case.edu/mandelcenter/career/.

FINANCIAL INFORMATION

Tuition

The tuition charges for 2009-2010 for the M.N.O. degree and CNM program are $1,375 per credit or $16,500 per semester for full-time M.N.O. students taking 12 or more credits. The cost for the CNM program depends upon the number of credit hours taken. Tuition covers instructional costs and computer usage. Books and living expenses are separate student expenses. Tuition is due and payable according to the university’s tuition payment policy for each semester in which course work is undertaken.

Technology Fee

Students are charged the student technology fee in the fall and spring semesters based on the number of credit hours registered for in each semester. For more information, visit http://www.case.edu/mandelcenter/grad/finance/.

Financial Aid

C10471_MANDEL.indd 409
5/26/09 12:31:10 PM
MANDEL CENTER FOR NONPROFIT ORGANIZATIONS

Information about scholarships or other financial aid assistance is available at http://www.case.edu/mandelcenter/grad/finance/.

Please note: Initial scholarship and financial aid decisions are typically made in the spring for the following fall, so application by April 30 to the M.N.O. or CNM program is encouraged. Requests for financial assistance received after June 1 will be considered based on availability of funds. Earlier application deadlines apply for full tuition scholarships.

ACADEMIC REGULATIONS

Registration
Registration for the M.N.O. and CNM programs is through the Weatherhead School of Management. The Mandel Center’s academic advisor must approve all schedules prior to registration.

Refer to the Weatherhead School section of this Bulletin for information about course changes and withdrawals. For additional information, call the Mandel Center at 216-368-8566.

Course Loads
Full-time graduate students are required to register for a minimum of 12 credits per semester. Part-time students typically register for 6 credits per semester.

Non-Degree Students
Individuals may register as non-degree students and take a maximum of 12 credit hours through a total of four (4) Mandel Center graduate level courses in the Weatherhead School of Management Non-Degree Program. For questions about this option, please contact the Mandel Center Admissions Office at 216-368-6025 or 1-800-435-6669 or visit http://www.case.edu/mandelcenter/grad.

Retention and Graduation Requirements

M.N.O. PROGRAM
Retention requirements for continued study in the M.N.O. program:

- Minimum G.P.A. after 15 credit hours of study: 2.5
- Minimum G.P.A. after 23 credit hours of study: 2.7
- Minimum G.P.A. after 29 credit hours of study: 3.0
- Minimum G.P.A. for graduation: 3.0

A student will be placed on academic probation after any semester in which the minimum G.P.A. is not attained. A student who is on academic probation in a particular semester will be allowed one additional semester to attain the minimum G.P.A. in order to continue in the M.N.O. program.

A candidate for the M.N.O. degree must file an application to graduate not later than two months before the commencement at which the degree is expected. The filing of this application is the responsibility of the M.N.O. candidate. Contact the Mandel Center at 216-368-8566 for more information. Eligibility of the candidate to graduate at the time requested will be verified upon receipt of the application.

RETENTION REQUIREMENTS FOR STUDENTS IN THE CNM PROGRAM

A CNM student who earns a final grade below a B in any course may no longer continue in the program. There is no academic probation period for the CNM, due to the short duration of the program.

A candidate for the CNM program must file an application to graduate not later than two months before the expected graduation date. The filing of this application is the responsibility of the CNM candidate. Contact the Mandel Center at 216-368-8566 for more information. Eligibility of the candidate to graduate at the time requested will be verified upon receipt of the application.

TIME LIMITATION

All requirements for the CNM program must be completed within two years from the date of the student’s initial registration.

TRANSCRIPTS

Official transcripts for course work completed may be obtained from the University Registrar’s Office at http://www.case.edu/provost/registrar/transcri.htm/.

COURSE DESCRIPTIONS (MAND)

Course Descriptions

MAND 401. Introduction to the Nonprofit Sector (3)
An examination of the social history of nonprofit organizations in the United States, to develop an historical perspective and a sense of magnitude, scope, and functions of the nonprofit sector and its relationships with business and government. This course will explore the theoretical bases upon which social scientists have sought to understand the role of the nonprofit sector in our economy and in our political and social systems, and will explore the issues that will shape the future of the sector. Eligible for M.B.A. credit.

MAND 405. Ethics and Professionalism for Nonprofit Leaders (3)
This course is an application of ethical frameworks and analysis to nonprofit organizations. Using cases and essays, the course will help nonprofit managers become better equipped to address ethical problems and dilemmas in their work in the following areas: ethics of boards, ethics and leadership, ethics and organizational culture, professional ethics, and ethics and fundraising. Eligible for M.B.A. credit.

MAND 406. Nonprofit Public Policy and Advocacy (3)
This course is an introduction to the institutions and processes that make up the political environment of nonprofit organizations in the United States. The course will examine the role of civil society in a democracy, take a general overview of American political institutions and the cultural beliefs that undergird them, and examine the important elements of the public policy process: the framing of issues, the role of political entrepreneurs and organized interests, elections, the legislative process and strategies for influencing it, and the roles of executive institutions and the courts. Emphasis will be placed on the ways that nonprofit advocates can advance their goals in the public policy process. Eligible for M.B.A. credit.
MAND 407. Earned Income for Nonprofit Organizations (3)
In this course, students will examine the entrepreneurial behavior of nonprofit-sector organizations in identifying new and varied sources of income to supplement the traditional contribution base. Using cases, students will explore the nontraditional sources of income that drive the tax-exempt sector, analyze data, and make management decisions. Eligible for M.B.A. credit.

MAND 408. Philanthropic Fundraising for Nonprofit Organizations (3)
This course will provide current and future nonprofit leaders with a detailed survey of the practices, principles, and process of fundraising, enabling them to effectively create, participate in, and manage fund development programs and staff. Successful fundraising is shown to be communication-based and built upon solid relationships with defined constituencies of donors and potential donors. Eligible for M.B.A. credit.

MAND 409A. Strategic Planning for Nonprofit Organizations: Practicum I (3)
This is the first of a two-course, integrated, practicum series designed to provide "hands-on" experiences in planning for, designing, and conducting strategic planning in nonprofit organizations. Students will learn to assess organizational readiness, facilitate the design of strategic planning processes, create a variety of approaches involving key stakeholders, and finalize a planning design suited to organizational culture. Eligible for M.B.A. credit. MAND 409A is the first part of a two-part sequence, the second part of which is offered the following semester.

MAND 409B. Strategic Planning for Nonprofit Organizations: Practicum II (3)
This is the second of a two-course, integrated practicum series designed to provide "hands-on" experience in planning for, designing, and conducting strategic planning in nonprofit organizations. Student teams will continue to consult with their nonprofit organizations to implement the committee deliberation phase of the planning process designed during the first practicum. Eligible for M.B.A. credit. MAND 409B is the continuation of a two-part course sequence. Prereq: MAND 409A.

MAND 410. Quantitative Analysis for Nonprofit Leaders (3)
This course is designed to give students basic understanding and working knowledge of data analysis, statistical concepts, use of computers, research designs for program planning and evaluation, and quantitative techniques for problem solving. The intent is to ensure that executives and leaders are able to effectively utilize and interpret statistical data, technical reports, research findings, and evaluation studies, and employ basic quantitative methods in their own analysis of problems and policies. Not eligible for M.B.A. credit.

MAND 411. Nonprofit Leadership Dialogs: Major Trends and Issues (1)
This course is intended to enable students to learn about major nonprofit leadership issues and trends through interaction and dialog with successful nonprofit leaders. It is also designed to provide outside nonprofit leaders with the opportunity to learn about the quality of the Mandel Center's student body. Eligible for M.B.A. credit.

MAND 412. Leadership for Nonprofit Organizations (3)
This course examines leadership from nonprofit political, managerial, and sociological perspectives. Concepts of leadership will be applied to nonprofit organizations through case discussion, student experience, and class exercises. The course integrates theory-based and practice-based approaches and prepares students to participate in leader-follower dynamics in the nonprofit setting. Eligible for M.B.A. credit.

MAND 420. Nonprofit Organization and Management (3)
This course will focus on theories of organization and general concepts and principles of management, governance, and leadership. Organizational design, behavior, performance, and effectiveness will be studied, and the special character and management problems of nonprofit organizations will be highlighted and analyzed. Eligible for M.B.A. credit.

MAND 422. Organizational Assessment and Program Evaluation in Nonprofit Orgs. (3)
The course is designed to introduce students to the approaches to organizational assessment and evaluation of organizational issues and problems. The class will explore a variety of ways of viewing organizations, assessing their stage of development, look at factors that influence or interfere with their forward progress, review the dimensions essential to nonprofit organizations and explore some processes useful to enable change. In addition, the course will focus on the process of creating and measuring program outcomes. Eligible for M.B.A. credit.

MAND 424. Economics for Nonprofit Managers (3)
This course is designed to familiarize students with basic ideas of microeconomic analysis so that they may apply this reasoning to important resource-related decisions facing contemporary nonprofit organizations. This introductory course will orient the student to the role of nonprofit organizations in a market economy, familiarizing the student with basic concepts of microeconomic analysis and how they apply to resource-related decisions, and provide the student with tools and concepts for analyzing pricing, compensation, outsourcing, investment of funds, and engaging in partnerships. Not eligible for M.B.A. credit.

MAND 425. Financial Accounting and Reporting for Nonprofit Organizations (2)
A working knowledge of accounting principles and practices as they pertain particularly to nonprofit organizations is stressed in this course. Topics include basic concepts of accounting, generation and use of accounting information, understanding and use of standard accounting reports, and the nuances of fund accounting and other subjects especially germane to nonprofit organizations. Not eligible for M.B.A. credit.

MAND 426. Financial Management for Nonprofit Organizations (3)
This course focuses on techniques and principles of financial management including budgeting, finance and investment decision making. Topics include budget formulation, analysis and planning, present value analysis, cost-effectiveness, cash flow analysis, portfolio management, and venture planning. Special emphasis will be given to the unique problems of nonprofits in capital formation, generating earned income, managing endowments, gifts and grants, and tax planning. Not eligible for M.B.A. credit. Prereq: MAND 425.

MAND 427. International Non-Governmental Organizations (3)
This course examines the role of voluntary associations in the international arena and, in particular, the multiple roles of international non-governmental organizations in affecting international political and economic outcomes. The course also examines the theoretical issues surrounding NGOs and international relations, particularly the relationship between global civil society and international political outcomes. Eligible for M.B.A. credit.

MAND 428. The American Nonprofit Sector in its Contexts (1)
This one-credit-hour intensive-format course is designed to enable students to learn what they need to know about the U.S. nonprofit sector
in order to serve successfully as executive leaders of nonprofit organizations. This class will help students (1) understand how individual nonprofit organizations and the nonprofit sector as a whole fit into the U.S. political and legal systems and into the U.S. economy, (2) distinguish the nonprofit sector of American society from the for-profit and the governmental sectors, (3) compare and contrast the U.S. nonprofit sector with its counterparts in other nations, and (4) evaluate the key current issues facing nonprofits in the United States. Not eligible for M.B.A. credit.

MAND 430. Managing Human Resources in Nonprofit Organizations (3)

Theories and principles of managing people in organizations are addressed in this course, including motivation theory and human resource development strategies. Particular attention is devoted to issues critical to nonprofit organizations, such as the management of volunteers, management of professionals, working with trustees, and staff/board relationships. Eligible for M.B.A. credit.

MAND 432. Marketing for Nonprofit Organizations (3)

This course provides students with a comprehensive overview of the principles and techniques of nonprofit marketing and with an understanding of the multiple contexts in which they are applicable—marketing of products and services, marketing to potential funders, marketing of ideas and behaviors (social marketing and advocacy). The focus of the course is on managerial decision-making to achieve organizational objectives and enhance organizational viability. Eligible for M.B.A. credit.

MAND 440. Management Information Systems for Nonprofit Organizations (3)

An examination of how the management of organizations in contemporary society can be understood as the managing of systems and operations that require the processing and analysis of information. Basic concepts and models of systems analysis, management information and decision systems, and operations management will be explained and applied to the analysis and control of organizational processes and the relationship of the organization to its environment. Computer-based models may be used to analyze problems, policies, and practices of organizations in a variety of nonprofit industries. Not eligible for M.B.A. credit.

MAND 444. Program Design in Nonprofit Organizations (3)

Program design and development are of critical importance in nonprofit organizations. Through this course students will have the opportunity to design a program using a specific analytic framework. Students will learn: (1) to address the demands of multiple constituencies and competing values in program development process, (2) skills for developing and implementing programs in the nonprofit sector, and (3) to examine issues of diversity as they affect organizations and community efforts and explore personal values and ethics as these influence programs and interventions. Eligible for M.B.A. credit.

MAND 450. Law of Nonprofit Organizations (3)

This course provides the student with a basic grounding in the laws and regulations governing nonprofit organizations. Content will include the procedures for incorporating, reporting, and maintaining tax-exempt status as a nonprofit organization, a familiarity with legal principles and research methods, and an overview of the legal, regulatory, and policy issues facing contemporary nonprofit organizations. Eligible for M.B.A. credit.

MAND 486. Leading and Managing Nonprofit Arts and Cultural Organizations (3)

This course addresses major issues affecting the leadership and management of arts organizations, the values and assumptions which have influenced arts organizations in the past, and current trends in society which may call those assumptions into question. Emphasis is given to issues of cultural sensitivity for leaders, managers and audiences as well as broadening the perspectives of future leaders so they may productively and creatively manage their institutions and careers. Eligible for M.B.A. credit.

MAND 489. Trusteeship: Governance of Nonprofit Organizations (3)

This elective course deals with the definition, history and concept of trusteeship, the areas of responsibilities of Boards of Trustees, the authority of Boards and the limits on its exercise, the organization of Boards and their committees, and the Board’s relationships with the Executive Director, the staff and the organization’s constituencies. Eligible for M.B.A. credit.

MAND 501. Special Problems and Topics (1 - 18)

An elective which provides the opportunity for an individualized, structured course of study in an area of special interest to the student, and is arranged by mutual agreement between the student and an appropriate faculty member.
MANDEL SCHOOL OF APPLIED SOCIAL SCIENCES

11235 Bellflower Road
Phone 216-368-2290; Fax 216-368-8670
Grover C. Gilmore, Ph.D., Dean
and Professor

MISSION STATEMENT
The mission of the Mandel School is to provide and integrate professional social work education, research, and service to promote social justice and empowerment in communities through social work practices locally, nationally and internationally.

A HISTORY OF INNOVATION
Ranked among the nation’s top graduate schools of social work by U.S. News and World Report, and ranked number one in Ohio, the Mandel School of Applied Social Sciences has always committed itself to learning from and fostering the best in social work practice and to building social work’s knowledge base. Since its founding in 1915 as the nation’s first university-affiliated professional graduate school of social work, the Mandel School has been an innovator in professional education, where educators, researchers and practitioners work side-by-side to investigate, study and disseminate knowledge to bridge the gap between the classroom and communities in which social workers practice.

The Mandel School provides students with a solid foundation designed to build core competencies with its innovative Ability-Based Learning Environment, which allows graduates a great degree of flexibility and portability. Students choose concentrations in either Community and Social Development or Direct Practice, which offers specializations in Aging; Alcohol and Other Drug Abuse; Children, Youth and Families; Health; and Mental Health. Certificate programs include early intervention, gerontology, health systems management, nonprofit management, and school social work. Dual-degree programs enable Mandel School students to obtain their social work degree concurrently with a master’s degree in bioethics, law, management, or nonprofit management.

The Mandel School believes that advanced practitioners are strategists of change, working in partnership with others to enhance the caring capacity of communities. The concentrations structure cross-trains Mandel School students, who build foundations in both areas that bring a breadth of knowledge to their work lives, allowing them the flexibility to pursue their interests even as they change over time. The school prepares advanced practitioners who become lifelong learners with the abilities needed to practice ethically and effectively with diverse populations and with systems of various sizes and types. Students learn to understand the dynamics of problematic social situations and to identify the strengths and resources in individuals, families and communities that offer the best hope of solutions. The school is committed to a vision of social work practice as a force of social justice, empowerment, and the building of healthy communities. That commitment extends beyond our national borders with the Mandel School’s award-winning program of international study options.

The Mandel School counts among its alumni many prominent educators, government officials, accomplished practitioners, researchers, advocates, public-policy-makers, and chief executives of national and regional agencies. Faculty achievements in professional organizations, research, and agency consultation further extend the school’s reputation as an active participant in the advancement of social work practice.

A Mandel School education is more than preparation. It is an opportunity to join a national network of scholars and practitioners who are shaping the course of social work in communities throughout the world. The Mandel School is ranked seventh in faculty productivity among social work schools by Academic Analytics.

For nearly one hundred years, the Mandel School of Applied Social Sciences has stood at the forefront of social work education, introducing innovations in teaching, research, and practice at every step of the way, with an approach that integrates theory and practice like no other.

At the heart of the Mandel difference is experience—not just the in-depth experience of our distinguished faculty—but the experience students obtain working in the real world of social work from the time they start their education here. Mandel is unique among social work schools for its students’ paid field placements, providing invaluable work experience, and, by making the education more affordable, extending the opportunity to an even broader range of students. Students learn through the Mandel School’s teaching and by their own doing. What they discover in a classroom on a Tuesday they apply to real life at their placements on Wednesday. Graduates leave the Mandel School prepared to handle the demands of social work because they already know what they are.

Mandel students take their places alongside long-time professionals in a variety of social work fields in placements at one of the more than 350 agencies with which the Mandel School collaborates, understanding firsthand the challenges of social work and sharing in its rewards. In a broad spectrum of local and regional organizations, students develop skills in direct practice, policy analysis and development, research, management and community development.

The Mandel Center for Nonprofit Organizations (a university-wide academic center)
Founded in 1984, the Mandel Center for Nonprofit Organizations, at Case Western Reserve University, is one of the pre-eminent nonprofit management academic centers in the world. The center offers nationally recognized graduate programs focused on developing the nonprofit community and its leaders, conducts cutting-edge research on the nonprofit sector, offers executive education and other non-credit professional development programs, and sponsors a leading journal featuring nonprofit management researchers’ work. The Mandel Center is distinguished by the quality of its faculty, by the strength of its ties with nonprofit leaders, and by its close relationships with four partner schools at Case Western Reserve University—the College of Arts and Sciences, the School of Law, the Mandel School of Applied Social Sciences, and the Weatherhead School of Management. For more information, please refer to the Mandel Center for Nonprofit Organizations’ section of this publication.

ADMINISTRATION
Grover Cleveland Gilmore, Ph.D.
(Johns Hopkins University)
Dean and Professor
Sharon E. Milligan, Ph.D.  
(University of Pittsburgh)  
Associate Dean for Academic Affairs; Chair,  
Master’s Program; Associate Director of the  
Center on Urban Poverty and Community  
Development

Susan Lajoie Eagan, Ph.D.  
Executive Director, Mandel Center, and Mandel  
Professor

(Case Western Reserve University)  
Clinical Instructor

Grover C. Gilmore, Ph.D.  
(Johns Hopkins University)  
Dean and Professor

Wallace J. Gingerich, Ph.D.  
(Washington University)  
Professor

Victor K. Groza, Ph.D.  
(University of Oklahoma)  
Professor (this needs proper consistent format-  
ting)

Timothy F. Hagan, B.A.  
(Cleveland State University)  
Distinguished Visiting Faculty

Merl C. Hokenstad Jr., Ph.D.  
(Brandeis University)  
Ralph S. and Dorothy P. Schmitt Professor

Leila West Jackson, Ph.D.  
(John Hopkins)  
Assistant Professor

Deborah Regenbogen Jacobson, Ph.D.  
(Tulane University)  
Assistant Professor

Michial Zane Jennings, M.S.W.  
(University of Iowa)  
Clinical Instructor

Mark L. Joseph, Ph.D.  
(University of Chicago)  
Assistant Professor

Eva Kahana, Ph.D.  
(University of Chicago)  
Professor

Marjory Klein, M.S.S.A.
The Master of Science in Social Administration (M.S.S.A.) program prepares students for advanced social work practice in a variety of settings. The master’s curriculum is designed to address the wide range of skills and functions required of a professional social worker. Mandel School students are instructed on the various theories of individual and group behavior as well as community systems theory. The application of this knowledge, along with the appropriate use of practice principles and techniques, is a major educational objective.

The curriculum is divided into two levels: foundation and advanced. The foundation curriculum (21 credit hours) includes the knowledge, values, processes, and skills essential for the general practice of social work. It consists of general courses in social work methods, human development theory, social policy, research methods, and an introductory semester of field education. The advanced curriculum (39 credit hours) builds on the professional foundation and provides for advanced knowledge and practice skills in the concentration selected by the student. Concentrations include the following: aging; alcohol and other drug abuse; children, youth and families; health; mental health; and community development. School social work is available as a special emphasis.

ABILITY BASED LEARNING ENVIRONMENT (ABLE)
The M.S.S.A. program incorporates an ability-based learning environment that enables students to develop and demonstrate mastery of eight core social work abilities. Classroom courses and field education are designed to help students develop each ability and continuously assess their learning throughout the educational experience. Mastery of the abilities is demonstrated in the field practicum and documented in a cumulative learning portfolio.

• Intentionally Use Yourself: Students demonstrate an awareness of “self” and use relationships as key components in social work practice. Students can accurately assess their impact on others and plan to use their knowledge and skills to accomplish professional tasks.

• Apply Social Work Methods: Effective community-based practice integrates all other abilities. MSASS graduates are able to assess problems, weigh intervention alternatives, implement change strategies, and evaluate results. They recognize that lasting solutions to social problems arise from community strengths.

• Integrate Social Work Values and Ethics: Students demonstrate their commitment to core social work values – service, justice, dignity and worth of the individual, importance of human relationships, and integrity. They are able to manage ethical conflicts competently.

• Value a Diverse World: Students understand and appreciate a diverse world; they learn to employ culturally sensitive intervention strategies that are specifically suited to the client population.

• Think Critically: Students think critically about their practice and its knowledge base. They bring this critical perspective to the social problems and situations they encounter.

• Communicate Effectively: Students have the oral, written, and attending skills that allow
them to communicate effectively and appropriately for the audience and setting. They will make appropriate use of audiovisual and communication technologies.

- **Advocate for Social Justice**: Students are effective advocates for social change and identify advocacy as a major responsibility of the profession. Students employ a range of advocacy strategies with individuals, families, groups, and communities.

- **Succeed in the World of Work**: Mandel School graduates are life-long learners, committed to ongoing professional development and success in the world of work. They are effective team members, employ productive work habits, and exhibit leadership skills.

Mandel School faculty place a high priority on the integration of theory with practice. To facilitate this integration, field work is done concurrently with course work. Through field education, students have the opportunity to acquire new skills and apply their classroom learning in their practice setting. The school is affiliated with over 300 agencies in the Greater Cleveland area, creating a vast network of field education as well as employment opportunities. Students are required to complete over 900 clock hours of field education. The school and the affiliated agency or field setting agree on the content and conditions of field education, including the qualifications of social workers who serve as field instructors. Field placement decisions are based on educational criteria, with student interests and career objectives taken into consideration.

**CONCENTRATIONS:**
- Community and Social Development
- Direct Practice

**DIRECT PRACTICE SPECIALIZATIONS:**
- Aging
- Alcohol and Other Drug Abuse
- Children, Youth and Families
- Mental Health
- Health

Health specialization is offered only in the full-time format.

**PLAN OF INSTRUCTION FOR THE M.S.S.A. DEGREE:**

**TWO-YEAR**
The traditional full-time program is a four-semester program.

**ADVANCED STANDING**
Up to 15 hours of advanced standing may be granted to students who have completed their bachelor's degree in social work from an institution that is accredited by CSWE in the past seven years.

The Twelve-Month Advanced Standing Program is available to students with a strong academic record in their, B.S.W. program. This program follows a fall, spring, and summer pattern and is intended for the student who has clear professional goals and can manage an accelerated format of study. Students complete their degree in August.

Admission to the Twelve-Month Advanced Standing Program is open to students who have a bachelor's degree in social work (B.S.W.) from an accredited program completed within the past seven years. Grades of B or better must have been attained in all foundation social work courses.

Because of the short time frame for completing the Twelve-Month Advanced Standing Program, dual degrees, individualized curricula, and the school social work emphasis are not available in this program.

**SENIOR YEAR IN PROFESSIONAL STUDIES PROGRAM**
Undergraduate students of superior ability and achievement may be admitted to the Mandel School at the end of their junior year. This program enables qualified college seniors who are majoring in social work related fields to begin their first year of graduate study during what would normally be their last year of undergraduate work. Exceptional undergraduate students who are firmly committed to social work as a profession can earn both their undergraduate and graduate degrees in five years.

A student in the Senior Year in Professional Studies Program is permitted to substitute the first year (31 semester hours) at the Mandel School for the last year of undergraduate work. The bachelor's degree will be granted by the undergraduate college when the student has completed his or her first year at the Mandel School.

Students applying for this program must be interviewed by an admissions officer as part of the application process to explore the candidate's level of maturity, knowledge of social work, and readiness for professional education. Application for this program should be made prior to the second semester of the junior year.

To qualify for this program, students must demonstrate superior academic ability and achievement during their first three years of undergraduate study. All applicants must (a) have sufficient coursework in the social and behavioral sciences by the end of their junior year; (b) hold a cumulative grade point average of at least 3.25; have successfully completed three-quarters of the major and minor courses in there area of concentration. Acceptance into the Senior Year in Professional Studies Program is contingent upon receipt of a written statement from the dean of the applicant's undergraduate college, outlining any remaining requirements.

**Note**: This program is available to students at Case Western Reserve University, Hiram College, the College of Wooster, Baldwin Wallace College, John Carroll University and Fisk University, by joint agreement with these institutions. Interested students from other institutions are encouraged to speak with the director of admissions.

**INTENSIVE WEEKEND PROGRAM**
The school offers an opportunity for employed human service professionals to pursue a social work degree full time. Classes meet one weekend per month throughout the calendar year and students are required to attend all classes. Students complete four courses each year (six during the first year), and complete all program requirements in three years.

Courses consists of four distinct components:
- a four week preparation period that includes readings and a written assignment;
- two weekends of classes, one month apart;
- a four-week study period between class weekends, during which time additional readings and written assignments are completed;
- a final study period of approximately three weeks, during which time the final course assignment is completed and materials for the next course are received.

Note: Two four-day weekends (including Thursdays) are scheduled for January and February in the first year of the foundation program.

**PART-TIME DEGREE PROGRAM**
Students may opt to complete their degree work on a part-time basis during their first year. During the second, third, and fourth years students complete field education requirements and carry a full-time, or nearly full-time, load.
Part-time students select classes from the full-time weekday schedule. These classes meet once a week for two hours. Employed professionals may participate in this program if they can arrange a flexible work schedule.

The part-time program may be completed in three years. Students granted advanced standing may complete the program in fewer semesters. Part-time students are required to register for a minimum of six credit hours per semester. A student must complete all degree requirements in a maximum of five years.

**Special Focus and Certificate Programs**

*(available to full-time students only)*

**M.S.S.A./C.N.M. (CERTIFICATE IN NONPROFIT MANAGEMENT)**

The M.S.S.A./C.N.M. combines the Master of Science in Social Administration degree (M.S.S.A.) with the Certificate in Nonprofit Management (C.N.M.) offered by the Mandel Center for Nonprofit Organizations. It provides career preparation for students with interests in nonprofit management, social service, and the social work profession. Students may complete the C.N.M. along with one of the regular M.S.S.A. concentrations. The program consists of five Mandel Center courses as well as the Legislative and Political Processes course offered by the Mandel School. Mandel School students interested in the M.S.S.A./C.N.M. should contact their advisor or the Mandel Center for more information.

To obtain a Certificate in Nonprofit Management, students must apply directly to the Mandel Center. M.S.S.A./C.N.M. students must be admitted to each program separately and must receive both credentials simultaneously to be granted credit for specific courses taken in the other program. For more information, please contact the Mandel Center's director of recruitment at 216-368-6025 or by email at mcnoadmissions@case.edu or visit http://www.case.edu/mandelcenterr/.

**SCHOOL SOCIAL WORK**

The School Social Work program is designed to train school social workers and provide them with the competencies to practice in a variety of traditional and non-traditional primary and secondary education settings. Such competencies include assessing the needs of school children, designing and implementing interventions, and making referrals to other professionals and agencies as needed. School social workers are able to function collaboratively with other professionals and assist the school and the community in mobilizing necessary resources on behalf of children and adolescents.

The School Social Work program educates master's level social work students for practice in school settings. The program is (a) consistent with State of Ohio regulations and professional standards developed by the National Association of Social Workers, and (b) a cooperative offering between the Mandel School of Applied Social Sciences at Case Western Reserve University and the Division of Education at Baldwin-Wallace College. Students in the program complete the Master of Science in Social Administration (M.S.S.A.) degree at the Mandel School with a concentration in Children, Youth and Families. As part of the M.S.S.A. degree, students complete three education courses at Baldwin-Wallace College, a seminar on School Social Work Practice, and field practicum in an approved school social work setting. After the completion of all required field work and coursework, a student can apply to the State of Ohio to receive a license/certificate in school social work.

This program can be completed only by two-year and eighteen-month students (not twelve-month students). Intensive weekend students can also complete this program if they are able to enroll in some full-time program classes.

**LOUIS B. STOKES FELLOWSHIP PROGRAM**

This program is designed to meet the needs of educating community development professionals for the challenges of revitalizing urban neighborhoods.

**MENTAL HEALTH FELLOWS PROGRAM**

The Mandel School offers a program of study that is designed with the needs of mental health and drug and alcohol boards in mind. The Intensive Weekend Program accommodates the schedules of mental health professionals to allow them to keep their current employment while obtaining a Master of Science in Social Administration.

**DUAL DISORDERS FELLOWS PROGRAM**

This program gives employed mental health and substance abuse professionals the opportunity to enhance their education, credentials and experience by earning a master's degree while staying in their current jobs and attending classes one weekend per month. The program is also structured to provide financial support to students by forcing a partnership among the employed student, his or her employer, the local community mental health or substance abuse services board, and the Mandel School.

**International education opportunities**

Qualified students may choose to participate in number of multi-disciplinary study-tours abroad, many during spring break, which will help them to familiarize themselves with a variety of social policies of other countries, which have in the past including The Netherlands, Guatemala, China, Bangladesh and Israel, among others.

**Dual and Interdisciplinary Degree Programs**

*(available to full-time students only)*

**Dual Social Work and Law (M.S.S.A./J.D.) Program**

A dual-degree program established by the Mandel School of Applied Social Sciences and the university’s School of Law makes it possible for selected full-time students to pursue an integrated program of studies and receive the M.S.S.A. and J.D. degrees. This program allows completion of both degrees within four years rather than the normal five years. Applicants for the dual-degree program must apply to and meet the admission requirements of both professional schools.

**Dual Social Work and Master of Nonprofit Organizations (M.S.S.A./M.N.O.) Program**

This program combines the Master of Nonprofit Organizations (M.N.O.) degree with the Master of Science in Social Administration degree (M.S.S.A.). It provides career preparation for students with interests in nonprofit management, social service, and the social work profession.

Students must apply and be accepted for each degree program to qualify. Students who choose to begin their studies in the M.S.S.A. program must apply to the M.N.O. program prior to completing their first semester of M.S.S.A. courses. New students can apply to either program simultaneously or separately. Dual-degree students must receive the M.N.O. and M.S.S.A. degrees simultaneously to be granted credit for specific courses taken in the other program. For more information, please contact the Mandel Center's director of recruitment at 216-368-6025 or by email
Joint Social Work and Master's in Business Administration (M.S.S.A./M.B.A.)

The M.S.S.A./M.B.A. is designed for candidates who wish to prepare for advanced social work practice in a variety of direct practice and community and social development settings, while developing the skills to assume management responsibility within those settings. Candidates must apply separately to each program.

Joint Social Work and Master of Arts in Bioethics (M.S.S.A./M.A.)

The joint-degree program with bioethics enables students to obtain graduate preparation in bioethics, an interdisciplinary program offered in the School of Medicine, along with their social work degree.

Candidates must apply separately to the Mandel School and the Department of Bioethics of the School of Medicine. The website for the bioethics program is: http://www.case.edu/med/bioethics/masters.htm/.

Students in this joint degree program should plan on two years plus one summer of graduate study.

NON-DEGREE STUDY

Some courses may be taken on a non-degree basis with the permission of the assistant dean for academic affairs. A maximum of 12 hours earned on a non-degree basis may be counted toward requirements for the master's degree if the student is subsequently admitted as a degree candidate.

Admissions and Application Information

Admission to the master's degree program at the Mandel School of Applied Social Sciences is granted on a selective basis determined by the quality of the total application. An applicant for admission is expected to meet the following minimum requirements:

1. A bachelor's degree from an accredited college or university.
2. Evidence of capacity to succeed in graduate level social work education based on undergraduate work and any previous graduate work. Previous work must include courses in social and behavioral sciences strong enough to ensure the applicant's ability to do creditable work at the graduate level.
3. A minimum undergraduate grade-point average is 2.7. A Miller Analogies Test or Graduate Record Exam is required for applicants with less than a 2.7 grade point average. In exceptional cases, applicants who lack the required academic credentials but whose other qualifications are outstanding may be admitted on a probationary basis. Students who enter on probation may not carry more than 15 credit hours in their first semester. Probationary students must achieve at least a 3.0 grade point average in their first semester of course work (minimum of six credits) to have their probationary status removed and continue in the program. Students who enter on probation may carry no more than 13 credit hours and may not enroll in field education during their first semester.
3. Evidence of a combination of personal qualities and values that are considered essential for the professional practice of social work: strong moral character; strong analytical and verbal skills; a caring and compassionate nature; and a personal commitment to social justice, empowering individuals, and serving vulnerable and under-represented groups.
4. The school may request a personal interview or additional information about an applicant if necessary.

ADMISSION PROCEDURES

The Mandel School catalog and application materials can be secured from the Office of Student Services, Mandel School of Applied Social Sciences, Case Western Reserve University, 10900 Euclid Avenue, Cleveland, Ohio 44106-7164 or by calling 800-863-6772 or by visiting our website at http://msass.case.edu/.

Students for full-time study are admitted in the fall semester. Applications are accepted on a rolling admissions basis but the latest application date is April 15 (July 1 for Intensive Weekend), though prospective students are strongly encouraged to apply early (December/January) for admission.

Advanced Standing

Advanced standing may be granted to students who have earned a bachelor's degree in social work within the past seven years from an institution accredited by the Council on Social Work Education. Students must have earned a grade of B or better in each social work foundation course for which advanced standing credit hours are given.

Proficiency Examinations

Students without a bachelor's degree in social work may waive the foundation courses in policy, socio-behavioral theory, and research, by passing a proficiency examination. Successful completion of the exam(s) exempts the student from the requirement to complete the course(s). Elective course(s) may be substituted in order to fulfill graduation requirements. There is no fee or penalty associated with taking the proficiency exams. However, each exam may be taken only once. Exams are offered prior to the start of fall and spring semesters. Students must make reservations to take those exams with the Mandel School Admissions Office.

Transfer

Students who are transferring to the Mandel School from another accredited graduate school of social work may apply for transfer credit for up to one full year of academic work and field education. Transfer students from social work programs must submit field work evaluations, official transcripts, and course syllabi.

In addition to the above, the following are required from those transferring from other schools of social work:

An evaluation of first-year field experience performance from the dean, field education director or faculty advisor of the school.

Transfer credit (6 hour limite) may be given for related, but non-social work, coursework completed within the past five years. Credit hours must not have been applied toward a previous graduate degree. Students must have received a grade of B or better in any course for which transfer credit is sought.

International Students

Applicants from other countries follow the regular application procedure. International students must have completed available social work training in their own countries, and have had paid experience in the social welfare field prior to entering the professional degree program. International students are required...
Tuition
In the 2009-2010 academic year, tuition for the Mandel School of Applied Social Sciences in the full-time master’s degree program (12-16 credit hours) is a flat rate of $33,000, or $1100 per credit hour.

A non-refundable tuition deposit of $100 is required of all master’s degree candidates at the time of acceptance. This deposit will be applied toward tuition for the degree program. Complete information about academic policies, procedures, and financial aid is available by contacting the Office of Student Services, Mandel School.

DOCTORAL PROGRAM

Doctor of Philosophy
The purpose of the program is the preparation of scholars, teachers, and leaders to generate new knowledge on the policies and programs of social welfare and the practice of social work. Accordingly, we emphasize the creative and evaluative skills necessary for independent inquiry. The program prepares students to be knowledgeable in the following:

- Relevant areas of the social and behavioral sciences;
- Research design, statistics, and the philosophy of science;
- Theory-building and theories of social welfare; and
- Methods for the application and transmission of knowledge in the human services.

In addition to this foundation knowledge, students develop specialized expertise in policy analysis and program planning, or social work practice theory; and in one or more substantive areas of social welfare. Effort is made to provide an educational climate in which critical analysis and creative thinking flourish. The program core emphasizes philosophical and scientific approaches to theory development, the content and boundaries of theoretical social welfare, statistics, and advanced research methodologies, and the social and behavioral science foundations underpinning social welfare programs and social work practice.

The area of specialization enables the student to apply social science theory, analytical approaches, and research tools to a social problem or issue in either social welfare policy or social work practice. Students are encouraged to focus on a substantive policy or practice area during the period of specialization. This facilitates the development of a dissertation proposal. Permeating the content of the entire program is a focus on the development and transmission of knowledge as a part of an educational process.

Students with a specific career interest in teaching, regardless of their area of specialization, are encouraged to take courses in social work education, learning theories, and teaching strategies as an integral part of the educational plan. Teaching mentorships are available.

Students can pursue special interests through individual reading and tutorial courses. In addition, regular course offerings in other departments of the university are available to students. Practical experiences on faculty-conducted research projects are made available to doctoral students.

A total of 36 credit hours of course work is required, plus 18 hours of dissertation credit. A qualifying examination, given after completion of course work, determines each student’s eligibility for degree candidacy. The degree is awarded following successful completion of the dissertation.

The school reserves the right to require additional courses, which may not be credited toward the doctoral requirements, if the faculty believes the student has insufficient knowledge in core areas of the curriculum, or to assist students in their intellectual and professional development.

Formats of the Ph.D. Program
In response to the different needs and interests of potential Ph.D. students, the Mandel School offers two formats for meeting course and degree requirements. Program requirements under both formats include taking 12 courses (36 credit hours), passing a qualifying exam, and completing a dissertation.

The Alternative Program

Structures Are:

THE FULL-TIME PROGRAM
Under this format, full-time students can complete course requirements and individualized research fellowships over two academic years.

Plan of Study: Full-Time Doctoral Program
FIRST FALL SEMESTER
- SASS 608 Philosophy of Science and Theory Building (required)
- SASS 610 Theories of Human Behavior: Macro and Micro Dimensions (required)
- SASS 613 Advanced Research Design (re-
required)

FIRST SPRING SEMESTER
• SASS 609 Theories of Social Welfare and Social Justice (required)
• SASS 614 Models of Qualitative Research (required)
• SASS 615 Social Statistics and Data Analysis (required)

SECOND FALL SEMESTER
• SASS 616 Applied Regression and General Linear Model (required)
• SASS 620 Theory and Research Base of Social Work Practice or
• SASS 621 Social Work Policy (one required)
Choose one of:
• SASS 637 or 632 or course outside of MSASS

SECOND SPRING SEMESTER
• SASS 618 Measurement Issues in Quantitative Research (required)
• SASS 630 Seminar in Social Work Education (required)
Choose one of:
• SASS 635 Methodological Issues In Quantitative Research (required)
• SASS 617 Specialization Seminar (elective)
OR
• SASS 637 Independent Study
• SASS 632 or course outside of MSASS

THIRD YEAR
The qualifying exam is taken beginning of fall semester
• 3 hours of SASS 701 In Fall
• 3 hours of SASS 701 in Spring

FELLOWSHIP COURSES
• SASS 701 Dissertation (18 credit hrs required)

Students must register each semester until the dissertation is complete. SASS 701 hours are not required during the summer semester, unless the student is defending his/her dissertation.

THE PART-TIME PROGRAM
The part-time format accommodates social work professionals who must maintain their employment commitments but wish to pursue Ph.D. study through the completion of a minimum of three courses per year. Financial assistance is available to students in this program.

ADMISSION TO DOCTORAL PROGRAM
Through the School of Graduate Studies of Case Western Reserve University, the Mandel School of Applied Social Sciences offers a Ph.D. in social welfare. To be admitted to the Ph.D. program, a candidate should have a master’s degree from an accredited school of social work or a master’s degree in a related field and demonstrate a superior record in undergraduate and graduate studies. Application to the Ph.D. program will be considered from persons with master’s degrees in allied fields with the recognition that their program will include equivalency requirements related to knowledge of social welfare. The Graduate Record Examination is required for application to the Ph.D. program. Applicants should have a score of at least 1200 on the combined Verbal and Quantitative Section of the Graduate Record Examination. A minimum grade point average of 3.0 for baccalaureate and master’s degree study is expected.

Additional materials considered in reviewing applications include the completed application form and a written statement, with the non-refundable application fee; official transcripts of all previous undergraduate and graduate courses taken for credit; and letters of recommendation. In addition, students from other countries must submit results of the Test of English as a Foreign Language (TOEFL) with a desired score of 600 or its equivalent.

For application information, please visit the program website at http://msass.case.edu/doctorate/

ACADEMIC POLICIES FOR PH.D. IN SOCIAL WELFARE

Faculty Advisors
Each doctoral student is assigned a faculty advisor to assist in the planning of his or her educational experience. At the appropriate time, a dissertation advisor is appointed after consultation with the student.

Qualifying Examination
The qualifying examination for doctoral candidates is taken after completion of coursework. The exam is intended to test the student’s ability to critically analyze and integrate knowledge.

Admission to Candidacy
Students are admitted to candidacy for the Ph.D. degree upon the successful completion of the qualifying examination. To be admitted to candidacy, the candidate also must have maintained an average of 3.0 and received no more than one course grade of C or lower. To remain in the program, students must maintain a minimum of a cumulative 3.0 average and receive no more than one grade of C or lower.

Dissertation Requirements
Each candidate for the Ph.D. degree must submit a written dissertation as evidence of his or her ability to conduct independent research at an advanced level. The dissertation must present a significant contribution to knowledge in the student’s field, and at least a portion of the content must be suitable for publication in a reputable professional journal or as a book or monograph.

The dissertation prospectus must be completed and accepted within two calendar years after the student has been admitted to candidacy, and the dissertation must be completed and accepted within five calendar years after admission to candidacy. It is to the student’s advantage to make steady progress in his or her research and aim for early completion of the dissertation.

Once a student registers for SASS 701 Dissertation, he or she must continue to register each succeeding regular semester (fall and spring) until the dissertation is complete unless granted a leave of absence. The minimum requirement for the dissertation is 18 hours.

All requirements for the Ph.D. degree must be completed within a period of five consecutive calendar years after a student is admitted to candidacy, including periods of leaves of absence.

Doctoral Program Financial Aid
Financial aid is available to admitted students in the form of tuition assistance and research and training fellowships.

CONTINUING EDUCATION PROGRAM
Opportunities to increase practical knowledge and skills are offered to human services practitioners in a variety of workshops, institutes, and cosponsored events. Every effort is made to provide practitioners with information that addresses (1) current social issues and practi-
GENERAL BULLETIN 2009-2011 421

The Mandel School is approved by the State of Ohio Counselor and Social Worker and Marriage and Family Therapist Board to provide continuing professional education to social workers and counselors. Courses offered in the MSASS Continuing Education Program usually meet license renewal requirements for these and other professionals i.e., psychologists, nurses, nursing home administrators and chemical dependency counselors.

General inquiries should be sent to: Director, Continuing Education Program, Mandel School of Applied Social Sciences, Case Western Reserve University, 10900 Euclid Avenue, Cleveland, Ohio 44106-7164. Brochures describing these programs are issued regularly, and individuals are placed on a mailing list on request.

COURSE DESCRIPTIONS (SASS)

Course Descriptions

SASS 350. Seminars in Applied Social Sciences (3)
Survey of special subject areas. Topics vary in response to faculty and student interests. Small group discussion. Prerequisite depends on content.

SASS 390. Independent Study for Undergraduates (1 - 3)
Individual study in Applied Social Sciences involving specific programs of reading, research, and special projects. Requires prior approval of faculty member directing the project. Recommended preparation: 12 hours of social science courses; approval of MSASS associate dean.

SASS 391. Seminar on Community Needs and Services (3)
The course is directed towards students interested in exploring the relationship between community needs and service delivery. The course will have both a classroom and experiential community component. The goal of the course is to provide students an opportunity to experience first-hand the application of theoretical knowledge to community needs.

SASS 426. Research Methods in Social Work (3)
This course provides an overview of the basic concepts used in the conduct of scientific inquiry and the tools of research methodology. It introduces students to the issues involved in the design, implementation, analysis and utilization of social research. Students are encouraged to focus on a practice-related research problem in their individual or group research projects, as well as to focus on research issues relevant to their specialization, field of practice, or field of practicum setting. Students are alerted to the risks of cultural bias in research throughout the course through examples and scientific readings.

SASS 440. Human Development I: Child and Adolescent (3)
This course offers an overview of normal individual development throughout the life cycle. Psychosocial theory, learning theories, and social role theory constitute the theoretical base for this foundation course. Developmentally determined objectives and tasks for every life stage are examined in the context of biological, genetic, psychological, familial, and sociocultural factors. Special emphasis is placed on the impact of gender, health, and minority status, and on community institutions of human development. This course supports the foundation social work methods course by introducing substantive content on human development as a framework for assessment, prevention, and intervention with psychosocial problems. Curricularly related to the advanced sociobehavioral courses on human development and developmental dysfunction, this course provides a basic understanding of normal human development, which can serve as a contextual framework for developmental deviations from the norm.

SASS 441. Human Development II: Adult (3)
This course builds on SASS 440 Human Development I (child & adolescent) by compassing the general themes of feeling (emotion), thinking (cognition), and acting (behavior) with adult emotional, cognitive, and behavioral development. Students will understand the differences and similarities between earlier (child and adolescent) and later (adult, including older adult) emotional, cognitive, and behavioral development by examining, across the life-span, the life-span, the idea, the idea/concept of: (1) adult development as gains/losses, (2) adult development as plasticity and variation (i.e. development can take many forms and can change), (3) adult development as risks, conflicts, protective factors, and resilience and (4) adult development as context (e.g. family, society, gender culture, ethnicity, social class, discrimination, sexual orientation, and socio-historical (i.e., cohort contexts). Prereq: SASS 440.

SASS 470. Social Policy (3)
This course provides basic perspectives on social policies related to poverty, health, aging, mental health, substance abuse, and discrimination. An analytical framework is used to systematically identify, define, and analyze social problems and policies. The course also introduces the student to social planning and service delivery.

SASS 477. Direct Practice Foundation Methods Skills (3)
The goal of this course is to develop culturally competent social work generalist practitioners who are armed with the knowledge and skills necessary to practice ethically with individuals and families in diverse social work practice settings. The course introduces major social work theories (i.e., systems-ecological theory) and intervention approaches (i.e., problem-solving). Understanding and practicing the skills necessary to carry out generalist practice will be a major focus on both lectures and skills lab.

SASS 478. Macro and Policy Practice Skills (3)
This course focuses on the development and application of practice skills in work with task groups, communities, and social policy institutions. It includes both didactic and experiential teaching and learning. The course is built on first semester foundation learning, particularly in the areas of social policy, diversity, discrimination, and oppression, and the direct practice skills lab. It will also draw on knowledge taught in the second semester course on theories of groups, organizations, and communities. Finally, there will be interaction with the field seminar and the field practicum. Prereq: SASS 477.

SASS 484. Theories of Oppression and Social Justice (3)
This course provides students with a basis for developing their ability to value a diverse world and to understand how discrimination and oppression operate to limit the life opportunities of members of minority and disenfranchised groups. Students will have the opportunity to develop and enhance their personal and professional awareness of their own cultural identity and to use this as a basis for developing their competence to work with individuals and groups different from themselves. Selected theoretical perspectives
will provide a descriptive and explanatory framework for critically analyzing the manifestation of discrimination and oppression and their impact on the affected populations. Social work’s response to discrimination and oppression within the profession and in society at large will also be examined.

SASS 495. Field Education Seminar (1)
This seminar prepares students for entry into field education. The course introduces students to a number of topics that are considered basic to beginning the social work field practicum.

SASS 500. Special Topics in Applied Social Sciences (1 - 6)

SASS 505. Adoption: Practice and Policy (3)
This course covers the concepts, knowledge, skills, and policies associated with contemporary adoption practice. The practice method reflects a triad perspective, meaning that adoption is examined from the viewpoints of birth parents, adoptees, and adoptive parents. For each topic area, social work roles, activities, tasks, and skills are explored along with policy issues. Exemplars and case studies are presented for illustration purposes. Consideration of triad needs at different life cycle stages are presented. The issues of ethnically competent adoption practice are emphasized throughout the course in each content area.

SASS 510. Health Disparities (3)
This course aims to provide theoretical and application tools for students from many disciplinary backgrounds to conduct research and develop interventions to reduce health disparities. The course will be situated contextually within the historical record of the United States, reviewing social, political, economic, cultural, legal, and ethical theories related to disparities in general, with a central focus on health disparities. Several frameworks regarding health disparities will be used for investigating and discussing the empirical evidence on disparities among other subgroups (e.g., the poor, women, uninsured, disabled, and non-English speaking populations) will also be included and discussed. Students will be expected to develop a research proposal (observational, clinical, and/or intervention) rooted in their disciplinary background that will incorporate materials from the various perspectives presented throughout the course, with the objective of developing and reinforcing a more comprehensive approach to current practices within their fields. Offered as CRSP 510, EPBI 510, MPH 510, NURS 510, and SASS 510.

SASS 515. Family Caregiving (3)
The purpose of this interdisciplinary graduate-level seminar is to explore the theoretical research, policy, and practice issues related to informal caregiving of the elderly. Topics will include the historical and cultural context of family caregiving, theoretical paradigms (i.e., adult development, stress and coping), characteristics of caregivers (i.e., gender, relationship, race, ethnicity, employment status, geographical setting), characteristics of the elderly care-receiver (i.e., type of cognitive and physical impairments), ethics, physical and mental health outcomes, service delivery issues, institutionalization, and bereavement. Through readings, discussions, guest lectures, and paper presentations, students will learn about the complexities of informal caregiving of the elderly from a range of disciplinary perspectives in order to improve assessment and practice skills in a variety of settings. Students are encouraged to focus on issues relevant to their discipline, specialization, or field of practice for their seminar papers.

SASS 517. Family System Interventions (3)
This course covers the knowledge, concepts, and skills associated with working families. The practice method will reflect a family systems approach, integrating theories and approaches within a systemic perspective. It will build practice skills in assessing, interviewing, and intervening with families and emphasize a strength-based perspective on intervention with families. Considerations of family issues at different developmental stages will be presented. The issue of ethnically competent and community-based social work practice with families will be stressed throughout the course for each content area. Prereq: SASS 477 or SASS 400TR.

SASS 532. Analytic Tools for Social Community Development (3)
Students will be able to use quantitative and qualitative methods for gathering, analyzing and interpreting information that can support community and social development. Students will develop the skills to apply geographic information system (GIS) tools, community survey methods, ethnographic methods, social indicators and demographic analysis. Students will also be introduced to web tools for community organizing and development. Prereq: SASS 426 or SRCH 426 or SASS 400TR.

SASS 534. Community and Social Development Perspectives (3)
An overview of the community and social development field. This course covers the history of community and social development in the U.S. and abroad, theoretical and empirical underpinnings of this work, major approaches, institutions and public policy related to community and social development. Focus will be placed on understanding and analyzing community power, and the relationship between community and regional power structures. The history of institutional involvement in community and social development (e.g., World Bank, United Nations, Banking Industry, Intermediaries, etc.) will be traced as well as the policies that affect community and social development.

SASS 537. Medical Aspects of Disabilities (3)
The focus is on the study of children with disabilities and chronic health conditions. Related issues of development, diagnosis, treatment, and family concerns are included. Continuum of care from hospital to home considered. Involvement of the family as a member of the treatment and care team is emphasized. Context of treatment is considered from a multidisciplinary team approach.

SASS 538. Global Aging (3)
A silent revolution is taking place as we enter the 21st century. The “globe” is graying! Population aging is a worldwide phenomenon. This rapidly changing demographic environment has important implications for social policy and the quality of life. The Global Aging Course examines the historical, economic, social, and political dimensions of the aging revolution. It then focuses on cross-national comparisons of policies and programs for older persons. Finally, global issues and action identified by the United Nations International Plan of Action on Aging are discussed.

SASS 539. Early Intervention: Theories and Practice (3)
This course both describes the characteristics of young children with disabilities and examines the intervention models and practices that are used to address the developmental and social-emotional needs of these children. The course describes the legislative and philosophical foundations for contemporary early intervention practice. It discusses the meaning of evidence based practice and examines contemporary early intervention practices from this perspective. The readings and assignments for this course have been designed to reflect the course objectives.

SASS 547. Problem Identification, Screening and Assessment/Diagnosis (3)
This course will provide a bio-psycho-social approach to identification, screening, assess-
ment and diagnoses of common psychosocial problems/dysfunctions experienced clients. This course introduces the student to the etiology, recognition and diagnoses of these problems in the context of social work practice. Through use of a competency-based model, students will be introduced to techniques used to screen, assess and diagnose problems such as serious mental illness, suicidality, depression and anxiety, substance abuse, child abuse, elder abuse, and exposure trauma. Students will also become familiar with the use of the DSM IV TR in providing axis I diagnostic formulations. A skills-based approach will be used in presenting students with specific screening, assessment and diagnostic protocols. This course is designed to incorporate a range of issues associated with stages across the lifespan from childhood to late life. Prereq: SASS 477 or SASS 400 TR.

**SASS 549. Theory/Practice Approaches in Direct Practice Social Work (3)**

This required, three credit course introduces selected theories and practice approaches commonly used in social work with individuals, families and groups. The course is designed to provide students with knowledge of theoretical explanations and practice frameworks commonly used in direct social work practice. The course also encourages students to apply critical thinking skills to theory and its practical applications. Case presentations, class discussions and assignments will require students to apply various theoretical perspectives to common problems and issues in social work practice. The course will highlight the use of professional social work values and attention to human development issues, diversity and cultural perspectives as they apply in each theory or framework. Prereq: SASS 477 or SASS 400 TR.

**SASS 563. Resources for Community And Social Development (3)**

Students will be able to understand and utilize the methods to identify, garner, and effective-ly use resources that promote community and social development. These methods can be applied to expanding resources for individuals, families, communities, and society, as well as to generate resources for organizations. While primarily focusing on financial resources, the course will also consider the important means of positioning an agency or organization to attract and receive resources and collaborate with others to put those resources to their most effective use. The skills that students practice in the course will include fund raising, grant development, financing, strategic partner-

**SASS 564. Social Work Practice in Alcohol and Other Drug Abuse (3)**

SASS 564 is an advanced direct practice concentration course focused upon knowledge, skills and values important for social work practice with people who abuse and/or are dependent on alcohol and other drugs. The content of SASS 564 directly builds upon the foundation direct practice course (SASS 477) and the required advanced course in screening and assessment (SASS 576). SASS 564 takes a bio-psycho-social approach to prevention, assessment and treatment of alcohol and other drug abuse and dependency (AODA) problems. This course introduces the student to the etiology and treatment of alcohol and other drug abuse in the context of social work practice. The historical background and the development of the evidence base of alcohol and other drug treatment interventions, self-help groups, and conceptual models of addiction will be presented. Students will explore their own attitudes and values toward AODA problems and how these affect treatment outcome as well as commonly used prevention and treatment approaches in social work with people who abuse and/or are dependent upon alcohol and other drugs. The course will use case materials to illustrate similarities and differences among various populations including minority/ethnic identity groups. Prereq: SASS 477 or SASS 400 TR.

**SASS 565. Community-Based Practice with Children and Families (3)**

This course covers knowledge, concepts, and tools associated with contemporary child welfare practice. The practice method reflects a family centered or family based approach, meaning that the welfare of children cannot be considered separately from the families of which they are a part. For each topic area, major social work roles, activities, tasks and skills are explored along with problems and issues in implementation. Program exemplars and case studies are presented for illustration purposes and practical application of the skills and techniques presented. Child welfare services that promote safety, permanency, and child well-being are presented. Consideration of family needs at different developmental stages of the child and family life cycle are also presented. The issue of culturally competent community based social work practice is stressed throughout the course for each content area. While this is primarily a methods course, program delivery and policy issues are discussed as they relate to the socio-political and organizational contexts of practice. Prereq: SASS 477 or SASS 400 TR.

**SASS 567. CSD Practice I: Strategies for Assessing, Building and Organizing (3)**

This course covers the frameworks and models in community assessment, community building and community organizing with a focus on the social processes in community development in the United States and internationally. Students will participate in a comparative analysis of models and learn specific skills used in community organizations and development practice, such as strategic planning, participatory action research, consciousness raising, and direct action. Through real world experience and case studies students will develop skills in neighborhood assessment, civic engagement, empowerment, leadership development, group work, relationship building, social capital formation, conflict resolution, democratic process, social policy analysis and change, and other methods. The course will provide specific applications of these models in relation to the dynamics of diversity and social justice.

**SASS 569. CSD Practice II: Strategy for Designing and Implementing Community (3)**

Students will learn about the design and implementation of community development in the U.S. and internationally. Content will include neighborhood revitalization, affordable housing, workforce development, business development, cooperatives, micro-enterprise, and other models of development that originated internationally and have been adapted in the United States. Attention will be given to globalization and the cultural and economic context—whether in disadvantaged communities in the U.S. or in the developing world—and to the skills that foster cultural competence. Students will practice the skills necessary for mobilizing human capital, designing community and social change, revitalizing neighborhoods, promoting productive employment, and affecting social policy. Students will learn to apply these change strategies in ways that promote sustainable development and social justice in both this country and around the world. Prereq: SASS 567
SASS 574. Legal Issues in Social Work (3)
This course surveys the legal system as it affects social work, either direct service practice or in the development of human service policies and programs. Students are exposed to the basic trial court procedures and have the opportunity to develop necessary skills to testify. A paper is required in which the student analyzes and integrates the legal and social work issues on a proposed topic of interest.

SASS 575. Travel and Study Seminar (3)
This course acquaints the student with the socio-political factors that influence the development of social welfare systems in a selected country and the impact of these systems on the development of social welfare systems in a selected country and the impact of these systems on the development and functioning of individuals, families, groups, or communities. The role of the emerging social work profession in social change is explored via the social welfare system. Topics focus on the health care, mental health, aging, child, and/or educational systems and are oriented towards direct practice, management, or community development.

SASS 576. Integrative Seminar in Alcohol and Other Drug Abuse Treatment (3)
This course is an advanced level course in the Alcohol and Other Drug Abuse Specialization that provides opportunities for students to increase their knowledge of topics in the areas of assessment, diagnosis and treatment of alcohol and other drug disorders. The seminar builds upon course material in Foundation Methods (477) and in the advanced methods course (SASS 549 and SASS 564). The seminar is intended to help students understand the evidence base for the treatment of substance use disorders and to explore selected areas of social work practice in intervention in the context of that evidence. Community applications of theory and techniques are stressed. The integrative Seminar in AODA Treatment uses a seminar format and provides students the opportunity to interact with treatment professionals from various treatment and practice settings. The seminar format also facilitates individual learning: each student selects his or her own topic to pursue in depth. Each student is responsible for leading a minimum of one seminar presentation. Each student will select the topic for the seminar in consultation with the instructor. Coreq: SASS 477 and SSWM 564 or SASS 564.

SASS 580. Social Work Practice in Mental Health: Children and Adolescents (3)
This advanced methods course builds on the content from required foundation social work methods, policy and human development courses including Direct Practice Methods and Skills, Mental Health Policy and Service Delivery. This course complements the content of advanced methods courses including Social Work with People Who Have Chronic Mental Illness, Social Work in Child Abuse and Family Violence, and Interventions in Alcohol and Other Drug Abuse. This course develops biopsychosocial knowledge and intervention techniques related to professional settings specializing in child and adolescent mental health: hospitals, child guidance agencies, family service agencies, mental health centers, and residential treatment centers. Students learn to use development and clinical theory to guide interventions while, maximizing individual strengths, social work treatment centers. Students learn to use development and clinical theory to guide interventions while, maximizing individual strengths, social work values and ethics, and empowerment. Social and economic risk factors, such as poverty, discrimination, and oppression, are considered in the intervention process and in the utilization of mental health services. In addition, students learn to think critically about the myriad ways cultural diversity influences parenting, child and adolescent norms and expectations. Students utilize assessment skills, coupled with knowledge of development and clinical theory to explore clinical case studies. Prereq: SASS 440 and SASS 477 or SASS 400-TR.

SASS 581. Social Work Practice with Older Adults (3)
This course is an advanced methods course that builds on the knowledge gained in Foundation Methods. The content of SASS 581 directly builds upon the foundation direct practice course (SASS 477) and the required advanced course in screening and assessment (SASS 576). It is also a required course in the Aging Specialization for the MSSA. The course will focus on the persistent principles and emerging emphases in direct practice with older adults and their families. Students will be asked to develop a model of practice based on knowledge of this unique population, social work values, and practice concepts. The course includes special issues in assessment, strengths-base case management, and intervention approaches known to be effective with emotional disorders in older adults. Prereq: SASS 477 or SASS 400-TR.

SASS 583. Social Work Practice in Mental Health Adults (3)
This advanced methods course builds on the content from required foundation social work methods, policy, and advanced sociobehavioral theory courses including Direct Practice Methods and Skills, Mental Health Policy and Service Delivery, Advanced Child and Adolescent Development and Dysfunction, and Adult Psychopathology. This course complements the content of advanced methods courses including Social Work with People Who Have Chronic Mental Illness, Social Work in Child Abuse and Family Violence, and Interventions in Alcohol and Other Drug Abuse. This course develops biopsychosocial knowledge and intervention techniques related to professional settings specializing in child and adolescent mental health: hospitals, child guidance agencies, family service agencies, mental health centers, and residential treatment centers. Students learn to use development and clinical theory to guide interventions while, maximizing individual strengths, social work values and ethics, and empowerment. Social and economic risk factors, such as poverty, discrimination, and oppression, are considered in the intervention process and in the utilization of mental health services. In addition, students learn to think critically about the myriad ways cultural diversity influences parenting, child and adolescent norms and expectations. Students utilize assessment skills, coupled with knowledge of development and clinical theory to explore clinical case studies. Prereq: SASS 477 or SASS 400-TR.

SASS 584. Integrative Seminar in Mental Health: Children and Adolescents (3)
Integrative Seminar in Mental Health: Children and Adolescents is an advanced level course, a capstone course in the Mental Health Child and Adolescent Specialization, that provides opportunities for students to increase their knowledge of assessment, diagnosis and treatment. This course builds on the course material in SASS 580, SASS 477, SASS 549, and SASS 576. The seminar is intended to help students integrate theory and practice, especially in the context of public mental health and community-based, social service practice. The integrative Seminar in Social Work Practice with Children and Adolescents uses a seminar format facilitates individual learning and promotes a learning-to practice, reflective approach. The seminar assumes there are numerous evidenced-based models and practices and focuses student learning on the role of the professional use of self in the implementation of theory, technique, model, or intervention.

SASS 586. Ethical Issues in Social Work Practice (3)
The main focus of the seminar is to relate
ethical principles to direct practice. Through lecture, discussion, group projects, and case examples, students gain a deeper understanding of ethical issues related to confidentiality, justice, client autonomy, whistleblowing, and other areas of great importance to social work practice today.

SASS 587. Integrative Seminar in Mental Health: Adults (3)
The Integrative Seminar in Social Work Practice with Adults is an advanced level course, a capstone course in the Mental Health Adult Specialization, that provides opportunities for students to increase their knowledge of assessment, diagnosis and treatment. This course builds on course material in SASS 583, SASS 477, and SASS 576. The seminar is intended to help students integrate theory and practice, especially in the context of public mental health and community-based, social service practice. The Integrative Seminar in Social Work Practice with Adults uses a seminar format and provides students the opportunity to interact with professionals, from various treatment and practice settings. The seminar format facilitates individual learning and promotes a learning to practice, reflective approach. The seminar assumes there are numerous evidence-based models and practices and focuses student learning on the role of the professional use of self in the implementation of theory, technique, model, or intervention.

SASS 589. Social Work in Health: Chronic Illness (3)
This course is an interest-focused seminar, which consists of the instructor's didactic presentations and students' individual presentations. The instructor addresses the unique features of practice in healthcare settings within a community-based context perspective. Various social work interventions appropriate for use in healthcare are explored. Additional content focuses on developmentally determined issues for chronically ill children, adolescents, young adults, middle-aged adults, and older adults, including sensitivity to issues of diversity in practice populations. Students select one chronic illness for intensive study. The chronic illness must be an organically-based disease process, not a mental illness or an addiction. Prereq: SASS 477 or SASS 400TR.

SASS 590. Field Practice (1 - 12)
SASS 594. Independent Study Abroad (1 - 12)
(Credit as arranged.)
SASS 598. Individual Reading (1 - 12)
Special written permission needed. See MSASS registrar.

SASS 601. Field Education I (2)
The overall goal of this course is to provide graduate level social work students with field related opportunities to develop foundation level competencies in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent developing practitioners. The field instructor is based at the social service setting and provides the direct instruction of the student. The faculty advisor, who is based at the Mandel School, serves as a link between all parties, interprets the requirements and standards of the school, and participates and consults in the design of the student's learning experience. The field instructor assigns tasks to the student according to the requirements of the Mandel School and the educational and experiential level of the student. Student, field instructor, and faculty field advisor all participate in various ways in the evaluation of the student's work; the faculty advisor is responsible for assigning the grade.

SASS 602. Field Education II (3)
This course is designed to be taken by entering Advanced Standing students in the first semester of their master's program and by Foundation level social work students in the second semester of their master's program. It consists of a field practicum and participation in professional development opportunities. For students entering the program with advanced standing, there is an additional requirement of four logs and an integrative assignment, and periodic meetings with a field faculty advisor in addition to the field conference. The overall goal of this course is to provide graduate level social work students with field related opportunities to continue to develop foundation level competencies in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. The periodic meetings with the field faculty advisor are designed to provide students with an opportunity to integrate classroom and field learning. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent, developing practitioners. Students spend 336 hours in field and professional development in SASS 603. Prereq: SASS 602 or equivalent.

SASS 603. Field Education III (3)
The overall goal of this course is to provide graduate level social work students with field related opportunities to continue to develop advanced level competencies in their area of concentration in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. The periodic meetings with the field faculty advisor are designed to provide students with an opportunity to integrate classroom and field learning. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent, developing practitioners. Students spend 336 hours in field and professional development in SASS 603. Prereq: SASS 601 or SASS 400TR.

SASS 604. Field Education IV (3)
This course is designed to be taken by students in their advanced course of study. It consists of a field practicum and participation in professional development opportunities. The overall goal of this course is to provide graduate level social work students with field related opportunities to continue to develop advanced level competencies in their area of concentration in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. The periodic meetings with the field faculty advisor are designed to provide students with an opportunity to integrate classroom and field learning. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent, developing practitioners. Students spend 336 hours in field and professional development in SASS 604. Prereq: SASS 603 or equivalent.

SASS 608. Philosophy of Science and Theory Building (3)
This is a required foundation course. The nature of theory is examined. Inductive and deductive methods for knowledge building are reviewed. Course content draws from philoso-
phy of science as well as empirical and phenomenological research.

SASS 609. Theories of Social Welfare and Social Justice (3)
This is a foundation course required for all students. Theories of social welfare and social justice are examined. Course content draws from moral philosophy, economics, political science, cultural anthropology, sociology, history, psychology, and social welfare theory and provides students with a broad orientation to the field of theoretical social welfare.

SASS 610. Theories of Human Behavior: Macro and Micro Dimensions (3)
This course deals with labeling, socialization, ecological, structural-functional, and conflict theories as macro-level theories. This course ends with a review of cultural, social reproduction, and postmodern orientations.

SASS 613. Advanced Research Design (3)
This foundation course in research methods is required of all students. It is a prerequisite to the quantitative and qualitative courses. Research designs and methods relevant to social welfare planning, policy development, practice and administration are examined.

SASS 614. Models of Qualitative Research (3)
This required course introduces the social scientific paradigms for qualitative research and then explores varying qualitative research models, including ethnography, grounded theory and life history methods. Prereq: SASS 608, SASS 613, and SASS 618.

SASS 615. Social Statistics and Data Analysis (3)
This foundation course (or its equivalent) is required of all students. Content includes univariate, bivariate and inferential statistics, and the use of electronic data processing technology to manage and analyze data. Prereq: SASS 613.

SASS 616. Applied Regression and the General Linear Model (3)
This is the second required course in the research methods sequence for MSASS doctoral students. At the end of this course, students will be able to apply ordinary least squares regression and logistic regression in the analysis of social science data. They will learn to formulate research questions and hypotheses, specify statistical models, carry out the appropriate analyses, interpret their findings, and communicate their results clearly and effectively. Prereq: SASS 615 or equivalent approved by instructor.

SASS 617. Specialization Seminar (3)
This course focuses on problem definitions and research issues related to specialized populations, fields of service and practice roles. The issues selected as the focus are based on faculty and student interests. Prereq: SASS 614 or SASS 618.

SASS 618. Measurement Issues in Quantitative Research (3)
This course covers the operationalization of social science concepts and development of methods for their measurement. Issues covered include index and scale construction, validity, reliability, questionnaire design, factor analysis, measurement error, and missing data. Prereq: SASS 615 and SASS 616.

SASS 620. Theory and Research Base of Social Work Practice (3)
This course provides a critical overview of the major theories and the body of research informing contemporary social work practice. Theories will include the foundational, such as psychodynamic, ego-psychological, ecological and systems, along with trans-theoretical and post-modern theories. The course will integrate a discussion of the history of scientific inquiry in social work, particularly focusing on practice or intervention studies, systematic reviews and meta-analyses. Criteria for evaluating individual studies and the evidence base in specific practice areas will be included, along with material on the current state of Evidence-Based Practice. Recommended preparation: SASS 610.

SASS 621. Social Welfare Policy (3)
This course focuses on the critical review and application of policy analysis frameworks related to social welfare policy. The conceptual, historical, ideological, and political foundations contributing to the development, formulation, implementation, and monitoring and evaluation of social welfare policies will be critiqued. Social welfare policies intended to ameliorate social ills (e.g., poverty, education, housing) will be analyzed using policy analysis frameworks in a critical and comparative fashion. Policy alternatives to respond to current and future social problems will be critically discussed for feasibility, viability and economic effects. Recommended preparation: SASS 610.

SASS 630. Seminar on Social Work Education (3)
This seminar examines the structure and content of social work education within the context of higher education in American society. Emphasis is placed on curriculum design and course development. The course also is designed to help students develop a strategic approach to teaching based on learning theory. Finally, attention is given to current issues and future directions for social work education.

SASS 632. Research Project (3)
This course provides students with the opportunity to work with specific faculty engaged in research studies either on an individual or group basis. Prereq: 614 and SASS 615.

SASS 635. Methodological Issues in Qualitative Research (3)
This course builds on SASS 614, Models of Qualitative Research. It focuses on the application of specific qualitative data-collection methods, data-analytic approaches, and strategies for representing findings from qualitative investigations. Prereq: SASS 614.

SASS 637. Individual Reading (1 - 18)
This is an individual reading course permitting students to select areas of interest and pursue these interests with specific faculty.

SASS 701. Dissertation Ph.D. (1 - 18)
This course is intended for students who have passed the qualifying examination and are actively working on their dissertation. Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

COURSE DESCRIPTIONS (SPPP)

SPPP 500. Special Topics in Social Work Policy (3)
This seminar course is intended for students who are interested in exploring advanced topics in social policy.

SPPP 502. Alcohol and Other Drug Abuse Policy and Service Delivery (3)
This course explores selected current alcohol and other drug abuse (AODA) problems using a problem analysis framework. Emphasis is placed on current and past AODA problem definitions as they affect policy and program development. Conceptualization of the problems resulting from AODA patterns of use and abuse, causation theories, the impact of cultural and social diversity as well as discrimination upon all client systems, and the role of local and national institutions which advocate for this population group are reviewed. Prereq: SASS 470 or SASS 400TR.

SPPP 510. Mental Health Policy and Service Delivery (3)
This course is designed for students preparing for careers as social workers in the mental health field with an understanding of mental health policy and service delivery at the federal, state, and local levels. Through readings,
lectures, discussion, and written assignments, the course will aid students in developing a macro-level perspective of mental health policies and programs. Prereq: SASS 470 or SASS 400TR.

SPPP 511. Issues in Health Policy and Service Delivery (3)
This course examines health care policy issues and options, and highlights the development of health care policy in the U.S., the influence of health policy development, and the role of social work. It also examines the problems, policy, and program issues in the subsidy, financing, reorganization, and regulatory capacity of health policy. National, state, and local issues will be stressed. The course is for students in the health concentration but also welcomes students from other areas. Prereq: SASS 470 or SASS 400TR.

SPPP 512. Legislative and Political Process (3)
This course focuses on how to deal effectively with legislators, their staff, and legislative systems. The roles of money and information in legislative and political systems are examined. The process through which a bill moves to become law is explored, including critical points of intervention in that process. Lobbying legislators, including presentation of testimony and use of coalitions, is featured. Prereq: SASS 470 or SASS 400TR.

SPPP 513. Aging Policy and Service Delivery (3)
This course reviews current income, health, and social service policies for older Americans. It also investigates patterns and levels of care for the elderly. Trends and issues in policies and programs for seniors are analyzed in the context of the dimensions and differential characteristics of the aging population in the country. Some cross-national comparisons of services for the elderly are included in this analysis. Prereq: SASS 470 or SASS 400TR.

SPPP 520. Homelessness Policy and Service Delivery (3)
This course provides an understanding of homelessness and its incidence and prevalence, its origins, both historical and social, its consequences, and policy-based strategies for its prevention. The course investigates the impact of homelessness on single individuals, families with children, minorities, and vulnerable populations such as the mentally ill and alcoholics. Students, organized into a task force, examine a range of professional and community-based responses to the problem. The task force method enables students to assess the effects of public policy on homeless people, critique the effectiveness and adequacy of local shelter and service programs, and propose community-based strategies to prevent, stop, and better homelessness. Prereq: SASS 470 or SASS 400TR.

SPPP 525. AIDS Seminar (3)
This course is designed to provide an understanding of HIV/AIDS. The nature and prevalence of the disease, including its impact upon vulnerable populations such as children and youth, women, gay and lesbian populations, people of color, prisoners, IV drug users, and street people are examined. The course focuses on public policies, programs, and service delivery for HIV/AIDS at local, state, and national levels. Topics include the policy-making role of advocacy groups, the function of AIDS service organizations, and the design of educational and preventive programs. Prereq: SASS 470 or SASS 400TR.

SPPP 529. Child and Family Policy and Service Delivery (3)
This course focuses on major federal legislation impacting children, youth, and families, examined in the context of community based social work policy/practice. It builds upon the foundation course in social welfare policy and enables students to use an advocacy approach to provide policy-informed services and to participate in policy and implementation and change. Prereq: SASS 470 or SASS 400TR.

COURSE DESCRIPTIONS (SRCH)

SRCH 530. Practice Evaluation (3)
This advanced course prepares direct practice students to examine their own practice with individuals, families, and groups. Attention is given to basic principles of measurement and selection of appropriate measurement instruments for use in direct practice settings. The course is intended to provide students with the technical skills necessary to investigate the components of social work practice and contribute to an empirically validated social work knowledge base. The student is asked to determine the efficacy of his/her practice intervention in field placement by using a suitable design and method. A hands-on project is required using clinical experience from field practice. Prereq: SASS 426 and SRCH 426 or SASS 400-TR.

SRCH 536. Individual Research Practicum (3)
With instructor and research sequence chair approval, an individual program of supervised research experience may be undertaken. This course allows the student to tailor a program of applied research to a specific practice issue or program. Prereq: SASS 426.

COURSE DESCRIPTIONS (SSBT)

SSBT 500. Special Topics in Sociobehavioral Theory (1-3)
This seminar is intended for students who are interested in exploring advanced topics of current interest in sociobehavioral theory.

SSBT 502. Infant and Toddler Development (3)
In this course, students will focus on that segment of the human life span called infancy and toddlerhood, a period of development from conception to age three years. Students will be introduced to the major theories of development and will integrate theory and research as they relate to children’s physical and motor development, perception, intelligence, language and communication development, and social and emotional development. The impact of the family and sociocultural contexts that affect development will be discussed. Discussion, case studies, and observations will be used to facilitate learning. Prereq: SASS 440 or SASS 400TR.

SSBT 527. The Theory and Practice of Leadership (3)
This course assists students preparing for management and leadership roles in social service organizations to understand theories of leadership and translate them into effective leadership practices. The class explores leadership definitions, tasks and responsibilities, and the development of leadership capabilities. Students also examine their personal values, beliefs, skills, and understanding of ethical principles underlying leadership. Prereq: SASS 440 or SASS 400TR.

SSBT 535. Human Sexuality (3)
The course addresses sexuality as an integral part of human functioning and human relationships throughout the life cycle. The formation of sexual identity is addressed, including gender identity, sexual orientation, and sexual intention. The physiological and psychological aspects of sexual behavior are covered, including the effects of aging, chronic illness, and sexually transmitted diseases. The course concludes with practical applications for social work, including an overview of assessment and treatment of sexual dysfunction. Prereq: SASS 440 or SASS 400TR.

SSBT 546. Welfare Reform and Poverty (3)
This course identifies and critically analyzes major theories of urban poverty and their implications for social policy in contemporary American society. Economic, sociocultural, cultural, and integrative theories of poverty
are examined. Case studies of poverty theories for social policy and the elimination of poverty are addressed. Prereq: SASS 440 or SASS 400TR.

SSBT 555. Women’s Issues (3)
This course examines theories that are relevant to the development and socialization of women, and discusses issues that are relevant to women’s lives within the context of oppression based on sexism, racism, ageism, homophobia, and other forms of discrimination. Emphasis is placed on assisting students in becoming more aware of the issues that are specifically relevant to their own development and socialization, and preparing for effective and sensitive professional practice by increasing knowledge about the issues facing women. Prereq: SASS 440 or SASS 400TR.

**COURSE DESCRIPTIONS (SSWM)**

**SSWM 500. Special Topics in Social Work Methods (1 - 3)**
This seminar course is intended for students who are interested in exploring advanced topics of current interest in methods. Prereq: SSWM 400 or SASS 477 or SASS 400TR.

**SSWM 518. Death and Dying (3)**
This course focuses on the concept of death and related topics from a social work perspective. Such topics include the role of death in American culture; the dying process and its institutions; assessment and intervention strategies; life span and family life considerations; and end-of-life decisions. The course provides both theoretical and experiential exposure to the dying process as it relates to self, the dying person, and the bereaved. Students will gain insight into serving the terminally ill, those who need assistance with mourning and grief, and clients dealing with difficult life-and-death decisions regarding loved ones. Prereq: SASS 477 or SASS 400TR.

**SSWM 519. School Social Work Seminar (3)**
This course prepares students to be certified school social workers. The course addresses major issues in American schools; a theoretical framework for school social work services; design, delivery, and evaluation of school social work services; legal and ethical issues; and the roles and intervention strategies of school social workers. It covers student and family problems and areas of need such as disability, truancy, divorce, teen pregnancy, youth depression and suicide, substance abuse, violence, and dropping out of school. This course is required for those participating in a planned program of study leading to state certification as a school social worker. If space permits, other students may enroll if they have or have had school social work experience. Prereq: SASS 477 or SASS 400TR.

**SSWM 530. Managing Organizational Change (3)**
This course provides a conceptual and practical understanding of planned change in human service organizations considering both organizational resources and achieving outcomes for clients. Skills and strategies for identifying needs for change, preparing and managing a change process, and institutionalizing change are critically examined. Prereq: SSWM 400 and SASS 400TR.

**SSWM 531. Strategic Alliances (3)**
This course provides organizational leaders with the concepts and practices critical to the development of interorganizational alliances, from affiliations to mergers and consolidations. Various strategies are examined and existing community-based national and international linkages are explored. Prereq: SASS 477 and SASS 478 and SASS 400TR.

**SSWM 541. Attracting Government, Foundation, and Corporate Support (3)**
This course reviews the trends, types of support available, sources of information, processes for accessing, criteria for decision-making, and the “politics” of grant, contract, in-kind, or other support. Preparation of winning proposals constitutes a special focus. Nonprofit organizations’ accountability, stewardship, and recognition responsibilities or activities are explored. Prereq: SASS 477 or SASS 400TR.

**SSWM 544. Budgeting and Financial Management in Social Service Organizations (3)**
Social service managers must be both responsible and accountable for the management of resources that enhance the provision of effective and efficient services to clients. In this course, students obtain an understanding of the skills, tools, and strategies needed to plan for the financial stability of their organizations. Students use a critical thinking perspective to examine budgetary and financial choices. They are able to understand the impact of power and politics in budget and financial processes. In addition, they are able to recognize ethical dilemmas that are often inherent in financial decision-making. Students demonstrate their understanding of program budgeting, financial reporting, and monitoring as well as other resource management concerns that affect human service managers and organizations. Prereq: SASS 477 or SASS 400TR.

**SSWM 546. International Social Work (3)**
This is an advanced seminar designed for students interested in the international dimensions of the social work profession and social work practice. The seminar focuses on commonalities and differences in the roles and functions of social workers in different nations. It also gives attention to social work as a global profession and social work practice on an international level. Prereq: SASS 477 or SASS 400TR.

**SSWM 563. Social Work Intervent in Co-occurring Mental and Substance Abuse Disorder (3)**
This advanced methods course provides a basic orientation to substance use disorders in persons with mental illness (SAMI). A biopsychosocial framework will be used to explore the etiology, the maintenance and the recovery of both mental and substance use disorders. The historical background of practitioner, programmatic, and institutional barriers that impede the development and application of clinical skills to dually diagnosed individuals will be explored. Emphasis will be placed on strategies for the implementation of services to deal with individuals with co-occurring problems and their families using the evidence-based New Hampshire-Dartmouth Psychiatric Research Center Integrated Treatment (IT) Model. Current assessment techniques and treatment of special populations including, but not limited to: women, minorities, and adolescents will be discussed. Prereq: SASS 477 or SASS 400TR.

**SSWM 573. Home-Based Family Interventions (3)**
This course provides students with an in-depth, comprehensive understanding of family preservation services and practice. Home-Based Family Interventions encompasses the values, attitudes, beliefs, knowledge base, and skills necessary for the beginning home-based worker. The course reviews the theories that guide family-centered services, examines models of family preservation services across various service systems, reviews current research on home-based services, and teaches skills or competencies necessary for home-based family work. A variety of teaching methods is used to learn, observe, and practice new skills. Prereq: SASS 477 or SASS 400TR.

**SSWM 575. Social Work with Persons with Serious Mental Illness (3)**
This course focuses on people who have severe mental illnesses. Students learn primary and tertiary community-based treatment and
rehabilitative approaches, services, and programs. In helping people achieve recovery, students learn the theory and practice skills that underscore the four major approaches to community-based service delivery: the assertive case management model; strengths case management model, psychosocial rehabilitation model, and the recovery model. Within each model, specific attention is placed on practice similarities and differences, especially interviewing assessment, and intervention. Within these practice skills, students learn how to identify social justice and empowerment values that are supported or undermined. Advocacy is highlighted as a central social work value and practice skill that cuts across community-based practice models. Finally, lectures, readings, and discussions examine how gender, ethnicity, and social class produce various experiences of mental illness and various social work interventions. Prereq: SASS 477 or SASS 400TR.

SSWM 579. Cognitive Behavioral Interventions (3)
This course acquaints students with the theoretical, conceptual, and skill bases of several cognitive-behavioral approaches to practice. Topics include assessment, use of tasks and homework, coping skills, cognitive restructuring, and problem solving approaches to practice. The course draws upon students’ field and work experiences to illustrate the application of the concepts and skills under discussion. Prereq: SASS 477 or SASS 400TR

SSWM 582. Social Work in Child Abuse and Family Violence (3)
This course addresses the etiology, investigation, and treatment of child abuse including sexual abuse and the roles of child welfare, health, and mental health agencies. Particular attention is given to direct work with children and adults who have experienced abuse, and to interventions in instances of family violence. Prereq: SASS 440 and SASS 477 or SASS 400TR.

SSWM 584. Social Work with Couples (3)
This course provides an overview of assessment and intervention methods for working with couples around issues of marriage, divorce, and remarriage. Alternate couple forms are discussed. The course emphasizes systems and social learning approaches, communication and negotiation in problem solving and its relevance to assessment, treatment structure, and techniques. Special attention will be given to problem areas such as commitment, sexual dysfunction, chemical dependency, and destructive communication patterns. Prereq: SASS 477 or SASS 400TR.

SSWM 585. Social Work with Groups (3)
A theoretical formulation of the social group work method as a problem solving process is addressed. Exercises are presented in the use of diagnostic skills to determine individual needs and problems for which groups may be helpful, the worker’s role in facilitating group functioning through his/her use of various program media. Attention is given to the significance of goals, agency environment, and policy for direct work with groups. Prereq: SASS 477 or SASS 400TR.

SSWM 586. Race and Class: Implications for Social Work Practice (3)
This course provides students with the opportunity to integrate concentration content within a perspective focusing on social work practice within the context of race and class. Specific attention will be focused on the development of a practice model that takes into account the impact of race and class on social functioning. Students will explore the effects of race and class on critical life areas such as education, housing, access to health care services, and the involvement with the justice system. Prereq: SASS 477 or SASS 400TR.
The School of Dental Medicine is a professional school offering a curriculum leading to the Doctor of Dental Medicine degree (D.M.D.). Advanced education programs in the dental specialties are also available. In conjunction with the School of Medicine, the School of Dental Medicine offers a combined D.M.D./J.M.D. program. The School of Dental Medicine also offers a program of continuing education courses in conjunction with the Greater Cleveland Dental Society for dental practitioners and auxiliaries including dental laboratory technicians.

The School of Dental Medicine was organized June 21, 1892, as the Dental Department of Western Reserve University. For the first 25 years of its existence, the school was located in downtown Cleveland. In 1917, the School of Dental Medicine became an integral part of the university and now occupies a building adjacent to the School of Medicine and the School of Nursing University Hospitals of Cleveland. In 2003 the name of the school officially changed from the School of Dental Surgery to the School of Dental Medicine and the degree offered changed from Doctor of Dental Surgery to Doctor of Dental Medicine.

The School of Dental Medicine is an institutional member of the American Dental Education Association and all of the programs of the School of Dental Medicine are accredited by the Commission of Dental Accreditation. Since its organization, it has conferred degrees on approximately 4,900 graduates.

SCHOOL OF DENTAL MEDICINE

Assistant Professor of Comprehensive Care
Stanley A. Hirsch, D.D.S. (Case Western Reserve University), M.S. (Indiana University)
Associate Professor of Oral Pathology and Acting Chair
T. Roma Jasinevicius, D.D.S. (Case Western Reserve University), M.Ed. (Cleveland State University)
Associate Professor of Comprehensive Care
Ge Jin, Ph.D. (Case Western Reserve University) Assistant Professor of Biological Sciences
Jefferson J. Jones, D.D.S. (University of Pittsburgh) Associate Professor of Endodontics and Chair
Richard J. Jurevic, D.D.S. (The Ohio State University) M.S.D., Ph.D. (University of Washington) Assistant Professor of Biological Sciences
Zinaida Kaleinikova, D.D.S. (Kaunas Medical University, Lithuania) Assistant Professor of Comprehensive Care
James A. Lalumandier, D.D.S. (Georgetown University), M.P.H. (University of North Carolina) Assistant Professor of Community Dentistry and Chair
Michael A. Landers, D.D.S. (Case Western Reserve University) Associate Professor of Oral Diagnosis and Radiology
Charles J. Love, D.D.S. (Case Western Reserve University) Associate Professor of Comprehensive Care
André K. Mickel, D.D.S., M.S.D. (Case Western Reserve University) Associate Professor of Endodontics
Sena Narendran, B.D.S. (University of Ceylon, Sri Lanka), M.S. (University of London, England) Associate Professor of Community Dentistry
Suchitra S. Nelson, Ph.D. (Case Western Reserve University) Associate Professor of Community Dentistry
Milton Ntragatakis, D.D.S., M.S.D. (Case Western Reserve University) Assistant Professor of Pediatric Dentistry
Ronald L. Occhionero, D.D.S. (Case Western Reserve University) Professor of Comprehensive Care; Associate Professor of Oral Surgery
Dean for Administration
Juan Martin Palomo, D.D.S. (Ponta Grossa State University, Brazil), M.S.D. (Case Western Reserve University) Associate Professor of Orthodontics
Leena Palomo, D.D.S., M.S.D. (Case Western Reserve University) Associate Professor of Periodontics
Jin-Ho Phark, D.D.S. (Humboldt University, Berlin) Assistant Professor of Comprehensive Care
Marsha A. Pyle, D.D.S. (Case Western Reserve University), M.Ed. (Case Western Reserve University) Professor of Oral Diagnosis and Radiology; Vice Dean
Faisal A. Quereshy, D.D.S. (State University of New York), M.D. (Case Western Reserve University) Assistant Professor of Oral and Maxillofacial Surgery
Avishai Sadan, D.M.D. (Hebrew University, Jerusalem, Israel) Associate Dean for Clinical Education; Professor of Comprehensive Care and Chair
Danny Sawyer, D.D.S., Ph.D. (Medical College of Virginia) Professor of Oral Diagnosis and Radiology and Chair of the Department
Benjamin L. Schechter, D.D.S. (Case Western Reserve University) Assistant Professor of Comprehensive Care
Narayan Sreenivasan, B.D.S. (Tamil Nadu Medical University, India), M.D.S. (University of Hong Kong) Associate Professor of Oral and Maxillofacial Surgery
Robert C. Skillcorn, B.A., D.D.S. (Ohio State University) Associate Professor of Periodontics
Sorin T. Teich, D.M.D. (Hebrew University, Israel) M.B.A. (Northwestern University-Chicago/ Tel Aviv University-Israel) Associate Professor of Comprehensive Care
Manish Valiathan, B.D.S. (College of Dental Surgery, Manipal, India), M.S.D. (Case Western Reserve University) Assistant Professor of Orthodontics
Fabiana Varjao, D.D.S., Ph.D. (Sao Palo University, Brazil) Senior Instructor of Comprehensive Care
Lance Vernon, D.M.D., M.P.H. (University of Pittsburgh) Senior Instructor of Biological Sciences
Kristin A. Victoroff, D.D.S. (Dalhousie University) Ph.D. (Case Western Reserve University) Assistant Professor of Community Dentistry
Russell Wang, D.D.S. (University of Toronto) M.S.D. (Indiana University) Associate Professor of Comprehensive Care
Aaron Weinberg, D.M.D., Ph.D. (The Hebrew University, Israel) Professor of Biological Sciences and Chair
Kristin A. Williams, D.D.S., M.P.H. (Case Western Reserve University) Assistant Professor of Community Dentistry
Stephen Wotman, D.D.S. (University of Pennsylvania) Professor of Community Dentistry

FACILITIES

Physical Resources
The entire Health Sciences Center has been designed so that students can travel from the School of Dental Medicine to the School of Medicine, the School of Nursing, the Health Sciences Library, the Health Sciences Dining Room, and any component of University Hospitals without having to go outside.

The dental school building was designed to provide a modern teaching facility. The Multimedia Laboratories are designed and equipped so that the basic sciences (except for anatomy), technique and simulated clinical experience can be carried on by the student in his or her individual area. The 50,000 square foot dental clinic floor consists of two major clinical areas and five specialty clinics. The major clinics are made up of individual cubicles, fully equipped as private operatories. Each student clinician is assigned to one of the individual operatories for the academic year.

Drawing from a local population of more than one million, the clinics provide a broad spectrum of care to the population, affording the student substantial clinical experience. The school cooperates with various organizations of the city in caring for their clients, an arrangement that provides additional clinical experience for students.

LIBRARIES
The Cleveland Health Sciences Library (CHSL) was formed in 1966 by an agreement
between the Cleveland Medical Library Association (CMLA) and Western Reserve University. CHSL operates in two locations: the Allen Memorial Medical Library and the Health Center Library (HCL). The total collection currently numbers 380,000 volumes. More than 1,700 journals are received.

The Allen collection, strongly clinical, serves private and institutional members of the Cleveland Medical Library Association as well as faculty and students of Case Western Reserve University.

The Health Center Library collection of basic science materials is primarily for faculty and students of the schools of dental medicine, medicine, and nursing and the department of biology.

The Dittrick Museum of Medical History, located on the third floor of the Allen Library, contains nearly 20,000 objects related to the history of medicine, dentistry, and pharmacy, with special emphasis on Cleveland and the Western Reserve. The museum also contains a medical archives collection and a rare book room.

Reference staff in both libraries help instruct patrons in the use of the library and its bibliographic resources. Items not available on campus may be obtained through interlibrary loan. Other services provided are quick telephone reference, citation verification, computerized or manual bibliographic searches, and access to the internet. The library staff can provide online searching of more than 100 databases.

HOSPITAL AFFILIATIONS

The School of Dental Medicine has working relationships with many hospitals and health clinics in the Greater Cleveland community. Students have the opportunity to function as dentists and observe hospital routine and operating room techniques in these hospitals. Many members of the faculty hold staff appointments in these extramural health facilities.

University Hospitals is a 974-bed tertiary care facility located across the street from the School of Dental Medicine. Graduate departments in oral and maxillofacial surgery and pediatric dentistry are based at this facility. A variety of educational and research opportunities exist in relation to this affiliation.

The Veterans Administration Medical Center is a modern 780-bed hospital in the University Circle area. The hospital provides dental services for both outpatient and inpatient veterans.

THE FREE CLINIC

The Free Medical Clinic of Greater Cleveland, at 12201 Euclid Avenue, is a nonprofit community service organization that presently offers medical, dental, podiatric, and legal services, as well as family planning and psychological counseling programs for adults and children; provides a patient advocacy program and speakers for community education and training at other health agencies; and operates a hotline seven evenings a week.

Dental students participate in clinical care at this site during clinical rotations and additionally may volunteer their services to any of the programs at the clinic.

THE PROFESSION OF DENTISTRY

The mission of dentistry is the protection and improvement of the health of individuals and society with a concentration on oral health. Professional activities encompass a wide variety of endeavors including the clinical care of individuals, the prevention of disease, the discovery of new knowledge, and the development of procedures and policies that protect and improve health, especially for those populations at risk for disease.

Because oral health is an important concern of society, the role of the dentist continues to be essential and rewarding. Men and women who are interested in scientific studies directly related to the welfare of people should find a strong appeal in dentistry as a life work. It offers an unusual opportunity for public service, community respect, and the use of originality, compassion, and substantial skill and independent judgment on a daily basis.

CONTINUING EDUCATION

The School of Dental Medicine, in conjunction with the Greater Cleveland Dental Society, offers a program of continuing dental education to practicing dentists and auxiliary personnel.

Guest lecturers, including faculty, who have distinguished themselves in one of the many specialty areas of dentistry present courses on an annual basis.

The continuing education courses encompass the expanding horizons of dentistry, covering such subjects as endosseous implants, periodontics, oral medicine, endodontics, dental materials, esthetic dentistry, restorative and prosthetic dentistry, occlusion, practice management, and orthodontics, as well as expanded functions for dental auxiliaries.

These courses are designed to keep the practitioner abreast of current procedures and enrich the participant’s knowledge of the newest and most accepted advances in all subjects of dentistry. Courses may include subject matter of an experimental and/or controversial nature. This material is offered to the profession for educational and informational purposes in a spirit of academic freedom. Participants are given the opportunity to weigh the validity and usefulness of this material according to their own professional experience and judgment.

Case Western Reserve School of Dental Medicine continuing education courses are eligible to fulfill verifiable requirements of some states and of the American Dental Association (ADA). Categories and credits are available on request.

DENTAL EDUCATION PROGRAM

The students who enter the School of Dental Medicine are very carefully selected and already have had many opportunities for intellectual and social development. The years in dental school should permit the continued maturation of the individual and should emphasize the basic knowledge and skills which are common to all dentists. Graduates should continue their dental education during their professional careers and add to the basic concepts taught in dental school by studying the scientific literature and by attending continuing education courses. While in dental school, the student develops an attitude of professionalism and a sense of responsibility toward the patient’s welfare, which will provide optimal dental care.

The Committee on Dental Education studies, reviews, and evaluates the school’s educational goals and objectives, subject matter, grading systems, and clinical and laboratory experiences.
for fellowship credit through the Academy of General Dentistry (AGD). The Case Western Reserve University School of Dental Medicine continuing education program is an ADA-recognized provider (Continuing Education Recognition Program.)

License to Practice Dentistry in Ohio
Currently the license to practice dentistry is granted by the Ohio State Dental Board after successful completion of appropriate examinations.

The candidate must be 21 years of age, show evidence of good moral character, and affirm that he or she understands the Ohio Dental Law.

Specific information about licensure in Ohio and other states should be obtained from the individual state boards of dentistry.

Admission

Admission to the D.M.D. Program
The Case Western Reserve University School of Dental Medicine is a participant in the American Association of Dental Schools Application Service (AADSAS). The online application is available from AADSAS (www.aeda.org) in mid-May and should be submitted as soon as possible after that date to ensure consideration for the primary class by the Admissions Committee. Early applications are strongly encouraged and given priority in the rolling admissions process. To increase the likelihood of receiving primary class consideration, complete application materials should be received in our offices by October 1. The deadline to apply is January 1.

Completed applications must include an application fee and an official copy of the Dental Admissions Test (DAT) score report sent directly to the school. Official transcripts from all post-secondary educational institutions attended and letters of recommendations should be submitted directly to AADSAS. When the application is complete, it will be reviewed by the Admissions Committee. If additional material is required, it will be requested after review of the application. The committee reviews applications continuously throughout the year.

Dental Admissions Test
All applicants are required to take the Dental Admissions Test (DAT). The Dental Admissions Test (DAT) is conducted by the American Dental Association (ADA). The test is administered on computer at Prometric Testing Centers year-round. The testing program is designed to measure general academic ability, comprehension of scientific information, and perceptual ability. Information and registration is available on the ADA's website at www.ada.org.

Letters of Recommendation
The applicant should arrange to have letters of recommendation sent to AADSAS at the time the application is submitted. These should be from the Pre-Dental Advisory Committee at the applicant's undergraduate institution. If no Pre-Dental Advisory Committee exists, letters from two instructors in the basic sciences are acceptable.

Personal Interviews
A personal interview at the School of Dental Medicine, by invitation of the Admissions Committee, is necessary prior to acceptance. The interview will tour the school, receive information about financial aid, and have an opportunity to talk with faculty and students. During the interview, the committee looks for evidence of such personal qualities as integrity, motivation, and maturity. The committee also expects applicants to have been exposed to the delivery of dental care either as participants or observers.

The Admissions Committee begins conducting formal interviews in August for entrance into the School of Dental Medicine the following July or August.

Academic Requirements
Matriculation at the School of Dental Medicine requires a minimum of 60 semester hours, or the equivalent, of collegiate courses, exclusive of physical education and military training. All requirements must be completed before enrollment. Applicants are strongly encouraged to earn their baccalaureate degree prior to enrollment in dental school.

The prerequisite course work includes a minimum of 12 semester hours of chemistry, of which 6 semester hours must be in organic chemistry; 6 semester hours of biology; 6 semester hours of physics, and 6 semester hours of English. The science courses must include laboratory instruction.

Primary consideration is given to applicants with a superior grade point average in both overall course work and prerequisite pre-dental courses. Students likely to be given first priority are those who have achieved superior grades in the basic sciences and who have taken an adequate sampling of courses in the social sciences and humanities to give them a broad background. Candidates who majored in non-science fields are given equal consideration with those who majored in the basic sciences.

Pre-dental electives suggested by the Admissions Committee include comparative anatomy, cell biology, genetics, biochemistry, microbiology and physiology. These courses are helpful in providing a foundation for the basic science courses to be taken in dental school.

Notification of Acceptance and Deposit
The American Dental Education Association stipulates that applicants not be advised of acceptance prior to December 1 of the year preceding enrollment. Acceptance is provisional and contingent on the applicant maintaining an acceptable level of achievement throughout the remainder of the college program. Upon notification of acceptance, the applicant is required to make a deposit of $1,000, which is applied to tuition costs. This deposit is non-refundable and nontransferable.

Advanced Standing
A graduate of a foreign dental school may be considered for advanced standing at the School of Dental Medicine. Applications for advanced standing are accepted beginning on August 1 of each year; those completed by November 1 are reviewed by the Admissions Committee. The committee may not accept applicants each year, depending on space availability.

In addition to the completed application form and $55 application fee, the applicant must submit all undergraduate and dental school transcripts, Part 1 National Board scores and a letter of recommendation from the dean or faculty of the school attended stating that the student was graduated and at what rank. In order to apply candidates must have earned a minimum of 85 or better on Part 1.

If the committee decides that the candidate is competitive, the applicant will be required to come to the school for a “bench test” examination. All travel and lodging costs are borne by the candidate and an additional fee for the bench test is required. Acceptance is based on the review of credentials, personal interview, bench testing and English language testing as applicable.
ACADEMIC REGULATIONS

D.M.D. Program

REGISTRATION
The act of registration includes the payment of the first semester tuition and the completion of the simplified registration form provided by the School of Dental Medicine. First-year students who do not register on the opening day of school and who have failed to provide satisfactory reasons in advance for the delay forfeit their right to admission. Vacancies which arise from such circumstances are filled from the list of alternate candidates at the discretion of the Committee on Admissions.

Registration must be completed by all upper-level students within 10 days after the opening day of school. Under unusual circumstances, special arrangements may be made with permission of the dean. The Social Security numbers of students are used for all records and documents and must be provided at the time of registration. Foreign students will be issued a number for this purpose if they have not obtained a Social Security number prior to registration.

TERMS AND COURSE LENGTH
The school year consists of 34 weeks of five days each, exclusive of vacations, and is divided into two semesters of two terms each. The final week of each semester is reserved for examinations. There are mandatory summer clinic and class sessions for all students at the end of the second and third years. A fee is charged for these summer sessions.

ATTENDANCE
Students enrolled at the School of Dental Medicine are expected to pursue their course of study according to a systematic plan as determined by the Faculty. It is the policy of the school that student attendance for clinic and clinic duty assignments is mandatory. Attendance requirements for lectures, laboratories and seminars are at the discretion of the course director. The course director is free to determine the extent to which absences affect the final grade. The student should realize that lack of regular attendance is extremely disruptive of academic progress and every attempt to attend all classes is strongly encouraged. The student should also be aware that the Committee on Student Standing and Promotion will consider faculty notation of poor attendance in its deliberations.

The Office of Student Services serves as a clearinghouse to notify faculty and staff of a student’s absence. Students who are not able to attend classes, laboratories or clinic are to call 216-368-6136 and advise the office of the period and expected duration of an absence and the reason that you will not be able to attend classes. The office will notify appropriate faculty and staff.

Note that the above action does not represent an approved absence. The clearinghouse function provided by the Student Service Office is a notification service. Individual faculty may express their own policy concerning absence as stated in the course syllabus.

There are situations where an approved absence that excuses the individual from classes et. al. is appropriate. An approved absence requires the approval and signature of the director of student services.

GRADING POLICY
Beginning with the class entering in the fall of 2006, the grading system of the School of Dental Medicine will be Pass/NoPass for all course work. The faculty will specify the mastery level in each course or module that is equivalent with passing. Students must pass each course/educational module. In each course or educational module students will receive formative feedback from the instructor as well as summative assessments which will contribute to the determination of their academic status in each respective course. At the end of each semester in the first two years of the program, students will be required to complete the Comprehensive Assessment battery of examinations.

PROMOTION
Ongoing review of student progress will be conducted by faculty mentors. Student progress will be formally reviewed at the end of each semester or sooner in each year of the program by the Committee on Student Standing and Promotion. Students will receive written notification of their status at the end of each semester or sooner. Students must pass each course or educational module and the Comprehensive Assessment battery of examinations. Passing of courses and educational modules involves satisfactory accomplishment in both course content and/or small group learning processes, for which students receive ongoing evaluation. Students may not be promoted with one or more failing or incomplete grades unless they have entered a remedial program to remove those grades by a deadline set by the course director or committee. In the usual case students will be provided 30 days after the end of the semester to complete all incomplete or failing course work unless an instructor or the committee specifies an alternative time for remediation and/or completion of course work.

Students must sit for the National Board Dental Examination Part I (NDBE I) by April 1 of the second year. Students who do not pass NDBE I prior to the beginning of the fall semester of the third year will not be permitted to begin the semester. Additionally, students must successfully complete all course work and pass the National Board Examination Parts I and II in order to be considered for graduation from the School of Dental Medicine.

ATTENDANCE
Students entering the School of Dental Medicine as of fall 2006 are expected to pursue their course of study according to a systematic plan as determined by the faculty. All students are required to attend class, be prepared for small and large group learning sessions, and attend all laboratory and clinic sessions. Because students work in teams during components of the curriculum, absences negatively impact the functioning and learning within a group. Students are evaluated in an ongoing manner on knowledge of content as well as small group learning processes and by clinical competency examinations.

The Following Information Applies to All Pre-Doctoral Students of the School of Dental Medicine

ABSENCE FROM EXAMINATIONS
The student is expected to be present at all examinations or provide, when possible, advance notice to the Office of Student Services when absence from an examination is anticipated. If a student fails to provide advanced notice, the student must provide an appropriate excuse. Failing to provide an acceptable excuse, the student will meet with the director of student services and the course director to discuss the absence. Following such consultation, the student will be informed of the consequences. The course director may permit the student to be re-tested (with or without penalty), be assigned a grade of zero for the examination, or receive a failing grade for the course.

LEAVE OF ABSENCE
A student may request a Leave of Absence for personal reasons or reasons of health when anticipated or actual absence is in excess of three weeks. Such requests must be submitted in
writing to the director of student services who will forward the request to the Committee on Student Standing and Promotion. The request must be submitted by letter and state the reason for the request, the length of leave requested and the date of return. The committee will ordinarily grant such requests if the student is currently enrolled and has been in regular attendance prior to the time or circumstances that necessitated the request. The request may be submitted by a parent, spouse or authorized agent of the student if the student is unable to file the request. The maximum length of leave is one year. Students must resume registration at the expiration of the leave unless formally granted an extension. Re-entry into the dental program is determined by the Committee on Student Standing and Promotion and may not necessarily be at the same level attained at the time the leave was granted. The committee also reserves the right to place a student on Leave of Absence when it has determined that the circumstances warrant that action, even in the absence of a formal request.

DEGREES CONFERRED

The degree Doctor of Dental Medicine (D.M.D.) is awarded to students successfully completing the four-year professional program offered by the school. The Master of Science in Dentistry (M.S.D.) degree is awarded to graduate students who successfully complete a graduate program of advanced study. Degrees are granted by the university on the recommendation of the faculty subject to the satisfactory completion of all curricular requirements and the discharge of all financial obligations to the university. The recommendation for a degree is discretionary with the faculty, and there is no contract stated or implied, between the university and the student that a degree will be conferred at any stated time, or at all.

WITHDRAWALS AND REFUNDS

To officially withdraw from the School of Dental Medicine, a written notice must be submitted to the dean for approval. Failure to attend class or merely giving notice to an instructor will not be regarded as an official notice of withdrawal. A student who withdraws after the start of a semester must pay a portion of the usual tuition. The student is charged in accordance with the university policy on withdrawals. If the withdrawal occurs during the time that the student is enrolled in summer clinic, the student is charged at a rate of 12.5 percent per week of usual fee for summer clinic.

The university will refund any tuition paid for a semester by any student in good standing who is inducted, or called to active duty, by the Armed Forces of the United States prior to completing that semester, and who does not receive credit for the work completed during that semester.

APPROPRIATE ATTIRE

All students are expected to dress appropriately. The dental student is obliged to follow the dress code developed by the Dental Student Council and approved by the faculty. Graduate students and residents are expected to dress in a manner acceptable to their department.

PERSONAL PROPERTY INSURANCE

Students are responsible for their personal property while on campus. The university assumes no responsibility for loss of or damage to a student’s personal property and the university insurance program does not cover such losses. Many families have homeowner or renter insurance policies which provide coverage for such perils as fire, water and theft. If this coverage does not exist, the student may wish to consider a separate renters insurance policy.

STUDENT SERVICES

The School of Dental Medicine’s Office of Student Services acts as a resource for individual dental students and for classes as a whole, providing services and administering programs that supplement the regular curriculum and enrich the quality of student life. Programs under the direction of this office include:

STUDENT ACTIVITIES

The School of Dental Medicine encourages its students to avail themselves of cultural opportunities within the university and the community.

Each class has its own student organization, which is governed by the students, with advice from the school’s Office of Student Services and other teaching staff, when such advice is requested.

The Student Council is an organization representing the entire student body whose purpose is to advance the interests of the students of the School of Dental Medicine and the university. Students of the School of Dental Medicine share in university athletics, participating in interclass, interdepartmental, and intercollegiate contests in various activities.

The School of Dental Medicine has chapters of two of the national dental student fraternities: Delta Sigma Delta and Psi Omega. Students of all classes are eligible for student membership in the American Dental Association, and the American Dental Education Association.

American Student Dental Association

The American Student Dental Association (ASDA) is a student organization of approximately 20,000 individual predoctoral and postdoctoral members organized into chapters, one at each of the U.S. dental schools. The ASDA is committed to the following:

1. Developing and training future leaders of the dental profession
2. Improving the quality of dental education
3. Disseminating information of value to dental students
4. Promoting the social, moral, and ethical obligations of the profession
5. Ensuring due process for all dental students
6. Representing dental students before legislative bodies and organizations
7. Providing opportunities for students and recent graduates to deliver health care to people in areas of need

The local chapter at Case Western Reserve University, representing all of the dental students, provides benefits that include:

1. Five professional publications
2. Reprints of released national dental board examinations
3. Insurance at low group rates (disability/medical, equipment, professional liability, term life insurance)
4. Reduced ADA dues upon graduation.

The American Dental Education Association (ADEA); The Voice of Dental Education

ADEA is the premier association serving the allied, predoctoral, and postdoctoral dental education community. ADEA provides advocacy, professional development, and a wealth of expert information and resources. We address contemporary issues influencing education, research, and the delivery of oral health care for the improvement of public health.

First-Year Orientation

Incoming students are introduced to the school, the university, and the Cleveland area in a four-day program presented by the Office of Student Services, faculty members, and upper-class students.
Faculty Mentors
All students are assigned to faculty mentors during freshman orientation. The advisors are volunteers from the faculty who offer the students guidance and fellowship during their educational program.

Student Monitoring
The director of student services monitors student grades on a regular basis and works individually with students. Students are assisted in defining problems, identifying available resources, and choosing specific steps to be taken toward improvement.

Tutoring
The Office of Student Services provides tutoring for students who need to improve their academic performance. The tutors are usually upperclassmen or graduate students. Students may seek tutoring on their own or be recommended for tutoring by course instructors. Tutors emphasize study techniques, time allotment, problem solving, and communication in addition to comprehension of content.

HONORS, PRIZES AND AWARDS
Recognition, both honorary and monetary, is given to students who achieve excellence in different facets of their dental education. A complete description of each award is available in the Office of the Dean.

Scholastic Achievement
• Alpha Omega Fraternity Award for Scholarship
• Omicron Kappa Upsilon
• Callahan Prize
• American Academy of Oral Medicine
• American Association of Women Dentists

Doctor Paul P. Sherwood/Hrutkay Award
American Association of Endodontists
American Association of Oral and Maxillofacial Surgeons
American Dental Society of Anesthesiology, Incorporated
Orthodontics
American Society of Orthodontists
Pediatric Dentistry
American Society of Dentistry for Children
Academy of Dentistry for the Handicapped
Periodontics
American Academy of Periodontology
Prosthodontics
Dentsply International Merit Award in Prosthodontics
Practice Management
• Richard A. Collier Prize

RESEARCH AND SCIENTIFIC PAPERS
• Alpha Omega Prize
• Block Drug Award

STUDENT AFFAIRS
The University Office of Student Affairs serves as an ombudsman focusing attention on the rights and responsibilities of students within the university community. In addition, it serves as a central source of information about university policies and procedures that affect student life and extracurricular programs and services. Students may contact the University Office of Student Affairs for resolution of specific problems and for referral to other university offices or campus agencies.

ACADEMIC PROGRAMS
Beginning with the fall 2006 entering class, the School of Dental Medicine will begin a three-year implementation plan for a new curriculum. Students who entered the program prior to fall 2006 will continue until graduation with the conventional curriculum, which includes traditional forms of instruction organized in discipline-based units. Updates about the curriculum implementation and current schedules are available at http://dental.case.edu/insidecase/.

DOCTOR OF DENTAL MEDICINE DEGREE PROGRAM

SCHOOL OF DENTAL MEDICINE

Entering Class, Fall 2006
The new curriculum will be accomplished through an integrated approach to instruction. The program will accomplish its goals through academic work in four themes and two threads, which are woven throughout the four years of the program. The program includes a variety of educational formats to deliver the curriculum, including problem-based learning sessions, team-based learning, independent study, seminars, experiential learning opportunities, traditional lectures, virtual reality clinical simulation, laboratories, standardized patient experiences, and patient-based comprehensive care. The goal of the new curriculum is to help students become better prepared in independent learning, critical thinking skills, and the use of evidence. The new curriculum is a program of study that includes traditional and newly organized integrated educational modules in the following themes and threads.

Themes

HEALTH AND WELL-BEING
This theme contains all curricula -- both didactic and clinical -- that apply to health and the normal structure and functioning of the body and of the oral complex. The traditional content areas of physiology, biochemistry, anatomy, histology, among other dental science classes, are integrated through cases to form a better bridge between the basic sciences and the clinical sciences.

DISEASE PROCESSES
The Disease Processes theme includes content related to general and oral diseases. These topics are often melded with healthy structure and function content to provide students with a global perspective of the implications of disease on usual functioning.

RESTORATION OF HEALTH
This theme contains content related to therapies necessary for treatment of medical disease and dental disease. A focus on restoring oral health is accomplished through virtual reality clinical skills training, training on models and progression to comprehensive dental care in conjunction with didactic knowledge.

MAINTENANCE OF HEALTH
The Maintenance of Health theme focuses on curriculum which explores strategies for preserving health through general and oral health therapies, patient education, disease risk assessment, and disease prevention. This theme
They participate in practice management activities of their preceptor group, developing critical skills for general practice dentistry.

**Combined Degree Programs**

By arrangement with the College of Arts and Sciences of Case Western Reserve University and other cooperating institutions of higher education, an in absence privilege is accorded undergraduates in their senior year, whereby the first year of professional study may be substituted for the last year of liberal arts education. The student may be granted a baccalaureate degree by the liberal arts college upon completion of the first year in the School of Dental Medicine. Arrangements for this in absence privilege must be made by the student with the liberal arts college before entering the School of Dental Medicine. This option must be exercised at completion of the first year of study in the School of Dental Medicine unless permission is granted by the undergraduate college and dental school by prior arrangement.

**Joint Degree Programs**

[Note: The D.M.D./M.D. Program described below is an exception to these policies. For details, please see the D.M.D./M.D. program description details.] Students enrolled full time in the School of Dental Medicine desiring to enter a joint degree program must apply and be admitted to a non-dental degree program of another school of the university through the usual process followed for admission at that school. If accepted, the student must notify the associate dean for education in writing at least four weeks prior to the start of the semester they wish to initiate non-dental course work in the joint degree program. A dental student must be in the top one-half of the class to be eligible to enter a joint degree program and may not begin earlier than the second semester of the first year.

If the student appears eligible for the initiation of a joint degree program, a dental faculty member will be assigned as an advisor to the student. The faculty advisor will be responsible for routine matters such as assisting in registration (e.g. add slips) in addition to the advisory function. Students should be assigned, or request, an advisor on the faculty of the second school in which non-dental course work is taken.

Eligible students must meet with the advisors and program coordinators of both schools. Following this meeting, the student will be provided with a written agreement and guidelines specifying the program which will have priority in all future considerations, a curriculum plan and projected timetable for the completion of course work, and other conditions or stipulations in effect that will govern the student’s tenure in both programs. The student will acknowledge the agreement with their signature.

First year students are limited to one course (3 credit hours) in the first semester (spring) of a joint program. Upper-level students (years two through four) in good standing (defined as top one-half for this purpose) may enroll for up to two courses (six credit hours) in each of the fall or spring semesters. Course work undertaken in the non-dental program should not ordinarily be scheduled during the regular school hours at the School of Dental Medicine unless approval is granted by the associate dean for education. Course work taken as a part of the non-dental program cannot be used to meet the requirements of the dental program.

Tuition charges for course work taken in the non-dental program are the responsibility of the School of Dental Medicine to the extent outlined in the agreement and to a maximum of six credit hours per semester (fall and spring semesters only) if the student fulfills all eligibility requirements, is enrolled full time and in good standing at the School of Dental Medicine, and is current in the payment of tuition to the School of Dental Medicine. Tuition charges for non-dental courses taken during the summer semester are the responsibility of the student. Enrollment in a joint degree program does not constitute a guarantee that a degree will be granted for either program at any given time or at all.

Permission to continue in the joint program may be withdrawn by either school for a variety of reasons including, but not limited to, poor or failing grades or grade point averages, incompleteness or tardiness in completing program requirements, delinquency in payment of tuition, nonacademic or academic probation, suspension or dismissal.

Problems that might arise will be resolved on a case-by-case basis by the associate dean for education and the faculty advisor in consultation with the student. The student may appeal any unfavorable decision to the Committee on Student Standing and Promotion for final resolution.

**D.M.D./M.D. Program**
The joint degree D.M.D./M.D. program of the Case Western Reserve University School of Dental Medicine and School of Medicine is poised as an innovative approach to satisfy the need for creation of a cadre of uniquely trained individuals who will integrate aspects of primary care into the practice of general dentistry. Students will obtain training in both the fields of medicine and dentistry in a five-year integrated training program that will lead to the D.M.D. and M.D. degrees. This new joint degree program will address the emerging requirement for health professions students to be broadly trained with an extensive perspective of health and disease. As the associations between oral health and systemic health become clearer, the role of these new health care practitioners of tomorrow will emerge to provide health promotion and disease prevention care in a new framework.

Prospective students of this new innovative program are interested in the health professions using a more broadly defined context, are independent thinkers, and have excelled in baccalaureate programs in the sciences. A pioneering spirit will characterize their motivation. Students will be prepared to sit for the clinical licensure examination leading to the practice of dentistry and for post-graduate, year-one residencies in medicine which are required prior to medical licensure.

**Special Programs for Undergraduates**

The College of Arts and Sciences and the School of Dental Medicine jointly offer two programs for exceptionally able and well qualified high school seniors who plan to pursue careers in dentistry. Students admitted to these programs will be provided with advisors from both the College of Arts and Sciences and the School of Dental Medicine. Prior to enrollment in the School of Dental Medicine, all students are required to achieve an acceptable performance on the Dental Admission Test given by the American Dental Association.

**SIX-YEAR DENTAL PROGRAM**

The Six-Year Dental Program is designed to enable the especially mature student who is determined to pursue a career in dentistry to accelerate his or her undergraduate and professional education.

The first two years of the program are spent in the College of Arts and Sciences. Students are required to follow a specific curriculum. In order to secure the place reserved for them in the first class year at the School of Dental Medicine, students must earn the current minimum grade-point average and current minimum grade in each course.

After successful performance in the pre-dental part of the program and on the Dental Admission Test, students in the Six-Year program move into the first year of dental school. The D.M.D. is awarded upon completion of the six-year program.

**Up to 10 students can be admitted to the Six-Year Dental Program each year.**

**PRE-PROFESSIONAL SCHOLARS PROGRAM IN DENTISTRY**

The Pre-Professional Scholars Program in Dentistry is designed for those who desire careers in dentistry but wish to broaden and enrich themselves with a full undergraduate program before embarking on study in a professional school. Such students matriculate in the College of Arts and Sciences with a conditional commitment for admission to the School of Dental Medicine to be honored upon completion of the bachelor’s degree.

Students are free to develop and follow a course of study that reflects their educational interests and needs rather than concentrating solely on activities that enhance their chances for admission to professional study. Participants will be expected to take the courses required of pre-dental students and to maintain the current minimum grade-point average or higher both for their work in the sciences and overall.

**EXPANDED FUNCTION DENTAL AUXILIARY PROGRAM**

The School of Dental Medicine offers a non-degree certificate course in expanded dental functions to dental auxiliaries with requisite training and experience. This continuing education program prepares the student to take an examination administered by the Ohio Commission on Dental Testing for Advanced Qualified Personnel.

The Expanded Function Dental Auxiliary course is a part-time program and includes didactic, pre-clinical laboratory, and clinical training. It is affiliated with several hospitals and health agencies in the Cleveland metropolitan area, where a portion of the clinical training takes place. Students are selected for admission on the basis of their performance on an entrance examination administered by the program faculty.

**BASIC SCIENCE PROGRAMS**

The most direct route toward a career in research is through the Doctor of Philosophy degree programs offered by the departments that are basic to health education: anatomy, biochemistry, microbiology, pathology, pharmacology, and physiology. Inquiries about these non-dental school programs should be addressed to the dean of graduate studies, who provides specific information about these programs. Fellowships may be available to qualified students to assist them during their period of study and research leading to an advanced degree. The curricula of the School of Dental Medicine are designed to provide general education in dentistry or in areas of clinical specialization. However, recognizing the need within dentistry for individuals qualified for teaching and research, the School of Dental Medicine may provide the use of its facilities and faculty as part of a cooperative program in the training of such individuals.

**ADMISSION TO ADVANCED EDUCATION PROGRAMS**

**Programs Offered**

The School of Dental Medicine, in cooperation with other institutions, offers programs of study in advanced education in general dentistry, endodontics, pediatric dentistry, periodontics, orthodontics, and oral and maxillofacial surgery. Entry requirements vary and are determined by the program director and faculty of each program who select applicants for admission. Program length, stipends offered and program requirements vary by program. Requests for application materials should be directed to the Office of Graduate Studies of the School of Dental Medicine Application materials are also available online at http://dental.case.edu/admissions/gradstudies/how-toapply.htm/.

All advanced education programs are accredited by the Commission on Dental Accreditation of the American Dental Association and are board-eligible programs for the respective specialty boards. The programs in endodontics, orthodontics, and periodontics are master’s degree programs with a certificate granted upon completion of the degree requirements. The programs in advanced education in general dentistry and pediatric dentistry are certificate-only programs. There is an optional master’s degree program offered in pediatric dentistry. The program in oral and maxillofacial surgery is a joint program with the School of Medicine leading to the M.D. degree and certificate in oral and maxillofacial surgery. A
Entry Requirements

All programs are highly structured and require a commitment to full-time study. Time for employment is limited; enrolled students are not permitted to engage in outside dental practice without the approval of their program director.

In order to be considered for admission, the applicant must submit several items: a completed application form (PASS or MATCH applications are accepted for some programs), all requested supporting documents such as transcripts, letters of recommendation, etc., and an application fee by the deadline published for each program. Incomplete or late applications will not be considered unless all other qualified applicants have been offered admission and a vacancy remains.

The selection of individuals for entry into a program of study is made by the program director (faculty) from the pool of applicants. The general criteria of the most qualified applicants for admission are as follows:

The applicant must be a graduate of a dental school accredited by the American or Canadian Dental Association or have been graduated from an institution considered by the School of Dental Medicine as one of acceptable academic caliber. (Applicants who are currently enrolled as dental students must submit a final transcript and verification of graduation from a dental school prior to entry if selected.)

The applicant should have earned a 3.0 (B) average or its equivalent and/or been graduated in the highest one-third of their graduating dental class.

The applicant must have passed Part I of the National Dental Board and should have an average score of at least 85 and have taken or applied for Part II (to be completed with a score of 85 or higher prior to entry if selected). If the applicant is a graduate of a foreign dental school and has not taken the National Dental Board, recent GRE examination results may be substituted (general test and one subject test in biochemistry, biology or chemistry). GRE scores should be at the fiftieth percentile or higher.

The applicant should have a documented interest in their field of study and must meet additional criteria set by the department to which they are applying. Applicants graduated from a non-English speaking dental school, and for whom English is not their first language, must take the TOEFL test with a minimum score of 550 (paper-based score), 213 (computer-based score), or 79 (internet-based score).

These criteria are considered minimums and a higher level of performance (where applicable) enhances the likelihood of acceptance. Applicants who paid an application fee but were not accepted, can be considered, at no additional fee, for entry the following year. In order for the application to be considered for the following year, a request for reactivation of the application must be made in writing and received by the deadline for applications for the following year. Those not selected for the second year must submit a new application and pay the application fee for further consideration.

Applicants selected for programs in advanced education in general dentistry, oral and maxillofacial surgery, or pediatric dentistry must be eligible for licensure or intern certificate issued by the State of Ohio, and must be a graduate of a dental school accredited by the Commission on Dental Accreditation. International applicants are accepted into the programs offered by the Departments of Endodontics, Orthodontics, and Periodontics.

ADMISSION OF STUDENTS FROM OTHER COUNTRIES

See "Students from Other Countries" in the Student Affairs section of this Bulletin.

M.S.D. DEGREE AND RESIDENCY PROGRAMS

Registration

Advanced education programs operate on a twelve-month basis, from July 1 of one year to June 30 of the next. The year is divided into two, six-month semesters (fall: July 1 to December 31; spring: January 1 to June 30). The act of registration includes submission of a course schedule approved by the department, the payment of semester tuition and the completion of online registration form. Each semester, registration must be completed as scheduled. Students enrolled in fall and spring semesters may arrange to pay bills for tuition and fees in two installments. At least half of the total bill must be paid at registration, the remainder must be paid in accordance with university policy. Fees may be charged for late registration or late payment. Students who fail to register within 30 days after the published dates will be considered to have withdrawn from the program. In the School of Dental Medicine, students who are not registered are not considered students of record, lose the protections of the university in matters of liability and therefore, may not treat patients. They can no longer attend class or receive grades and will have to formally reestablish their matriculation. In any circumstance, all lost course and/or clinical time will be added to the end of the program’s original completion date.

Under unusual circumstances, special arrangements for registration may be made with permission of the department chair and the associate dean for graduate studies. Social Security numbers are used for all records and documents and must be provided at the time of registration. Foreign students will be issued a number for this purpose if they have not obtained a Social Security number prior to registration. New students and new residents who do not register as specified and who have failed to provide satisfactory reasons for the delay in advance, forfeit their right to admission. Vacancies which arise from such circumstances are filled from a list of alternate candidates at the discretion of the department.

Grading

The responsibility for assigning grades rests exclusively with the course director, who must announce the general method of grading at the beginning of the course. Course grades are reported to the Registrar of the School of Dental Medicine at the end of the course or when a final grade has been determined if prior to the scheduled completion time for the course. Incomplete or conditional grades can be changed only by the course director (see grading policies of the university). The following grading system is used at the School of Dental Medicine for advanced education courses:

<table>

Research Project
For master's degree programs, each student must carry out an original and meaningful research project acceptable to the department chair and the advisory committee. A written thesis, similarly acceptable, is to be prepared and must conform to the standard format determined by the Office of Graduate Studies of the School of Dental Medicine. The thesis must be submitted before the prescribed deadline. An oral examination (defense) of the thesis is required. This examination is administered by the student's advisory committee before a standard date set by the Office of Graduate Studies of the School of Dental Medicine. Unanimous agreement of the committee is required to pass the thesis examination. A student must be registered for thesis credit or continuing graduate work during the semester in which the thesis examination is conducted. The thesis defense is ordinarily open to all members of the university faculty, student body, and guests.

Extra Courses
Individual students enrolled in an advanced education program, whether or not a master's degree is involved, may be required to take courses beyond the general requirements set forth by the department in order to complete the program. In such instances, the student must be notified in writing by the department chair, with a copy filed in the Office of Graduate Studies of the School of Dental Medicine.

Time Limits
Each student is expected to maintain continuous registration and all requirements must be completed within five consecutive calendar years immediately following matriculation as an advanced education student, including approved periods of leave of absence. A student who fails to complete the requirements within five years must be formally readmitted with full standing in order to continue study, subject to terms of readmission, future time limits, and revised requirements for the award of the degree. Prior status in the program is no guarantee of readmission and should not be assumed.

Leave of Absence
A student may request a leave of absence for personal reasons or reasons of health when anticipated or actual absence is in excess of three weeks. A written request for a leave of absence must include the reason for the request and the length of time requested. A leave of absence cannot exceed one calendar year. It must be submitted to the program director and to the associate dean of graduate studies of the School of Dental Medicine. The program director will forward the request with his/her response to the Committee on Graduate Studies. In order to be eligible for such requests, the student must be currently enrolled and in regular attendance prior to the time or circumstances that necessitated the request. At the expiration of the leave, the student must resume registration unless formally granted an extension. A leave of absence does not extend the maximum time permitted for the completion of degree requirements. A student who fails to obtain an approved leave, or who fails to resume registration at the time expected, may be separated from the program. During the period of leave, it is expected that the student will not avail himself or herself of the teaching and research resources of the School of Dental Medicine or the university. At the end of an approved leave, reentry into the program is reviewed by the program director in concert with the Committee on Graduate Studies, and may not be at the same level attained at the time the leave was granted. Programs with a high patient case component may require that the clinical portion of the program be repeated in its entirety. Finally, the committee also reserves the right to place a student on leave of absence where it has been determined that the circumstances warrant, even in the absence of a formal request.

Maintenance of Good Standing
A minimum cumulative grade point average of 2.75 is required for good standing in a graduate program for all courses taken for graduate credit (excluding those graded Satisfactory/Unsatisfactory or Pass/No Pass).

The associate dean for graduate studies reviews student performance and may recommend a course of action to the Committee on Graduate Studies. The committee may require remedial work, place a student on academic review or probation, set conditions for continuation in the student's course of study or program, and may require withdrawal for failure to meet the academic standards set by the department or school. A student who receives a grade deemed unsatisfactory in any course is placed on probation and must remove himself or herself from probation within a time period specified by the committee. It is expected that removal from probation will ordinarily require repetition of the course with an acceptable grade or the successful completion of work deemed equivalent by the student's advisory committee and the departmental chair.
In this regard, a student may be separated from the university for any one of the following reasons:

1. Failure to correct probationary status within the specified time period.
2. Failure to achieve a minimum grade point average of 2.50 or above upon completion of 12 semester hours or a grade point average of 2.75 or higher upon completion of 21 semester hours of graduate study.
3. Failure to complete all requirements for the master's degree within five consecutive calendar years from the term of matriculation, unless granted an extension of a maximum of one year upon recommendation of the advisor and chair and approved by the associate dean for graduate studies.

In calculating the grade point average, all courses for which quality points are given are counted, including courses which may be required to be repeated. In addition, on the recommendation of the student's department, and with due process, the School of Dental Medicine may suspend or separate a student from the university for failure to maintain appropriate standards of conduct and integrity in discharging their responsibilities. Academic failure, moral delinquency, gross misconduct, or failure to meet the specific conditions of probation or academic review is sufficient reason for requiring withdrawal from the school.

Graduation

The minimum requirements for the master's degree in the School of Dental Medicine are 54 semester hours of course work, including six or more semester hours of thesis/equivalent registration, and the submission of an accepted thesis. Individual departments may require additional semester hours of specific course work and/or thesis. Not less than 48 semester hours may be at the 500 level or higher.

A candidate for a Master of Science in Dentistry degree must make application for the degree to the Office of Graduate Studies of the School of Dental Medicine no later than three months before the commencement at which the degree is expected.

The awarding of the degree is dependent upon the satisfactory completion of all requirements, and the recommendations of department chair, Committee on Graduate Studies, and faculty of the School of Dental Medicine. The student must complete all requirements for both the master's degree and certificate in order to receive either.

Degrees will not be awarded to candidates with delinquent financial accounts that include, but are not limited to, tuition payments, fees, and library fines.

DELAYED GRADUATION

A candidate who has successfully defended his or her thesis, but who fails to meet the deadline for thesis submission for graduation in one semester, will be permitted to receive his or her degree at the next scheduled graduation, without further registration or payment of tuition if the completed thesis is submitted within fourteen days of the date originally scheduled for graduation. If all requirements are not met within this grace period, the candidate must register for the subsequent semester.

COURSE DESCRIPTIONS (COMP)

COMP 358. Clinical Oral Surgery I (1)

COMP 387. General Practice Dentistry A (1.5)

COMP 389. General Practice Dentistry B (1.5)

COMP 390. General Practice Dentistry A (1.5)

COMP 394. General Practice Dentistry B (1.5)

COMP 458. Clinical Oral Surgery II (1)

COMP 495. Directed Clinical Studies (1)

This course is intended to provide students with the opportunity to advance their dental clinical patient skills in the comprehensive care clinics of the school while also providing advanced opportunities for students who are so inclined to focus in individual areas of clinical skills development.

COURSE DESCRIPTIONS (DENC)

DENC 322. Surgical Periodontics (1.5)

DENC 328. Oral Diagnosis and Treatment Planning (1)

DENC 334. Operative Dentistry Clinic (2)

DENC 336. Operative Dentistry Clinic II (2)

DENC 338. Pediatric Dentistry Clinic (1.5)

DENC 339. General Dentistry Clinical Qualifying (5)

DENC 342. Periodontics (5)

DENC 348. Endodontics Clinic (1.5)

DENC 349. Endodontics Clinic II (1.5)

DENC 352. Surgical Periodontics (1.5)

DENC 358. Clinical Oral Surgery I (1)

DENC 364. Operative Dentistry Clinic (2)

DENC 366. Operative Dentistry Clinic II (2)

DENC 368. Endodontics Clinic (1.5)

DENC 372. Oral Diagnosis and Treatment Planning (1)

DENC 378. Pediatric Dentistry Clinic (1.5)

DENC 382. Surgical Periodontics (1.5)

DENC 386. Operative Dentistry Clinic (2)

DENC 388. Operative Dentistry Clinic II (2)

DENC 389. General Practice Dentistry B (1.5)

DENC 390. General Practice Dentistry A (1.5)

DENC 392. General Dentistry Clinical Qualifying (5)

DENC 393. General Dentistry Clinical Qualifying II (5)

DENC 394. Endodontics Clinic (1.5)

DENC 395. Directed Clinical Studies (1)

DENC 397. Quality Assurance (1)

DENC 398. Endodontics Clinic II (1.5)

DENC 399. General Dentistry Clinical Qualifying II (5)

DENC 400. General Dentistry Clinical Qualifying III (5)

DENC 402. Periodontics (5)

DENC 404. General Dentistry Clinical Qualifying IV (5)

DENC 406. General Dentistry Clinical Qualifying V (5)
DENC 428. Oral Diagnosis and Radiology (.5)
Clinical experience in the admitting and radiology service.

DENC 448. Endodontics (1)
Clinical application of the principles of endodontics therapy. Diagnosis and treatment planning. Management of endodontic emergencies and prognosis of endodontic treatment.

DENC 464. Operative Dentistry (1.5)
Clinical application of the principles of operative dentistry.

DENC 468. Prosthodontics (1.5)
Clinical application of the principles of prosthodontic dentistry.

DENC 474. Fixed Prosthodontics (1.5)
Treatment of patients requiring simple and advanced fixed prostheses as an integrated part of total patient care.

DENC 478. Pediatric Dentistry (1)
Emphasizes comprehensive oral health care of the well child to provide experience in examining, diagnosing, treatment planning, and completing treatment of a selected number of children. Preventive aspects of pediatric dentistry emphasized. Additional voluntary experiences in clinical practice of pediatric dentistry available.

DENC 482. Clinical Orthodontics (1)
Clinical application of the principles of orthodontics.

DENC 487. General Practice Dentistry B (2.5)
Comprehensive dental care. Each student is assigned for clinical training to a preceptor group led by a practicing general dentist. The preceptor guides the students in diagnosis, treatment planning, and actual patient treatment with consultation in various specialties as required. Experiences in the provision of emergency dental care. The preceptor directs the total dental health care of the patients of each of his students. Biweekly seminars are provided for each preceptor group. Special topics, students cases, techniques, and journal articles are discussed. Recommended preparation: Concurrent enrollment in DENC 489.

DENC 489. General Practice Dentistry B (2.5)
Comprehensive dental care. Each student is assigned for clinical training to a preceptor group led by a practicing general dentist. The preceptor guides the students in diagnosis, treatment planning, and actual patient treatment with consultation in various specialties as required. Experiences in the provision of emergency dental care. The preceptor directs the total dental health care of the patients of each of his students. Biweekly seminars are provided for each preceptor group. Special topics, students cases, techniques, and journal articles are discussed. Recommended preparation: Concurrent enrollment in DENC 487.

DENC 490. General Practice Dentistry A (2.5)
Clinical application of the principles of general practice dentistry. Recommended preparation: Concurrent enrollment in DENC 494.

DENC 492. General Dentistry Clinical Competency (.5)
This course consists of the successful completion of the recall, emergency, diagnosis and treatment planning, and patient outcomes clinical competencies. It is also necessary for the student to successfully fulfill the recall needs of their assigned clinic patients in order to pass this course. Recommended preparation: Completion of Basic Core Program.

DENC 494. General Practice Dentistry B (2.5)
Clinical application of the principles of general practice dentistry. Recommended preparation: Concurrent enrollment in DENC 490.

DENC 498. Quality Assurance (1)
This course reinforces quality assurance skills and knowledge provided in the prerequisite course including, but not limited to: providing students with the working knowledge of dental record keeping, as it relates to diagnosis and treatment of pathology; recognition and management of medical illness and disabilities; treatment planning; documentation of pre-existing conditions, current and past treatment; established laboratory protocols; evaluation of reasons for remakes and re-done; post-treatment evaluation of care. Recommended preparation: DEND 394.

COURSE DESCRIPTIONS (DEND)
DEND 315. Practice Management I (1)
This course is designed to develop practical knowledge and skills in dental practice management. It is organized around initial topics that will lay the foundation for adequate planning for practice success after graduation. The subsequent courses build upon this foundation knowledge so that students will have a general perspective of where to begin their strategies for success in the future. This course discusses topics that include analysis of practice configurations, choosing the appropriate consultants, basic tools for fiscal management and evaluation, and identifying opportunities that match the student’s life goals.

DEND 415. Practice Management II (2)
Students deal with entrepreneurship applications and experiences specific to dentistry and are introduced to the process of formulating a business plan. Personal finance and investment strategies are covered in this course, particularly as they pertain to developing a business plan for the students’ careers. Each student constructs a business plan specific to the goals and situation of that student.

DEND 416. Practice Management III (1.5)
This course is designed to develop practical knowledge and skills in dental practice management. As the student prepares for clinical practice, topics surrounding negotiation of working contracts, insurance contract evaluation, policies, compliance, and marketing are among some of the most important issues to be familiar with. Skills acquired in the preceding course are applied to the student’s “practice” (panel of patients) for evaluation of practice productivity and growth.

DEND 420. Jurisprudence and Professional Ethical Responsibility (.5)

SCHOOL OF DENTAL MEDICINE

Ethical and legal issues, civil and criminal law, contracts, malpractice and current ethical and legal dilemmas encountered in practice.

DEND 421. Periodontal Medicine and Cases (1)
Further application of the knowledge and skills learned in prior periodontal courses. Focus is on how selective periodontal treatment can be integrated into a treatment plan considering the parameters presented by a special situation. Some examples are treatment related to endodontics, prosthodontics, geriatrics, esthetics, orthodontics and implantology.

DEND 426. Oral Diagnosis Seminar (1)
Case-based review of oral diagnosis, radiology, and medicine.

DEND 455. Oral Surgery IV-A (.5)

DEND 482. Orthodontics (1)
Instruction through lectures and audio-visual programs enabling the student to gain judgment, knowledge, and skills to select and treat uncomplicated tooth irregularities in children and adults. Advanced topics in comprehensive orthodontics, such as surgical orthodontics and clef; palate treatment.

DEND 488. Case Presentations (2.5)
Selected cases presented by students and instructors emphasizing diagnosis, treatment planning, and complete patient care. Topics of special interest covering the concepts of total patient care and recent advances in dental treatment presented by guest lecturers and faculty.

COURSE DESCRIPTIONS (DENF)
DENF 422. Comprehensive Periodontics (3)
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have approval of their chair and the dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the periodontic procedures associated with general dentistry.

DENF 428. Comprehensive Oral Medicine (3)
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their department chair and the dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the radiologic and oral diagnostic procedures associated with general dentistry.

GENERAL BULLETIN 2009-2011
DENF 448. Comprehensive Endodontics (3)  This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their department chair and the dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the endodontic procedures associated with general dentistry.

DENF 455. Comprehensive Oral Surgery (3)  This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their department chair and the dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the oral surgery procedures associated with general dentistry.

DENF 464. Comprehensive Operative Dentistry (3)  This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their department chair and the dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the operative procedures associated with general dentistry.

DENF 468. Comprehensive Removable Prostodontics (3)  This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their department chair and the dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the removable prosthodontics procedures associated with general dentistry.

DENF 474. Comprehensive Fixed Prosthodontics (3)  This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their department chair and the dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the fixed prosthodontic procedures associated with general dentistry.

DENF 478. Comprehensive Pedodontics and Orthodontics (3)  This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their department chair and the dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the pediatric and orthodontic procedures associated with general dentistry.

**COURSE DESCRIPTIONS (DENT)**

DENF 501. Biological Aspects of the Stomatological System (2)  This course is a review of biochemistry, molecular and cellular biology, histology, and oral anatomy and an expansion of oral biological topics that underlie the disciplines of endodontics, orthodontics, periodontics, and pediatric dentistry.

DENF 502. Correlative Medical Science (2)  Case-based discussion of selected systemic disease commonly encountered by the dentist.

DENF 503. Facial Growth and Development (1)  Emphasis on the qualitative, quantitative, and integrative changes during postnatal craniofacial growth and development.

DENF 504. Advanced Facial Growth (1)  Student participation in seminar evaluation series dealing with problems and controversies apparent in the literature in regard to theories of growth, development, and aging. Emphasis on the craniofacial literature, but not exclusively.

DENF 505. Dentofacial Anomalies (1)  This course is designed to provide students with the practical experience regarding the multidisciplinary aspects of diagnosis and treatment of patients with craniofacial anomalies. Observation of team sessions and active participation in patient examinations, diagnosis, and treatment planning.

DENF 506. Concepts of Occlusion (Orthodontics) (1)  Course given in a continuing education format dealing with the spectrum of gnathology. Subjects include the physiology of occlusion, record-taking and mounting of cases, laboratory and clinical exercises in occlusal equilibration, splint construction, set-ups, positioner construction, and the examination, diagnosis, and treatment of various TMJ disorder. Instruction is carried out by the use of lectures and laboratory and clinical exercises.

DENF 507. Master’s Thesis Hypothesis (1)  The requirements for the degree of Master of Science in Dentistry include the successful completion of a suitable research experience, demonstration of scholarly attainment, and the ability to conduct directed research. This course will be directed toward initiating the student’s research component of their Master of Science in Dentistry degree by culminating in the development of the thesis protocol. Research topics covered may include human subjects protection, sample size calculation and power applied to student’s area of research interest, study design, and statistical approach. Students will complete the CITI certification process.

DENF 508. Master’s Thesis Protocol (2)  The requirements for the degree of Master of Science in Dentistry include the successful completion of a suitable research experience, demonstration of scholarly attainment, and the ability to conduct directed research.

DENF 509. Advanced Dental Studies (1 - 10)  A course for non-degree-seeking students who wish to pursue special post-doctoral studies in the School of Dental Medicine. Arrangement made through the department and the associate dean for graduate studies.

DENF 510. Epidemiology and Biostatistics (3)  A detailed presentation of epidemiological and biostatistical techniques designed to acquaint the student with a broad spectrum of scientific approaches and to prepare for a research project. Topics include design of observational and experimental studies, common biostatistical techniques encountered in the dental literature such as t-test, ANOVA, chi-square, correlation and regression, and assessing the validity of diagnostic tests. Instruction includes lectures, critique of selected literature and computer analysis of data.

DENF 512. Advanced Oral Pathology (3)  Lectures and seminars on the clinical and histopathologic characteristics of many of the common oral diseases. Special emphasis on developing a logical approach to clinical and histopathologic diagnosis. Participation is expected for in-class discussion of the clinical and histopathologic material presented.

DENF 513. Anatomy of the Head and Neck (3)  This course deals with the structural, functional, and clinical relationships of the many organs and organ systems which comprise the head, neck, and pharyngeal regions of the human body.

DENF 514. Research Methods: Preparation (1.5)  The goal of this course is to facilitate a formal statement of the student’s research idea as preparation for working with a thesis committee or undertaking independent research.

DENF 515. Interdisciplinary Seminar (.5)  A weekly seminar in which faculty research is presented and discussed. Included are dental, medical, engineering and social sciences faculty who are collaborating in an interdisciplinary fashion on basic and/or applied research topics of interest to the dental profession. When appropriate, M.S.D. candidates present their research to the seminar group.

DENF 516. Microbiology, Immunology, and Immune Systems (1)  This course reviews bacterial structure and classification, provides insight into oral bacterial pathogenesis, Principles of antibiotic use and mechanisms of
resistance are reviewed. Microbial diagnostic methodologies are discussed. Integration of periodontics, endodontics, and pediatric dentistry is stressed as it relates to the inflammatory process in the human host.

DENT 518. Behavioral Considerations in Oral Health Care (3)
This course focuses on the behavioral knowledge and skills the oral health practitioner must possess in order to deliver effective, patient-centered care. Specifically, the course is designed to enhance graduate students’ existing knowledge and skills in relation to dentist-patient communication, management of diverse patient populations, and patient education and facilitation of health behavior change.

DENT 523. Clinical Specialty Seminar I - Orthodontics (2)
This course is a companion to clinical training in orthodontics and involves faculty and student evaluation of past and present literature. Sessions are used to evaluate current timely literature, and lectures and seminars complement the clinical experiences with topics including patient management, treatment of various aged populations and malocclusions, orthopedic appliances, treatment of patients with special needs, and various aspects of fixed and removable mechanotherapy. First in a series of four courses.

DENT 524. Clinical Specialty Seminar II - Orthodontics (2)
Second in a series of four courses. (See DENT 523.)

DENT 527. Clinical Specialty Seminar III - Orthodontics (2)
Third in a series of four courses. (See DENT 523.)

DENT 528. Clinical Specialty Seminar IV - Orthodontics (2)
Fourth in a series of four courses. (See DENT 523.)

DENT 529. Endodontology I (3)
Scientific rationale for endodontic practice. Endodontic anatomy, physiology, pathology, and microbiology. All treatments and techniques studied and substantiated by current and classical research. First in a series of four courses.

DENT 530. Endodontology II (3)
Second in a series of four courses. (See DENT 529.)

DENT 531. Endodontology III (3)
Third in a series of four courses. (See DENT 529.)

DENT 532. Endodontology IV (3)
Fourth in a series of four courses. (See DENT 529.)

DENT 533. Pediatric Dentistry Literature Review I (2)
Review of the literature in preparation for the specialty board examination in pediatric dentistry. Includes articles on various topics including growth and development, special needs patients, oral pathology and oral medicine, and clinical and hospital practice.

DENT 534. Pediatric Dentistry Literature Review II (2)
Second in a series of four courses. See DENT 533 Pediatric Literature Review I.

DENT 535. Fundamentals in Pediatric Dentistry I (3)
Students present selected chapters from major pediatric dentistry review books for critique and discussion. Major strengths and weaknesses are emphasized. The course director then presents the most current information on the subject.

DENT 536. Fundamentals in Pediatric Dentistry II (3)
Second in a series of two courses. See DENT 535 Fundamentals in Pediatric Dentistry I.

DENT 537. Advanced Clinical Pediatric Dentistry I (3)
Students develop skills in diagnosis, radiographic technique, treatment planning, preventive and restorative dentistry, space management, trauma management, and nonpharmacologic behavior management. There is an opportunity to attend hospital grand rounds and physician conferences.

DENT 538. Advanced Clinical Pediatric Dentistry II (3)
Students develop skills in diagnosis, radiographic technique, treatment planning, preventive and restorative dentistry, space management, trauma management, and nonpharmacologic behavior management. There is an opportunity to attend hospital grand rounds and physician conferences.

DENT 539. Endodontic Literature Review I (3)
Provides scientific basis for present and future treatment. Instructs students in critically evaluating literature. Provides format for lifelong self-education. Specific journal assignments summarized, evaluated, and presented for group discussion weekly. First in a series of four courses.

DENT 540. Endodontic Literature Review II (3)
Second in a series of four courses. (See DENT 539.)

DENT 541. Endodontic Literature Review III (3)
Third in a series of four courses. (See DENT 539.)

DENT 542. Endodontic Literature Review IV (3)
Fourth in a series of four courses. (See DENT 539.)

DENT 550. Clinical Pharmacology (1)
This course is designed to enable residents to obtain an understanding of the pharmacology of the most commonly prescribed medications: pharmacotherapeutic concepts in relationship to disease pathophysiology; rational drug therapy in the treatment of disease; drug-drug interactions and drug-disease interactions; adverse drug events. Residents will be expected to apply information on disease pathophysiology and pharmacotherapy to clinical cases. The ultimate goal is to provide relevant information to assist clinicians in practice.

DENT 551. Clinical Endodontic Specialty I (3)
Students present case histories as they encounter them in clinic. Cases discussed in detail and critically evaluated by colleagues and graduate endodontic faculty. Past endodontic literature discussed in detail as each student presents a topic assigned by faculty. Problems in clinic discussed. Several guest endodontists present various techniques and perform them. First in a series of four courses.

DENT 552. Clinical Endodontic Specialty II (3)
Second in a series of four courses. (See DENT 551.)

DENT 553. Clinical Endodontic Specialty III (3)
Third in a series of four courses. (See DENT 551.)

DENT 554. Clinical Endodontic Specialty IV (3)
Fourth in a series of four courses. (See DENT 551.)

DENT 555 Management of Medical Emergencies (1)
This course covers the diagnosis and management of common medical emergencies, with special emphasis on patient evaluation and history taking to prevent such emergencies in the dental office. Venipuncture technique and the use of emergency equipment are demonstrated. Also included is a basic course in cardiopulmonary resuscitation, with practical demonstrations and examinations that lead to certification in basic CPR.

DENT 557 Periodontal Conference I (1)
Presentation of treated patients with advanced periodontal disease. Discussion of the clinical findings, etiology, diagnosis, and treatment plan. Critical review of the different surgical procedures used in therapy and evaluation of postoperative results. First in a series of four courses.

DENT 558. Periodontal Conference II (1)
Second in a series of four courses. (See DENT 557.)

DENT 559. Periodontal Conference III (1)
Third in a series of four courses. (See DENT 557.)

DENT 560. Periodontal Conference IV (1)
Fourth in a series of four courses. (See DENT 557.)

DENT 561. Orthodontics for Pediatric Dentists I (1)
The course is designed to familiarize the pediatric dentistry residents with (1) the clinical evaluation of patients to determine appropriateness of orthodontic intervention, (2) record taking, (3) diagnosis, (4) treatment planning of cases in the mixed and permanent dentition, (5) treatment administration and (6) retention strategies. The primary focus will be on interceptive orthodontics including growth modification and corrective orthodontics in the permanent dentition. First in a series of four courses.

DENT 562. Orthodontics for Pediatric Dentists II (1)
Second in a series of four courses. See DENT 561 Orthodontics for Pediatric Dentists.

DENT 564. Advanced Principles of Occlusion (1)
This course is designed to provide in-depth knowledge of the structure and function of all anatomic components involved in occlusion, biomechanics of articulation and mastication; recording of mastication patterns; diagnosis of occlusal dysfunction; relationship to neuromuscular and temporomandibular joint anatomy and pathology; evidence based therapy used in the management of occlusal and temporomandibular disorders and its significance to inflammatory periodontal disease.

DENT 565. Practice Management I (Ortho) (1)
Seminar and demonstration course designed to prepare the student for all phases of the “business” of orthodontics as well as the responsibility of being a “professional.” Management of the department clinic, private practice management, office visitation, and the business community, and ethics through the use of guest speakers on jurisprudence, personal and professional insurance, accounting, estate planning, risk management, informed consent, banking, office design, organized dentistry and investments. First in a series of four courses.

DENT 566. Practice Management II (Ortho) (1)
Second in a series of four courses. (See DENT 565.)

DENT 567. Practice Management III (Ortho) (1)
Third in a series of four courses. (See DENT 565.)

DENT 568. Practice Management IV (Ortho) (1)
Fourth in a series of four courses. (See DENT 565.)

DENT 569. Orthodontic Literature Review I (1)
The course will focus on contemporary and classic literature selected to cover a wide range of orthodontic topics. The selected literature includes the reading list suggested by the American Board of Orthodontics in preparation for the Part II of the ABO examination. Students will be required to discuss the articles and answer questions pertaining to the reviewed material.

DENT 570. Orthodontic Literature Review II (1)
The course will focus on contemporary and classic literature selected to cover a wide range of orthodontic topics. The selected literature includes the reading list suggested by the American Board of Orthodontics in preparation for the Part II of the ABO examination. Students will be required to discuss the articles and answer questions pertaining to the reviewed material.

DENT 572. Pre-Clinical Principles in Orthodontics (1)
This course is comprised of a series of seminars presented by orthodontic faculty covering topics that will prepare the first orthodontic resident for the initial phases of clinical training.

DENT 573. Advanced Specialty Principles: Clinical I (2)
Full fixed orthodontic appliance treatment of patients in an educational setting. First in a series of four courses.

DENT 574. Advanced Specialty Principles: Clinical II (2)
Second in a series of four courses. (See DENT 573.)

DENT 575. Advanced Specialty Principles: Clinical III (2)
Third in a series of four courses. (See DENT 573.)

DENT 576. Advanced Specialty Principles: Clinical IV (1)
Fourth in a series of four courses. (See DENT 573.)

DENT 577. Clinical Periodontics I (3)
Clinical practice of periodontics supplemented by case evaluation and treatment planning. A comprehensive study of normal and diseased periodontal tissues including etiology and diagnosis. Current modes of therapy-rationale technique, and prognosis. First in a series of four courses.

DENT 578. Clinical Periodontics II (3)
Second in a series of four courses. (See DENT 577.)

DENT 579. Clinical Periodontics III (3)
Third in a series of four courses. (See DENT 577.)

DENT 580. Orthodontics-Oral Surgery Conference (1)
A seminar series involving a multidisciplinary approach to the treatment of patients with severe craniofacial deformities. Begins in the fall of each year (continuing for four semesters) with a series of lectures, followed by assignment of patients supervised jointly by the departments of orthodontics and oral surgery. Meetings held bimonthly to review patient progress, plan treatment, and present cases for discussion. Each student involved in all phases of treatment: presurgical orthodontics, the surgical procedure, finishing orthodontics, and retention.

DENT 581. Clinical Periodontics III (3)
Third in a series of four courses. (See DENT 577.)

DENT 582. Clinical Periodontics IV (3)
Fourth in a series of four courses. (See DENT 577.)

DENT 583. Orthodontic Diagnostic Seminar I (1)
Series of lectures and seminars covering the science of orthodontic diagnosis. Course consists of lectures on techniques of diagnosis, treatment planning, and critique of cases from the department or from faculty private practices. Content also includes long-term follow-up of post retention cases. First in a series of three courses.

DENT 584. Orthodontic Diagnostic Seminar II (1)
Second in a series of three courses. (See DENT 583.)

DENT 585. Orthodontic Diagnostic Seminar III (1)
Third in a series of three courses. (See DENT 583.)

DENT 586. Limited Tooth Movement for the Dental Specialist (1)
A review of the rationale for orthodontic treatment in periodontally diseased patients and in pre-restorative dentitions. Lectures, audio-visual programs, and technique sessions. Diagnosis, treatment planning, and various methods of tooth movement.

DENT 587. Periodontal Prosthesis (1)
This course examines and defines the periodontal prosthesis interrelationships beginning with treatment planning and continuing with discussing the utilization of the combined treatment modalities. It focuses on provisionalization, fi xation treatment, occlusion, aesthetics, removable appliances, and special advanced treatment problems.

DENT 588. Hospital Rotation (2)
Students are assigned full time to anesthesia service and perform such duties as directed by anesthesiology staff: preoperative evaluation of patients, indications and contraindications for specific methods of anesthesia, relationship of medical problems to anesthesia risks, assisting in preparation of patients for anesthesia, intubation and anesthesia management, assisting in the management of complications, and post-anesthetic recovery management including monitoring of vital signs, blood gases, EKG, etc., and participation in post-anesthesia rounds and conferences.

DENT 591. Orthodontics for Pediatric Dentists I (1)
Third in a series of four courses. See DENT 561 Orthodontics for Pediatric Dentists.

DENT 592. Orthodontics for Pediatric Dentists IV (1)
Fourth in a series of four courses. See DENT 561 Orthodontics for Pediatric Dentists.

DENT 595. Advanced Periodontal Seminar I (1.5)
Series of seminars covering clinical, histological, and physiological aspects of the periodontium in health and disease, etiology, diagnosis, prognosis, prevention, and treatment of periodontal disease, as well as the relationship of periodontics to other phases of dentistry. First in a series of four courses.

DENT 596. Advanced Periodontal Seminar II (1.5)
Second in a series of four courses. (See DENT 595.)

DENT 597. Advanced Periodontal Seminar III (1.5)
Third in a series of four courses. (See DENT 595.)

DENT 598. Advanced Periodontal Seminar IV (1.5)
Fourth in a series of four courses. (See DENT 595.)

DENT 631. Pediatric Dentistry Literature Review III (2)
Third in a series of four courses. See DENT 533 Pediatric Dentistry Literature Review I.

DENT 632. Pediatric Dentistry Literature
Review IV (2)
Fourth in a series of four courses. See DENT 533 Pediatric Dentistry Review I.

DENT 637. Advanced Clinical Pediatric Dentistry III (3)
Third in a series of four courses. See DENT 537 Advanced Clinical Pediatric Dentistry I. Additionally, residents learn to manage children with complex special health care needs, including inpatients. Residents interact and coordinate with other medical departments within the hospital, and with outside clinics and practitioners.

DENT 638. Advanced Clinical Pediatric Dentistry IV (3)
Fourth in a series of four courses. See DENT 637 Advanced Clinical Pediatric Dentistry III.

DENT 639. Advanced Seminar in Pediatric Dentistry I (3)
Students present patient cases for in-depth discussion of specific clinical problems.

DENT 640. Advanced Seminar in Pediatric Dentistry II (3)
Second in a series of two courses. See DENT 637 Pediatric Dental Seminar I.

DENT 651. Thesis M.S.D. (1 - 9)
Subsections for each program area of study: endodontics, orthodontics, periodontics, or pediatric dentistry.

DENT 661. Conscious IV Sedation I (2)
Didactic portion covers physical evaluation, physiology, pharmacology, emergencies, and techniques. Cardiac monitoring, basic life support, and advanced cardiac life support.

DENT 662. Conscious IV Sedation II (1)
(See DENT 661.) Supervised clinical experience in conscious IV sedation.

DENT 663. Implant Dentistry I Periodontics (1)
Designed to enhance the understanding of current concepts and their role in the multidisciplinary treatment of the patient.

DENT 664. Implant Dentistry II Periodontics (1)
(See DENT 663.) Clinical demonstration, participation, and case presentation in implant dentistry.

DENT 682. Cephalometrics (1)
A lecture and laboratory course in cephalometric roentgenography leading to a thorough understanding of craniofacial radiographic techniques. Use of x-rays and radiation hygiene, and technical and interpretive proficiency.

DENT 683. Imaging and IT in the Orthodontic Office (1)
This course is designed to give some basic computer knowledge and prepare the resident for the use of computers in the orthodontic office.

DENT 684. Radiology and Cephalometrics (1)
Fundamentally related to cephalometric radiography, skeletal morphology, and cephalogram interpretations of historic analyses via the Krogman-Sassouni Syllabus. Also, clinical evaluations of hard and soft tissue relationships of the airway and skeletal maturation are presented. The use of Bolton Standards in craniofacial analysis is stressed.

DENT 685. Literature Review in Periodontics I (1)
Comprehensive discussion of selected articles related to clinical periodontology and basic sciences of significance to periodontal research and therapy.

DENT 686. Literature Review in Periodontics II (1)
(See DENT 685.)

DENT 687. Literature Review in Periodontics III (1)
Third in a series of four courses. See DENT 685.

DENT 688. Literature Review in Periodontics IV (1)
Fourth in a series of four courses. See DENT 685.

DENT 690. Pediatric Dental Residency (1 - 10)
Allows registration for non-degree-seeking students in graduate level courses at the direction of the department.

DENT 692. Restorative Fellowship (6)
Provides for 12 months of clinical and didactic training in all phases of general dentistry beyond the scope of predoctoral dental education. Areas of emphasis include advanced restorative techniques, proper selection of restorative materials, restoration of implants, fixed and removable prosthodontics, and esthetic dentistry. At the discretion of the course director, students may register for an additional 12 months, during which time the student will build on knowledge attained during the first year, continue with advanced didactic instruction, expand their clinical experience through continued patient care, participate in clinical research, and have teaching opportunities.

DENT 694. Fellowship in Dentistry (6)
The Fellowship in Dentistry provides for advanced clinical, didactic and research training beyond the scope of the pre-doctoral dental education.

DENT 695. Oral Surgery Residency (1 - 10)
Allows registration for non-degree-seeking students in graduate level courses at the direction of the department.

COURSES DESCRIPTIONS (DSPR)

DSPR 232. Periodontics (1)
A comprehensive course in periodontology including etiology, diagnosis, radiographic, interpretations and prognosis.

DSPR 234. Oral Pathology (3)
Diseases and abnormalities of the teeth and adjacent hard and soft tissues. Includes periodontal, pulpal, and periapical diseases as well as cysts, tumors, developmental anomalies, and oral aspects of systemic disease.

DSPR 236. Cariology (1)
Etiology, clinical and radiologic features, risk assessment, and prevention of caries.

DSPR 239. Neoplasia (.5)
Topics covered in this educational module include tumor nomenclature, features of benign versus malignant tumors, cytologic characteristics of cancer cells, pathogenesis and prognosis.

DSPR 333. Management of Medical Emergencies (1)
Patient evaluation, diagnosis and treatment of life-threatening emergencies that may arise in the course of dental treatment. Includes instruction in basic life support and cardiopulmonary resuscitation.

DSPR 341. Oral Diagnosis and Radiology (2)
This course helps the beginning clinician develop and understand the diagnostic process. It is designed to present to the student a method by which the common oral problems facing the dental practitioner can be recognized, diagnosed, evaluated and managed.

DSPR 342. Oral Cancer Diagnosis (1)

DSPR 352. Dental Management of Medical Disease (1)
Hospital procedures and protocol and the management of surgical complications and emergencies. General principles of surgery as applied to selected topics.

COURSE DESCRIPTIONS (DSRE)

DSRE 335. Clinical Pharmacology (2)
This course is designed to review common pharmacologic agents encountered in the general population. Emphasis is placed on the prescription, action, and interaction of dental pharmacologic agents as well as the implication of medical prescriptions on dental therapy. The course culminates in the evaluation of case studies and problem solving in drug therapy.

DSRE 354. Oral Surgery IV (1)

DSRE 374. Fixed Prosthodontics (1.5)
Diagnosis and treatment planning in fixed prosthodontics and construction of simple crowns and bridges. Lecture series concerning the discussions and demonstration of elementary and advanced methods of restoring occlusion, esthetics, and speech using fixed prosthesis.

DSRE 391. Endodontics (1)
Recognition of endodontic pulpal health and the changes that occur in the transition from health to
and death, cell signaling, differentiation and gene expression. The cell cycle, mechanisms for cell damage, repair and death, cell signaling, differentiation and gene expression. This course serves as a foundation for the modules in Health and Wellbeing and Disease Processes.

HEWB 123. Facial Growth (1)
Introduction to the normal growth and development of the human face from embryology to adult.

HEWB 124. Masticatory Dynamics (2)
Descriptive anatomy of masticatory structures with emphasis on deciduous and permanent teeth and the temporomandibular-mandibular movements, and the fundamental concepts of the functional relationships between the dentition and the temporomandibular joint. Lectures on comparative anatomy and variations in tooth morphology.

HEWB 126. Masticatory Dynamics Lab (1.5)
Companion pre-clinical component to HEWB 124. Laboratory exercises and assignments include drawings, waxups and tooth identification, and use of semi-adjustible articulator.

HEWB 128. Body as Host (2.5)
This educational module focuses on the role of bacteria, viruses, and fungi in immune function that preserves and maintains health and discusses host changes that occur during oral and systemic disease processes.

HEWB 130. Oral Histology (1.5)
Development of teeth and supporting tissues. Histology and ultrastructure cytology of the oral region with emphasis on the calcified tissues.

HEWB 134. Head and Neck Structure and Function (2)
This course explores the developmental, cellular, physiologic, anatomic and biochemistry components of the head and neck region. The focus is both healthy functioning and disease of the head and neck area.

HEWB 249. DentoFacial Morphology (1)
Provides the dental student with an introduction to the assessment of dynamic faces and the relatively static dentition. The course details the etiologies and characteristics of various malocclusions including developmental disharmonies observed during the growth and development of a child. Primary emphasis is on empowering the student in the diagnosis of malocclusions employing study casts, intra and extra-oral photographs and cephalograms.

**COURSE DESCRIPTIONS (HEWB)**

**HEWB 121. Foundations of Life Science (4.5)**
This course includes an introduction to basic elements of cell structure and function. This includes the characteristics and role of different types of cells, the cell cycle, mechanisms for cell damage, repair and death, cell signaling, differentiation and gene expression. This course serves as a foundation for understanding the health and well-being of the body.

**HEWB 131. Heart and Lungs in Disease and Health (2)**
This course provides students with the understanding of the structural and functional relationships of the cardiovascular and respiratory systems. This integrated approach serves as a foundation for understanding the health and well-being of the systems. This education module also facilitates student recognition of cardiovascular and respiratory dysfunction that may be present in their patients and helps students understand how such conditions may affect their patients’ general and oral health.

**HEWB 232. Health and Disease: Renal and Hematologic Systems (2)**
This educational module focuses on the understanding of the structural and functional relationships of the renal and hematologic systems. This integrated approach serves as a foundation for understanding the maintenance of health and well-being as well as disease processes within the body.

**HEWD 241. Gastrointestinal System in Health and Disease (2)**
This educational module focuses on the understanding of the structural and functional relationships of the gastrointestinal system in health and disease.

**HEWD 243. Endocrine and Reproductive Systems in Health and Disease (1.5)**
This educational module focuses on the understanding of the structural and functional relationships of the many components of the endocrine and reproductive systems in health and disease.

**HEWD 245. Musculoskeletal System in Health and Disease (1.5)**
This educational module focuses on the understanding of the structural and functional relationships of the many components of the musculoskeletal system in health and disease.

**HEWD 246. Neuroscience in Health and Disease (2)**
An integrated approach to the anatomy and physiology of the human nervous system. Analyzes neural phenomena at both cellular and systems levels.

**COURSE DESCRIPTIONS (INQU)**

**INQU 101. Orientation to Small Group Learning (.5)**
This module provides a framework for small group learning and independent study emphasizing the use of evidence and academic resources.

**INQU 102. ACE: Knowing the Patient (2)**
This ACE introduces the student to professional patient interaction and evaluation in a simulated environment. Students will develop interview techniques, learn patient appraisal skills, and techniques for communicating effectively in a health care environment. Students will experience patient interviews and assessment in a simulated environment with live patients.

**INQU 103. Integration Conference (.5)**
This bi-weekly conference integrates basic science principles and clinical principles to further define the role that science plays in clinical practice. Examples from basic science and clinical research will be related to functional applications in dental care.

**INQU 104. Integration Conference (1)**
This bi-weekly conference integrates basic science principles and clinical principles to further define the role that science plays in dental practice. Examples from basic science and clinical science research will be related to functional applications in dental care.

**COURSE DESCRIPTIONS (LDRS)**

**LDRS 111. Health, Science and Society (2.5)**
This intensive sequence concerning health and society provides a context for students to view their professional education based on the mission of the profession: “to protect and improve the health of individuals and the society.” This course introduces students to epidemiology, biostatistics, creation and evaluation of scientific evidence, and evidence-based practice. This course also gives students an introduction to small group learning.

**LDRS 212. Dental Auxiliary Management (1)**
Lectures in the principles of auxiliary management. Overview of organization management, communication skills, duty delegation, and organization of work. Information is provided about the dental allied health fields, duties, responsibilities, training, and testing.

**LDRS 310. Professional Development II (1)**
Major issues and trends that affect oral health and the mission of dentistry in the United States. Behavioral knowledge and skills essential to the oral health practitioner’s ability to deliver effective patient-centered care.

**LDRS 313. Dental Patient Management/Risk Management (1)**
Principles of patient management and risk management are reviewed. The primary focus is directed toward the skills associated with communication. A variety of examples of malpractice are reviewed and discussed. Other areas of risk are discussed such as infection and occupational hazards related to EPA and OSHA standards.
COURSE DESCRIPTIONS (MAHE)

MAHE 141. Preventive Periodontics (1)

MAHE 144. Preventive Periodontics Clinic (1)
Companion clinical component to MAHE 143. Clinical application of methods for the prevention and maintenance of periodontal health in patients. The importance of patient education, motivation, and cooperation in present methods of prevention and plaque control.

MAHE 145. ACE: Outreach Preventive Dentistry (1.5)
This ACE introduces the student to professional patient interaction and evaluation in a simulated environment. Students will develop interview techniques, learn patient appraisal skills, and techniques for communicating effectively in a health care environment. Students will experience patient interviews and assessment in a simulated environment with live patients.

MAHE 242. Periodontics (1)
Companion clinical component for DSPR 232. Students observe and assist at periodontal surgical procedures on moderately advanced periodontal diseases. Treatment includes root planing, curettage, occlusal adjustment, minor tooth movement and case maintenance.

MAHE 340. Nutrition for Dentistry (1)
General nutrition concepts are presented in addition to aspects pertinent to the practice of dentistry.

COURSE DESCRIPTIONS (REHE)

REHE 151. Dental Anatomy (3)
Descriptive anatomy of masticatory structures with emphasis on deciduous and permanent teeth and the temporomandibular-mandibular movements, and the fundamental concepts of the functional relationships between the dentition and the temporomandibular joint. Lectures on comparative anatomy and variations in tooth morphology.

REHE 152. Basic Procedures in Fixed Prosthetics (2)
To introduce and familiarize the dental student to basic principles related to fixed prostodontics. The introduction will emphasize principles of engineering and preparation designs, full coverage retains for both metal and ceramic restorations.

REHE 153. Dental Anatomy Laboratory (5)
Companion preclinical component to REHE 151. Laboratory exercises and assignments include drawings, waxes, tooth identification, and use of semi-adjustable articulator.

REHE 154. Basic Procedures in Fixed Prosthetics Lab (1.5)
Laboratory component of REHE 152.

REHE 155. DentSim Laboratory (1)
This course covers the criteria, techniques and practice of preparing 'ideal/standard' operative preparations. The restorative procedures will be performed on typodont teeth mounted in a computer assisted simulator (DentSim).

REHE 156. DentSim Laboratory (1)
This course covers the criteria, techniques and practice of preparing 'ideal/standard' operative preparations. The restorative procedures will be performed on typodont teeth mounted in a computer assisted simulator (DentSim).

REHE 158. Dental Materials (5)
The primary goal is to introduce basic material science concepts needed to evaluate, compare and select materials for a specific application. Knowledge of properties, indications and limitations of different clinical and laboratory materials will be presented. The effect of manipulation variables on material properties will be emphasized.

REHE 229. Introduction to Radiography (1.5)
Initial course consisting of lecture and laboratory covering basic principles of radiography. Included are: instructions on taking intraoral radiographs, radiation physics involved in x-ray generation and the parts and function of the x-ray unit, radiation biology of x-ray interaction with tissue, head and neck anatomy and pathology with regards to radiographic interpretation. Each student will have a clinic rotation.

REHE 251. Surgical Techniques I (1.5)
This educational module introduces basic surgical techniques in the field of oral and maxillofacial surgery, with special emphasis on the simple and surgical extraction of teeth. Topics will include wound healing, suture technique, principles of surgery, instrumentation, surgical exodontia, prescription writing, and introductory pain management.

REHE 252. Pain Control (1)
Anatomy pertaining to local anesthesia. Drugs used in local anesthesia and technique of administration. Management of complications. Slides and clinical demonstrations.

REHE 253. Basic Procedures in Esthetics (1)

REHE 254. Pharmacology (4)
This course introduces students to the principles of pharmacology and to the mechanisms of drug action in the context of common disease states.

REHE 256. Advanced Principles of Radiography (5)
This is a continuation of REHE 229. This course will explore alternative intraoral radiographic techniques, extraoral radiography techniques, their uses and limitations. Included is a discussion of radiation safety in the dental office and film processing. Each student will have an opportunity to gain "hands-on" experience in patient alignment for a panoramic radiograph and alternative tools for taking quality films. Each student will have a clinic rotation.

REHE 257. Prosthodontic Technology (2)
A lecture-demonstration-laboratory approach to complete denture prosthesis construction. Emphasis on certain fundamental biological considerations of the edentulous patient, such as the oral membranes, muscles, bones, and phonetics and how they relate to the technical aspects of denture constructions.

REHE 258. Treatment Planning (1)
This course provides lecture presentations to help prepare the student to develop skills in patient diagnosis and treatment planning. The lectures will guide the students through the thought processes necessary in the development of workable treatment plans. The emphasis will be on exposing the students to the approach used in our clinic of providing the patients with options of optimal, alternative and emergency diagnostic or recall treatment plans using decisional analysis.

REHE 259. Basic Procedures in Fixed Prosthodontics II (2)
This course builds upon those core elements covered in REHE 152/154. Emphasis on principles of engineering for fixed partial dentures, preparation and design of fixed partial dentures, considerations for the restoration of endodontically involved teeth, and definitive and provisional fixed partial denture restorations. Introduces dental material topics related to fabrication of a fixed partial denture restoration, including: chemomechanical soft tissue retraction, die spacers, investments, casting and casting alloys, ceramics, soldering, provisional materials, prefabricated and custom post and core systems. Emphasis on principles of engineering for fixed partial dentures, preparation and design of fixed partial dentures, considerations for the restoration of endodontically involved teeth, and definitive and provisional fixed partial denture restorations. Introduces dental material topics related to fabrication of a fixed partial denture restoration, including: chemomechanical soft tissue retraction, die spacers, investments, casting and casting alloys, ceramics, soldering, provisional materials, prefabricated and custom post and core systems.

REHE 260. Basic Procedure Fixed Prosthodontics Lab (2)
Laboratory component of REHE 259.

REHE 262. Basic Procedures in Operative Dentistry (2)
This course, together with REHE 253, covers the criteria, techniques, and practice of preparing "ideal/standard" operative preparations and placement of operative restorations. The emphasis is on posterior amalgam preparations and restorations, as well as an introduction to cast gold inlay and onlays. Students will be introduced to basic cariology and radiology as it relates to operative dentistry. In addition, the composition and properties of amalgam, liners and bases, investment material, and gold will be reviewed. Students will work on typodont and extracted teeth.

REHE 263. Basic Procedure in Esthetics Lab (5)

REHE 264. Endodontics (1.5)
Introduction to methods and materials necessary for successful root canal therapy.

REHE 266. Partial Denture Design (2)
Recognition of clinical situations that require partial denture therapy are developed. Introduction to the terms used in removable partial prosthodontics. Partially edentulous casts diagnosed, designed, surveyed, contoured for path of insertion, prepared for rest seat areas, and finally tripoded for further orientation by each student on his or her own casts. Thus the design, surveying, and clinical applications for removable partial service are presented in order to maintain optimal oral health conditions and to provide a sound basis for the prosthesis.

REHE 267. Prosthodontic Technology (2)
Companion preclinical component to REHE 257. Each student constructs a complete set of dentures using laboratory manikin as patient. Although REHE 267 was conceived as a technique course, one of its principal objectives is to prepare the student for the clinical aspect of dental education.

REHE 268. BP Competency Lab (1.5)
REHE 272. Basic Procedure Operative (1)
Laboratory component of REHE 262.

REHE 274. Endodontics (5)
Companion laboratory component to REHE 264. Complete endodontic treatment performed by each student on extracted teeth using gutta percha.

REHE 276. Partial Denture Design Lab (1.5)
Theories of removable partial denture construction which enable the student to perform exercises that are associated with the techniques used to achieve a successful result. Students will be evaluated by various testing methods.

REHE 351. Surgical Periodontics (1)
Case analysis and treatment planning for various conditions of periodontal disease. Case presentation to patients. Basic surgical technique and advanced types of periodontal surgery demonstrated. Occlusal analysis and occlusal adjustment considered.

REHE 352. Oral Rehabilitation (1)
The didactic curriculum provides a series of lectures that emphasize the importance of evaluation of the entire stomatognathic system for treatment planning. Causal relationships influenced by misdirected forces and hyperfunction are discussed.

REHE 353. Treatment Planning II (0.5)
This course provides formal instruction designed to prepare the students for patient management, practice management, and treatment planning. Emphasis on devising optimal, alternative and emergency diagnostic treatment plans.

REHE 355. Esthetic Dentistry (1)
Lectures and demonstrations. The indications, contraindications, limitations, and use of modern techniques and materials in esthetic dentistry.

REHE 360. Implant Dentistry (1)
Didactic and laboratory instruction that introduces the concepts used in implantology. These include the scientific basis of implant tissue reactions, and the surgical and restorative protocols. Emphasis is placed on slide presentation of actual cases. An opportunity is given to students to place an implant in an artificial mandible and to manipulate implant components on a typodont.

COURSE DESCRIPTIONS (REMA)
REMA 332. Dental Care for the Aging Population (1)
The didactic curriculum provides a general background on the changing demographics of our population as well as knowledge about the medical, social, psychological, and dental problems many older Americans face today. Dental problems common to the elderly, approaches to treatment planning and the provision of care for this unique group in traditional and non-traditional settings are explored.

REMA 341. Oral Health and Dentofacial Mechanics in the Child Patient (2)
SCHOOL OF LAW

Robert H. Rawson Jr., J.D., Interim Dean

Founded in 1892, the School of Law is a charter member of the Association of American Law Schools and of the national law honorary society, the Order of the Coif. It was among the first law schools accredited by the American Bar Association.

The school has a student body of about 700 and a full-time faculty of about fifty. In the school’s early years, most students came from Ohio and remained in Ohio after graduation. Today, students come from all parts of the country, and there are Case law graduates in virtually every state (and in several foreign countries), and certainly in every major U.S. city. An active and aggressive Career Services Office works with students, graduates, and prospective employers from all over the nation to maximize job opportunities.

SCHOOL OF LAW ADMINISTRATION

Robert H. Rawson, Jr., J.D. (Harvard University)
Interim Dean

Sharona Hoffman, J.D. (Harvard University), LL.M. (University of Houston)
Senior Associate Dean for Academic Affairs and Co-Director of the Law-Medicine Center

Jonathan L. Entin, J.D. (Northwestern University)
Associate Dean for Academic Affairs

Lisa M. Mencini, M.B.A. (Cleveland State University)
Associate Dean for Development and Public Affairs

Sarah McFarlane Polly, J.D. (Ohio State University)
Associate Dean for Student Services

Alyson Sutter Alber, J.D. (University of Virginia)
Assistant Dean for Special Projects

Kelli Curtis, J.D. (Ohio State University)
Assistant Dean for Career Services

Elaine B. Greaves, L.L.B. (York University Osgoode Hall), L.L.M. (New York University)
Assistant Dean for Admissions

Crystal Taylor, M.B.A. (Indiana University)
Assistant Dean for Finance and Administration

Jonathan H. Adler, J.D. (George Mason University)
Director of the Center for Business Law and Regulation

Jessica Wilen Berg, J.D. (Cornell University)
Associate Director of the Law-Medicine Center

Craig M. Boise, J.D. (University of Chicago), L.L.M. (New York University)
Associate Director of the Center for Business Law and Regulation

Kathleen M. Carrick, M.L.S. (University of Pittsburgh), J.D. (Cleveland State University)
Director of the Law Library

Laura Brown Chisolm, J.D. (Case Western Reserve University)
Director of the Law Library

George W. Dent Jr., J.D. (Columbia University), L.L.M. (New York University)
Associate Director of the Center for Business Law and Regulation

Jon Grootzinger Jr., J.D. (Cornell University)
United States Director of the Canada-United States Law Institute

Katherine Hessler, J.D. (College of William & Mary), L.L.M. (Georgetown University Law Center)
Associate Director of the Center for the Interdisciplinary Study of Conflict and Dispute Resolution

Jessie Hill J.D. (Harvard University)
Associate Director of the Center for Social Justice

Lewis R. Katz, J.D. (Indiana University)
Director of the LLM in United States and Global Legal Studies

Henry T. King Jr., LL.B. (Yale University)
Chairman of the Canada-United States Law Institute

Raymond Shih Ray Ku, J.D. (New York University)
Co-Director of the Center for Law, Technology, and the Arts

Robert P. Lawry, Diploma in Law (Oxford University), J.D. (University of Pennsylvania)
Director of the Center for Professional Ethics

Wilbur C. Leatherberry, J.D. (Case Western Reserve University)
Director of Skills Courses and Advocacy Programs

Jacqueline D. Lipton, Ph.D. (Griffith University), LL.B. (University of Melbourne), L.L.M. (Cambridge University), L.L.M. (Monash University)
Co-Director of the Center for Law, Technology, and the Arts, and Associate Director of the Frederick K. Cox International Law Center

Judith P. Lipton, M.S.S.W. (University of Wisconsin), J.D. (University of Connecticut)
Co-Director of the Milton A. Kramer Law Clinic Center

Kenneth R. Margolis, J.D. (Case Western Reserve University)
Co-Director of the Milton A. Kramer Law Clinic Center

Kevin C. McMunigal, J.D. (University of California, Berkeley)
Acting Director of the Center for Professional Ethics

Maxwell J. Mehlman, J.D. (Yale University)
Director of the Law-Medicine Center

Craig Allen Nard, J.D. (Capital University), J.S.D., LL.M. (Columbia University)
Director of the Center for Law, Technology, and the Arts

Michael P. Scharf, J.D. (Duke University)
Director of the Frederick K. Cox International Law Center

Calvin William Sharpe, J.D. (Northwestern University), M.A. (Chicago Theological Seminary)
Director of Center for the Interdisciplinary Study of Conflict and Dispute Resolution

Robert N. Strassfeld, J.D. (Virginia)
Director of the Institute for Global Security Law and Policy; Associate Director of the Frederick K. Cox International Law Center

Megan Allen, M.L.I.S. (Kent State University)
Electronic Services and Training Librarian
SCHOOL OF LAW FACULTY

Jonathan H. Adler, J.D. (George Mason University)
Professor of Law and Director of the Center for Business Law and Regulation
Arthur D. Austin II, J.D. (Tulane University)
Edgar A. Hahn Professor of Law in Jurisprudence
Jessica Wilen Berg, J.D. (Cornell University)

Assistant Director of Alumni Relations and Operations
Robert Myers, J.D. (Cleveland State University), M.L.S. (Kent State University)
Head of Serials and Collection Access Librarian
Lisa Peters, J.D. (Georgetown University), M.L.S. (Rutgers University)
Head of Access Services
Rachel Nicole Pelaia, B.A. (University of Dayton)
Manager of Marketing & Communications
Sara Jean Petite, M.L.S. (Kent State University)
Government Resource Manager and Bibliographic Access Librarian
Tonya Phillips, B.S., Howard University
Director of Student Financials and Associate Director of Admissions
Carl Roloff, B.S. (Capella University)
Webmaster
Jay Allen Ruffner, B.S. (Case Western Reserve University)
Director of Academic Services
Adria J. Sankovic, M.A. (Case Western Reserve University)
Assistant Director for the LL.M. in United States and Global Legal Studies
Alice Simon, M.A. (University of Baltimore)
Manager of Communications for the Academic Centers and Law Journals
Darlene A. Shuler, M.Ed. (Xavier University)
Assistant Director of Admissions and Diversity Initiatives
Paula J. Slaughter, B.A. (Columbus University)
Associate Director for Budget and Library Finance
Dan Ujcz J.D (Case Western Reserve University)
Managing Director of the Canada-United States Law Institute

SCHOOL OF LAW FACULTY

Jonathan H. Adler, J.D. (George Mason University)
Professor of Law and Director of the Center for Business Law and Regulation
Arthur D. Austin II, J.D. (Tulane University)
Edgar A. Hahn Professor of Law in Jurisprudence
Jessica Wilen Berg, J.D. (Cornell University)

Assistant Director of Alumni Relations and Operations
Robert Myers, J.D. (Cleveland State University), M.L.S. (Kent State University)
Head of Serials and Collection Access Librarian
Lisa Peters, J.D. (Georgetown University), M.L.S. (Rutgers University)

Carl Roloff, B.S. (Capella University)
Webmaster
Jay Allen Ruffner, B.S. (Case Western Reserve University)
Director of Academic Services
Adria J. Sankovic, M.A. (Case Western Reserve University)
Assistant Director for the LL.M. in United States and Global Legal Studies
Alice Simon, M.A. (University of Baltimore)
Manager of Communications for the Academic Centers and Law Journals
Darlene A. Shuler, M.Ed. (Xavier University)
Assistant Director of Admissions and Diversity Initiatives
Paula J. Slaughter, B.A. (Columbus University)
Associate Director for Budget and Library Finance
Dan Ujcz J.D (Case Western Reserve University)
Managing Director of the Canada-United States Law Institute

SCHOOL OF LAW FACULTY

Jonathan H. Adler, J.D. (George Mason University)
Professor of Law and Director of the Center for Business Law and Regulation
Arthur D. Austin II, J.D. (Tulane University)
Edgar A. Hahn Professor of Law in Jurisprudence
Jessica Wilen Berg, J.D. (Cornell University)
Richard Gordon, J.D. (Harvard University)  
Associate Professor of Law

Jon Groetzinger Jr., J.D. (Cornell University)  
Associate Professor of Law; United States Director of the Canada-United States Law Institute.

Jessie Hill J.D. (Harvard University)  
Associate Professor; Associate Director, Center for Social Justice

Sharon Hoffman, J.D. (Harvard University), LL.M. (University of Houston)  
Professor of Law and Bioethics, and Co-Director of the Law-Medicine Center

Daniel Jaffe, J.D. (Columbia University)  
Assistant Professor of Law

Erik M. Jensen, M.A. (University of Chicago), J.D. (Cornell University)  
David L. Brennan Professor of Law

Lewis R. Katz, J.D. (Indiana University)  
John C. Hutchins Professor of Law and Director of the LL.M. in United States and Global Legal Studies

Maureen Sheridan Kenny, J.D. (Cleveland Marshall)  
Associate Professor of Law

Henry T. King Jr., LL.B. (Yale University)  
Professor of Law and U.S. Chairman of the Canada-United States Law Institute

Juliet P. Kostritsky, J.D. (University of Wisconsin)  
John Homer Kapp Professor of Law

Raymond Shih Ray Ku, J.D. (New York University)  
Professor of Law and Co-Director of the Center for Law, Technology, and the Arts

Wilbur C. Leatherberry, J.D. (Case Western Reserve University)  
Professor of Law and Director of Skills Program and Externships

Kenneth F. Ledford, J.D. (North Carolina University)  
Associate Professor of History and Law

Jacqueline D. Lipton, Ph.D. (Griffith University), LL.B. (University of Melbourne), LL.M. (Cambridge University), LL.M. (Monash University)  
Professor of Law, Co-Director of the Center for Law, Technology and the Arts, and Associate Director of the Frederick K. Cox International Law Center

Judith P. Lipton, M.S.S.W. (University of Wisconsin), J.D. (University of Connecticut)  
Professor of Law and Co-Director of the Milton A. Kramer Law Clinic Center

Kenneth R. Margolis, J.D. (Case Western Reserve University)  
Professor of Law and Co-Director of the Milton A. Kramer Law Clinic Center

Louise W. McKinney, J.D. (Case Western Reserve University)  
Professor of Law, Milton A. Kramer Law Clinic Center

Kevin C. McMunigal, J.D. (University of California, Berkeley)  
Judge Ben C. Green Professor of Law

Laura McNally, J.D. (Syracuse University)  
Associate Professor of Law

Maxwell J. Mehlman, J.D. (Yale University)  
Arthur E. Petersilge Professor of Law, Professor of Bioethics, and Director of the Law-Medicine Center

Kathryn Sords Mercer, M.S.S.W., J.D., Ph.D. (Case Western Reserve University)  
Associate Professor of Law, Lawyering Skills

Dale A. Nance, M.A. (University of California, Berkeley), J.D. (Stanford University)  
Professor of Law

Craig Allen Nard, J.D. (Capital University), J.S.D., LL.M. (Columbia University)  
Tom J.E. and Bette Lou Walker Professor of Law and Director of the Center for Law, Technology and the Arts

Cassandra Burke Robertson, J.D. (University of Texas)  
Assistant Professor of Law

Matthew Rossman, J.D. (New York University)  
Associate Professor of Law, Milton A. Kramer Law Clinic Center

Michael P. Scharf, J.D. (Duke University)  
Professor of Law and Director of the Frederick K. Cox International Law Center

Carolyn Seymour, J.D. (Michigan University)  
Associate Professor of Law

Morris G. Shanker, M.B.A., J.D. (University of Michigan)  
Professor of Law

Calvin William Sharpe, J.D. (Northwestern University), M.A. (Chicago Theological Seminary)  
John Deaver Drisko-Baker & Hostetler Professor of Law and Director of Center for the Interdisciplinary Study of Conflict and Dispute Resolution

Gary J. Simson, J.D. (Yale University)  
Joseph C. Hostetler-Baker & Hostetler Professor of Law

Rosalind Simson, B.A., Ph.D., (Yale University)  
Associate Professor of Law

Ann Southworth, J.D. (Stanford University)  
Professor of Law

Ted Steinberg, B.A., (Tufts University)  
Ph.D., (Brandeis University)  
Professor of History and Law

Robert N. Strassfeld, J.D. (Virginia)  
Professor, Director of the Institute for Global Security Law and Policy; Associate Director of the Frederick K. Cox International Law Center

SECONDARY FACULTY

Scott Fine, M.B.A. (Stanford University)  
Professor for the Practice of Banking & Finance and Law

Brian Gran, Ph.D. (Northwestern University)  
Assistant Professor of Sociology and Law

Ted Steinberg, Ph.D. (Brandeis University)  
Professor of History and Law

Martha A. Woodmansee, M.A., Ph.D. (Stanford University)  
Professor of English and Law

ADMISSION

This section relates to the J.D. programs; see below for information regarding admission to LL.M. programs. For complete information about admission policies and procedures, and about the law program generally, see the law school’s current admissions bulletin, which the school’s Office of Admissions will mail on request.

Admission Procedures

Since the School of Law receives many more applications than there are places in the first-year class, the admissions process is selective. Each application receives full file review. When we review files, our principal question is this: Is a candidate ready to meet the intellectual challenges of our program? The admissions committee evaluates each applicant’s credentials, looking carefully at the candidate’s undergraduate grade-point average and LSAT score as well as other, non-quantitative factors, such as level and difficulty of undergraduate
SCHOOL OF LAW

course work, writing ability, and work experience. The school receives applications as early as September for admission in the following fall. Beginning in January, the admissions office takes action on the applications; as decisions are made, applicants are notified. Most decisions are made between January 1 and May 1. At that point the class is filled, and the office starts a waiting list of candidates. As vacancies occur up to the date of registration, candidates are drawn from the list.

Admission Requirements

ADMISSION TO REGULAR STANDING

In order to enroll as a candidate for the Juris Doctor (J.D.) degree, a student must have a bachelor's degree from an accredited institution. Every applicant must have taken the Law School Admission Test (LSAT) and must have registered with the Law School Data Assembly Service (LSDAS) before the application deadline.

ADMISSION TO ADVANCED STANDING

Students currently enrolled in accredited law schools may apply for admission with advanced standing. They must complete four semesters in residence at Case Western Reserve to receive the J.D. degree.

ADMISSION AS A VISITOR

We accept students enrolled at other law schools who wish to take courses at Case Western Reserve for credit toward their own school's degree requirements. Such students must submit with their application a letter from their dean indicating that they are in good standing and that the other law school will accept the academic credits from Case Western Reserve.

FINANCIAL INFORMATION

See "Financial Information" section of this bulletin.

ACADEMIC PROGRAMS

Juris Doctor (J.D.) Degree

The School of Law offers the Juris Doctor (J.D.) degree as well as dual-degree programs (see below). The J.D. degree requires successful completion of 88 credit hours, of which 38 hours are in required courses and 50 hours are elective courses. For students in dual-degree programs, 12 hours of elective credits are waived in consideration of completion of the dual-degree (9 hours for the J.D./CNM program). The first year program for the J.D. degree consists mainly of the required basic courses. In addition, in the spring semester students select a 2-credit elective "perspectives" course; the menu of first-year "perspectives" courses varies from year to year.

FALL SEMESTER REQUIRED COURSES

- LAWS 101, Introduction to Lawyering (1)
- LAWS 122, Torts (4)
- LAWS 123, Contracts (4)
- LAWS 131, Criminal Law (4)
- LAWS 144, Property (4)
- LAWS 201, CORE Lawyering Skills I (2)

SPRING SEMESTER REQUIRED COURSES

- LAWS 104, Civil Procedure (4)
- LAWS 131, Criminal Law (4)
- LAWS 144, Property (4)
- LAWS 202, CORE Lawyering Skills II (2)
- Choice of one "perspectives" course (2)

In the second year, every student must take LAWS 375, Professional Responsibility (3) and the remaining CaseArc requirements (two courses of 2 credits each). Otherwise, the curriculum is elective after the first year. As a requirement for graduation, every student must complete a substantial research paper.

CURRICULAR CONCENTRATIONS

We offer a number of curricular concentrations for both the Juris Doctor and US & Global Legal Studies degrees. These optional concentrations allow students to provide a concentrated focus for some of their elective coursework. For complete information about the optional concentration program, see the law school's website or contact the Academic Services Office at the School of Law. The current available curricular concentrations are:

J.D. Program

- Business Organizations
- Criminal Law
- Litigation
- Health law
- International Law
- Law, Technology, and the Arts – Law & Technology track or Law & the Arts track
- Public Law – Public and Regulatory Institutions track or Individual Rights and Social Reform track
- US Legal Studies Program
- Alternative Dispute Resolution/Mediation
- Health Law
- International Business Law
- Intellectual Property
- Public International Law

INTERDISCIPLINARY PROGRAMS

For complete information about dual-degree programs, see the law school's website or contact the Academic Services Office at the School of Law.

J.D./M.B.A.

A dual-degree program between the School of Law and the Weatherhead School of Management allows students to earn two degrees in four years. Students spend the first year in one school and the second year in the other. Once the required courses are behind them, they spend the third and fourth years taking electives at both schools. Five areas of law-management specialization have been approved by the two schools: international business, health systems management, corporate finance, banking and investment, and labor and industrial relations.

J.D./M.A./M.S.

Enrolling in both the law school and the School of Graduate Studies, a student can study law and a Master of Arts or Master of Science program and earn the two degrees in seven regular semesters or six semesters plus two summers. Current options for this dual-degree are:

- M.A.–Legal History
- M.A.–Bioethics
- M.S.–Biochemistry

J.D./M.S.S.A. (Master of Science in Social Administration)

Together, the School of Law and the Mandel School of Applied Social Sciences offer a four year program in law and social work. Students take the basic required courses in both schools and then have considerable flexibility in pursuing their particular interests and preparing themselves for different careers. Besides their time in the classroom, students gain practical experience in internships.

J.D./M.N.O. (Master of Nonprofit Organizations)

This program combines the Master of Nonprofit Organizations (M.N.O.) degree with the Juris Doctor degree (J.D.). It provides preparation for students interested in, for example, practicing law within a nonprofit organizational setting; working as a program
officer in a foundation; serving as a leader or manager of a nonprofit organization; working in the area of nonprofit public policy and advocacy; or working in the field of planned giving.

Students must apply and be accepted for each degree program to qualify. New students can apply to both programs simultaneously or at separate times. Students who choose to begin their studies in the J.D. program must apply to the M.N.O. program prior to completing their first year at the School of Law.

- Dual-degree students must receive the M.N.O. and J.D. degrees simultaneously to be granted credit for specific courses taken in the other program.
- J.D./M.N.O. students continue to register at their initial school of enrollment throughout the dual program.

For more detailed information, contact:

**Director of Recruitment**
Mandel Center for Nonprofit Organizations
Case Western Reserve University
10900 Euclid Avenue
11402 Bellflower Road (visitors)
Cleveland, Ohio 44106-7167

**J.D./M.N.O. Advisor**
School of Law
Case Western Reserve University
10900 Euclid Avenue
Cleveland, Ohio 44106-7148
(216) 368-3600

**J.D./M.D.**
The School of Law and the School of Medicine offer a dual-degree program that allows a student to complete both degrees in six years. A student who begins at the law school spends two years studying law, then four years studying medicine. Alternatively, a student may spend the first two years and the last two years at the medical school, and the middle years at the law school.

**J.D./M.P.H. (Public Health)**
The M.P.H. degree will generally add a year of additional course work to the J.D. degree, creating a four-year program. Law students enrolled in the dual J.D./M.P.H. degree program may earn up to 12 credits toward the J.D. in graduate level M.P.H. courses. The law school offers several health law courses that meet the M.P.H. elective requirements.

**J.D./C.N.M. (CERTIFICATE IN NONPROFIT MANAGEMENT)**
The J.D./C.N.M. combines the Juris Doctor degree (J.D.) with the Certificate in Nonprofit Management (C.N.M.). It provides preparation for students interested in, for example, practicing law within a nonprofit organizational setting; working as a program officer in a foundation; serving as a leader or manager of a nonprofit organization; working in the area of nonprofit public policy and advocacy; or working in the field of planned giving.

The program consists of five courses. Law of Nonprofit Organizations (LAWS 234) is required and the remaining four courses are chosen in consultation with the J.D./C.N.M. faculty advisor.

Students should apply to the degree/certificate program no later than the end of the second year at the School of Law. J.D./C.N.M. students must be admitted to each program separately and receive both credentials simultaneously to be granted credit for specific courses taken in the other program.

For more information, contact the Director of Recruitment, Mandel Center for Nonprofit Organizations, at 216-368-6025 or by e-mail at mcnoadmissions@case.edu.

**Graduate School Option**
Students in the School of Law who are not enrolled in a dual-degree program may take up to nine hours of approved courses in the other graduate and professional schools of Case Western Reserve University and have such courses counted for credit toward the J.D. degree.

**LL.M. in United States and Global Legal Studies**
The LL.M. in United States and Global Legal Studies is designed for graduates of foreign law schools who wish to spend an intensive year immersed in American legal education. LL.M. candidates take most courses with American J.D. candidates and have seminars with American lawyers. Degree requirements include 24 course credits (including LAWS 570, Foreign Graduate Seminar). Students from civil law countries must take LAWS 595, American Contract Law, and students whose command of English is deficient will be required to take an English language course. LAWS 263, Doing Business in the U.S., is an elective available only to LL.M. students.

Each student’s courses will be determined by the program director in consultation with the student and will be based on the student’s prior legal education and interests. After completion of the degree requirements, students may elect to spend a summer internship with a law firm or corporate legal department in the United States. Further information and admission materials may be requested from Professor Lewis R. Katz, director of the LL.M. in United States and Global Legal Studies program or Ms. Adria J. Sankovic, assistant director of the LL.M. in United States and Global Legal Studies program.

**THE LAW LIBRARY**
The law library’s holdings include more than 390,000 books and volume-equivalents, complete collections of federal and state law, law reviews, current law services, an extensive British and Commonwealth collection, and special collections in taxation, labor law, foreign investments, international law, and environmental law. The law library is building strong collections in law and medicine, intellectual property, and law of the European Union. It is a selective depository for both U.S. and Canadian government documents. The law school itself has computer workstations on every floor of the library, providing access to hundreds of electronic services and library catalogs, and a wide range of software services. The university boasts a fast and powerful network and wireless access, and the university network links the law school to the vast resources of the Internet. The law library is a member of OhioLINK, which is a consortium of Ohio’s college and university libraries and the State Library of Ohio. OhioLINK offers access to more than 31 million library items from 79 institutions. These materials include items from law, medical, and special collections.

The law library offers its users access to an ever-expanding list of electronic research databases as well as e-books. Electronic resources are accessible through the library catalog and the Law Library Services page on our website. Web-based databases offered include Lexis/Nexis and Westlaw as well as over 100 OhioLINK databases (including Index to Legal Periodicals and Medline). Many of these OhioLINK databases contain the full text of journal articles. Housed within the law library is a computer laboratory and a computer training laboratory.

**SPECIAL PROGRAMS**

**MILTON A. KRAMER LAW CLINIC CENTER**
The Supreme Court of Ohio authorizes student practice under attorney supervision in the final year of law school. Through the clinic, students provide legal representation to indigent clients and community groups and receive academic credit. The supervising attorneys are full-time members of the law faculty. The clinical program is the capstone of the skills curriculum and offers specialized practice experiences in Criminal Justice, Community Development, Civil Litigation Practice, focused on consumer matters, predatory lending, social security disability, and other public benefit issues, Immigration, Health Law, and Family Law.

CENTER FOR BUSINESS LAW AND REGULATION
To better prepare its students and future leaders with a thorough understanding of the business issues facing entrepreneurs, entities, and other clients, the School of Law created the Center for Business Law and Regulation. The center focuses on expanding curricular offerings and programs as well as engaging in opportunities for legal, empirical, and interdisciplinary research, assessing the role and impact of government in the regulation of business. The center will also host special lectures and symposia to highlight topics in business law and foster public debate and inquiry regarding business regulation.

CENTER FOR THE INTERDISCIPLINARY STUDY OF CONFLICT AND DISPUTE RESOLUTION (CICSDR)
During this age of globalization, our world has begun to steadfastly look toward negotiation, mediation, arbitration and other forms of dispute resolution as alternative methods of solving conflict. Since the 1970s, the Alternative Dispute Resolution (ADR) movement has gained momentum in judicial and academic circles and is currently reflected in courses in most law schools, while the number of established mediation and arbitration practices continues to rise. To best prepare students for meeting these societal and legal changes, Case School of Law has established the Center for the Interdisciplinary Study of Conflict and Dispute Resolution (CICSDR). CICSDR’s core mission is to encourage greater sensitivity to appropriate dispute resolution and skill development, preparing Case School of Law students for the multiple roles they will perform as lawyers in a global economy.

THE ARTS
The Center for Law, Technology, and the Arts was established as an internationally recognized forum for the interdisciplinary study of law, technology, and the arts. The Center focuses on teaching, research, and programs pertaining to intellectual property, technological innovation and technology transfer, the intersection of science, economics, philosophy, and the law, legal issues concerning biotechnology and computer technologies, and laws and cultural issues relating to the creative arts. Through the Center, the law school is able to offer students opportunities to address important, topical issues relating to law and technology and law and the arts through a variety of courses, lectures, events, and symposia.

FREDERICK K. COX INTERNATIONAL LAW CENTER
The International Law Center serves as the stimulus for enhancing programs in international, comparative, and transnational law at the law school. It supports visiting scholars and visiting faculty at the law school to enrich the curriculum and research capacity of the resident faculty. It also supports the development of international information resources. Through a series of sister law school relationships, it seeks to attract foreign students to the law school and provide opportunities for Case Western Reserve law students to study abroad; it also provides opportunities for faculty to study and teach abroad.

INSTITUTE FOR GLOBAL SECURITY LAW AND POLICY
The events and aftermath of 9/11 have made security and counter-terrorism fundamental, if not defining, concerns for the world community, nations, companies, the legal system, and individuals. The institute for Global Security Law and Policy was created in 2005 to provide a uniquely comprehensive hub for addressing the legal, financial, political, social, religious and cultural ramifications of counter-terrorism, using an innovative multifaceted approach that integrates theory with practical application. The Institute develops and integrates the best learning from the academic and the real world and draws on numerous disciplines and experiences to provide innovative and world class programs, research, teaching, and service on the issues of security and counter-terrorism. The work of the Institute serves as an invaluable resource to governments, businesses, organizations, the legal profession, and the general community.

LAW-MEDICINE CENTER
The Law-Medicine Center at Case Western Reserve University has been in operation for over 50 years. It began with a focus on forensic medicine, but has broadened to include the whole range of legal, social, economic, scientific, and ethical issues in which law and medicine are interrelated. Besides the regular course offerings, the center frequently presents lectures, symposia, and workshops, and sponsors major conferences. It publishes a student-edited journal, Health Matrix: Journal of Law-Medicine. Participants in the center’s activities include not only university personnel, but also professionals from such institutions as University Hospitals of Cleveland and the Cleveland Clinic.

CENTER FOR SOCIAL JUSTICE
The School of Law has a proud but little-known history of providing a welcoming atmosphere that attracted African American students in the years before desegregation. Many of those graduates went on to distinguished careers. The purpose of the Center for Social Justice is to honor those graduates and the School of Law’s historic commitment to racial equality, as well as to promote social justice now and in the future for various groups that experience discriminatory treatment today. Its activities include holding conferences and speaker programs, hosting scholars from academia and practice, expanding curricular coverage, and providing financial support to students working in the area of social justice full-time after graduation or during summers while in law school.

CANADA-UNITED STATES LAW INSTITUTE
The Canada-U.S. Law Institute, established in 1976, is jointly sponsored by the law schools of Case Western Reserve University and the University of Western Ontario. Its primary educational purpose is to give students of both schools a comparative perspective on their own country’s legal system. Each semester, up to six students from each school spend the term in residence at the other school. The school in which the student is a degree candidate gives full credit for the semester’s work. The two schools also exchange faculty, usually for periods of one or a few days, but occasionally to teach one or more courses for a full semester.

A second purpose of the institute is to provide
a framework for the exploration of transnational and international legal issues affecting the relationship between Canada and the United States. In addition to the regularly scheduled courses on Canadian-U.S. topics, the institute sponsors workshops and conferences, including annual conferences in Cleveland, which, in recent years, have dealt with Canadian-U.S. economic ties.

The institute also sponsors a regular publication, the Canada-U.S. Law Journal; the annual Niagara Moot Court Competition, in which students from U.S. and Canadian law schools participate; and special research projects, often with funding support.

LITIGATION PROGRAM
Since the mid-1970s, the School of Law has invested heavily in its litigation program. Students practice the basic skills of trial advocacy in such courses as LAWS 397, Trial Tactics (4), and in the co-curricular moot court and mock trial programs.

STUDENT ACTIVITIES

PUBLICATIONS
The School of Law publishes three scholarly journals, all student-edited. The oldest is the Case Western Reserve Law Review, published quarterly. The Journal of International Law is published two to three times a year; the JIL editorial board also has responsibility for the Canada-U.S. Law Journal (sponsored by the Canada-U.S. Law Institute), published once a year. Health Matrix: Journal of Law-Medicine began as a joint undertaking of all six of the university’s professional schools but since 1990, has been sponsored solely by the law school and its Law-Medicine Center.

Competitions

MOCK TRIAL
A student board administers the Dean Dunmore Competition, a year long program in which second-year (and a very few third-year) students participate. It culminates in a round-robin tournament involving 16 finalists. From those finalists, the board selects teams who will compete the following year in the National Moot Court Competition, the Craven Competition in constitutional law, and the Niagara Competition (sponsored by the Canada-U.S. Law Institute). Case Western Reserve also enters the Jessup International Competition; that team is selected by another student group, the Society of International Law Students.

MOCK TRIAL
The Jonathan M. Ault Mock Trial Board sponsors an intramural competition from which emerge the members of interscholastic teams. Currently, the law school sends student representatives to the National Trial Competition, the National Student Trial Competition of the Association of Trial Lawyers of America, and a competition sponsored by the Academy of Trial Lawyers of Allegheny County, Pennsylvania.

REGULATIONS AND RULES OF CONDUCT
The Academic Regulations of the School of Law are provided to each student upon matriculation through the law school’s website.

In addition to the university’s rules of conduct, law students are expected to comply with the American Bar Association’s Model Code of Professional Responsibility and Model Rules of Professional Conduct, to the extent that these are applicable, and with the law school’s own Code of Conduct. The Model Code and Model Rules are available in the law library. The school’s Code of Conduct, like the Academic Regulations, is provided to each student upon matriculation through the law school’s website.

COURSE DESCRIPTIONS (LAWS)

LAWS 002. Education Law (3)
This course surveys the legal and social policy challenges related to public education settings. Students will study relevant constitutional issues, legislative mandates, school vouchers to supplement tuitions in private schools, charter schools, and more recent attempts under state constitutions to provide a quality education for all children. Beyond analyzing the legal frameworks that shape public education, the course will also cover the difficulties confronting public education from a sociological perspective.

LAWS 004. Settlement Law Seminar (2 - 3)
This seminar will examine the theory and practice of settlement of disputes. Matters to be considered include: the practical issues of how one negotiates the settlement and drafts settlement documents; the theoretical issues of why some cases settle and why some do not; the appropriate role of judges and mediators in facilitating settlements; and the procedural and substantive law affecting the settlement of law suits. Grade is based on a presentation and a paper. Enrollment is limited to 12.

LAWS 006. Legal History of European Union Seminar (3)
The seminar introduces students to the history, development, and present structure of the legal system of the European Union from the ECSC in 1951, through the Treaty of Rome in 1957, to the Treaty of Amsterdam in 1997. The seminar will examine the “constitutional” structures and institutions of the European Union, including the emergence of a binding jurisprudence from the European Court of Justice; will look at general interpretive principles emanating from the European civil law tradition, such as the doctrines of subsidiarity and proportionality; will explore the public law of the European Union, the “four freedoms,” human rights, and equal treatment of women and men; and will briefly treat private law rights emergent not only from treaty and parliamentary enactment but from Union jurisprudence. The seminar will concentrate on the historical and economic context, but legal doctrine and practice will also be considered.

LAWS 008. Famous American Trials Seminar (3)
This seminar is in part a course of American legal history and in part advanced evidence course. We will consider in some detail several (probably five) famous trials in American history, starting with the Salem witchcraft trials and ending (probably) with the trial of Charles Manson. For each trial considered, except the first, students will be expected to read an assigned book that concerns the trial and to address various issues for class discussion. Each student will also write a paper about a famous trial not covered in the assigned readings and make a presentation to the class regarding that case at the end of the semester. This seminar will be limited to 12 students and may be used to satisfy the writing requirement.

LAWS 010. African-American Lawyers Seminar (3)
This seminar takes an interdisciplinary approach to the study of African-American lawyers. It examines aspects of the history of black lawyers in America, as well as topics relating to black lawyers in contemporary America. The course will situate these experiences in the context of both the history of the legal profession and the history of race relations and the struggle for civil rights in the United States. Students will prepare a substantial research paper and make an oral presentation of their research to the class. Limited to 12.

LAWS 011. Firearms Regulation (3)
This class examines the constitutional and policy questions surrounding firearms regulation. The course will cover historical issues, modern statutory controls, and legal and policy questions surrounding firearms regulation. Perea or Corey: LAWS 202.

LAWS 013. Current Controversies in Environmental Law (3)
This seminar will explore current legal and policy controversies in environmental law. Special attention will be paid to recent Supreme Court decisions and forthcoming environmental protection, federal courts, including current constitutional challenges to environmental programs and regulations. Issues likely to be discussed include the impact of recent federalism decisions on environmental protection, federal preemption of state regulation, environmental standing, the non-delegation doctrine, and cost-benefit analysis, among other topics. Students
LAWS 017. Scientific Evidence and Advanced Research (2)
Students must be concurrently enrolled in LAWS 214 (no exceptions). Enrollment limited to six students.

LAWS 018. Professional Responsibility Advanced Research (3)
This seminar will allow students concurrently enrolled in Professional Responsibility (LAWS 375) to satisfy the upper-level writing requirement. Students will receive advanced instruction in legal research in Professional Responsibility and will be required to complete a series of written exercises, including drafting a rule and writing a brief and a judicial opinion. The exercise will include a series of planning questions to help students structure their work. Each exercise will require the students to develop expertise in an area of Professional Responsibility through performance in simulated professional roles. At least one oral presentation will be required.

LAWS 019. Commercial Information and the Law (3)
This seminar focuses on defining 'commercial information' from a lawyer's perspective and analyzing ways in which laws in different jurisdictions are developing to protect owners and developers of such information from unauthorized access, interference, disclosure and/or use of their information products and services. The subject will be taught from a comparative/international perspective because of the increasingly global nature of many of the issues for discussion. Class discussion topics will include: the nature of commercial information and its relationship to the legal concept of property; the relationship between commercial information and intellectual property law (specifically copyright, patent, and trade secret law); case studies involving Internet business methods, computer software and electronic databases and the way in which intellectual property laws have developed in relation to these information products; the use of contract law and technological protection measures to protect the value of information stored and accessed electronically; and problems of financing businesses, and generally valuing business assets, where the main valuable assets are commercial information products.

LAWS 020. Civil Rights (3)
This course will examine the enforcement of federal civil rights laws against government, government officials, and private individuals. The course will focus partly on the unique issues and challenges involved in litigating civil rights cases, and approximately the first half of the semester will be spent on 42 U.S.C. § 1983, the "all-purpose" civil rights statute. We will discuss the mechanics of litigating federal civil rights cases, such as the state action requirement, absolute and qualified immunities, liability of municipalities, limitations on injunctive relief, and attorney's fees. Much of the second half of the semester will be devoted to other civil rights statutes, such as the Fair Housing Act, the Voting Rights Act, Title IX, and Title VI. The course will not cover statutes dealing with discrimination in the workplace, however, so those topics are treated fully in the Employment Discrimination course.

LAWS 021. Animal Law (3)
This seminar will review selected federal and state laws that pertain to animals focusing on the Animal Welfare Act, wildlife statutes, and criminal anti-cruelty laws. Students will review recent cases and laws which address the larger questions posed by the animal rights movement, distinguishing between regulations designed for animals and those designed for humans involved with animals. After gaining familiarity with the landscape of animal law, students will examine the animal rights movement as an example of a social justice/reform movement. Topics will include: the conflicts and intersections between law and science; methods and tactics used in legal reform advocacy; the validity and efficacy of using philosophical justifications for legal arguments or change; definitions of property; the historical and geographic context of this movement within the spectrum of other reform movements. Students can choose to write one paper to satisfy the upper-level writing requirement or write two smaller papers which will not satisfy the writing requirement.

LAWS 022. Religion, Ethics, and the Law (3)
This is a paper seminar, limited to 12 students. The course will explore the intersection between religion, ethics, and the law in the American legal system. We will begin with a series of general questions: To what extent do we have true separation of church and state in American jurisprudence? Why should religious beliefs be given more deference than political opinions or other personal expressions? Does the law set the standard for public morality or reflect it? In order to establish a successful legal system, does society need to reach a consensus as to its moral and ethical values? When is the government ethically justified in punishing individuals for their misconduct, and what theories justify punishment within the criminal justice systems? In the second part of the course we will focus on a variety of issues that raise legal, ethical, and religious questions. Topics may include capital punishment euthanasia, genetic testing war crimes, and others.

LAWS 023. Religion, Ethics, and the Law (3)
This is a paper seminar, limited to 12 students. The course will explore the intersection between religion, ethics, and the law in the American legal system. We will begin with a series of general questions: To what extent do we have true separation of church and state in American jurisprudence? Why should religious beliefs be given more deference than political opinions or other personal expressions? Does the law set the standard for public morality or reflect it? In order to establish a successful legal system, does society need to reach a consensus as to its moral and ethical values? When is the government ethically justified in punishing individuals for their misconduct, and what theories justify punishment within the criminal justice systems? In the second part of the course we will focus on a variety of issues that raise legal, ethical, and religious questions. Topics may include capital punishment euthanasia, genetic testing war crimes, and others.

LAWS 024. ePayment Systems Seminar (1)
This seminar builds on the foundation established during the first-year curriculum and focuses on the law and technology of payment systems. Such topics will include the contractual relationship amongst and between the various organizations transacting to enable a b2c payment; the various elements of such agreements; the various impacts of a payment system (criminal, civil, and administrative); the implications for legal structure and policy; and the practical considerations of a lawyer advising clients within this domain. Grade is based on a paper, a presentation, and class attendance and participation.

LAWS 025. Animal Law (3)
This seminar will review selected federal and state laws that pertain to animals focusing on the Animal Welfare Act, wildlife statutes, and criminal anti-cruelty laws. Students will review recent cases and laws which address the larger questions posed by the animal rights movement, distinguishing between regulations designed for animals and those designed for humans involved with animals. After gaining familiarity with the landscape of animal law, students will examine the animal rights movement as an example of a social justice/reform movement. Topics will include: the conflicts and intersections between law and science; methods and tactics used in legal reform advocacy; the validity and efficacy of using philosophical justifications for legal arguments or change; definitions of property; the historical and geographic context of this movement within the spectrum of other reform movements. Students can choose to write one paper to satisfy the upper-level writing requirement or write two smaller papers which will not satisfy the writing requirement.

LAWS 026. Religion, Ethics, and the Law (3)
This is a paper seminar, limited to 12 students. The course will explore the intersection between religion, ethics, and the law in the American legal system. We will begin with a series of general questions: To what extent do we have true separation of church and state in American jurisprudence? Why should religious beliefs be given more deference than political opinions or other personal expressions? Does the law set the standard for public morality or reflect it? In order to establish a successful legal system, does society need to reach a consensus as to its moral and ethical values? When is the government ethically justified in punishing individuals for their misconduct, and what theories justify punishment within the criminal justice systems? In the second part of the course we will focus on a variety of issues that raise legal, ethical, and religious questions. Topics may include capital punishment euthanasia, genetic testing war crimes, and others.

LAWS 027. Religion, Ethics, and the Law (3)
This is a paper seminar, limited to 12 students. The course will explore the intersection between religion, ethics, and the law in the American legal system. We will begin with a series of general questions: To what extent do we have true separation of church and state in American jurisprudence? Why should religious beliefs be given more deference than political opinions or other personal expressions? Does the law set the standard for public morality or reflect it? In order to establish a successful legal system, does society need to reach a consensus as to its moral and ethical values? When is the government ethically justified in punishing individuals for their misconduct, and what theories justify punishment within the criminal justice systems? In the second part of the course we will focus on a variety of issues that raise legal, ethical, and religious questions. Topics may include capital punishment euthanasia, genetic testing war crimes, and others.

LAWS 028. Advanced Criminal Law Seminar (3)
This seminar focuses on substantive criminal law rather than criminal procedure. It uses the first-year
protection of technological works ranging from chemical formulae, to software, to biotechnology; and trademark law, which relates to the goodwill associated with corporate identity and product recognition. We will also devote time to the study of the philosophy and economics of intellectual property keeping in mind, throughout the course, the need to strike an optimal balance between incentives to create and commercialize intellectual creations on the one hand and public access to these creations on the other hand. Prereq: LAWS 229 or LAWS 235.

LAWS 034 International Tax Policy Seminar (3)
This survey seminar will examine the broad policies underlying income taxation in the international arena with a focus on residence- and source-based justifications for income taxation, the ways that these bases of taxation come into conflict, and the various methods that countries use to mitigate the potential damage from competing tax claims. The seminar will explore these concepts by focusing on a variety of specific international tax problems including harmful tax competition, negotiation of bilateral tax treaties, and the effect of e-commerce on source rules. Other topics that may be covered include offshore financial centers, tax havens; tax treaties and treaty tax shelters. Limit 12. Recommended preparation: LAWS 211.

LAWS 035. Religion Clauses of First Amendment Seminar (3)
This seminar will explore the constitutional doctrines relating to the Free Exercise Clause and the Establishment Clause of the First Amendment. The readings will include key Supreme Court cases demonstrating the evolution of free exercise and Establishment Clause doctrines, as well as some historical materials, but we will also maintain a focus on current First Amendment controversies, such as school vouchers, faith-based government funding initiatives, and religious symbols on public property. Grade is based on class participation, final presentation, and a paper. Limited to 12.

LAWS 036 Appellate Practice (3)
This course is designed to teach students the rules and formalities of appellate practice and help students develop the skills necessary to write an effective appellate brief and present a persuasive oral argument. During the first semester students research and write an appellate brief and engage in short in-class oral arguments. During the second semester students receive instruction on the organization and presentation of longer oral arguments, engage in a practice oral round and receive an individualized critique of their performance. They complete the course by competing in the Dunmore Moot Court Tournament, which culminates in a final round oral argument before sitting judges in the spring. Prereq: LAWS 801 and LAWS 802.

LAWS 037. Copyright in the Digital Millennium Seminar (3)
Copyright in the Digital Millennium is a seminar that explores the challenges to traditional copyright law presented by the advent of digital technology and the Internet. Beginning with the current litigation involving Internet file-sharing, we explore the legal and doctrinal issues raised by efforts to apply copyright and other legal and technological measures to digital works. In order to evaluate the competing arguments in this debate, students will examine the doctrinal, historical, and theoretical underpinnings of copyright law from multiple perspectives.

LAWS 038. Labor and Employment Law Issues in the Global Economy (3)
This seminar will consider the impact of globalization on workers and labor law.

LAWS 039. Environmental Law Research Seminar (2)
We will explore and ask several questions from a philosophical and historical perspective, including: Should one’s intellectual product be entitled to protection? What are the reasons for granting or denying protection? What form, if any, should this protection take? What are the costs and benefits to society of protecting one’s intellectual product?

LAWS 040 Contexts of Invention Seminar (3)
This seminar will explore the social and cultural construction of invention, the diverse ways in which invention has been conceptualized, from an interdisciplinary perspective—from the perspective, that is, not only of the law but of the arts and sciences in the broadest sense, including literature, the fine arts, entertainment, economics, medicine, engineering, education, and business. Emphasis will be on the cultures, rhetorics, and histories of invention across these fields. As such, this seminar represents an extension of the inquiry initiated at a conference held at Case Law School on “Intellectual Property and the Construction of Authorship.” This seminar will help prepare students to participate in a conference to be held in the Spring 2006 entitled (Con)texts of Invention.

LAWS 043. Biotechnology Law and Policy (2)
This course is designed to expose the law student and graduate student in science or business to the legal, business, and policy issues relevant to the biotechnology industry. We will cover issues related to patents, corporate organization and financing, particularly venture capital as it relates to the Start-Up Biotech Company), licensing and other transactions, regulatory issues relevant to the Food and Drug Administration, university technology transfer, and academic conflicts of interest. Prereq: LAWS 229.

LAWS 044. Arbitration Law and Practice Seminar (2)
This seminar will cover arbitration as a form of adjudication focusing on the law, processes, uses, and practice of arbitration. The seminar begins with a conceptual exploration of adjudication and arbitration and proceeds with discussions of the uses of arbitration to resolve commercial, international, labor, and consumer disputes. The seminar will next explore the relationship between arbitration and the courts examining the Federal Arbitration Act and State Law which includes preemption and choice of law issues, the agreement to arbitrate focusing on contract formation and arbitrability issues, and judicial supervision and review. Finally, the seminar will cover the arbitration proceeding itself with detailed looks at the selection and impartiality of the arbitrator as well as the role of lawyers, evidence, discovery, and interim measures in the conduct of the proceeding. Both trial and appellate simulations will be a feature of this seminar experience.

LAWS 045. Copyright Litigation (2)
This course will begin with an overview of a copyright litigation case and then proceed to discuss issues relating to pre-litigation strategy, infringement, and defenses to infringement. The seminar will explore the drafting of a complaint and the answer thereto, including counterclaims; drafting discovery documents; preparing witnesses; and taking and defending a deposition, which will take place in the context of a mock trial, many of the issues that pertain to a trial, including the roles of judge and jury, jury instructions, direct and cross-examination, jury selection, and post-trial motions. Prereq: LAWS 235.

LAWS 046. Strategic Management of Intellectual Property (2)
The course will focus on real-world issues encountered by intellectual property attorneys (in-house and outside counsel). Issues and relevant case law relating to due diligence, licensing, procurement, licensing, enforcement, and defense will be discussed. Specific areas will include: (1) How to identify and classify IP as well as develop a corporate framework for fostering creation of IP, extracting it, documenting it, securing internal rights (e.g., forbidding employees to search others patents to mitigate willful infringement liability), or searching in only non-patent literature. There are numerous issues that will be presented and discussed during the course.

LAWS 047 Law of the Music Industry (2)
This course will cover the major components of the music industry, including recording agreements (major label and independent labels), record producer deals, songwriting and music publishing concepts, group issues, personal appearances, and music in cyberspace. There will be an extensive discussion of fundamental copyright, trademark, and cyberlaw concepts, as well as advanced copyright concepts specifically related to the recording and publishing industry. Special attention will be paid to the topic of musical copyright infringement litigation. Course materials will include selected cases, forms of the above agreements, and selected handouts. Guest speakers will include a variety of industry professionals, including personal managers, recording artists, record company executives, and concert promoters. Students will be invited to participate in a variety of special events, including attending a music industry seminar at The Rock and Roll Hall of Fame sponsored by Cleveland’s volunteer Lawyers for the Arts and attending the annual Mountain Dew High School Rock-Off held at the Odeon. Prereq: LAWS 235.

LAWS 048. International Humanitarian Law (1)
This course is designed to prepare the student members of the Jean Pictet Competition team, but is open to all students with an interest in international humanitarian law. The course will be taught in two all-day Friday-Saturday sessions in January and February by international humanitarian law
LAWS 056. Selected Topics in Business and Law (1)
This course will focus on the key principles of business operations and the financial tools necessary to measure business performance and the roles that lawyers play in advising business clients in today's environment, as well as the intersection of law and business in our economy. Coverage and emphasis will vary from year to year. The course will use case studies, real time filings by corporations, and 2-3 books written about well-known business transactions and is co-taught by a visiting practitioner or business leader and a member of the regular faculty.

LAWS 057. Issues in Election Law (2)
This course will examine recent and current issues and controversies related to U.S. election law. The course will focus on careful readings of relevant statutes, court decisions, and academic commentary on various election law questions, including ballot access, voter fraud, disenfranchisement, redistricting and gerrymandering, campaign finance, campaign speech, and election contests. The course will explore some of the legal questions that inevitably arise in the context of conducting democratic elections and how well courts and other legal institutions address these issues. Grades will be based exclusively upon short weekly writing assignments (1-3 pages) based upon the assigned reading and class participation. There will be no final exam.

LAWS 060. Cyberlaw (3)
This subject deals with how the law regulates and otherwise applies to activities taking place in 'cyberspace.' It considers how existing legal principles are being modified and extended in the digital information age to meet the needs of society, particularly in relation to electronic commerce. As the nature of dealings in cyberspace develops and new legal problems emerge over time, the focus of the course may change to reflect current legal issues. However, topics for discussion will be drawn from the following: the nature of the Internet, legal regulation of cyberspace vs. self-regulation, the relevance of international law/international regulation, e-commerce contracting, 'property' in cyberspace with particular reference to intellectual property, trademarks and domain names, defamation on the Internet, online crime (e.g., fraud, pornography, etc.), information privacy and security, online dispute resolution and associated conflicts of law issues.

LAWS 062. ERISA II - Advanced Employee Benefits (3)
Continuation of Employee Benefits (ERISA): defined benefit plans, including in-depth consideration of defined benefit plan documents; VEBAs, their use and regulation; group life, Accidental Death & Dismemberment, and Long Term Disability plans and related insurance documents; insured and non-insured medical benefit plans; reporting and disclosure requirements of ERISA, including summary plan descriptions, summary of material modifications, Form 5500, and "top hat" elections; and requests for favorable determinations of qualified plans, including Form 5500 and Notices to Interested Parties.

LAWS 063. Selected Topics in Family Law (3)
This course explores in depth the theory, doctrine and practical application of various topics within family law. The topics explored may include marriage, divorce, property division, spousal support, parent-child relations, child custody, visitation, child support, domestic violence, rights of unmarried partners, etc. Approximately half of the course will be devoted to exploration of the principles and doctrine of the topics covered (multi-jurisdictional approach will be utilized) and the other half will be devoted to litigation or alternative methods of resolving disputes concerning the issues in the topics covered. The grade will be based on an examination of the substantive material covered and participation during class.

LAWS 064. International Environmental Law (3)
This course examines selected issues and current problems in international environmental law, with a particular focus on transboundary environmental problems, global "commons," and the development, implementation and enforcement of international environmental agreements. Requirements for the class will include several short writing assignments and weekly simulations and role-play exercises. There will be no final exam. Limited enrollment of 20 students.

LAWS 065. Adoption Law (2)
This course surveys adoption law in the United States, including public and private adoptions, international adoptions, and the legal issues involving reproductive law and surrogacy.

LAWS 066. Leadership and Communication Skills for Lawyers (2)
This 13-week interactive course will provide students with the tools and techniques needed to be more capable speakers and communicators. While the course will include some training for persuasive public speaking in a courtroom, most of the focus will be on developing effective communication skills so that students will have the requisite confidence, focus, and control to speak in a variety of settings. A section of the class will also concentrate on handling the media including how to control a message and advice for clients who may be in the public spotlight. The program will be interactive so that students have numerous opportunities to participate and speak. Role-playing exercises will be utilized as well as video-taped playback. Grading is based on participation and improvement and there will not be a final exam.

LAWS 067. Intervention Law: Iraq and Vietnam (3)
Using the examples of American intervention in Vietnam and Iraq, this course examines some of the international and domestic legal issues raised by war and military intervention. Among the topics covered will be the legal justifications for intervention and the arguments for the illegality of the two wars; constitutional limits on executive war making powers; the justiciability of issues of war and peace under U.S. law; the draft, the volunteer army, and conscientious objection; GI rights and GI dissent; the law of war and international humanitarian law and the recurring problems of massacre, murder, and torture.

LAWS 068. Islamic Law (2)
This course will cover major aspects of the Islamic
Law. It will provide students with a better understanding of Islam and its adherents. Many topics related to Islam and its basic beliefs, including some contemporary issues, will be covered in this course.

**LAWS 071. The Intersection of Unfair Competition and Intellectual Property (2)**

Traces the role of tort, contract, and property in filling the gaps between copyright, trademark, and patent. The trace implicates federal and state systems and a cluster of rights such as trade secrets, ideas, industrial design, common law copyright, and moral rights.

**LAWS 072. Federal Taxation of Corporations and Shareholders (3)**

This course provides a comprehensive background in the taxation of corporations and shareholders, including the tax treatment of transfers of property to a corporation; distributions from a corporation to its shareholders: redemptions; liquidations; and the simpler forms of corporate reorganizations.

**LAWS 073. Disability Law (3)**

Disability Law provides a comprehensive overview of the federal laws relating to individuals with disabilities. The course focuses on issues of nondiscrimination and affirmative rights in the areas of employment, government programs and services, places of public accommodation and education. Beyond analyzing the legal framework that shapes disability rights, the course will also discuss issues related to disability rights from a social policy perspective.

**LAWS 075. Business Associations for LL.M. Students (3)**

This course is an introduction to the law of business associations including general and limited partnerships, limited liability companies, and corporations tailored to their specific needs.

**LAWS 076. Sex, Gender, and the Law (3)**

This course will critically examine the ways in which law in the U.S. treats sex and gender in a variety of contexts, most notably, the workplace, the family, the reproductive sphere, and in several arenas of sexual exploitation. Among the topics discussed will be parenthood, abortion, pornography, prostitution, and rape. Moreover, the course will explore various, often competing, theories about how law should approach issues of these sorts. For example, should it focus on notions of equality, autonomy, or non-subordination? Included among the issues addressed will be problems raised by the intersections of gender with race, class, and ethnicity.

**LAWS 078. Counter-Terrorism Law (3)**

This course will take an in-depth look at counter-terrorism in the United States, Israel, and other countries. The course will examine the competing conceptions and definitions of terrorism at the national and international level and the institutions and processes designed to execute the "war on terrorism." This will include study of the balance between security and liberty policies in the U.S. Patriot Act, the use of military tribunals or civil courts, the use of assassination or targeted killings, and the emerging law on enemy combatants and their detention, and the arguable need for new self-defense doctrines at the global level. Prereq or Coreq: LAWS 327.

**LAWS 079. Terrorism Prosecution Lab (3)**

This lab will involve students in an integrated experience of academic research and public service. Students will work on research projects in counter-terrorism law in the United States, Israel and other countries. The course will engage students in projects for a variety of organizations that are trying to develop expertise in counter-terrorism law, including U.S. attorney offices, thinktanks, defense attorneys, international governmental and non-governmental organizations. Students will study and research various aspects of counter-terrorism in the U.S., foreign countries, and at the international level, including the balance between security and liberty policies in the U.S. Patriot Act, the use of military tribunals or civil courts, the use of assassination or targeted killings, and the emerging law on enemy combatants and their detention, and the arguable need for new self-defense doctrines at the global level. Prereq or Coreq: LAWS 78.

**LAWS 080. I.T. Principles for Lawyers (1)**

This course is designed to allow students to achieve an overview of information technology terms and concepts.

**LAWS 082. International Business Organizations (3)**

This course offers a combined classroom and field experience designed to help students understand why U.S. multinational corporations engage in transactions through offshore financial centers or "tax havens." To this end, the course will provide an introduction to and address the tax and other policy implications of various international business structures and strategies including captive insurance arrangements, asset securitizations, hedge funds and offshore banking. The course will consist of four Friday afternoon sessions in the early part of the spring semester, followed by a week-long visit to the Cayman Islands during spring break, when students will meet and hear from academics, private-sector professionals and government officials based in the Cayman.

**LAWS 084. Capital Markets, Venture Capital, and Mgmt., Principles for Lawyers (1)**

This course is designed as an introductory course for second- and third-year law students who want to understand the way in which businesses are managed and financed, the various roles that capital markets play in their development, and the methods for measuring business success. Intensive case studies will be used as a framework for looking at real world situations. The course will integrate guest lectures from visiting business leaders. CFOs will explain how they measure the success of their business and what financial information is required to do their job. Finally, a part of each class will evaluate real time business issues, applying the lessons learned from the case studies and modeling the expected outcomes. James Bildner, CWRU alumus and CEO of Tier Technologies, will teach the course. Students will write a paper based on a case study. This course will count toward the nine-credit limit on non-law school courses. Prereq: LAWS 261.

**LAWS 085. Intellectual Property Transactions (3)**

Students will explore how companies develop business and legal strategies to protect their intellectual property assets through agreements with strategic business partners, content providers, vendors, and licensees. As part of the course, students will select a company name and protect it, draft and negotiate agreements, and hold a mock negotiation at the end of the semester. One prior course in patent, trademark, or copyright is required. Grade is based on a final examination.

**LAWS 086. International Intellectual Property (3)**

This course surveys selected issues and current problems involving the criminal aspects of international law and the international aspects of criminal law. The course begins with an introduction to the origins and purposes of international criminal law. We will then explore the contours of the duty to prosecute those who commit international crimes. Next, we will focus on application of domestic and international law to the question of jurisdiction over international criminal activities. This is followed by three units examining substantive international criminal law as contained in multilateral treaties concerning terrorism, war crimes and crimes against humanity. Next, we will explore the procedural aspects of international cooperation in criminal matters, with particular attention to extradition and problems associated with obtaining evidence from abroad. We will also analyze the reach of U.S. constitutional protections to U.S. investigative and law enforcement activities overseas. Finally, we will study the new Yugoslavia and Rwanda War Crimes Tribunals and the permanent International Criminal Court. The class will be seminar-format, with short writing assignments, weekly simulations, and role-play exercises designed to bring the materials to life. There will be no final exam.

**LAWS 087. International Criminal Law (2)**

This course surveys selected issues and current problems involving the criminal aspects of international law and the international aspects of criminal law. The course begins with an introduction to the origins and purposes of international criminal law. We will then explore the contours of the duty to prosecute those who commit international crimes. Next, we will focus on application of domestic and international law to the question of jurisdiction over international criminal activities. This is followed by three units examining substantive international criminal law as contained in multilateral treaties concerning terrorism, war crimes and crimes against humanity. Next, we will explore the procedural aspects of international cooperation in criminal matters, with particular attention to extradition and problems associated with obtaining evidence from abroad. We will also analyze the reach of U.S. constitutional protections to U.S. investigative and law enforcement activities overseas. Finally, we will study the new Yugoslavia and Rwanda War Crimes Tribunals and the permanent International Criminal Court. The class will be seminar-format, with short writing assignments, weekly simulations, and role-play exercises designed to bring the materials to life. There will be no final exam.

**LAWS 089. Homeland Security/USCG Lab (3)**

This course will provide students with the opportunity to conduct research and prepare legal memoranda addressing issues submitted by the US Department of Homeland Security and the United States Coast Guard. Students will meet for lecture sessions that provide a background into the issues presented, including border security, Great Lakes laws, immigration, administrative law, and the environment. The student's work product will be submitted to, and utilized by, DHS/USCG.

**LAWS 090. Canon Law (2)**

This course examines the legal system of the Roman Catholic Church. In addition to an historical overview of the science of canon law, lectures address specific canons of the Code of Canon Law and selected canonical issues. Subjects to be considered include marital law, ecclesiastical sanctions (i.e., criminal law) and procedures, trial procedures.

**LAWS 092. International Criminal Law (2)**

This course surveys selected issues and current problems involving the criminal aspects of international law and the international aspects of criminal law. The course begins with an introduction to the origins and purposes of international criminal law. We will then explore the contours of the duty to prosecute those who commit international crimes. Next, we will focus on application of domestic and international law to the question of jurisdiction over international criminal activities. This is followed by three units examining substantive international criminal law as contained in multilateral treaties concerning terrorism, war crimes and crimes against humanity. Next, we will explore the procedural aspects of international cooperation in criminal matters, with particular attention to extradition and problems associated with obtaining evidence from abroad. We will also analyze the reach of U.S. constitutional protections to U.S. investigative and law enforcement activities overseas. Finally, we will study the new Yugoslavia and Rwanda War Crimes Tribunals and the permanent International Criminal Court. The class will be seminar-format, with short writing assignments, weekly simulations, and role-play exercises designed to bring the materials to life. There will be no final exam.

**LAWS 094. Jewish Law (2)**

This is an externship program in which students approved by the City attorneys will work at the City of
SCHOOL OF LAW

Cleveland Law Department for 12 hours per week, with and under the direct supervision of Law Dept attorneys on civil cases, or under the supervision of the Cleveland City Prosecutor, on criminal cases. Students will research substantive and procedural legal issues, draft memoranda, analyze information obtained through discovery and through research, and assist with preparation of cases. Students with legal intern certificates may appear in court. Students will also attend periodic meetings in which they will review and reflect upon the work engaged in on the cases assigned, learn about other law department cases, and discuss various topics relating to the law department's mission and jurisdiction. Topics in these discussions may include substantive law dealt with in the various sections of the law department, discovery and pre-trial practice, professionalism, negotiation and settlement. Students will interact with the law school faculty liaison through journals and periodic meetings to discuss and further reflect upon the externship experience. Students must be approved following a security clearance application. For more information about the City of Cleveland Law Department, students are encouraged to visit http://www.city.cleveland.oh.us/government/departments/law/lawind.html

LAWS 096. NAFTA and Bilateral Trading Agreements (1)
Since the World Trade Organization Doha Negotiations have stalled, countries increasingly look to bilateral and regional trading arrangements as a viable alternative to multilateral negotiations. This course is a four day, one credit course examining the legal and policy considerations with respect to bilateral and regional trading arrangements, using the Canada-U.S. FTA, NAFTA, U.S-Chile FTA, Canada-Chile FTA, and various United States, Australian and Asian bilateral trading arrangements. The faculty will cover both the legal aspects considered in the negotiations and the actual considerations of negotiators.

LAWS 099. Bar Preparation Course (1)
This skills course will begin with an overview of bar exam structures and requirements. Students will receive instruction in strategies and tactics for learning bar-tested material and presenting it effectively in bar-exam conditions. The course will include several practice exam opportunities as well as self-evaluation along with professor feedback. It will conclude with a preview-length exposure to a commercial bar-preparation course, which will include external evaluation of practice essays written that context. Students will complete a series of practice exams and essays; there will be no traditional final exam.

LAWS 100. Introduction to Lawyering (1)
This course is the first component of the CaseArc Integrated Lawyering Skills Program. It is an introduction and orientation to the study of law and lawyering skills. The course introduces students to issues of professionalism, interviewing skills, the trial and appellate processes as well as legal analysis, writing and argumentation. It also introduces students to skills for preparation and participation in the law school classroom and to comparative analysis of different legal systems. The course is required for all entering students and is scheduled each day of the week prior to the beginning of regular classes in the fall semester.

LAWS 103. Constitutional Law I (4)
The constitutional system of the United States: judicial function in constitutional cases; the division of powers between the national and the states and within the national government; the powers of the president; national and state citizenship; and constitutional limitations on the powers of the states and nation for the protection of individual liberties. Required.

LAWS 104. Civil Procedure (4)
A broad survey of the procedural development of a lawsuit is undertaken, tracing the various steps from pleading and discovery to trials and judgments. Modern procedural issues involved in jurisdiction of the courts, venue, choice of law, and former adjudications are discussed. Throughout the course principal attention is given to the Federal Rules of Civil Procedure. Required.

LAWS 123. Contracts (4)
The formation of a contract; problems of offer and acceptance; consideration: the question of contract breach; damages and remedies for a breach. Required.

LAWS 131. Criminal Law (4)
A basic course in substantive criminal law, dealing with the standards to be used in defining and punishing criminal behavior. The course includes discussion of crimes and criminality; culpable mental states; causation; insanity; attempt and complicity; homicide; and rape. Required.

LAWS 132. Torts (4)
This course covers compensation of an injured party for harm resulting from intentional or unintentional acts and omissions of others. Consideration is given to the rules, rationale, and policy underlying tort liability. The course includes analysis of assault and battery, false imprisonment, negligence, standard of care, duty, risk, causation, liabilities and rights of landowners and land users, liability relating to dangerous activities and defective products, liabilities arising from special relationships or specially recognized legal interests, and defenses. Required.

LAWS 144. Property (4)
The nature of property interests; estates in land and future interests; concurrent ownership; landlord-tenant; transfer of property interests; easements, covenants, and equitable servitudes; nuisance; and zoning. Required.

LAWS 160. Dispute Resolution (2)
This course will examine the characteristic methods by which American courts resolve disputes, and will then compare those methods with those used by alternative institutions of dispute resolution such as administrative agencies, arbitration, and mediation negotiation. In resolving disputed issues of law, American courts are constrained by doctrines of precedent, stare decisis, and the principles of statutory interpretation, all of which will be treated in some depth in the course. Disputed issues of fact in American courts are commonly decided by juries consisting of ordinary citizens, and the course will explore a number of features of the jury as it impacts litigation in courts. The portion of the course devoted to alternative dispute resolution will involve some simulations and role-playing exercises. There will be a single examination at the end of the term which will be the primary basis for grading.

LAWS 200. Patent Litigation (1)
This course will simulate a patent infringement case. Students will be asked to represent a client, and in that capacity will identify issues, provide legal advice, and prepare papers and pleadings as necessary. In particular, students will be asked to conduct a limited number of the following simulations: draft a complaint and an answer to the complaint, including counterclaims; draft discovery documents; perform a mock Markman hearing; prepare witnesses, including expert witnesses; take and defend a deposition; or prepare pre-trial.

LAWS 201. Advanced Civil Procedure (4)
This course will pick up where the 1L Civil Procedure course leaves off, exploring in greater depth topics raised by the Federal Rules of Civil Procedure. Among the planned topics are the following: discovery (ranging from the practical, Pretrial Practice-type approach to a more conceptual, casebook-style approach); sanctions; multi-district litigation; finality (starting off from collateral estoppel/res judicata, through Rule 60, and including issues pertaining to the legislative revival of time-barred claims); appealability; class actions; injunctions.

LAWS 202. Constitutional Law II (3)
This course explores the individual freedoms protected by the First Amendment. Primary attention is devoted to the freedoms of speech, assembly, and association. The course analyzes what is protected, why it is protected, and to what degree it is protected. Topics covered include prior restraint, advocacy of unlawful conduct, the hostile audience defense, defamation, commercial speech, obscenity, offensive speech, expression on public property, and symbolic speech.

LAWS 207. Evidence (3)
This is a comprehensive course in the law of evidence as applied in civil and criminal cases. Subjects include relevance, direct and cross-examination, impeachment, character, expert and lay opinion testimony, and hearsay. A problem-oriented approach is used to highlight both the practical applications and theoretical underpinnings of rules of evidence. Students may not take both LAWS 207 and LAWS 212.

LAWS 210. Family Law (3)
This survey course covers law relating to the creation, functioning, and dissolution of the family as a legal unit. Topics include legitimacy, adoption, procreative rights, cohabitation, marriage, family obligations, division of marital property, divorce and annulment, and child custody. Particular attention is given to the social forces that affect the development of rules and policies.

LAWS 211. Federal Income Tax (4)
An introductory course in federal income taxation of the individual taxpayer, including a consider-
ation of the nature of income, specific statutory exclusions, business and nonbusiness deductions, the treatment of capital gains and losses, and elementary tax accounting.

LAWS 212. Evidence (4)
A comprehensive course in the law of evidence as applied in civil and criminal cases. Subjects include relevance, hearsay, judicial notice, privileges, examination of witnesses, expert and lay opinion testimony, and real, demonstrative, and scientific evidence. This course deals with both the practical applications and theoretical underpinnings of the Federal Rules of Evidence and common law precedents. Students may not take both LAWS 207 and LAWS 212.

LAWS 214. Scientific Evidence in Criminal Litigation (2)
The legal issues associated with the use of scientific evidence at trial. It examines the admissibility of scientific evidence, expert testimony, and related issues. In addition, it considers specific techniques such as forensic pathology, fingerprint comparison, firearms identification, bite mark comparisons, questioned document examinations, and polygraph and DNA evidence testing. Outside experts are used to present many of the topics. May satisfy the writing requirement.

LAWS 216. International Tax (3)
This course examines the U.S. taxation of transactions undertaken by foreign individuals or entities in the U.S. as well as the U.S. taxation of transactions undertaken by U.S. individuals or entities abroad. Major topics that will be covered include determination of the source of income, the taxation of income derived from a U.S. trade or business, the withholding tax regime, taxation of various entities, controlled foreign corporations, the U.S. anti-deferral rules, the U.S. foreign tax credit, taxation of foreign currency transactions and the role of tax treaties. Recommended preparation: LAWS 072, LAWS 343, or permission of the instructor.

LAWS 217. Juvenile Law (2)
The role of the juvenile court in society: its jurisdiction, procedures, and dispositional alternatives. Students study both the quasi-criminal aspects of the juvenile court (jurisdiction over juvenile delinquents and status offenders) and the civil-protective aspects of the court (termination of parental rights and the handling of neglected, dependent, and abused children). In addition, the rights afforded juveniles are compared with the rights afforded adults in comparable circumstances. Many related juvenile justice issues, such as the right of a minor female to have an abortion without parental notice and the constitutionality of capital punishment for juvenile offenders, are also examined.

LAWS 218. Advanced Family Law (2)
This is a simulation course in advanced family law. Students will conduct the preparation, strategy, and execution of a civil family law hearing in selected areas, e.g., domestic violence. The student will study a major statute (e.g., Domestic Violence Statute, Ohio Code Section 3113.31), and simultaneously master the techniques of hearing, including opening statement, direct examination, cross examination, closing argument, and learn the use of evidentiary objections and the handling of documents at trial. The choice of topic may change from year to year. Prereq: LAWS 63 or LAWS 210.

LAWS 219. Workers’ Compensation (2)
Workers’ Compensation law and theory continue to evolve through statutory change and judicial decisions. The statutes deal with benefits for work-connected injury and disability. Course material is national in scope with an emphasis on corresponding Ohio cases. The course also touches on related areas of law, such as torts.

LAWS 220. Civil Law and Psychiatry (2)
The interaction between law and psychiatry in the rights of persons with mental disabilities in the community and in treatment settings. Topics include involuntary commitment, suicide, guardianship, psychiatric malpractice, psychic damages, special education, confidentiality and child abuse and custody. Students will test the analysis of legal issues against actual experience (videotaped interviews, visit to a state mental hospital). The course is jointly taught by a psychiatrist and an attorney specializing in mental health law.

LAWS 222. Health Care Professions (2)
This course examines the legal and ethical issues that arise in the health care setting, with a focus on health care delivery systems. Students will engage in case studies and role-playing exercises to analyze legal and ethical issues in the delivery of health care services. Prereq or Coreq: LAWS 227. The course is not open to bioethics Master’s degree candidates. (BETH)

LAWS 224. International Law (2)
An introduction to basic comparative, transnational, and international law disciplines. Using areas of substantive and procedural law familiar to first-year students, the course examines issues arising from cross-national activity. Students are exposed to the choice of law, comparative law, international law, and international institutions.

LAWS 225. Criminal Law and Psychiatry (2)
The interaction between criminal law and psychiatry: psychiatric diagnosis and treatment, competence to stand trial, the insanity defense, malingered mental illness, infanticide, stalking, violence, sexual predator laws, and direct and cross-examination of mental health experts. Videotaped examples serve as a basis for discussion. A visit to the Justice Center Court Psychiatric Clinic is included. The course is taught jointly by a psychiatrist and an attorney specializing in mental health law.

LAWS 227. Health Law (3)
The course examines the nature and structure of the health care system; the relationship between patient, provider, and payer; private legal controls on health care delivery such as malpractice and informed consent law; and public controls in the form of government regulatory and payment programs. Offered as HSMC 427 and LAWS 227.

LAWS 229. Patent Law (2 - 3)
Basic concepts of patent law as property considered primarily in its substantive aspects, including the relationship to other forms of protection and intellectual property, infringement, and statutory requirements for patents.

LAWS 232. Wills, Trusts, and Future Interests (4)
A survey of the law of intestate and testate succession, will substitutes, private and charitable trusts, fiduciary administration, and future interests (including the Rule Against Perpetuities).

LAWS 234. Nonprofit Organizations (3)
explores the rationale for the existence of the nonprofit sector and the allocation of certain functions to it. The focus is on the legal framework for the structure and operation of nonprofit organizations under state nonprofit corporation statutes and the policy and practice of preferred tax treatment for selected organizations and gifts to them under the Internal Revenue Code.

LAWS 235. Copyright Law (3)
Copyright law is the in-depth study of the legal doctrine and policy relating to the protection of one’s artistic, literary, musical, and computer-related expression. We will focus primarily on the 1976 Copyright Act and amendments thereto, such as the Digital Millennium Copyright Act of 1998.

LAWS 236. Natural Resources (3)
An introduction to the law of natural resources with emphasis on private rights rather than resources in the public domain. Major themes will include: how the common law deals with rights in another’s land; problems of common pool resources, their ownership and regulation; different legal treatment of renewable and nonrenewable resources; legal structures available for the exploitation of natural resources. Primary focus will be on water, oil, and gas, but the legal issues of other extractive industries will also be considered.

LAWS 238. Mergers and Acquisitions (3)
Topics include the corporate and securities laws governing various forms of mergers and acquisitions; business motivations for mergers; concerns of acquiring and acquired companies in friendly mergers; bidders’ techniques and targets’ defenses in hostile tender offers and proxy contests; valuation of businesses and investments, portfolio theory, and capital markets; concerns of companies and investors in negotiating corporate financing. Prereq: LAWS 261.

LAWS 243. Food And Drug Law (2)
This course examines the federal Food, Drug and Cosmetic Act. It will entail a detailed look at the law, policy statements, and literature related to approving new drugs and devices. The course covers such topics as human subjects research; product labeling and testing; OTC vs. prescription status; compassionate use exceptions; control of biotechnology techniques; differences between food, drugs and devices; and FDA enforcement. We will also explore how law and the legal system anticipate and
also respond to changes in technology in ways that may enhance or inhibit the development of new technologies and new applications of old technologies. Attendance at classes is mandatory. Grade is based on final exam.

**LAWS 244. Poverty, Social Inequality, and the Law (3)**

An overview of the way the law impacts on disadvantaged people, and the law that supports advocacy on their behalf. Students will learn about legal problems that are common to poor people and identify potential solutions. The course will analyze the effectiveness of various legal interventions such as administrative advocacy, and litigation (including individual and class representation) in various contexts. Past and current means of using and changing the law on behalf of low-income people will be studied. Students will analyze the responsibilities of lawyers to represent low-income clients. Many of the concepts will be taught through the use of case studies; a client interview will be conducted, and court observation is required. Grade is based on oral case study presentation, written assignments, and class participation.

**LAWS 245. Complex Litigation (2)**

Analysis of key issues typically encountered in complex civil litigation including substantive implications of seemingly procedural choices. Class actions, multidistrict litigation, joinder and consolidation. Exploration of practical and ethical issues encountered in complex civil litigation.

**LAWS 246. Advanced Contracts (3)**

We will examine the methodology of law and economics and of deontological approaches to contracts, legal realism, the methodology of default rules, gap filling and incomplete contracts, adjustment of long-term contracts, employment contracts and the employment at will doctrine, and contract and class participation.

**LAWS 247. International Human Rights (3)**

This course will cover a variety of issues in the area of international human rights. Issues covered will include the law of treaties and treaty interpretation; international organizations’ and non-governmental organizations’ roles in protecting human rights; the rights of women and minorities; critiques of the law on behalf of low-income people will be studied. Students will analyze the responsibilities of lawyers to represent low-income clients. Many of the concepts will be taught through the use of case studies; a client interview will be conducted, and court observation is required. Grade is based on oral case study presentation, written assignments, and class participation.

**LAWS 248. Criminal Procedure II (2)**

The class will also focus on procedural issues like distribution of child pornography on the Internet and the use of computer technology to commit traditional crimes like embezzlement and terrorism. The class will examine Internet gambling and the distribution of child pornography on the Internet to illustrate issues that arise in connection with the use of computer technology in criminal activity. The class will also focus on procedural issues like jurisdiction and venue that become problematic in the context of computer crime. Limited to 20. Prereq: LAWS 131.

**LAWS 251. Employment Law (3)**

This course examines employer-employee relations in non-union settings. Topics include wrongful discharge, occupational safety and health regulation, minimum wage, and workplace privacy issues. The course emphasizes written work, including advanced legal research training. Minimal overlap with Labor Law (LAWS 359) and Discrimination in Employment (LAWS 328).

**LAWS 253. European Union Law (2 - 3)**

After a brief introduction to the institutions and organs of the European Community, the legal aspects of the internal operations of the Community will be discussed. Special emphasis will be placed on the external impact of Community law, for example, its trading rules, company law, and business competition law, as well as its rules governing the free movement of goods, services, capital, and persons. The concept of European citizenship will also be dealt with.

**LAWS 257. U.S. Legal Writing for Foreign Graduates (3)**

This course is designed to teach English compositional skills and grammar for legal studies. With an English-as-a-second-language focus, this course will seek to teach students the various steps of the writing process, English grammar, and certain aspects of legal composition. The main goal of this course is to enable students to write clearly and correctly within U.S. legal studies and the U.S. legal work place. The course will meet twice a week for one hour. Students will be required to take this course based on a written exam administered at the beginning of the semester. Students must receive a grade of at least a C to pass out of the course.

**LAWS 261. Business Associations (5)**

This course is an introduction to the law of business associations, including general and limited partnership, limited liability companies, and corporations. The functions and relationships of enterprise participants, primarily promoters, equity owners, creditors, and managers are investigated. The course covers pre-organizational problems and then canvases the roles of ownership and management, with emphasis on the special duties (fiduciary and other) imposed on certain participants in publicly and closely-held entities. The regulation of securities fraud, proxy voting and solicitations, and the issuance of securities under the federal securities laws is explored. Fundamental concepts of business financing, including valuation of the concern and claim structure, are investigated. Organic changes, including dissolutions, mergers, and tender offers, are discussed.

**LAWS 263. Patent Prosecution (3)**

This course will expose students to the issues and concepts of drafting a patent application. Topics include defining an invention, drafting a patent application, responding to Office Actions issued by the USPTO. Patent law is a prerequisite. Grade is based on three short papers and a multiple choice final.

**LAWS 264. International Organizations (3)**

Deals with legal issues surrounding some common characteristics of intergovernmental organizations having wide membership, with an emphasis on the United Nations systems. Many of the issues are constitutional or procedural; that is, they have to do with the powers of, and restrictions upon, the organizations or their members as set forth in the constituent instruments of the organizations or as otherwise agreed in practice. Issues such as eligibility for membership and termination thereof, rights and obligations of members, dispute resolution, and legislative procedures will be addressed comparatively. The growth of international law through intergovernmental organizations is also addressed.

**LAWS 266. Sales and Secured Financing (4)**

A concentrated survey of the law relating to the sale and lease of goods and secured financing. (1) Sales. The primary focus will be on the law relating to the sale of goods in commercial setting, i.e., Article 2 of the Uniform Commercial Code. Some attention will be given to the United Nations Convention on the International Sale of Goods. Considerable attention will also be given to consumer sales issues, e.g., the Uniform Consumer Sales Practices Act and similar legislation. There will be some coverage of leasing of goods under Article 2A of the UCC. (2) Secured Financing. Personal property security interests under Article 9 of the UCC will be examined in considerable depth. Real property mortgages will not be covered. Not open to students who are taking or have taken Sales (LAWS 381) or Property Security (LAWS 377). Students taking this course are precluded from subsequently taking either of those courses.

**LAWS 267. Products Liability (2)**

Explores in depth the liability of manufacturers and sellers for physical injury to persons or property caused by defective products. The relevant law includes UCC warranty provisions, Restatement of Torts (Second) section 402A and other tort law, state “tort reform” statutes, and federal and state statutes regulating product safety, such as the FDA and the Consumer Product Safety Act. The course will also examine proposals to “reform” the law of products liability.

**LAWS 268. Death Penalty Law and Process (2)**

The course offers a review of the death penalty process, theory, and law from trial through execution, including examination of state laws and federal habeas corpus law. The course focuses on the legal principles implicated by the death penalty and also examines the social issues it raises including the social/legal arguments against the death penalty, race and gender issues, and the influence of political and other factors on the process. Recommended preparation: LAWS 327.

**LAWS 273. Computers and Crime (1)**

The course will cover both the new kinds of criminal activity made possible by computer technology and the use of computer technology to commit traditional crimes like embezzlement and terrorism. The class will examine Internet gambling and the distribution of child pornography on the Internet to illustrate issues that arise in connection with the use of computer technology in criminal activity. The class will also focus on procedural issues like jurisdiction and venue that become problematic in the context of computer crime. Limited to 20. Prereq: LAWS 131.
LAWS 274. Community Development Law (2)
An examination of the law of economic and land development in underserved and deteriorated areas. Legal issues related to business organization, financing, real estate, governmental programs, and regulation and taxation (among other areas) will be covered. Topics include background of urban deterioration, governmental and private sources of assistance, organizing the developing entity, financing the project, governmental programs, tax policy and programs, land assembly, and administration of developments.

LAWS 276. Contemporary Issues in International and Comparative Law (1)
The objectives of the course will revolve around initiating students to the basic concepts and principles of comparative law reasoning and helping students make sense of the increasing dialogue between jurisdictions practicing constitutionalism in a global context with a focus on human rights issues. The coverage of the proposed course will select from the following themes depending on student interest and availability of materials: (a) Freedom of religion, secularism and culture; (b) Freedom of expression and hate propaganda; (c) Freedom of expression and sexual representation; (d) Equality and same sex unions; (e) Assisted suicide; (f) Death penalty; (g) Implementation of human rights in federal or quasi-federal politics; (h) Socio-economic rights; and/or (i) Cultural rights.

LAWS 277. Immigration Law (2)
The general principles of immigration law and procedure, including federal authority to regulate immigration, removal of aliens (deportation and exclusion), administrative and judicial review, fleeing persecution (refugees, asylees, and others), immigrants and nonimmigrant visas, and consular practice. The course will emphasize practical application of current immigration law.

LAWS 279. Advanced Real Estate Development: Shopping Centers (2)
The course takes the point of view of the attorney for a real estate developer with a strong emphasis on shopping center development, including apartment complexes and office building developments, but provides insights useful to an attorney for the other side: a tenant, financial institution, or major developer in that capacity will identify issues, provide legal advice, and prepare papers and pleadings as necessary. In particular, students will be asked to conduct a limited number of the following simulations: draft a complaint and an answer to the complaint, including counterclaims; draft discovery documents; prepare witnesses, including expert witnesses; take and defend a deposition; or prepare pre-trial motions and exhibits. Trademark law is a prerequisite. Grade is based on the students work in these simulated settings.

LAWS 283. Medical Malpractice (2)
The course will involve liability and quality of care issues in the health care field, with an emphasis on the liability of physicians, hospitals, and to a lesser extent insurers. Topics will include defining the standard of care, theories of liability, defenses to medical malpractice, tort reform, and quality control. Recommended preparation: LAWS 261.

LAWS 285. Courts, Public Policy, and Social Change (3)
Examines the social impact of law and use of social research in the legal process, assesses efforts to use law to effect social reform, and empirical studies of legal processes and institutions. Recommended preparation: Graduate standing or consent of department. Offered as LAWS 285 and POSC 429.

LAWS 289. Secured Transactions (2)
This course deals with Article 9 of the UCC and other legal and equitable rules relating to the use of personal property as security for debts. Topics covered include creation of a security interest (mortgage), rights and obligations of the debtor (mortgagor) and the secured party (mortgagor), priority of interests in the same property, redemption rights of the debtor, and foreclosure of a security interest by the mortgagee. May not be taken by students who have taken or are taking the 4-credit Sales and Secured Transactions course (LAWS 266). Students who have taken or are planning to take the 3-credit Sales (LAWS 381) course may enroll.

LAWS 293. Financial Principles for Lawyers (3)
This course provides an introduction to the use of financial economics that are frequently relevant in many areas of law. Topics to be covered include the time value of money, uncertainty, claim structure (including the characteristics of debt, equity, and hybrid securities, and the benefits and detriments of debt and equity financing), behavior of securities markets, and analysis of financial statements. Use of these concepts in specific areas of legal practice will be discussed.

LAWS 295. Law of Health Care Organization and Finance (2)
This course presents an overview of corporate health care law issues including: public and private reimbursement systems, fraud and abuse, physician self-referrals, corporate practice of medicine/fee splitting, certificate of need, tax-exempt status of health care providers, and antitrust and insurance regulation of health care providers. The course will examine the origins and public behind current corporate health law and regulations and the issues they present for health care providers. Enrollment is limited to 25. Prereq: LAWS 227.

LAWS 296. Complex Federal Criminal Investigation and Prosecution (3)
The course will explore some of the practical, substantive, and ethical issues that arise in complex federal investigations and prosecutions. Students will read cases and articles concerning topics such as the use of electronic surveillance, plea bargaining, and contacts with persons represented by counsel. They will also discuss how the law limits or enhances the powers of federal prosecutors conducting criminal investigations and prosecutions. Grade will be based on class participation and a take-home examination. Prereq: LAWS 131 and LAWS 327.

LAWS 297. Immigration Law II (1)
The course is dedicated to the study of visas for visitors and aliens of extraordinary ability in the sciences, arts, or entertainment. Course materials will be drawn from Legomsky’s Immigration and Refugee Law and Policy, the Immigration and Nationality Act, and Title 8 (CFR). Students will be required to write a paper or prepare a visa petition. The course will likely be offered every other year. Prereq: LAWS 277.

LAWS 298. Health Care Transactions (2)
This course will examine a variety of typical transactions among health care providers and payors. Students will have the opportunity to understand the financial motivation behind these transactions and to identify the unique health care law issues presented by them. Students will learn to develop alternative methods for structuring transactions to minimize or avoid such issues. The types of transactions to be examined include: physician recruitment, physician practice acquisitions, physician practice management companies, joint ventures between hospitals and physicians, mergers and acquisitions of health care providers, and formation of integrated delivery networks. Enrollment is limited to 25. Recommended preparation: LAWS 295.

LAWS 299. Trademark Litigation (2)
This course will simulate a trademark infringement case. Students will be asked to represent a client, and in that capacity will identify issues, provide legal advice, and prepare papers and pleadings as necessary. In particular, students will be asked to conduct a limited number of the following simulations: draft a complaint and an answer to the complaint, including counterclaims; draft discovery documents; prepare witnesses, including expert witnesses; take and defend a deposition; or prepare pre-trial motions and exhibits. Trademark law is a prerequisite. Grade is based on the students work in these simulated settings.

LAWS 301. Administrative Law (3)
This course examines the legal and institutional framework within which agencies administer regulatory statutes, with emphasis on procedural and constitutional issues. Major themes include limiting arbitrary action, controlling agency discretion, and promoting governmental accountability. Examples and problems are drawn from a wide range of substantive areas, including business, communications, consumer protection, education, environmental, health and safety, intellectual property, labor and employment law, and real estate law.

LAWS 303. Admiralty Law (2)
The general principles of admiralty law including jurisdiction, practice, maritime liens, collisions, salvage, limitation of liability, and the rights of injured maritime workers.

LAWS 304. American Legal History (3)
This course surveys the American legal past from the Revolutionary era to the present. It examines the development of a distinct American legal culture by exploring the interrelationships among legal institutions, thought, practice, and education in various historical periods.

LAWS 306. Comparative Commercial Remedies (1)
This intensive mini-course covers a number of issues arising in the context of remedies in commercial litigation. We begin by discussing a number of difficult points of damages which are typically overlooked in the basic contracts and torts courses, such as: defining loss, consideration of claiming losses not immediately measured in year-end accounts, claiming
loss of a chance of making a profit (or avoiding a loss), and rights to a Defendant's profit that is resul-
tant from a wrongdoing. Also, the course will con-
sider other (non-damages) money claims arising out
of commercial relations, some aspects of proprietary
remedies, and protective remedies.

LAWS 307. Securities Regulation (3)
This course explores the policies and techniques of
state and federal investor protection, with empha-
sis on the distribution of securities by issuers and
their affiliates. If an analysis of express general
anti-fraud remedies, the "security" concept, and the
diverse philosophies underlying "value judgment"
and "disclosure" approaches to regulation of busi-
ness fund-raising practices, the course proceeds to a
full consideration of the impact of the Federal Secu-
rities Act of 1933 on primary and secondary distri-
butions. Concurrent as well as independent effects
of state blue sky laws, typified by the Uniform Se-
curities Act, are also treated. To round out the total
pattern of investor protection in the distributional
scene, the course includes limited excursions into
the anti-fraud, periodic reporting, public informa-
tion availability, and broker-dealer aspects of the Se-

LAWS 308. Advanced Securities Regulation (3)
This course will expand on the disclosure and
enforcement themes discussed in the Securities
Regulation (LAWS 307) survey course to engage in
an in-depth examination of selected real-world
securities topics. The focus will be to deepen the
student's understanding of the SEC regulatory re-
gime through consideration of current "hot topics"
in securities law (such as executive compensation,
8-K disclosures, loss contingencies and Manage-
ment's Discussion & Analysis), by reviewing SEC
pronouncements and working with actual hypo-
thetical disclosure and counseling situations.
In addition to analyzing rules, students will par-
ticipate in drafting, analyzing, and commenting on
sample disclosure documents and client advice
memos. The course is designed to further the stu-
dent's understanding of a corporate/securities law
practice as well as deepen the student's substan-
tive knowledge in securities regulation law. Prereq:
LAWS 307.

LAWS 309. Antitrust Law (3)
A study of the implementation of federal trade reg-
ulation statutes with emphasis on the interrelation-
ship of these laws with the competitive tensions of
the contemporary economy.

LAWS 311. Representing the Athlete (3)
The emphasis of this course will be placed various
aspects involved in the providing legal services to
professional athletes, including negotiation tactics
and letter and contract drafting. The class will in-
clude several negotiation and drafting exercises as
well as a simulated representative relationship be-
tween the student and the entertainer/athlete. In
the context of a mock litigation/arbitration, stu-
dents will also be required to draft legal briefs in
support of the contractual positions taken during
the contract drafting exercises.

LAWS 313. Business Planning (3)
Major events in the creation and development of
a business are examined in light of partnership,
corporate, and tax law problems. Students are pre-
sented with a series of hypothetical client-suggested
transactions. Students seek the most appropriate
means of attaining the business ends desired by the
principals. From time to time, brief written mem-
oranda covering issues raised by the problem sce-
narios may be required. Emphasis is placed on the
interaction among partnership, corporate, tax, and
securities concepts and doctrine. The significant
business events that may be covered in the course
include formation of a partnership; incorporation of
a going concern; corporate distributions, recapi-
thalizations, and repurchases of shares; sale of
the corporate business; and corporate combination.
Prereq: LAWS 211 and LAWS 261.

LAWS 315. Commercial Paper (3)
One of the basic courses in commercial law, deal-
ing with the law of negotiable instruments and
bank collections and deposits. These topics are con-
sidered primarily under the Uniform Commercial
Code and, to some extent, recent federal banking
and consumer credit legislation.

LAWS 319. American Indian Law (2)
An introduction to the body of law governing the
relationship among Indian tribes and state and fed-
eral governments. Major themes include tribal
sovereignty; the federal-tribal relationship; crim-
inal, tax, and regulatory jurisdiction on reservations;
and the rights of individual Indians. Does not fulfill
writing requirement.

LAWS 320. Conflict of Laws (2)
Competing approaches to choice of law in cases
having multi-state and/or multi-national contacts.
The course also covers personal jurisdiction, con-
stitutional and international limitations on choice
of law, and enforcement of judgments. Compara-
tive and international perspectives are integrated
throughout. Students develop their own choice of
law theory in a simulated restatement conference.

LAWS 323. Debtor-Creditor Law (3)
The creditor's power to enforce its judgments
through such judicial processes as attachment, exe-
cution, levy, garnishment, and creditors' bills. The
debtors' power to resist creditors' claims through
statutory exemptions or federal bankruptcy dis-
charge, or because the creditor has acted inappro-
priately or in bad faith. Also studied is the creditor's
power to set aside and avoid fraudulent transfers
made by the debtor, a power which has generated
much litigation in recent years. We also study the
special rights of the federal government to enforce
its claims, through the Federal Debt Collection
Act of 1990, the Federal Priority Statute, and the
Federal Tax Lien Statute. Finally, we survey collec-
tive creditors' remedies under state law, including
assignments for the benefit of creditors, creditors'
arrangements, and receiverships.

LAWS 324. Bankruptcy (3)
An introduction to bankruptcy law, with empha-
sis on the current Federal Bankruptcy Code. The
course includes Chapter 7 (liquidation bankruptcy
proceedings), Chapter 11 (business reorganizations),
and Chapter 13 (simplified reorganizations for indi-
viduals and sole proprietorships). Also considered
are various state law debtor-creditor remedies and
the impact of bankruptcy on such remedies. Prior
enrollment in the UCC and debtor-creditor courses
may be helpful but is not mandatory.

LAWS 326. Banking Law & Regulation (3)
This course will provide an overview of basic U.S.
Federal banking law in the context of evolving in-
ternational standards. The course will begin by
examining the roles played by banks in the world
economy and why a specialized set of regulation is
justified. The course will then examine each of the
major U.S. Federal laws and international stan-
dards that govern banking activities against the
background of the various regulatory theories discussed.
Topics will include entry, expansion/merger, capital,
reserves, investments, lending, interest, insolven-
cy, non-banking financial activities, money launder-
ing, and international activities. Close attention will
be given to the role of supervision in both domestic
and international contexts. Extensive use will be
made of international and comparative materials

LAWS 327. Criminal Procedure I (3)
The investigatory stage of the criminal process.
Constitutional limitations on searches and seizures,
interrogation practices, and pretrial identification
procedures are examined. In addition, the exclusion-
ary rule, the principal method for enforcing Fourth,
Fifth, and Sixth Amendment rights, is considered.

LAWS 328. Discrimination in Employment (3)
This course will examine the federal laws concern-
ing discrimination in the workplace. These include
Title VII of the 1964 Civil Rights Act, the Equal Pay
Act, the Age Discrimination in Employment Act,
the Americans with Disabilities Act, the Genetic
Information Nondiscrimination Act. We will study
the regulation of discrimination based on race, sex,
religion, national origin, age, disability, and genetic
status, including policy and ethical question and
strategic considerations in prosecuting and defend-
ing employment-based civil rights actions.

LAWS 329. Master Classes in Health Law, Policy
and Ethics (2)
Leading experts in the fields of health law, health
policy, and bioethics will teach each master class
on a topic of their choice under the coordination of
the instructor. The course will be open to graduate
and professional students. The grade will be based
on class participation and an examination.

LAWS 331. Environmental Law (3)
The course is designed to provide an overview of
both the breadth and depth of environmental regu-
lation in the United States and to consider ways
our environmental regulatory system might be im-
proved. Although all of the major environmental
laws will be surveyed, several statutes will be exam-
ined in greater detail. Students will be expected to
navigate select provisions of statutes and regulations
through in-class problem sets. Guest speakers will
also be invited to speak on topics of current inter-
est.

LAWS 335. Remedies Seminar (3)
This seminar provides students with both a broad

SCHOOL OF LAW
survey of the law of civil remedies and a chance to focus individual research on a particular area of interest within that broad survey. The law of remedies focuses on what happens after the merit of a case has been decided; how does the court provide remedies to the successful litigant? This seminar examines concepts of corrective justice, the institutional incentives created by different types of remedies, and related policy issues. Topics include "private" remedies (tort, contract, etc.), "public remedies," such as civil rights actions in which plaintiffs seek broad injunctive relief, and specialized areas of public-policy concern such as punitive damages and remedies in class-action suits.

**LAWS 337. National Security Law (3)**

Provides a study of the separation of powers in national security matters, presidential war powers, congressional and presidential emergency powers, the domestic effect of international law, the use of military force in international relations, investigating national security threats, the Freedom of Information and Privacy Acts, access to national security information in the federal courts, and restraints on disclosing and publishing national security information. The course builds upon a strong foundation of constitutional law and addresses the fundamental tension that exists in our foreign and domestic affairs by virtue of the constitutional separation of powers between the respective branches of government. Several classroom hours will be spent dealing with constitutional war powers and how the executive and legislative branches have tried to define their respective measures of expressed and implied power with regard to the Vietnam War, the War Powers Resolution of 1973, and more recent US incursions such as the first Persian Gulf War and the most recent invasion of Iraq.

**LAWS 340. Federal Courts (3)**

This course explores the relationships between the federal courts, Congress, and state courts and governments. Topics include congressional control of federal jurisdiction, justiciability, federal court abstention, suits against state and federal governments and officials, habeas corpus, and federal injunctions on state proceedings.

**LAWS 341. Estate Planning and Taxation (3)**

This course covers the federal law of estate and gift taxation. Topics include the computation of the estate tax, the taxation of gifts, the assets included in the gross estate, deductions from the gross estate to compute the taxable estate, credits against the tax, the generation-skipping transfer tax, and estate planning ideas and techniques, such as the use of trusts. The income taxation of estates and trusts is also covered. Grade is based on class participation and a major written paper on a topic chosen by the student and approved in advance by the instructor. Prereq: LAWS 211 and LAWS 232.

**LAWS 343. Federal Taxation of Partnerships and Partners (3)**

This course will examine the basics of partnership taxation. The topics will include the tax consequences of capital contributions to and distributions from a partnership, the receipt of a partnership interest in exchange for services, the allocation of profits and losses among the partners, the computation of the adjusted basis of a partner's interest, the sale or liquidation of a partner's interest, and the liquidation and termination of the partnership. Prereq: LAWS 211.

**LAWS 346 Insurance (3)**

A comprehensive introduction to the regulation of the insurance industry and to the legal issues arising from relation between the parties to insurance contracts. The course examines statutory regulation of the industry by state and federal agencies and analyzes cases involving aggressive regulation by the judiciary as well. Insurance decisions on the cutting edge of developments in contract, tort, and agency law are studied. Students are required to study the policy forms most frequently encountered in practice: the automobile policy, the homeowner's policy, and the life insurance policy. The course also provides exposure to problems relating to other areas of insurance including commercial general liability coverage, fire insurance, professional liability (malpractice) coverage, and health insurance.

**LAWS 349. International Trade and Development (3)**

The public international and United States law regulating international trade. (The private law of international trade and investment is dealt with in International Business Transactions, LAWS 354.) It includes the economic theory of international trade (although no exposure to a course in economics in secondary or undergraduate education is necessary) as well as a legal examination of issues regulating global and regional (e.g., the Canada-U.S. Free Trade Agreement, EEC) international trade. Primary emphasis is on the General Agreement of Tariffs and Trade (GATT) and the World Trade Organization (WTO) as well as such United States legislation implementing the GATT as antidumping and countervailing duties legislation and escape clause relief. The roles of trade and aid are also explored, as well as U.S. legislation affecting the transfer of resources to less developed countries.

**LAWS 350. International Arbitration (2)**

An advanced course covering the current status of arbitration as a dispute settlement mechanism in international affairs. This course will cover the use of arbitration as a means of resolving international disputes: a) between private parties; b) between private and governmental parties; and c) between governments. It will cover possible forums and rules of arbitral dispute resolution and the problems of the enforcement of foreign arbitral awards. Special aspects of dispute resolution in certain geographical and subject areas will be covered as will be the problem of sovereign immunity. Disputes arising from multinational business transactions will be focused on as will be maritime, environmental, and border disputes.

**LAWS 351. Alternative Dispute Resolution (2)**

Students will examine the processes of alternative dispute resolution (ADR) through reading materials, videotapes, guest lectures, and simulation exercises. Particular emphasis will be given to the interaction of lawyers and clients in business negotiations and in litigation. Negotiation, arbitration, mediation, the summary jury trial, and the mini- trial will be examined. The class will also cover impediments to ADR, such as lack of understanding or hostility on the part of clients or lawyers. Offered as LAWS 351 and LHRP 451.

**LAWS 353. Philosophy of Law (3)**

This is an examination of the general nature of law, the broad concerns of jurisprudence, the study of comparative law, and many of the issues raised in the literature of legal philosophy. Students will examine the principles of legal positivism, mitigated natural law, and rights theory. Selected readings and cases will illustrate these theories, which will also be examined in the context of rule selection by new governments in developing or revolutionary societies. The course also looks at the general nature of legal systems: how politics, morality, and individual views of justice and rights affect particular court cases and the course and development of law generally. Topics will include abortion, obscenity and sin, civil disobedience, affirmative action, sexual gatekeeping, and the death penalty. This is unlike any other of the legal theory or jurisprudence courses, and those who have sampled legal theory elsewhere in a different form are welcome and encouraged to enroll. Recommended preparation: PHIL 101. Offered as LAWS 353, PHIL 335, and PHIL 435.

**LAWS 354. International Business Transactions (3)**

This course examines various types of international business activities from a transactional perspective. It focuses on international sales, international payments, and international licensing transactions and examines the different legal systems (state, federal, international) that may impact on these transactions. It also considers commercial aspects of the interpretation of cross-border contracts, dispute resolution concerning cross-border contracts, and the role of lawyers. Some basic issues relating to private international law/conflicts of law are also addressed. There is also some introductory coverage of international electronic commerce transactions and related legal issues.

**LAWS 357. Sexual Orientation & the Law (3)**

The course will address the development of legislation and case law dealing with LBTQ rights in different practice areas including family law, estate planning, and employment law. Further, the course will deal with possible scenarios for more legislative and judicial activity.

**LAWS 359. Labor Law (3)**

The basic course in the area of union-management relations, designed both for students desiring to pursue the field further and for those whose interest lies in an introduction to legal principles in this area. The course begins with a brief historical study of the evolution of the labor movement and prestatutory law. It then considers federal regulation under the National Labor Relations Act of union organizational efforts, management-union interaction, and the representation process, then proceeds to the collective bargaining process. The collective bargaining process is examined in some depth with special emphasis on the scope and substance of the duty to bargain in good faith, the enforcement of
This two-semester course is to address issues relating to biomedical-related inventions by exposing law students, MBA students, and Ph.D. candidates (in genetics and proteomics) to the challenges and opportunities encountered when attempting to develop biomedical intellectual property from the point of early discovery to the clinic and market. Specifically, this course seeks to provide students with the ability to value a given technological advance or invention holistically, focusing on issues that extend beyond scientific efficacy and include patient and practitioner value propositions, legal and intellectual property protection, business modeling, potential market impacts, market competition, and ethical, social, and healthcare practitioner acceptance. The course will meet over two consecutive semesters—fall and spring—and is six credit hours (three credits each semester). During these two semesters, law students, MBA students, and Ph.D. candidates in genomics and proteomics will work in teams of five (two law students, two MBA students, and one Ph.D. candidate), focusing on issues of commercialization and IP management of biomedical-related inventions. The instructors will be drawn from the law school, business school, medical school, and technology-transfer office. To be eligible for this course, law students must also have a B.S. or equivalent in the life sciences, such as biology, biochemistry, genomics, molecular biology, etc. Offered as MGMT 467, LAWS 367, GENE 467. Prereq: LAWS 229 and LAWS 261.

LAWS 368. Business of Baseball (3)
This course will bring the "business of baseball" to the students, and present them with an interactive "hypothetical" problem-solving dialogue with the instructor, which would deal with the most important issues facing major and minor league baseball today. Prereq: LAWS 261 and LAWS 391.

LAWS 370. Intellectual Property Survey (2)
This course is designed to provide students with an overview of several areas of law traditionally associated with intellectual property or IP, including copyright law, which pertains to the protection of literary, musical, and artistic creations and has issues replete with First Amendment implications; patent law and trade secret law, which focus on the protection of technological works ranging from chemical formulae, to software, to biotechnology; and trademark law, which relates to the goodwill associated with corporate identity and product recognition. We will also devote time to the study of the philosophy and economics of intellectual property keeping in mind, throughout the course, the need to strike an optimal balance between incentives to create and commercialize intellectual creations on the one hand and public access to these creations on the other hand.

LAWS 372. Current Topics in Health Law (2)
The course will cover 13 different current topics that students are likely to confront in the practice of health care law. Each topic will be presented by a leading practitioner in the field, who will provide appropriate reading materials. The presentations will be followed by student discussion led by a visiting faculty member. The grade will be based on class participation and an examination.
treatment for children; genetic screening; hospital ethics committees; access to care and the politics of health care in the 90s; and ethics in the business of medicine. Readings will consist of legal cases and documents, statutes, regulations and articles from the academic and the lay press. Grade is primarily based on an exam. Both an oral class presentation and a short paper are optional to supplement the grade, but not to replace the exam. Attendance and class participation are also considered for grading purposes.

LAWS 385. Real Estate Transactions and Finance (2 - 3)
Covers basic real estate transactions as well as issues involved in complex finance and development. Topics include: brokers, land contracts of sale, deeds and title covenants, the recording system, title insurance, mortgages, shopping center development, cooperatives and condominiums, ground lease financing, construction lending, distressed properties, selected federal income tax issues, and the real estate attorney’s professional responsibilities. Whenever possible, issues will be examined in the context of model transactions.

LAWS 386. Advanced Evidence (3)
This seminar is designed to cover specific issues in evidence, e.g., privilege, toxic torts, computer-generated evidence, expert testimony, syndrome evidence, and profile evidence. A paper and presentation are required. The paper may satisfy the writing requirement.

LAWS 388. International Real Estate Transactions (2)
The course will explore selected topics involved in international real estate transactions, from the perspective of an American counsel representing an American entity doing business abroad. Topics may include structuring, transactional goals, due diligence, letters of intent and documentation, deal implementation, title protection, and others. The course will use traditional learning techniques as well as case studies and simulations, with a major focus on letters of intent/documentation. Students will be graded based on class participation and presentations, written assignments, and a final paper/take home exam. Recommended preparation: LAWS 385 (may be taken concurrently).

LAWS 389. Corporate Real Estate Transactions (2)
Real estate is typically the largest single category of capital investment and the second largest category of repeat expense (after total personnel costs) for most businesses. Major industrial and service sector companies are increasingly focused on the opportunities and challenges inherent in the real estate portfolios that support their core operations. This course will highlight the strategic case for effective corporate real estate management and the role of inside and outside legal counsel in the commercial real estate context. The course will consider advanced transactional situations, including purchase and sale of commercial properties, leasing of business properties, and complex industrial facilities. The course’s emphasis on case studies and commercial transaction scenarios are also designed to act as a capstone course that complements and draws upon the students’ prior coursework in contracts, real estate and commercial transactions, ethics and government regulation. Three parallel case studies will run throughout the course, illustrating the application of each topic to different types of client organizations: a Fortune 500 industrial company, a small family-owned retail business, and a medium-sized not-for-profit organization with several sites. Each client organization will have mock client representatives who will have different business and style preferences, which the class will need to accommodate and will come to anticipate in fashioning and recommending solutions for each client. The final exam will build from these same client scenarios, offering the class participants an opportunity to apply their learning to make recommendations to each client with respect to specific situations and goals.

LAWS 390. Topics in Advanced Labor Law (2)
Covers relations between employers, employees, and unions not covered in the basic Labor Law course (LAWS 359). Among topics included are hot cargo agreements, obligations of successor employers, duty to fair representation, union security, federal preemption of state labor legislation, internal union affairs, and labor law reform. Prereq: LAWS 359.

LAWS 391. Sports Law (3)
Sports and Entertainment Law is the study of legal issues and problems relating to the music, television, and sports industries. This course focuses on the applicability of various legal doctrines to these industries, such as intellectual property law, labor law, and contract law. Also, emphasis will be placed on negotiation tactics and letter and contract drafting by conducting several negotiation and drafting exercises as well as a simulated representative relationship between the student and the entertainment/athlete. In the context of a mock litigation/arbitration, students will also be required to draft legal briefs in support of the contractual positions taken during the contract drafting exercises. Prereq: LAWS 211 and LAWS 261.

LAWS 392. Mass Media Law and Policy (2)
This two-credit course is designed to cover the law and regulation of electronic and print media.

LAWS 393. Trademark Law (3)
Trademark Law is the study of how commercial entities use words and designs to identify the source of their products and services in the minds of consumers and competitors. This course focuses on domestic and international trademark acquisition, retention, transfer, registration, and infringement. In addition to the common law of trademarks and unfair competition, much of this course will be devoted to studying the statutory scheme of federal trademark law.

LAWS 395. Trial Practice (2)
This course provides practical training in jury and nonjury courtroom trial procedure. Students are assigned as lawyers in criminal and civil cases to conduct jury selection, examine and cross-examine witnesses, make objections, and argue motions in a simulated courtroom environment. Students may not take both Trial Practice and Trial Tactics (LAWS 397). Prereq: LAWS 207 or LAWS 212.

LAWS 396. Reproductive Rights Seminar (3)
This seminar will cover the basics of the Supreme Court’s reproductive rights jurisprudence and will look at a series of topics relating to the reproductive rights law and policy, including ‘partial-birth’ abortion and the health exception; minors’ access to abortion, contraception, and sex education; reproductive rights and religion; and assisted reproductive technologies. In addition to various interim writing assignments, you will be required to submit a substantial paper by the end of the semester. Prereq: LAWS 202.

LAWS 397. Trial Tactics (4)
An intensive course in trial tactics, techniques, and advocacy. The emphasis during the first half of the semester is on practice in the separate components of a trial: direct examination, objections, cross-examination, use of rehabilitative devices, examination of expert witnesses, jury selection, opening statements, closing argument, and pretrial preparation. During the second half of the semester each student acts as co-counsel in a full trial. Videotape recording is used for critiquing student performance throughout the semester. Students may not take both LAWS 397 and LAWS 395 (Trial Practice). Prereq: LAWS 207 or LAWS 212.

LAWS 398. Eminent Domain Law: Litigation Techniques and Trial Practice (2)
This course will provide students with a study of the law of eminent domain as it has evolved under the US Constitution and State of Ohio laws, with a special focus on the emerging law that has developed on the last decade. Will provide a special opportunity for students to understand the techniques and strategy of the litigation of modern eminent domain actions, both from the perspective of the acquiring agency as well as the private property owner. Also, provides exposure to the trial of an eminent domain action, both from the perspective of the acquiring agency as well as the private property owner. Also, provides exposure to the trial of an eminent domain action and special techniques, strategies, and practice pointers related to the successful trial of right to take proceedings before a judge and the trial of jury actions on issues of compensations.

LAWS 399. Pretrial Practice: Civil (2)
This course picks up where most first-year legal research and writing courses leave off. We will examine intensively, among other things, the various discovery devices (including depositions, interrogatories, document requests, and requests to admit), pretrial motion practice, litigation as a means of achieving the best possible negotiated result, and alternative dispute resolution mechanisms (including mediation and arbitration). In other words, we will study the things that litigators spend most of their time doing and thinking about: how lawyers go about gathering and preserving evidence, the everyday interactions they have with courts, and the reasons they do all these things even though they rarely expect to get all the way to trial. The course will include simulations and extensive drafting assignments.
LAWS 400. Pretrial Practice: Criminal (2)
This course introduces students to the key activities lawyers undertake in a criminal case in advance of trial. This course examines the various steps leading up to trial, such as the preparation of an indictment, the drafting of discovery requests, motion practice related to discovery and the suppression of evidence, preparation and negotiation of plea agreements, and other motion practice related to the pre-trial phase. This course is designed to expose students to the pretrial phase in a criminal case from the perspective of both the prosecution and defense. Anticipated topics for discussion will include case investigation, the gathering of evidence, pretrial problems typically encountered in a criminal case, and the role sentencing guidelines can have in shaping plea negotiations and other pretrial negotiations. The course will include simulations, drafting assignments, opportunities for mock oral argument, and negotiating exercises. Limited to 12 students.

LAWS 401. The Lawyering Process (2)
Certain legal skills basic to the practice of law, including interviewing, counseling, and negotiating, are discussed, and students have the opportunity to practice those skills in simulated interviews and negotiations under the supervision of the instructor. Videotapes of lawyers and/or students are shown and reading materials assigned. Class discussions of reading materials and videotapes and experience in simulations enable students to confront basic problems of interpersonal communications, role conflicts, and decision-making posed by law practice.

LAWS 402. Pretrial Practice: Medical Malpractice (2)
This advanced skills course is a specialized version of the Pretrial Practice (Civil) course. The focus is on the work of counsel for plaintiffs and defense counsel in medical malpractice cases including pleading, discovery, motion practice, and settlement negotiation. The course will emphasize the special problems confronted in medical malpractice cases such as obtaining and interpreting medical records and dealing with expert medical witnesses.

LAWS 403. Criminal Justice Clinic I (3)
Students handle a limited number of misdemeanor cases in municipal courts throughout Cuyahoga County. The seminar sessions are devoted to discussions of cases being handled by the students and to ethical and strategic considerations of criminal law practice, trial tactics, and plea bargaining. Hypothetical case studies are also used to increase the breadth of the students' exposure to the criminal justice system. Each student also handles some prosecution in local court. Prereq: LAWS 327.

LAWS 407. Death Penalty Lab (3)
This Lab will involve students in an integrated experience of academic research and public service. Students will work on semester-long research projects arising from actual death penalty cases that will be of assistance to practitioners in death penalty cases or research projects for governmental and non-governmental organizations engaged in support for, opposition to, or reform of the death penalty at a local state, national, or global level. Issues may include: victim's rights; jury selection (race/gender discrimination); proportionality (discrepancies in geographic application or application to different fact patterns); economic impact on the system; eleemosynary and transnational problems with foreign accused; systemic review (e.g., Illinois commission); and other specific recurring issues arising from innocence, assistance of counsel, experts, jury instructions, or misconduct (judge, attorney, jury). The students will have no direct representation responsibilities.

LAWS 409. Death Penalty Lab II (2)
This lab will involve students in an integrated experience of academic research and public service. As enrollment is limited to students who have successfully completed Lab I, these students will assume a supervisory role working with Lab I students. Students will work on research projects arising from actual death penalty cases that will be of assistance to practitioners in death penalty cases or research projects for governmental and non-governmental organizations engaged in support for, opposition to, or reform of the death penalty at a local state, national, or global level. Issues may include: jury selection issues; proportionality issues; economic impact of the application of the death penalty; examination of issues surrounding a specific state's ability to provide a viable clemency; issues of international law: research, investigation, and litigation of case specific issues ranging from actual innocence, ineffective assistance of counsel, ineffective assistance of experts, prosecutorial misconduct, judicial misconduct, juror misconduct, etc. Prereq: LAWS 407.

LAWS 411. Civil Litigation & Mediation Clinic I (3)
In this course, students handle various kinds of civil disputes on behalf of consumers who need legal assistance but cannot afford to pay for a private lawyer. Students are responsible for all phases of litigation, including the initial client interview and case assessment, preparation of pleadings and motions, conducting discovery, settlement negotiations, and, if necessary, trying the case before a judge or jury. A weekly two-hour seminar session provides a regular forum for learning the substantive law that applies to the students' caseloads, as well as discussion of the various legal, professional, and ethical issues that arise in the cases. In addition, after completing required basic mediation training, students act as mediators in small claims and/or landlord-tenant cases in municipal court. Students must be enrolled in and complete both semesters to receive credit. Prereq: LAWS 207 or LAWS 212 and LAWS 432.

LAWS 412. Civil Litigation & Mediation Clinic II (3)
Continuation of LAWS 411. Both semesters must be completed before credit is given.

LAWS 414. Criminal Justice Clinic II (3)
Continuation of LAWS 413. Both semesters must be completed before credit is given.

LAWS 418. Health Law Clinic I (3)
Students represent clients in social security disability claims, adult guardianships, health insurance claims and disputes, access to health care, special education for disabled children, nursing home transfers and discharges, and other health and disability law-related issues. They investigate complaints in nursing home and represent clients in administrative and court proceedings. A major part of the student's responsibilities is to analyze the problems and determine the best way of resolving them. Seminar sessions are primarily devoted to specific skills and to discussions of matters being handled by the students. The ethical and practical problems encountered in health law practice are emphasized, as well as legal theory. This is a year-long course; students must be enrolled in and complete both semesters of work to receive credit. Prereq: LAWS 207 or LAWS 212 and LAWS 227 or LAWS 373.

LAWS 419. Health Law Clinic II (3)
Continuation of LAWS 418. Both semesters must be completed before credit is given.

LAWS 423. Financial Integrity in Emerging Markets Lab (3)
In this course, which is offered alternately as either a lab or a seminar, students study and research key aspects of the international financial system integrity rules, with a focus on the anti-money laundering and terrorist financing standards of the Financial Action Task Force (FATF) and the Basel Core Principles on Banking Supervision of the Basel Committee (as well as similar standards promulgated for other financial institutions). When offered as a lab, the course engages students in projects for a variety of organizations involved in improving the integrity of financial institutions, including the FATF (as well as FATF-style regional bodies), the International Monetary Fund, the World Bank, the United Nations Office on Drugs and Crime, and locally based governmental and non-governmental organizations. Students satisfactorily completing this course will be eligible to apply for a fully paid summer internship with a local bank that will involve work in the bank's legal, anti-money laundering and financial intelligence units. Recommended preparation: LAWS 211 and LAWS 307.

LAWS 430 Community Development Clinic I (3)
This is a year-long course; students must complete both semesters of work to receive credit. Students represent businesses and non-profit entities in formation of their businesses and to obtain tax exemption for non-profit corporations. They act as general counsel helping their clients plan for future projects and activities and operate in compliance with law that regulates their activities. Students may also help to structure tax, real estate and corporate transactions for entities. Students may have the opportunity to work on simple intellectual property matters including trademark, trade name and copyright registrations, as well as website issues and nondisclosure agreements. This clinic is primarily transactional in nature and is designed to expose students to the special problems encountered in representing entities and in structuring transactions. Seminar sessions will be devoted to discussions of applicable law pertaining to specific cases students are working on and development of the skills necessary to represent individuals and entities in transactional matters. Students also will be exposed to the ethical problems associated with entity representation.
Prereq or Coreq: LAWS 261.

LAWS 431. Community Development Clinic II (3)
(See LAWS 430.)

LAWS 432. Basic Mediation Training (1)
This course provides students with basic mediation training. After successful completion, students will be certified, allowing them to serve as volunteer mediators in forums where basic training is required.

LAWS 436. Immigration Law Practicum I (3)
The Immigration Clinic will be both a real client representation clinic and provide students with experience of working on consulting projects with such organizations as the American Immigration Law Foundation. Examples of the activities that students may work on include 1) representation of individuals in matters before the Immigration Court, 2) preparation of legal memoranda, briefs, or policy papers on targeted immigration law issues. Examples of the kinds of cases and issues to be included are asylum, removal, petitions based upon the Violence Against Women Act, protections of non-citizen victims of domestic violence, and legality of detention. This is a year-long course. Prereq: LAWS 277.

LAWS 437. Immigration Law Practicum II (3)
The “Immigration Law Practicum” provides students a unique opportunity to assist persons from other countries and cultures while gaining hands on experience drafting legal documents and briefs, preparing factual and expert witness affidavits, and conducting human rights and international law research. Students may work on a variety of pro bono asylum, refugee, and removal (deportation) cases, helping individuals to obtain freedom from abuse, torture and persecution. Students desiring a two-semester experience may follow up “Immigration Law Practicum” by enrolling in “Immigration Law Practicum II.” Prereq: LAWS 277 and LAWS 436.

LAWS 438. Digital Law and Business (1)
The course provides Law and MBA students with an understanding of legal issues that need to be addressed in the development of digital business at the level of website management and transactions. The course also highlights the critical role of technology as a source of new legal requirements, and also as a means to address and enforce legal requirements that are critical in conducting on-line business (e.g. demand for authenticity, or non-repudiation). The course is organized as a series of topics that focus on critical aspects of e-business development and related contractual issues, business transactions and their enforcement, security, privacy, intellectual property rights, consumer protection, international legal issues and e-business regulation. Specific legal topics include: a). Copyright, trademark, and (to a lesser extent) patent issues (web development, content management). b). Contract law in the e-business context (formation, repudiation, E-sign, UETA, UCITA, etc.). (B2B, B2C transactions, financial transactions). c). Online privacy law and privacy policies (marketing topics). d). DMCA, ACPA, ECFA and the Patriot Act, COPPA. e). Website Terms of Use (web development), f). Website affiliate agreements (web development), g). Website development and maintenance agreements (web development). h). Web product distribution agreements. i). Shrinkwrap, clickwrap, and EDI agreements (B2B). j). Various IP-related licensing, confidentiality, development, and assignments, agreements, domain naming (Internet). Offered as LAWS 438 and MIDS 438.

LAWS 440. International War Crimes Project (3)
Students in this unique course undertake legal research projects for various international criminal tribunals (including the International Criminal Court and the tribunals in Cambodia and Sierra Leone, among others). They prepare memoranda on selected issues related to current tribunal cases. The course sessions explore the development of international criminal law and the establishment of the tribunals, as well as their jurisprudence and their Rules of Procedure and Evidence. Grades are based on the quality of student papers and in-class presentations. Completed research projects along with their accompanying source notebooks become part of the tribunal libraries.

LAWS 442. Access to Justice Externship (3)
This is an externship program in which students work at the Legal Aid Society of Cleveland for 12 hours per week with and under the direct supervision of Legal Aid attorneys. (For the summer program, students will work full time for 10 weeks during the summer months.) Students will research substantive and procedural legal issues, draft memoranda, and assist with preparation of cases. Students will work on a variety of issues, depending on student interest and agency need. In the past students have worked on substantive matters in the areas of family law, bankruptcy, housing, worker's compensation, government benefits, special education and immigration. Students will interact with the law school faculty liaison through journals and periodic meetings to discuss and further reflect upon the externship experience. For more information about the Legal Aid Society of Cleveland, students are encouraged to visit http://www.lasclev.org/.

LAWS 451. Global Corporate Governance Lab (3)
This Lab will involve students in an integrated experience of academic research and public service. Students will work on research projects on corporate governance law and policy for publicly owned companies in emerging markets such as India, Russia, Turkey, and South Africa. The course will engage students in projects for a variety of organizations involved in improving corporate governance in emerging markets, including the Organization for Economic Cooperation and Development (OECD), the International Fiscal Corporation, the Institute of International Finance (IFF), and locally based governmental and non-governmental organizations. Students will study and research key aspects of corporate governance, including minority shareholder protection, the structure and responsibility of the board of directors, accounting and auditing requirements, transparency of shareholder ownership and control, and enforcement as they apply to emerging markets. Special attention will be paid to the importance of fashioning rules appropriate for the economic, social, and legal environment of each jurisdiction.

LAWS 454. Urban Development Lab (2)
This course will involve students in an integrated experience of academic research and public service to the Greater Cleveland area. Students will work on semester long research projects arising from issues raised by local nonprofit development organizations and the development arms of other local nonprofit groups and government agencies. Specific topics will vary from semester to semester, but will generally fall within (i) barriers to development of urban properties, (ii) the role of local government and communities in encouraging or discouraging development projects and (iii) solutions for making urban areas, in general, and Cleveland, in particular, more livable and sustainable. When possible, students will present their findings directly to the organization(s) raising the issue. Students can expect direct or indirect exposure to aspects of real estate, finance, land use, tax and other regulatory law.

LAWS 500. Supervised Research Seminar (1 - 2)
Second- and third-year students may earn graded credit for an individual research project of scholarly depth and scope, under the close supervision of a faculty member. Approval of the faculty supervisor is required before registration. No student may undertake more than two Supervised Research projects or earn more than a total of four hours of Supervised Research credit. No student may work on more than one Supervised Research project in one semester. May satisfy the writing requirement.

LAWS 501. International Tribunal Externship (12)
This program provides opportunity for students to participate in a semester long program with a tribuneal program arranged through the Cox International Law Center.

LAWS 503. U.S. Attorney Externship: Civil (3)
This is an externship program in which students selected by the law school will work at the United States Attorney's Office in Cleveland for 12 hours per week, with and under the direct supervision of Assistant US Attorneys on civil cases being handled by that office. Most cases will involve torts, employment discrimination, immigration and prisoner habeas, administrative appeals, environmental enforcement, bankruptcy, debt collection and civil fraud. Students will observe and, in some cases, participate (as assistants to the USA on the case) in pretrial and court proceedings, and will work on projects to assist in the prosecution of the cases to which they are assigned. Students will research significant legal issues, draft briefs and pleadings and assist with witness and exhibit preparation. Students will also attend a 1-hour weekly seminar in which they will review and reflect upon the court proceedings observed and the work engaged in on the cases assigned, and discuss various topics relating to federal civil litigation involving the government. Topics in the seminar may include authority and responsibility of the U.S. Attorney, ethics, litigation with the government, discovery and post-trial practice, expert witnesses, damages, compromise and settlement.
sancions and civility. Students must be approved by the United States Attorney following completion, review and approval of a security clearance application.

**LAWS 505. Curricular Training: Law Field Research (0)**

This course is intended exclusively for the foreign national J.D. or L.L.M. law student who wishes to gain applied legal experience based on their intended career path with an organization that offers course credit for internship experience. These internships may be either paid or unpaid. This course will provide a means for the student to build required skills and bridge the gap between the classroom and real world application. The student is encouraged to explore and discover additional avenues to assist in the management and advancement of his/her career. Does not count toward J.D. credit.

**LAWS 508. ERISA (4)**

This class will cover employee benefits law. (ERISA): defined benefit plans, including in-depth consideration of defined benefit plan documents; VEBAs, their use and regulation; group life, Accidental Death & Dismemberment, and Long Term Disability plans and related insurance documents; insured and non-insured medical benefit plans; reporting and disclosure requirements of ERISA, including summary plan descriptions, summary of material modifications, Form 5500, and “top hat” elections; and requests for favorable determinations of qualified plans, including Form 5300 and Notices to Interest Parties.

**LAWS 509. Law of the Visual Arts (2)**

This course deals with legal aspects of the world of visual arts. In particular, the course will explore art theft; plunder of art in times of war; governmental regulations affecting the import and export of works of art; tax and estate planning issues for art collectors; artists’ rights (including freedom of speech, moral rights, copyright, and resale royalty rights); and the problems art museums face in acquiring, exhibiting, and deaccessioning works of art. Several classes will examine works of art with particular relevance to the course. In addition, the CMAs deputy director of development, its legal counsel, and the chairman of its board will talk about the myriad legal issues the CMA and its staff face on a daily basis.

**LAWS 510. Intellectual Property Theory Seminar (3)**

We will explore and ask several questions from a philosophical and historical perspective, including: Should one’s intellectual product be entitled to protection? What are the reasons for granting or denying protection? What form, if any, should this protection take? What are the costs and benefits to society of protecting one’s intellectual product?

**LAWS 511. Supreme Court Seminar (3)**

Students will examine the judicial process in the U.S. Supreme Court, including the nature of decision-making in a multi-member tribunal, procedural and jurisdictional issues, and the development of a justice’s jurisprudential philosophy. Students follow and analyze a particular justice or an aspect of the Court’s operation. May satisfy the writing requirement.

**LAWS 512. Tax Policy Seminar (3)**

This advanced seminar for students interested in fundamental issues of tax policy and tax reform considers the favorable treatment of capital gains, the advisability of adopting a comprehensive tax base under a new definition of gross income, the use of tax incentives to achieve non-tax policy goals, and the basic system of taxing corporations and shareholders. May satisfy the writing requirement. Recommended preparation: LAWS 211.

**LAWS 519. Torts Theory Seminar (3)**

This seminar will allow students to examine theories of justice in the context of tort law. In the seminar, we will be reading and discussing a series of articles that seek to provide a basis for understanding and evaluating tort doctrine. This will include readings concerning the economic approach, the corrective justice approach, and approaches based on distributive justice. The doctrine that we study will be that which is familiar from the first year course: strict liability, the requirements of the reasonable person, proximate cause, duty and product liability. Students will pick an area of tort doctrine and write a paper that will apply one or more theories to that area. A student might, for example, examine a manufacturer’s duty to warn customers about possible harm in the use of the product, and would write a paper helping us to understand that duty in light of economic and corrective justice theories.

**LAWS 531. Control of Toxins in Products and Workplaces (3)**

This seminar will explore the regulation of potentially dangerous levels of toxic substances in products and workplaces. Particular attention will be devoted to considering the structure of the current legal framework for ensuring that the public is adequately represented in these highly complicated regulatory programs that impose substantial costs on manufacturers. After studying key aspects of the major federal programs that oversee the manufacture and marketing of toxins in products and workplaces, seminar participants will consider the role that the market and tort law play in supplementing regulation. Students will be expected to write a substantial research paper related to one of the themes of the course.

**LAWS 550. Advanced Nonprofit Organizations Seminar (3)**

In this seminar, students will explore selected topics related to structure, governance, tax exemption, and government oversight of nonprofit organizations. Class readings and discussions for the first several weeks will build on the basic understanding developed in LAWS 234, Law of Nonprofit Organizations. Topics will be selected to consider framework in context, using recent real-life case studies. Students will write a significant paper on a chosen topic and present it to the class. The course grade will be based on the paper, the presentation, and class participation. Paper may satisfy writing requirement. Prereq: LAWS 234.

**LAWS 553. United States Attorney Externship: Criminal (3)**

This is an externship program in which students selected by the law school will work at the United States Attorney's Office in Cleveland for 12 hours per week, with and under the direct supervision of Assistant U.S. Attorneys on cases under investigation or being prosecuted by that office. Most cases will involve general crimes (robbery, theft, immigration, etc.), or offenses involving drugs or firearms. Students will observe and, in some cases, participate (as assistants to the AUSA on the case) in court proceedings, and will work on projects to assist in the prosecution of the cases to which they are assigned. Students will also attend a 1-hour weekly seminar in which they will review and reflect upon the court proceedings observed and the work engaged in on the cases assigned, and discuss various topics relating to federal criminal law and prosecutions. Topics in the seminar may include arrest through indictment, seizures and warrants, pretrial proceedings, plea bargaining, sentencing, discovery, pretrial conferences, jury selection and trials, post conviction proceedings, trial skills and appeals. Students must be approved by the United States Attorney following completion, review and approval of a security clearance application. Prereq: LAWS 212, LAWS 327 and LAWS 375.

**LAWS 554. 14th Amendment Seminar (3)**

This seminar focuses on the Fourteenth Amendment through Supreme Court cases and the social implications of these holdings. We will discuss the definition of equality under the law and approaches to reaching equity goals. Students should gain a frame work for comparing equal arguments asserted in a variety of settings for different groups, e.g., gender in employment settings, wealth discrimination, and race in education.

**LAWS 556. Judicial Externship Seminar (4)**

Students in the spring of their first year are selected for summer externships with specific federal district and circuit judges. Classes in the spring of the first year, during the externship summer, and in the fall of the second year complement the eight weeks of externing in the judge’s chamber. Recommended preparation: Permission of the instructors.

**LAWS 557. Genetics and Law (3)**

The current federal Human Genome Project is attempting to understand the health and behavioral implications of the 50,000 to 100,000 genes in the human body. Genetic tests are being offered to let people know if they are at risk of having a child with a genetic defect or if they will later in life suffer from cancer or other disease. Genetic predispositions are also being investigated for certain behaviors such as gay sexual preference, intelligence, and anti-social behavior. This course will cover the tort law, family law, constitutional law, criminal law, employment law, and insurance implications of developments in genetics.

This seminar will examine selected issues in comparative and international law affecting patents, copyrights, trademarks, and trade secrets. By looking at comparative systems, we will understand
the differing philosophies underlying intellectual property in different legal cultures. By examining the movements to harmonize and unify national systems (looking at the process of harmonization, extraterritorial enforcement of rights, conflicts of law, and global protection), we will see how the different cultures are being merged. May satisfy the writing requirement. Recommended preparation: LAWS 370.

LAWS 570. Foreign Graduate Seminar (2) This seminar is the required introductory course for foreign students enrolled in the Graduate Program in U.S. Legal Studies. It begins with a series of lectures introducing students to American legal education; American government, courts, and culture; various common law subjects; and professional responsibility. Throughout the year seminar sessions are held with legal practitioners from law firms and corporations in the Cleveland area who are involved in an international practice. Limited to the foreign LLM students. 

LAWS 574. Selected Topics on American Legal Professions (3) This seminar will consider the history, structure and demographics of the American legal profession. We will focus primarily on recent changes in the organization and operation of law practice and the effect of those trends on the delivery of legal services and the working lives of lawyers. Students will be required to write and present a substantial paper, which may satisfy the writing requirement. Grade is based on class participation, a presentation, and a paper.

LAWS 595. U.S. Contract Law (3) The subject matter and coverage of this course is approximately the same as the subject matter and coverage of first-year Contracts (LAWS 123) as abbreviated and modified to reflect that it (a) is limited to foreign students who are candidates for the LLM in U.S. Legal Studies and (b) consists of 3 (not 5) credit hours.

LAWS 596. Social History of Crime Seminar (3) This course is designed to offer students a somewhat different optic on the way that law operates in society, different, that is, from the sense one might get from reading case books. Here our concern is with the meaning of law in the largest sense, not so much from the standpoint of legal doctrine, but in the sense of how it works as a system of power to advance certain interests in society at the expense of less powerful groups. By “social history” I refer to the study of ordinary people, as opposed to political leaders and rulers. Thus the course explores how the law played out in the lives of ordinary men and women during the period from the eighteenth century to the present. What is a crime? How have certain customary rights been criminalized and why? What are the ideological underpinnings of the law? These are some of the questions we will take up as we examine crime in Britain and the U.S. from a thematic perspective.

LAWS 599. Doing Business in the United States (3) The course is designed to introduce foreign students to many areas of U.S. domestic law through consideration of a transnational business transaction. Examples of areas of law covered: restrictions on foreign investment, regulatory agencies, banking and finance, importing and exporting, business entities, litigation and alternative dispute resolution, labor relations, immigration law, taxation. Limited to candidates for the LLM in the U.S. Legal Studies. 

LAWS 601. Canada-United States Law Institute Seminar (2) Canada-US Legal Relations provides students with a broad examination of the issues confronting the Canada-US relationship. Topics discussed include comparative constitutional law, North American trade & investment law, immigration, Canada-US border security, and environmental issues – including the Great Lakes. The course includes lectures by practitioners and government officials. Students are required to author a paper that may be published in Canada-US Law Institute materials and journals.

LAWS 603. Research Ethics and Regulation (2) This course is designed to introduce students to the ethical, policy, and legal issues raised by research involving human subjects. It is intended for law students, post-doctoral trainees in health-related disciplines and other students in relevant fields. Topics include (among others): regulation and monitoring of research; research in third-world nations; research with special populations; stem cell and genetic research; research to combat bioterrorism; scientific misconduct; conflicts of interest; commercialization and intellectual property; and the use of deception and placebo. Course will meet in one per week for 2 hours throughout the semester. Grades will be based on class participation and a series of group projects and individual short writing assignments. Offered as CRSP 603 and LAWS 603.

LAWS 660. Federal Public Defender Externship (3) This externship program will give students an opportunity to observe and participate in many facets of federal criminal procedure and practice. Under the supervision of the Federal Public Defender and his staff, students will research and draft legal memoranda, pre-trial motions, sentencing motions, and appellate briefs. Students will also observe court proceedings and assist in trial and hearing preparation. Students will work on a variety of cases, including drug, firearm, fraud, and white collar crime. Given the pace and work demands of the Office of the Federal Defender, this externship program will have students assisting with substantive legal work.

LAWS 661. Federal Trade Commission Externship (3) This externship program will expose students to federal civil practice involving the Federal Trade Commission in a range of civil matters primarily focused on the FTC’s consumer protection mission. The externship includes seminar-style discussions with both junior and senior FTC litigators in the East Central Region office. Students will assist FTC attorneys and staff in the preparation and presentation of their cases.

LAWS 662. Internal Revenue Service Externship (3) This externship program will expose students to federal civil tax practice involving the IRS and Office of IRS Chief Counsel, including a broad range of issues involving the assessment and collection of federal taxes. The externship includes seminar discussions and placement in the local office of IRS Chief Counsel. Students will assist the attorneys in providing legal assistance to IRS personnel, in federal tax litigation in the U.S. Tax Court, and providing legal assistance to the U.S. Attorney’s Office in federal tax litigation.

LAWS 709. Canada - United States Law Journal (0) Students enrolled in this non-credit course will serve as writers and editors for the annually published Canada - U.S. Law Journal.

LAWS 712. The Pictet Moot Court (1) The Pictet Moot Court course provides one co-curricular credit for the work of the three students who have been selected to represent CWRU Law School in the annual Jean Pictet International Humanitarian Law Moot Court Competition. Students must take International Humanitarian Law, as well as International Law, International Criminal Law, or International Human Rights as pre- or co-requisites.

LAWS 718. Health Matrix Seminar (2) Students write their Health Matrix notes through the year long Health Matrix Seminar. Students work closely with the instructor to develop their topics, outlines, several drafts, and final notes. The course will include multiple individual meetings with the professor, extensive feedback, and oral presentations of the papers. Students will develop their writing and oral presentation skills and will receive training concerning advanced legal research, plagiarism, and statutory interpretation. 2L associates also will have responsibilities for journal production work, such as verifying footnotes.

LAWS 719. Health Matrix Seminar (3) The Health Matrix seminar will provide training in writing, editorial skills, and advanced legal research for students writing notes for the Journal of International Law. Topics to be covered will include topical research, advanced Westlaw and Lexis training, writing techniques, and plagiarism. 2L associates also will have responsibilities for journal production work, such as verifying footnotes.

LAWS 740. Journal of International Law Seminar (3) The seminar will provide training in writing, editorial skills, and advanced legal research for students writing notes for the Journal of International Law. Topics to be covered include plagiarism, a topic, web-based research, advanced Westlaw and Lexis training, and Westlaw research, advanced research training in selected substantive areas, and writing techniques. Satisfactory completion of the seminar will satisfy the upper-level writing requirement. Grade is based on the quality of the note and class participation.

LAWS 745. Law Review Seminar (2) The seminar will provide training in writing, editorial skills, and advanced legal research for students writing notes for the Case Western Reserve Law
This course is the second of the required courses in the CaseArc Program which trains students in the fundamental skills of practicing law. Students build on their learning in CORE 1 by confronting more complex and challenging problems. The format of the course and teaching methods are similar to CORE 1, but the writing component of the course shifts from the objective mode to the persuasive, and the research component incorporates electronic research in depth. In addition, the students learn more complex fact gathering, document analysis, and counseling. Finally, students are introduced to negotiation theory and technique and to the principles of effective oral presentation in formal and informal settings. Students must take this course in the spring semester of their first year. Recommended preparation: LAWS 801.

**LAWS 803. Core 3: Transaction, Writing, and Skills (2)**

This is the third of the required sequence of courses in which students are introduced to the fundamental skills of practicing law. Students build on their learning in CORE 1 and CORE 2 by applying the principles of legal research, analysis, writing, interviewing, counseling and negotiation in the transactional setting. Students also learn about the challenges of applying these lawyering skills in the representation of groups and entities. The format of the course and teaching methods are similar to CORE 1 and CORE 2. Students must take this course and Focused Problem Solving in their second year. They will be assigned one in the fall and the other in the spring. Recommended preparation: LAWS 801 and LAWS 802.

**LAWS 804. Focused Problem Solving (2)**

This is the fourth of the required sequence of courses in which students are introduced to the fundamental skills of practicing law. Students apply and expand the skills learned in CORE 1 and 2 in the context of a specific area of law. The overarching emphasis of the course is legal problem solving, and strategy formation and implementation. Students will identify and evaluate options to solve specific legal problems, engage in fact gathering, develop strategies for accomplishing goals, interview and counsel clients, evaluate ends/means considerations, and depending on the type of problem, function in the litigation and/or transactional contexts. Students must take this course and CORE 3 in their second year. They will be assigned one in the fall and the other in the spring. Recommended preparation: LAWS 801 and LAWS 802.

**COURSE DESCRIPTIONS (LINS)**

**LINS 114. Intervention and Law in Vietnam and Iraq (2)**

Using the examples of American intervention in Vietnam and Iraq, this course examines some of the international and domestic legal issues raised by war and military intervention. Among the topics covered will be the legal justifications for intervention and the arguments for the illegality of the two wars; constitutional limits on executive war making powers; the justiciability of issues of war and peace under U.S. law; the draft, the volunteer army, and conscientious objection; GI rights and GI dissent; the law of war and international humanitarian law and the recurring problems of massacre, murder, and torture.

**LINS 115. Comparative Employment Law and Policy (2)**

It is commonly said that workers face a global labor market, and yet the laws regulating the employment relationship differ considerably from one country to another, and, in particular, between the United States and European countries. How do different forms of regulation shape National labor markets and what are the implications for global competition? This course examines the differing regulatory approaches taken on such issues as job security, discrimination, employee privacy, protection of whistle blowers and restrictions on post-employment competition.

**LINS 117. Role of the Judge from a Comparative Perspective (2)**

This course will unveil how judges use their arsenal to review the acts of the political branches. This includes lowering or raising the standing barrier, using rigorous or lenient tests, limiting or broadening the scope of the political question doctrine, finding rights which are not enumerated in the Constitution, and other strategies. By applying these strategies effectively, the judiciary has become a major player in society, which sometimes rivals the political branches. The course, which revolves around the concept of separation of powers, draws on cases from the U.S. and non-U.S. jurisdictions. No prior knowledge of these jurisdictions is required.
WEATHERHEAD SCHOOL OF MANAGEMENT

Our Values
- We believe that management is a noble profession committed to the advancement of human life.
- We value our strong ethical foundation and strive to promote a culture rich in ideas and reflection. We are committed to increasing individual creative and critical capacities, nurturing new and expansive patterns of thought.
- We value research of enduring consequence and judge its significance by the impact it has on management thought, management action, and public policy.
- We value learning that is active and collaborative. Students, faculty and staff together engage important management problems with an innovative, knowledge-creating approach.
- We are responsive to the needs of our students.
- We consider alumni our important partners and strive to add value to their personal and professional lives.

ACADEMIC DEGREE PROGRAMS

Undergraduate Programs
- Bachelor of Science in Accounting
- Bachelor of Science in Management
- Bachelor of Arts in Economics (awarded by the College of Arts and Sciences)

Professional Programs
- Master of Accountancy (MAcc)
- Master of Business Administration (MBA)
- Master of Science in Management (MSM)

Specializations:
- Finance
- Operations Research
- Supply Chain
- Master of Science in Positive Organization Development and Change (MPOD)
- Master of Engineering and Management
WEATHERHEAD SCHOOL OF MANAGEMENT

Robin Dubin
Associate Dean for Graduate and Professional Programs

Laura Gordos
Director of Finance and Administration

Julia Grant
Associate Dean for Undergraduate Studies and Academic Administration

Sonia Winner
Associate Dean for External Relations

WEATHERHEAD SCHOOL DEGREE PROGRAMS

Undergraduate Programs
Bachelor of Science in Accounting
Accountancy demands a high degree of technical training, similar to the professions of architecture, law, engineering and medicine. The accounting profession requires a broad knowledge of the fundamentals of economics and business, and a commitment to public well being. Career opportunities in accounting include the public, corporate, government, non-profit, and health care sectors. The undergraduate program in accountancy is designed to prepare students for entrance into these careers and to provide a foundation for the examination to become a Certified Public Accountant (CPA) or to achieve other professional certifications.

As part of the sequence of courses leading to the Bachelor of Science degree in Accounting offered through the Weatherhead School of Management, the student takes required and elective courses in related fields of banking and finance, economics, marketing, organizational behavior, management information systems, management policy, and operations.

REQUIRED ACCOUNTING COURSES
• ACCT 101 - Introduction to Financial Accounting (3 hours)
• ACCT 202 - Management Accounting (3 hours)
• ACCT 300 - Corporate Reporting I (3 hours)
• ACCT 301 - Corporate Reporting II (3 hours)
• ACCT 304 - Advanced Financial Reporting (3 hours)
• ACCT 305 - Income Tax: Concepts, Skills, Planning (3 hours)
• ACCT 314 - Attestation and Assurance Services (3 hours)

Students pursuing the BS in Accounting are advised to take the two introductory classes as early as possible, and the required MGMT 250/251 sequence in the second year. Accounting majors may not use the P/NP option for any Weatherhead School of Management courses. Twelve credit hours of accounting course work taken at another accredited institution may be considered for transfer toward the Bachelor of Science degree in Accounting, although transfer credit for courses beyond introductory accounting must be approved by the Department of Accountancy. Each student is required to consult with an advisor in the Office of Undergraduate and Integrated Study Programs at Weatherhead.

Bachelor of Arts in Economics (College of Arts and Sciences)
Economics is concerned with the problems of allocating scarce resources to meet human needs. Students who study economics gain an understanding of how consumers (households), producers (firms) and governments make decisions affecting the allocation of resources and, therefore, a society’s economic performance. Economics also involves an examination of how the interaction of these decisions in markets and in the political process produces certain outcomes, and how legal and institutional arrangements can influence these outcomes. Finally, the study of economics leads to a better appreciation of the ways in which trade, investment, and the movement of people and information across national boundaries tie the global economy together.

An undergraduate major in economics provides an excellent preparation for a variety of professional careers, such as management, law and government service. This major is essential for those wanting to pursue graduate work in economics.

Major (for BA degree)
A major in economics consists of 33 credit hours, with a minimum of 27 credit hours of economics courses. It leads to the Bachelor of Arts degree.

REQUIRED COURSES
• ECON 102 and 103
• STAT 207, STAT 243, or ECON 226
• ECON 307
• ECON 308 or 309
• ECON 326

SENIOR CAPSTONE—TO BE CHOSEN FROM THE FOLLOWING LIST
Other approved projects in conjunction with capstone requirements in other majors.

ELECTIVES
Minimum of five additional courses in economics at 200-level or 300-level. At least two of these courses must be in 1 concentration (see below). Up to three hours of the student’s capstone experience can count toward the 15 hours of electives.

Economics Concentrations:

RESOURCES & MARKETS
- ECON 255 - Economic History of the United States
- ECON 332 - Economics of Labor Markets
- ECON 333 - Economics of Organizations and Employment Relationships
- ECON 341 - Banking and Finance
- ECON 367 - Energy Economics and Engineering Solutions
- ECON 368 - Environmental Economics

INDUSTRIAL ORGANIZATION
- ECON 328 - Experimental Economics
- ECON 329 - Game Theory
- ECON 364 - Industrial Organization
- ECON 369 - Economics of Technological Innovation

PUBLIC ECONOMICS
- ECON 342 - Public Finance
- ECON 343 - Economics of State and Local Governments
- ECON 378 - Health Care Economics
- ECON 386 - Urban Economics

INTERNATIONAL ECONOMICS
- ECON 372 - International Finance
- ECON 373 - International Trade
- ECON 375 - Economics of Developing Countries
- ECON 350 - World Economic History

Minor (for BA or BS degree)
ECON 102, ECON 103, and three additional economics courses (9 credit hours) selected in consultation with the minor advisor.

Bachelor of Science in Management
Graduates of the Bachelor of Science in Management program have obtained a broad education within a scientific framework that enables them to bring an unusual degree of analytical capability to the problems of management and business. Each management student is required to obtain a concentration by completing a course sequence in banking & finance, marketing, or an approved, individualized program of study. In addition, each student must consult with an advisor in the Office of Undergraduate and Integrated Study Programs at Weatherhead.

Management Concentrations

CONCENTRATION I: BANKING & FINANCE (15 CREDIT HOURS):
- BAFI 356 - Investments (3)
- BAFI 357 - Financial Modeling, Analysis & Decision Making (3)
- BAFI 359 - Intermediate Corporate Finance (3)
- BAFI 372 - International Finance (3)
- ACCT 300 - Corporate Reporting I (3)

CONCENTRATION II: MARKETING (15 CREDIT HOURS):
Required:
- MKMR 304 - New Product Development and Marketing (3)
- MKMR 310 - Market Research (3)
- MKMR 311 - Consumer Behavior (3)
Plus one or both of:
- MKMR 307 - Marketing through the Supply Chain (3)
- MKMR 312 - Selling and Sales Management (3)
Plus, if needed, one of:
- ANTH 314 - Cultures of the United States (3)
- ECON 373 - International Trade (3)
- PSCL 315 - Social Psychology (3)

CONCENTRATION III: DEAN’S APPROVED CONCENTRATION
Subject to approval by the Undergraduate Curriculum Committee, a student may construct a 15-credit sequence of courses in an area of individual interest.
Students pursuing a BS in Management are advised to take the MGMT 250/251 sequence in the second year. Management majors may not use the P/NS option for any Weatherhead School of Management courses.

Minors
ACCOUNTING MINOR (15 CREDIT HOURS)
- ACCT 101
- ACCT 102
- ACCT 300
At least two additional 300-level courses approved by the Department of Accountancy.
Undergraduate accounting majors accepted to the joint BS in Accounting/MAcc program are permitted to double count six credit hours of course work towards both the BS in Accounting and the MAcc. Hence, the two programs require 152 credit hours of study rather than 158 credit hours (122 credit hours for the BS and 36 credit hours for the MAcc). For the first eight semesters of study, students register as an undergraduate in Case Western Reserve University; thereafter, students register in the graduate professional degree program in the Weatherhead School of Management. Students complete and are awarded the Bachelor of Science in Accounting prior to completing the master’s degree program.

**Accelerated BS in Accounting/Master of Accountancy (MAcc)**

The accelerated BS in Accounting/MAcc program allows motivated students to complete both the BS in Accounting and the MAcc degrees in four years of study. These students are able to double count six credit hours of course work reducing the total credit hour requirement from 158 credit hours to 152 credit hours. To enroll in this program, students must have:

- completed 90 hours of undergraduate course work;
- completed all of the undergraduate WSOM SAGES General Education Requirements;
- completed 36 hours of the WSOM major requirements (including 15 hours of the required accountancy coursework); and
- achieved at least a 3.0 overall GPA.

For all eight semesters of study, the student will register as an undergraduate in Case Western Reserve University and never as a graduate student in the graduate professional degree program in the Weatherhead School of Management. Students in this program will receive both the BS and the master’s degree at the end of the program.

**Program Requirements**

To be eligible, a student must:

- have completed 21 credit hours of course work at Case Western Reserve (prior to the start of the work assignment);
- have a minimum GPA of 2.5 and be in good academic standing;
- have completed ACCT 101 and ECON 102 or 103;
- register for MGMT 001 or MGMT 002, a non-credit practicum course;
- complete pre-practicum assignments with the University Career Center;
- secure a Weatherhead faculty member as a practicum advisor; and
- develop an approved Learning Agreement with the practicum advisor.

*An assistant dean in Weatherhead Undergraduate Programs may serve as practicum advisor for summer practica.*

All practica developed through the University Career Center must be taken for transcript notation and have a faculty member serve as a practicum advisor. If a student elects to work in an internship/practicum without enrolling in the course for academic notation, he or she will neither have the benefits of full-time student status, nor represent the practicum program in any official capacity.

**PROFESSIONAL PRACTICUM**

The primary goal of this active learning experience is the intellectual, personal and professional growth of the student in an area related to the student’s academic goals. The practicum should provide the student with new skills, insights and experiences that are transferable to the academic setting.

A practicum is a planned, structured, supervised workplace experience at an approved “site” organization. The practicum is an experiential learning arrangement between the student, the employer and the practicum advisor in conjunction with the University Career Center. Employers provide appropriate supervision and work related learning, while the practicum advisor guides and evaluates the student’s experience.

Students apply to the University Career Center in the semester preceding the work assignment. A student may participate in up to two practica, but must spend at least one intervening semester on campus.

GRADUATE PROGRAMS

The MBA Program
Weatherhead’s highly regarded MBA curriculum guides students in self-examination, growth and learning, in both theory and practice. Our newly redesigned core curriculum provides a solid foundation in management skills. In the core, and in distinctive year-long electives, students are introduced to our two signature themes: Sustainability and World Benefit, and Manage by Designing. The Weatherhead MBA program prepares students to be business leaders in the 21st Century, and is delivered in a variety of formats, as described below.

Full-Time MBA Program Twenty-one-month Curriculum Core Courses (33 credit hours)
The two-year, full-time MBA program is designed for individuals with diverse academic backgrounds and relevant work experience. In the first year of the program, students acquire basic business skills by taking the integrated core curriculum. The core is comprised of a yearlong class in marketing and supply chain, two semesters each of accounting and finance, and one semester each of statistics, strategy, leadership development, and human values in organizations. The core also introduces students to economics and systems. A distinctive feature of the first year experience is the executive dialogues seminar, in which teams of executives meet with students to discuss problems in their organizations and their solutions.

In the second year of the program, students can specialize in areas of interest by taking elective classes. Students will also have the opportunity to take newly designed yearlong electives. All of the yearlong electives are project based classes, allowing student projects to be more sophisticated and in depth than would be possible in the typical, one semester, elective.

CONCENTRATIONS
There are no concentration requirements to complete the degree; however, some students may wish to pursue a concentration. More detailed information is available at the website: www.weatherhead.case.edu/academics/masters/mba/concentrations/.

INDEPENDENT STUDY
MBA students are limited to 6 credit hours of elective credit as independent study. Any student wishing to take more than 6 credit hours of independent study must petition the associate dean for graduate and professional programs.

Other courses at the university may be eligible for MBA elective credit. Contact the Student Services Office for additional information.

STATISTICS AND FINANCE PREPARATION WORKSHOPS
All admitted students in the 21-month curriculum who do not have an academic or employment background in these areas are strongly encouraged to attend the appropriate workshops in advance of starting the MBA program. The workshops are offered during the two weeks before the start of full-time orientation in August.

EVENING AND SATURDAY PART-TIME MBA PROGRAMS
The evening and Saturday part-time MBA programs are designed for qualified students who wish to pursue their graduate management education while continuing to work full time. Evening and Saturday instruction is available as a 48 credit hour program for qualified candidates with diverse academic backgrounds, or as a 42 credit hour program for qualified students with undergraduate business degrees from a U.S. institution.

EVENING AND SATURDAY CORE CURRICULUM (48 CREDIT HOURS)

- MGMT 403 - Leadership Assessment and Development (3) (cannot be waived)
- MGMT 499 - Strategic Issues and Applications (3) (cannot be waived)
- MGMT 413 - Human Value in Organizations (3)
- QUMM 414 - Statistics and Decision Modeling (3)
- ACCT 401 - Finance and Managerial Accountability (3)
- BAFI 402 - Financial Management I (3)
- MIDS 409 - Information Design and Management (3)
- MKMR 403 - Marketing (3)
- OPMT 405 - Operations Management (3)
- ECON 403 - Economics for Management (3)

Students who have completed undergraduate equivalent course work of an MBA core course may petition to waive a core course and substitute an elective. Substitution of four or more electives will qualify students for the 42 credit hour program (see below).

EVENING AND SATURDAY ADVANCED ELECTIVES (15 CREDIT HOURS)
Students in both the 42 and 48 credit hour evening and Saturday part-time MBA programs take between 12 and 18 credit hours of electives depending upon the program. See the departmental course offerings section for detailed course descriptions.

Cleveland Clinic Health Management Scholars Program
Cleveland Clinic and Case Western Reserve University’s Weatherhead School of Management have joined forces to create the Health Management Scholars Program. This innovative partnership gives four students the unique opportunity to participate in Weatherhead’s full-time MBA program with a Health Systems Management concentration and in specialized action learning assignments at the Cleveland Clinic. Qualifying scholars will also receive the following benefits:

- a tuition scholarship of $15,000 per year;
- courses at Cleveland Clinic and the Weatherhead School;
- prestigious paid summer internships at Cleveland Clinic; and
- seminars featuring Cleveland Clinic managers as guest speakers.

For additional information about this program or to apply, please call 216-368-2030 or e-mail bizadmission@case.edu/.

The Executive Master of Business Administration (EMBA)
The Executive Master of Business Administration (EMBA) is a 21-month program specifically designed to prepare experienced managers with the knowledge, skills and perspective required for expanded general managerial and executive responsibility. A qualified applicant must have 10 years of experience, 5 of those in a management capacity, and his or her company endorsement. The program is delivered in five integrated semesters through a unique format which provides flexibility for a comfortable learning/work/life balance. Each semester contains modules that deal with a particular theme. Action learning projects throughout the program allow the participants to work
on real issues that affect their sponsoring organizations and provide instant ROI. Each semester starts with a four-day residency, after which, participants come to campus one contiguous Friday and Saturday each month. These sessions are combined with technology-enhanced learning elements that enable participants to remain engaged and connected while working individually and within a supportive team environment. For more information call Carleen Henderson, director, EMBA program at 216-368-2554.

Executive Doctor of Management (EDM)
The Executive Doctor of Management (EDM) Program is an interdisciplinary doctoral degree program, designed specifically for experienced professionals. The EDM program focuses on the broad economic, political, social, and technological forces facing organizations today. Qualifications for the EDM Program include a master’s degree, at least 15 years of experience, and a personal commitment to seeking a deeper understanding of management in a global context by conducting issue-oriented research. For further details, a program brochure and information on applying to the EDM Program, contact Sue Narrker, director, EDM program at 216-368-1943.

Master of Accountancy (MAcc)
The Master of Accountancy is an integrative program, which builds directly upon the student’s undergraduate education. Qualified students should have an undergraduate degree in accountancy from an accredited U.S. program or the equivalent. Students who do not have an accountancy degree may still be admitted, but will need to take additional courses to provide an appropriate foundation in business and accountancy. The program is normally 36 credit hours for those who have an undergraduate accountancy degree. Entering students without this degree will usually require an extended period of study in the program to meet prerequisites in the following areas:

- General Business: business law, corporate finance, marketing, micro and macro economics, operations management and statistics
- Accountancy: principles, intermediate financial accounting, advanced financial accounting, managerial accountancy, U.S. taxation and auditing

The program is primarily designed for students interested in full-time study. Part-time students are also admitted, contingent upon their commitment to complete the program on a timely basis. Students may be admitted for study at the beginning of the fall, spring or summer semesters, but it is generally advantageous to begin study in the fall semester. Some scholarships are available to exceptional applicants for the full-time program.

Undergraduate accounting students at Case Western Reserve University are strongly advised to enter and complete the Master of Accountancy program in their fifth year. University policies permit such students an opportunity to complete the Master of Accountancy in 30 credit hours, rather than 36, if course selection is properly planned. Certain highly qualified Case Western Reserve University students in Accounting may be eligible to accelerate their completion of the BS in Accounting and the Master of Accountancy through the integrated studies program. This program allows such students to enroll as both an undergraduate and a graduate student during the senior year. Because of the necessity for proper planning of course work and programs, undergraduate students are strongly encouraged to apply for the Master of Accountancy in the junior year.

A typical 36 credit hour course of study for a student with an undergraduate accountancy background includes:

ACCOUNTANCY CORE COURSE CURRICULUM
- ACCT 520 - Advanced Financial Accountancy Theory (3)
- ACCT 540 - Analysis of Contemporary Accountancy Issues (3)
- ACCT 405 - Advanced Federal Taxes (3)
- ACCT 444 - Advanced Auditing Theory and Practice (3)
- Accountancy Electives (6 credit hours)

Students may choose any 12 credit hours from any graduate accountancy courses (excluding basic courses in the MBA core). A concentration is not required although students may develop a concentration in taxation or reporting and assurance services.

Supporting Electives (18 credit hours)
The electives allow students to develop a background in areas that complement and support careers in professional accountancy. Concentrations are not required, but students may choose concentrations in certain areas such as banking and finance, organizational and human resource development, information systems, operations and supply chain management, strategic management and other areas. No more than three credit hours of accountancy course work may be taken as a supporting elective. Courses must be taken in at least two areas (not including accountancy). These electives may not include basic courses in the MBA core. Courses will be selected in consultation with the graduate program advisor.

Contact Professor Larry M. Parker, director, Master of Accountancy Program, 216-368-2065, larry.parker@case.edu; or Tiffany Welch, program director, Master of Accountancy Program, 216-368-2058, tiffany.welch@case.edu, for further information.

Master of Engineering and Management (MEM)
The Master of Engineering and Management (MEM) program is designed to meet the needs of industry by offering young engineers the critical skills needed to be successful in an engineering career. The MEM program is a 42 credit hour program which takes three semesters to complete. Courses are taught by the highly ranked faculty of the Case School of Engineering and Weatherhead School of Management.

MEM ADMISSION REQUIREMENTS
Students who are enrolled in accredited baccalaureate engineering programs and who hold junior or senior level status will be considered for admission. In addition, students with less than five years of work experience after receiving their bachelor’s degree from an accredited engineering program are also eligible for admission.

Additional information regarding the MEM program is available in the Case School of Engineering section of the General Bulletin.

Master of Science in Management (MSM)
In the Master of Science in Management (MSM) program, students gain the entry-level management and business skills. Unlike most other graduate business degrees, recent bachelor’s of arts degree graduates with no prior business course work may qualify for this two-semester degree program. The MSM curriculum is designed to give students a broad experience of all major areas of the current business spectrum, providing a solid foundation for thorough, informed decision-making in today’s business environment.
NINE-MONTH CURRICULUM

- MGMT 403 - Leadership Assessment and Development I (3)
- MGMT 499 - Strategic Issues and Applications (3)
- MGMT 413 - Human Value in Organizations (3)
- QU MM 414 - Statistics and Decision Modeling (3)
- ACCT 401 - Financial Reporting and Control (3)
- BAFI 402 - Managerial Finance (3)
- MKMR 409 - Information Design and Management (3)
- OPMT 405 - Operations Management (3)
- ECON 403 - Economics (3)
- QU MM 498 - Action Learning Consulting Course (3)
- International Institute (3)

STATISTICS AND FINANCE PREPARATION WORKSHOPS

All admitted students to the nine month MSM curriculum are required to attend Statistics and Finance preparation workshops in advance of starting the MSM program. The workshops are offered during the weeks before the start of full-time orientation in August.

MBA OPPORTUNITIES

Students who have completed the MSM may return to Weatherhead after at least one year of full-time work experience to complete an accelerated MBA degree with two additional full-time semesters. The total academic period for the combined MSM and accelerated MBA is four semesters — the same as a traditional MBA degree. Students may also complete the MBA in the part-time program.

For more information regarding the MSM program, call 216-368-2030 or e-mail bizadmission@case.edu.

Master of Science in Management with a specialization in Operations Research (MSM-OR)

Operations research uses mathematics, statistics and computers to help managers make decisions regarding complex organizational problems. These types of problems arise in manufacturing and service companies, as well as in many other kinds of organizations. Decision problems may be solved by developing mathematical models of the problem, using a computer to obtain a solution, then validating that the solution can be implemented and will perform as predicted by the model.

The MSM-OR program trains students in the techniques and applications of operations research and provides them with a basic understanding of business fundamentals in order to contribute value to organizations and communicate effectively with professionals in other business disciplines.

Requirements for the 36 credit hour MSM-OR can be completed in 12 months of full-time study by taking 6 credit hours in the summer semester and 15 credit hours each in the fall and spring semesters. The program is available on a full- or part-time basis. For more detailed information e-mail msm-oper@case.edu or visit the department website: http://weatherhead.case.edu/orom/.

MSM-OR CURRICULUM

The MSM-OR curriculum has three components: the business core, the operations research core, and a specialty track.

BUSINESS CORE (6 CREDIT HOURS TOTAL)

The business core provides students with an introduction to the major principles and concepts of business operations. Business core selections include accounting, economics, finance, information systems, marketing or operations. The specific set of courses selected depends on the specialty track chosen.

OPERATIONS RESEARCH CORE (18 CREDIT HOURS TOTAL)

The operations research core provides a solid grounding in the techniques of management science. Course requirements include:

- Prerequisite Mathematics Courses (if needed)
- Core Courses (1.5 credit hours each)
- Linear Programming
- Deterministic Models with Applications
- Stochastic Models with Applications
- Probability and Statistics for Management Science I
- Probability and Statistics for Management Science II
- Regression and Forecasting
- Simulation Design
- Simulation Models with Applications
- Integrated Problem Solving
- Data Structures
- Open Elective (3 credit hours)
- Specialty Track (12 credit hours total)

To obtain an in-depth, marketable set of skills in one area of concentration, students take a coherent sequence of courses in one of four tracks: Operations Research, Operations Management, Finance and Information Systems.

Master of Science in Management with a specialization in Supply Chain (MSM-SC)

Supply chain management deals with the coordination of all activities that affect a product, flowing from its sources of raw materials to customers for the purpose of creating value in the end product. The product may be a physical good, a service, an idea, information or other entity that flows through a defined pipeline or channel.

The 36 credit hour MSM-SC program trains students at the master's level in supply chain methods and concepts, business fundamentals, and quantitative techniques in order to be effective analysts in manufacturing and service companies.

Requirements for the 36 credit hour MSM-SC degree can be completed in 12 months by taking 6 credit hours in the summer semester and 15 credit hours in both the fall and spring semesters. The program is available on a full- or part-time basis. For more detailed information e-mail msm-oper@case.edu or visit the department website: http://weatherhead.case.edu/orom/.

MSM-SC CURRICULUM

The curriculum is composed of two components: the business core and the supply chain core.

BUSINESS CORE (12 CREDIT HOURS TOTAL)

The business core provides students with an introduction to the major principles and concepts of business operations. Subject areas addressed in the business core are accounting, finance, marketing, and operations.

SUPPLY CHAIN CORE (24 CREDIT HOURS TOTAL)

The supply chain core consists of the following quantitative and managerial courses:

- Prerequisite Mathematics Courses (if needed)
- Quantitative (1.5 credit hours each):
  - Linear Programming
  - Deterministic Models with Applications
  - Probability and Statistics for Management Science I
  - Probability and Statistics for Management Science II
  - Regression and Forecasting
  - Simulation Models with Applications

WEATHERHEAD SCHOOL OF MANAGEMENT
Th e core set of classes includes:

- BAFI 403 - Financial Management II
- BAFI 404 - Financial Modeling
- BAFI 434 - Financial Econometrics
- BAFI 430 - Derivatives and Risk Management
- BAFI 435 - Empirical and Computational Finance

Electives (12 Hours)

Students may take any graduate level finance or accounting electives, as well as other appropriate graduate electives to be chosen in consultation with an advisor.

Master of Science in Positive Organization Development and Change (MPOD)
The context of organizational development has shifted radically within the last 20 years. Today’s leaders need to be prepared to embrace accelerated change, technology, distributed organizing, social entrepreneurship, and globalization. The MPOD degree enables professionals to create a better world by developing human potential with strength-based methods of inquiry, design, and change management.

The Department of Organizational Behavior offers a 19-month, 40 credit hour program delivered in five week-long residencies and one 10-day international study tour, with virtual conferencing and intensive Internet-mediated learning between residential periods.

This distinct learning atmosphere offers Weatherhead students a unique opportunity to experience a new global educational delivery model, called “collaborative excellence.” This model connects the best in experiential learning, expansive virtual collaboration tools, and the exciting new fields of positive organizational scholarship and human systems change.

The MPOD includes certifications in both Appreciative Inquiry for Business & Society and Leadership Development through Emotional Intelligence and Coaching. In addition, participants complete two team-based consulting projects in the field, and an individual application project in their workplace. The program also offers a multicultural experience with OD students and practitioners in countries outside the United States.

Residency One

Foundations of Positive OD; Experiential Learning for Individuals, Teams, and Organizations; Joining the Global Inquiry (BAWB)
management or supervisory experience. Executive MNO students typically take 30 hours of required courses and 15 hours of elective courses. Students who have taken prior course work in the required areas may, with faculty approval, replace specific required courses with other elective courses. For further information, contact the Mandel Center’s director of recruitment at 216-368-6025.

Admission to the 45-credit Executive MNO degree option will be considered only at the time of the initial admission into the master’s degree program. Students may not apply for this option once they have matriculated into the 60-hour program.

ADMISSION REQUIREMENTS
For additional information concerning the MNO program (including scholarship information), contact the director of recruitment at 216-368-6025, by e-mail to mcnoadmissions@case.edu, at the website: www.case.edu/mandelcenter, or by mail at: Mandel Center for Nonprofit Organizations, Case Western Reserve University, 10900 Euclid Avenue, Cleveland, Ohio 44106-7167.

SCHOLARSHIP AID
The Mandel Center offers numerous scholarship opportunities, both merit- and need-based.

WAIVER POLICY
A total of six credit hours are eligible for waiver, subject to the following requirements:

- Courses to be waived must have been taken from an accredited institution within five years of the date of application to the MNO degree program.
- A grade of at least B must have been earned.
- A Mandel Center faculty member must review and approve the waived course. Courses will not be waived based on work experience.
- A student must register for and complete at least 54 credits toward the MNO degree in residence at the university, in addition to any courses waived.

A waived course may reduce degree requirements.

TRANSFER CREDIT
Courses granted transfer credit must be approved as applicable to the MNO program. Courses must be taken at an accredited institution and approved prior to enrollment. A grade of at least B must be earned, and these grades are not counted in the cumulative grade point average. Transfer credit is limited to six credit hours.

SUBSTITUTION
An additional nine credit hours may be approved for substitute credit. Substitute courses replace required MNO courses but do not reduce the total number of credit hours required to complete the program. Substitute courses must be selected and approved in accordance with a clearly defined written proposal consistent with student interests/needs and the MNO program mission.

RESIDENCY REQUIREMENT
Students must complete a minimum of 54 credit hours of course work in residence through the Weatherhead School of Management to be eligible to receive the MNO degree.

REGISTRATION
Registration for MNO programs is done through the Weatherhead School of Management. Refer to the section on Registration and Academic Information for information about course changes and withdrawals.

RETENTION AND GRADUATION REQUIREMENTS
The retention requirements for continued study in the MNO program are:

- minimum GPA after 15 credit hours of study: 2.5;
- minimum GPA after 23 credit hours of study: 2.7;
- minimum GPA after 29 credit hours of study: 3.0; and
- minimum GPA for graduation: 3.0

A student will be placed on academic probation after any semester in which the minimum GPA is not attained. A student who is on academic probation in a particular semester will be allowed one additional semester to attain the minimum GPA in order to continue in the MNO program.

NON-DEGREE STUDENTS
Individuals may register as non-degree students and take a maximum of 12 credit hours through a total of four (4) Mandel Center graduate level courses. For questions about this option, please contact the Mandel Center Admissions Office at 216-368-6025 or visit http://www.case.edu/mandelcenter/grad/.

WEATHERHEAD SCHOOL OF MANAGEMENT

JOINT DEGREE PROGRAMS

MBA/JD Joint Degree Program
The Weatherhead School of Management at Case Western Reserve University has a formal full-time joint-degree program with the School of Law. Students enrolled in the program who fulfill the requirements set for graduation by both schools will receive both a JD and an MBA degree. The MBA/JD joint-degree program is designed for individuals who want to specialize in the legal, contractual, and governmental aspects of management.

Program Structure
The Weatherhead School of Management offers two curriculum options for MBA students: the accelerated, 11-month MBA Program (for students with undergraduate business degrees), and the traditional, two-year MBA Program (for students with all other undergraduate degrees).

Students enrolled in the traditional MBA Program may complete the three-year JD program and the two-year MBA program in four academic years by completing 127 credit hours (including a 7 credit hour overload which can be taken during the academic year or during the summer semester). Students in the accelerated MBA Program may complete the MBA/JD Program in three years, plus one summer semester, by completing 116 credit hours. Joint-degree candidates may start the MBA/JD program at either school.

The School of Law allows joint-degree students to use 12 credit hours from the MBA to fulfill both JD and MBA requirements. The Weatherhead School of Management allows joint-degree students to use 12 credit hours from the School of Law to fulfill both MBA and JD requirements. Students must achieve a grade of C or better to receive double credit for the courses. This reduces the total number of hours required for the two degrees by 24 credit hours.

The School of Law is a full-time day program with no evening division; therefore, MBA/JD students may enroll only on a full-time basis, except during summer sessions. Joint-degree students must receive both the JD and the MBA degrees simultaneously upon completion of degree requirements at both schools in order to receive the 24 hours of cross-credits described above.

ADMISSION TO THE MBA/JD PROGRAM
MBA/JD applicants must meet all of the ad-
mission requirements of both schools, including taking both the LSAT and the GMAT, completing separate applications to both schools (indicating on both applications that they are applying for the MBA/JD), and paying both application fees. Students may defer the decision to apply to the MBA/JD program until after enrolling in either the MBA or JD program provided that the application to the second school is received before the beginning of the third semester in either program. Students are expected to take one full year of study in one program followed by one full year of study in the other. During the third and fourth years of the MBA/JD, students combine courses in both schools each semester. Additional information may be obtained by phoning the Weatherhead School at 216-368-2030 or the School of Law at 216-368-3600.

REGISTRATION
Throughout the joint-degree program, MBA/JD students continue to register in the first school they attended. After completion of both degree programs, two separate diplomas are awarded. Course work for both programs must be completed within six years of the date of initial enrollment in either program.

MBA/JD CURRICULUM
For more information about the MBA/JD curriculum, visit the website: http://weatherhead.case.edu/academics/masters/mba/joint/mbajd/.

MBA/MD Joint Degree Program
Case Western Reserve University’s School of Medicine and Weatherhead School of Management collaborate to offer the joint MBA/MD degree program. The MBA/MD provides physicians with the management knowledge and skills necessary to deal with rapid changes in the healthcare industry and the economy.

PROGRAM STRUCTURE
Students can complete the four-year MD degree and the two-year MBA degree in five years or less. The Weatherhead School of Management offers two curriculum options for MBA students: the accelerated, 11-month MBA Program (for students with undergraduate business degrees); and the traditional, two-year MBA Program (for students with all other undergraduate degrees).

Students enrolled in the traditional MBA Program may complete the four-year MD program and the two-year MBA program in five academic years by completing 51 MBA credit hours plus all requirements for the MD program. Students in the accelerated MBA Program may complete the MBA/MD Program in four years, plus one summer semester, by completing 38 MBA credit hours plus all requirements for the MD program. Joint-degree candidates may start the MBA/MD program at either school. The School of Medicine is a full-time day program with no evening division; therefore, MBA/MD students may enroll only on a full-time basis. Joint-degree students must receive both the MD and the MBA degrees simultaneously upon completion of degree requirements at both schools in order to receive the dual degree.

ADMISSION TO THE MBA/MD PROGRAM
MBA/MD applicants must meet all admission requirements of the School of Medicine and the Weatherhead School of Management, including taking both the MCAT and the GMAT and completing separate applications to both schools. MD students may apply to the MBA/MD program as late as the beginning of the third semester of medical school. Students are expected to take one full year of study in one program followed by one full year of study in the other. During the third and fourth years of the MBA/MD, students combine courses in both schools each semester. Additional information may be obtained by phoning the Weatherhead School at 216-368-2030 or the Medical School at 216-368-3450.

REGISTRATION
Throughout the joint-degree program, MBA/MD students continue to register in the first school they attended. After completion of both degree programs, two separate diplomas are awarded. Course work for both programs must be completed within six years of the date of initial enrollment in either program.

MBA/MIM Joint Degree Program
The Weatherhead School and the American Graduate School of International Management (the Thunderbird School) jointly offer a graduate level program in both management and international studies.

The MBA/Master of International Management (MIM) provides the strengths and career planning advantages of both schools for students who wish to build a career in international business by offering the following:

- a unique management skills assessment and development process, as well as strong functional concentrations through the MBA program at the Weatherhead School of Management;
- foreign language fluency—with an emphasis on business communications—and a wide range of course offerings in international studies and world business through the MIM Program at Thunderbird; and
- access to all placement services and alumni networks at both schools, both during enrollment in the joint-degree program and as a graduate of the joint-degree program.

PROGRAM STRUCTURE
Because of the interdisciplinary advantages achieved when taking both degrees simultaneously, students in the MBA/MIM joint-degree program are able to accelerate and streamline course work in both schools. As a result, most students can complete the 81 credit hour joint program in 24 months, as compared to the 3½ years (102 credit hours) required to complete the two programs separately. In order to progress through the joint-degree program at the most efficient pace, students should start the program at the Weatherhead School of Management and complete the program at the Thunderbird School.

Both degrees will be awarded simultaneously at the completion of all degree requirements for the MBA and MIM.

ADMISSION TO THE MBA/MIM PROGRAM
Prospective students who are interested in applying to the joint MBA/MIM program offered by the Weatherhead School of Management and the Thunderbird School should apply separately to each school. (Applicants to the Weatherhead School of Management should indicate their interest in the MBA/MIM in the appropriate area under “Intended Program” at the bottom of the first page of the Weatherhead MBA application.) Separate transcripts, GMAT and TOEFL scores, recommendations, essays and other materials required to complete application at each school must be sent individually to each school.

The admissions committees of each institution will maintain independent control over their admissions criteria and procedures. Students must be admitted separately to each of the programs. Admission to one school does
not guarantee admission to the other.

Students who have already enrolled in the MBA or MIM program before pursuing their interest in the joint MBA/MIM degree will be permitted to apply to the joint-degree program provided they have completed no more than 27 credit hours in either program.

Students applying to the joint-degree program are also eligible to apply for scholarships, fellowships and loan programs at both schools. Please refer to each school’s application for information regarding tuition, financial aid, etc.

To request application materials, contact the schools:

MBA/MIM CURRICULUM

For information about the MBA/MIM curriculum, visit the MBA/MIM website: http://weatherhead.case.edu/academics/masters/mba/joint/mbamim/.

MBA/MSM-OR and MBA/MSM-SC Joint Degree Programs

The joint MBA/MSM in OR or SC provides an exceptionally rich curriculum for students who are particularly interested in combining general management skills with depth in areas such as logistics or quantitative finance. The MBA/MSM-OR and MBA/MSM-SC programs share a common goal: to prepare graduates with the principles and concepts associated with a business specialty. They also possess a basic understanding of managerial functions, facilitating practical problem solving and effective communication with non-technical management personnel.

PROGRAM STRUCTURE

Students may pursue the MBA/MSM-OR or MBA/MSM-SC on a full- or part-time basis. Students planning to attend part time should confer with an advisor to determine the appropriate sequence of courses in the program. Full- and part-time students who already have begun the MSM or MBA program may apply to the joint-degree program provided they have completed no more than 18 credit hours in the MSM program or 30 credit hours in the MBA program (12 credit hours in the accelerated MBA program).

Students in the joint-degree program will receive both degrees simultaneously, regardless of whether course work for one of the degrees has been completed. Course work for both programs must be completed within six years of the date of initial enrollment in either program. Students in the joint-degree program will be granted an automatic one-year extension to the five-year deadline for completion of the MSM degree.

RETENTION REQUIREMENTS

GPAs of students in the joint-degree program will be calculated separately to determine compliance with retention requirements in each program. Students may have up to an additional 6 credit hours beyond the minimum to meet degree requirements to improve their cumulative GPA in order to attain the graduation GPA requirement for the appropriate program.

Students must also comply with the 36 credit hour residency requirement of the MBA program and the 36 credit hour requirement for the MSM-OR/SC.

MBA/MSM-OR/SC CURRICULUM STRUCTURE

For more information, visit the MBA/MSM-OR website: http://weatherhead.case.edu/academics/masters/mba/joint/mbamsmor/ or the MBA/MSM-SC website: http://weatherhead.case.edu/academics/masters/mba/joint/mbamsmscm/.

MBA/MSSA Joint Degree Program

The MBA/Master of Science in Social Administra-

WEATHERHEAD SCHOOL OF MANAGEMENT

ADMISSION TO THE MBA/MSSA PROGRAM

Candidates must apply separately to the MSSA program at the Mandel School and the MBA program at the Weatherhead School, and complete all application requirements of both schools, indicating on both applications their intent to join the joint-degree program. Applicants must have completed a minimum of two years of full-time experience in a social service organization. Admission decisions are made independently by each school. For more information, please contact the Weatherhead School at 216-368-2030 or visit the MBA/MSSA program website: http://weatherhead.case.edu/academics/masters/mba/joint/mbamssa/.

MBA/MSN Joint Degree Program

The MBA/MSN in Nursing (MSN) joint-degree program is offered in partnership with the Frances Payne Bolton School of Nursing. The joint degree combines the 63 credit hour MBA and the 40 credit hour MSN degree in a 78 credit hour integrated academic experience for nurses who wish to advance their practitioner, management and leadership skills.
WEATHERHEAD SCHOOL OF MANAGEMENT

PROGRAM STRUCTURE
The curriculum plan is designed for MBA/MSN students who intend to complete the joint degree in four semesters, with course overloads and an internship opportunity in the summer between the first and second year of the program. Some MBA/MSN students prefer to complete the joint degree at a slower pace. Those students will finish in five semesters, and will have the opportunity to obtain internships during the first and second summers between academic years.

ADMISSION TO THE MBA/MSN PROGRAM
Candidates must apply separately to both the Weatherhead School of Management and the Frances Payne Bolton School of Nursing, including submission of official scores from the MAT or GRE for the School of Nursing and the GMAT for the School of Management. After admission, students will register in the School of Management for their entire course of study in the MBA/MSN. For more information about the MSN degree, visit the website: http://fpb.case.edu/.

MBA/MSN CURRICULUM
For details about the curriculum structure, visit the website: http://weatherhead.case.edu/academics/masters/mba/joint/mbamsn/.

MBA/MPH Joint Degree Program
The joint MBA/Master in Public Health (MPH) degree was developed by the School of Medicine, the School of Graduate Studies and the Weatherhead School of Management to provide the skills and knowledge necessary for those who wish to attain the following goals:
• a career of working with communities to improve the health of their members by identifying and assessing the health needs of the population and planning and implementing programs to meet those needs; and
• management leadership to ensure continued economic viability, human development and effective communication for the public health organization and community in which they practice.

PROGRAM STRUCTURE
Because of the complementary nature of both degrees, students who integrate the MBA/MPH course work to complete the joint degree will be able to reduce the degree credits of the MPH by 6 credit hours and the MBA by 12 credit hours. Joint-degree candidates will thereby reduce the total requirement for both degrees from 99 to 81 credits hours. Full-time MBA/MPH students may be able to complete the joint-degree in two or two and one half years, including one or two summer sessions. Students completing the MBA/MPH on a part-time basis may complete joint-degree requirements in four to four and one half years. Both diplomas will be awarded upon completion of all course work for both degree programs. Students enrolled in the MD program at the School of Medicine can also integrate the dual MBA/MPH degree program with their MD degree program.

ADMISSION TO THE MBA/MPH PROGRAM
MBA/MPH candidates must complete separate applications, participate in the required admission tests (the GMAT for the MBA program) and be admitted separately to each program. Throughout the MBA/MPH program, joint-degree students will continue to register in the school where they first register. MBA/MPH students may be included in the resume book and the on-campus interview schedule at the Weatherhead School of Management Career Management Center throughout the duration of their joint program.

For more information about the MPH program, contact the program director, MPH Program, School of Medicine, 216-368-3197.

MBA/MPH CURRICULUM
For details about the curriculum, visit the website: http://weatherhead.case.edu/academics/masters/mba/joint/mbamph/.

JD/MNO Joint Degree Program
This program combines the Master of Nonprofit Organizations (MNO) degree with the Master of Science in Social Administration degree (MSSA). It provides career preparation for students with interests in non-profit management, social service, and the social work profession.

New students can apply to either program simultaneously or separately. Students must apply and be accepted for each degree program to qualify. Students who choose to begin their studies in the MSSA program must apply to the MNO program prior to completing their first semester of MSSA courses. Dual-degree students must receive the MNO and MSSA degrees simultaneously to be granted credit for specific courses taken in the other program.

For more information on the MSSA/MNO degree, visit the website: http://msass.case.edu/academic/.

MA/MNO Joint Degree Program
This program combines the MNO degree with the Master of Arts in Music History (MA). It provides preparation for students who desire to blend a strong background in music and the arts with management in non-profit organizations.

Students must apply and be accepted for each degree program to qualify. Students in either program must be admitted within the first year of study to the other program in order to be admitted to dual-degree status. New students may apply to both programs simultaneously or at separate times. Dual-degree students must receive the MNO and MA degrees simultaneously to be granted credit for specific courses taken in the other program.

For more information on the MA/MNO degree, visit the website: http://music.case.edu/mused/programs.html/.

MBA/CNM
MBA students with a career focus in the management of non-profit organizations may ob-
tain a Certificate in Nonprofit Management (CNM), offered through the Mandel Center for Nonprofit Organizations, by completing 15 credit hours of Mandel Center courses (9 of the 15 credit hours may be counted as MBA electives). By enrolling in one additional course in two of the last three semesters of the MBA program, full-time students may complete the MBA and the CNM without extending their course of study or incurring additional tuition fees.

CREDIT REQUIREMENTS FOR THE MBA/CNM
Students in the dual program must complete 15 credits toward the CNM and 57 hours toward the MBA degree. These students may double count nine credit hours of Mandel Center courses that have been approved for credit in both programs. Because of double counting, students completing the CNM and MBA concurrently will have a 63 credit hour program requirement.

COURSES CURRENTLY APPROVED FOR MBA AND CNM CREDIT
There is one required course for the MBA/ CNM, MAND 401 (Introduction to the Nonprofit Sector).

For a complete listing of courses which are eligible for both the MBA and the CNM, visit the website: http://weatherhead.case.edu/academics/masters/mba/concentrations/nonprofit.cfm

Students wishing to propose any modification in the recommended sequence of study on the basis of prior course work, past experience, or professional interest must present a written request for consideration and approval by the MBA/CNM faculty advisor.

For more information, contact the Mandel Center’s director of recruitment at 216-368-6025 or by e-mail at mcnoadmissions@case.edu.

ADMISSION/ENROLLMENT PROCEDURES FOR THE DUAL MBA/CNM PROGRAM
Candidates must complete both applications and be admitted to each program separately. Full-time MBA students must apply to the CNM program no later than the end of their first semester in the MSSA program. Candidates interested in, for example, practicing law within a nonprofit organizational setting; working as a program officer in a foundation; serving as a leader or manager of a non-profit organization; working in the area of non-profit public policy and advocacy; or working in the field of planned giving.

The program consists of five courses that must include a Law course, LAWS 234. Candidates must complete both applications and be admitted to each program separately. JD students must apply no later than the end of their first year in the MBA program. JD/CNM students must receive both credentials simultaneously to be granted credit for specific courses taken in the other program.

For more information, contact the Mandel Center’s director of recruitment at 216-368-6025 or by e-mail at mcnoadmissions@case.edu.

MBA/CNM
The M SSA/CNM combines the Master of Science in Social Administration (MSSA) with the Certificate in Nonprofit Management. The M SSA/CNM provides career preparation for students with interests in nonprofit management, social service, and the social work profession.

fifteen credit hours of Mandel Center courses. MSSA students should apply to the degree/certificate program no later than the end of their first semester in the MSSA program. Candidates must complete both applications and be admitted to each program separately. MSSA/ CNM students must receive both credentials simultaneously to be granted credit for specific courses taken in the other program.

For more information, contact the Mandel Center’s director of recruitment at 216-368-6025 or by e-mail at mcnoadmissions@case.edu.

JD/CNM
The JD/CNM combines the Juris Doctor degree (JD) with the Certificate in Nonprofit Management. It provides preparation for students interested in, for example, practicing law within a nonprofit organizational setting; working as a program officer in a foundation; serving as a leader or manager of a non-profit organization; working in the area of non-profit public policy and advocacy; or working in the field of planned giving.

The program consists of five courses that must include a Law course, LAWS 234. Candidates must complete both applications and be admitted to each program separately. JD students must apply no later than the end of the second year in the JD program. JD/CNM students must receive both credentials simultaneously to be granted credit for specific courses taken in the other program.

For more information, contact the Mandel Center’s director of recruitment at 216-368-6025 or by e-mail at mcnoadmissions@case.edu.

CERTIFICATE PROGRAMS
Certificate in Health Systems Management (HSM)
Admissions qualifications: bachelor’s degree, professional experience in health care delivery system, or professional or graduate degree in the health sciences. Individuals with an MBA or working toward an MBA may also enroll in the certificate program. Contact 216-368-2030 for additional information.

SUGGESTED CURRICULUM AND SEQUENCE OF COURSES:
A total of 15 credit hours of course work from the following courses is required for completion of the Certificate:

- HSMC/BAFI 420 – Health Finance (3)
- HSMC 421/ECON 421 – Health Economics and Strategy (3)
- HSMC 427/LAWS 227 – Health Law (3)
- HSMC/MIDS 432 – Health Care Information Systems (3)
- HSMC 446/IIME 446 - Models of Health Care Systems (1.5)
- HSMC 447/IIME 447/BIO5447 - Regulatory Affairs for the Biosciences (1.5)
- HSMC 456 – Health Policy and Management Decisions (3)
- HSMC 501 G – Medical School Electives (1-3)
- HSMC 502 – Health Care Executive Education Series (3)

ADDITIONAL HEALTH COURSES (SCHOOL OF LAW)
- LAWS 295 – Health Care Organization and Finance (2)
- LAWS 298 – Health Care Transactions (2)

ADDITIONAL HEALTH COURSES (GRADUATE SCHOOL/SCHOOL OF MEDICINE)
- MPH 429 - Introduction to Environmental & Occupational Health (3)
- MPH 439 - Public Health Management and Policy (3)

TUITION PAYMENT
Tuition for each 3-credit course will be charged at the current rate for the semester in which the student registers.

ACADEMIC POLICY
Courses in the HSM Certificate Program are documented on an academic transcript from Case Western Reserve University. A Certificate in Health Systems Management will be awarded after the student completes five courses with passing grades and completes a graduation application through the Weatherhead Student Services office. All HSM Certificate participants who matriculate into the MBA Program within five years of completion of the Certificate may transfer the five courses toward completion of MBA degree require-
Certificate in Nonprofit Management (CNM)
The Certificate Program in Nonprofit Management, offered through the Mandel Center for Nonprofit Organizations, is designed for practicing managers and leaders in human service, fine and performing arts, cultural, educational, community development, religious, civic and other non-profit organizations who aspire to senior-level executive positions.

For more information on the CNM program, contact the Center’s Director of Recruitment at 216-368-6025, mcnoadmissions@case.edu, or visit www.case.edu/mandelcenter/grad/cnm. CNM students must satisfactorily complete a set of five approved courses (15 credits) in residence, including one required course, Introduction to the Nonprofit Sector.

REGISTRATION
Registration for the CNM program is through the Weatherhead School of Management. Refer to the section on Registration and Academic Information for information about course changes and withdrawals.

RETENTION REQUIREMENTS FOR STUDENTS IN THE CNM PROGRAM
A CNM student who earns a final grade below a B in any course may no longer continue in the program. There is no academic probation period for the CNM, due to the short duration of the program.

For additional information concerning the CNM program (including scholarship information), contact the Mandel Center’s director of recruitment at 216-368-6025 or by e-mail at mcnoadmissions@case.edu, or on the website at: www.case.edu/mandelcenter/.

Certificate in Operations
The Department of Operations offers a graduate certificate consisting of 15 credit hours of coherent course work. Designed for practicing professionals who seek greater expertise, the Certificate in Operations program can be tailored to specific interests. Sample areas are Supply Chain Management, and Operations Research.

Upon completion of all requirements below, the student should request the certificate through the Weatherhead Student Services Office.
• Completion of 15 credit hours of the courses selected in collaboration with the department’s director of graduate programs.
• Maintain a B (3.0) grade point average through all course work.

PHD PROGRAMS
PhD in Management
The PhD in Management program is designed for individuals whose career goals are to conduct research and teach in academic, policymaking, or research institutions. The program provides both a general background in management and strong specialization in the individual’s choice of major field (accountancy, economics, entrepreneurship, information systems, labor and human resource policy, marketing, and management policy). A program of study is tailored to each student’s needs and career goals. Students are encouraged to engage in publishable research before receiving their doctorates. They also are given the opportunity to teach courses after admission to candidacy.

An integral strength of the PhD in Management program at the Weatherhead School of Management is its attention to the individual. A successful doctoral experience requires more than course work. Frequent one-to-one interaction with faculty in the area of one’s specialization is necessary for developing conceptual and methodological skills. Only a few students are admitted to the doctoral program each year, guaranteeing direct communication with faculty in research, teaching and advanced independent study courses.

The PhD in Management program has been designed so that the student, in cooperation with an advisor, can develop the plan of study that best meets his or her career objectives. Students are encouraged to be eclectic and take course work outside of the Weatherhead School.

Because only a small number of applicants can be admitted each year, selection is limited to those whose credentials are strong and whose interests match well with the faculty. Each applicant is required to furnish an official copy of his or her GMAT score, official transcripts, at least three letters of recommendation, and a statement of his or her area of interest. Financial aid is available on a competitive basis, ranging from graduate assistantships to fellowships and lectureships. For more information, visit the website: http://weatherhead.case.edu/academics/doctorate/.

PhD in Operations Research
For the PhD degree in Operations Research, a number of required courses in specific areas must be taken. Required and elective courses form a coordinated program of study that provides depth of knowledge of the field as well as a comprehensive understanding of related subjects. The program culminates in a dissertation, which presents new, significant research findings.

Contact the Department of Operations for further information (216-368-4141), e-mail at PhD-opert@case.edu, or visit the website: http://weatherhead.case.edu/academics/doctorate/operations-research/.

PhD in Organizational Behavior
The doctoral program offered by the Department of Organizational Behavior focuses on research and helping at the individual, team, organizational, and global system levels. Students also are encouraged to develop the skills necessary to use their knowledge to promote constructive change.

For further information, visit the website: http://weatherhead.case.edu/academics/doctorate/organizational-behavior/.

Executive Doctor of Management
The Executive Doctor of Management (EDM) Program, offered by the Weatherhead School of Management at Case Western Reserve University, integrates concept and practice within the context of today’s emerging and pressing global issues. The EDM is available to a small, select group of experienced executives who possess graduate degrees and are committed to pursuing formal, rigorous study as practitioners-scholars. By addressing practicing professionals’ specialized needs for advanced knowledge and skills, the EDM Program enables dedicated professionals to explore new horizons of executive management within their organizations and beyond. For additional information, please visit: http://weatherhead.case.edu/academics/doctorate/executive-doctor-of-management/.

WEATHERHEAD CENTERS
Health Systems Management Center
The Health Systems Management Center (HSMC) is an interdisciplinary education and research center jointly sponsored by the Weatherhead School of Management and the School of Medicine. HSMC focuses its programming on issues involving three key
groups in the health care delivery system: medical providers, institutional providers and purchasers of health care services. For more information, contact J.B. Silvers, faculty director, at 216-368-5417.

The Mandel Center for Nonprofit Organizations (a university-wide academic center)
Founded in 1984, the Mandel Center for Nonprofit Organizations, at Case Western Reserve University, is one of the preeminent non-profit management academic centers in the world. The center offers nationally recognized graduate programs focused on developing the non-profit community and its leaders, conducts cutting-edge research on the non-profit sector, offers executive education and other non-credit professional development programs, and sponsors a leading journal featuring non-profit management researchers’ work. The Mandel Center is distinguished by the quality of its faculty, by the strength of its ties with non-profit leaders, and by its close relationships with four partner schools – the College of Arts and Sciences, the School of Law, the Mandel School of Applied Social Sciences, and the Weatherhead School of Management. For more information, please refer to the Mandel Center for Nonprofit Organizations section of this publication.

Business as an Agent of World Benefit
The Center for BAWB advances extraordinary business innovation and entrepreneurship by turning the global environmental and social issues of our day into core value creation opportunities.

The Center for BAWB provides solutions to the how of sustainable value and social entrepreneurship, helping companies become the leading-edge stars of their industries through applied sustainability, research, and education efforts.

WEATHERHEAD UNDERGRADUATE STUDENT ORGANIZATIONS

Alpha Kappa Psi
Alpha Kappa Psi is a national professional business fraternity whose objective is to help develop well-trained, ethical, and skilled leaders. The Omicron Omega chapter of AKPsi was founded in 1999 at the Weatherhead School, and is open to any student majoring in a business related field. Members interact with speakers from the business community, attend conferences with other Alpha Kappa Psi chapters, and organize social events on and off campus. At the end of each academic year, the chapter holds the Yellow Rose Reception to celebrate the year’s activities and to present special awards.

Beta Alpha Psi
Beta Alpha Psi is the honorary accounting fraternity. The Weatherhead School is home to one of the oldest chapters in the country, founded in 1930. Beta Alpha Psi hosts professionals from all of the major accounting and consulting firms to talk about career opportunities in the accounting profession. The fraternity also periodically sponsors field trips to accounting firms and corporations. Membership to this fraternity is restricted to accounting majors; however, all students can attend meetings and guest speaker presentations. The Beta Alpha Psi Banquet is held at the end of each spring semester and is attended by accounting faculty, staff, alumni and current undergraduate and graduate accounting students. In addition, many members of the professional accounting community attend the event. The banquet is held to honor outstanding accounting students, both current and former, and to induct new BAP members.

Omicron Delta Epsilon
Omicron Delta Epsilon is the international honor society in economics. Students who maintain a high academic record are invited to join the organization. Meetings and activities are held throughout the year and highlighted by the McMyler Memorial Lecture at the end of the school year.

Wolstein Society
The Wolstein Society was formed to recognize outstanding undergraduates who represent the spirit of enterprise as demonstrated by leadership, scholarship, community service and professional will, the prized attributes of effective and successful individuals. The organization is named in honor of Iris S. and the late Bert L. Wolstein, benefactors of Wolstein Hall, and supporters of undergraduate education in the Weatherhead School. All students with junior standing who meet a certain set of criteria are evaluated for membership. The group is overseen by a faculty and staff committee and has a faculty moderator. Members of the Wolstein Society are required to organize and participate in various activities aligned with the mission of the Society. The Wolstein Society inducted its first members in fall of 2006.

Case Marketing Association
The Case Marketing Association provides undergraduate students with an opportunity to undertake creative advertising and marketing experience by tackling projects for the Case community. Additionally, internal workshops and programs help build the skills of its members, and its AAF affiliation helps link its members to professionals within the Cleveland area.

WEATHERHEAD GRADUATE STUDENT ORGANIZATIONS

There are many opportunities for Weatherhead students to engage and further develop their leadership abilities. The first of these experiences begins in the classroom where students are expected to lead class discussions and group projects and challenge their colleagues to reach their full potential. Beyond the classroom, students have access to leadership opportunities in both the Weatherhead School and Cleveland communities.

Graduate Business Student Association (GBSA)
The Graduate Business Student Association and other student-run organizations design and manage multiple social, community and networking programs throughout the school year. Often students take the lead on new initiatives that shape the future of the school and the community.

Consulting Club
The Consulting Club assists and empowers students with resources and opportunities in their preparation for a consulting career.

Entrepreneurial Venture Association
The Entrepreneurship Venture Association (EVA) is a student-run organization at the Weatherhead School of Management dedicated to channeling student activities toward the creation and growth of businesses in the Cleveland area and beyond. The goal of the EVA is to take a leadership role in transforming Cleveland into an active member of the new economy.

Finance and Investment Club
The Finance and Investment Club is a club designed to provide guidance to Weatherhead students pursuing a career in finance.
Awareness of the business aspects of medicine and health sciences. The mission of the HSM-BC is to promote interaction between healthcare industry leaders and WSOM students.

Marketing Club
The Weatherhead Marketing Club provides the graduate business community with opportunities to explore all facets of marketing. Our vision is to further the aspirations of Weatherhead students interested in a career in marketing.

Net Impact: Students for Responsible Business
Weatherhead Net Impact is a student-run body dedicated to creating an atmosphere where people can develop and expand their personal view of the role of business in society and their role as business leaders. This group provides an introduction to innovative business models, best practices, and cool companies that can make an impact.

Supply Chain Management Club
Supply Chain Management is all about delivering the right product at the right place, at the right time and at the right price. Supply Chain Management Association was founded to foster the talents that we have at Weatherhead School of Management to meet these challenges.

Wine Society
The Wine Society meets several times a year to sample different wines from around the world. These events are consistently well subscribed with representation from all degree programs.

Alumni Association
Members of the Weatherhead School of Management Alumni Association include all alumni of the Weatherhead School’s graduate and professional programs. The association works to promote the welfare and advance the objectives of the school, and sponsors a range of activities and services for alumni and students to encourage professional development, provide for the exchange of ideas, and stimulate social interaction.

HONORARY SOCIETIES

Beta Gamma Sigma
Beta Gamma Sigma is a national scholarship honor society in the field of business administration and commerce. MBA candidates whose academic performance is outstanding (usually in the top 20 percent of the graduating class) may be elected to membership in the Eta Chapter of Ohio, which was established at Case Western Reserve University in 1958.

Omega Rho
Omega Rho is an international honor society founded in 1975 to honor academic excellence in operations research and closely allied intellectual disciplines. As a founding chapter of Omega Rho, the Case Western Reserve University unit recommends membership for students who have achieved high honors in the graduate program in operations research. The Department of Operations initiates chapter members annually.

GRADUATE STUDENT LEADERSHIP AWARDS

The Scott S. Coven Student Leadership Award is presented to a Weatherhead School graduate student who serves as a leader and as a model for Weatherhead students. The recipient promotes the Weatherhead School image in a positive way, contributes to the total community and stimulates the classroom experience. This award is presented at the Weatherhead Diploma Ceremony in May. The recipient of this award is chosen by a selection committee comprising alumni representatives of all Weatherhead programs. Students, alumni, faculty, staff and friends of the Weatherhead School make nominations.

The Theodore M. Alfred Distinguished Service Award is presented to a Weatherhead School graduate student who participates in community service inside and outside the Weatherhead community, brings community service opportunities to Weatherhead students and promotes service opportunities to Weatherhead students. This award is presented at the Weatherhead Diploma Ceremony in May. The recipient of this award is chosen by a selection committee comprising alumni representatives of all Weatherhead programs. Students, alumni, faculty, staff and friends of the Weatherhead School make nominations.

The Student Life Award is presented to a Weatherhead School graduate student who actively participates in and supports Weatherhead student activities and events, encourages and supports student participation in student life activities, and creates, revitalizes or provides added value to Weatherhead student organizations, activities or programs. This award is presented at the Graduation Awards Reception in May. The recipient of this award is chosen by a selection committee comprising alumni representatives of all Weatherhead programs. Students, alumni, faculty, staff and friends of the Weatherhead School may make nominations.

The Rita Kicher Award is presented to a graduating, part-time graduate student at the Weatherhead School. The award recipient should be recognized as an outstanding colleague in Cleveland’s professional/business community by his/her peers and supervisors, be an active member of one or more community non-profit organizations, contribute to one or more professional societies or organizations, demonstrate leadership qualities advocated by the Weatherhead School, and promote the Weatherhead School in a positive way. This award is presented at the Graduation Awards Reception in May. The recipient of this award is chosen by a selection committee comprising alumni representatives of all Weatherhead programs. Students, alumni, faculty, staff and friends of the Weatherhead School may make nominations.

REGISTRATION AND ACADEMIC INFORMATION

Course Loads
Full-time graduate students must register for at least 9 credit hours per semester to maintain full-time status. A typical full-time course load, however, is 15-17 credit hours per semester. Part-time students who are employed full-time generally register for a maximum of 6 credit hours per semester and 3 credit hours in the summer, which is considered halftime status. Requests for course overloads should be directed to the Weatherhead Student Services office at 216-368-2030.

Course Registration
A student may enroll during each registration period through the last day of late registration, as set by the official university calendar. Exceptions will be granted only upon the recommendation of the dean of the Weatherhead School of Management. A fee of $25 is charged during the late registration period.

To register, students must have a clear balance.
unless they are participating in the Bridge Loan Program. In this case, a company tuition reimbursement letter must be submitted. Students will register online using the Student Information System. Students who wish to apply for federal loans can visit the website: www.fafsa.ed.gov.

During any semester, students may not register in more than one school or college of Case Western Reserve University. Transfer within the university requires the approval of the deans of the schools or colleges involved. Special arrangements are made for students in joint-degree programs. (See the relevant section of this bulletin for details.)

If at any time a student fails to register in two consecutive semesters, excluding the summer session, he or she must reapply for admission to the Weatherhead School of Management unless a prior arrangement has been made.

Course Changes
Requests for changes in courses and sections may be processed online, via e-mail (wsomregistrar@case.edu), or by contacting a Weatherhead Student Services Coordinator (216-368-4809) by the last day of the drop/add period.

Withdrawals
To withdraw from all courses in a semester, the student must contact the Weatherhead Registrar, wsomregistrar@case.edu, before the university deadline for withdrawal to have an official withdrawal form processed. All withdrawals after the official drop/add periods will result in a transcript entry. The grade of W will be given if a student officially withdraws from a semester-length course by the deadline specified in the official university calendar. A student withdrawing after this date will receive the grade of F unless, in the judgment of the associate dean of graduate and professional programs, there are valid reasons for recording the grade of W.

Failure to attend class, giving notice to the instructor, or nonpayment of fees will not be regarded as official notice of withdrawal. A grade of F may be assigned to each course from which the student has not officially withdrawn.

Tuition charges for withdrawals after the drop/add deadline are prorated based upon the week of withdrawal and according to the schedule published in the semester registration materials.

Note: A student is not entitled to any tuition adjustment for a course dropped after the drop/add deadline (unless student withdraws from all course work for the semester). If a student must drop a course for circumstances that are unavoidable and unforeseen, he or she may petition (in writing to Weatherhead School Registrar) for a partial tuition refund for the course.

Grades
The grading system for Weatherhead School of Management students is:

- **A** 4 quality points
- **B** 3 quality points
- **C** 2 quality points
- **D** 1 quality point
- **R** successful completion of the first semester of a two-semester course
- **P** Pass 0 quality points (with degree credit)
- **S** 0 quality points (with degree credit)
- **F** 0 quality points (averaged in cumulative grade point average, no degree credit)
- **I** Incomplete (no degree credit)
- **AD** Audit (no degree credit)
- **NG** Unsatisfactory audit
- **W** Withdrawal from a class (no degree credit)
- **WD** Withdrawal from all courses in a semester (no degree credit)

Grade of Incomplete
The grade of Incomplete (‘I’) is assigned at the discretion of an instructor, provided that two criteria are met:

- There are extenuating circumstances, explained to the instructor before the assignment of the grade, which clearly justify an extension of time beyond the requirements established for other students in the class. It is the student’s responsibility to notify the instructor of the circumstances which prevent completion of the course.
- The student has been passing the course and only a small segment of the course remains to be completed, such as a term paper, for which the extenuating circumstances justify a special exception.

In order to receive credit for a course marked I, the student must complete the work by the date specified by the instructor, and in no event later than the end of the next regular semester (fall or spring).

In the absence of notification or adequate justification, the instructor has the authority to assign the student a final grade that assumes a failing grade for the missing work.

If the student wishes to petition to extend a grade of I beyond the stated deadline, the student must obtain approval from the faculty member who assigned the incomplete grade and the associate dean before the deadline. A request must be made in writing and convey (a) extenuating circumstances justifying the extension, and (b) the expected date of completion of the work. If approved, the request should be initialed by the faculty member and delivered by the student to the associate dean for approval. Failure to complete course requirements by an extended date will result in a grade of F.

Grade of Satisfactory
The grade of S indicates passing performance only in designated courses approved by the Curriculum Committee. The grade of S is not counted in determining quality average, and an S, once entered on the student’s record, may not be changed. Under no circumstances should some students in a course receive an S while other students receive letter grades. No student can receive credit for more than six credit hours of grades of S toward the MBA degree.

Extra Assignments
No student is permitted to do extra assignments beyond the work assigned to all students in a course in order to obtain a higher grade. This policy applies to changing an I grade to a regular grade, or to changing one regular grade to another. However, faculty may replace or substitute assignments for individual students in a course, depending on extenuating circumstances.

Course Audit
The grade of AD (audit) will be given when a student has officially registered to audit a course and has satisfied the requirements specified by the instructor for this grade. The instructor may designate that the student has not completed all requirements for auditing the course and that NG (no grade) be recorded on the student’s transcript. The designation of NG is not available under any other circum-

WEATHERHEAD SCHOOL OF MANAGEMENT

GENERAL BULLETIN 2009-2011

493
Students will be permitted to change their registration in a course from credit to audit (AD) only if the change is officially made by the deadline specified in the university calendar. Students may audit only with permission of the instructor and may not audit a required course in the MBA curriculum. Any course that has been audited may not be repeated for credit.

Retention Requirements
For retention in the MBA, EMBA, MSM and MAcc degree programs of the Weatherhead School, a student must meet the following academic requirements: (1) a quality-point average of 2.25 at the completion of 12 semester hours of graduate study; (2) a quality-point average of 2.4 or higher at the completion of 21 semester hours or more of graduate study; (3) a quality-point average of 2.5 or higher at the completion of 33 semester hours or more of graduate study. In calculating the quality-point average, all graduate courses for which quality points are given are counted, including courses that may have been repeated. (Refer to the MNO degree information in this bulletin or to the School of Graduate Studies section for retention requirements for that degree program.)

In addition, students must receive a minimum grade of C in core courses. If the minimum grade of C is not obtained, the student must take the course again to meet graduation requirements and prior to taking any classes that require that course as a prerequisite.

Graduation Requirements
A cumulative quality point average of 2.50 in all graduate courses taken for credit in the MBA, EMBA, MSM or MAcc degree programs is required for the awarding of these degrees. All requirements for each of the professional degree programs must be fulfilled within six years from the date of the student’s initial registration in graduate study in the Weatherhead School of Management.

A candidate for a degree awarded by the Weatherhead School must complete an application for graduation and submit it to the Weatherhead Student Services office no later than two months before the graduation date at which the degree is expected to be awarded. Upon receipt of the student’s application, the registrar will verify the student’s eligibility for graduation at the anticipated date. Students are advised to contact the Student Services Office if they have any questions regarding the time or the requirements for graduation.

An annual convocation ceremony is held in May. Candidates who are awarded degrees in August or January will be invited to attend the ceremony the following May.

Transcripts
Case Western Reserve University considers grades and other information about students’ performance at Case Western Reserve University to be a private matter and will release such information to students only upon written request. Transcripts will not be issued to or on behalf of students who have not discharged all financial obligations to the university.

Transcripts of work completed at other institutions will not be released to students or other third parties.

Transfer Credit
Six hours of transfer credit may be granted toward the MBA degree in accordance with the following provisions:

- the student registers for and completes a minimum of 36 credit hours of course work in the Weatherhead School of Management toward the MBA degree;
- the work to be transferred must have been completed at another AACSB accredited graduate school of business;
- grades for the work to be transferred are not documented on an official transcript, nor is the course counted in the student’s grade point average; and
- the courses are applicable to the MBA program at Case Western Reserve University.

Course work to be transferred from a local college or university must not be offered by the Weatherhead School of Management. The student must contact the Weatherhead School registrar to initiate a request for transfer credit for a course to be taken at another university. The registrar will seek approval from the associate dean for graduate and professional programs. The school will not be liable for acceptance of transfer credit unless this approval process is completed prior to a student’s enrollment in courses at another university. This prior approval of course work will be acknowledged in writing. An official transcript from the other school, mailed directly to the Weatherhead School registrar, must be on file before the transfer of credit can be completed. Graduate courses counted toward another degree are not eligible for transfer credit.

Double Counting of Courses for Joint-Degree Students
Any student wishing to double count courses for any joint-degree program in the Weatherhead School of Management will be subject to the following restrictions:

- a minimum of 36 credit hours of course work will be required for each degree awarded by the Weatherhead School of Management, over and above all courses taken in any other degree program at Case Western Reserve University; and
- in the MBA program, elective courses may be double counted within the limits stated above, with the further provision that a minimum of three electives must be Weatherhead School of Management elective courses. A grade of C or higher must be received for any elective taken outside the Weatherhead School of Management in order to be counted for MBA credit.

ACCOUNTING (ACCT)

ACCT 101. Introduction to Financial Accounting (3)
This course covers concepts, principles, and practices including the preparation and interpretation of financial reports, record-keeping procedures, and internal controls.

ACCT 202. Management Accounting (3)
This course focuses on management accounting as a supporting system, helping managers to run businesses and other organizations. The course builds on knowledge of microeconomics, organizational design and behavior, production, and logistics as a foundation to explore how management accounting provides information for management planning, control and decision activities. Prereq: ACCT 101 and ECON 102.

ACCT 300. Corporate Reporting I (3)
This course covers financial accounting theory, generally accepted accounting principles and reporting practices, including evaluation of current issues and practices related to asset valuation, including receivables, inventory and fixed assets. It also covers the users and uses of financial statements, the difference between cash-basis and accrual accounting, the determination of income, the financial statements, financial statement analysis, revenue recognition, and the role of financial information in valuation decisions and contracting. Prereq: ACCT 101 and ACCT 202.

ACCT 301. Corporate Reporting II (3)
This course covers financial accounting theory, generally accepted accounting principles and reporting practices. Areas of focus include: liability determination, long-term debt, derivatives, leases, pensions and other post-retirement benefits, accounting for income taxes, earnings per share, stock options, and investments. International aspects also are considered. Prereq: ACCT 300.

ACCT 303. Survey of Accounting (3)
The course covers the principle of financial and managerial accounting for non-management students, including the framework that underlies financial and manual accounting and how accounting information should be used by: (1) parties external to the firm, i.e., stockholders, creditors and government, to evaluate the financial performance of an organization; and (2) internal management to fulfill the planning, control and performance evaluation functions. Enrollment is limited to students who are neither management nor accounting majors nor enrolled in the Weatherhead School of Management. This course cannot be substituted for ACCT 202 without a waiver from the chair. Offered as ACCT 303 and ACCT 403.

ACCT 304. Advanced Financial Reporting (3)
This course covers partnerships, consolidations, foreign exchange, international aspects of accounting, accounting for state and local governments and not-for-profit organizations, segment reporting and interim reporting. Prereq: ACCT 301.

ACCT 305. Income Tax: Concepts, Skills, Planning (3)
This course covers underlying federal income tax and concepts and law applicable to various entities. May not be taken for credit if ACCT 430 is taken for credit. Prereq: ACCT 202 or ACCT 401.

ACCT 314. Attestation and Assurance Services (3)
This course covers the role of the auditor, the audit process, the public accounting profession, audit risk and materiality, fraud, audit methods and techniques, audit planning, internal control, the effects of information technology on the audit, auditing revenue, receivables and inventories, professional ethics, legal responsibilities, emerging assurance services, and recent developments in the auditing profession. Prereq: ACCT 301.

ACCT 360. Independent Study (1 - 18)
ACCT 401. Financial and Managerial Accountancy (3)
This course examines the underlying framework of financial and managerial accountancy, focusing on how financial information is used by: (1) parties external to the organization to evaluate financial performance, i.e., stockholders, creditors, and government agencies; and (2) internal management to plan, control, and evaluate the information for key decisions of the organization.

ACCT 401A. Financial and Managerial Accountancy (1)
The accounting component will cover the use and application of basic financial statements, the basic cost structures in a firm, and decision making using accounting information. We will discuss usage and analysis of information from the annual report, focusing on the balance sheet, income statement, cash flow statement, and related notes. The course will also cover internally generated accounting information about the cost structure of the firm. We will discuss use of this information in decision making. You are expected to be comfortable with definitions of basic accounting terms, and you should be familiar with the accounting structure and the financial statements. Prereq: Open to ACL-MBA students.

ACCT 403. Survey of Accounting (3)
The course covers the principle of financial and managerial accounting for non-management students, including the framework that underlies financial and manual accounting and how accounting information should be used by: (1) parties external to the firm, i.e., stockholders, creditors and government, to evaluate the financial performance of an organization; and (2) internal management to fulfill the planning, control and performance evaluation functions. Enrollment is limited to students who are neither management nor accounting majors nor enrolled in the Weatherhead School of Management. This course cannot be substituted for ACCT 202 without a waiver from the chair. Offered as ACCT 303 and ACCT 403.

ACCT 405. Advanced Federal Taxes (3)
Corporate income taxes, estate and gift tax, fiduciary income taxes, partnerships, and hybrid forms of organization are covered. Prereq: ACCT 305.

ACCT 406. Accounting Information Systems (3)
This course addresses the intersections of information technologies and accounting. Current themes include corporate communications/investor relations, as well as e-commerce. The corporate communications/investor relations module focuses on the use of technology in communicating with investors, particularly in terms of investor relations websites, XBRL (an electronic financial reporting format), the use
of online investment analysis tools, and trends in the use of technology in communicating with investors. The e-commerce module focuses on functionality and security issues related to e-commerce web platforms.

**ACCT 413. Seminar in Management Accounting and Control Systems (3)**

Managerial accounting is concerned with providing information to managers and others inside the organization to direct and control its operations. Successful modern-day companies are moving away from the mass production models of yesterday and moving quickly towards manufacturing models described as lean or described as patterned after the Toyota Production System. Unfortunately, accounting models are not moving to meet that need. This course is intended to discuss the traditional methods, their limitations in today’s environments, and to explore what financial and other information is necessary to profitably grow contemporary organizations of today. Prereq: ACCT 401.

**ACCT 414. Corporate Reporting and Analysis (3)**

This course provides a basis for evaluation of traditional and proposed uses of report and information for decision making in investment, credit and internal planning and control. Students are introduced to concepts and analytical techniques that can be used to critique and interpret the financial health of the organization. At a practical and theoretical level, the course integrates research in the areas of accounting, quantitative methods and finance which has proved useful in the financial analysis of organizations. Prereq: ACCT 401 and BAFI 402.

**ACCT 418. Fraud, Governance and Reporting (3)**

This course examines managerial fraud, primarily made possible by the manipulation of accounting. This includes treatments of the motives for fraudulent behavior but focuses primarily upon the techniques of earnings management and the processes of its detection. Governance of organizations in the post-Enron, WorldCom and Tyco environment will also be studied. Regulation and the duties of those responsible for proper governance will be among the topics in this portion of the course. Guest speakers from the forensic industry and materials from practice institutes will be employed. Prereq: ACCT 401 and BAFI 402.

**ACCT 419. Financial Reporting and Capital Structure (1.5)**

Corporations require sources of capital, which typically include both debt and equity financing. These different contract forms lead to different financial statement implications due to the rules of accrual accounting. This course covers the detailed financial reporting techniques and procedures related to these contracts that affect the information produced and subsequently used in capital markets. Prereq: BAFI 402.

**ACCT 429. Social Ethics and Taxes (1.5)**

During the first part of the semester students will learn to prepare income tax returns for low-income workers. After students are trained to prepare returns, they will assist low-income clients in the preparation of tax returns. Readings and classroom discussion will focus on federal and local tax policy, financial statement analysis, and the impact of tax policy on wage earners. All students will be challenged to consider how their experiences can help them become better managers and leaders as they advance in their careers.

**ACCT 430. Taxes and Management Decisions (3)**

This course is designed to sensitize students to the importance of tax planning opportunities and pitfalls inherent in management decisions. The course will focus on helping students recognize potential tax opportunities and problems by examining a variety of practical managerial decision contexts. The course is specifically designed for students preparing for careers in management, not necessarily in accounting or tax. Prereq: ACCT 401 or MAND 425 and MAND 426.

**ACCT 431. Tax Research Methods (3)**

This course concentrates on the basic nature of the tax research process: identification of pertinent facts, issue definition, determination of appropriate authoritative sources, evaluation of authoritative sources, development of issue resolution alternatives, and communication of research results. The course includes a study of available research sources as well as reviewing the development and hierarchy of those sources. Library research materials are used, including tax services, journal articles, Internal Revenue Code, course cases, and administrative rulings. Tax research cases are employed as the basic methodology for simulating actual tax research problems. Computer applications for tax research are assigned. Prereq: ACCT 405.

**ACCT 437. Principles of Personal Financial Planning and Taxation (3)**

This course focuses on financial planning for individuals. It is designed to be an overview course that touches on the basic concepts of each area of financial planning including general principles of financial planning, insurance planning, investment planning, income tax planning, retirement planning, estate planning, and planning for college education funding. Upon completion of this course, the student should be able to identify major issues in these areas and prepare a basic comprehensive financial plan for a hypothetical client. This course should provide the student with an appreciation for the amount of additional education necessary in order to become qualified as a Certified Financial Planner. Prereq: ACCT 401 and BAFI 402. Prereq or Coreq: ECON 403.

**ACCT 439. Regulation of Accountancy (3)**

This course examines the role and structure of government standard-setting agencies, including the U.S. Securities and Exchange Commission (SEC) and the Public Company Accounting Oversight Board (PCAOB) and related legislative and regulatory aspects as found in the Sarbanes-Oxley Act of 2002, and in studies by the General Accounting Office (GAO) and other regulatory agencies. The 1993 and 1994 securities acts, the notions of full and fair disclosure and auditor independence are addressed as important aspects of securities regulation. Research papers and assignments address technical and disclosure requirements of operating companies and mutual funds. Extensive use is made of web-based information including company and mutual fund sites and databases. Prereq: ACCT 301.

**ACCT 444. Advanced Auditing Theory and Practice (3)**

This course examines auditing concepts and issues in depth. A special focus exists on audit evidence and how auditors make decisions. Some topical areas include ethics, analytical review, fraud, and the role of technology. Prereq: ACCT 314.

**ACCT 495. Advanced Accounting Seminar (1)**

ACCT 495 is a one semester credit hour seminar course designed to permit focus and attention upon specialized technical accounting and reporting topics which are individually insufficient to warrant larger credit offerings. It is expected that the topics of individual ACCT 495 seminars will vary based upon faculty availability and interest and the rapidly changing environment of professional circumstances. Individual seminar topics will be proposed, reviewed and approved by the accounting faculty at appropriate times and thereafter added to the ACCT 495 offering
list. Possible seminar topics include: International Financial Accounting Standards; Securities and Exchange Commission Accounting; Federal Financial Accounting and Reporting; Mutual Fund Reporting; Financial Controls and Board Governance; Research Methods and Topics; and Triple-Bottom Line/Accountability topics.

ACCT 501. Special Problems and Topics (1 - 18)
This course is offered, with permission, to students undertaking reading in a field of special interest.

ACCT 520. Advanced Accounting Theory (3)
This course studies contemporary issues in financial accounting theory and business reporting. Topics are considered from their historical development to contemporary circumstances. Academic and professional literatures are employed to gain a variety of perspectives on current matters. The development of communication skills, written and verbal, and use of support technology for presentations is emphasized throughout. Students are required to make several individual and team presentations, to conduct database and periodical research and to provide frequent written and oral research reports. Prereq: ACCT 304.

ACCT 540. Contemporary Accountancy Policy (3)
This is a seminar on subjects of contemporary concern to the profession of accountancy which are currently being analyzed and debated by professional bodies and the academic community. These subjects involve the role of the profession in society, and the appropriate execution of that role. Some of the potential topics are government oversight in the profession, competitive pressures, independence, scope of services, and education/competency issues. The seminar provides a participative understanding of the press of society on the accountancy profession. Prereq: ACCT 405 and ACCT 520.

ACCT 601. Special Problems and Topics (1 - 18)
This course is offered, with permission, to Ph.D. candidates undertaking reading in a field of special interest.

ACCT 701. Dissertation Ph.D. (1 - 18)
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

BANKING AND FINANCE (BAFI)

BAFI 341. Money and Banking (3)
This course emphasizes the importance of financial markets, the nature and role of the financial system, and the linkages between these—money and banking—and the economy. Emphasis is placed on both theoretical and practical constructs, on major innovations and contemporary changes, and the closely intertwined condition of financial and economic systems with monetary and fiscal policy. Offered as BAFI 341 and ECON 341. Prereq: ECON 102 and ECON 103.

BAFI 342. Public Finance (3)
Government intervention is a pervasive feature of every modern economy. The goal of this course is to develop the economic tools for understanding and evaluating a wide range of government behaviors such as taxation and redistribution policy, the public provision of goods and services, and the regulation of private markets. ECON 342 begins by considering “market failures” that justify government intervention in a market economy. To respond to such failures, governments must raise revenues through taxation. Using the tools of microeconomic theory, we will develop a framework for thinking about the positive and normative effects of alternative forms of taxation. Particular attention will be paid to the individual income tax in the U.S., allowing students to understand the efficiency, distributional and behavioral implications of recent changes in the tax code. We will then turn to the expenditure side of the public sector. The economic principles used to evaluate public expenditures will be discussed and exemplified through the analysis of significant public programs. Of particular interest will be the effect of public programs on the incentives faced by workers and families. Offered as BAFI 342 and ECON 342. Prereq: ECON 102.

BAFI 355. Corporate Finance (3)
The basic goals of this course are to familiarize students with the concepts and tools used in financial management at both the corporate and personal levels. They include the notion of present value, securities valuation, risk and return analysis, and other financial analysis techniques. The concepts and techniques are, in turn, used to evaluate and make decisions regarding the firm’s investments (capital budgeting) and the cost of capital. Prereq: Minimum sophomore standing; ACCT 101 or ACCT 303.

BAFI 356. Investments (3)
This course is about investing in securities. It provides a comprehensive introduction to security analysis and portfolio management. Investing is a rational decision-making process in which the investor seeks to select a package or portfolio of securities that meets a pre-determined set of objectives. Descriptive, insti-
tutional and quantitative decision-making methods are arranged in a cohesive framework of analysis of interest to the informed investor. Topics include modern portfolio theory, the relation between risk and return, efficient markets, bonds, and options, among others. Prereq: BAFI 355.

BAFI 357. Financial Modeling, Analysis and Decision Making (3)
Firms try to create value. In their day-to-day operations, they are faced with numerous challenges: Should we accept trade credit or borrow? Will an acquisition create or destroy value? Should we introduce a new product line even if it cannibalizes an existing one? In each of these situations they try to quantify the impact on the value of their firm. The goal of this course is to develop your skills in financial modeling and valuation, so you can tackle issues like the ones described above. The course is designed to be “hands-on”: You will learn to apply the theory and develop spreadsheet modeling skills through homework, case studies and a group project. By the end of the course you will have a good understanding of both the theory and practice of valuation, and possess a set of cutting-edge financial modeling skills. This course is designed for students who aspire to work in a regular company, a bank or a consulting firm in (i) corporate finance (including mergers and acquisitions); (ii) strategy; or (iii) equity analysis. Prereq: BAFI 355.

BAFI 359. Intermediate Corporate Finance (3)
This is the second course in the undergraduate corporate finance sequence with an emphasis on applications. It is a case-based course that will apply and amplify concepts developed in the first course (BAFI 355 Corporate Finance). The cases selected for BAFI 359 will cover, among other topics, cash budgets and working capital management, financial strategy, capital budgeting, capital structure/dividend policy concepts, public equity valuation/initial public equity offerings, leveraged buyouts, and mergers and acquisitions. Students will develop both conceptual and financial-modeling skills. Prereq: BAFI 355.

BAFI 360. Independent Study (1 - 18)
This course is offered for candidates undertaking reading in a field of special interest. Permission of department chair required.

BAFI 372. International Finance (3)
This course deals with open-economy macroeconomics and international financial markets, covering open-economy national income analysis, international macroeconomic policy coordination, exchange rate determination, foreign portfolio investment, and global financial crises. Recommended preparation: ECON 102 and ECON 103. Offered as BAFI 372 and ECON 372.

BAFI 402. Financial Management I (3)
In this course, students are introduced to the basics of corporate finance, including the objectives, tasks, and decisions made by corporate financial managers. The course covers discounted cash flows, bond and stock valuation, cost of capital, capital budgeting, asset risk and return, and short-term and long-term financial management. Coreq: ACCT 401.

BAFI 402A. Managerial Finance (1)
This module reviews knowledge and refreshes core skills in managerial finance, especially those related to financial statement analysis, discounted cash flow valuation, and risk and return in the capital markets. Teaching methods include lectures, discussions, cases, and extensive exercises. Prereq: Open to ACL-MBA students.

BAFI 403. Financial Management II (3)
This is a continuation of BAFI 402 and serves as a prerequisite for several advanced electives in banking and finance. Its purpose is to familiarize the student with the theory and application of additional models used in financial decision-making by corporations. Issues relating to efficient markets, dividend policy, capital structure, financing decisions, option pricing, leasing, and risk management are among the topics considered. In addition, special topics may include mergers and acquisitions, pension funds, and international financial management. Prereq or Coreq: ACCT 401, BAFI 402 and QUMM 414. Prereq or Coreq: ECON 403.

BAFI 404. Financial Modeling (3)
Firms try to create value. In their day-to-day operations, they are faced with numerous challenges: should we accept trade credit or borrow? Will an acquisition create or destroy value? Should we introduce a new product line even if it cannibalizes an existing one? In each of these situations they try to quantify the impact on the value of their firm. The goal of this course is to develop your skills in financial modeling and valuation, so you can tackle issues like the ones described above. The course is designed to be “hands-on”: you will learn to apply the theory and develop spreadsheet modeling skills through homework, case studies and a group project. By the end of the course you will have a good understanding of both the theory and practice of valuation, and
credit risk. Fixed income securities account for about two thirds of the market value of all outstanding securities, and hence this topic is important. The course covers the basic products of fixed income markets including treasury and LIBOR products, such as interest rate swaps. Risk management and hedging strategies are covered as well as selected topics in credit risk models and mortgage-backed securities. Prereq: BAFI 430.

BAFI 432. Corporate Risk Management (3)
This is a unique strategic risk management course aimed at participants who wish to enhance their understanding of the risks faced by corporate firms, both financial and nonfinancial, learn techniques to identify and measure these risks, and understand how derivatives and risk management solutions can be used to manage these risks, create value, and advance the strategic goals of the firm. The course is designed in a manner such that it would be of use to executives of all corporations, financial and nonfinancial, across all functional areas. Prereq or Coreq: BAFI 403.

BAFI 434. Financial Econometrics (3)
BAFI 434 represents a rigorous study of the latest developments in the area of financial econometrics. The class assumes no prior knowledge of econometrics. It assumes that you have had a basic statistics class and that you have had regression analysis. It is taught using economic motivations and examples from the financial world. The course concerns modern econometric topics like time-series forecasting, volatility modeling, and panel data analysis. Various concepts and approaches in the course will be subjected to real world data. Students are expected to have basic knowledge of the fundamentals of corporate finance and statistics. The course aims at providing a lasting conceptual framework for model building using modern applied econometric techniques commonly employed in finance. Prereq: QUMM 414 and BAFI 402.

BAFI 435. Empirical Finance (3)
BAFI 435 provides an introduction to empirical analysis and research in finance. This involves the management of empirical datasets and the aspects of quantitative applications of finance theory. The goal is to enable the student to deal with the need to analyze complex and large financial and economic datasets that is present in many fields of the financial profession. The scope of the data as well as the quantitative methods used in such analysis often requires familiarity with robust computational environments and statistical packages. As such, another goal of the course is to familiarize the student with at least one such environment. Applications are conducted using real financial and economic data. The course draws on the theoretical aspects of the subjects covered, but mainly focuses on the practical matters required to undertake an empirical analysis of financial topics - e.g., the definition of the research question, the datasets required, the computational needs, and, then, the implementation. The course enables the student to evaluate outstanding financial research as well as to conduct his or her own research. Prereq: BAFI 434.

BAFI 440. Advanced Corporate Finance (3)
This course exposes the students to a more in-depth treatment of some of the topics covered in BAFI 403 and introduces them to new topics. Topics include investment decisions, financing decisions, payout decisions, contracting decisions and performance metrics, internal control systems, risk management, real options, diversification and valuation. Topics covered may vary from semester to semester. Prereq: BAFI 403.

BAFI 444. Entrepreneurial Finance (3)
The objective of this course is to introduce students to the issues of financial management and capital formation in new ventures. The course will address issues of estimation of cash requirements, development of pro forma financial plans, firm valuation and the process and tools used in raising debt and equity financing. Bootstrapping, angel investing, venture capital, strategic alliances and initial public offerings will be covered. The emphasis is on the entrepreneur and how he/she can assess financial needs and develop a sensible plan for acquiring financial resources in a manner that is consistent with their financial needs and other strategic goals. Offered as BAFI 444 and ENTP 444. Prereq: BAFI 402.

BAFI 450. Mergers and Acquisitions (3)
This course examines the economic rationale and motivation for the different merger and acquisition and recapitalization activities undertaken by firms and individuals in the U.S. market. Emphasis is on the comparable publicly traded proxy company, comparable “change of control” transaction, and discounted cash flow methods of valuing a firm. The class will also review the different types of debt and equity capital employed to fund mergers and acquisitions and recapitalizations, how senior lenders and equity investors structure their loans and/or investments, and how investors realize the gains through different exit strate-
choices concerning the use of scarce resources, how prices and incomes are determined in competitive markets, and how market power affects the prices and quantities of goods available to society. We will also examine the impact of government intervention in the economy.

ECON 103. Principles of Macroeconomics (3)
While Microeconomics looks at individual consumers and firms, Macroeconomics looks at the economy as a whole. The focus of this class will be on the business cycle. Unemployment, inflation and national production all change with the business cycle. We will look at how these are measured, their past behavior and at theoretical models that attempt to explain this behavior. We will also look at the role of the Federal Government and the Federal Reserve Bank of the United States in managing the business cycle.

ECON 120. Life After Graduation (1)
This is a one-credit seminar intended for freshmen, sophomores and juniors. The purpose of the class is to help students understand what career choices they will have with an economics major. During this course, students will assess their strengths and weaknesses, learn networking tools, and explore the options available to them. The class will meet once a week for an hour. Graduating seniors need to obtain permission to enroll. Students may not earn credit for ECON 120 if they have completed MGMT 250.

ECON 205. Economic Perspectives (3)
This course examines important contemporary and historical issues from an economic perspective. It enables students to think about the world “like an economist.” Possible topics of current interest include the transformation of Eastern Europe, ethnic and racial strife, environmental policy and sustainable development, and professional sports.

ECON 255. Economic History of the United States (3)
The growth of the American economy from the colonial period to the present. Competing explanations of economic growth; significant attention to the political and legal environment in which the U.S. economy developed; “lessons” of past experience for contemporary policy; some attention to inequality and the changing distribution of wealth and income. Offered as ECON 255 and HSTY 255.

ECON 307. Intermediate Macro Theory (3)
Macroeconomics studies aggregate indicators of the performance of an economy, most commonly measured in terms of GDP, unemployment rate and inflation rate. An important goal of macroeconomic researchers is to develop a model of an economy that is simple, yet powerful enough to explain the historical trends of these aggregate economic indicators. Needless to say, coming up with a good model has remained a very difficult task. So far, there is no single model that is good enough to coherently explain even the most prominent historical trends of aggregate economic indicators. But several models have been built, each offering insight into a certain aspect of the economy. Throughout the course model building is motivated by real world cases from the American economy. Prereq: ECON 103.

ECON 308. Intermediate Micro Theory (3)
This course will give you an overview of microeconomic theory, which forms a basis for much of economic analysis. The main focus of the class will be theoretical, in order to give you a solid foundation for future study in virtually any other field of economics. This includes the theory of how consumers decide what to consume and how firms decide when to stay in business, and how much to produce at what price. Note: a student cannot receive degree credit for both ECON 308 and ECON 309. Prereq: ECON 102.

ECON 309. Intermediate Micro Theory: Math Based (3)
This course will cover the same topics covered in Economics 102: theory of the consumer, theory of the firm, markets and government intervention in the market. However, we will cover these topics in more detail and we will use calculus in our analysis. You should come away from this course with a greater understanding of how consumers and firms make their decisions and how they interact in the market place. Note: a student cannot receive degree credit for both ECON 308 and ECON 309. Prereq: ECON 102, MATH 121 or MATH 125.

ECON 326. Econometrics (3)
Econometrics is the application of statistics to empirical economic analysis. One way of testing the validity of economic theories is to gather data and apply statistical tests to see if the data support the theory. These data are usually gathered by observing actual economies, firms and consumers, rather than by performing experiments in a laboratory. Because economic analysts lack the precision and control of the laboratory, they must compensate by adjusting their statistical procedures. In this class, we will concentrate on regression analysis, which is the basic tool of the economic researcher. We will study the assumptions commonly made in the application of
ECON 330. Economic Behavior and Psychology (3)

This course covers the relatively new field of Behavioral Economics, also sometimes called “Psychology and Economics.” Behavioral economics involves incorporating insights into economics from other disciplines that enrich the understanding of how people make economic decisions. Most of the crossovers come from the field of psychology, but there is also a growing interest in ideas from sociology and neuroscience. We will cover fundamental concepts related to decision-making, such as how people respond to risk, how people make decisions over time, and the ways in which people really aren’t as selfish as economists sometimes make it seem. We will also discuss empirical work that shows how these concepts affect how economists think about real-world issues. Examples include examining how to set the default options for 401k programs, understanding why people pay for costly gym memberships they do not use, and looking at whether sellers on Ebay use the best possible ending times for their auctions. Prereq: ECON 102.

ECON 332. Economic Analysis of Labor Markets (3)

This course is about the economics of work and pay. We will take a comprehensive look at labor markets in the U.S. and other advanced countries and examine related social policy issues. This will include the effect of unions on wages, the underpinnings of the income distribution of the U.S., issues of poverty and welfare, discrimination and wage differential by gender and race, the relationship between work and family, education as a determinant of wages, and the way firms use wage and employment practices to motivate their employees to work productively. What makes labor economics special is that the commodity we examine is human labor, something that is central to the organization of our lives and the functioning of the economy. Labor economics thus applies the standard neoclassical model of demand, supply, and equilibrium to many areas that also have a profound human dimension. Prereq: ECON 102.

ECON 333. The Economics of Organizations and Employment Relationships (3)

Organizational Economics is the study of effective organizational design and management. It applies the powerful tools of modern economics to such questions as: what are the practices and structures that make for successful firms? Why are successful firms able to excel at some things (think Microsoft and word processors and spreadsheets) but not at other things (think Microsoft and web-based search)? Fundamentally organizations are human enterprises and their performance is driven by the people they employ. For this reason a good deal of organizational economics is concerned with how firms structure relationships with their employees. One of the important benefits students gain from studying organizational economics is a rigorous and logical framework for thinking about their jobs and careers. By applying this framework to many different real world settings, students become adept at translating general insights to their specific concerns. Organizational economics is built upon a hybrid approach to human behavior that draws from economics and social psychology. From economics, we take the idea that individuals can skillfully use the resources and information at their disposal to achieve their goals. From social psychology we take the idea that individual pursuits of their interests is complicated by the emotions, impulses, and cognitive biases built into human brains. The economic emphasis on goals implies that successful organizations must structure incentives and design jobs in ways that are consistent with the interests of employees. The psychological approach implies that successful organizations must also adopt motivational strategies that appeal to both the rational and non-rational drivers of human behavior. Prereq: ECON 102.

ECON 341. Money and Banking (3)

This course emphasizes the importance of financial markets, the nature and role of the financial system, and the linkages between these--money and banking--and the economy. Emphasis is placed on both theoretical and practical constructs, on major innovations and contemporary changes, and the closely intertwined condition of financial and economic systems with monetary and fiscal policy. Offered as BAFI 341 and ECON 341.

ECON 342. Public Finance (3)

Government intervention is a pervasive feature of every modern economy. The goal of this course is to develop the economic tools for understanding and evaluating a wide range of government behaviors such as taxation and redistribution policy, the public provision of goods and services, and the regulation of private markets. ECON 342 begins by considering “marker failures” that justify government intervention in a market economy. To respond to such failures, governments must raise revenues through taxation. Using the tools of microeconomic theory, we will develop a framework for thinking about the positive and normative effects of alternative forms of taxation. Particular attention will be paid to the individual income tax in the U.S., allowing students to understand the efficiency, distributional and behavioral implications of recent changes in the tax code. We will then turn to the expenditure side of the public sector. The economic principles used to evaluate public expenditures will be discussed and ex-
emphasized through the analysis of significant public programs. Of particular interest will be the effect of public programs on the incentives faced by workers and families. Offered as BAFI 342 and ECON 342.

ECON 343. Economics of State and Local Governments (3)
This course uses economic analysis to gain insight in the U.S. system of state and local governments. In the case of local governments, unlike the familiar case of the U.S. government, people often display their displeasure with the government’s actions by leaving rather than by voting against the incumbents. A careful consideration of the circumstances under which people will choose “exit” (moving out) over “voice” (voting) is central to the course. We’ll also examine economic theories of why people vote and how people vote. We consider a broad range of policy issues. Among them are school finance, zoning, local government economic development policies, lotteries, and affordable housing policy. Of course, we also analyze the full range of state and local government taxes, including the property tax, personal income tax, corporate income tax, and sales tax. Prereq: ECON 102 or consent of instructor.

ECON 345. Public Choice (3)
This course covers economic theory and empirical analysis of the behavior of politicians, bureaucrats, and voters based on the assumption of rational pursuit of self-interest, comparison with other approaches to the study of political behavior, and implications of alternative collective decision procedure. Prereq: ECON 102 and ECON 103.

ECON 350. World Economic History: From Poverty to Prosperity (3)
The average person living in the industrialized world today has 10-20 times the annual income of his or her forbears in 1800 and a much longer lifespan. What explains the massive increases in living standards for residents of the industrialized world? The average person living in Africa today has roughly the same if not less annual income than in 1800. Why haven’t all the world’s people seen a similar increase in living standards since 1800? These questions are the central themes of this course on the evolution of the world economy over the past millennium. Highlights of the class will include the pre-1800 Malthusian economy, the industrial revolution and its spread, 19th and 20th century globalization booms, and the development successes and failures of the 20th century. Prereq: ECON 102.

ECON 351. Managerial Economics (3)
This course explores the economic principles that underlie strategic decisions in firms. Topics include the determination of vertical and horizontal boundaries of firms, strategic positioning and the sources of competitive advantage. Prereq: ECON 102.

ECON 354. Industrial Organization (3)
This course examines how companies compete against each other and interact with customers in an effort to increase profits. Topics include: pricing strategies, product differentiation, advertising, R&D strategies, bundling and tie-ins, entry barriers, mergers and acquisitions, collusion and cartels, the dynamics of network industries (e.g. information technology), and technology adoption and diffusion. The course will take two complementary perspectives. First, we will consider the point of view of companies, and ask how different business strategies can affect competitive success. Second, we will consider the perspective of consumers and policymakers: we will ask whether different firm strategies enhance or reduce social welfare, and will explore different policy options to increase welfare (e.g. antitrust policies, patent systems). The first part of the course will utilize a range of basic economic tools. In the second part of the course, we will apply what was learned in the first part to real examples of firms and industries, including both business and legal cases. Prereq: ECON 102.

ECON 361. Energy Economics and Engineering Solutions (3)
This course examines the economics of markets for various energy sources, and the potential of emerging technologies to alter the market outcomes. We will look at why energy markets have historically been subject to extensive government intervention. We will analyze the effects of traditional policy measures such as price controls and regulation; and we will examine current policy issues arising from the relationships among energy use, economic growth, and the environment. Prereq: ECON 102.

ECON 366. Environmental Economics (3)
This course will use economic theory as an aid to understanding environmental problems and their solutions. We will start with a study of the firm. Once we have developed an understanding of firms’ incentives to pollute and overexploit natural resources, we will learn how various economic policies can change these incentives and thus prevent environmental degradation. Thereafter, we will evaluate the efficiency of these economic policies.

Finally, we will apply our theoretical analysis to specific environmental problems. Prereq: ECON 102.

ECON 369. Economics of Technological Innovation and Entrepreneurship (3)
This course is designed to help students identify, evaluate, and obtain control over technological opportunities so they may successfully understand the challenges of starting new companies. The course focuses on four themes: 1) the source, discovery and evaluation of technological opportunities; 2) the process of organizing a new firm to produce new technology that satisfies the needs of customers; 3) the acquisition of financial and human resources necessary to exploit technological opportunities; and 4) the development of mechanism to appreciate the returns from exploitation of technological opportunities. Prereq: ECON 102.

ECON 372. International Finance (3)
This course deals with open-economy macroeconomics and international financial markets, covering open-economy national income analysis, international macroeconomic policy coordination, exchange rate determination, foreign portfolio investment, and global financial crises. Recommended preparation: ECON 102 and ECON 103. Offered as BAFI 372 and ECON 372.

ECON 373. International Trade (3)
This course deals with international trade theories and policies, covering gains from and patterns of trade, immigration, foreign direct investment, protectionism, multilateral trade liberalization, regionalism and the costs and benefits of globalization within as well as among nations. Prereq: ECON 102 and ECON 103.

ECON 375. Economics of Developing Countries (3)
This course focuses on international aspects of economic development. The term “developing country” is often defined as a country that exhibits low per capita income, high poverty level, low level of industrialization, or low life expectancy. In terms of size, the developing countries make up at least three-fourth of the world population. Why do we study those countries’ economies separately from the industrialized economies? In fact, low economic growth, high unemployment, or high poverty rates also exist in many developed countries. The differences lie not in the types of problems but in the causes of these problems. In addition, differences in the kind of institutions that prevail in developing countries also
lead to different policy prescriptions. Among developing countries, differences in historical experience, cultural practices, political institutions and economic conditions are also enormous. Illustrations and explanations of those differences are provided from a wide range of developing countries. Prereq: ECON 102 and ECON 103.

Global & Cultural Diversity

ECON 377. Economics of Nonprofit Organizations (3)
The purpose of this course is to familiarize students with the private non-profit sector of the U.S. economy, with economic theory contributing to our understanding of this sector, and with the policy and management issues affecting non-profit organizations. Topics include understanding the different types of non-profit organizations; the size, scope and economic significance of the non-profit sector; the different parts of the economy in which non-profits operate; economic theories of why non-profit organizations exist and how they behave; analysis of important trends such as commercialization and globalization of the sector and its changing relationships with government, and how the U.S. non-profit sector compares with the third sector in other countries. Prereq: ECON 102.

ECON 378. Health Care Economics (3)
The health care industry is the fastest growing sector of the U.S. economy, with expenditures on health care now accounting for over 14% of total GDP. Because of its complexity and sheer size, the health care industry affects virtually every facet of the economy including labor productivity, income distribution and international competitiveness. The goal of ECON 378 is to apply the tools of economic analysis to develop students’ understanding of health care markets and related public policy issues. The course begins with an overview of the health care system in the U.S. with attention to disturbing statistics that have inspired calls for reform. The remainder of the course is approximately divided between analysis of the consumer side of the health care market and analysis of the provider side. Throughout the course, proposals for reforming the health care system will be described and discussed. Prereq: ECON 102.

ECON 386. Urban Economics (3)
Microeconomic theory as taught in principles (and even intermediate) does not usually take into account the fact that goods, people, and information must travel in order to interact. Rather, markets are implicitly modeled as if everyone and everything is at a single point in space. In the first part of the course, we will examine the implications of spatial location for economic analysis. In the second part of the class, we will use microeconomic tools to understand urban problems. Topics that we will cover include urban growth, suburbanization, land use, poverty, housing, local government, transportation, education, and crime. Prereq: ECON 102.

ECON 391. Advanced Topics and Writing in Economics (3)
This course is characterized by intense yet open-ended intellectual inquiry, guided by reading from primary and secondary sources, and will include extensive practice in written and oral communication. The focus will be on contemporary economic issues and scholarship, and assumes a high level of ability in undergraduate economics training. Specifically, this course provides an avenue for an intellectual discourse on some of the most challenging present day economic issues, and we will rigorously think and write about how economic concepts can be applied to virtually any topic, issue and event in the social world. Students will be challenged throughout the course to think and write like an economist and see the world through the economist’s lens. Prereq: ECON 308 or ECON 309 and ECON 326 and junior or senior standing.

SAGES Dept Seminar

ECON 395. Public Policy Case Competition (4)
This course uses economics to conduct an in-depth analysis of an important and current public policy issue. The specific issue will change from year to year, as will the set of economic tools used in the analysis. A constant feature of this capstone however will be the Richard Shatten Public Policy Case Competition. In this competition, students in the class will form teams and present policy suggestions to faculty as well as to public policy makers. Monetary prizes will be awarded to the top three team projects. The competition is in memory of Richard Shatten, a professor at the Weatherhead School who was also executive director of Weatherhead’s Center for Regional Economic Issues (REI). Through his work at REI and his earlier work as executive director of Cleveland Tomorrow, Richard was an important voice shaping public and private economic decision-making in Northeast Ohio. Prereq: Junior or Senior standing.

SAGES Senior Cap

ECON 397. Honors Research I (3)

All students admitted to the Honors Program will undertake an independent research project (senior thesis) under the guidance of a faculty member (thesis advisor). All Honors students will enroll in the 397/398 sequence. ECON 397 is used to define the topic, review the literature, formulate hypotheses, and collect appropriate data. Students will complete their research in ECON 398. Prereq: Junior standing and minimum GPA of 3.3 in ECON major and 3.0 overall. Coreq: Declared ECON major.

SAGES Senior Cap

ECON 398. Honors Research II (1 - 3)
This is the second course in a two course sequence to complete the Honors Research Program in Economics. Prereq: ECON 397. Coreq: Declared Economics major.

SAGES Senior Cap

ECON 399. Individual Readings and Research (1 - 6)
Intensive examination of a topic selected by the student.

ECON 403. Economics for Management (3)
This course surveys of the basic principles of micro and macroeconomics. Topics covered in microeconomics include supply and demand, market structures and factor markets. Macroeconomics topics are the national incomes accounts, the determination of national income, employment and inflation, fiscal and monetary policies and international trade.

ECON 403A. Economics (1)
This course serves as a review of economic principles and an introduction to the use of economics in the management setting. Basic economic concepts will be demonstrated by analyzing economic issues and policies relating to the environment in which organizations function. Economic analysis will be demonstrated with reference to particular decisions confronted by firms, including game theory. Prereq: Open to ACL-MBA students.

ECON 406. Innovation and Entrepreneurship (2)
The purpose of this module is to acquaint and ultimately engage clinical researchers with the business of innovation and entrepreneurship. Goals include: (1) to provide researchers with many of the skills that they would need to translate academic research into commercial uses; (2) to sensitize clinical researchers to the goals of the business community and facilitate their ability to work with the private sector on technology development; and (3) to
make clinical researchers aware of the processes of academic technology development and transfer. Sessions consist of lectures and case discussion facilitated by the instructor. Some sessions include members of the business community as guest lecturers. As an example, students will discuss the financing of new companies with local venture capitalists. Student products include the evaluation of the commercial potential of a university technology in which they apply their new knowledge about commercialization of scientific discoveries. Offered as CRSP 503, ECON 406, and HSMC 406.

ECON 421. Health Economics and Strategy (3)
This course has evolved from a theory-oriented emphasis to a course that utilizes economic principles to explore such issues as health care pricing, anti-trust enforcement and hospital mergers, choices in adoption of managed care contracts by physician groups, and the like. Instruction style and in-class group project focus on making strategic decisions. The course is directed for a general audience, not just for students and concentration in health systems management. Offered as ECON 421, HSMC 421, and MPH 421. Prereq: ECON 403.

ECON 431. Economics of Negotiation and Conflict Resolution (3)
Students frequently enroll in a negotiation class with one thought in mind—negotiating a better job offer from an employer. They soon learn, however, that negotiation skills can do far more than improve a pay check. Negotiations occur everywhere: in marriages, in divorces, in small work teams, in large organizations, in getting a job, in losing a job, in deal making, in decision making, in board rooms, and in court rooms. The remarkable thing about negotiations is that, wherever they occur, they are governed by similar principles. The current wave of corporate restructuring makes the study of negotiations especially important for M.B.A.s. Mergers, acquisitions, downsizing and joint ventures call into question well established business and employment relationships. Navigating these choppy waters by building new relationships requires negotiation skills. The increased stress on quality and other hard-to-measure aspects of relationships with customers and suppliers makes the process of negotiation even more complex and subtle. For these reasons, negotiation classes have taken center stage in the study of management. Every major business school now offers classes in negotiation and these classes are overflowing with students. Offered as ECON 431 and LHRP 413.

ECON 436A. Economics of Organizations-E.M.B.A. (2)
Dramatic changes in technology, work force demographics and economic competition are forcing firms to rethink their internal organization. Implementing new internal strategies is remarkably hard for organizations and managers to do. This class is designed to provide the economic tools that managers need to understand why their organizations are the way they are and why change can be as difficult as it is important. This course focuses on two elements of a firm’s internal strategy: structuring incentives and investing in relationships. In the incentives section, we analyze how organizations allocate decision rights; evaluate performance; and implement motivation strategies. In the relationships section, we analyze how organizations sustain functional, long-term relationships in competitive or conflictual environments. A small number of surprisingly simple economic models, it turns out, offer important insights into incentive design and investments in long-term relationships.

ECON 436B. Economics of Organizations-M.B.A. (3)
Dramatic changes in technology, work force demographics and economic competition are forcing firms to rethink their internal organization. Implementing new internal strategies is remarkably hard for organizations and managers to do. This class is designed to provide the economic tools that managers need to understand why their organizations are the way they are and why change can be as difficult as it is important. This course focuses on two elements of a firm’s internal strategy: structuring incentives and investing in relationships. In the incentives section, we analyze how organizations allocate decision rights; evaluate performance; and implement motivation strategies. In the relationships section, we analyze how organizations sustain functional, long-term relationships in competitive or conflictual environments. A small number of surprisingly simple economic models, it turns out, offer important insights into incentive design and investments in long-term relationships.

ECON 441. Economics of Financial Intermediation (3)
Institutions such as commercial banks, investment banks, insurance companies, and mutual funds perform important financial intermediation roles in an economy. This course provides a conceptual framework that allows the exploration of how these financial institutions perform their intermediation role through their different activities, such as loan origination, underwriting, insurance, and asset management. This framework also lends itself to the study of how and why regulation can be critical in ensuring the safety and soundness of the financial system. Prereq: ACCT 401, BAFI 402, ECON 403 and QUMM 414.

ECON 450. Health Care Economics for the Biosciences (1.5)
This course utilizes economic principles to explore such issues as health care pricing, anti-trust enforcement and pharmaceutical economics, choices in adoption of managed care contracts by physician groups, and the like. Instruction style and in-class group project focus on making strategic decisions. The course is directed for a general audience, not just for students and concentration in biosciences or health systems management. Offered as BIOS 450, ECON 450, and HSMC 450.

ECON 462. The Digital Economy (3)
What is the digital economy all about? How big is it, and what are its main features? Despite the dot-com debacle and subsequent stock market decline, there are some fundamental changes taking place in the economy, due to the Internet, that will affect business for many years to come. Among the topics discussed are the effects on productivity growth, structural change at the industry level and organizational change at the corporate level, the role of small business and entrepreneurship, the digital economy in Cleveland, and issues for public policy. Prereq: ECON 403.

ECON 464. Technology Entrepreneurship (3)
This course is designed to help students to identify, evaluate, and obtain control over technology opportunities that they can successfully exploit by starting new companies. The course focuses on four themes: (1) the source, discovery, and evaluation of technological opportunities, (2) the process of organizing innovation to produce new technology that satisfies the needs of customers, (3) the different mechanisms available to appropriate the returns from the exploitation of technological opportunities, and (4) the differences between opportunities and approaches that are valuable and sustainable for independent entrepreneurs and large firms. Students taking this course may not receive credit for both ECON 464 and ENTP 441. Offered as ECON 464 and ENTP 464.

ECON 474. International Trade (3)
This course deals with the causes and effects of international trade and investment. Its cov-
erage includes the global and regional commercial agreements and institutions that affect the international business environment. The European Union, the North American Free Trade Agreement, and the World Trade Organization are treated extensively. Prereq: ECON 403.

ECON 475. International Finance (3)
This course covers the global financial markets that multinational corporations, government agencies, and banks use in conducting business. These financial markets include the market for foreign exchange, the Eurocurrency and related money markets, the Eurobond and global equity markets, the commodity markets, the markets for forward contracts, options, swaps, and other derivatives. Prereq: ECON 403.

ECON 486. Value Creation Through Real Estate (3)
Introduction to economic analysis of real estate markets, with focus on development of urban land. Introduction to financial instruments used in development, and to the role of government in facilitating and constraining the use of real property. Prereq: ECON 403.

ECON 501. Special Problems and Topics (1 - 18)
This course is offered, with permission, to students undertaking reading in a field of special interest.

ECON 525. Advanced Microeconomic Theory (3)
This course will give students an introduction to microeconomic theory at the Ph.D. level. Topics to be covered include consumer theory, the theory of the firm, general equilibrium (in other words, the theory of competitive markets), imperfect competition (models of Cournot oligopoly, Bertrand oligopoly, etc.), information economics (with focus on principal-agent problems), and auction theory. Students in the course will be expected to have a working knowledge of calculus. Some knowledge of constrained optimization and real analysis will be useful as well, although this is not required. While this is not a course in game theory, basic game theoretic concepts will be introduced to the extent they are necessary to understand the material. No previous background in economics will be assumed. Prereq: Ph.D. standing.

ECON 526. Advanced Econometrics (3)
This course focuses on the theoretical underpinning of multivariate regression analysis. The course also develops practical applications of econometric analysis. The course also introduces students to more advanced topics including discrete choice analysis, instrumental variables, and time-series methods.

ECON 601. Special Problems and Readings (1 - 18)
This course is offered, with permission, to Ph.D. candidates undertaking reading in a field of special interest.

ECON 701. Dissertation Ph.D. (1 - 18)
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

DEPARTMENT OF MARKETING AND POLICY STUDIES

DIVISION OF LABOR AND HUMAN RESOURCE POLICY
Paul F. Gerhart, Head
Phone 216-368-2045; Fax 216-368-4785

FACULTY
Paul F. Gerhart, PhD
(University of Chicago)
Professor of Labor and Human Resource Policy
Paul F. Salipante Jr., PhD
(University of Chicago)
Professor of Labor and Human Resource Policy

LABOR AND HUMAN RESOURCE POLICY (LHRP)

LHRP 311. Labor Problems (3)
This course examines labor-capital/government relations from current and historical perspectives. It reviews sociological, political, psychological, and economic explanations for conflicts and cooperation between labor and management. Selected aspects of law and negotiated institutions, such as individual rights and grievance procedures and a comparison of the U.S. with other countries, are also covered.

LHRP 360. Independent Study (1 - 18)
This course is offered for candidates undertaking reading or independent research in a field of special interest.

LHRP 409A. Unions, Collective Bargaining, and Management Policy (1.5)
The course examines why and how employees join or do not join unions; the processes of certifying and decertifying unions; alternative strategies used by management in dealing with unions; and models of union-management cooperation in traditional manufactur-
zation members are considered, covering such areas as hiring, performance appraisal, labor-management relations, employee rights, pay systems, grievance systems, and worker participation.

LHRP 424. Developing High Performance Work Systems (3)
This course will focus on understanding the factors shaping high performance work systems (HPWS) in organizations. Overall, an HPWS is based on a philosophy of using people to provide a sustainable competitive advantage; a reorganization of work structures and processes to maximize organizational learning and customer responsiveness; a set of human resource policies that seeks to build employees’ motivation and skills, and align individual interests with those of the organization; and new approaches to managing employees that are consistent with these philosophies, work organizations, and policies. Prereq: MGMT 413.

LHRP 425. Managing Human Resource Issues in Entrepreneurial Firms (3)
This course examines how entrepreneurial firms can develop human resource practices and strategies to sustain their vision, grow their businesses, and create value for customers, shareholders, and employees. The first half of the course will be devoted to exploring the distinctive challenges entrepreneurial firms encounter in aligning organizational goals and human resource strategy and practices. Among those practices are staffing, recruitment and selection, compensation, and employee motivation. The second half of the course will explore these issues further in the context of key organizational phases ranging from firm foundings, the transition from entrepreneurial to professional management, the development of “entrepreneurship” in existing organizations, and the spin-off of the new corporate ventures. Offered as ENTP 425 and LHRP 425.

LHRP 431. Negotiations for Managers (3)
The aim of this course is to enhance individual as well as organizational performance and competitive advantage through “principled negotiation”, “win-win bargaining”, and collaborative as opposed to competitive approaches to team problem solving. The context crosses all types of business, government and non-governmental organizations. Concepts, strategies, and models of negotiation are drawn from social psychology, economics, labor relations, and legal literature. Students will also be introduced to mediation (both as mediators and negotiators); to the complex art of advocacy and to the latest alternative dispute resolution (ADR) techniques. There is heavy reliance on simulations and role play to enhance student understanding of key course concepts. Although immediate skill enhancement through practice is a goal, students understanding of key concepts will enable them to continuously improve their insights and skills long after the course is concluded. There is no prerequisite for the course.

LHRP 435A. International Human Resources Management (1.5)
This course examines the unique challenges of managing Human Resources globally. Particular emphasis is on cultural and other contextual differences, and their influence on other HR practices such as selection, training, performance management, compensation, and union relations. The course establishes a conceptual foundation in cross-cultural cognitive and behavioral differences. Heavy emphasis is on case analysis. There is no formal prerequisite, but it is recommended that students have either completed, or are taking concurrently, the Human Values in Organizations course (MGMT 413) or LHRP 421.

LHRP 435B. International Human Resources Management (2)
Same as LHRP 435A except that students enrolling in the 2.0 credit version of the course will select a particular region or country (other than the one where they hold citizenship) and develop an independent analysis of particular advantages and challenges facing the human resource manager assigned to this country or region. The instructor may approve alternative projects.

LHRP 445. Compensation and Benefits (3)
Strategic management of compensation and benefits for effective motivation of managers and employees is introduced through the use of cases and student development of a wage and salary system based on a live organization. Since government-mandated and voluntary benefits comprise a third of compensation costs for many firms, significant attention is given to the attraction, retention, and motivational effects of benefits such as tuition reimbursement and training programs. Contingent compensation as a motivator and employment cost control device are also given significant attention.

LHRP 451. Alternative Dispute Resolution (2)
Students will examine the processes of alternative dispute resolution (ADR) through reading materials, videotapes, guest lectures, and simulation exercises. Particular emphasis will be given to the interaction of lawyers and clients in business negotiations and in litigation. Negotiation, arbitration, mediation, the summary jury trial, and the mini-trial will be examined. The class will also cover impediments to ADR, such as lack of understanding or hostility on the part of clients or lawyers. Offered as LAWS 351 and LHRP 451.

LHRP 501. Special Problems and Topics (.5 - 18)
This course is offered, with permission, to students undertaking individual reading or research projects in a field of special interest.

LHRP 601. Special Problems and Topics (1 - 18)
This course is offered, with permission, to Ph.D. candidates undertaking reading in a field of special interest.

Associate Professor of Management Policy

MANAGEMENT POLICY (PLCY)
PLCY 200. Social and Political Environment of Management (3)
This course is concerned with the relationship between business activities and the broader social environment. Business is a part of society and has responsibilities and obligations beyond mere profit maximization. These responsibilities and obligations are those that fall on all citizens: to contribute to the health and well-being of our democracy and civil society. In this course, we will explore and debate these responsibilities and obligations in the context of a broad array of ideas and cases. Our goal will be to make some progress toward answering the question: “What is the right ethical responsibility of business, both inside and outside the organization, and how is it correctly implemented?”

PLCY 360. Independent Study (1 - 18)

PLCY 399. Business Policy (3)
This course uses case analysis to develop perspective and judgment on business problems through the integration of functional areas. Formulation, development, and implementation of organization goals and policies, the development of strategy in relation to the competitive environment, and applications of quantitative and behavioral decision-making techniques are examined. Prereq: Senior standing.

PLCY 418. Enterprise Development (3)
Course features new product launch by students and new business idea competition judged by actual venture capitalists. Students will also learn how to acquire control of an existing company, including valuation methods, sources of funding, tactics for finding companies to buy, and how to negotiate the purchase of a business. Also includes actual student negotiation with sellers of a company. Course is designed to accelerate career success through bold entrepreneurial strategies. Offered as ENTP 418 and PLCY 418.

PLCY 419. Entrepreneurship and Personal Wealth Creation (3)
Course explores the accumulation of personal wealth utilizing entrepreneurial strategies. The underlying competencies of successful entrepreneurs are identified and applied to individual lives of students. Active entrepreneurs will be studied, and original case studies of start-ups and acquisitions provide the basis for class exercises. Offered as ENTP 419 and PLCY 419.

PLCY 420. Managing the Family Firm (3)
The vast majority of U.S. firms are family controlled and present special problems in strategic management including the interaction of family and firm objectives, executive succession, management development and motivation, finance, estate planning, etc. This course explores solutions to these problems in the context of guiding the firm’s growth through the threshold between personal and professional management. The course pedagogy is participative and experiential. Offered as ENTP 420 and PLCY 420.

PLCY 422. Managing an Emerging Growth Enterprise (3)
Students are exposed to what it is like to work in an emerging growth company with sales under $100 million. Prospective students might be individuals who are considering employment with middle market company, entrepreneurs who may start a company, or business persons who may buy a middle market company. The learning experience will stem from participating in an actual semester-long project. In-class discussions include: business planning, selling, managing technology transfer, and creativity/innovation, and guest presentations by CEOs from middle market companies. Offered as ENTP 422 and PLCY 422. Prereq: ACCT 401, BAFI 402, MKMR 403 and MIDS 409.

PLCY 425. Chief Executive Officer (3)
This course is designed for students who aspire to become a chief executive officer. The unique role, responsibilities, and requirements of the CEO will be explored. Students will benchmark CEO best practices through exposure to leading chief officers, study the paths to and preparation for the top job, and develop a personal career strategy to increase their chances of becoming a CEO.

PLCY 426. International Entrepreneurship (3)
This course introduces the area of international entrepreneurship by focusing on various aspects of this area. Topics to be covered include: conditions making small, medium-sized, and new ventures increasingly important in international business; information sources relevant to international entrepreneurship; critical steps in deciding on doing international entrepreneurship, strategic planning and methods in conducting international entrepreneurship; and benefits and problems of going international as a new venture. Offered as ENTP 426 and PLCY 426.

PLCY 427. Entrepreneurial Strategy (3)
Creating and managing a new venture inside or outside a corporation is a task that few individuals are able to accomplish, even though many profess the desire. The primary goal of this course is to provide an understanding of entrepreneurship and the entrepreneurial process. The course will broaden a basic understanding obtained in the functional areas (organization, strategy, finance) as they apply to new venture creation and growth. While most of the examples in class will be drawn from new venture formations, the principles also apply to new business development in corporate settings and to non-profit entrepreneurship. Offered as ENTP 427, PLCY 427.

PLCY 429. New Venture Creation (3)
The primary goal of this course is to provide an understanding of entrepreneurship and the entrepreneurial process. The course will broaden a basic understanding obtained in the functional areas as they apply to new venture creation and growth. Offered as ENTP 429 and PLCY 429.

PLCY 439. Intrapreneurship - Entrepreneurship within the Corporation (3)
Intrapreneurs are the entrepreneurs within corporations who combine innovation, creativity and leadership to develop and launch new products, new product lines, and new business units that grow revenues and profits from within. Intrapreneurial innovation and creativity have never been needed more by U.S. corporations than they are today. Numerous corporations have been increasing revenues through mergers and acquisitions, rather than through internal product innovation and new business creation. Today, many companies are returning to their entrepreneurial roots. Revitalizing existing companies through intrapreneurial activity creates new capital, retains and increases jobs, and creates exciting places to work and achieve. The purpose of this course is to encourage students to research and understand the theories, principles, concepts, and practices of entrepreneurship within organizations--Intrapreneurship. Students will become acquainted with trends, expectations, organizational challenges to innovation, and opportunities in today’s corporate America. Offered as ENTP 439 and PLCY 439.

PLCY 450. Challenges to U.S. Management from East Asia (3)
Examination of the Japanese, Chinese, and other East Asian business systems. Looks at how the business systems relate to broader social, economic, and political contexts. Compares the different systems with each other and with that of the United States. Inquires into the reasons for the past successes and recent problems of these systems.
PLCY 474. Innovation for Competitive Advantage (3)
In this course, we will develop frameworks to identify new value propositions for the customer. We will then apply these frameworks to three types of innovations that we see in practice--incremental, disruptive and white space--and more importantly understand business model innovations that go beyond just a product or process innovation. The course will also explore techniques of focused brainstorming and creative problem solving techniques. Prereq or Coreq: MGMT 499.

PLCY 490. Corporate Strategy (3)
This course is an advanced strategy course that explores the determinants of successful corporate strategy. In Strategy Issues and Applications you were exposed to the basic frameworks for developing successful competitive or business unit level strategy. Corporate strategy takes you to the next level and provides the frameworks you need to be able to be successful in multiple businesses. At its core corporate strategy constitutes any and all decisions that change the core business model of a firm. Examples are vertical integration, new but related product lines, entering new markets with existing products and entering new or existing markets with unrelated products. The fundamental premise of the course is that successful corporate strategy is rooted in competitive advantage arising from capabilities residing at the business unit level. Starting from analyzing business level strategies of very simple firms, the course successively builds frameworks towards more complicated business level strategies. Next, the course develops frameworks to discuss corporate strategy based around the concept of core competencies and market entry strategies. Finally, the course develops the concepts that are useful in greenfield entries, alliances and acquisitions as part of an overall corporate strategy. Prereq: MGMT 499.

PLCY 494. Managerial Consultancy (3)
Students will learn to match consulting methodologies with client needs and employ a step by step strategy development process applied to actual companies which are semester-long clients of the class. Accelerated career strategies in the consultancy business are featured as well as tactics for getting hired in the first place. The course views consultancy as a role rather than career and conceptualizes consultancy as a process of optimizing an organization's value creation potential and competitive advantage. Students should be able to apply the concepts regardless of career choice. Exposure to senior practicing consultants is featured.
PLCY 495. Industry and Competitive Analysis for Strategic Planning (3)
This course introduces methods of industry and competitive analysis. Industry structure and firm competitive behavior are studied with a view to develop business strategies for securing and preserving competitive advantage. Emphasis is placed on understanding industry dynamics and the processes by which industries undergo change and evolution. Emphasis is also placed on firms' capabilities and core competencies and their capacity to implement major strategic changes in their industries. Readings and cases are the principal pedagogical tools utilized in this course. Students are required to analyze an industry of their choice in small project teams and present their analyses in class.

PLCY 496. Strategic Planning and Control Systems for Strategy Implementation (3)
This course introduces the principal tools of strategy implementation, namely the design of organization structures, the use of formal planning and control systems, and the design of measurement and reward systems. The importance of organizational context (small vs. large, for profit vs. not-for-profit, manufacturing vs. service, etc.) and the need to tailor systems to the context of the organization are emphasized. New and emergent organizational forms and their role in strategy development and implementation are reviewed. Cases and readings are the principal pedagogical methods utilized. Students work in small project teams, study the operation and effectiveness of systems for strategic control in organizations, and present the results of their analysis in class presentations.

PLCY 501. Special Problems and Topics (1 - 18)
This course is offered, with permission, to students undertaking reading in a field of special interest.

PLCY 601. Special Problems and Topics (1 - 18)
This course is offered, with permission, to Ph.D. candidates undertaking reading in a field of special interest.

PLCY 701. Dissertation Ph.D. (1 - 18)
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

MARKETING (MKMR)

MKMR 301. Marketing Management (3)
This course covers key concepts and practices of marketing with emphasis on analysis and development of integrated marketing plans and programs that create customer value and competitive advantage in the world-wide marketplace. Prereq: ACCT 202 or ACCT 303.

MKMR 304. New Product Development and Marketing (3)
This course focuses on preparing students to manage the marketing processes that are essential to extract and make useful to the marketplace and society the commercial and social values embedded in new product and process ideas. All levels of technology and of innovativeness are addressed, including breakthrough technologies and radical innovations. The objective function for the organization is to create commercial and/or social value. Students will discuss the role of product development in achieving and sustaining competitive advantage, the structure and dynamics of managing development from concept to successful commercialization, and the marketing management concepts and tools required to manage the process. A variety of exercises, cases and projects will allow students to practice the idea. Prereq: MKMR 301.

MKMR 307. Marketing Through the Supply WEATHERHEAD SCHOOL OF MANAGEMENT

508
MKMR 310. Marketing Research for Decision Making (3)

This course will introduce students to marketing research, its applications to managerial decision-making and emphasize research as an aid to problem solving in marketing management. Students will go through the steps of conducting marketing research, which include problem definition, research design (exploratory, descriptive and causal), data collection methods, questionnaire design, attitude measurement, sampling and data analysis. The course will be based on lecture, discussion, individual problem solving analytical assignments, case analyses, and a semester-long team-based marketing research project. Students will also learn to use the SPSS software for solving specific research problems through data analysis. Prereq: STAT 207 or STAT 243 or STAT 312 or PSCL 282 or consent of instructor.

MKMR 311. Consumer Behavior (3)

This course focuses on human decision-making processes and how they influence purchase and consumption behavior. Drawing on psychology and sociology it examines a wide variety of topics including motivation, attribution, decision-making, reference group influence, and information processing with an emphasis on the practical application of these theories into actionable marketing strategies. An understanding of the factors that drive consumers’ purchase and consumption decisions is critical to predicting or influencing their behavior. Although we will focus on consumer behavior, much of the content is basic human behaviors and so is also applicable in business-to-business and not-for-profit settings. Prereq: MKMR 301 or consent of instructor.

MKMR 312. Selling and Sales Management (3)

Selling and sales management are keys to implementing an organization’s marketing program and customer relationships. This course emphasizes developing an understanding of basic marketing concepts, selling principles, interrelationships among sales force management and other business functions, appropriate strategy for managing a sales force and measurement of sales force productivity. We will use theories of work motivation and explore how individual difference variables influence the choices of sales managers. This course uses a synthesis of sales research and leading practices to focus on both a strategic and a tactical perspective. Strategic issues include: entrepreneurial strategy, the sales force’s role in company strategy, customer relationship and strategic account management, sales force size and organization and career paths to sales management. Tactical issues include: effective approaches to selling, finding and retaining top sales talent, motivating and compensating the field force, evaluating performance, and aligning sales territories. Prereq: MKMR 301 or consent of instructor.

MKMR 360. Independent Study (1 - 3)

This course is offered, with permission, to students undertaking reading and research in an area of their special interest.

MKMR 403. Managerial Marketing (3)

This course focuses on managing marketing as a process of creating value and mutually desirable exchanges of values. That is the foundation of a customer orientation and a central theme of market-driven management. Methods for strategic marketing planning, understanding buyer behavior, market analysis, segmentation and devising integrated marketing programs are introduced. Creating customer value and competitive advantage in worldwide markets is the central theme. Prereq: ACCT 401.

MKMR 403A. Marketing (1)

This course is designed to refresh and enhance student familiarity with fundamental concepts in marketing management, and with how those concepts are applied to solve realistic business problems. The course exposes students to basic marketing theory in the areas of consumer behavior and decision making (both individual consumers and organizational buyers), pricing strategies, channel management and its importance to marketing strategy, new product development and management, and promotion management. Equal emphasis is given to analyzing business cases that deal with realistic situations where the theories described above can be applied. Considerable emphasis is also given to learning analysis techniques and back-of-the-envelope calculations that can be applied to case data (financial, market research results, industry reports, etc.) to gain further insights. Prereq: Open to ACL-MBA students.

MKMR 405. Industrial/New Technologies Marketing (3)

This course focuses on concepts and practices of business-to-business marketing of products and services. It also examines how rapid technological change impacts industrial markets. Topics covered include: buyer-seller relationship building, competitive bidding, developing markets for new materials and value-based pricing strategies. Marketing to the government, marketing of intellectual property and marketing-R&D-manufacturing interface issues will also be explored. Prereq: MKMR 403.

MKMR 406. Sales Force Management (3)

Selling and sales management are keys to implementing an organization’s marketing program and customer relationships. This course emphasizes developing an understanding of basic marketing concepts, selling principles, interrelationships among sales force management and other business functions, appropriate strategy for managing a sales force and measurement of sales force productivity. We will use theories of work motivation and explore how individual difference variables influence the choices of sales managers. This course uses a synthesis of sales research and leading practices to focus on both a strategic and a tactical perspective. Strategic issues include: entrepreneurial strategy, the sales force’s role in company strategy, customer relationship and strategic account management, sales force size and organization and career paths to sales management. Tactical issues include: effective approaches to selling, finding and retaining top sales talent, motivating and compensating the field force, evaluating performance, and aligning sales territories. Prereq: MKMR 403.

MKMR 407. Marketing Through the Supply Chain (3)

This course views the supply chain (including the distribution channels) as a multi-organization business system that enables customers at all points in the system to acquire the benefits/value they want in the way they want.
MKM 410. Marketing Research for Decision Making (3)
This course stresses the generation and use of marketing information for a range of managerial decisions, including identifying and defining marketing performance and improving understanding of marketing as a process. This course discusses contemporary approaches for defining marketing information needs, designing methods for information collection and making sense of obtained results. The course utilizes lecture/discussion, case analysis, and a field project to develop skills in defining and solving marketing problems. Prereq: MKMR 403 and QUMM 414.

MKM 411. Consumer Behavior (3)
This course addresses micro and macro issues in consumer behavior which are essential for managers seeking to analyze and influence consumer decision making. The course focuses on how consumer behavior analysis can be used to develop effective marketing techniques and strategies. This involves developing an understanding of consumer behavior from a variety of perspectives, identifying the major factors that influence how consumers process and learn, marketing communications, managing consumer satisfaction, and developing an understanding of purchase decision making and its implications for marketing strategy. Emphasis is placed on designing persuasion strategies, enhancing brand memory, consumer profiling, analyzing consumer trends, and customer relationship management. Prereq or Coreq: MKMR 403.

MKM 412. E-Marketing (3)
Using a combination of lectures, cases, and hands-on projects, the course examines how the Internet influences all the key aspects of marketing, including marketing strategy, pricing, advertising, segmentation, marketing research, retailing, distribution channels, and international marketing. Additionally, the course will cover more Internet specific topics such as privacy, wireless web, sales force automation, and emarketplace models. The course incorporates both business-to-business and business-to-consumer outlooks.

MKM 421. Product and Brand Management (3)
Established products and brands typically provide the majority of firms’ earnings. If carefully managed, these products also are a significant source of growth and future earnings. This course focuses on the role of a Product/Brand Manager in profitably managing a firm’s existing offering. Students identify areas for growth (or decline) within a firm’s mature product lines, devise ideas to capitalize on growth potential or address decline, develop and assess concrete marketing initiatives, and determine the financial impact of alternative plans. The course uses a combination of case analysis, lecture/discussion and guest speakers, allowing students to develop their repertoire of quantitative and qualitative marketing decision skills. Prereq: MKMR 403.

MKM 430. Marketing Problem-Solving (3)
The objective of this course is to build skills for effective problem solving in practical, real-world marketing situations. Utilizing case studies, online databases and secondary data, the course focuses on contemporary analytical approaches that provide insights into, and clarify the underlying dynamics of marketing phenomenon. Marketing decisions discussed cover consumer and industrial marketing problems. This course is intended for students who are interested in data-based-decision-making tools for solving marketing problems.

MKM 450A. Entrepreneurial Marketing-E.M.B.A. (2)
This course addresses the entrepreneurial/intrapreneurial process of commercializing an idea for a market opportunity. Students select an opportunity and develop a deployable, one-year market entry program and a five-year strategic marketing program. Emphasis is on the entrepreneurial marketing decision process, including defining the business, defining the market, specifying customer perceived value, assessing competitive capability and advantage, identifying and properly using secondary and primary information, and deploying marketing programs throughout the organization and the supply chain. Offered as ENTP 450 and MKMR 450B. Prereq: MKMR 403.

MKM 460. Marketing Communications Management (3)
This course provides a sound understanding of marketing’s total organization and the supply chain. Offered as MKMR 475 and OPMT 475.

MKM 475. Supply Chain Logistics (3)
The focus of this course is on the effective management of a firm’s downstream processes in the supply chain that deliver goods and services to customers. Concepts, methods, and strategies are presented that can lower supply chain costs while maintaining or improving customer service. In addition, ideas for using the supply chain for competitive advantage leading to revenue enhancement are discussed. Adding value for customers is the objective. Key topics include transportation planning, inventory management, network design, and customer service goal setting. Offered as MKM 475 and OPMT 475.

MKM 476. Supply Management in the Supply Chain (3)
The focus of this course is on the effective management of a firm’s upstream supply
chain processes that provide it with the services and physical goods needed for product and service creation and distribution. The primary objectives of the course are: 1) to understand the complexity of inter-firm and intra-firm coordination in implementing cutting-edge supply chain programs such as vendor managed inventories, third-party logistics, mass-customization, quick response, and strategic alliances; 2) to develop the ability to design efficient supply systems and formulate integrated supply strategies so that all components are synchronized to fit a firm’s competitive environment, market needs, and overall corporate strategies; and 3) to impart analytical skills necessary to develop effective solutions for a variety supply management problems. Offered as MKMR 476 and OPMT 476.

**MKMR 501. Special Problems and Topics (1 - 18)**
This course is offered, with permission, to students undertaking reading or a project in a field of special interest.

**MKMR 601. Special Problems and Topics (1 - 18)**
This course is offered, with permission, to Ph.D. candidates undertaking reading or a project in a field of special interest.

**MKMR 701. Dissertation Ph.D. (1 - 18)**
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

**INFORMATION SYSTEMS (MIDS)**

**MIDS 301. An Introduction to Information Systems (3)**
The focus of this course is information, the design of systems used to manage it, and the benefits that can be derived from it in an organizational context. Topics include interface design, design standards and tools, networks, infrastructure use, software applications and implementation, data collection, storage and retrieval, and web systems. The course balances organizational issues illustrated through readings, and hands-on development, through assignments and projects.

**MIDS 310. Technology of Information Systems (3)**
Review of present day computing systems and function of modern computer technology. Computer systems architecture, file structures, operating systems, compilers and assemblers, and telecommunications. Prereq: MIDS 309.

**MIDS 315. Multimedia Systems (3)**
Current practices and future directions of multimedia systems are discussed. Special attention is given to management issues involved in specifying, designing, developing, and assessing multimedia systems and to design principles that can be used to improve the quality of multimedia. This is a project-based course in which students gain experience in developing websites, CD-ROMs, and films. Description for MIDS 415: As information becomes more abstract and therefore more difficult to perceive directly with one’s sense, sonic and visual presentation become more important than ever. Designing systems that take advantage of people’s aesthetic sensibilities is an area wide open to the enterprising and inventive entrepreneur. This course will interest those who think that artists have a say about how sound and graphics and words might be put together. The course examines aesthetic issues that arise in the development of multimedia. It focuses on creative integration of video, audio, and graphics particularly for the web, interactive CDs, and virtual reality. Offered as MIDS 315 and MIDS 415. Prereq: Not open to first-year students.

**MIDS 326. Systems Analysis and Design (3)**
This course investigates concepts and techniques for analyzing organizational systems in order to identify opportunities for redesigning the organization, its work practices and/or its information systems. It emphasizes creativity in diagnosing organizational problems and opportunities. You will learn consultation and intervention strategies for moving to a consensus on problem definition and a vision of desired changes. You will learn both soft and structured object-oriented methods for performing systems analysis. In addition you will learn the process of documenting new organizational and information system requirements in a form suitable for detailed system design and implementation. Prereq: MIDS 309.

**MIDS 327. Database Management (3)**
From large-scale business systems to on-line shopping carts, databases are the engines of contemporary business. This is a course on the design and development of database management systems with an emphasis on the business processes that these databases are created to support, as well as methods for extracting powerful information from databases. Students will learn to apply a broad range of tools, including various data and process modeling techniques. Different database systems will be employed during the semester, and there will be introductions to web integration, business applications, and data mining. The final project puts it all together in a real-world database development project. Prereq: MIDS 309 and MIDS 310.

**MIDS 329. Design of Object-Oriented Systems (3)**
This course provides an opportunity to gain an understanding of the concepts and technology of object-oriented systems and learn system design techniques that take full advantage of this technology. Students also develop competence in programming in an object-oriented language. Recommended preparation: Ability to program in Pascal or C, or consent of the instructor.

**MIDS 360. Independent Study (1 - 18)**

**MIDS 385. Web Systems Integration (3)**
Standards-based technology is used to help solve complex information system problems in modern organizations. This course brings together component-based development approaches in the context of doing business on the global Internet and on corporate intranets. Enabling technologies are based on published and de facto Internet standards including HTTP and HTML, CGI/API and Perl.
CSS, JavaScript, ActiveX, XML, CORBA/DCOM, and SSL/SET. Students are encouraged to contribute to a team effort to design, implement, and integrate an appropriate solution to a selected business problem in electronic commerce or distance learning. They will also develop competency in the foundation technologies. Offered as MIDS 385 and MIDS 485.

MIDS 409. System and Design Thinking (3)
For over a half-century, the field of information systems has been learning about the design, development, testing, and use of complex systems. Computers are just the start. The networks that connect them to create a massive communications grid, the software that runs on them, and the impact of these artifacts on organizations have all generated large bodies of knowledge. Two modes of thinking have proven particularly valuable in making sense of these developments—system thinking and design thinking. While this course applies concepts from system thinking and design thinking to problems related to using information in organizations, the techniques are widely applicable to managing.

MIDS 409A. System and Design Thinking (1)
For over a half-century, the field of information systems has been learning about the design, development, testing, and use of complex systems. Computers are just the start. The networks that connect them to create a massive communications grid, the software that runs on them, and the impact of these artifacts on organizations have all generated large bodies of knowledge. Two modes of thinking have proven particularly valuable in making sense of these developments—system thinking and design thinking. While this course applies concepts from system thinking and design thinking to problems related to using information in organizations, the techniques are widely applicable to managing. Prereq: Open to ACL-MBA students.

MIDS 410. Information Technology Architectures (3)
Just as a crafts person needs an intimate understanding of the tools of a trade, the information professional must understand the architecture of hardware, telecommunication facilities, operating systems, applications and networks. This course covers how prioritization, security, sharing and distribution can be improved by parallelism and how required synchronization can be safely and efficiently implemented across an essentially layered architecture that extends from the chip to the user-friendly application. Prereq: MIDS 409.

MIDS 413. Managing Large Systems (3)
This course will help you understand the complex nature of the selection, implementation and management of large enterprise business systems (such as Enterprise Resource System, Customer Relationship Management systems and Supply Chain Management systems). It is no secret that many companies have publicly, and privately, struggled with large enterprise business systems projects which ended up millions of dollars over budget, many years behind schedule, or worse, crippling the companies’ operations by failing to meet the day-to-day demands of the business. During this course, we will examine case studies of successful, and unsuccessful, projects and organize the common themes into a framework applicable to the successful navigation of the life cycle of large enterprise business systems. Prereq: MIDS 409.

MIDS 415. Multimedia Systems (3)
Current practices and future directions of multimedia systems are discussed. Special attention is given to management issues involved in specifying, designing, developing, and assessing multimedia systems and to design principles that can be used to improve the quality of multimedia. This is a project-based course in which students gain experience in developing websites, CD-ROMs, and films. Description for MIDS 415: As information becomes more abstract and therefore more difficult to perceive directly with one’s sense, sonic and visual presentation become more important than ever. Designing systems that take advantage of people’s aesthetic sensibilities is an area wide open to the enterprising and inventive entrepreneur. This course will interest those who think that artists have a say about how sound and graphics and words might be put together. The course examines aesthetic issues that arise in the development of multimedia. It focuses on creative integration of video, audio, and graphics particularly for the web, interactive CDs, and virtual reality. Offered as MIDS 315 and MIDS 415.

MIDS 420-1. Identifying Design Opportunities (0)
Designing is giving form to an idea to conceive of a more desirable product, service, process or organization and refining the idea into something that can be delivered reliably and efficiently. Good design integrates these evolving ideas with the day-to-day realities of a firm’s operations, systems, marketing, economics, finance and human resources. Designing is thus a unique managerial activity that brings together changing technologies, capabilities, relationships, activities and materials to shape an organization’s plans and strategies. It combines analysis and synthesis in ways that are integrative and inventive, and through it managers create opportunities and means of attaining them. Viewed this way, designing is a core competence of a successful entrepreneur or innovative leader. This course is the first in a two-semester sequence. Design analysis is the systematic review of the four orders of design...
found in every firm—namely, the firm’s communications, products, interactions and environments—and the creation of opportunities to increase firm value by improving each. Students will identify ill-defined, ill-structured problems within organizations. Such problems are ones for which there are no definitive formulations and for which the formulation chosen affects the solutions available. For such problems, there is no explicit way of knowing when you have reached a solution, and solutions cannot necessarily be considered correct or incorrect. But finding innovative solutions to such problems can provide unique opportunities to distinguish organizations and to create exceptional value. A major outcome of the semester’s inquiry is a presentation of the challenges and opportunities discovered during the design analysis of the client organization. The presentation will include a conceptualization of the client’s current situation and opportunities, along with a statement of their design requirements. It is successful to the extent that it demonstrates learning by creating unexpected value to the client.

MIDS 426. Designing Successful Systems (3)
One of the greatest challenges organizations face is creating information systems that work. Not only must you be able to diagnose problems, envision new possibilities, and design solutions, you must also be able to communicate your ideas to the technologists who will build and support the systems you need. In this course we will investigate concepts and techniques for analyzing systems and processes in order to identify opportunities for improving the organization, its work practices and its information systems. We will emphasize creativity in diagnosing organizational problems and opportunities. We will explore consultation and intervention strategies for moving to a consensus on problem definition and a vision of desired changes. We will investigate strategies for documenting organizational and information system requirements that both managers and information technology professionals can understand and act on. Finally, we will discuss project management approaches that keep development efforts in time and under budget.

MIDS 427. System Development and Data Management (3)
Information drives modern organizations. From ERP systems to on-line shopping carts, databases are the engines of contemporary business applications. Managers who possess a fundamental understanding of databases have an advantage. These managers appreciate the potential of the data at their fingertips, and they know how to improve the business processes that databases support. This is a course on the design and development of database management systems with an emphasis on the role of databases in business processes. Students will learn the tools of data and process design, and will learn how to extract powerful information from databases. The final project puts it all together in a real-world database development project.

MIDS 432. Health Care Information Systems (3)
This course covers concepts, techniques and technologies for providing information systems to enhance the effectiveness and efficiency of health care organizations. Offered as HSMC 432, MIDS 432, and MPH 532.

MIDS 438. Digital Law and Business (1)
The course provides Law and MBA students with an understanding of legal issues that need to be addressed in the development of digital business at the level of website management and transactions. The course also highlights the critical role of technology as a source of new legal requirements, and also as a means to address and enforce legal requirements that are critical in conducting on-line business (e.g. demand for authenticity, or non-repudiation). The course is organized as a series of topics that focus on critical aspects of e-business development and related contractual issues, business transactions and their enforcement, security, privacy, intellectual property rights, consumer protection, international legal issues and e-business regulation. Specific legal topics include: a). Copyright, trademark, and (to a lesser extent) patent issues (web development, content management), b). Contract law in the e-business context (formation, repudiation, E-sign, UETA, UCITA, etc.) (B2B, B2C transactions, financial transactions), c). On-line privacy law and privacy policies (marketing topics), d). DMCA, ACPA, ECPA and the Patriot Act, COPPA, e). Website Terms of Use (web development), f). Website affiliate agreements (web development), g). Website development and maintenance agreements (web development), h). Web product distribution agreements. i). Shrinkwrap, clickwrap, and EDI agreements (B2B). j). Various IP-related licensing, confidentiality, development, and assignments, agreements, domain naming (Internet). Offered as LAWS 438 and MIDS 438.

MIDS 447. Chief Officer Dialogues on Information and Management (3)
Each week, Chief Level Officers (CIO, CEO, CFO, CMO, CTO, etc.) from major corporations present the class with live problems in which technology, strategy and operational issues must be integrated in a coherent organizational course of action. Students work in teams to design courses of action in response to those problem situations, which Chief Level Officers then review, critique and discuss. Offered as MGMT 447 and MIDS 447. Prereq: MIDS 409.

MIDS 461. Change Management (3)
Change is an inherent dimension of organizational life-new policies, regulations, technologies, people, products, competitors, markets, processes, physical facilities...the list goes on. Consequently, the abilities to adapt to and manage technical and organizational changes are critical managerial competencies. This course aims to provide a framework for planning, analyzing, and managing those changes over which you as a manager will have some control. Though our discussions will focus on technology-enabled and technology-related change, the intention is to equip you with a process model, tools, and guiding principles that can be applied more generally to other change processes.

MIDS 470. Analyzing Mobility and Mobile E-Business (3)
Pervasive digital services and mobile computing applications, and intelligent and ubiquitous computing environments will change the landscape of organizational computing and business applications in the next decade. They will also change how we work and how business is conducted. There are technological, business, and regulatory challenges that must be addressed in shifting organizational approaches and technological solutions to this new environment. The goal of this course is to examine state-of-the-art solutions to this new arena, explore business opportunities and analyze research themes and issues that are emerging in this new arena. The course is meant for Ph.D. students studying pervasive computing, advanced M.S.M. students who are interested in this new area, technologically savvy M.B.A. students who want to explore and expand their knowledge in the leading edge technologies and for students in the engineering school who want to study business applications of telecommunication and agent-based technologies.

MIDS 485. Web Systems Integration (3)
Standards-based technology is used to help solve complex information system problems in modern organizations. This course brings together component-based development ap-
proaches in the context of doing business on the global Internet and on corporate intranets. Enabling technologies are based on published and de facto Internet standards including HTTP and HTML, CGI/API and Perl, CSS, JavaScript, ActiveX, XML, CORBA/DCOM, and SSL/SET. Students are encouraged to contribute to a team effort to design, implement, and integrate an appropriate solution to a selected business problem in electronic commerce or distance learning. They will also develop competency in the foundation technologies. Offered as MIDS 385 and MIDS 485.

MIDS 501. Special Problems and Topics (1 - 18)
This course is offered, with permission, to students undertaking reading in a field of special interest.

MIDS 527. Seminar in MIDS (3)
This seminar addresses topics of current interest with a strong emphasis on research. It is intended primarily for the faculty and doctoral students of the MIDS Department.

MIDS 601. Special Topics in MIDS (1 - 18)
This course is offered, with permission, to Ph.D. candidates undertaking reading in a field of special interest.

MIDS 701. Dissertation Ph.D. (1 - 18)
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

DEPARTMENT OF OPERATIONS

Peter B. Lewis Building
Kamlesh Mathur, Chair
Elaine Iannicelli, Department Administrator
Phone 216-368-4141; Fax 216-368-6250

FACULTY

A. Dale Flowers, DBA
(Indiana University)
Associate Professor of Operations

Ankur Goel, PhD
(University of Texas-Austin)
Assistant Professor of Operations

Kamlesh Mathur, PhD
(Case Western Reserve University)
Professor of Operations and Department Chair

Harvey M. Salkin, PhD
(Rensselaer Polytechnic Institute)
Professor of Operations

Matthew J. Sobel, PhD
(Stanford University)
Professor of Operations; William E. Unsworth
Professor of Industrial Economics; Professor of

Electrical Engineering and Computer Science

Daniel Solow, PhD (Stanford University)
Associate Professor of Operations

George Vairaktarakis, PhD
(University of Florida)
Associate Professor of Operations

Ronald Ballou, PhD
(The Ohio State University)
Professor Emeritus of Operations

Hamilton Emmons, PhD
(Johns Hopkins University)
Professor Emeritus of Operations

Secondary Appointment

Peter Ritchken, PhD
(Case Western Reserve University)
Professor of Operations; Kenneth Walter Haber
Professor of Finance

OPERATIONS MANAGEMENT

OPMT 360. Independent Study (1 - 18)

OPMT 390. Special Problems and Topics in Operations Management (1 - 18)
Undergraduate student pursues a special topic or problem, with agreement of operations management instructor.

OPMT 405. Operations Management (3)
Operations management deals with the design of products and processes, the acquisition of resources, the conversion of inputs to outputs, and the distribution of goods and services. It is central to a firm’s ability to compete effectively. As global competition in both goods and services increases, the management of operations is becoming more and more important. This course provides a broad overview of the managerial issues associated with production and delivery of goods and services. It includes the use of quantitative modeling using computers as a central methodology. Prereq: QUMM 414.

OPMT 405A. Operations Management (1)
In recent years, a changing competitive landscape has highlighted the critical role of the operations function in ensuring business success. In this course, we treat business as a value-added chain of processes that supply and convert disparate inputs into products and services and distribute these outputs. We examine how to best design, run and improve these processes. A variety of manufacturing and service sector settings will be used as examples to illustrate the concepts. It is assumed that the student is familiar with the material covered in a basic undergraduate course in operations management. Specifically, a vocabulary of operations management terminology and proficiency in basic tools and techniques of operations management are expected. Prereq: Open to ACL-MBA students.

OPMT 407. Marketing Through the Supply Chain (3)
This course views the supply chain (including the distribution channels) as a multi-organization business system that enables customers at all points in the system to acquire the benefits/value they want in the way they want to acquire them. It is a collaborative human network creating customer and shareholder value throughout the system. Strategic and tactical management topics include specifying customer desired value, assessing network members’ (suppliers, producers, distributors, and customers) abilities to create it, and consequently allocating decisions, tasks, and rewards to members. Emphasis is on structure, communication, motivation, and control/discipline to encourage effective implementation throughout the supply chain system. Offered as MKMR 307 and MKMR 407 and OPMT 407.

OPMT 420. Managing Quality with Six Sigma (3)
This course provides an introduction to managing quality throughout the supply chains in both manufacturing and service organizations, utilizing the popular Six Sigma approach. The familiar DMAIC (define, measure, analyze, improve, control) problem solving approach will be emphasized. Students will learn the basic tools of quality (such as cause-and-effect diagrams for brainstorming), quality processes (such as benchmarking), and quality management including quality planning, quality control, and quality improvement. The course will include the subject of statistical process control, an integral component of Six Sigma.

OPMT 422. Service Operations Management with E-Commerce (3)
This course concerns the management of operations in e-commerce and other kinds of services. E-commerce absorbs more course time than any other type of service, but we also examine other settings such as financial services, health care, information systems, and transportation. There are modules on the similarities and differences of operations in e-commerce versus other service industries, structures of service industries, design of services, profitably utilizing service capacity, enhancing the quality of services, and managing service projects. Topics in capacity manage-
ment include revenue management, queuing models, and simulation. A recurring theme is the integration of service operations with marketing, finance, and information systems. Prereq: OPMT 405.

**OPMT 450. Project Management (3)**

Project management is concerned with the management and control of a group of interrelated tasks required to be completed in an efficient and timely manner for the successful accomplishment of the objectives of the project. Since each project is usually unique in terms of task structure, risk characteristics and objectives, the management of projects is significantly different from the management of repetitive processes designed to produce a series of similar products or outputs. Large-scale projects are characterized by a significant commitment of organizational and economic resources coupled with a high degree of uncertainty. The objective of this course is to enhance the ability of participants to respond to the challenges of large-scale projects so that they can be more effective as project managers. We study in detail up-to-date concepts, models, and techniques useful for the evaluation, analysis, management, and control of projects. Prereq: QUMM 414.

**OPMT 475. Supply Chain Logistics (3)**

The focus of this course is on the effective management of a firm's downstream processes in the supply chain that deliver goods and services to customers. Concepts, methods, and strategies are presented that can lower supply chain costs while maintaining or improving customer service. In addition, ideas for using the supply chain for competitive advantage leading to revenue enhancement are discussed. Adding value for customers is the objective. Key topics include transportation planning, inventory management, network design, and customer service goal setting. Offered as MKMR 475 and OPMT 475.

**OPMT 476. Supply Management in the Supply Chain (3)**

The focus of this course is on the effective management of a firm's upstream supply chain processes that provide it with the services and physical goods needed for product and service creation and distribution. The primary objectives of the course are: 1) to understand the complexity of inter-firm and intra-firm coordination in implementing cutting-edge supply chain programs such as vendor managed inventories, third-party logistics, mass customization, quick response, and strategic alliances; 2) to develop the ability to design efficient supply systems and formulate integrated supply strategies so that all components are synchronized to fit a firm's competitive environment, market needs, and overall corporate strategies; and 3) to impart analytical skills necessary to develop effective solutions for a variety supply management problems. Offered as MKMR 476 and OPMT 476.

**OPMT 477. Enterprise Resource Planning in the Supply Chain (3)**

Enterprise resource planning is the dominant system by which companies translate the needs from their customers into the detailed plans that the company must perform to meet the customer needs, and the resulting support the company will need from its suppliers. Both quantitative and qualitative techniques for performing all the functions involved in this process provide the focus for this course. The quantitative analysis will be supported by microcomputer software available in the Weatherhead computer lab.

**OPMT 479. International Operations Management (3)**

The main objective of this case-based course is to help prospective operations managers to overcome national and cultural myopia, identify cultural and contextual differences in operations management practice, describe successful operations management approaches in other countries and examine reasons for their success as well as the viability of transferring them to significantly different operating environments, and finally address the impact of the global scope of operations on the usual operating decisions (production planning, quality control, etc.). Topics to be covered include organization of global operations, production strategies in entering foreign markets, development of a global manufacturing strategy, international facilities location, offshore manufacturing, global sourcing and logistics, global transfer of technology, risk management on global operations, cultural and national comparisons of operations management practices, and successful global service operations. Prereq: OPMT 405.

**OPMT 480. Operations Strategy and Technology (3)**

This course discusses the process of developing an operations strategy for competitive advantage. A number of strategic issues are studied from a manufacturing perspective, including: product development, introduction of new technologies, managing multiple plant operations, flexibility, and financial control systems. Prereq: OPMT 405.

**OPMT 490. Independent Study in Operations Management (1 - 15)**

This course is offered, with permission, to students undertaking reading in a field of special interest.

**OPMT 501. Special Problems and Topics (1 - 18)**

This course is offered, with permission, to students undertaking reading in a field of special interest.

**OPMT 504A. Research in Operations Management I (1.5)**

The material in this introduction to the research literature in operations management consists of several research papers on supply chains for goods and services. Although specific topics and papers vary from year to year, representative topics include manufacturing, logistics, design of service networks, and revenue management. Prereq: OPRE 412A, OPRE 419, OPRE 426, and OPRE 513A, or consent of instructor.

**OPMT 504B. Research in Operations Management II (1.5)**

Seminar continuation OPMT 504A's introduction to the research literature in supply chains for goods and services. Specific topics and papers vary from year to year, but representative topics include manufacturing, logistics, service networks, and revenue management. Prereq: OPMT 504A or consent of instructor.

**OPMT 601. Special Problems and Topics (1 - 18)**

This is a course of flexible design in which a student, with the agreement of an instructor in operations management, may pursue a special topic or problem. M.B.A. students should enroll in OPMT 501.

**OPMT 701. Dissertation Ph.D. (1 - 18)**

This course is open to Ph.D. candidates who are preparing dissertations in some field of operations management. Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

**OPERATIONS RESEARCH (OPRE)**

**OPRE 300. Undergraduate Projects in Operations Research (1 - 18)**

Individual operations research projects are carried out by qualified students.

**OPRE 301. The Science of Business Decision Making (3)**

The science of decision making, also called operations research (OR) or management science, is the discipline of applying advanced quantitative methods to make better decisions. By using mathematical models to analyze complex situations, decision science gives
managers the power to make more effective decisions and build more productive systems. Techniques covered include linear programming, networks, project management, inventory, queuing and simulation. Recommended preparation: one semester of statistics or consent of instructor. Prereq: STAT 207.

OPRE 345. Decision Theory (3)
This course provides an understanding of the principles, basic concepts, and methodology of engineering economics. It develops proficiency with these methods and with the process for making rational decisions regarding situations likely to be encountered in professional practice.

OPRE 348. Personal Investment Strategies (3)
This course is an introduction to the world of personal investing. In the framework of personal investment objectives and alternatives, topics included are: stocks, bonds, convertibles, warrants, options and mutual funds. Discussions of contemporary factors driving stock and bond prices such as international currency and interest rate implications are also discussed. Practical money management programs to meet different investment objectives and levels of wealth are explored. Prereq: ACCT 202.

OPRE 402. Stochastic Models with Applications (1.5)
This course surveys fundamental methods and models in operations research and operations management that incorporate random elements. Topics discussed will include basic results from the theory of stochastic processes, especially Markov chains; an introduction to stochastic dynamic programming; and models in the control of queues and inventories. Prereq: OPRE 433A and OPRE 433B.

OPRE 411A. Linear Programming (1.5)
The objective of this course is to enable the student to formulate deterministic (linear, nonlinear, integer and network) models. The simplex algorithm for solving linear programming problems is presented geometrically, algebraically and economically. The role of duality theory is also discussed. Case studies are used to teach the student how to formulate, use computer packages, and prepare managerial reports for solving deterministic (linear, nonlinear, integer, network, and goal programming) problems that arise in business operations as well as project management problems (using PERT/CPM techniques). Conceptual and mathematical ideas of the various methods for solving such problems are presented. Prereq: OPRE 411A or QUMM 414. Coreq: OPRE 411A or QUMM 414.

OPRE 413. Business Applications of Decision Models (3)
The objective of this course is to expose the students to situations from various business disciplines (e.g., finance, marketing, information systems, supply chain management, etc.) where quantitative models effectively address the decision problems. This course will also integrate these business disciplines. The course will also prepare students for action learning projects where quantitative tools may be appropriate. The course will apply tools and techniques learned in QUMM 414. Other quantitative tools will be introduced "just-in-time" in context to particular application area. Prereq: QUMM 414. Coreq: OPMT 405.

OPRE 419. Game and Decision Theory (1.5)
Most of this course is an introduction to game theory; the remainder is a brief introduction to Bayesian analysis of decision problems including decision trees and conjugate pairs of distributions. The game theory portion consists of an axiomatic approach to utility theory, noncooperative solution concepts emphasizing equilibrium points, and cooperative solution concepts. Examples are drawn from economics, marketing, and operations research. Coreq: OPRE 411A.

OPRE 424. Scheduling Theory (3)
Combinatorial and implicit search techniques are developed and applied to scheduling problems, including sequencing on a single and on parallel processors, scheduling in flow shops, open shops and general job shops, and resource-constrained project scheduling, to satisfy various objectives. Topics in the complexity of algorithms and worst-case analysis of heuristics are discussed. Stochastic extensions, manpower scheduling or other special topics may be considered. Prereq: OPRE 425A.

OPRE 427. Convexity and Optimization (3)
Introduction to the theory of convex sets and functions and to the extremes in problems in areas of mathematics where convexity plays a role. Among the topics discussed are basic properties of convex sets (extreme points, facial structure of polytopes), separation theorems, duality and polars, properties of convex functions, minima and maxima of convex functions over convex set, various optimization problems. Offered as MATH 327, MATH 427, and OPRE 427. Prereq: MATH 223 or consent of instructor.

OPRE 432A. Simulation Models with Applications (1.5)
This course covers the modeling and analysis of business systems using computer simulation. The focus of the course is the introduction of simulation as a modeling tool with emphasis on understanding the structure of a simulation model and how to build such models with the help of popular simulation software(s). Some fundamental statistical concepts behind simulation modeling will also be discussed. Prereq: OPRE 433A and OPRE 433B or consent of instructor.

OPRE 432B. Simulation Design (1.5)
This course covers the statistical design and analysis of simulation models. The topics include random number generation, input data analysis, statistical analysis of simulation outputs, variance reduction techniques, and design of simulation experiments. Prereq: OPRE 432A. Coreq: OPRE 434 or consent of instructor.

OPRE 433A. Probability and Statistics for Management Science I (1.5)
This course introduces the basic tools of probability. Topics include elementary probability theory, conditional probability, Bayes Theorem, commonly encountered distributions including binomial, Poisson, uniform, exponential, and normal (univariate and bivariate), organizing and summarizing data—mean, variance, moments, and other descriptive statistics. Examples are given of business applications in operations, finance, and marketing. Recommended preparation: A semester of calculus or consent of instructor.

OPRE 433B. Probability and Statistics for Management Science II (1.5)
This course covers the foundations of statistical analysis, with an emphasis on applications of confidence intervals and hypothesis testing for a wide array of experimental designs. Topics include: sampling, comparison of means, medians and proportions through interval estimation and hypothesis testing, and an introduction of regression analysis. Prereq: OPRE 433A or consent.

OPRE 434. Regression and Forecasting (1.5)
The first part of this course covers the funda-
mentals of multiple linear-regression analysis and logistic regression models emphasizing understanding and forecasting relationships between variables in a variety of data settings. The second part includes time series analysis and forecasting. Using case studies and commonly used state-of-the-art statistical software (e.g., SPSS, SAS, etc.) students learn to summarize relationships and measure how well these relationships fit data, and how to make meaningful statistical inferences and forecasts. Prereq: OPRE 425B or QUMM 414.

OPRE 435A. Computer Programming (1.5)
The objective of this course is to provide the student with the ability to write object-orient ed computer code in C++ for solving problems that do not involve complex data structures. Topics include the use of variables and pointers, built-in functions, input and output, selection statements, loops, functions, and classes.

OPRE 435B. Integrated Problem Solving in OR and OM (1.5)
This project-oriented course uses a variety of software to involve the student in the complete problem-solving process in OR and OM. This process includes problem definition and formulation, data collection, and storage in a database, connecting the database to the solution algorithm, designing and implementing an appropriate user interface, and presenting the final solution. Prereq or Coreq: OPRE 411B.

OPRE 435C. Data Structures (1.5)
The objective of this course is to provide the student with the data structures (arrays, files, linked lists, trees, and so on) and the numerical methods (differentiation, integration, and solving linear equations) needed for implementing algorithms that solve operations research and operations management problems. These topics are illustrated with C++ and object-oriented programming. Emphasis is given to ensuring that the programs are robust and usable by nontechnical people. Prereq: OPRE 435A.

OPRE 448. Personal and Institutional Money Management (3)
This course is an introduction to contemporary portfolio management. In addition to introductory material on securities, options and security markets, topics include contemporary equity and debt management models, hedging strategies, program trading, portfolio insurance, arbitrage programs, mergers and acquisitions, international investing and intermarket influences, and other contemporary factors driving stock and bond prices. Prereq: BAFI 402.

OPRE 454. Analysis of Algorithms (3)
This course presents and analyzes a number of efficient algorithms. Problems are selected from such problem domains as sorting, searching, set manipulation, graph algorithms, matrix operations, polynomial manipulation, and fast Fourier transforms. Through specific examples and general techniques, the course covers the design of efficient algorithms as well as the analysis of the efficiency of particular algorithms. Certain important problems for which no efficient algorithms are known (NP-complete problems) are discussed in order to illustrate the intrinsic difficulty which can sometimes preclude efficient algorithmic solutions. Recommended preparation for EECS 454: MATH 304 and (EECS 340 or EECS 405). Offered as EECS 454 and OPRE 454. Prereq: OPRE 435A and OPRE 435C.

OPRE 490. Independent Study in Operations Research (1 - 15)
This course is offered, with permission, to students undertaking reading in a field of special interest.

OPRE 501. Special Problems and Topics (1 - 36)
This course is offered, with permission, to students undertaking reading in a field of special interest.

OPRE 504A. Research in Mathematical Finance I (1.5)
The course introduces the basic principles of discrete time financial markets. The focal points are the method of no arbitrage asset pricing, its relationship with equilibrium investment strategies of individuals in a market of financial securities, and its applications in valuation of contingent claims. Specific topics include basic utility theory, single and multiple period investment models, complete and incomplete markets, risk neutral probability measures, pricing of European and American stock options, and introduction to bonds and interest rate derivative models. Prereq: OPRE 411A, OPRE 433A and OPRE 433B.

OPRE 504B. Research in Mathematical Finance II (1.5)
The course introduces the mathematical models of financial analysis in continuous time. Topics include diffusion processes, stochastic differential equations and Ito’s lemma martingales, equivalent martingale measures for risk neutral valuation, Girsanov’s theorem, the Black-Scholes model of European option pricing, American options in continuous time, and introduction to the Heath-Jarrow-Morton model of interest rate claim valuation. Prereq: OPRE 504A.

OPRE 505. Theory of Linear Programming (1.5)
This course presents the theory of linear programming, including the formal development and proofs of (a) the geometry of linear programming problems (convex sets, extreme points and extreme rays), (b) the steps of the simplex algorithm and their relationship to the geometry, and (c) duality theory and its uses in sensitivity and post-optimality analysis. Prereq: OPRE 411A and OPRE 510.

OPRE 506. Theory of Nonlinear Programming (1.5)
This course presents the algorithms and theory for solving nonlinear programming problems. Problems that do not have constraints include: (a) solving nonlinear systems of equations with Newton’s method, (b) finding fixed points of functions using the Brouwer and contractive fixed-point theorems, and (c) optimizing nonlinear functions of a finite number of variables using gradient and conjugate-gradient algorithms with line searches. Problems that have constraints include: (a) solving the linear complementarity problems, (b) solving optimization problems with methods of feasible directions that use the Karush-Kuhn-Tucker conditions and also with methods that use penalty functions. Throughout, the role of convexity in establishing convergence of algorithms is explained. Prereq: OPRE 505.

OPRE 510. Math Foundations for Advanced Studies (1.5)
This course enhances the ability to use mathematics in advanced studies. In addition to learning such elementary ideas as the difference between closed-form and numerical-method solutions, a systematic approach is used to learn how to read, understand, think about, and do proofs. Specifically, it is shown how all proofs, regardless of subject area, can be explained as a sequence of individual proof techniques. The following mathematical skills are also taught: translating visual images to symbolic form using quantifiers; classifying mathematical objects into groups having similar properties; creating and working with mathematical definitions; unification; generalization.

OPRE 513. Stochastic Optimization (3)
This course concerns optimization of stochastic models, it emphasizes models of sequential decisions, and it includes some topics in stochastic processes. It includes the formulation of Markov decision processes and their optimization with various algorithms (often
called dynamic programming). Other topics include stochastic order relations and other aspects of lattice programming, adaptive control, and stochastic programming. General results are employed to elicit the structure of optimal policies in areas such as inventory, finance, maintenance, and queueing. Prereq: OPRE 411A. Coreq: OPRE 526.

OPRE 515A. Combinatorial Optimization (1.5)
This course provides the ability to recognize, formulate, and solve (or determine how difficult it is to solve) combinatorial optimization problems. Mathematical programming and network/graph-theory problems are used to illustrate the art of problem formulation. The individual components of combinatorial optimization are identified and presented in a unified framework. The two standard search strategies for finding an optimal solution—namely, the greedy approach and the finite-improvement approach—are illustrated with numerous examples. Conditions are presented under which these search strategies provide an optimal solution. Prereq or Coreq: OPRE 510.

OPRE 515B. Graph Theory (1.5)
This course provides the ability to use graph theory as a problem-solving tool. The student is taught to recognize, formulate, and solve graph theory problems. Numerous examples from Operations Research, Computer Science, and related areas are used to illustrate the art of problem formulation. Appropriate theory and algorithms are then developed for solving these problems using the two basic search strategies of the greedy algorithm and the finite-improvement algorithms. Prereq: OPRE 515A.

OPRE 516. Discrete Optimization (3)
This course is an introduction to optimization problems involving a finite number of alternatives. Applications include problems in network flows (distribution systems, project scheduling, production planning, routing etc.) and integer programming (scheduling, location, sequencing, capital budgeting, etc.). Numerous algorithms and heuristics are presented for solving these problems (shortest path, maximum flow, cutting plane, enumerative and partitioning algorithms). Computational complexity of these algorithms is also emphasized. Prereq: OPRE 411A and OPRE 509.

OPRE 526. Stochastic Processes (3)
This course analyzes probabilistic models of phenomena which evolve over time. Modules include birth-and-death processes (including the Poisson process), renewal theory, regenerative processes, Markov chains (discrete- and continuous-time), semi-Markov processes, system properties of queueing models, martingales, and Brownian motion. The course frequently explores the queueing theory consequences of general stochastic processes. Prereq: OPRE 433A and OPRE 433B.

OPRE 601. Advanced Readings in Operations Research (1 - 18)
Students report on recent literature and review selected topics in the various areas of operations research. Students also perform detailed studies of special topics in operations research under the guidance of a faculty member. M.B.A. students should enroll in OPRE 501.

OPRE 602. Predissertation Research (3)
The objective of this course is to introduce the student to the process of doing research. Students work with a faculty member on a research topic of mutual interest. The student presents the results in a written report and an oral presentation open to all faculty and students. The work is evaluated by a committee of three faculty members.

OPRE 701. Dissertation Ph.D. (1 - 18)
This course is limited to candidates for the Ph.D. degree who are preparing dissertations under the guidance of three faculty members. Students work with a faculty member on a research topic of mutual interest. The student presents the results in a written report and an oral presentation open to all faculty and students. The work is evaluated by a committee of three faculty members.

DEPARTMENT OF ORGANIZATIONAL BEHAVIOR
Peter B. Lewis Building
Ronald Fry, Chair
Lila Robinson, Department Administrator
Phone 216-368-2060; Fax 216-368-6228

FACULTY
Diane Bergeron, PhD
(Columbia University)
Assistant Professor of Organizational Behavior

Diana Bilimoria, PhD
(University of Michigan)
Associate Professor of Organizational Behavior

Richard E. Boyatzis, PhD
(Harvard University)
Professor and H.R. Horvitz Professorship in Family Business

Susan S. Case, PhD
(New York University at Buffalo)
Associate Professor of Organizational Behavior

Harlow Cohen, PhD
(Case Western Reserve University)
Professor for the Practice of Organizational Behavior

David L. Cooper, PhD
(Case Western Reserve University)
Professor of Organizational Behavior, Fairmount Minerals Professor of Social Entrepreneurship, Director of University Center for Business as an Agent of World Benefit

Ronald E. Fry, PhD
(Massachusetts Institute of Technology)
Associate Professor of Organizational Behavior and Department Chair

David A. Kolb, PhD
(Harvard University)
Professor of Organizational Behavior

Tony Lingham, PhD
(Case Western Reserve University)
Lecturer of Organizational Behavior

Melvin Smith, PhD
(University of Pittsburgh)
Faculty of Executive Education, Professor for the Practice of Organizational Behavior

Eric Neilsen, PhD
(Harvard University)
Professor Emeritus of Organizational Behavior

Suresh Srivastva, PhD
(University of Michigan)
Professor Emeritus of Organizational Behavior

SECONDARY APPOINTMENTS
David Aron, MD
(Columbia University)
Professor of Medicine, School of Medicine and Sr. Staff Physician, Cleveland VA Medical Center; Professor of Organizational Behavior

Duncan Neuhauser, PhD
(University of Michigan)
Professor of Epidemiology and Biostatistics, School of Medicine; Professor of Organizational Behavior

James Stoller, MD, MSODA
(Case Western Reserve University)
Director Leadership Development, Cleveland Clinic Foundation

Peter Whitehouse, MD, PhD
(Johns Hopkins University)
Professor of Bioethics, Neurology, Neuroscience, and Psychiatry, School of Medicine; Professor of Organizational Behavior

ORGANIZATIONAL BEHAVIOR (ORBH)
ORBH 303. Leadership and Personal Development (3)
This is an experience-based course designed for increased integration of cognitive and emotional processes, greater awareness of one’s behavior and impact on others, and greater opportunity for behavioral change in interpersonal relations. Several Saturday classes.

ORBH 304. Advanced Workshops in Personal Development (3)
This is an experience-study course offered for groups of interested and qualified individuals. This course concentrates on an affective theme: conflict and power, intimacy, aggression, etc. There is an effort to combine experience-based learning with conceptual understanding. Prereq: ORBH 303.

ORBH 370. Women in Organizations (3)
The purpose of this course is to explore the unique challenges of life for women in their twenties as they increase understanding of the issues surrounding women, ambition, and success in a variety of organizations and professions. At this stage of life there are many choices women can make regarding careers and relationships. This course will broaden understanding of the context of work in women’s lives and help women and men understand the leadership and managerial issues that will surround them in organizations. Offering more complex understandings of issues women face in the workplace related to race and gender, the course will help increase self-knowledge about personal identity and direction, values, and abilities including the enhancement of leadership capabilities. It will also facilitate career development, improving the ability of individual women to be choiceful about the quality of integration of both a personal and professional life.

ORBH 390. Special Topics (1 - 18)
This course is offered for candidates undertaking reading in a field of special interest.

ORBH 403. Developing Interpersonal Skills for Managers (3)
This course is intended to sharpen students’ skills in the art of relating successfully to other individuals and groups. The course uses an intensive group experience to make students more aware of how their actions affect others, more capable of giving and receiving interpersonal feedback, and more cognizant of processes through which groups work. Several Saturday classes.

ORBH 412. Organizational Analysis (3)
This course studies organizational analysis through appreciative inquiry. It explores multiple frameworks for understanding the complexity of organizational life. Students form teams and conduct appreciative studies across industries. This course also addresses questions of organizational change (how to move from theory/ideal to practice). Learning is experiential in nature.

ORBH 413. Foundations of Positive Organization Development and Change (4)
This course explores and develops the art of reading and understanding social systems in ways that help us imagine, design and develop organization excellence. First it seeks to show how many of our conventional ideas about organizations are based on discourse and metaphors that lead us to see and understand organizations in partial and often limiting ways. Growing research from the domains of Positive Psychology and Positive Organization Scholarship and the theory and practice of Appreciative Inquiry will be explored to show how we can create new and more positive, strength-based ways of designing and developing social systems. Includes presentations, guest lectures and panel discussions on current topics of interest for the Master in Positive Organization Development and Change (MPOD) candidates. Led by a faculty member of the Department of Organization Behavior, these dialogues and seminars will be presented in several of the six main residencies of the MPOD program. Reflective essays and integrative papers will enable participants to explore their practice of OD, leadership capacity, application of learnings from the program and deeply held values related to current issues and opportunities in the domain of human systems change and development. Prereq: Open to MPOD candidates only.

ORBH 414A. Organization Design for a Knowledge World (1)
The objective of this course is to familiarize participants with the theory and technique of organization design and corporate change with particular emphasis on helping leaders understand and implement the latest forms of organizing in a customer-focused, electronically mediated and knowledge-driven world. Frameworks presented will be used to explore the impact of the information revolution on organization design and change, and the evolution of traditional vertically integrated and multi-divisional enterprises toward spider web structures, trans-organizational networks and communities of practice. (Part-one of a two-section course.) Prereq: Open to MPOD candidates only.

ORBH 414B. Organization Design for a Knowl-
effective leaders? Are they different from effective managers? How do they think and act? What makes us want to follow them? How are leaders developed? What and how can people (you) help/coach others develop their competencies to become more effective leaders? (Part two of a three-section course.) Prereq: ORBH 416A.

ORBH 416C. Coaching Leadership and Executive Assessment and Development (1)
Leadership with emotional intelligence will be examined by studying a number of topics and applying them to two major case studies: 1) a CEO; and 2) yourself. In this context, coaching the development of leadership will be a major topic throughout the course. This course will explore questions such as: Who are effective leaders? Are they different from effective managers? How do they think and act? What makes us want to follow them? How are leaders developed? What and how can people (you) help/coach others develop their competencies to become more effective leaders? (Part three of a three-section course.) Prereq: ORBH 416B.

ORBH 417. Managing Organizational Change (3)
This course focuses on change as an inescapable fact for organizations and societies of the present and future. Given the existence of such change, how may individuals charged with managing or facilitating an organization’s response to change deal with their task, and what conceptual or technical tools will help them cope with the challenges of the unpredictable? The course examines social and organizational change to provide a base for considering the future and the demands it is likely to pose. Strategies and tactics used in organizational and social developments in the past are critically examined for their relevance to the future.

ORBH 418. Systems Thinking, Action Research and Sustainability (2)
Sustainability is introduced as a movement in business to create value by responding to social and environmental problems in ways that meet current needs without reducing future capacity. Students are introduced to systems thinking skills, such as whole system mapping, causal loop modeling, emergent hypotheses, stakeholder analysis and engaging productive dialogues. Emphasis is placed on use of these skills as methods for working with clients to create actionable knowledge, thereby integrating reflection with action to leave the client system stronger. Prereq: Open to MPOD candidates only.

ORBH 419A. Building the Sustainable Enterprise (2)
In this course, participants will build on skill developed in ORBH 418 by working in the field with a client system to build a sustainable enterprise. Emphasis is on clarifying what sustainability means for a successful enterprise, the advantages to stakeholders of working as action researchers and the use of systems tools to foster generative dialogue. Professional presentations and papers are developed to advance a collaborative learning network among participants and clients. (Part one of a two-section course.) Prereq: Open to MPOD candidates only.

ORBH 419B. Building the Sustainable Enterprise (2)
In this course, participants will build on skill developed in ORBH 418 by working in the field with a client system to build a sustainable enterprise. Emphasis is on clarifying what sustainability means for a successful enterprise, the advantages to stakeholders of working as action researchers and the use of system tools to foster generative dialogue. Professional presentations and papers are developed to advance a collaborative learning network among participants and clients. (Part two of a two-section course.) Prereq: ORBH 419A.

ORBH 425. Developing Emotional Intelligence (3)
Although helping or stimulating individuals to change, learn, and develop is considered a responsibility of the human resource function in an organization, every professor, manager, consultant, and helping professional spends most of their time trying to provoke, evoke, or catalyze a change in others. This course will examine the processes by which individuals change and the methods often used to facilitate this change. How and what a person chooses to change (i.e., select their change goals) will be explored, as well as factors affecting the extent to which he/she changes. The efficacy and ethics of various approaches to individual change as part of human resource and organization development efforts will be discussed. Prereq: MGMT 403.

ORBH 430A. MBA Institute In Sustainable Value and Social Entrepreneurship I (0)
The MBA Institute in Sustainability and Social Entrepreneurship involves 6 credits divided up into two ‘courses’. The first course --- phase one --- creates a foundational platform featuring key models and managerial tools for the building sustainable value and “turning the social and global issues of our day into business opportunities.” The second course in an applied sustainability field experience where teams work with companies and communities or real-life sustainability and social entrepreneurship opportunities. The foundations course is a prerequisite to the applied field project phase.

ORBH 430B. MBA Practicum in Sustainable Value and Social Entrepreneurship II (6)
The MBA Institute in Sustainability and Social Entrepreneurship involves 6 credits divided up into two “courses”. The first course---phase one--- creates a foundational platform featuring key models and managerial tools for the building sustainable value and “turning the social and global issues of our day into business opportunities.” The second course is an applied sustainability field experience where teams work with companies and communities or real-life sustainability and social entrepreneurship opportunities. The foundations course is a prerequisite to the applied field project phase. Prereq: ORBH 488.

ORBH 431. Experiential Learning for Individuals, Teams, and Organizations (3)
This course focuses on the theory of experiential learning and its application at the individual, team, and organizational levels of analyses. This course offers the chance for students to gain insight into their individual learning & adaptive styles, and how such styles impact the way they interact and have consequence for team. The course also explores how teams and organizations learn, and the effect that cultural determinants have on learning and adaptability. In addition, the course examines how learning theory can be applied to focused institutional development projects and educational processes. The course uses presentations, lectures, research findings, interactive activities, and class discussion. The current topics of interest are for the Masters in Positive Organization and Development (MPOD) candidates. It is led by a faculty member of the Department of Organization Behavior. Reflective essays and integrative papers will enable participants to explore their learning styles and that of their organizations and teams to strengthen the practice of OD and human systems change and development. Prereq: MPOD students only.

ORBH 432A. Relational Skills Laboratory (2)
The objective of this course is to hone the participant’s abilities to use themselves as instruments of change and development in relationships with colleagues and clients. Participants will explore theories of adult development along with interpersonal and group dynamics, write and analyze autobiographies, diagnose
interpersonal needs and styles, and practice techniques for developing generative relationships with clients during an OD intervention, or as process consultants in group/team settings. (Part one of a two-section course.) Prereq: Open to MPOD candidates only.

ORBH 432B. Relational Skills Laboratory (2)
The objective of this course is to hone the participant’s abilities to use themselves as instruments of change and development in relationships with colleagues and clients. Participants will explore theories of adult development along with interpersonal and group dynamics, write and analyze autobiographies, diagnose interpersonal needs and styles, and practice techniques for developing generative relationships with clients during an OD intervention, or as process consultants in group/team settings. (Part two of a two-section course.) Prereq: ORBH 432A.

ORBH 435. Practicum in Appreciative Inquiry and Positive OD (4)
This course develops participants’ consultative skills. Competence in role entry and development, data collection, intervention and evaluation is gained through class exercises and field projects. The focus is on developing a problem-centered approach to intervening in organizations that minimizes reliance on programmed techniques and maximize collaborative innovation and learning between client and consultant. Prereq: Open to MPOD candidates only.

ORBH 438. Design of Organizational Development and Analysis Projects (4)
This course has two objectives: (1) to learn to design and deliver training workshops; and (2) to plan and execute organizational change and/or analysis projects that are consistent with their current skills, career plans and developmental needs, and with the opportunities, strategic needs and organizational problems of their client organizations. This course is limited to candidates for the MSODA program.

ORBH 439A. Individual Field Project (2)
The objective of this course is to plan and execute a significant organization development, change and/or analysis project with an ongoing client or employer. Emphasis is placed on the craft of developing projects that are consistent with one’s current skills, career plans and developmental needs, combined with the needs, opportunities, readiness, and resources of the client organization. This course is limited to candidates for the MPOD program. (Part one of a two section course.) Prereq: Open to MPOD candidates only.

ORBH 439B. Individual Field Project (2)
The objective of this course is to plan and execute a significant organization development, change and/or analysis project with an ongoing client or employer. Emphasis is placed on the craft of developing projects that are consistent with one’s current skills, career plans and developmental needs, combined with the needs, opportunities, readiness, and resources of the client organization. This course is limited to candidates for the MPOD program. (Part two of a two-section course.) Prereq: ORBH 439A.

ORBH 450. Executive Leadership (3)
This course explores answers to questions such as: Who are leaders? Are they different than managers, heroes and heroines? How do the effective ones think and act? What situations create leaders, foster their emergence or provide opportunities? What makes us want to follow them? What are the personal pits of being a leader (i.e., sex, drugs, alcohol, insomnia, ulcers, etc.)? How are leaders developed? Case studies, self-study and at-work projects will be the primary methods used in the course.

ORBH 460. Women in Organizations (3)
This course addresses important leadership and management issues concerning women in organizations. The course provides complex understandings of issues pertinent to professional women and work such as sex role typing, sex-based discrimination, equal pay, sexual harassment, work-family balance, women’s leadership and women’s career issues and development. The course helps students increase self-knowledge about their own values and practices as well as enhance their capabilities as leaders and managers. We will examine the opportunities, challenges, trade-offs, and organizational dynamics experienced by women in work settings, as well as the interpersonal, organizational, and societal structures and processes impacting women in organizations. Through a variety of course methods, students gain greater awareness of the gendered nature of work and organizations and learn effective strategies for women’s career progress and effective participation in organizations.

ORBH 470. Leading Change from a Complexity Perspective (3)
In this course, we will continuously attempt to answer two questions: (1) What is the process of sustained, desirable change? and (2) What is the role of a leader? Concepts from complexity theory will be used, including understanding the multilevel nature of SDC at the individual, dyad, team, organization, community, country, and global levels. Intentional Change Theory (ICT) will be used as the organizing concept for the changes studied. Prereq: MGMT 403.

ORBH 478. Organization and the Environment (3)
This course focuses on ways of looking at the interface between organizations and their environments that have important implications for organizational development activities and the people who design and implement them. The first part of the course reviews several conceptual approaches to assessing this interface. The second part involves the application of these approaches to a series of organizational/environmental problems that members of the class perceive their organizations as currently experiencing. Limited to MSODA candidates.

ORBH 479A. Foundations of Strategic Thinking (1)
This course will define what constitutes strategic change and what does not. Students will be introduced to a variety of strategic interventions and models from which to interpret, understand and achieve positive organizational change. Opportunity will be provided to apply selected models to the student’s organization and other cases in order to gain insight and appreciation for financial and non-financial factors that influence fundamental organizational growth and development. (Part one of a two-section course.) Prereq: Open to MPOD candidates only.

ORBH 479B. Foundations of Strategic Thinking (2)
This course will define what constitutes strategic change and what does not. Students will be introduced to a variety of strategic interventions and models from which to interpret, understand and achieve positive organizational change. Opportunity will be provided to apply selected models to the student’s organization and other cases in order to gain insight and appreciation for financial and non-financial factors that influence fundamental organizational growth and development. (Part two of a two-section course.) Prereq: ORBH 479A.

ORBH 480. The Dynamics of Effective Consulting Strategies (3)
This course will: 1) highlight the major current trends and changes that affect the nature of managerial work; 2) describe how OD practitioners and consultants need to factor such trends into their consulting strategies; 3) differentiate between types of interventions, the circumstances in which they apply and their
unique strengths; 4) provide background theories that explain the challenges inherent in mobilizing positive change; 5) describe ways to bridge the gap between knowing and doing in order to build organization resilience; and 6) introduce a variety of consulting techniques and skills that the students can add to their repertoire. Prereq: Open to MPOD candidates only.

ORBH 488. Leadership and the Global Agenda (3)
This course will attempt to develop leadership values and competencies in Organization (OD) within the global arena. Objectives for the course include: (1) developing an executive view of the state of the world; (2) building skills in appreciative inquiry for researching best practices of organizations to maintain sustainable economic development; (3) learning how to build organizational capacities for responding to the global agenda for change; and (4) developing a global consciousness to a larger set of global values to provide a vision for a better world and the potentials of our organizations to assist in realizing such a vision.

ORBH 490. Special Topics (1 - 18)
This is a seminar course led by a member of the faculty of the Department of Organizational Behavior. Specific topics are announced at the start of each semester. This course is intended also for independent study.

ORBH 491. Managing Diversity and Inclusion (3)
This course addresses workforce diversity issues from individual, group, and organizational perspectives. The focus is on innovative ways of utilizing today’s culturally expanding workforce. Emphasis is on the “what and how” for managers in developing a corporate culture that embraces diversity, helping them in learning to work with, supervise and tap the talent of diverse employees within their organizations. Included are methods for modifying systems to attract, retain, develop, and capitalize on benefits of the new workforce demographics. A retreat experience is part of this course and is required of all participants.

ORBH 497. Development of Executive Leadership Skills (3)
The objective of this course is the development of skills in effective human interaction, with emphasis on the pragmatics of working with people in organizations. The focus is on learning by doing through the use of applied behavioral science methods of simulation, role plays and structured exercise. Leadership topics covered include decision management, problem management, motivation, planned change, teamwork, and the language of leaders. Designed for MSODA students. M.B.A. students admitted upon consent of instructor.

ORBH 498. Global Citizenship and Multi-Cultural OD: International Study Tour (4)
This course will broaden perspectives and knowledge of how OD principles and technologies are generated and applied in contexts and cultures outside of North America. Selected literature representing global perspectives on the practice of OD and field experiences will provide support and background for personal experience and reflection on cross-cultural issues in organizing. The primary learning context will be an intense, 10-day study tour to some country outside of North America to provide the participants with opportunities for: 1) comparative studies of OD practices in different cultural settings; 2) in-depth experiences with OD practitioners and students in a different national, regional and cultural context; 3) co-inquiry with non-North American students also involved in developing OD knowledge and skills; and 4) on-site organization visits outside of North America to observe and learn about on-going dynamic change efforts. Prereq: Open to MPOD candidates only.

ORBH 501. Special Problems and Topics (1 - 18)
This course is offered, with permission, to students undertaking reading in a field of special interest.

ORBH 510. Organizational Behavior Department Seminar (3)
The OB Department Seminar is organized and managed by the first year PhD students. Seminar sessions will alternate between first year meetings and gatherings of the ORBH community of students, faculty and friends. Community sessions will be organized around research presentations of PhD Qualifying Papers, Dissertation Proposals and Dissertation Defense. Seminar Objectives: 1. To create and sustain an appreciative, intellectually nourishing learning space for the ORBH community that will support, inspire and empower us to explore the frontiers of scholarship in our field; 2. To provide a forum for sharing the ongoing research and scholarship of the department; 3. To develop productive collaborative research relationships; 4. To increase our collective knowledge of the current state of the art in OB and to develop productive collaborative research relationships; 4. To increase our collective knowledge of the current state of the art in OB and related fields.

ORBH 511. Micro Organizational Behavior (1)
Examines the field of micro-organizational behavior. Specifically, the study of individuals and groups within an organizational context and the study of internal processes and practices as they affect individuals and groups. Major topics include individual characteristics such as beliefs, values and personality. Individual processes such as motivation, emotions, commitment, group and team processes, such as decision-making; organizational processes and practices such as goal setting, performance appraisal and rewards, and the influence of all of these on such individual, group and organizational outcomes as performance, job satisfaction, citizenship behaviors, turnover, justice, absenteeism and employee engagement.

ORBH 513. Appreciative Inquiry and Strength-Based Change (1)
This course explores and develops the art of understanding social systems in ways that help us imagine, design and develop organizational excellence. It seeks to show how many of our conventional ideas about organizations are based on discourse and metaphors that lead us to see and understand organizations in partial and often limiting ways. Growing research from the domains of Positive Psychology and Positive Organization Scholarship and the theory and practice of Appreciative Inquiry will be explored to show how we can create new and more positive, strength-based ways of designing and developing social systems.

ORBH 520. Group and Interpersonal Analysis (1)
This course is a review of major concepts and research in group dynamics and interpersonal relations. Topics concern face-to-face social interaction such as communication patterns, power, hierarchy, leadership, norms, goals, productivity, social theories of personality, and personal change through group methods. The course combines cognitive emphasis and personal experience-based learning.

ORBH 525. Developing Emotional Intelligence (1)
This course will examine the process by which individuals change and the methods often used to facilitate this change. How and what a person chooses to change (i.e., select their change goals) will be explored, as well as factors affecting the extent to which he or she changes. The efficacy and ethics of various approaches to individual change as part of hu-
man resources and organization development efforts will be discussed.

**ORBH 530. Social Analysis (1)**

This course is an introduction to major themes and concepts in sociology that influence the field and to sociological analysis as it relates to the careers of behavioral science practitioners. Students are exposed to major theoretical orientations as well as to summaries of current thinking in several major topic areas in sociology. The studies of sociology, sociologists and the self are combined to help students develop a sociological perspective of their own potential roles in the applied behavioral sciences.

**ORBH 540. Social Exchange, Social Networks, and Social Capital in Organizations (1)**

In this course we will examine the nature of social exchange relationships in organizations. We will explore how individual perceptions regarding the quality of the relationship they have with their immediate supervisor, their work group, and the organization as an entity can impact their workplace attitudes and behaviors. Additionally, we will learn how the examination of networks of relationships can enhance our understanding of how individuals experience organizational life. The course will also provide a brief introduction to the theory, methods and procedures of social network analysis with an emphasis on applications to individual and organizational social capital.

**ORBH 541. Organizational Systems (1)**

This course covers the use of general systems theory as a conceptual base for examining organizations from the macro-perspective. The course examines organizational structure and technology, organizations and interorganizational networks in interaction with their societal environments, and large-scale problems of organizational and social power, conflict and change. It is designed to present a large-scale perspective on organization theory and behavior that is complementary to the micro-perspective of organizational behavior.

**ORBH 560. Research Methods I (3)**

This course concerns itself with issues associated with the conduct of social research. The primary focus is on learning the "craft" of research and its associated technologies. Among the topics that are addressed are: scientific method; research terminology and definitions; search design; laboratory experiments; simulations; field experiments; field studies; measurement, reliability and validity; and sampling. This course is intended to help students acquire the skills necessary in undertaking dissertation-related research.

**ORBH 561. Research Methods II: Theory Building (3)**

This course is designed as a methodological practicum in theory building through qualitative methods. The process of good theory construction is portrayed as the discovery of theory from data, resulting in the construction of knowledge of consequence. The course asserts, in Lewinian fashion, that "there is nothing so practical as good theory." It then focuses on the methods, personal disciplines, and perspectives needed to bring this dictum alive. Individual research proposals are developed throughout the semester.

**ORBH 565. Research in Gender and Diversity in Organizations (1)**

Examination of full range of feminist research methods exploring relationships between feminism and methodology involving a plurality of perspectives for conducting research and creating knowledge with an emphasis on collecting and interpreting qualitative materials. Particular attention is paid to understanding gender and diversity-related phenomenon that occur in the workplace. Classic feminist research from a variety of historical, societal, economic, interpersonal, and organizational paradigms are incorporated. Coreq: ORBH doctoral students only.

**ORBH 570. Learning and Development (1)**

This course provides an exploration of the learning and development paradigm underlying the human potential development approach to human resource development. The origins of this approach in the naturalist epistemologies John Dewey’s pragmatism, Kurt Lewin’s gestalt psychology, the work of James, Follett, Emerson, Piaget, Maslow, Rogers, and others and current research in adult development, biology and brain/mind research, artificial intelligence, epistemology, moral philosophy and adult learning will be considered. The course will focus on applications of these ideas to current issues in human resource development such as adult learning in higher education, advanced professional development, and large system learning and development. Coreq: ORBH doctoral students only.

**ORBH 572. Thematic Analysis (1)**

This course will help students develop the ability to sense themes, or patterns, the ability to apply coding systems in a reliable manner, the ability to develop a coding system, and the ability to design research studies for developing or using codes. Participants will develop and practice these abilities on four types of data which are: conscious and unconscious thought; an individual’s behavior; interaction among people; and historical documents such as speeches, myths, ballads, etc. Assignments will involve reading, practice coding material provided, developing preliminary codes from material selected, and a research project in which development and/or use of a code is required. Appropriate for doctoral students in behavioral or social sciences (Mini-Course, Occasional Offering). Prereq: Doctorate students only.

**ORBH 575. Theory and Research in Small Groups (3)**

The course is designed to provide doctoral students with broad exposure to the theoretical foundations of research in the area of groups and teams in organizations, and to current and emerging trends in the research within this area. The ultimate objective is to enable students to conduct independent research on topics relevant to groups and teams within organizations. The primary focus will be on task-oriented groups and teams, and in the organizational context. It will draw from basic research in social psychology and sociology in addition to organizational behavior.

**ORBH 601. Special Problems and Topics (1 - 18)**

This course is offered, with permission, to candidates undertaking reading in a field of special interest.

**ORBH 660. Methods of Applied Behavioral Science (3)**

This course includes laboratory methods of learning, techniques of design and operation in human relations training, and trainer behavior in group settings. The course is aimed at conceptualizing learning and influence processes in training laboratory settings as well as providing opportunities for the practice of design and operating skills.

**ORBH 701. Dissertation Ph.D. (1 - 18)**

Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

**OTHER COURSE OFFERINGS**

**MANAGEMENT COURSES (MGMT)**

**MGMT 001. Supervised Professional Practicum - Semester 1 (0)**

A professional practicum is a workplace experience, the primary goal of which is the intellectual, personal and professional growth of the student. It occurs under the sponsorship or supervision of a mentor in the workplace.
who is committed to seeing that it is an educational as well as a work venture. It requires skills appropriate to the student’s year in college and provides students with new skills, insights and experiences that are transferable back to the academic setting and/or to a future position in the workplace. (Only available to declared Weatherhead Accounting or Management majors.) Prereq: Junior standing.

MGMT 250. Managing Organizations and People I (3)
The principal goals of this course are to help students understand: 1) The context in which they, as managers, will function; the options they have for careers in management based on their own aptitudes and orientations; and how they can develop the skills they need for success in their chosen fields; and 2) How the effective strategic management of people contributes to organizational performance and the production of value, and that for many organizations, the effective management of people has been the driver of competitive advantage. This is the first course in a two course sequence.

MGMT 251. Managing Organizations and People II (3)
The principal goals of this course are to help students understand: 1) The context in which they, as managers, will function; the options they have for careers in management based on their own aptitudes and orientations; and how they can develop the skills they need for success in their chosen fields; and 2) How the effective strategic management of people contributes to organizational performance and the production of value, and that for many organizations, the effective management of people has been the driver of competitive advantage. This is the second course in a two course sequence. Prereq: MGMT 250.

MGMT 315. International Management Institute (3)
The course provides undergraduate students with a unique overseas visitation, language orientation, and management subject experiences during periods such as spring break, or during internships immediately following the end of the semester. Opportunities for diverse cultural and language experiences which result from the institute are added benefits of these programs. Prereq: ECON 102, ECON 103, ACCT 101 and BAFI 355.

MGMT 360. Special Topics and Issues in Management (1 - 9)
This course option is available to qualified students who are undertaking special projects in a management related field.

MGMT 395. Advanced Seminar (1)
This seminar, for undergraduate students with junior class standing or above, provides an opportunity to consider topics of importance in the community of ideas and activities related to the professional and managerial world. The development of writing and communication skills and in-depth discussion are expected attributes of seminar activity. The topic and scope of the coverage will be defined by the course instructor as consistent with the seminar approach to learning of the university. MGMT 395a, 395b, 395c

MGMT 395. Advanced Seminar (1)
This seminar, for undergraduate students with junior class standing or above, provides an opportunity to consider topics of importance in the community of ideas and activities related to the professional and managerial world. The development of writing and communication skills and in-depth discussion are expected attributes of seminar activity. The topic and scope of the coverage will be defined by the course instructor as consistent with the seminar approach to learning of the university.

MGMT 398. Action Learning (6)
This is an experiential course built around a live project in a local organization. The project-based course is focused on improving business process. Students will work in teams to analyze the current situation and diagnose its problems or opportunities, creatively envision new possibilities, evaluate potential improvements and recommend appropriate solutions. Students will be evaluated by the professor and the project managers at the client organizations. Prereq: ACCT 202, BAFI 355 and MKMR 301. Coreq: Senior standing, SAGES Senior Cap

MGMT 400-TR. MGMT 400 Level Transfer Course (3 - 99)

MGMT 403. Leadership Assessment and Development (3)
This course is designed to increase competitive attractiveness in the marketplace and maximize the added value of the M.B.A. program. The objective of the course is to have students learn a method for assessing and developing in themselves the knowledge and abilities relevant to management throughout their careers. This is accomplished by helping students develop an individualized learning plan to enhance their level of knowledge in 11 fields and 22 abilities. Students engage in a number of assessment activities, then receive feedback and interpret it. This occurs in the context of an Executive Action Team (i.e., students and a facilitator) in which students help each other assess their current capability and future development needs. This course is limited to students in the M.B.A. program.

MGMT 413. Human Value in Organizations (3)
Examines the behavioral sciences relevant to the effective management of people and the effective design of human resources system, structure and policies. Topics include leadership, change management, motivation and pay systems, team dynamics, staffing, decision making, organizational communications, employee participation, performance appraisal, conflict management, negotiation, work design, organizational design, and organizations culture. A variety of methods, including experiential and interactive learning methods, are used to study these topics.

MGMT 413A. Human Values in Organizations (1)
Classes will explore research in the fields of organizational behavior and human resource management and apply this knowledge in actual situations and cases. They will learn
about how to learn from experiences they have in class and in their EATs. Students will be able to directly apply skills learned in class to leadership, project management, task force management, team development, staff meetings, decision making, problem solving, interpersonal relations, environmental analysis, job redesign, organizational change, and labor and human resource policy. Prereq: Open to ACL-MBA students.

MGMT 419. Corporate Field Research (1)
This course is intended for the graduate business student who wishes to gain applied/practical business experience based on his/her intended career path and/or with an organization. This course will assist building required skills and bridge the gap between the classroom and real world application.

MGMT 420A. Dialogues in Top Management I (1.5)
MGMT 420A and MGMT 420B Dialogues in Top Management I and II. Students must take the two courses in sequence. The courses comprise a series of dialogues with teams of top-echelon managers of pre- and post-dialogue student groups; analytic papers based on the content of the dialogues, class discussions, and readings. Readings and class discussions address both the character and dynamics of complex, enterprise-wide management problems and processes of effectively managing them. In open dialogues with practicing top-echelon managers students explore the practice and theory of effective top-echelon/general management. That is management that involves applying concepts and skill across all functional areas of management. Student groups’ analytical essays after each dialogue stimulate in-depth discussion both of possible conceptual models of the management process and of the relationships to it of the course materials in the graduate programs.

MGMT 420B. Dialogues in Top Management II (1.5)
MGMT 420A and MGMT 420B Dialogues in Top Management I and II. Students must take the two courses in sequence. The courses comprise a series of dialogues with teams of top-echelon managers of pre- and post-dialogue student groups; analytic papers based on the content of the dialogues, class discussions, and readings. Readings and class discussions address both the character and dynamics of complex, enterprise-wide management problems and processes of effectively managing them. In open dialogues with practicing top-echelon managers students explore the practice and theory of effective top-echelon/general management. That is management that involves applying concepts and skill across all functional areas of management. Student groups’ analytical essays after each dialogue stimulate in-depth discussion both of possible conceptual models of the management process and of the relationships to it of the course materials in the graduate programs.

MGMT 433. Starting and Managing a Successful Startup Through Critical Phases (1.5)
This course focuses on the key issues in starting and managing a successful startup through the critical phases of growth: Birth, Funding, Pre-Product Launch, Product Launch, Rapid Growth and Exit Strategy. Students will be exposed to prominent alumni who have multiple entrepreneurial experiences enabling future entrepreneurs to avoid pitfalls and communication mistakes that could doom their fledgling company.

MGMT 440. Leadership Assessment and Development II (0)
The exit assessment course (MGMT 440) is aimed at assessing how students’ career goals, values and abilities may have changed since the program began. The course meets for one mandatory half day seminar in the Spring Semester and carries 0 units of credit. In the MGMT 403 course, students were provided the tools and opportunities for self-assessment and career planning. In the very first semester, they completed several assessment instruments (LSI, POQ, 360-Feedback (ECI-U), ASI, My Values, Career Anchors and others). They had to identify their top values, set a career vision and created an individualized learning plan. The ultimate goal was to assure that their personal development and preparation was relevant to, and in alignment with, the relevant requirements of today’s business management careers. This course is specifically designed to identify if a student’s prior learning plan (completed in the MGMT 403 course) still fits with his/her current career reality and to also identify what has changed for him/her. The activities in the course will include: Viewing the current reality of today’s business environment; Revisiting their experience in the MBA program including any internships/jobs; Determining if a student’s values, vision and learning plan still fit; Retaking the 360-Feedback (Emotional Intelligence Competencies) to identify development of competencies; Identifying relevant areas of personal development; Committing to a refined learning plan and goals. Through a highly interactive and team based process, students will be able to reflect on their current reality, get feedback on your personal growth and discover what changes would enhance their professional career journey.

MGMT 447. Chief Officer Dialogues on Information and Management (3)
Each week, Chief Level Officers (CIO, CEO, CFO, CMO, CTO, etc.) from major corporations present the class with live problems in which technology, strategy and operational issues must be integrated in a coherent organizational course of action. Students work in teams to design courses of action in response to those problem situations, which Chief Level Officers then review, critique and discuss. Offered as MGMT 447 and MIDS 447. Prereq: MIDS 409.

MGMT 460. Managing in a Global Economy (3)
Managers need new skills to enable them to manage effectively in what is increasingly a global economy. They need a deeper understanding of cultural differences and how these differences may influence communications with foreign employers, employees, customers, suppliers or partners. They need a better understanding of the economic and political mechanics of the world business system. They need to learn how to find out more about potential opportunities and threats that lie outside the United States. This course is designed to address these needs.

MGMT 464. Business Ethics (3)
This course is built around two core learning tracks. The first is extended analyses of case studies, which identifies ethical problems, diagnoses import, and develops strategic programs to address them. The second learning track uses short pieces of fiction to explore issues of ethical character, leadership, and organizational responsibility. Each student keeps an ethics journal over the course of the semester to reflect on ethical issues, both inside and outside the classroom. In addition, small student groups are formed to write case studies focusing on a business ethics problem.

MGMT 465. Perspectives in European Management (3)
The European Summer Institute provides an introduction to international business through a unique combination of class meetings on campus and a two-week excursion to central Europe. While in Europe, students meet with local business people, consulate officials, and university professors to learn the prerequisites for doing business in the region. The trip features a number of site visits to local companies. (This course may be used for...
of topics, including principles of intellectual property and intellectual property management, business strategies and modeling relevant to the creation of start-up companies and exploitation of IP rights as they relate to biomedical-related inventions. The goal of this two-semester course is to address issues relating to the commercialization of biomedical-related inventions by exposing law students, MBA students, and Ph.D. candidates (in genomics and proteomics) to the challenges and opportunities encountered when attempting to develop biomedical intellectual property from the point of early discovery to the clinic and market. Specifically, this course seeks to provide students with the ability to value a given technological advance or invention holistically, focusing on issues that extend beyond scientific efficacy and include patient and practitioner value propositions, legal and intellectual property protection, business modeling, potential market impacts, market competition, and ethical, social, and healthcare practitioner acceptance. The course will meet over two consecutive semesters—fall and spring—and is six credit hours (three credits each semester). During these two semesters, law students, MBA students, and Ph.D. candidates in genomics and proteomics will work in teams of five (two law students, two MBA students, and one Ph.D. candidate), focusing on issues of commercialization and IP management of biomedical-related inventions. The instructors will be drawn from the law school, business school, medical school, and technology-transfer office. To be eligible for this course, law students must also have a B.S. or equivalent in the life sciences, such as biology, biochemistry, genomics, molecular biology, etc. Offered as MGMT 467, LAWS 367, and GENE 467.

MGMT 495-2. Ames Advanced Business Plan Seminar (0)
This two-semester 6 credit hour course teaches students to write a strategic business plan. Working in teams, students study a Cleveland area business through meetings with company executives, including the CEO, under the supervision of a faculty member and outside planning expert. In Semester One, multiple leading faculty members will conduct classes which focus on key components of a business plan, including marketing, strategy, finance, supply chain and leadership. Semester One will culminate with a case study of an assigned company written by each team. Semester Two is a practicum experience during which student teams write a strategic business plan for their assigned company, once again under the supervision of faculty and outside mentors. Plans will be presented by teams to a Business Plan Competition jury composed of leading private equity executives, investment bankers and/or corporate CEOs.

MGMT 496. Action Learning Preparation: Introduction to Systems Thinking (1)
In preparation for MGMT 497, Action Learning for M.S.M. students, M.S.M. students, assigned to teams, will participate in intensive seminars to learn strategies to organize the projects for MGMT 497 and work effectively with their client organizations.

MGMT 497. Action Learning Project (3)
This course allows teams of students to integrate functional, core knowledge and apply analysis and strategic management skills in a real-world setting. Students will be evaluated by the instructor and the project managers at the client organizations.

MGMT 498. Action Learning (3)
This course allows teams of students to integrate functional core knowledge from the first year of the M.B.A. program and apply analysis and strategic management skills in a real-world setting. Students will be evaluated by the instructor and the project managers at the client organizations. Recommended preparation: Second year full-time M.B.A. status.

MGMT 499. Strategic Issues and Applications (3)
This course wraps up the M.B.A. core by providing an integrative experience of applying the full range of managerial skills addressed throughout the core in a comprehensive case exercise. Students develop, document, and
present comprehensive, implementable strategic and tactical actions programs in groups. Prereq: ACCT 401 and BAFI 402.

MGMT 501. Special Problems and Topics (1 - 18)
This course is offered, with permission, to students undertaking reading in a field of special interest.

MGMT 560. Theoretical Perspectives in Management (3)
This seminar exposes students to management theories from a variety of disciplines. The goal of the course is to help students learn to synthesize and contrast theories to develop hypotheses of their own. Prereq: Ph.D. standing or consent of instructor.

MGMT 570. Research Theory and Method (3)
This seminar explores pertinent issues in the philosophy of social sciences and in the use of quantitative and qualitative research methods. It seeks to clarify pivotal issues in scientific enterprise like the nature of scientific knowledge, the nature of scientific methods, their grounding, issues of ontology and epistemology, rhetoric, and how scientific knowledge relates to the organization of scientific communities. The seminar's objective is to prepare students to think critically about the underlying assumptions and their day-to-day research practices. Prereq: Ph.D. standing.

MGMT 575. Doctoral Research Project (3)
The objective of the course is to produce a stand-alone piece of scholarship in the academic discipline pursued by the student. The paper or project should be of publishable quality as judged by the instructor. The work of the student is to be accomplished on the independent study basis under the direction of a faculty member. Although there are no specific course prerequisites, the understanding is that all other course work should have been completed to be admitted into the class. Prereq: Ph.D. standing.

MGMT 601. Special Topics (1 - 18)
This course is offered, with permission, to Ph.D. candidates undertaking reading in a field of special interest.

MGMT 602. Advanced Topics (1 - 18)
This is a course of flexible design to meet advanced theoretical and/or methodological needs of doctoral students. Approval is needed from the instructor, and it requires a letter grade.

HEALTH SYSTEMS MANAGEMENT COURSES (HSMC)

HSMC 406. Innovation and Entrepreneurship (2)
The purpose of this module is to acquaint and ultimately engage clinical researchers with the business of innovation and entrepreneurship. Goals include: (1) to provide researchers with many of the skills that they would need to translate academic research into commercial uses; (2) to sensitize clinical researchers to the goals of the business community and facilitate their ability to work with the private sector on technology development; and (3) to make clinical researchers aware of the processes of academic technology development and transfer. Sessions consist of lectures and case discussion facilitated by the instructor. Some sessions include members of the business community as guest lecturers. As an example, students will discuss the financing of new companies with local venture capitalists. Student products include the evaluation of the commercial potential of a university technology in which they apply their new knowledge about commercialization of scientific discoveries. Offered as CRSP 503, ECON 406, and HSMC 406.

HSMC 420. Health Finance (3)
Exploration of economic, medical, financial and payment factors in the U.S. healthcare system sets the framework for the study of decisions by providers, insurers, and purchasers in this course. The mix of students from various programs and professions allows wide discussion from multiple viewpoints. Offered as BAFI 420 and HSMC 420. Prereq: ACCT 401.

HSMC 421. Health Economics and Strategy (3)
This course has evolved from a theory-oriented emphasis to a course that utilizes economic principles to explore such issues as health care pricing, anti-trust enforcement and hospital mergers, choices in adoption of managed care contracts by physician groups, and the like. Instruction style and in-class group project focus on making strategic decisions. The course is directed for a general audience, not just for students and concentration in health systems management. Offered as ECON 421, HSMC 421, and MPHP 421.

HSMC 427. Health Law (3)
The course examines the nature and structure of the health care system; the relationship between patient, provider, and payer; private legal controls on health care delivery such as malpractice and informed consent law; and public controls in the form of government regulatory and payment programs. Offered as HSMC 427 and LAWS 227.

HSMC 432. Health Care Information Systems (3)
This course covers concepts, techniques and technologies for providing information systems to enhance the effectiveness and efficiency of health care organizations. Offered as HSMC 432, MIDS 432, and MPHP 532.

HSMC 446. Models of Health Care Systems (1.5)
This course is for professionals who will pursue their careers in, or associated with, the health care industry; and therefore, need to understand the structure, operations and decision influences in the health care delivery system. The course is intended to develop competence and confidence in the participant's ability to understand and operate in the industry. the largest and, perhaps, the most complex in the United States. It is applicable to the private and public, profit and non-profit sectors. In this course students are introduced to: the different systems of care delivery; their organization and operations; their markets and the nature of the demand for their services; and the dynamics of their interaction among themselves and with other entities in the industry (e.g., payors/insurers, regulators and accreditation, technology and pharmaceutical suppliers). Offered as HSMC 446 and IIME 446.

HSMC 447. Regulatory Affairs for the Biosciences (1.5)
This mini-course introduces students to the Food and Drug Administration (FDA) and the laws and regulations it enforces. A scientific regulatory agency with far reaching enforcement authority. FDA is the most powerful consumer protection agency in the world. This course will familiarize students with FDA's mission, philosophy and organizational structure, as well as policy and procedure it uses to ensure the safety and effectiveness of the food, drugs, biologics, cosmetics, medical devices and radiation-emitting products it regulates. Recommended preparation: Enrollment in the MEM Biomedical Entrepreneurship Track. Offered as BIOS 447, HSMC 447, and IIME 447.

HSMC 448. Engineering Statistics for Biosciences (3)
This course provides an introduction to bio-statistics, emphasizing experimental design, analysis of data, and special emphasis on statistical and financial aspects of randomized clinical trials for biomedical applications. There will be a final project involving development of a clinical trial protocol including the experimental design, recruitment and
retention strategy, analysis plan and budget. Offered as BIOS 448, HSMC 448, and IIME 445.

HSMC 450. Health Care Economics for the Biosciences (1.5)
This course utilizes economic principles to explore such issues as health care pricing, anti-trust enforcement and pharmaceutical economics, choices in adoption of managed care contracts by physician groups, and the like. Instruction style and in-class group project focus on making strategic decisions. The course is directed for a general audience, not just for students and concentration in bioscience or health systems management. Offered as BIOS 450, ECON 450, and HSMC 450.

HSMC 456. Health Policy and Management Decisions (3)
This seminar course combines broad health care policy issue analysis with study of the implications for specific management decisions in organizations. This course is intended as an applied, practical course where the policy context is made relevant to the individual manager. Offered as HSMC 456 and MPHP 456.

HSMC 501. Special Problems and Topics (1 - 18)
This course is offered, with permission, to students undertaking reading in a field of special interest.

HSMC 502. Health Care Executive Education Series (1 - 3)
Students may choose six out of eight all day Friday seminars in the Health Care Executive Education Series, plus completion of a paper covering an aspect of the management of health care systems. Registration is 1 credit for fall semester and 2 credits for the spring semester as seminars begin in the fall and continue through the spring semester. Limited to students admitted to the Health Systems Management Certificate program and those with approval from Mindy Kinnard at 216-368-6405.

HSMC 601. Special Problems and Topics (1 - 18)
This course is offered, with permission, to Ph.D. candidates undertaking reading in a field of special interest.

EXECUTIVE DOCTOR OF MANAGEMENT (EDMP)

EDMP 610. Culture and World Politics (3)
Religion, ethnicity, and nationalism have assumed major political significance in the post Cold-War and post-9/11 eras. The course examines ideas of political democracy and economic liberalism in relation to different cultural and religious ideas and explores relationships among social values, political structures, and economics.

EDMP 611. Theory and Practice of Collective Action (3)
The ability of autonomous and interdependent parties to coordinate actions, or to act cooperatively, affects a wide range of organizational and social problems. This course addresses the theory and practice of collective action in local, national and global contexts. Case studies of collective action problems, such as environmental protection, community revitalization, and the mobilization of interest groups will be discussed.

EDMP 612. Identifying a Personal Research Domain (3)
The first course in the E.D.M. inquiry sequence provides an introduction to practitioner scholarship and an opportunity for participants to identify and develop their personal research domains. Participants gain skills in inductive, interpretive modes of research, in literature searching and synthesizing, and in conceptualizing. These skills are put to use by interacting with practitioners and literature in order to conceptualize a research question or issue. This work specifies an “action” or “practice” problem to be addressed during the three years of the program, and it serves as a first draft of a more thorough conceptual model to be completed in the second semester of the first program year. The preliminary conceptual model includes rich narratives and the identification of casual relationships among relevant constructs.

EDMP 613. Leading Change (3)
Sustained, desirable change (SDC) drives adaption, growth and life itself. In this course, we will attempt to answer two questions: (1) What is the process of sustained, desirable change? and (2) What is the role of a leader? Concepts from complexity theory will be used, including understanding the multilevel nature of SDC at the individual, dyad team, organization, community, country, and global levels. Intentional Change Theory (ICT) will be used as the organizing concept for the changes studied.

EDMP 614. Business as a Dynamic System (3)
This course examines the evolution of large-scale business firms as a result of technological and organizational change. It deals with the role of history, culture and finance in generating business organizations in various countries. This course also studies regional innovation systems, as well as the digital economy: what its main features are, what is genuinely new, and what the implications are for business organizations and industry clusters.

EDMP 616. Global Economic Systems and Issues (3)
This course provides a framework and analytical tools for understanding globalization and international economic relations in the context of the global political system. It analyzes the economic and political forces that are shaping global cooperation on economic matters, the role and impact of international economic institutions such as the World Bank, the International Monetary Fund, and the World Trade Organization, and evolving forms of regional governance, such as the European Union. It covers national and international policies and development and the causes and cures of international financial crises. The course revolves around concepts of efficiency, equality, power, and institutions in the making of public policy towards globalization of communications and transportation.

EDMP 617. Technology and Social System Design (3)
Managers are designers who shape the social and technical world we inhabit. This course explores the process of design and asks how managers can become better designers who anticipate and evaluate the social, economic, and political consequences of existing and emerging products, processes organizational forms.

EDMP 620. Synthesis and Application of Knowledge (3)
This capstone inquiry seminar focuses on how different methodological techniques complement and conflict with each other and how they may be used in concert. The seminar emphasizes understanding findings from a variety of studies and translating them into common language, thus permitting decision making and action.

EDMP 621. Applied Research I (3)
The Applied Research component of the E.D.M. Program integrates conceptual analysis with managerial and social policy. This seminar is dedicated to writing the proposal for students’ applied research projects, which are undertaken as independent work during the third year.

EDMP 622. Thematic Elective I (1 - 3)
Participants in the E.D.M. Program take a selected sequence of two coordinated elective courses that provide opportunities for advanced study in topic- or sector-specific ar-
and ethical questions pertaining to the definition of research is evaluated and length, intensity and complexity of research reports at the end of the first year of the program. The course conveys how to generate research ideas by critically reviewing literature and developing ideas that contribute to a problem or issue of interest by working with theory and extending previous research. The practicality of conducting certain kinds of research is evaluated and length, intensity and ethical constraints of different research efforts are examined. Each student produces a report communicating and supporting a conceptually sound and pragmatically useful model of some real world phenomenon. The paper defines a problem of interest and its research design, and fieldwork for data collection. The purpose of these courses is to recognize the work the students are doing to conduct and present their individualized research at a high quality level. Activities conducted under the Directed Studies courses are dedicated to the collection of qualitative or quantitative data and the preparation of research reports. 

EDMP 643. Foundations for Quantitative Inquiry (3) This course aims to develop the basic foundation of statistical concepts and skills for designing and executing generalizable studies. It focuses on building competence in model building, construct measurement, research design, data collection methodologies, and application of analytical software commonly involved in quantitative inquiry. Covered topics include framing research questions, reliability ad validity of measurement, quasi-experimental research design, and fieldwork for data collection. Classes are designed to balance between the theory and practice of quantitative research design, and will be linked to the participant’s own research projects. Prereq: EDMP 641.

EDMP 644. Multivariate Data Analysis (2) Building on instruction in univariate statistics, this course covers the fundamental assumptions, principles, and applications of multiple regression and structural equation modeling methodologies for analyzing quantitative data. It focuses on building competence in analytical skills for testing hypotheses guided by a conceptually sound and pragmatically useful model of some real world phenomenon. Analytical software used include SPSS and AMOS. Prereq: EDMP 641.

EDMP 645. Critical Applications and Research Project Issues (4) Using the multivariate and research design toolkit developed in related courses, this course focuses on critically analyzing selected pieces of published applied and policy research to develop a critical appreciation of issues and debates that have wide applicability and relevance. In addition, this course addresses common application issues that may arise during the participants’ execution of individual research projects. Application of critical analysis and appreciation approach to the participant’s own research work is encouraged and supported by sharing and discussing common themes and problems.

EDMP 646. Advanced Analytical Methods for Generalizable Studies (3) This course addresses advanced topics in regression and structural equation modeling such as confirmatory factor analysis, mediator/moderator analysis, multiple-group analysis, management of missing data, and analyzing qualitative/categorical data. These analytical methods are intended to enhance the participant’s toolkit to facilitate a strong bridge to the academic literature and the application to specific data based problems that arise in applied research. 

EDMP 647. Introduction to Statistics (1) This course introduces basic statistical concepts and their application in social research building, elementary statistical methods and applications, descriptive statistics, random variables, sampling distribution, estimation, hypothesis tests. The course also provides an introduction to data analysis using SPSS computer software.

EDMP 660. Directed Studies: Qualitative Fieldwork (1 - 3) This course is part of the qualitative research sequence which began with EDMP 638: Qualitative Research Methods I. In this qualitative fieldwork course, students will conduct a series of interviews based on the research proposal and interview guide which they de-
veloped in EDM 638. Students are expected to complete their interviews and work with faculty to begin initial analysis of the interview data.

EDMP 661. Directed Studies: Qualitative Research Report Preparation (1 - 3)
This course is dedicated to individualized student research. Student research objectives and plans are implemented through qualitative and quantitative fieldwork, report preparation, and manuscript development and submission.

EDMP 662. Directed Studies: Quantitative Fieldwork (1 - 3)
This course is dedicated to the design, development and execution of the student’s individualized research work. Each student will be expected to develop a proposal for research work that aims to empirically test a conceptual model to address a significant substantive problem. Following faculty approval and feedback, each student will be expected to conduct field work for data collection in accord with a research design that yields high quality data. Completion of the course requirements will rest on the satisfactory completion the fieldwork as per guidelines provided in the course.

EDMP 663. Directed Studies: Quantitative Research Report (1 - 3)
This course is dedicated to the execution and completion of student’s individualized research work. Each student will be expected to execute a research study to provide reliable and valid conclusions using rigorous quantitative methodologies and write a publishable quality paper for submission to faculty for approval. It is highly desired that student papers be submitted for presentation and publication at appropriate academic and/or practitioner outlets. Completion of the course requirements will rest on the satisfactory completion and submission of the research paper as per guidelines provided in the course.

EDMP 664. Research Dissemination (3)
This course prepares students to publish their work in academic journals as well as in high quality practitioner outlets.

EDMP 665. Research Methods (3)
This course addresses key conceptual and practical issues in the conduct of both qualitative and quantitative inquiry. These issues include identifying a specific topic of research interest, strategies for literature review, and developing plans and procedures for preliminary data collection from the field. The objective is to prepare students for more advanced theoretical projects as well as actual fieldwork and research projects in later stages of the E.D.M. Program.

EDMP 667. Frontiers of Management Research I (3)
The purpose of this seminar introduces students to a variety of topics in the various fields of management, presents issues at the frontiers of knowledge in each field, and discusses methodological issues as well as the implications of the research for practice/policy. This course draws on expertise from faculty in the Weatherhead School, the university, and EDM alumni.

EDMP 668. Frontiers of Management Research II (3)
This seminar is a continuation of Frontiers in Management I and introduces students to further disciplines in the field of management. Issues at the frontiers of knowledge in a variety of fields are presented and methodological issues as well as the implications of the research for practice/policy are discussed. This course draws on expertise from faculty in the Weatherhead School, the university, and EDM alumni.

EDMP 669. Applied Research Project Continuation (1 - 9)
Program participants who have not successfully completed their Applied Research Projects before the start of the fall semester following their third year of enrollment in the E.D.M. Program will have seven years from the date of their initial matriculation into the Program to complete degree requirements. If their work continues beyond the normal 54 credit hours of designed courses, they will register for Applied Research Project Continuation. Continuation credits may also be used for students enrolling in the Program after August 2000, who have not completed their required course work and research requirements within the Program’s required 54 semester credit hours.

ENTREPRENEURIAL STUDIES (ENTP)
ENTP 301. Entrepreneurial Strategy (ENTP)
This course is designed to show students how to identify potential business opportunities, determine what constitutes a good business model, and to strategically implement a business proposal. Topics of focus include an overview of the entrepreneurial process, determinants of venture success in high tech and other business environments, and strategies for industry entry and venture growth.

Prereq: ACCT 101 or ACCT 303. Coreq: At least sophomore standing.

ENTP 310. Entrepreneurial Finance - Undergraduate (3)
This course explores the financing and financial management of entrepreneurial new ventures. The course will focus on issues of financial management of new ventures (forecasting cash flows, cash flow management, capital budgeting, valuation, capital structure) and the various financial methods and mechanisms available to entrepreneurs (bootstrapping, angel investors, venture capitalists, IPOs). Prereq or Coreq: ACCT 101 or ACCT 303 or consent of instructor.

ENTP 311. New Venture Creation (3)
This course explores all aspects of the creation of a new venture from idea through startup, growth, and beyond. Students will learn how to evaluate opportunities, develop strategies, create a business plan and acquire financing for a new venture. In this course students will develop a business plan for a new venture.

ENTP 312. Senior Seminar in Entrepreneurship (3)
The main objective of this course is to meet the advanced needs of our students in honing their entrepreneurial skills. This objective will be achieved through readings and case instruction, presentations by entrepreneurs who are actively engaged in starting new ventures and the commercialization of new technologies, and the successful completion of a research project for an entrepreneurial venture. These projects will be graded by the professor and presented to the class and to the client entrepreneur. Prereq: ENTP 310 and ENTP 311.

ENTP 418. Enterprise Development (3)
Course features new product launch by students and new business idea competition judged by actual venture capitalists. Students will also learn how to acquire control of an existing company, including valuation methods, sources of funding, tactics for finding companies to buy, and how to negotiate the purchase of a business. Also includes actual student negotiation with sellers of a company. Course is designed to accelerate career success through bold entrepreneurial strategies. Offered as ENTP 418 and PLCY 418.

ENTP 419. Entrepreneurship and Personal Wealth Creation (3)
Course explores the accumulation of personal wealth utilizing entrepreneurial strategies. The underlying competencies of successful entrepreneurs are identified and applied to
individual lives of students. Active entrepreneurs will be studied, and original case studies of start-ups and acquisitions provide the basis for class exercises. Offered as ENTP 419 and PLCY 419.

**ENTP 420. Managing the Family Firm (3)**
The vast majority of U.S. firms are family controlled and present special problems in strategic management including the interaction of family and firm objectives, executive succession, management development and motivation, finance, estate planning, etc. This course explores solutions to these problems in the context of guiding the firm’s growth through the threshold between personal and professional management. The course pedagogy is participative and experiential. Offered as ENTP 420 and PLCY 420.

**ENTP 422. Managing an Emerging Growth Enterprise (3)**
Students are exposed to what it is like to work in an emerging growth company with sales under $100 million. Prospective students might be individuals who are considering employment with middle market company, entrepreneurs who may start a company, or business persons who may buy a middle market company. The learning experience will stem from participating in an actual semester-long project. In-class discussions include: business planning, selling, managing technology transfer, and creativity/innovation, and guest presentations by CEOs from middle market companies. Offered as ENTP 422 and PLCY 422. Prereq: ACCT 401, BAFI 402, MKMR 403 and MIDS 409.

**ENTP 424. Management of Research and Development (organization, strategy, finance) as they apply to new venture creation and growth. While most of the examples in class will be drawn from new venture formations, the principles also apply to new business development in corporate settings and to non-profit entrepreneurship. Offered as ENTP 424 and PLCY 424.**

**ENTP 427. Entrepreneurial Strategy (3)**
Creating and managing a new venture inside or outside a corporation is a task that few individuals are able to accomplish, even though many profess the desire. The primary goal of this course is to provide an understanding of entrepreneurship and the entrepreneurial process. The course will broaden a basic understanding obtained in the functional areas (organization, strategy, finance) as they apply to new venture creation and growth. While most of the examples in class will be drawn from new venture formations, the principles also apply to new business development in corporate settings and to non-profit entrepreneurship. Offered as ENTP 427, PLCY 427.

**ENTP 429. New Venture Creation (3)**
The primary goal of this course is to provide an understanding of entrepreneurship and the entrepreneurial process. The course will broaden a basic understanding obtained in the functional areas as they apply to new venture creation and growth. Offered as ENTP 429 and PLCY 429.

**ENTP 439. Entrepreneurship - Entrepreneurship within the Corporation (3)**
Intrapreneurs are the entrepreneurs within corporations who combine innovation, creativity and leadership to develop and launch new products, new product lines, and new business units that grow revenues and profits from within. Intrapreneurial innovation and creativity have never been needed more by U.S. corporations than they are today. Numerous corporations have been increasing revenues through mergers and acquisitions, rather than through internal product innovation and new business creation. Today, many companies are returning to their entrepreneurial roots. Revitalizing existing companies through intrapreneurial activity creates new capital, retains and increases jobs, and creates exciting places to work and achieve. The purpose of this course is to encourage students to research and understand the theories, principles, concepts, and practices of entrepreneurship within organizations—Intrapreneurship. Students will become acquainted with trends, expectations, organizational challenges to innovation, and opportunities in today’s corporate America. Offered as ENTP 439 and PLCY 439.

**ENTP 444. Entrepreneurial Finance (3)**
The objective of this course is to introduce students to the issues of financial management and capital formation in new ventures. The course will address issues of estimation of cash requirements, development of pro forma financial plans, firm valuation and the process and tools used in raising debt and equity financing. Bootstrapping, angel investing, venture capital, strategic alliances and initial public offerings will be covered. The emphasis is on the entrepreneur and how he/she can assess financial needs and develop a sensible plan for acquiring financial resources in a manner that is consistent with their financial needs and other strategic goals. Offered as BAFI 444 and ENTP 444. Prereq: BAFI 402.

**ENTP 446A. Venture Law (2.5)**
This course will provide an overview of the legal issues associated with venturing in the life sciences. The course will cover the legal aspects of company formation, management of intellectual property, strategic alliances, compensation, and securities laws. Recommended preparation: Full time M.B.A. status. Offered as BIOS 446A and ENTP 446A.

**ENTP 446B. Venture Law (3)**
This course will provide an overview of the legal issues associated with venturing in the life sciences. The course will cover the legal aspects of company formation, management of intellectual property, strategic alliances, compensation, and securities laws. Recommended preparation: Evening M.B.A. status. Offered as BIOS 446B and ENTP 446B.

**ENTP 450. Entrepreneurial Marketing-M.B.A. (3)**
This course addresses the entrepreneurial/intrapreneurial process of commercializing an idea for a market opportunity. Students select an opportunity and develop a deployable, one-year market entry program and a five-year strategic marketing program. Emphasis is on the entrepreneurial marketing decision process, including defining the business, defining the market, specifying customer perceived value, assessing competitive capability and advantage, identifying and properly using secondary and primary information, and de-
The course will provide an overview of the legal issues associated with venturing in the life sciences. The course will cover the legal aspects of company formation, management of intellectual property, strategic alliances, compensation, and securities laws. Recommended preparation: Full time M.B.A. status. Offered as BIOS 446A and ENTP 446A.

BIOS 446B. Venture Law (3)
This course will provide an overview of the legal issues associated with venturing in the life sciences. The course will cover the legal aspects of company formation, management of intellectual property, strategic alliances, compensation, and securities laws. Recommended preparation: Evening M.B.A. status. Offered as BIOS 446B and ENTP 446B.

BIOS 447. Regulatory Affairs for the Biosciences (1.5)
This mini-course introduces students to the Food and Drug Administration (FDA) and the laws and regulations it enforces. A scientific regulatory agency with far reaching enforcement authority, FDA is the most powerful consumer protection agency in the world. This course will familiarize students with FDA’s mission, philosophy and organizational structure, as well as policy and procedure it uses to ensure the safety and effectiveness of the food, drugs, biologics, cosmetics, medical devices and radiation-emitting products it regulates. Recommended preparation: Enrollment in the MEM Biomedical Entrepreneurship Track. Offered as BIOS 447, HSMC 447, and IIME 447.

BIOS 448. Engineering Statistics for Biosciences (3)
This course provides an introduction to bio-statistics, emphasizing experimental design, analysis of data, and special emphasis on statistical and financial aspects of randomized clinical trials for biomedical applications. There will be a final project involving development of a clinical trial protocol including the experimental design, recruitment and retention strategy, analysis plan and budget. Offered as BIOS 448, HSMC 448, and IIME 445.

BIOS 450. Health Care Economics for the Biosciences (1.5)
This course utilizes economic principles to explore such issues as health care pricing, anti-trust enforcement and pharmaceutical economics, choices in adoption of managed care contracts by physician groups, and the like. Instruction style and in-class group project focus on making strategic decisions. The course is directed for a general audience, not just for students and concentration in biosciences or health systems management. Offered as BIOS 450, ECON 450, and HSMC 450. Prereq: ECON 403.

EXECUTIVE MBA (EMBA)

EMBA 412. Stakeholder Management - Leadership (2)
Participants will be challenged to enhance their leadership capacity by assessing and analyzing the knowledge, abilities, values and interests relevant to executives. The course will also explore issues of ethical character, leadership, and organizational responsibility as well as corporate governance. Prereq: E.M.B.A. candidates only.

EMBA 415. EMBA Execution - Leadership (4)
The modules in this course will prepare executives to lead their organizations by understanding how to “execute” their plans. Participants will complete the LEAD module. Advanced negotiations will also be covered in this course. The focus is on enhancing individual as well as organizational performance and competitive advantage through “principled negotiation,” “win-win” bargaining and collaborative approaches to bargaining. Prereq: E.M.B.A. candidates only.

EMBA 417. TEAMS (1)
This course enables the formation of E.M.B.A. study groups and classroom learning environment by introducing participants to their adult learning styles, models of group decision-making, theories of team development and rules of engagement for effective learning teams. Prereq: E.M.B.A. students only.

EMBA 425. EMBA Execution - Management (4)
The modules in this course will prepare executives to manage their organizations by understanding how to “execute” their plans. Participants will focus on the role of a Product/Brand Manager in profitably managing a firm’s existing offerings and identify areas for growth. The course also presents first-hand issues in international management. It accomplishes this by means of readings, a written assignment and, most importantly, an international trip designed to witness different management cultures, styles and environments for business in the international community. Prereq: E.M.B.A. candidates only.

EMBA 431. Application Project I (5)
The first year application project is built around a live situation in your organization enabling you to apply the concepts and skills you are learning in the E.M.B.A. program immediately. The project should focus on an important opportunity or issue. In undertaking the project, you will learn the generic problem solving approach and how to apply it in your organization. You will also investigate techniques for process analysis and project management. The outcome of your work will be a concrete result for your organization that should provide a return at least equal to the cost of your degree. Prereq: E.M.B.A. candidates only.

EMBA 432. Application Project II (5)
This is an experiential course built around a live project in the student’s organization. The project will focus on improving a business process or making a challenging strategic decision. Students must lead a team to do this project. The team will analyze the current situation and diagnose its problems or opportunities, creatively envision new possibilities, evaluate potential improvements and recommend and begin to implement appropriate solutions. Students will learn the generic problem solving approach used by many major consulting firms and how to apply it in their organizations. They will also investigate techniques for process analysis and project management. The outcome of the project will be a concrete result for the organization. Prereq: E.M.B.A. candidates only.
EMBA 434. EMBA Process - Application Project II (.5)
This is an experiential course built around a live project in the student’s organization. The project will focus on improving a business process or making a challenging strategic decision. Students must lead a team to do this project. The team will analyze the current situation and diagnose its problems or opportunities, creatively envision new possibilities, evaluate potential improvements and recommend and begin to implement appropriate solutions. Students will learn the generic problem solving approach used by many major consulting firms and how to apply it in their organizations. They will also investigate techniques for process analysis and project management. The outcome of the project will be a concrete result for the organization. Students will also serve as coaches for other classmates and practice their consultative skills. Prereq: E.M.B.A. candidates only.

EMBA 435. EMBA Execution - Application II (1)
This is an experiential course built around a live project in the student’s organization. The project will focus on improving a business process or making a challenging strategic decision. Students must lead a team to do this project. The team will analyze the current situation and diagnose its problems or opportunities, creatively envision new possibilities, evaluate potential improvements and recommend and begin to implement appropriate solutions. Students will learn the generic problem solving approach used by many major consulting firms and how to apply it in their organizations. They will also investigate techniques for process analysis and project management. The outcome of the project will be a concrete result for the organization. Students will also serve as coaches for other classmates and practice their consultative skills. Prereq: E.M.B.A. candidates only.

EMBA 436. Accounting for Business Executives (2.5)
This course is an introduction to financial and managerial accounting, rather than a course in introductory accounting. This course is designed for the business professional and is intended to prepare the student to use the information prepared by accountants. It will not dwell in detail on the technical aspects of accounting or bookkeeping. In addition, this course is designed to help the student become an effective user of cost information, from the perspective of parties internal to the firm. This aspect of accounting is a compilation of techniques rather than a set of rules. Since the information is for private use, the goal is to create the most meaningful and useful data for use by managers. Assignments will be designed to develop the student’s ability to analyze and interpret accounting data and to more effectively utilize accounting data in day to day business decisions. Finally, this course is intended to strengthen abilities to identify problems and opportunities, to search out and analyze desired information leading to a well-reasoned conclusion, and to perform sensitivity analysis around that conclusion, using financial information. Prereq: E.M.B.A. candidates only.

EMBA 437. Economic Analysis for Managers (2)
This course, which is limited to students in the Executive M.B.A. program, explores the basic elements of the economic system which the executive needs to know in order to understand how the firm interacts with the system and how economic factors affect decision making. Prereq: E.M.B.A. candidates only.

EMBA 438. Business Statistics And Quantitative Analysis (2)
In this course, students study the use of modern quantitative and business statistics to support the executive decision-making process. With the help of computer software, the models examined assist in describing and analyzing problems and suggesting possible managerial actions. The techniques discussed include tools for decision making under uncertainty including regression analysis. Prereq: E.M.B.A. students only.

EMBA 439. Corporate Finance (3)
The central organizing principle of this course is to familiarize the class with the basics of valuation. This first course in finance introduces the tools and methods employed in valuation of projects and corporate securities. Valuation involves the determination of (i) cash flows of the firm, project or financial assets and (ii) the discount rates that are used to compute the present values of the cash flows. Asset pricing models provide the underpinnings for the development of the discount rates. The material is synthesized in capital budgeting exercises which are cost-benefit analyses of capital project cash flows to evaluate whether they are value enhancing. Prereq: E.M.B.A. candidates only.

EMBA 440. System Thinking (1)
The need to deal with ever more complex systems became apparent during the two world wars. Many of the systems developed to aid in the war effort, particularly those that integrated people and technologies, could not be completely understood using the tools of analysis. Breaking a complex system down into its components—which we have been taught to do since childhood—only takes us so far. To understand a system’s purpose and the dynamics that keep it functioning requires another kind of thinking. Drawing on ideas from biology and holistic psychology, systems thinking provides principles and tools to aid in understanding such purposeful systems. Prereq: E.M.B.A. candidates only.

EMBA 441. Leadership Assessment and Development (1)
The primary objective of Leadership and Executive Assessment and Development (LEAD) is to learn a method for assessing your knowledge, abilities, values, and interests relevant to leadership and executive management so that you will be able to develop and implement a plan for enhancing your leadership and executive capability throughout your career and life. The enabling objectives are: (a) To systematically identify your current and desired capability (i.e., knowledge, abilities, values, and interests); (b) To develop an individualized learning agenda and plan for the next 3-5 years; and (c) To explore techniques to assist others in doing the same. In this first module of the three-module series you will learn about the concepts of resonant leadership and emotional/social intelligence. You will also draft a personal vision statement, as well as write an essay on your vision and values. Prereq: E.M.B.A. candidates only.

EMBA 442. Innovation (1)
Organizations are under constant pressure to be efficient and productive in order to generate (often short-term) profit. At the same time they must innovate to remain competitive in the long-term. Innovation involves the generation, development, and delivery of new products, processes, or businesses. Intrapepreneurs are those who can successfully bring new ideas to fruition in established organizations. Innovation in the context of an established organization requires that intrapreneurs fundamentally understand the dynamics of innovation and innovation management. This course introduces fundamental concepts associated with innovation in the context of an established organization. Prereq: E.M.B.A. candidates only.

EMBA 443. Managing Operations (2.5)
This course is a broad-spectrum course with emphasis on Lean production techniques helpful to the practice of management in general
and at any level. We will discuss commonly occurring application problems in quality management, just-in-time production, operational flexibility and project management. The methodologies presented are applicable to manufacturing as well as service organizations like health care, insurance, hotel-management, airlines and government related operations. The emphasis will be on the fundamentals of the operations function in an organization but we will explore the interface of operations management with other functional areas such as marketing, finance, accounting, etc. This course is not oriented toward specialists in operations management. Its goal is to introduce students to the environments and help them appreciate the problems that operations managers are confronted with. Prereq: E.M.B.A. candidates only.

EMBA 444. Execution/Change (1.5)
The global business landscape is littered with expansive, well intended strategies that failed. Why? Often because leaders fail to identify and invest in the full range of the projects required to support those strategies. Even as strategists break their plans into doable chunks, they seldom work with project leaders effectively. Many leaders neglect to revise their company’s strategic portfolio to fit the demands of the dynamic environment and they lose touch with strategic initiatives long before all ports are transferred and outcomes are realized in operations. In this course, we will expose you to concepts and tools by which you can set the purpose, communicate goals, carved the goes out into discrete projects with measurable outputs that will give clear line of sight or people lower in the organizational hierarchy about what the purpose is. This clarity about the purpose and goal congruence is the critical elements of successful execution. Prereq: E.M.B.A. candidates only.

EMBA 445. Corporate Strategy (2)
Topics covered in this course are as follows: Concepts that underlie corporate-wide success; discerning the inimitable capabilities of your organization; recognizing synergies across a firm’s multiple lines of business and leveraging these capabilities in new businesses; developing new markets; identifying markets that have a high probability for success; how to choose between Greenfield entries, joint ventures and acquisitions; techniques for managing acquisitions. Prereq: E.M.B.A.

EMBA 446. Managing Risk (2)
Some of the most profound developments in finance have been in the area of financial engineering and risk management. Financial engineering has resulted in an explosion of new securities, trading strategies, and in risk management programs. Indeed, in today’s economy over two thirds of large U.S. corporations use one type of financial engineering, namely derivatives, as part of their risk management program. The course seeks to help corporate managers understand how financial engineering can be used to advance the goals and strategies of the firm. This class provides an introduction to the basic building blocks of financial engineering, namely call and put options. These products are to finance, what the periodic table is to chemistry. By meshing options together, the financial engineer can create a financial product that exactly meets specific risk management needs. The course focuses on using derivatives to change a firm’s risk profile with respect to equity, interest rate, foreign exchange, and commodity risks. The ideas here extend to all areas of finance including mergers and acquisitions, international finance, capital budgeting and strategic planning. Prereq: E.M.B.A. candidates only.

EMBA 447. Leadership Assessment and Development (1.5)
The primary objective of Leadership and Executive Assessment and Development (LEAD) is to learn a method for assessing your knowledge, abilities, values, and interests relevant to leadership and executive management so that you will be able to develop and implement a plan for enhancing your leadership and executive capability throughout your career and life. The enabling objectives are: (a) To systematically identify your current and desired capability (i.e., knowledge, abilities, values, and interests); (b) To develop an individualized learning agenda and plan for the next 3-5 years; and (c) To explore techniques to assist others in doing the same. In this third module of the three-module series you will pull together elements from the first two modules to construct an individualized learning plan for your future growth and development. Prereq: E.M.B.A. candidates only.

EMBA 450. Managerial Marketing (2)
This course is designed with three overarching objectives. The first is an emphasis on decision making in a broad range of market contexts. The second objective builds on the notion that decision making is dynamic; that is, market situations demand not just one good decision but a series of them as a situation unfolds (providing new and varied information for each subsequent decision). Integrating concepts from a number of the courses that you are taking concurrently into decision-making about markets is a final objective. Coreq: E.M.B.A. students only.

EMBA 451. Competitive Strategy and Integrated Case (2.5)
This course will help you understand the keys to successful strategic planning - the capabilities needed for competitive advantage in each and every business of a firm. In particular, the course will help you understand the following. Critical capabilities vs. table stakes, how to position the firm in a market segment to maximize the chance of success and the limits to growth of the core business. All of the analysis will be done within a framework that integrates the core concepts developed in the other functional courses. Coreq: E.M.B.A. students only.

EMBA 452. Supply Chain and LEAN (1)
SC and Lean Operations managers are responsible for designing, running, controlling and improving the systems that accomplish production. This course is a broad-spectrum course with emphasis on techniques and information that are helpful to the practice of management in general and at any level. We will discuss commonly occurring application problems such as process analysis, inventory control, quality management, just-in-time concepts, etc. with applications in manufacturing, health care, insurance, hotel-management, airlines and government related operations. The emphasis will be on the fundamentals of the operations function in an organization. Also we will explore the interface of operations management with other functional areas such as marketing, finance, accounting, etc. Coreq: E.M.B.A. students only.

EMBA 453. Leadership Assessment and Development - II (1)
The primary objective of Leadership and Executive Assessment and Development (LEAD) is to learn a method for assessing your knowledge, abilities, values, and interests relevant to leadership and executive management so that you will be able to develop and implement a plan for enhancing your leadership and executive capability throughout your career and life. The enabling objectives are: (a) To systematically identify your current and desired capability (i.e., knowledge, abilities, values, and interests); (b) To develop an individualized learning agenda and plan for the next 3-5 years; and (c) To explore techniques to assist others in doing the same. In this second module of the three-module series you will receive 360-degree feedback on your emotional/social intelligence competencies. You will also
participate in a one-on-one executive coaching session with the instructor. Additionally, working with your group, you will apply the course concepts to the analysis of a current CEO. Coreq: E.M.B.A. students only.

EMBA 454. Cultural Challenges for Global Managers (1)
This course addresses some of the critical cultural issues faced by managers doing business in the global economy, such as: What is Culture? How does it impact business? What opportunities does it present for managers of local, as well as global organizations? Results of cross-cultural research are considered, but the course relies primarily on case analysis and class discussion to engage participants in creating solutions for the thorny issues presented. Prereq: E.M.B.A. candidates only.

EMBA 455. Managing in an Emerging Economy (1.5)
This course will prepare executives to add value to their organizations by understanding how to strategically position an organization for global success. Prereq: E.M.B.A. candidates only.

EMBA 456. Managing in the New Global Economy (1)
This course focuses on how aspects of today’s globalization (especially the reduction of trade barriers, rise of BRIC economies, and globally distributed product development) are impacting company strategies and operations. Prereq: E.M.B.A. candidates only.

EMBA 457. International Trade and Finance (2)
This course consists of two parts. The first part deals with the global trade and direct investment environment. It covers the theories as well as the political economy of international trade and foreign direct investment. Its aim is twofold: (i) to enable an understanding of such technical issues as to how the effects of tariffs and quotas differ or how free trade areas and customs unions differ; and (ii) to provide a systemic view of how government policies and corporate strategies interact in changing the global trade and investment environment of business. The second part of the course deals with regional economic integration and the global monetary system. Its aim is twofold (i) to enable an understanding of such technical issues as to how different stages of economic integration such as free trade areas and customs union differ; how the foreign exchange market functions in terms of different hedging instruments in the context of the international monetary system; and (ii) to provide a systemic view of how government policies and corporate strategies interact in changing the global trade and financial environment of business. Prereq: E.M.B.A. candidates only.

EMBA 464. Legal Environment (2)
This course provides a brief overview of the legal system that managers face, with an emphasis on contracts, corporate law, property rights and the modern regulatory apparatus of government. Prereq: E.M.B.A. candidates only.

QUANTITATIVE METHODS IN MANAGEMENT (QUMM)

QUMM 414. Statistics and Decision Modeling (3)
This course provides the foundations of statistical and operations research methodologies for managerial decision-making. Business statistics focuses on statistical thinking as one of the fundamentals of effective management. Topics covered include sampling and the normal distribution, making inferences from data via confidence intervals and hypothesis tests, and analyzing relationships between samples. Decision modeling of organizational systems uses mathematical and computer models to provide a quantitative perspective on identifying, analyzing and solving complex decision problems. This course includes an introduction to linear programming models and applications, simulation techniques in decision-making, and project management.

QUMM 414A. Statistics and Decision Modeling (1)
This class provides a brief look at management science and selected key tools and applications. Topics include modeling, linear programming, simulation and linear regression. Students should have a background in statistics and college-level algebra. Just-in-time statistics review workshops will be available at the beginning of the semester. Prereq: Open to ACL-MBA students.

QUMM 501. Special Problems and Topics (1 - 18)
This course is offered, with permission, to students undertaking reading in a field of special interest.

QUMM 601. Special Problems and Topics (1 - 18)
This is a course of flexible design in which a student, with the agreement of an instructor in quantitative methods, may pursue a special topic or problem. M.B.A. students should enroll in QUMM 501.
The mission of the Case Western Reserve University School of Medicine is to advance the health of humankind through four interrelated components:

1) Education: To provide the highest-quality humanistic and scientific education for students pursuing the doctor of medicine degree, advanced degrees in the biomedical sciences, and graduate and continuing medical education.

2) Research: To lead in the development of new knowledge in the biomedical sciences, the clinical disciplines, and areas of inquiry that examine the organization and provision of health care services.

3) Clinical care: To deliver excellent clinical care through faculty members and bring leading-edge treatments from the laboratory to practice.

4) Public service: To contribute to the public good -- locally, nationally and globally -- in activities related to health and health care.

Since its founding in 1843, the Case Western Reserve University School of Medicine has been an innovator in medical education and a leader in pioneering research.

The school was one of the first medical schools in the country to employ instructors devoted to full-time teaching and research. Six of the first seven women to receive medical degrees from accredited American medical schools graduated from Western Reserve College (as it was called then) between 1850 and 1856.

Already a leading educational institution for more than a century, in 1952 the School of Medicine initiated the most advanced medical curriculum in the country, pioneering integrated education, a focus on organ systems and team teaching in the preclinical curriculum. This curriculum instituted a pass/fail grading system for the first two years of medical school to promote cooperation among students instead of competitiveness, introduced students to clinical work and patients almost as soon as they arrived on campus, and provided free, unscheduled time in an era when doing so seemed unthinkable. Many other medical schools followed suit, and these components remain at the core of the medical school’s curriculum today.

At least eleven Nobel Prize holders have ties to the School of Medicine:
- John J.R. Macleod, M.B., Ch.B., D.P.H., physiology professor at Case from 1903 to 1918, shared the 1923 Nobel Prize in Physiology or Medicine for the discovery of insulin. Dr. Macleod completed a considerable amount of the groundwork that furthered his understanding of diabetes in Cleveland.
- Corneille J.F. Heymans, M.D., who was a visiting scientist in the Department of Physiology in 1927 and 1928, received the Nobel Prize in Physiology or Medicine in 1938 for work on carotid sinus reflexes.
- Frederick C. Robbins, M.D., shared the 1954 Nobel Prize in Physiology or Medicine for his work on the polio virus, which led to the development of polio vaccines. He received the award two years after joining the medical school. Dr. Robbins was active at the school until his death in 2003, at which time he held the titles of medical school dean emeritus, University Professor emeritus, and emeritus director of the Center for Adolescent Health.
- Earl W. Sutherland Jr., M.D., who had been professor and director of pharmacology from 1953 to 1963, won the 1971 Nobel Prize in Physiology or Medicine for establishing the identity and importance of cyclic adenosine monophosphate (AMP) in the regulation of cell metabolism.
- Paul Berg, Ph.D., who earned his biochemistry degree at the university in 1952, received the 1980 Nobel Prize in Chemistry for pioneering research in recombinant DNA technology.
- H. Jack Geiger, M.D., a 1958 alumnus of the medical school, is a founding member and past president of Physicians for Social Responsibility, which shared the 1985 Nobel Peace Prize as part of International Physicians for the Prevention of Nuclear War, and Physicians for Human Rights (PHR), which shared the 1997 Nobel Peace Prize as part of the International Campaign to Ban Landmines.
- George H. Hitchings, Ph.D., who had been a biochemistry instructor from 1939 to 1942, shared the 1988 Nobel Prize in Physiology or Medicine for research leading to the development of drugs to treat leukemia, organ transplant rejection, gout, the herpes virus and AIDS-related bacterial and pulmonary infections.
- Alfred G. Gilman, M.D., Ph.D., a 1969 graduate of the medical school, shared the 1994 Nobel Prize in Physiology or Medicine for identifying the role of G proteins in cell communication.
- Ferid Murad, M.D., Ph.D., a 1965 graduate of the medical school, shared the 1998 Nobel Prize in Physiology or Medicine for discoveries concerning nitric oxide as a signaling molecule in the cardiovascular system.
- Paul C. Lauterbur, Ph.D., a 1951 graduate of the engineering school and a visiting professor of radiology at Case in 1993, shared the 2003 Nobel Prize in Physiology or Medicine for pioneering work in the development of magnetic resonance imaging.
- Peter C. Agre, M.D., who completed a fellowship in hematology at Case while a medical student at Johns Hopkins, shared the 2003 Nobel Prize in Chemistry for discoveries that have clarified how salts and water are transported out of and into the cells of the body, leading to a better understanding of many diseases of the kidneys, heart, muscles and nervous system.

Two other distinguished alumni have served as U.S. surgeon general: Jesse Steinfeld, M.D., a 1949 graduate, was surgeon general from 1969 to 1973, and David Satcher, M.D., Ph.D., graduated in 1970 and was surgeon general from 1998 to 2002.

Dr. Satcher also served as director of the Centers for Disease Control and Prevention from 1993 to 1998, and another medical school graduate, Julie Gerberding, M.D., M.P.H., followed in his footsteps, in 2002 becoming the first woman to be named CDC director.

The school is very proud of the contributions made by its educators and graduates but doesn’t rest on its laurels. Today, the Case School of Medicine is among the top medical schools in the enrollment of minority students, and each class contains a high percentage of women. The curriculum responds to the latest findings in education and medicine and sets the pace for other schools.

The Case School of Medicine was the first
medical school to provide laptop computers to all its students. Today, students use their laptops to access the entire syllabus as well as numerous electronic resources deemed essential by faculty. Students have access to the WiFi network at the medical school and across campus. The wireless network also brings the latest technological resources to the fingertips of faculty during classroom time and facilitates interactive education through video conferencing among many learning sites. But technology is used to enhance, not replace, the faculty-student interaction that occurs in the classroom, the laboratory and small group discussions.

The School of Medicine is the largest biomedical research institution in Ohio, as measured by funding received from the National Institutes of Health, the world’s largest funding agency of biomedical research. The medical school receives more NIH funding than all the other Ohio medical schools combined and is in the top tier of medical schools nationally.

U.S. News and World Report repeatedly has ranked the Case Western Reserve School of Medicine as one of the top research medical schools in the country.

In 2002, the school became only the third institution in history to receive the best review possible from the body that grants accreditation to U.S. and Canadian medical schools, the Liaison Committee on Medical Education. Also in 2002, the school built on its tradition of innovation in education when the university and the Cleveland Clinic Foundation entered into an agreement to form the Cleveland Clinic Lerner College of Medicine at Case Western Reserve University, with the first class matriculating in 2004.

HISTORY

Founded in 1843 as the Medical Department of Western Reserve College (and popularly known then as the Cleveland Medical College), the school moved into its first permanent home, in downtown Cleveland, in 1846. In 1915, a 20-acre site was secured for a medical center in University Circle, the current home of Case Western Reserve University, its School of Medicine, and two of the school’s affiliated hospitals, University Hospitals of Cleveland and the Louis Stokes Cleveland Department of Veterans Affairs Medical Center. University Circle also is home to many of the country’s outstanding cultural and educational institutions.

In 1924, the School of Medicine moved into the most modern and best-equipped preclinical science building in the country at that time. That building, donated by Cleveland industrialist Samuel Mather, remains an integral part of the medical school complex. It was named the Harland Goff Wood Building in 1993 in honor of the late chair and professor of biochemistry and former provost of the university.

In 1971, the Health Sciences Center was completed to house the university’s medical, dental and nursing schools, as well as the Health Center Library. In 1994, the health sciences complex was named for now-retired U.S. Congressman Louis Stokes. The proximity of these excellent research and educational centers to other prestigious university departments, including science, engineering and social sciences, stimulates uniquely creative interaction among researchers and educators.

Another giant leap in research capabilities came in the early 1990s, when the Richard F. Celeste Biomedical Research Building, named for the former Ohio governor, was opened. The $70 million building, attached to the Wood Building, added 154,000 square feet of research space and includes conference spaces, a lecture hall, public spaces and a cafeteria.

Recent boosts in research capabilities came with the spring 2003 dedication of a new, eight-floor addition to the School of Medicine’s Wood Building, which added more than 40,000 square feet to the medical school, primarily for research laboratories. Also as part of the project, 30,000 square feet of existing laboratory space in the Wood Building was renovated. And in the fall of 2003, the School of Medicine and University Hospitals of Cleveland dedicated the new, eight-floor Iris S. and Bert L. Wolstein Research Building, adding 320,000 square feet of space for up to 700 researchers.

FACULTY

The university’s medical school educators have received four Abraham Flexner Awards for Distinguished Service to Medical Education, more than have educators at any other medical school in the country, from the Association of American Medical Colleges.

The School of Medicine has 1,670 full-time and 2,104 part-time faculty members who teach in classroom, laboratory, small group and clinical settings. These faculty members work in the medical school’s fifteen preclinical departments, twenty clinical science disciplines, and numerous centers.

EDUCATION

In 2002, the School of Medicine became only the third institution in history to receive the best review possible from the body that grants accreditation to U.S. and Canadian medical degree programs, the Liaison Committee on Medical Education. School of Medicine faculty lead two programs leading to the M.D. at the School of Medicine (the longstanding School of Medicine program, also known as the University Program, and the Cleveland Clinic Lerner College of Medicine at Case Western Reserve University, also known as the College Program, which is scheduled to open in academic year 2004-2005), and one program resulting in an M.D. through the University Program and a Ph.D. in a basic science discipline through the School of Graduate Studies (the Medical Scientist Training Program or MSTP and the M.D./Ph.D. program offered through the Department of Epidemiology and Biostatistics). Also, through the School of Graduate Studies, School of Medicine faculty lead programs resulting in Ph.D. and master’s degrees in basic science disciplines. All of these degree programs are detailed in this School of Medicine section of this General Bulletin.

RESEARCH

As a research institution, the School of Medicine also has a tradition of national leadership. The National Institutes of Health (NIH) is the country’s largest funding source for biomedical research, and the School of Medicine consistently has ranked in the top tier of the nation’s medical schools for federal research funding from the NIH. In fact, fiscal year 2002 (at press time the latest year for which figures were available) marked the 16th consecutive year that NIH funding to the medical school had increased. In fiscal year 2002, the school received more than $239 million in grants from the NIH, including funds to the school’s newest affiliate, the Cleveland Clinic Foundation. The school ranked first among Ohio’s six medical schools, receiving more NIH funding than all the other Ohio schools combined.

CLINICAL CARE

The School of Medicine provides world-class clinical care through full-time faculty at its major affiliates, including the Cleveland Clinic Foundation, Louis Stokes Cleveland Department of Veterans Affairs Medical Cen-
ter, MetroHealth Medical Center, and University Hospitals of Cleveland. Their positions on faculty ensure the transition of leading-edge treatments from the laboratory to the clinical setting.

PUBLIC SERVICE

The School of Medicine also serves the northern Ohio community in many ways. The school’s faculty provide 90 percent of the indigent health care in Cuyahoga County and a majority of the care for indigent patients in Ohio. The School of Medicine’s commitment to the community also is illustrated by a number of programs that link researchers and medical students to the community. These include the Center for Science, Health and Society, the Office of Urban Health, the Center for Adolescent Health, the Center for Health Promotion Research, the Primary Care Track, and the Institute for Public Health Sciences, involving the MetroHealth System and the School of Medicine. This latter program includes research into the prevention, diagnosis and treatment of health problems in groups and communities, as well as educational programs for medical and graduate students, physicians and other health care personnel.

Current community-based programs, including the Urban Area Health Education Center (AHEC) and the award-winning Cleveland Health Education Program, offer opportunities for students from several of the university’s undergraduate and professional schools, especially the medical school, to interact with students in the Cleveland public schools and with the community at large. Also, through the master of public health degree program, students complete a public health field practicum in which they work on a project for a public agency and produce a report for the agency. M.P.H. graduates are qualified to work in local and state health departments, universities and colleges, hospitals, ambulatory medical centers, non-profit organizations, and the insurance and pharmaceutical industries.

A major economic influence on the northern Ohio area, the School of Medicine and its affiliated hospitals are among the largest employers of personnel in the area and further stimulate the economy by providing concepts for technology transfer to the business sector.

On the international level, the School of Medicine has a global health and diseases program focusing on AIDS, parasitic diseases, tuberculosis, malaria and other diseases that directly threaten world health.

ADMINISTRATION

The dean of the School of Medicine, who reports to the president of the university, also is vice president for medical affairs at Case Western Reserve University. The dean is responsible for the administration of the school and for the university’s relationships with affiliated hospitals; medical health-related agencies and institutions; and community health care, education and research programs involving the faculty of the School of Medicine. One of the dean’s newest education-related responsibilities is the Cleveland Clinic Lerner College of Medicine of Case Western Reserve University, a program within the School of Medicine that was announced in mid-2002. The dean of the School of Medicine also is the director of the Case Research Institute, a joint, virtual research enterprise of Case Western Reserve and University Hospitals of Cleveland, announced in late 2002, that brings together the strategic planning, operational aspects and financial support of all research initiatives of the clinical and translational departments of the School of Medicine and University Hospitals of Cleveland.

The chairs of university departments are delegated administrative responsibility in their respective areas and report to the dean.

The faculty of the School of Medicine, through the Faculty Council, plan and implement educational programs and formulate general policies and those regarding student affairs.

CASE WESTERN RESERVE UNIVERSITY SCHOOL OF MEDICINE ADMINISTRATION

Pamela B. Davis, M.D., Ph.D.  
Interim Dean, School of Medicine  
Vice Dean for Research

Daniel Ornt, M.D.  
Vice Dean for Education and Academic Affairs,  
Vice Dean for Education for the Cleveland Clinic Lerner College of Medicine of Case Western Reserve University

Lisa Ory Marshall  
Senior Associate Dean for Development, Alumni Relations and Communications

C. Kent Smith, M.D.  
Senior Associate Dean for Students

Murray D. Altose, M.D.  
Associate Dean for Louis Stokes Cleveland Department of Veterans Affairs Medical Center

Daniel E. Anker, Ph.D., J.D.

Associate Dean for Faculty Affairs and Human Resources

Ben H. Brouhard, M.D.  
Associate Dean for the MetroHealth System

Claire M. Doerschuk, M.D.  
Associate Dean for Medical Student Research

Robert L. Haynie, M.D., Ph.D.  
Associate Dean for Student Affairs

Lina Mehta, M.D.  
Associate Dean for Admissions

Achilles Demetriou, M.D., Ph.D.  
Associate Dean for Clinical Affairs

Jerry M. Shuck, M.D., D.Sc.  
Associate Dean and Director of Graduate Medical Education

Richard Sohn, Ph.D.  
Associate Dean for Research Administration

Thomas R. Sonderegger  
Associate Dean for Finance and Budget

Terry M. Wolpaw, M.D.  
Associate Dean for Curricular Affairs

Alison K. Hall, Ph.D.  
Director of Graduate Education

Andrew J. Fishleder, M.D.  
Executive Dean, Cleveland Clinic Lerner College of Medicine of Case Western Reserve University

Alan L. Hull, M.D., Ph.D.  
Associate Dean for Curricular Affairs, Cleveland Clinic Lerner College of Medicine of Case Western Reserve University

Andrew C. Novick, M.D.  
Associate Dean for Faculty Affairs, Cleveland Clinic Lerner College of Medicine of Case Western Reserve University

Kathleen N. Franco, M.D.  
Associate Dean for Admissions and Student Affairs, Cleveland Clinic Lerner College of Medicine of Case Western Reserve University

Jill Stanley  
Assistant Dean for Space and Facilities Planning

Edward A. Bruss  
Director of Finance and Planning

Tim A. Sidor, M.D.
Clinical Associate Professor
Layton Kest, M.D.
Professor
Allen D. Seftel, M.D.
Donald R. Bodner, M.D.
Jack S. Elder, M.D.
Mani Menon, M.D.
Nehemia Hampel, M.D.
Stanley Althof, Ph.D.

AFFILIATED HOSPITALS

The Cleveland Clinic Foundation
In 2002, the university and the Cleveland Clinic Foundation entered into an agreement to form the Cleveland Clinic Lerner College of Medicine of Case Western Reserve University, with the first students matriculating in 2004. The “College Program” is a program within the Case School of Medicine.

The Cleveland Clinic was founded in 1921 by four Case Western Reserve faculty members, three of whom are counted among the alumni of the Case School of Medicine. The clinic’s main campus, where much of the activity associated with the program will occur, is located on 130 acres adjacent to and southwest of the Case Western Reserve campus.

The clinic includes the 12-story, state-of-the-art Crile Building, a 934-staffed-bed hospital (including a children’s hospital), the Cleveland Clinic Educational Foundation and the Lerner Research Institute.

In 2001, the clinic recorded more than 2.25 million outpatient visits and 52,000 hospital admissions. Among them were patients from all 50 states and 80 foreign countries. More than 1,100 full-time physicians and scientists and 700 house staff/fellows provide patient care in 100 specialties and subspecialties.

The clinic provides health care for Cleveland-area communities through a network of family health centers and medical offices located in Beachwood, Brunswick, Chagrin Falls, Creston, Elyria, Independence, Lakewood, Lorain, Solon, Strongsville, Westlake, Willoughby Hills and Wooster. Also, community-based oncologists offer a full range of hematology and oncology services for adults at eight suburban locations: Beachwood, Chagrin Falls, Independence, Middleburg Heights, Solon, Strongsville, Warrensville Heights and Willoughby Hills.

The Louis Stokes Cleveland Department of Veterans Affairs Medical Center
The Louis Stokes Cleveland Department of Veterans Affairs Medical Center (VAMC) is a major teaching hospital of the School of Medicine and is an important site for the education of medical students. The Cleveland VAMC also supports more than 100 residency and fellowship training positions in medicine, surgery, and psychiatry and their subspecialties. Most VAMC physicians hold faculty appointments within the School of Medicine. The affiliation is overseen by the Dean’s Committee, consisting of the dean, department chairpersons from the School of Medicine, and key VAMC officials.

The Cleveland VAMC is a part of the VA Healthcare System of Ohio, linking VA health care facilities in Ohio in an integrated service network. Inpatient care is provided at the Wade Park and Brecksville divisions and includes medicine, surgery, psychiatry, spinal cord injury, neurology and rehabilitation medicine as well as a nursing home and a domiciliary. Outpatient care is delivered in primary and specialty care clinics located at Wade Park, Brecksville, Akron, Canton, Cleveland, East Liverpool, Lorain, Mansfield, New Philadelphia, Painesville, Ravenna, Sandusky, Warren and Youngstown. The medical center serves more than 82,000 individual veterans annually through approximately 8,000 hospital admissions and 780,000 outpatient visits.

An active research program includes activities funded through the Department of Veterans Affairs and other governmental and private funding sources. Total funding of approximately $21.5 million annually (from all sources) supports more than 50 principal investigators in a broad range of research endeavors.

The MetroHealth System
The MetroHealth System has been serving the medical needs of the Cleveland community for more than 160 years. Today the hospital system is one of the largest, most comprehensive health care providers in Northeast Ohio.

The MetroHealth System includes: MetroHealth Medical Center, MetroHealth Center for Rehabilitation, MetroHealth Center for Skilled Nursing Care, Elisabeth Severance Center for Skilled Nursing Care at MetroHealth, MetroHealth Clement Center for Family Care, and a dozen urban and suburban primary care sites. In addition, in 2000, MetroHealth opened an outpatient surgery center on Cleveland’s west side. Together, these units provide a complete spectrum of health care services.

As Cleveland’s first hospital and the largest on the city’s west side, the 731-bed MetroHealth Medical Center is the flagship unit of The MetroHealth System. The medical center provides a full range of general and tertiary services for the acutely ill; rehabilitation services are provided through MetroHealth Center for Rehabilitation. MetroHealth is nationally recognized for its advanced techniques in treating complex medical problems. Special interests include emergency and trauma care, surgical specialties, family health, senior health, internal medicine, oncology, dentistry, women’s and children’s services, psychiatry, rehabilitation, and subacute and long-term care.

As a principal teaching center of the School of Medicine, MetroHealth maintains a fine tradition of academics and research. All active staff physicians are full-time faculty of the School of Medicine and actively participate in undergraduate and graduate medical education. Intensive training for physicians and medical professionals is offered in more than 25 medi-
MetroHealth Medical Center provides care to more than 27,000 inpatients, including more than 3,500 newborns, annually. More than 600,000 visits are recorded each year in the medical center’s 100 outpatient clinics. In addition, patient visits to the emergency room exceed 75,000.

University Hospitals Health System

University Hospitals Health System (UHHS) is the region’s premier healthcare delivery system, serving patients at more than 150 locations throughout northern Ohio.

The system’s 947-bed, tertiary medical center, University Hospitals of Cleveland (UHC), is the primary affiliate of Case Western Reserve University (Case). Together, they form the largest center for biomedical research in the state of Ohio. The system provides the major clinical base for translational researchers at the Case Research Institute, a partnership between UHC and Case Western Reserve University School of Medicine, as well as a broad and well-characterized patient population for clinical trials involving the most advanced treatments. Included in UHC are Rainbow Babies & Children’s Hospital, among the nation’s best children’s hospitals; Ireland Cancer Center, a National Cancer Institute-designated Comprehensive Cancer Center (the nation’s highest designation); and MacDonald Women’s Hospital, Ohio’s only hospital for women.

Committed to advanced care and advanced caring, University Hospitals Health System offers the region’s largest network of primary care physicians, outpatient centers and hospitals. The system also includes a network of specialty care physicians, skilled nursing, elder health, rehabilitation and home care services, managed care and insurance programs, and the most comprehensive behavioral health services in the region. For more information, go to www.uhhs.com/.

Cleveland Health Sciences Library

The Cleveland Health Sciences Library began operating in 1966 with an agreement between the Cleveland Medical Library Association and Case Western Reserve University. CHSL operates in two locations: the Health Center Library in the Robbins Building (formerly the east wing) of the School of Medicine, and the Allen Memorial Medical Library, at the corner of Euclid Avenue and Adelbert Road. Both libraries have public computers with full Internet access, black-and-white and color photo-
copiers, and quiet study areas. There is wireless network access throughout both libraries, and electrical outlets are available at study tables. The Health Center Library, which in 2003 underwent a $2.5 million renovation, offers several group study rooms and a Level 2 Technology Enhanced Classroom.

The CHSL collection consists of books, journals, theses, government documents, audio-visual items and electronic resources. The Dittrick Medical History Center collection, located at the Allen Memorial Medical Library, also contains archives, rare books, photographs and artifacts for research in the history of medical technology. The CHSL’s total collection numbers close to 400,000 volumes. CHSL receives more than 1,500 print subscriptions and has access to approximately 7,000 electronic journals and more than 220 research databases. These resources are included in the campus-wide online catalog, EuclidPLUS (http://catalog.case.edu), which also includes materials held by the University Library branches, the Law Library, the Harris Library of the Mandel School of Applied Social Sciences, the Cleveland Institute of Music Library, the Cleveland Institute of Art Gund Library, and the Laura and Alvin Segal College of Judaic Studies Library. Classes on using these electronic resources are offered through the CaseLearns program (http://library.case.edu/caselearns/).

CHSL is a member of the statewide consortium OhioLINK (http://www.ohiolink.edu). Requests for materials not available on campus or through OhioLINK may be made online using ILLiad (http://www.case.edu/chsl/illiad.htm). Complete information about the CHSL can be found at http://www.case.edu/chsl/homepage.htm/.

ENDOWED LECTURES

The Nikaan B. Anderson Lecture

Established in 1974 by friends of the late professor of anesthesiaology (from 1969 until his death in 1974), this annual lecture is presented by teachers of the science of anesthesia.

The Claude S. Beck Scholarship Visiting Lectureship

This lecture, about cardiovascular surgery, was established in 1989. At what is now known as the Case Western Reserve University School of Medicine, Claude S. Beck, M.D., was demonstrator of surgery in 1924 to 1925; professor of neurosurgery in 1940; and the first professor of cardiovascular surgery in the United States from 1952 until 1965.

The Richard E. Behrman, M.D., Lecture In Child Development

Established in 2001 with contributions from friends of colleagues of this former School of Medicine dean (1980 to 1989), this annual lecture is delivered by distinguished scholars in child development.

The Jack H. Berman, M.D., Lecture

Established in 1999 by family, friends and colleagues of this alumnus and associate clinical professor, guest lecturers discuss the basic science behind disease and its application to patient care through this program.

The Louis A. Bloomfield Memorial Lecture

Established in 1955 in memory of the Cleveland attorney Theodore R. Bloomfield by his widow and his son, this lecture brings outstanding members of the medical profession from around this country and abroad to discuss new concepts and developments in medicine with the medical community and allied professions.

The William E. Bruner, M.D., D.SC., Lecture In Ophthalmology

This lecture was established in 2002 in memory of the father of Clark E. Bruner and grandfather of William E. Bruner II, M.D., a 1975 medical school alumnus, with gifts coming from them as well as Susan E. Bruner.

The Courtney Burton Frontiers of Medicine Lecture

This annual lecture is presented by an outstanding individual who has achieved or helped achieve a significant advance in medicine or a closely related field and whose presentation would be of great interest to members of the medical profession. It is supported by a fund established in 1993. Courtney Burton Jr., was chair of the board of Ogletree Norton Co. from 1957 until shortly before his death in 1992.

The Alfred Cahen Memorial Lecture

This lecture series in gastroenterology has been supported by a fund established in 1965 by Lottie Cahen, widow of the founder and former president of World Publishing Co., in memory of her late husband.

The Frohring Presidential Lectureship
in Medicine and Engineering
Lecturers in medicine and engineering deliver this lectureship at the discretion of the University president thanks to a fund begun in 1993 by Paul R. Frohring.

Nathan S. Greenfield Family Visiting Lecturers in Pharmacology
Through an endowment, Rosalee Greenfield Weiss, Ph.D., and Raymond A. Weiss, Ph.D., established this annual lecture in 1997 to honor her father, Nathan S. Greenfield, a pharmacist who owned Wade Park Pharmacy in Cleveland from 1914 to 1956; her mother, Corinne Sternheimer Greenfield; and Lynn Stuart Weiss, daughter of the benefactors, who died of cancer in her mid-20s in 1971.

The Zella Hall Lecture
This annual lecture or series of lectures is presented by one or more distinguished visiting researchers selected by the dean of the School of Medicine or his or her designee. It/they are made possible because of support received in 1998 by the estate of Zella Hall.

The Hanna Lectures
Founded in 1913 by G. W. Crile, 1887-0W, in honor of H. Melville Hanna, philanthropist and founder of the M.A. Hanna Co., the Hanna Lectures are delivered by distinguished basic scientists from this country and abroad.

The William D. Holden Lectureship in Surgery
Established in 1985 by the members of the Department of Surgery of MetroHealth Medical Center in honor of their former chair and Payne Professor of Surgery, this series of lectures in surgery is delivered by distinguished leaders in American surgery.

The Lorand V. Johnson Lecture
This lecture, for residents and visiting staff members in ophthalmology, was established in 1967 by the Wright Foundation.

The Lester Krampitz Lecture and Education Fund
The fund was established in 1982 by family, friends and colleagues of former faculty member Lester Krampitz, M.D., to honor him with a lecture fund in microbiology. It is intended to facilitate the interchange of ideas, a process Dr. Krampitz, who joined the faculty in 1946 and retired in 1978, believes is vital to scientific research.

The Carl H. Lenhart Surgical Lecture
Established in 1955 by friends of this alumnus of the Class of 1904, in his memory, this lecture presents outstanding speakers on clinical developments in surgery.

The Roy Scott Lecture
Established by colleagues, students, family and friends in memory of the former head of the Department of Medicine of MetroHealth Medical Center, this lecture involves an annual two-day visit of a leading cardiologist, who presents the lecture and grand rounds to house officers and students of the School of Medicine.
Medicine.

The Robert Sternlicht Visiting Lecturers in Pharmacology and Cancer Biology
Originally established in 1990 by friends and family and named the Robert Sternlicht Memorial Fund, these lectures feature distinguished experts whose presentations will advance the study of oncology at the School of Medicine. Lectures are chosen by the chair of the Department of Pharmacology and the director of the comprehensive cancer center. Robert Sternlicht was the son of Himan Sternlicht, Ph.D., associate professor emeritus of pharmacology.

The Merton F. Utter Memorial Lecture
Established in 1981 in memory of the former professor of biochemistry and chair of the Department of Biochemistry, this lecture is delivered by a scientist of the highest caliber in a field related to those in which Dr. Utter was interested. Lecturers are chosen by the chair of the Department of Biochemistry.

The Austin S. Weisberger Lecture
Established in 1972 in the Department of Medicine, this lecture honors the memory of the man who, at the time of his death in 1970, was the John Huntington Hord Professor and chair of the Department of Medicine of the School of Medicine and University Hospitals.

The Harland G. Wood Endowment Fund in the Department of Biochemistry
Established in 1994 in memory of the late chair and professor of biochemistry and former provost of the university, this fund supports an annual Page-Wood symposium, co-sponsored by the School of Medicine and the Cleveland Clinic Foundation, featuring a leader in the field of biochemistry, an annual guest lecturer in biochemistry, and an annual guest lecturer selected by faculty with the rank of assistant professor in the Department of Biochemistry.

PUBLICATIONS
Below are listed some of the many publications produced in paper form by the Office of Development, Alumni Relations, and Communications. Many of them are accessible via the Web, too; visit http://casemed.case.edu and click on “news and publications.” News articles about the School of Medicine also are accessible at this site.

Communique
Communique is the calendar of events for the School of Medicine. It is published monthly in paper form and also is updated continuously on the Web.

Medical Bulletin
The Medical Bulletin is a magazine for faculty, students, alumni, friends and media. Published three times a year, the Medical Bulletin contains feature articles highlighting research and education, as well as additional areas of interest. Articles provide a glimpse into the people behind the programs. Alumni receive an additional insert, Alumni News, which features class notes and obituaries as well as other news of special interest to alumni. A stand-alone edition of Alumni News featuring reunion coverage is published once a year for alumni.

MedLines
MedLines, a newsletter for faculty, staff, students, alumni, friends and media of the School of Medicine, is published about six times a year. It highlights news about research, education, and the people at the medical school.

Focus
Focus is a biannual tabloid produced by the Office of Development, Alumni Relations, and Communications. It provides the medical school with the chance to thank its generous individual and organizational donors and inform them, and potential donors, of additional giving opportunities. As of press time, Focus was not available online.

Admissions Brochure
The Office Development, Alumni Relations, and Communications also produce a publication for prospective medical students. The information also is available online by visiting http://casemed.case.edu and clicking on “admissions.”

Annual Report
The medical school produces an annual report highlighting accomplishments in research, education and service. It includes an “honor roll” of donors for the most recent fiscal year. It is available online.

ADMISSION TO MEDICAL SCHOOL
Those interested in obtaining a degree other than the medical degree should contact the appropriate school within the university. See individual schools’ listings elsewhere in this publication for contact information.

There are three paths to a medical degree at Case Western Reserve University School of Medicine: the University Program, the Cleveland Clinic Lerner College of Medicine of Case Western Reserve University (College Program), and the Medical Scientist Training Program (MSTP).

All inquiries about admission and application to the University Program should be addressed to:

OFFICE OF ADMISSIONS
School of Medicine
10900 Euclid Ave.
Cleveland, Ohio 44106-4920
Phone: 216-368-3450
casemed-admissions@case.edu

All inquiries about admission and application to the College Program should be addressed to:

OFFICES FOR MEDICAL EDUCATION
Cleveland Clinic Lerner College of Medicine of Case Western Reserve University
9500 Euclid Ave., NA21
Cleveland, Ohio 44195
Phone: 216-445-7170 or 866-735-1912
ccclcm@ccf.org

All inquiries about admission and application to the Medical Scientist Training Program should be addressed to:

MSTP OFFICE
School of Medicine
Case Western Reserve University
10900 Euclid Ave.
Cleveland, Ohio 44106-4936
216-368-3404
cvh3@case.edu or djh5@case.edu

The information below pertains to prospective medical students. For additional information, visit http://casemed.case.edu and click on “admissions.”

Getting Started
Students wishing to apply to the School of Medicine, including the Cleveland Clinic Lerner College of Medicine of Case Western Reserve University, must initiate the process on the Internet through the American Medical Colleges Application Service (AMCAS). To learn more about the AMCAS application process, visit http://www.aamc.org/students/am-
Admissions Process

Here’s how the admissions process works at the School of Medicine: After AMCAS receives an applicant’s electronic application, he or she receives an e-mail directing him or her to the Case School of Medicine online secondary (final) application. Applicants should complete this application as instructed. After the applicant has submitted the secondary application and all supporting materials, the appropriate admissions committee will review the information and decide whether to invite the applicant for an interview. After the interview, the committee will decide whether to extend an offer of admission. Applicants are notified of the committee’s decision no later than May 1.

Admissions Criteria

Although the admissions committee considers grades and the score on the Medical College Admission Test (MCAT) in the admissions process, high grades and a high score on the MCAT alone are not sufficient criteria for admission (the MCAT is mandatory; however). Just as important are qualities such as integrity, interpersonal skills and leadership ability.

Academic Requirements

Applicants must have a solid foundation in the sciences needed to understand modern biomedical information. At a minimum, applicants should possess the following knowledge:

- Biology. Applicants ordinarily satisfy this requirement if they’ve taken a one-year course in biology that stressed molecular and quantitative concepts. Courses in anatomy, taxonomy, botany and ecology will not satisfy this requirement.
- Chemistry (through organic). Applicants normally meet this requirement if they’ve completed a one-year course in basic chemistry and a one-year course in organic chemistry. Other sequences, and courses that included organic/biologic chemistry content, are acceptable, too.
- Basic physics. Applicants generally satisfy this requirement if they’ve taken a one-year course in physics.
- Writing skills. Applicants typically meet this requirement if they’ve taken an introductory course in expository writing. The committee considers other courses that required extensive writing, however.
- Biochemistry. A course in biochemistry is required of all those applying to the Cleveland Clinic Lerner College of Medicine of Case Western Reserve University and is highly recommended for those applying to the Case School of Medicine.
- Basic physics. Applicants generally satisfy this requirement if they’ve completed a one-year course in physics.
- Writing skills. Applicants typically meet this requirement if they’ve taken an introductory course in expository writing. The committee considers other courses that required extensive writing, however.

Financial Aid

About 80 percent of the university’s medical students receive some financial aid based strictly on financial need. It’s impossible to provide precise figures on financial aid before each specific situation is completely analyzed, but here is a description of the general aspects of the process:

The School of Medicine adheres to the unit loan concept used by most private medical schools. Under this concept, if a student qualifies for financial aid, he or she is expected to obtain a specific portion of his or her support from outside sources such as a Stafford Loan, savings and family. Once the student obtains this amount, the remaining aid would be provided through School of Medicine resources, up to the amount determined to be his or her reasonable need. The school’s contribution would be a combination of loan and scholarship, with the exact ratio determined by the student’s particular circumstances.

Programs such as the Medical Scientist Training Program, the M.D./Ph.D. in health services research program, and others offer financial support for participants. For more information, see other entries in this publication and contact the specific program.

Also, the medical school offers up to 17 merit scholarships annually to each class through its Dean’s Scholars program and David Satcher, M.D., Ph.D.-Rubens Parnies, M.D. Minority Student Scholarship program. These scholarships, which vary in annual amounts up to $30,000, are awarded for up to four years for selected students. The school also offers up to four merit scholarships through the Alumni Scholars and Amici Scholars programs. These scholarships are $20,000 annually for up to four years for selected students. Application for the scholarships is by invitation of the admissions committee. Recipients are students with records of exceptional academic and personal achievement.

To Those Currently in College

The admissions committee gives preference to candidates who will have completed the requirements for a bachelor of arts or bachelor of science degree before entering medical school. Most accepted candidates rank in the top one-third of their classes, and a large proportion of them have outstanding scholastic records.

The committee’s main considerations are the overall quality of college performance and general ability and potential. In most instances, applicants are given priority if they have completed all minimum academic requirements and have taken the MCAT by the time they submit their AMCAS applications. Although no special emphasis is placed on the applicant’s major / field of study, the committee strongly favors the concept of a broad, general college education.

THE SCHOOL OF MEDICINE VALUES A WIDELY DIVERSE STUDENT BODY.

Students who have been out of college a year or more:

Those who have been out of college for a year or more are encouraged to apply. Approximately half of the students at the School of Medicine have a year or more between the time they graduate from college and the time they enter medical school, and about 10 percent of them begin medical school when they are 30 years old or older.

Those two or more years removed from full-time college course work should plan to take challenging, advanced-level (junior-, senior- or graduate-level) courses in the biological sciences to prepare for entry.

PROGRAMS LEADING TO M.D.

Today, applicants can choose from three paths to obtain a medical degree at Case Western Reserve University: the University Program, the University Program, and the University Program.
Clinical experiences begin in the first week of and 5) patient-based activities.

The WR2 Curriculum also creates an independent, educational environment where learning is self-directed and where student education primarily occurs through: 1) facilitated, small-group student-centered discussions 2) large group interactive sessions such as Team Learning or didactic sessions that offer a framework or synthesis, 3) interactive anatomy sessions, 4) clinical skills training, and 5) patient-based activities.

Research and Scholarship begin early in the curriculum with weekly sessions led by faculty engaged in cutting edge research. In the summer following year one, the majority of students engage in summer research opportunities. All students participate in a mentored 16 week experience in research and scholarship and complete an MD thesis prior to graduation.

Electronic resources make the most of classroom time while improving opportunities for self-directed learning and capitalizing on the innovative technology available at Case Western Reserve University.

A key component of the University Program is the unscheduled time on Thursday mornings and weekday afternoons. Students use this time for self-directed learning as well as to pursue a joint degree, take electives, participate in interest groups, shadow a practicing physician, or become active in student organizations.

Each student in the University Program is a member of one of the following advising societies: Emily Blackwell Society, Frederick Robbins Society, David Satcher Society, or Joseph Wearn Society. Each society is headed by an advising dean, who helps the students navigate the curriculum, advises them on residency and career planning, and writes their dean's letters.

Society deans hold regularly scheduled small group and individual meetings with the students. The society deans are all members of the faculty of the School of Medicine and participate actively in the educational programs of the school. Some aspects of the curriculum are coordinated through the societies.

Please see the “Curricular structures of Case M.D. programs” chart and “The four-year University Program in detail” section on subsequent pages of this publication for additional information.

OVERVIEW OF THE COLLEGE PROGRAM

OVERVIEW OF THE UNIVERSITY PROGRAM

The University Program curriculum always has reflected the latest in educational practices and medical knowledge. In the 1950s the School of Medicine was the first to introduce the organ systems approach to teaching the basic sciences. In July 2006 the University Program launched the Western Reserve2 Curriculum (WR2) to create a system of learning that reunites the disciplines of public health and medicine into a single, integrated program of study.

The WR2 Curriculum has high expectations for self-directed learning, and seeks to train physician scholars who are prepared to treat disease, promote health and examine the social and behavioral context of illness. It interweaves four themes of research and scholarship, clinical mastery, leadership and civic professionalism to prepare students for the ongoing practice of evidence-based medicine in the rapidly changing healthcare environment of the 21st century.

Scholarship and clinical relevance are the benchmarks for learning, and clinical experiences and biomedical and population sciences education are integrated across the four years of the curriculum. The WR2 Curriculum also creates an independent, educational environment where learning is self-directed and where student education primarily occurs through: 1) facilitated, small-group student-centered discussions 2) large group interactive sessions such as Team Learning or didactic sessions that offer a framework or synthesis, 3) interactive anatomy sessions, 4) clinical skills training, and 5) patient-based activities.

Clinical experiences begin in the first week of the University Program when students participate in community-based health care field experiences. In the second month of medical school, students begin the Rotating Appren
ticeship in Medicine Program (RAMP). This program involves students in five patient care settings. In January of the first year, students begin the Community Patient Care Preceptorship (CPPC). Each student works with a community physician one afternoon a week for the next year.
ogy with emphasis on areas of relevance to human health and disease. Topics include: basic cell structure; protein structure and function; genomic organization and expression, including basic genetics, DNA repair and recombination, transcriptional regulation, RNA processing and translation; membrane structure and function, including membrane protein biosynthesis and function; cell signaling pathways, including hormone and drug action; metabolism and energetics. Prereq: Consent of department.

OVERVIEW OF THE MEDICAL SCIENTIST TRAINING PROGRAM (MSTP)

A combined M.D./Ph.D. program in biomedical sciences, the Medical Scientist Training Program (MSTP), is available for students desiring research careers in medicine and related biosciences. This program takes seven to eight years to complete, depending on the time needed to complete the Ph.D. dissertation research. Financial support includes a stipend and full tuition support.

Candidates must meet established prerequisites for admission to both the School of Medicine and the School of Graduate Studies. Criteria include demonstrated capabilities in research and superior undergraduate academic credentials. Applicants must have either U.S. citizenship or permanent residency status to be considered for admission to the MSTP. Descriptive materials and applications can be obtained by contacting the MSTP program.

The first two years of the MSTP are centered on the University Program pre-clinical core medical school curriculum, which occupies five mornings each week. Afternoons are include time for graduate courses and/or research rotations, as well as clinical training, thus integrating the medical school and graduate school experiences. The next three to four years are devoted to completion of graduate courses and Ph.D. thesis research in one of the multiple MSTP-affiliated graduate programs. During the Ph.D. phase, MSTP students can choose to participate in the MSTP Clinical Tutorial, a program designed to enhance clinical skills and allow students to develop connections between their research and clinical interests (this further addresses the goal of integrating medicine and science). After completion of the Ph.D. program, students return to medical school for two years to complete clinical clerkships and finish the M.D. curriculum.

The program is administered by the MSTP Steering Committee, which consists of faculty from both basic science and clinical departments. Its functions include selecting candidates for admission, designing and administering the program curriculum, advising students and evaluating student progress. Please see the “Curricular structures of Case M.D. programs” chart, “The Medical Scientist Training Program in detail” section, and the Medical Scientist Training Program (under Other Degree Programs) and Integrated Biological Sciences entries on subsequent pages of this publication for additional information.

CURRICULAR STRUCTURES OF CASE M.D. PROGRAMS

University Program
(4 year program with optional 5th year)

YEAR 1
Foundations of Medicine and Health, Foundations of Clinical Medicine (FCM), summer research opportunities, RAMP, clinical preceptorships

YEAR 2
Foundations of Medicine and Health, FCM, study period for National Boards examination, Basic Core clinical rotation or research block

YEAR 3
Basic Core clinical rotations, research block, Advanced Core clinical rotations, sub internships, electives

YEAR 4
Sub internships, electives, Area of Concentration, MD thesis completion, Becoming a Doctor II

YEAR 5 (OPTIONAL)
University Program students may elect a fifth year of study for research and scholarship

College Program - Basic research curriculum and experience

YEAR 1
College Program basic science and research curriculum, ICM

YEAR 2
College Program basic science and research curriculum, ICM

YEAR 3
Research thesis required for graduation

YEAR 4
Optional MSTP Clinical Tutorial

YEAR 5
Ph.D. program

YEAR 6 (IF NEEDED)
Ph.D. program

YEAR 7
Third year MD curriculum (core clinical clerkships)

YEAR 8
Fourth year MD curriculum (completion of core clinical clerkships if necessary, clinical and research electives)

THE UNIVERSITY PROGRAM IN DETAIL

The Western Reserve2 Curriculum (WR2) creates at Case a system of learning that reunites the disciplines of public health and medicine into a single, integrated program of study. The WR2 Curriculum has high expectations for self-directed learning, and seeks to train physi-
cian scholars who are prepared to treat disease, promote health and examine the social and behavioral context of illness. It interweaves four themes of research and scholarship, clinical mastery, leadership and civic professionalism to prepare students for the ongoing practice of evidence-based medicine in the rapidly changing healthcare environment of the 21st century.

Scholarship and clinical relevance are the benchmarks for learning, and clinical experiences and biomedical and population sciences education are integrated across the four years of the curriculum. The WR2 Curriculum also creates an independent, educational environment where learning is self-directed and where student education primarily occurs through: 1) facilitated, small-group student-centered discussions 2) large group interactive sessions such as Team Learning or didactic sessions that offer a framework or synthesis, 3) interactive anatomy sessions, 4) clinical skills training, and 5) patient-based activities.

EDUCATION THROUGHOUT THE FOUR YEARS IS CENTERED ON:

1. Fostering experiential and interactive learning in a clinical context;
2. Stimulating educational spiraling by revisiting concepts in progressively more meaningful depth and increasingly sophisticated contexts;
3. Promoting integration of the biomedical and population sciences with clinical experience;
4. Transferring concepts and principles learned in one context to other contexts;
5. Enhancing learning through deliberate practice, or providing learners with direct observation, feedback, and the opportunity to practice in both the clinical environment and in the Case School of Medicine’s Mt. Sinai Skills and Simulation Center.

THE WESTERN RESERVE 2 CURRICULUM HAS 10 GUIDING PRINCIPLES.

1. The core concepts of health and disease prevention will be fully integrated into the curriculum.
2. Medical education will be experiential and emphasize the skills for scholarship, critical thinking, and lifelong learning.
3. Educational methods will be chosen that stimulate an active interchange of ideas among students and faculty.
4. Students and faculty will be mutually respectful partners in learning.
5. Students will be immersed in a graduate school educational environment characterized by flexibility and high expectations for independent study and self-directed learning.
6. Learning will be fostered by weaving the scientific foundations of medicine and health with clinical experiences throughout the curriculum. These scientific foundations include basic science, clinical science, population-based science, and social and behavioral sciences.
7. Every student will have an in-depth mentored experience in research and scholarship.
8. Recognizing the obligations of physicians to society, the central themes of public health, civic professionalism and leadership will be longitudinally woven throughout the entire curriculum.
9. The systems issues of patient safety, quality medical care, and health care delivery will be emphasized and integrated throughout the curriculum.
10. Students will acquire a core set of competencies in the knowledge, mastery of clinical skills and attitudes that are pre-requisite to graduate medical education. These competencies will be defined, learned and assessed and serve as a mechanism of assessment of the school’s success.

Curricular Composition

The four years of the WR2 Curriculum is divided into four major components, each of which will focus on health as well as disease, and the health of populations in addition to the health of individual patients.

1) Scientific and Clinical Foundations of Medicine and Health: This component is made up of six blocks.

The first block – Becoming a Doctor I - is six weeks in duration, and gives students an understanding of the doctor’s role at the bedside and in society. Typically students begin their medical education by studying basic science at the molecular level, and are often not fully aware of the relevance that this knowledge has in their future education as physicians or how it relates to the actual practice of medicine. This curricular block focuses on how physicians can act as advocates for their patients in the health care system; how social and environmental factors impact health; and the importance of clinical research as the unifying principle between disease biology and the science of clinical practices. This block also has a strong emphasis on the importance of critical thinking and rigorous methodologies in the measurement of clinical phenomena.

Becoming a Doctor II – Captive Experience: During the fourth year of medical school, all students will be required to return to campus for two-three weeks of focused, shared experiences during which they revisit the social and behavioral determinants of health and disease and health system issues within the context of the basic science, clinical skills and evidence-based medicine they’ve learned since entering medical school.

The next five blocks in the Foundations of Medicine and Health are comprised of basic science education complemented by clinical immersion experiences, early contact with patients in clinical preceptorships and simulated clinical experiences. Subject matter is integrated across entire biological systems, which permits faculty in the different disciplines to leverage teaching time to convey content and concepts common to their disciplines. Content is divided into the following blocks:

• Human Blueprint: Comprised of endocrine, reproductive development, genetics, molecular biology, and cancer biology.
• Food to Energy: Encompasses gastro-intestinal system, nutrition, energy, metabolism and biochemistry.
• Homeostasis: Includes cardiovascular system, pulmonary system, renal system, cell regulation, and pharmacology.
• Host Defense and Host Response: Focuses on host defense, microbiology, blood, skin, and the auto-immune system.
• Cognition, Sensation and Movement: Comprised of neurosciences, mind, and the musculoskeletal system.

Several themes stretch longitudinally across these blocks, including anatomy, histopathology and radiology, as well as clinical mastery. Leadership, bioethics, and research methods are likewise incorporated longitudinally.

Blocks 2-6 follow a common pattern. Each block has a Clinical Immersion Week and each has a Reflection and Integration Week. During the Clinical Immersion Week, students leave the classroom and enter the clinical setting to see the relevance of the basic science they have been studying as the concepts are used in the setting of patient care.

The Reflection and Integration week is the final week of blocks 2-6. During this week, no new material is introduced. Learning activities are planned to help students spiral back to concepts introduced earlier in the block by...
presenting these concepts again, sometimes in new contexts, and now integrated with other concepts previously learned. End of block assessment takes place during the reflection and integration week.

2) Research and Scholarship: The WR2 Curriculum increases Case’s emphasis on research and scholarship to encourage student career development in the areas of clinical investigation and population research. The practice of medicine is becoming increasingly evidence and science-based, and research teaches students a way of thinking that makes them better doctors. The focus on research and scholarship provides medical students with opportunities to pursue individualized areas of interest in great depth. Through this 16-week, mentored experience in research and scholarship (which can be taken at any point from March of the second year onward), students acquire the intellectual tools needed to formulate research questions, critically assess scientific literature and continue the life-long pursuit of learning that is a critical aspect in the careers of all physicians and physician/scientists. The research project culminates in a thesis, which is written in the format of a manuscript of the leading journal in the particular area of interest.

3) Clinical Experiences: The clinical curriculum cuts across all four years of the medical school curriculum, and can be divided into three areas of involvement:

a. Foundations of Clinical Medicine: This segment of the clinical curriculum runs longitudinally through the Foundations of Medicine and Health, and is divided into three components:
   i. Foundations of Clinical Medicine Seminars: Beginning in “The Human Blueprint,” Block 2, students participate in weekly two hour Foundations of Clinical Medicine Seminars. These seminars combine small group and large group teaching methods as they continue the themes introduced in “Becoming a Doctor.”
   ii. RAMP: Beginning in September of Year 1, groups of students participate in Rotating Apprenticeships in Medical Practice (RAMP), during which they each rotate through patient care encounters in multiple settings.
   iii. Community Patient Care Preceptorship (CPCP): After completing RAMP, students select a clinical setting and a physician preceptor with whom they will work. Students meet with these preceptors every week, and have the opportunity to practice clinical and communication skills while receiving feedback from their practicing physician mentor.

b. Basic Core Clinical Rotations: Beginning in March of their second year, students undertake their core clinical rotations in 16-week blocks: Basic Core I (Family Medicine, Internal Medicine, and Surgery) and Basic Core II (Neurology, Pediatrics, OB/Gyn, and Psychiatry). Each of these clinical rotations is offered at all of the School of Medicine’s hospital affiliates (including University Hospitals of Cleveland, the Cleveland Clinic Foundation, MetroHealth Medical Center and the Louis Stokes VA Medical Center).

c. Advanced Core Rotations: These consist of 4 separate, required 4-week rotations that can be completed in any order at any of our partner hospitals listed above. The domains for these experiences are: Chronic Illness, Aging in Men and Women, Peri-operative Critical Care and Pain Management, and Undifferentiated Care. All rotations in a domain share the same learning objectives, but the specific content varies from site to site depending on clinical and educational strengths.

In all Core Clinical Rotations, students experience both breadth and depth in clinical care, and clinical experiences are developmental, with opportunities to reinforce, build upon, and transfer knowledge and skills. Clinical learning is also integrated across disciplines whenever possible, and the roles of basic science, civic professionalism, scholarship, and population health in clinical care are evident throughout the clinical curriculum. Students likewise have patient care responsibilities that are progressive in sophistication and increasing in amount as their level of clinical skill and knowledge increases, and all core clinical competencies are addressed and assessed using common methods used at each clinical site at which rotations occur.

4. Advanced Clinical and Scientific Studies: Advanced clinical and scientific studies have three components: 1) in-depth clinical preparation for internship through the selection of sub-internships; 2) in-depth scholarship through selection of areas of concentration that integrate clinical and basic science within a defined area of study; and 3) broad opportunities for further clinical and research electives. An area of concentration encompasses three to four months of study, including advanced clinical experiences and in depth study through seminars in medicine and health.

EVALUATION AND ASSESSMENT

Student assessment in the WR2 Curriculum is designed to accomplish three goals: 1) drive the types of learning and inquiry that are goals for the WR2 Curriculum; 2) ascertain whether students attain the level of mastery set as a goal for graduates of Case; and 3) prepare students for the Multiple Choice Question (MCQ) USMLE exams. These three goals are accomplished through multiple different assessment methods.

Independent student study and inquiry are hallmarks of WR2 through assessment strategies that are formative, focus on the synthesis of concepts, and promote student responsibility for the mastery of skills and material. The following assessments are used in the Foundations of Medicine and Health:

1) Assessment of students’ participation in weekly Case Inquiry (IQ) groups by faculty facilitators, utilizing observable behavior anchors and focusing on contributions to the group content, contributions to the group process, and professional behaviors.

2) Synthesis Essay Questions (SEQs). Weekly, formative, open book concept reasoning exercises in which students are given a brief written clinical scenario and asked to explain a clinical phenomenon and its basic science underpinnings. Throughout a teaching block, students complete SEQs at the end of each week. They then compare their answers to an ideal answer template as well as get feedback on their reasoning ability from their IQ group facilitator.

3) Summative Synthesis Essay Questions (SSEQs), or exercises that measure what students know at specific points in their education, are closed book exercises with approximately 5 scenarios that take 3-4 hours to complete. These SSEQs are based on the synthesis essays students have done in an open book fashion throughout the block. In the final week of the block SSEQs present concepts from previous exercises in new contexts and require a more sophisticated level of concept integration. These summative exercises are scheduled at the end of each large teaching module (every 3-4 months) and are graded by the faculty who
are content specialists.

4) Structure Practical Exercises. These assessments will occur in the final week of blocks 2-6 and will integrate anatomy, histopathology and radiology through clinical scenarios and questions that ask for anatomic localization and histo-pathologic identification.

5) Self Assessment Multiple Choice Questions (MCQs). At the beginning of each 12 week teaching block students will have access to 200 MCQs and answers drawn from the School of Medicine’s existing extensive bank of questions which will be mapped to learning objectives for the block. These questions are representative of those given during the USMLE Part I. Students can use these MCQs through the block as a study aid and method for self-assessment.

6) Cumulative Achievement Tests (CAT). At the end of each block, students will complete a secure formative MCQ achievement test, based on content covered in the current teaching block as well as on content from each previous block. These exams will be designed, utilizing test question resources available through the NBME. Tests will become progressively longer throughout the Foundations of Medicine and Health. The final CAT will reflect material across all curriculum blocks. These formative tests are for student use only, and enable students to gain perspective on their overall progress and preparedness for the USMLE.

7) Student progress in Foundations of Clinical Mastery is measured by small group facilitator assessment in the Seminars of Clinical Practice, direct observation of skills, preceptor evaluation of patient-based activities, and OSCE examinations.

8) Personal Learning Plan. During the Reflection and Integration Week, students review the learning objectives for the block and reflect on their learning, identifying their strengths and areas for further study. A reflective essay is completed that links to pieces of evidence, accumulated throughout the block, to support why areas of strength and areas for further growth have been identified. A plan for further learning is then developed.

The WR2 Curriculum provides students with a focused education that employs a limited number of classroom hours, but lays the expectation for around the clock learning by students. The content of WR2, organized across biological systems, provides students with an integrated view of medicine and health and a clearer understanding of how the basic sciences and clinical practice relate to one another. The flexibility of WR2 permits students to explore in depth an area of interest to them alongside a mentor, and the curriculum’s focus on the social and behavioral context of health and disease as well as on population medicine, will prepare students to face the emerging challenges of today’s health care system.

**Western Reserve2 Curriculum Core Clinical Rotations**

The Core Clinical Rotations, launched in July 2006, represent an integrated approach to clinical education that is shared by students from both the University and College programs of the Medical School. Students engage in clinical learning with basic science correlation through patient-based experiences that are developmental and provide opportunities to acquire, reinforce, build upon, and transfer knowledge and skills. In the Basic Cores, students are based one of the three affiliated hospital systems (UH/VA, MetroHealth, CCF) for an entire 16 week experience, facilitating meaningful educational relationships and support. The Advanced Core rotations are shared among teaching sites and are designed as 4-week modules that address areas of curricular need.

**BASIC CORE I**

Family Medicine, Internal Medicine, Surgery
Basic Science Integration
(16 weeks at one of 3 teaching sites - UH/VA, MetroHealth, Cleveland Clinic)

**BASIC CORE II**

Neurology, Pediatrics, Psychiatry, Women’s Health (OB/GYN)
Basic Science Integration
(16 weeks at one of 3 teaching sites – UH/VA, MetroHealth, Cleveland Clinic)

**ADVANCED CORE**

Undifferentiated Care, Chronic Illness, Aging in Men and Women, Peri-Operative Critical Care and Pain Management
(Each four weeks, flexible scheduling, all sites)

**Assessment for Promotion and Graduation**

The faculty of the School of Medicine is charged with assessing all aspects of student performance, including knowledge, skills and personal characteristics that are pertinent to the development of a responsible, competent and humane physician. This responsibility is delegated by the faculty to the Committee on Students, a standing committee of the faculty of medicine, with a majority of its members faculty-elected.

The Committee on Students reviews the performance of every medical student in the University Program during each of the four years, determines each student’s continuing status as a student in the school, and recommends candidates for graduation. The committee reviews a medical student’s total performance, which includes the usual indices such as formal grades and assessments, as well as the professional attitudes and behavior manifested by the student. Medical education entails the mastery of didactic, theoretical, and technical matters as well as the demonstration of appropriate professional and interpersonal behavior, sensitivity, sense of responsibility and ethics, and the ability to comport oneself suitably with patients, colleagues and co-workers. To be eligible for promotion and graduation, students must complete the requirements and perform satisfactorily in all components of the curriculum. Medical students in the University Program are graded “satisfactory” or “identified for remediation” in the first two years and as “honors”/ “commendable”/ “satisfactory”/ “unsatisfactory”/ “incomplete” in the clerkships of the third and fourth years. There is no class ranking.

In addition, medical students must obtain at least the minimum passing score as established by the United States Medical Licensing Examination Composite Committee on the U.S. Medical Licensing Examination (USMLE) Step 1, Step 2 Clinical Knowledge Examination and Step 2 Clinical Skills Examination to be eligible for graduation from the school.

**THE FIVE-YEAR COLLEGE PROGRAM IN DETAIL**

The goal of the curriculum of the five-year Cleveland Clinic Lerner College of Medicine of Case Western Reserve University (College Program) is to foster a passion for scientific inquiry and skills for critical thinking, coupled with broad-based clinical expertise, to optimally position the M.D. graduate to pursue a career as a physician-investigator. The College Program is unique in the United States in incorporating a research thread woven throughout the five-year curriculum, including two full summers focused on research training and experiences, and an additional full year to enable students to complete a substantive research thesis required for graduation. The
educational program nurtures the students’ curiosity about science and medicine and provides them with clinical skills, a substantive research experience, and core skills and knowledge about research and research careers. The relatively small class size encourages discussion and collaboration among students and faculty. Students are immersed in a supportive, integrated and richly diverse clinical and research environment, which provides each student with research and clinical knowledge and skills and a core professional network to build a strong foundation for a career as an expert clinician and researcher. The College Program holds promise of a new approach to increasing the number of M.D.s prepared to become physician-investigators.

Basic Science Curriculum
The College Program is based on a graduate education model, with active learning in teams and individually, while leaving significant time for independent study. The organ systems curriculum in the first two years uses problem-based learning (PBL), in which small groups of students work through clinical cases to identify basic science and other learning objectives and research the answers with the help of a faculty tutor. The PBL approach encourages teamwork and exploration and understanding of concepts. The PBL cases are complemented by interactive seminars, labs and problem sets in which students further develop and hone their ability to define and analyze problems, formulate answerable questions, and search for and evaluate evidence.

Discipline-based learning objectives in cell biology and biochemistry, physiology, pharmacology, anatomy, embryology, histology, pathology, oncology, and genetics are integrated as threads throughout the organ systems blocks. The goal is for students to integrate concepts in these core biomedical disciplines into their growing understanding of the function of the human body in health and disease. Anatomy is case-based and taught using projections, cross-sectional images, and interactive electronic curriculum. Electives are available for students who wish to pursue more-in-depth exposure to specific aspects of anatomy with dissection of cadavers.

Advanced basic science teaching is integrated into the clinical rotations in years three through five, with basic science “rounds” on clinical services, special basic science seminars for students, and required in-depth essays and reports on the basic science underlying problems they encounter in specific patients.

Clinical Curriculum
The Foundations of Clinical Medicine course in years one and two addresses the same core learning objectives as the FCM course for University Program students and includes interviewing skills and physical diagnosis, with patient care in the office of a longitudinal clinical preceptor for a half day every other week in year one and every week in year two. In year two, an additional half-day per week is devoted to clinical experiences that relate directly to the organ systems courses or develop special clinical skills such as the pediatric history and physical exam or experience with acute care medicine. The objective is for students to develop clinical skills, integrate clinical activities with their basic science and research learning, and become proficient in the history and physical examination before beginning inpatient rotations. College students meet with students in the University Program and the MSTP in weekly Science of Clinical Practice Seminars, facilitated by medical school faculty and leaders from the community, in a ten-session Health Policy series.

Students then move into a flexible, three-year continuum of core and elective clinical rotations, with dedicated time to complete a required research project under the guidance of a three-faculty thesis committee. Required clinical rotations are the same as for students in the University Program and are offered at all Case-affiliated hospitals in the Cleveland area. Clinical rotations at the Cleveland Clinic have the same core learning objectives as those at other hospitals, with the addition of research and basic science threads incorporated into the clinical experiences. During their research time, students spend a half day per week in a clinical experience specifically related to their area of research, which is selected with the advice of their research and physician advisors.

Research Curriculum
The research curriculum begins in the summer of year one with small group discussions, journal clubs and labs addressing basic and translational research methods coupled with hands-on experience with a research project in the lab of an established research preceptor. Students learn core principles of designing and interpreting research experiments, reading the research literature, presentation of research data in written and oral form, and the skills needed for productive interactions with all members of a basic science research team. The curriculum continues throughout years one and two, with research learning objectives emphasized during PBL cases and other activities in the basic science and clinical curricula, and weekly Process of Discovery seminars in which investigators present and discuss their latest research findings.

The summer research curriculum in the year two focuses on clinical research, with an in-depth course on applied statistical and epidemiological methods, journal clubs focusing on reading the clinical research literature, and other interactive sessions in which students learn core principles of designing and analyzing clinical research projects, human subjects protection, and ethics of clinical research. Each student also participates in a clinical research project with an established clinical researcher and writes a clinical research proposal to address a question he or she developed during the summer.

By the end of year two, each student must select a research project and advisor for his or her thesis, which is to be completed during the last three years of the program. Students may choose to conduct their research with a basic or translational researcher or with a clinical researcher and may choose from a broad range of research opportunities at the Cleveland Clinic, Case or other research facilities in Cleveland. Other opportunities, such as those offered by the Howard Hughes Medical Institute at the National Institutes of Health, also will be considered. Each student has a three-member thesis committee consisting of his or her advisor and two other faculty members, one of whom must be an expert in a related area of clinical research for students who engage in basic research, or an expert in a related area of basic research for students in engage in clinical research. The goal is for each student to understand the spectrum of potential applications of his or her own research in the understanding of human health and disease.

Assessment for Promotion and Graduation Using Learning Portfolios
Each medical student in the College Program has a close advising relationship with a physician advisor, who works with a total of six to eight students throughout all five years of the curriculum. Students build a learning portfolio that demonstrates mastery of the clinical, basic science and research objectives of the curriculum. The physician advisor reviews the student’s portfolio regularly, helps the student identify learning goals to address...
relative weaknesses or build on areas of relative strength, and assist with designing a final three-year clinical/research continuum and with career advising.

Nine learning outcomes have been identified for the College Program, and progressive levels of competency for each outcome are defined for each year of the curriculum. Ongoing assessments of competency for each outcome allow the faculty to determine students’ readiness for advancement in and graduation from the program. Assessment of College Program students is competency based; grades are not assigned for any component of the curriculum, and there is no class ranking system. The learning outcomes:

1. Research: Demonstrate knowledge base and critical thinking skills for basic and clinical research, skill sets required to conceptualize and conduct research and understand the ethical, legal, professional and social issues required for responsible conduct of research.

2. Basic, clinical and social sciences: Demonstrate and apply knowledge of human structure and function, pathophysiology, human development and psychosocial concepts.

3. Communication: Demonstrate effective verbal, nonverbal and written communication skills in a wide range of relevant activities in medicine and research.

4. Clinical skills: Perform appropriate history and physical examination in a variety of patient care encounters, and demonstrate effective use of clinical procedures and laboratory tests.

5. Clinical reasoning: Diagnose, manage and prevent common health problems of individuals, families and communities. Interpret findings and formulate action plan to characterize the problem and reach a diagnosis.

6. Professionalism: Demonstrate knowledge and behavior that represents the highest standard of medical research and clinical practice, including compassion, humanism, and ethical and responsible actions at all times.

7. Personal development: Recognize and analyze personal needs (learning, self-care, etc.), and implement plan for personal growth.

8. Health care systems: Recognize and be able to work effectively in the various health care systems, to advocate and provide for quality patient care.

9. Reflective practice: Demonstrate habits of analyzing cognitive and affective experiences that result in identification of learning needs leading to integration and synthesis of new learning.

As students progress through the curriculum, the faculty for each course identifies expected competencies to be achieved for each learning outcome. These explicit competencies provide students with a standard by which to judge their progress. The portfolio approach requires students to take an active role in assessing and directing their own learning. Regular self-assessment of strengths and weaknesses for purposes of determining learning needs is essential to becoming a lifelong learner.

The portfolio will contain evidence of the students’ work to be used for both formative and summative assessments. Formative assessments, scheduled at regular intervals throughout each year, require students to provide written self-reflections on evidence of their progress, receive feedback from their physician advisors, and develop learning plans to progressively enhance their competencies. At the end of each year, students construct a portfolio for summative assessment and meet with members of an evaluation committee who will determine their readiness to proceed to the next year or graduate from the program. The evaluation committee serves in the same capacity as the Committee on Students for the University Program and presents reports on the progress of College Program students at end-of-year meetings of the Committee on Students.

The major objective of the portfolio system is for students to assume responsibility for monitoring and directing their learning progress by becoming skilled in self-assessment, reflection, and self-directed learning. This innovative approach also will provide them with documentation of their achievements in medical school that will be useful in their applications to residency programs.

In addition to satisfactory summative assessments of the learning portfolio each year, students in the College Program must pass the U.S. Medical Licensing Examination (USMLE) Step 1 at the end of the year two to advance to year three. Students are also required to take the USMLE Step 2 by Jan. 31 in the year they intend to graduate. To be eligible for graduation from the school, students must obtain at least the minimum passing score on this examination as established by the USMLE Composite Committee. In addition to passing the written USMLE Steps 1 and 2, students must sit for the USMLE Step 2 Clinical Skills Examination before graduation.

THE MEDICAL SCIENTIST TRAINING PROGRAM IN DETAIL

General Description

The Case Medical Scientist Training Program (MSTP) provides training for future physician-scientists by combining well-developed curricula in science and medicine. Medical school and graduate school components are combined in a manner designed to optimize dual-degree training. Unique aspects of the program include the integration of graduate school and medical school in many phases of the program and a high degree of student involvement in running the program.

The MSTP includes three major phases of training.

First phase: During the first two years, each student completes the first two years of the University Program medical school curriculum, including early clinical experiences, completes at least three research rotations, takes graduate courses, and chooses his or her Ph.D. graduate program and thesis lab. During the summers before the first two years of medical school, students complete research rotations. During the fall and spring semesters of year one and the fall semester of year two, students generally take a graduate course or complete a research rotation.

Second phase: During the Ph.D. thesis phase, students complete all requirements of their Ph.D. thesis program. They also can participate in the MSTP Clinical Tutorial.

Third phase: The final phase is the return to years three and four of the University Program medical school curriculum. The focus is clinical training, but research electives can be taken for part of year four.

Although each of these three phases has a different focus, opportunities exist for students to pursue both research and clinical training in each phase. The philosophy of the Case MSTP is to integrate medicine and science throughout the program as much as possible.

The Case MSTP is run by faculty, students, and staff. The MSTP Council is a body of students that plans and runs certain aspects of the program. The program manager and program assistant have many important roles and run the day-to-day management of the program. They are often the first people students contact for advice or help. The associate director is involved in decisions at all levels of the program and is the primary advisor for students in the...
first two years of the program. The director is responsible for all aspects of the program and is available to students for advice at any stage. The MSTP Steering Committee makes decisions on MSTP policy, planning, student admissions, approval of mentors and evaluation of students.

Incoming MSTP students are expected to enter the program on July 1. The MSTP summer retreat, usually held in July, provides an important orientation to the program and includes sessions and workshops for program and professional development.

Advising System
The MSTP associate director advises students in the first two years on research rotations and course work. Students may also meet with an MSTP Steering Committee member representing an area of research interest or with the MSTP director. During the Ph.D. training period, mentoring is provided by the thesis advisor and thesis committee, which includes a member of the MSTP Steering Committee and a member with an M.D. MSTP students are full members of the medical school class and enter one of the four societies of the University Program when they matriculate in the program. The society dean provides important advice for matters concerning the MD curriculum. In addition, the MSTP provides clinical advisors to help MSTP students with issues concerning the clinical curriculum. The director provides advising to students in all phases of the program.

Classes and Research Rotations in Years One and Two
During years one and two of the University Program, MSTP students register for 9 credit hours of graduate course work.

- **Fall semester, year 1:** IBIS 401, IBIS 411 and either MSTP 400 or an appropriate graduate school course
- **Spring semester, year 1:** IBIS 402, IBIS 412 and either MSTP 400 or an appropriate graduate school course
- **Fall semester, year 2:** IBIS 403, IBIS 413 and either MSTP 400 or an appropriate graduate school course
- **Spring semester, year 2:** IBIS 404 and graduate school courses

IBIS 401, 402 and 403 (Integrated Biological Sciences I-IV) are 3-4 credits each. IBIS 404 (Integrated Biological Sciences IV) is offered as a zero-credit course. IBIS 411, 412, and 413 (Clinical Science I-III) are two credits each.

In contrast to their fellow medical students, MSTP students are graded during years one and two of the medical school curriculum for these graduate courses, which provide graduate school credit for the medical school curriculum. These grades are for graduate school purposes and do not affect standing in the medical school.

Additional credits are added for other graduate-level courses as selected by the student. Students generally take MSTP 400 (Research Rotation) or one graduate school course per semester. Graduate courses are scheduled in the afternoon to avoid conflict with the medical school curriculum. MSTP students will be registered for MSTP 400 during the summer terms before each of the first two years of medical school. Students also may complete a research rotation instead of a graduate school course during the fall or spring semester.

The Ph.D. Phase
After completion of the second year of medical school, each student chooses a Ph.D. thesis mentor, joins a specific Ph.D. program, and completes any remaining graduate school course work and other requirements for the Ph.D. degree. The following graduate programs are affiliated with the MSTP:

- Biochemistry
- Biology
- Biomedical Engineering
- Cancer Biology Training Program (through the Pathology Ph.D. program)
- Cell Biology
- Chemistry
- Developmental Biology (through the Genetics and Neuroscience Ph.D. programs)
- Genetic and Molecular Epidemiology
- Genetics: Molecular, Developmental and Human Genetics
- Immunology Training Program (through the Pathology Ph.D. program)
- Microbiology and Molecular Biology
- Molecular Virology
- Pathology (Molecular and Cellular Basis of Disease)
- Neurosciences
- Nutritional Sciences
- Pharmacological Sciences
- Physician Engineer Training Program (PETP, through the BME Ph.D. program)
- Physiology and Biophysics

All MSTP students are required to take a one-week ethics course (IBMS 500 - Being a Professional Scientist - 0 credits) during the spring semester of their third year in the program (first year of Ph.D. research).

Clinical Tutorial, Clinical Refresher Course and Years Three and Four of Medical School
During the Ph.D. thesis phase, MSTP students are encouraged to take the optional MSTP Clinical Tutorial, which provides a unique longitudinal part-time clinical experience. The MSTP Clinical Tutorial is a year-long course that enhances clinical skills for year three of medical school. It also serves a special career development objective by allowing students to balance medical and scientific interests and explore the connections between these areas. The MSTP Clinical Tutorial, offered during the Ph.D. phase, is an example of the integration of science and medicine in the Case MSTP. An alternative approach to enhancement of clinical skills is the MSTP Clinical Refresher course, which is taken before the start of year three. After completion of the Ph.D., MSTP students are enrolled in medical school to complete the requirements for the M.D. (see description provided for the University Program).

MSTP Activities
The MSTP supports several activities that enhance the scientific and professional development of students. These activities also foster a vibrant and collegial MSTP community with a strong sense of mission in the training of physician scientists.

Summer retreat: The annual MSTP summer retreat is a two-day event focusing on scientific presentations, professional development and program planning for the upcoming academic year.

Winter retreat: This retreat occurs in January or February. Students in their research years present their thesis work (completed or in progress) through a brief oral or poster presentation.

MSTP Student Council coordinates many activities of the Case MSTP. The Council meets once each month to discuss activities that are run by different student committees. The overall goals of the MSTP Student Council are to identify objectives for the program, to allow students to initiate programs to enhance the MSTP, to encourage increased student involvement in the operation of the MSTP, and to enhance development of leadership skills of MSTP students. The president, vice president and secretary are all elected for one-year terms. Committees are led by 1-3 committee chairs who take charge of committee activities...
and coordinate the involvement of other students in the committee activities. All students are welcome and encouraged to participate in the various committees and to attend the student council meetings. The MSTP Council Charter is attached as an Appendix.

Recent Council committees have included the following:

1. Monthly Dinner Meeting Committee. This committee is responsible for planning monthly dinner meetings, selecting topics, speakers, and menus. The series is organized by students and is attended by students, Steering Committee members and research mentors. Invited speakers (students, faculty, alumni and outside speakers) address issues pertinent to research, professional issues, career development or other topics of interest. The informal environment at these gatherings promotes social and professional interactions.

2. Agre Society. The Agre Society at Case Western Reserve University serves to advance understanding of biomedical research by clinical residents, fellows and MSTP students. The society's activities involve residents and fellows from clinical training programs at Case-affiliated hospitals (Internal Medicine, Pediatrics, Surgery, Pathology, and Genetics), MSTP students in all phases of the program and associated faculty. The main focus of the Agre Society is a series of informal monthly dinner meetings. The design of the Agre Society promotes interactions between MSTP students, residents and fellows with interests in biomedical research, allowing these groups to enrich each other with their different experiences and viewpoints. The program helps clinical residents and fellows to learn about research and identify potential mentors within the wider Case research community. It also helps MSTP students to understand the clinical context of their research and enables them to form contacts with people at more advanced stages of training. The society is named for Peter Agre, M.D., a medicine resident in the University Hospitals of Cleveland/VA program in the mid 1970's who won the Nobel Prize in Chemistry in 2003 for the discovery of aquaporins. The Agre Society is sponsored by the Case/ UHC Department of Medicine and is run jointly by the Department of Medicine and MSTP Council. For more information, contact the MSTP office (mstp@case.edu) or R. Tyler Miller, M.D., Department of Medicine.

3. Communications/Newsletter Committee. This committee is responsible for publishing the biannual newsletter.

4. Web Page Committee. This committee is responsible for generating content for the Case MSTP website.

5. Summer Retreat Committee. This committee plans the summer retreat.

6. Intro to MSTP: This committee is in place to help first year MSTP students adjust to the program and Case.

7. Physician-Scientist Visiting Lecturer: This committee is in charge of planning the visit of a prominent physician/scientist who will come to give a seminar and visit in depth with MSTP students in small groups to discuss the intersection of science and medicine and career development issues for physician scientists.

8. Community Service Committee: Plans events for involvement of MSTP students in community service.

9. Social Committee: This important committee plans fun events throughout the year!

10. Student Representative to Faculty Council: One student is selected to represent the MSTP on Faculty Council.

11. MSTP Women's Committee: Women in the MSTP organize luncheons or other meetings to discuss issues that face women pursuing careers in science. Members may invite a successful woman scientist who provides a role model as a physician scientist.

12. Other committees may be formed at the discretion of Council.

Scientific meetings: The program strongly encourages students to present their research at national or international meetings and provides financial support to pay for part of meeting travel expenses (other funding is obtained from the research mentor). In addition to the general meeting support for all students, each year two students are offered the opportunity to attend the annual M.D./Ph.D. national student conference in Colorado, with all expenses paid by the MSTP.

Research symposia: MSTP students are encouraged to present their research at Case student symposia, including the annual graduate student symposium and the Irwin H. Lepow Student Research Day. These symposia feature a nationally recognized keynote speaker, and students have the opportunity to interact extensively with the noted scientist. A committee awards prizes for outstanding student presentations.

Assessment of MSTP Students

Students in the MSTP are assessed for the medical school component of the program in the same manner as students in the University Program, with the exception that grades are awarded for those courses in the M.D. curriculum in years one and two that receive graduate school credit and are used to satisfy requirements for the Ph.D. degree. Students must satisfactorily complete all requirements for both the M.D. and the Ph.D.

Expectations for Personal and Professional Characteristics

Students are evaluated on knowledge base, clinical skills and professional behavior and attitudes. The following characteristics are evaluated throughout the medical curriculum, and students are expected to adhere to these standards in both their academic and personal pursuits:

Interpersonal relationships: Provides supportive, educational and empathetic interactions with patients and families, and is able to interact effectively with "difficult" patients. Demonstrates respect for and complements roles of other professionals, and is cooperative, easy to work with, commanding respect of the health care team.

Initiative: Independently identifies tasks to be performed and makes sure that tasks are completed. Performs duties promptly and efficiently, and is willing to spend additional time, assume new responsibilities, and able to recognize the need for help and ask for guidance when appropriate.

Dependability: Completes tasks promptly and well. Present on time and actively participates in clinical and didactic activities. Always follows through and is exceptionally reliable.

Integrity and honesty: Demonstrates integrity. Is honest in professional encounters. Adheres to professional ethical standards.

Tolerance: Demonstrates exceptional ability to accept people and situations. Acknowledges her or his biases and does not allow them to affect patient care.

Function under stress: Consistently maintains professional composure and exhibits good clinical judgment in stressful situations.

SCHOOL OF MEDICINE

Assessment of MSTP Students

Students in the MSTP are assessed for the medical school component of the program in the same manner as students in the University Program, with the exception that grades are awarded for those courses in the M.D. curriculum in years one and two that receive graduate school credit and are used to satisfy requirements for the Ph.D. degree. Students must satisfactorily complete all requirements for both the M.D. and the Ph.D.

Expectations for Personal and Professional Characteristics

Students are evaluated on knowledge base, clinical skills and professional behavior and attitudes. The following characteristics are evaluated throughout the medical curriculum, and students are expected to adhere to these standards in both their academic and personal pursuits:

Interpersonal relationships: Provides supportive, educational and empathetic interactions with patients and families, and is able to interact effectively with “difficult” patients. Demonstrates respect for and complements roles of other professionals, and is cooperative, easy to work with, commanding respect of the health care team.

Initiative: Independently identifies tasks to be performed and makes sure that tasks are completed. Performs duties promptly and efficiently, and is willing to spend additional time, assume new responsibilities, and able to recognize the need for help and ask for guidance when appropriate.

Dependability: Completes tasks promptly and well. Present on time and actively participates in clinical and didactic activities. Always follows through and is exceptionally reliable.

Integrity and honesty: Demonstrates integrity. Is honest in professional encounters. Adheres to professional ethical standards.

Tolerance: Demonstrates exceptional ability to accept people and situations. Acknowledges her or his biases and does not allow them to affect patient care.

Function under stress: Consistently maintains professional composure and exhibits good clinical judgment in stressful situations.
SCHOOL OF MEDICINE

Appearance: Always displays an appropriate professional appearance.

Educational Authority
Governance of the educational programs leading to medical degree resides in the Faculty of Medicine. Each class of students selects representatives who become voting members of the Faculty of Medicine. The faculty of the School of Medicine is responsible for the content, implementation and evaluation of the curriculum. The dean of the School of Medicine serves as its chief academic officer with overall responsibility to the university for the entire academic program. The vice dean for education and academic affairs carries the dean's academic and administrative authority and has direct supervisory responsibility over the units that lead and support the curriculum.

The faculty's Committee on Medical Education (CME) evaluates, reviews and makes recommendations concerning the major units of the medical education program. Acting for the faculty, the Committee on Medical Education evaluates the achievement and outcomes of curricular objectives and reviews the curriculum as a whole. The faculty elects the majority of the members of the Committee on Medical Education; student representatives also serve on this committee and its various subcommittees.

Three curriculum councils are responsible for the University Program and one curriculum council is responsible for the College Program; all four councils report to the CME. These councils are responsible for the strategic planning, content, design, selection of teaching leadership, and oversight of the curriculum, student assessment and program evaluation.

GRADUATION
A medical student who has satisfactorily completed all the required work in the School of Medicine program in which he or she is enrolled may be granted the degree of doctor of medicine (M.D.) by Case Western Reserve University, provided that:

1) He or she has been registered at Case Western Reserve University School of Medicine for at least four academic years, or has transferred to the University Program after two years at another accredited medical school.
2) The Committee on Students for the University Program or the Medical Student Promotions and Review Committee for the College Program approves his or her record of performance, and the faculty recommends him or her to the trustees for graduation.
3) He or she has discharged all financial obligations to the university and to the program in which he or she is enrolled.
4) He or she has taken the U.S. Medical Licensing Examination (USMLE) Steps 1 and 2 and the USMLE Step 2 Clinical Skills Examination, and has obtained a minimum passing score on the examinations as determined by the USMLE Composite Committee. The requirements for graduation of any class may be altered by action of the faculty of the School of Medicine.

LICENSE
Licensure to practice medicine in the United States and its territories is a privilege granted by the individual licensing boards of the states and territories. Each licensing board of the individual jurisdictions establishes its policies, eligibility and requirements for the practice of medicine within its boundaries pursuant to statutory and regulatory provisions. The degree of doctor of medicine awarded by Case Western Reserve University is an academic degree and does not provide a legal basis for the practice of medicine.

THE ELECTRONIC CURRICULUM
The School of Medicine has developed an integrated electronic curriculum for all four years of the medical curriculum that contains a list of learning objectives as well as the resources that allow the students to achieve the objectives. These resources include references to traditional textbooks and journal articles, original textual material, PowerPoint files, illustrations, animations, videos, audio files, and links to Internet-based learning resources (including original journal articles in electronic format). These resources are made available on the Internet by an NT/Internet server system.

Students have access to the Internet and the electronic curriculum from their assigned personal desks via fiber optic Ethernet connection to CWRU net and via wireless access when away from their desks. When off campus, access is through a modem connection.

Other Degree Programs
The degree programs listed in this section may require admission to another school at the university in addition to or instead of the School of Medicine. Each school may have different deadlines and requirements for admissions.

Please contact the other schools separately using information provided under that school's listing in this publication. Please see departmental listings in this section of the General Bulletin for information about additional degree programs offered through the medical school's departments.

CLINICAL RESEARCH SCHOLARS PROGRAM (CRSP)
Leading to a Master of Science degree in clinical research, the Clinical Research Scholars Program (CRSP) provides physicians, dentists, nurses, and Ph.D.-prepared health care professionals with a rigorous, high quality, didactic education in clinical research methods. The aim of CRSP is to develop a new generation of clinical investigators for leadership roles in academia and industry.

CRSP Scholars are individuals who have completed their clinical training and want to develop a professional career based in clinical investigation. A prerequisite for consideration for admission is a degree in medicine, dentistry, nursing, or an allied science. The program consists of formal didactic course work, a longitudinal seminar series, and an intensive mentored experience centered on a specific clinical research problem. The curriculum makes use of existing didactic material offered throughout Case Western Reserve’s medical, nursing, dental, management, and law schools as well as courses specifically designed for CRSP Scholars.

The program resides in the School of Medicine and the School of Graduate Studies and consists of a two-to-five year curriculum requiring 36 credit hours. Fifteen hours are accumulated in five required courses common to all fields of clinical investigation. At the end of the first year of study, Scholars differentiate into one of four specialty tracks that afford maximum flexibility and that are adapted to meet a wide array of clinical research career goals. Completion of a formal thesis is required for the awarding of the Master of Science degree.

For more information, see http://casemed.case.edu/CRSP or contact Carol Tolin, Program Coordinator, The Clinical Research Scholars Program at Case, c/o MetroHealth Medical Center - Bell Grove 3-45, 2500 MetroHealth Drive, Cleveland, Ohio 44109-1998; e-mail: carol.tolin@case.edu.

CLINICAL RESEARCH SCHOLARS PROGRAM (CRSP)
Course Descriptions

CRSP 401. Introduction to Clinical Research
Summer Series (1 - 3)
This course is designed to familiarize one with the language and concepts of clinical investigation and statistical computing, as well as provide opportunities for problem-solving, and practical application of the information derived from the lectures. The material is organized along the internal logic of the research process, beginning with mechanisms of choosing a research question and moving into the information needed to design the protocol, implement it, analyze the findings, and draw and disseminate the conclusion(s). Prereq: M.D., R.N., Ph.D., D.D.S., health professionals.

CRSP 402. Study Design and Epidemiologic Methods (3)
This course will cover the methods used in the conduct of epidemiologic and health services research and considers how epidemiologic studies may be designed to maximize etiologic inferences. Topics include: measures of disease frequency, measures of effect, cross-sectional studies, case-control studies, cohort studies, randomized controlled trials, confounding, bias, effect modification, and select topics. Recommended preparation: CRSP 401 or permission of instructor.

CRSP 403. Biostatistics for Clinical Research (3)
We introduce biostatistical methods for clinical investigators involved in patient-oriented, translational, epidemiologic, health services and public health research. We anticipate that students will be involved in designing and interpreting their own studies, but also in critically evaluating the work of others. The course thus emphasizes the statistical process: how to conduct studies, what the results mean, and what can be inferred about the whole from pieces of information. The focus is on understanding and describing relationships between phenomena and measuring how well these relationships fit data. A project involves problem specification, data collection, management, analysis, and presentation. Students will use statistical software extensively and will be exposed to multiple packages. Topics include descriptive statistics, exploratory data analysis, the fundamentals of probability, sampling, inferential statistics, power and sample size, experimental design, correlation, regression, and association. Recommended preparation: CRSP 401.

CRSP 406. Introduction to Statistical Programming using SAS (2)
This course will provide students with an introduction to SAS version 8.2 in the context of clinical research. Topics will include an overview of the SAS "data step" and procedures commonly used to explore, visualize, and summarize clinical data. Students will learn the basics of the SAS programming language, how to troubleshoot SAS code, as well as how to interpret selected SAS output. Clinical research datasets will be used in class examples, computer laboratory sessions, and homework. Each session will include a lecture immediately followed by a computer lab to reinforce the concepts introduced. Students will work in small groups or individually. Recommended preparation: CRSP 403 or consent of instructor.

CRSP 407. Logistic and Survival Analysis (3)
This course introduces two commonly used statistical modeling techniques found in the medical, epidemiologic, and public health research fields: logistic regression and survival analysis. The course emphasizes summarizing and analyzing binary and time-to-event outcomes. The focus is on establishing a foundation for when and how to use these modeling techniques as well as an understanding of interpreting results from analyses. Two course projects will involve problem specification, data collection, analysis, and presentation. Students will use statistical software extensively and will be exposed to output from SAS. Planned topics include contingency tables, logistic regression models and diagnostic measure, analyzing ordinal outcomes, estimating of the survival curve, Cox proportional hazard regression models and diagnostic measures, and sample size estimation. Prereq: CRSP 403 and CRSP 406.

CRSP 412. Communication in Clinical Research (Part 1) (1)
Parts 1 and 2 of this course build basic knowledge and develop core skills in scientific communication, grantsmanship, and the peer review process. Written and oral communication in clinical science, applying for grants, submitting abstracts and manuscripts, giving presentations, and the peer review process will be covered. Recommended preparation: CRSP 401 or equivalent and consent of instructor.

CRSP 413. Communication in Clinical Research (Part 2) (1)
Parts 1 and 2 of this course build basic knowledge and develop core skills in scientific communication, grantsmanship, and the peer review process. Written and oral communication in clinical science, applying for grants, submitting abstracts and manuscripts, giving presentations, and the peer review process will be covered. Recommended preparation: CRSP 401 or equivalent and consent of instructor.

CRSP 500. Observational Studies (3)
An observational study is an empirical investigation of treatments, policies or exposures and the effects that they cause, but it differs from an experiment because the investigator cannot control treatment assignment. We introduce design, data collection and analysis methods appropriate for clinical investigators, preparing students to design and interpret their own studies, and those of others in their field. Technical formalities will be minimized, and the presentations will focus on the practical application of methodologies and strategies. A course project involves the completion of an observational study, and substantial use of statistical software. Topics include randomized experiments and how they differ from observational studies, planning and design for observational studies, adjustments for overt bias, sensitivity analysis, methods for detecting hidden bias, and propensity methods for selection bias adjustment, including multivariate matching, stratification and regression adjustments. Prereq: EPBI 432, EPBI 441, or CRSP 407 or consent of instructor.

CRSP 501. Working in Interdisciplinary Research Teams (1)
This course will assist learners to understand why and how different professional disciplines, each representing a body of scientific knowledge, must work together to develop and disseminate knowledge. Learners will develop a set of skills specific to being an effective member and leader of an interdisciplinary research team, including working with different value and knowledge sets across disciplines, running effective meetings, managing conflict, giving and receiving feedback, and group decision-making techniques. Using the small group seminar approach and case studies, learners will practice individual and group communication, reflective and self-assessment techniques, and engage in experiential learning activities regarding effective teamwork in interdisciplinary research teams. Techniques to increase group creativity and frame new insights will be discussed. Recommended preparation: K grant Appointment or permission of instructor.

CRSP 502. Leadership Development (2)
Leadership Assessment and Development is for participants to learn a method for assessing their knowledge, abilities, and values relevant to management; and for developing and implementing plans for acquiring new management related knowledge and abilities. The major goals of this course include generating data through a variety of assessment methods designed to reveal your interests, abilities, values, and knowledge related to leadership effectiveness; learning how to interpret this assessment data and use it to design plan developmental activities; small group sharing of insights from the various assessments. Recommended preparation: K grant appointment or consent of instructor.

CRSP 503. Innovation and Entrepreneurship (2)
The purpose of this module is to acquaint and ultimately engage clinical researchers with the business of innovation and entrepreneurship. Goals include: (1) to provide researchers with many of the skills that they would need to translate academic research into commercial use; (2) to sensitize clinical researchers to the goals of the business community and facilitate their ability to work with the private sector on technology development and transfer. Sessions consist of lectures and case discussion facilitated by the instructor. Some sessions include members of the business community as guest lecturers. As an example, students will discuss the financing of new companies with local venture capitalists. Student products include the evaluation of the commercial potential of a university technology in which they apply their new knowledge about commercialization of scientific discoveries. Offered as CRSP 503, ECON 406, and HSMC 406.

CRSP 510. Health Disparities (3)
This course aims to provide theoretical and application tools for students from many disciplinary backgrounds to conduct research and develop interventions to reduce health disparities. The course will be situated contextually within the historical record of the United States, reviewing social, political, eco-
SCHOOL OF MEDICINE

nomic, cultural, legal, and ethical theories related to disparities in general, with a central focus on health disparities. Several frameworks regarding health disparities will be used for investigating and discussing the empirical evidence on disparities among other subgroups (e.g., the poor, women, uninsured, disabled, and non-English speaking populations) will also be included and discussed. Students will be expected to develop a research proposal (observational, clinical, and/or intervention) rooted in their disciplinary background that will incorporate materials from the various perspectives presented throughout the course, with the objective of developing and reinforcing a more comprehensive approach to current practices within their fields. Offered as CRSP 510, EPBI 510, MPHP 510, NURS 510, and SASS 510.

CRSP 603. Research Ethics and Regulation (2)
This course is designed to introduce students to the ethical, policy, and legal issues raised by research involving human subjects. It is intended for law students, post-doctoral trainees in health-related disciplines and other students in relevant fields. Topics include (among others): regulation and monitoring of research; research in third-world nations; research with special populations; stem cell and genetic research; research to combat bioterrorism; scientific misconduct; conflicts of interest; commercialization and intellectual property; and the use of deception and placebos. Course will meet in once per week for 2 hours throughout the semester. Grades will be based on class participation and a series of group projects and individual short writing assignments. Offered as CRSP 603 and LAWS 603.

CRSP 651. Clinical Research Scholars Thesis
CRSP Thesis M.S.

MASTER OF PUBLIC HEALTH (M.P.H.)
The master of public health program prepares students to enhance health in human populations through organized community effort. Graduates are qualified to work in local and state health departments, universities and colleges, hospitals, ambulatory medical centers, non-profit organizations, and the insurance and pharmaceutical industries.

The program seeks to attract a rich mix of students, including those pursuing degrees in medicine, nursing, dentistry, law, social work, bioethics, management and other fields, as well as students holding undergraduate degrees.

The program has tracks in adolescent health (the first in the country), public health research, urban health, health care policy and administration, health promotion/disease prevention, international health, and epidemiology. The 36-hour program can be completed in two years. Students earn 15 credit hours through five required courses representing the fundamentals of public health: biostatistics, epidemiology, environmental health, health policy/administration, and behavioral health. Also, students receive a total of nine credit hours for three courses in an area of concentration of their choice (see aforementioned list), three credit hours for an elective course, and nine credit hours from a one-semester public health field practicum. In the practicum, students develop and work on a project that brings their new public health skills to the community.

The M.P.H. program has developed several new dual degree programs. Each program combines the master of public health degree with one of the following degrees: master of science in nursing degree, medical degree, master of business administration degree, juris doctorate degree, master of arts in bioethics or master of arts/Ph.D. in anthropology. It is anticipated that additional dual degree programs will be developed.

Admission is through the Case Western Reserve University School of Graduate Studies. For more information, call 216-368-3725, e-mail acn3@case.edu, or visit www.casemph.org.

MASTER OF PUBLIC HEALTH (MPHP)

Course Descriptions

MPHP 306. History and Philosophy of Public Health (3)
The purpose of this course is to introduce students to the science and art of public health through an understanding of the history and philosophies that represent its foundation. Students will learn about the essentials of public health and applications of these precepts throughout history and in the present. The course will examine public health case histories and controversies from the past and present, in order to better understand solutions for the future. Offered as MPHP 306 and MPHP 406.

MPHP 313. Health Education, Communication, and Advocacy (3)
Using a biopsychosocial perspective, an overview of the measurement and modeling of behavioral, social, psychological, and environmental factors related to disease prevention, disease management, and health promotion is provided. Offered as EPBI 411 and MPHP 411.

MPHP 413. Health Education, Communication, and Advocacy (3)
Historical, sociological, and philosophical factors that have influenced definitions and the practice of health education and health promotion are studied. Advanced concepts in health communication theory will also be explored. This course is designed to education, motivate, and empower undergraduates and graduate students to become advocates for their own health, the health of their peers, and the health of the community. Offered as MPHP 313 and MPHP 413.

MPHP 419. Topics in Urban Health in the United States (3)
This course examines patterns of urban health and disease across the life course among marginalized populations and communities. We will examine the socio-environmental contexts that impact health status (i.e., racism, health disparities, neighborhood context, and environmental stressors). Readings from epidemiology, sociology, and public health literature will provide a foundation for the multiple factors and processes that impact health. Offered as EPBI 419 and MPHP 419.

MPHP 421. Health Economics and Strategy (3)
This course has evolved from a theory-oriented emphasis to a course that utilizes economic principles to explore such issues as health care pricing, anti-trust enforcement and hospital mergers, choices in adoption of managed care contracts by physician groups, and the like. Instruction style and in-class group project focus on making strategic decisions. The course is directed for a general audience, not just for students and concentration in health systems management. Offered as ECON 421, HSMC 421, and MPHP 421.

MPHP 429. Introduction to Environmental Health (3)
This is a survey course of environmental health topics including individual, community, population, and global issues. Introduction to risk management, important biological mechanisms, and age and developmental impacts are covered in an overview fashion. A practical inner city home environment experience is included. Offered as EVHS 429 and MPHP 429.

MPHP 431. Statistical Methods I (3)
Application of statistical techniques with particular emphasis on problems in the biomedical sciences. Basic probability theory, random variables, and distribution functions. Point and interval estimation, regression, and correlation. Problems whose solution involves using packaged statistical programs. First part of year-long sequence. Offered as ANAT 431, BIOL 431, EPBI 431, and MPHP 431.

MPHP 432. Statistical Methods II (3)
Methods of analysis of variance, regression and analysis of quantitative data. Emphasis on computer solution of problems drawn from the biomedical sciences. Design of experiments, power of tests, and adequacy of models. Offered as BIOL 432, EPBI 432, and MPHP 432. Prereq: EPBI 431 or equivalent.

MPHP 433. Community Interventions and Program Evaluation (3)
This course prepares students to design, conduct, and assess community-based health interventions and program evaluation. Topics include assessment of need, evaluator/stakeholder relationship, process vs. outcome-based objectives, data collection, assessment of program objective achievement based on process and impact, cost-benefit analyses, and preparing the evaluation report to stakeholders. Recommended preparation: EPBI 490, EPBI 431, or MPHP 405. Offered as EPBI 433 and MPHP 433.

MPHP 439. Public Health Management and Policy (3)
This course will include a description of the health care system, an understanding of population based health care, concept and methods of health management, current issues in health policy and the application of these concepts using case studies. Topics will include the role of the manager, organizational design and control, professionals in organizations, adaptation and accountability. This is a required course in the M.P.H. degree. Grades will be based on class participation and a paper.

MPHP 442. Biostatistics II (3)
This course deals with the basic concepts and applications of nonparametric statistics. Topics will include distribution-free statistics, one sample rank test, the Mann-Whitney and Kruskal Wallis tests, one sample and two sample U-statistics, asymptotic relative efficiency of tests, distribution-free confidence intervals, point estimation and linear rank statistics. Recommended preparation: EPBI 441. Offered as EPBI 442 and MPHP 442.

MPHP 444. Sexuality, Public Health and the Law (3)
This course provides an overview of numerous issues that arise at the intersection of public health, sexuality, and the law. In the context of public health, these issues include the prevention of infectious disease transmission, the prevention of violence, and the protection of the public health. Legal issues include those related to individuals' right to privacy, child custody, child abuse and neglect, and protection of the public.

MPHP 450. Clinical Trials and Intervention Studies (3)
Issues in the design, organization, and operation of randomized, controlled clinical trials and intervention studies. Emphasis on long-term multicenter trials. Topics include legal and ethical issues in the design; application of concepts of controls, masking, and randomization; steps required for quality data collection; monitoring for evidence of adverse or beneficial treatment effects; elements of organizational structure; sample size calculations and data analysis procedures; and common mistakes. Recommended preparation: EPBI 431 or consent of instructor. Offered as EPBI 450 and MPHP 450.

MPHP 451. Principles of Genetic Epidemiology (1 - 3)
A survey of the basic principles, concepts and methods of the discipline of genetic epidemiology, which focuses on the role of genetic factors in human disease and their interaction with environmental and cultural factors. Many important human disorders appear to exhibit a genetic component; hence the integrated approaches of genetic epidemiology bring together epidemiologic and human genetic perspectives in order to answer critical questions about human disease. Methods of inference based upon data from individuals, pairs of relatives, and pedigrees will be considered. The last third of the course (1 credit) is more statistical in nature. Offered as EPBI 451, GENE 451, and MPHP 451.

MPHP 456. Health Policy and Management Decisions (3)
This seminar course combines broad health care policy issue analysis with study of the implications for specific management decisions in organizations. This course is intended as an applied, practical course where the policy context is made relevant to the individual manager. Offered as HSMC 456 and MPHP 456.

MPHP 458. Statistical Methods for Clinical Trials (3)
This course will focus on special statistical methods and philosophical issues in the design and analysis of clinical trials. The emphasis will be on practically important issues that are typically not covered in standard biostatistics courses. Topics will include: randomization techniques, intent-to-treat analysis, analysis of compliance data, equivalency testing, surrogate endpoints, multiple comparisons, sequential testing, and Bayesian methods. Offered as EPBI 458 and MPHP 458.

MPHP 460. Health Research Methods I (3)
This is a course in research methods focusing on practical issues in the conduct of health services research studies. Topics include: an overview of health services research; ethics in health services research; proposal writing and funding; the relationship between theory and research; formulating research questions; specifying study design and study objectives; conceptualizing and defining variables; validity and reliability of measures; scale construction; operationalizing health research relevant variables using observation, self and other report, and secondary analysis; formatting questionnaires; developing analysis plans; choosing data collection methods; sampling techniques and sample size; carrying out studies; preparing data for analysis; and reporting of findings. Offered as EPBI 460 and MPHP 460.

MPHP 464. Obesity and Cancer: Views from Molecules to Health Policy (3)
This course will provide an overview of the components of energy balance (diet, physical activity, resting metabolic rate, dietary induced thermogenesis) and obesity, a consequence of long term positive energy balance, and various types of cancer. Following an overview of energy balance and epidemiological evidence for the obesity epidemic, the course will proceed with an introduction to the cellular and molecular biology of energy metabolism. Then, emerging research on biologically plausible connections and epidemiological associations between obesity and various types of cancer (e.g., colon, breast) will be presented. Finally, interventions targeted at decreasing obesity and improving quality of life in cancer patients will be discussed. The course will be cooperatively-taught by a transdisciplinary team of scientists engaged in research in energy balance and/or cancer. Didactic lectures will be combined with classroom discussion of readings. The paper assignment will involve application of course principles, lectures and readings. Offered as EPBI 464, MPHP 464.

MPHP 467. Cost-Effectiveness Analysis in Health Care (3)
Evaluation of alternative medical treatments and drug therapies. Topics include cost-benefit, cost-effectiveness and cost-utility analysis. Measuring cost, benefits and health outcomes. Quality of life and other measures of effectiveness will also be addressed. Emphasis on case studies, course project, and evaluation of publications. Some decision analysis and policy implications will also be included. Offered as EPBI 467 and MPHP 467.

MPHP 468. The Continual Improvement of Healthcare: An Interdisciplinary Course (3)
The focus of this course is on collaborative work for the benefit of patients and community. Seminar classwork is combined with a field project, in which interdisciplinary student teams apply what
they have learned to the improvement activities of a local health care organization. Successful completion of the course depends on participation in seminar sessions and completion of the interdisciplinary student team project. Offered as EPBI 468, NURS 468, and MPHP 468.

MPHP 474. Principles of Practice-Based Network Research (3)
Practice-based research networks (PBRNs) are organizations of community-based healthcare practices that engage in clinical research and practice improvement. In the U.S., there are more than 100 of these dynamic, collaborative organizations that enable the translation of research into practice and practice into research. They also frequently engage in developing and refining methods to improve healthcare quality. This course is designed to provide students with a foundation in PBRN methods and principles, including: introduction to PBRNs, methods for collaborating with community practices, PBRN funding strategies, PBRN data collections methods, statistical issues in network research, community-based participatory research, human subjects’ protection issues in PBRNs, quality improvement research in PBRNs, funding for PBRN research, and writing PBRN research findings for publication. Each 2.5 hour class session will feature a lecture followed by a discussion of readings from the literature. Students will develop a PBRN research or quality improvement proposal during the semester. Offered as EBPI 474, FAMD 474, MPHP474.

MPHP 475. Management of Disasters Due to Nature, War, or Terror (3)
The purpose of this course is to make participants aware of the special needs of children and families in disaster situations and understand public health approaches to address these needs. The learning objectives for this course are: 1) Identify the most important problems and priorities for children in disaster situations, 2) Identify the organizations most frequently involved in providing assistance in disaster situations and define their roles and strengths, 3) Describe the reasons why children are among the most vulnerable in disaster events, 4) Conduct emergency nutritional assessments for children, 5) Develop health profiles on displaced children and plan interventions based on results, 6) Define common psychosocial issues of children and the means to address them, 7) List basic points of international law including the Geneva Convention that relate to all persons involved in disaster situations, 8) List important security issues, 9) Appreciate ethical issues involved in disaster situations and employ skills of cross cultural communication, 10) Recognize and respond to special issues for children involved in biological and chemical terrorist attacks.

MPHP 477. Internship at Health-Related Government Agencies (3)
This independent study course will incorporate a one-semester-long internship at health-related government agencies (Ohio Department of Health, Ohio Department of Job and Family Services, or Cleveland City Health Department). The choice of the agency will depend on the student’s academic interests and research goals. The objective is to develop a level of familiarity with the organizational and operational aspects of such agencies, and to gain an understanding of agencies’ and bureaus’ interactions with the legislative body, as well as the processes of developing, implementing, managing, and monitoring health initiatives. The instructor and the liaison persons at the agencies will be responsible for planning structured encounters of interns with key administrators and policy makers, and to select a research project, based on the intern’s research interests and the agencies’ research priorities. Interns will be required to submit a draft of the report to the instructor at the end of the semester. The approved final report will be submitted to the agency. The project will be evaluated for its methodological soundness and rigor. Students will be required to be at the agency one day a week. Recommended preparation: EPBI 515. Offered as EPBI 477 and MPHP 477.

MPHP 484. Geographic Medicine and Epidemiology (1 - 3)
This course focuses on the epidemiology, prevention, treatment, and control of tropical and parasitic diseases. Emphasis will be placed on the triad of agent, host, and environment for infectious disease impacting global health. Three distinct modules will focus on specific examples such as malaria, helminths, bacteria, or viruses. Active class participation is required through discussions, case studies, and group projects. Recommended preparation: EPBI 490, EPBI 491 and a microbiology course or consent of instructor. Offered as EPBI 484, INTH 484, and MPHP 484.

MPHP 485. Adolescent Development (3)
Adolescent Development can be viewed as the overriding framework for approaching disease prevention and health promotion for this age group. This course will review the developmental tasks of adolescence and identify the impact of adolescent development on youth risk behaviors. It will build a conceptual and theoretical framework through which to address and change adolescent behavior to promote health. Offered as ADHT 485 and MPHP 485.

MPHP 488. Gender, Ethnicity, and Health Research (3)
This course is designed to acquaint students with the literature addressing the constructs of race, ethnicity, gender, and social class; to examine critically the contexts in which these constructs are often applied; and to assess the relationship between each of these constructs and access to health care, quality of care, and health outcome. Offered as EPBI 488 and MPHP 488.

MPHP 490. Epidemiology: Introduction to Theory and Methods (3)
Epidemiologic principles and methods needed to understand population-based statements of illness and health. Descriptive epidemiology, analytic epidemiology, and epidemiologic inference. Classification, morbidity and mortality rates, sampling, screening, epidemiologic models, field trials, controlled epidemiologic surveys, sources of bias, and causal models. Recommended preparation: STAT 201 or STAT 207 or STAT 312 or equivalent. Offered as EPBI 490 and MPHP 490.

MPHP 491. Epidemiology: Case-Control Study Design and Analysis (3)
This course builds upon EPBI 490 with a comprehensive study of the concepts, principles, and methods of epidemiologic research. The course content specifically focuses on the case-control study design and provides a framework for the design, analysis, and interpretation of case-control studies. Rigorous problem-centered training includes exposure measurement, subject selection, validity, reliability, sample size and power, effect modification, confounding, bias, risk assessment, matching, and logistic regression. Individual and group data projects will be analyzed using SAS statistical software. Offered as EPBI 491 and MPHP 491.

MPHP 492. Epidemiology: Cohort Study Design and Analysis (3)
This course provides a comprehensive introduction to the cohort study. Particular emphasis is placed on cohort study design and cohort data analysis. The course will cover the conceptual framework underlying cohort studies, planning and conducting a cohort study, basic concepts of time, exposure and outcome, and methods in the analysis of longitudinally collected data. Analytic methods covered in the class include, but are not limited to: analysis of age, period, and cohort effects, analysis of incidence rates, analysis of repeated measures, and analysis of time-to-event data. Students will have the opportunity to conduct analysis of data obtained from an actual cohort study using a statistical package of their choice. Offered as EPBI 492 and MPHP 492. Prereq: EPBI 431 and EPBI 490 or equivalent.

MPHP 493. Chronic Disease Epidemiology (3)
This course is intended for graduate students in epidemiology and M.P.H. students who are interested in chronic disease epidemiology and prevention. The course will cover: 1) overview of concepts in chronic disease epidemiology and etiology, study design in epidemiologic research, and causal inference; 2) major chronic diseases in the U.S. populations and prevention; and 3) cancer screening. For each specific disease of interest, the lecture is structured according to 4 major components: 1) basic epidemiology; 2) risk factors and etiology; 3) prevention (and screening); and 4) controversies and future research. Offered as EPBI 493 and MPHP 493. Prereq: EPBI 490 or equivalent.

MPHP 494. Infectious Disease Epidemiology (1 - 3)
The epidemiology, prevention and control of representative infectious disease models. Emphasis on the triad of agent, host, and environment and the molecular and genetic basis of agent and host interaction in the population. Recommended preparation: EPBI 490, EBPI 491, and a microbiology course or consent of instructor. Offered as EPBI 494, INTH 494, and MPHP 494.

MPHP 495. Mental Health Epidemiology (3)
This course explores the epidemiology of diseases affecting the brain, including various forms of mental illness and neuro logical disorders. The course utilizes a cross-disciplinary approach and draws on sci-
experience, sociology, history, and. Offered as EPBI 495 and MPHP 495.

MPHP 499. Independent Study (1 - 18)

MPHP 501. Graduate Seminar (0)

Students and faculty will meet twice a month to listen to local faculty and national researchers and discuss their current work. The students are encouraged to ask questions and challenge the speakers. Some of the talks will offer CME credits. Offered as EPBI 501 and MPHP 501.

MPHP 502. International Health Practice (3)

This course aims to provide practical knowledge to prepare students to serve and study for international health work particularly in complex humanitarian emergencies. The course is organized and discussed from the perspective of health care professional. This course is intended for graduate-level students in medicine, nursing, public health, social work, and medical anthropology. Historical development of the discipline, key methodological issues, and essential principles in key topics will be discussed in multidisciplinary approach. Offered as FAMD 502 and MPHP 502.

MPHP 506. The Future of Public Health (0 - 3)

This course provides a forum for students to examine topics critical to the future of public health in a structured and progressive format. Utilizing the expertise of public health practitioners, students will gain insight into core public health issues in an interdisciplinary, discussion-oriented seminar. The course begins with an introduction to Informatics, Technology, Leadership, and Communication in Public Health then moves to focused examinations of various methodologies, theories, and approaches used in the field. This foundation informs the final third of the semester, during which ethical issues, policy concerns, and specific topics are critically examined. The major class projects include the development of an electronic portfolio, relevant topic presentations and discussions.

MPHP 507. Building a Public Health Capstone (0 - 3)

This course is designed to walk students through the process of creating a Capstone Project, form “idea to field”. Specific topics to be covered include: identifying a project, creating a project plan, how to effectively work in the community, program design, evaluation, ethical issues in community research, creating an analytic plan, survey design, and writing results. Major class projects include completing an IRB application or completing a grant application for your own project. The last two weeks of class center around attending and discussing the Capstone Presentations of graduating students.

MPHP 508. Ethics, Law, and Epidemiology (3)

This course is designed to provide epidemiology students with basic knowledge about the ethical and legal principles underlying epidemiological research. This is not a public health law class. Issue papers are assigned on a weekly basis. Each issue paper requires that the student analyze the situation depicted and apply the principles learned. Some issue papers may require that the student draft a proposed rule, a portion of legislation, or a document such as an informed consent form. Other exercises may require that students critique an existing agency rule or legislation. Offered as EPBI 508 and MPHP 508. Prereq: EPBI 490 and EPBI 491 or equivalent.

MPHP 510. Health Disparities (3)

This course aims to provide theoretical and applicational tools for students from many disciplinary backgrounds to conduct research and develop interventions to reduce health disparities. The course will be situated contextually within the historical record of the United States, reviewing social, political, economic, cultural, legal, and ethical theories related to disparities in general, with a central focus on health disparities. Several frameworks regarding health disparities will be used for investigating and discussing the empirical evidence on disparities among other subgroups (e.g., the poor, women, uninsured, disabled, and non-English speaking populations) will also be included and discussed. Students will be expected to develop a research proposal (observational, clinical, and/or intervention) rooted in their disciplinary background that will incorporate materials from the various perspectives presented throughout the course, with the objective of developing and reinforcing a more comprehensive approach to current practices within their fields. Offered as CRS 510, EPBI 510, MPHP 510, NURS 510, and SASS 510.

MPHP 532. Health Care Information Systems (3)

This course covers concepts, techniques and technologies for providing information systems to enhance the effectiveness and efficiency of health care organizations. Offered as HSMC 432, MIDS 432, and MPHP 532.

MPHP 652. Public Health Capstone Experience (1 - 9)

The Public Health Capstone Experience consists of a public health field practicum, involving a placement at a community-based field site, and a Master’s essay. The field placement will provide students with the opportunity to apply the knowledge and skills acquired through their Master of Public Health academic program to a problem involving the health of the community. Students will learn to communicate with target groups in an effective manner; to order priorities for major projects according to definable criteria; to use computers for specific applications relevant to public health; to identify ethical, social, and cultural issues relating to public health policies, research, and interventions; to identify the process by which decisions are made within the agency or organization; and to identify and coordinate use of resources at the placement site. The Master’s essay represents the culminating experience required for the degree program and may take the form of a research thesis, an evaluation study, or an intervention study. Each student is required to formally present the experience and research findings. This course is available only to Master of Public Health students.

COURSE DESCRIPTIONS (MSTP)

MSTP 400. Research Rotation in Medical Scientist Training Program (0 - 9)

All students must complete research rotations in a minimum of three different MSTP-approved laboratories and submit rotation reports and rotation evaluations for each to the MSTP office. All three of the rotations must be completed before the beginning of each student’s third year of the program. The main purpose of research rotations is to aid the student in selecting a laboratory for their thesis work.

M.D./D.M.D. PROGRAM

The joint degree DMD/MD program of the Case Western Reserve University School of Dental Medicine and School of Medicine is poised as an innovative approach to satisfy the need for creation of a cadre of uniquely trained individuals who will integrate aspects of primary care into the practice of general dentistry. Students will obtain training in both the fields of medicine and dentistry in a five-year integrated training program that will lead to the DMD and MD degrees. This new joint degree program will address the emerging requirement for health professions students to be broadly trained with an extensive perspective of health and disease. As the associations between oral health and systemic health become clearer, the role of these new health care practitioners of tomorrow will emerge to provide health promotion and disease prevention care in a new framework.

Prospective students of this new innovative program are interested in the health professions using a more broadly defined context, are independent thinkers, and have excelled in baccalaureate programs in the sciences. A pioneering spirit will characterize their motivation. Students will be prepared to sit for the clinical licensure examination leading to the practice of dentistry and for post-graduate, year-one residencies in medicine which are required prior to medical licensure at the end of five years.

M.D./J.D.

This program, offered in conjunction with Case Western Reserve University School of Law, may be completed in six years. The J.D. portion requires the completion of 88 credit hours of study. Admission is through the School of Medicine and the School of Law. For more information about the J.D. portion of the program, visit http://law.case.edu/ academic, call the law school admissions office at 216-368-3600 or 800-756-0036, or e-mail lawadmissions@case.edu.

M.D./M.A. IN BIOETHICS

The 27-credit-hour Master of Arts in bioeth-
ics program, including a 12-hour foundations course taken during the first year of medical school, emphasizes the interdisciplinary and interprofessional nature of the field. It is designed to provide advance training in bioethics for those who anticipate encountering ethical issues in the course of their primary careers. Medical school students complete the bioethics program while pursuing their medical degrees; no additional time is required. Admission for the master's degree portion is through the Case Western Reserve University School of Graduate Studies. For more information, visit http://www.case.edu/med/bioethics/bioethics.html on the Web, e-mail bioethics@case.edu, or see http://www.case.edu/med/bioethics/bioethics.html on the Web.

PH.D. IN BIOETHICS
Case Western Reserve University is one of only two universities in the country to offer a pure bioethics doctorate program in addition to its master's and joint degree programs with medicine, nursing, law and genetics. Admission to the Ph.D. program is through the Case Western Reserve University School of Graduate Studies. For more information, please contact the Department of Bioethics at 216-368-6196, e-mail bioethics@case.edu, or see http://www.case.edu/med/bioethics/bioethics.html on the Web.

PH.D. IN GENETICS/M.A.
IN BIOETHICS
The rapid pace of human genetic research has led to an ever-increasing number of complex ethical issues, making the need for combined training in genetics and bioethics more critical. This is the first joint degree program in Ohio to address this need.

The master of arts in bioethics degree program is a 27-credit-hour program. Required courses include a 12-hour foundations course, a three-credit-hour clinical ethics rotation, and 12 hours of electives. Admission to the master's degree portion is through the Case Western Reserve University School of Graduate Studies Admission to the Ph.D. in genetics program is a separate process.

For more information, please contact the Department of Bioethics at 216-368-6196, e-mail bioethics@case.edu, or see http://www.case.edu/med/bioethics/bioethics.html on the Web.

M.D./M.B.A.
This program is offered in conjunction with Case Western Reserve University Weatherhead School of Management. For more information, visit http://weatherhead.case.edu/mba/jointDegree/joint_mbaMd.cfm on the Web, call the management school's admissions office at 216-368-2030 or 800-723-0203, or e-mail questions@exchange.som.case.edu.

M.D./M.S. IN APPLIED ANATOMY
The core curriculum of this 30-hour, non-thesis master of science master of science in applied anatomy degree program integrates aspects of modern molecular biochemistry, cell biology and physiology with the traditional aspects of anatomical structure and nomenclature of cells, tissues and organs. Electives allow students to pursue individual interests in special areas of research and health care. The program is excellent preparation for those preparing for biomedical careers or those planning to pursue a Ph.D. A thesis option is available.

For more information, visit http://case.edu/med/anatomy/msmd.html, call 216-368-2433, or e-mail mxs86@case.edu.

M.D./PH.D. IN HEALTH POLICY AND HEALTH SERVICES RESEARCH
This program prepares students for careers in academic medicine, health policy, public health, and/or health care management. An important area of focus within this training program is methods and issues in study design that pertain to research examining the health and health care problems of urban and vulnerable populations.

Application to and acceptance in the Ph.D. program in Health Policy/Health Services Research follows admission to the School of Medicine. Dual-degree students are fully integrated with graduate students in other tracks within the Department of Epidemiology and Biostatistics. Dual-degree students typically complete the Ph.D. coursework and the dissertation requirement by their end of their fifth year after matriculation, with the M.D. awarded at the end of the seventh year. Support for tuition and a stipend is available for a limited number of students each year.

For more information, see http://epbiwww.case.edu/hsr.html or contact the departmental coordinator for Graduate Studies, Ms. Alicia Boscarello at 216-368-5957 or by e-mail at alicia.boscarello@case.edu.

PHYSICIAN-ENGINEER TRAINING PROGRAM (PETP)

The Physician-Engineer Training Program (PETP) is a dual-degree program leading to an M.D. and a Ph.D. in biomedical engineering. The total program takes seven to eight years to complete. Students receive full financial support throughout the entire program. This includes all tuition costs, health service fees, computer fees and an annual stipend.

For more information, see http://bme.case.edu/petp/; write PETP Admissions, Case Western Reserve University, 10900 Euclid Avenue, Cleveland, Ohio 44106-7207; phone 216-368-4094; or e-mail axb127@case.edu or ywc3@case.edu.

MEDICAL STUDENT ORGANIZATIONS
The list of organizations and activities available to medical students continually evolves to reflect the interests of current students. Here’s a sampling of the organizations and activities available at press time.

American Association of Anatomists
Contact: Tim Heacock (trh7),
Dave Jackowe (djl10)
Description: To promote science and research excellence, education and teaching excellence, and enhancement of resources for anatomy students.

American Medical Association- Medical Student Section
(Case AMA-MSS)
Contact: George Lominadze (gd61), Stephen Schuldt (ses44), Bishr Aldabagh (bxa33), CCLCM: Kevin Blaine (blainek@ccf.org)
Description: The AMA-MSS chapter at Case Western Reserve University serves to inform medical students about the events affecting medicine in general. It allows students to get involved locally, regionally and nationally in the other aspects of healthcare - policy and politics - with the backing of the most powerful medical association in the nation, the AMA. Want to know what else is out there, beyond the four walls of medical school? Want to be part of an association that will represent you for your entire career? Then come join the AMA-MSS!

American Medical Students Association (AMSA)
Contact: Laura Janneck - President (lmi17),
Dave Boverslus- Vice President (dbb11), Patrick Elliot - Treasurer (pf64), CCLCM Chair:
David Ly

Description: AMSA is the nation’s largest independent medical student organization. AMSA is committed to improving health care for all people; promoting improvement in medical education; being involved in the social, moral and ethical obligations of medicine; assisting in the improvement and understanding of world health problems; contributing to the welfare of medical students and residents; and advancing the profession of medicine. At Case, AMSA conducts events and projects that educate our students on these issues and empowers them to take action at our school, in our community, and nationally. AMSA offers a number of leadership opportunities, educational retreats, internships, and holds regional and national conferences that are the largest annual gatherings of medical students.

American Medical Women’s Association (AMWA)
Contact: Christine Gosen (clg10), Adriane Boyle (amb60), Jessica Bazick (jgb14)
Description: Welcome to the world of women in medicine! AMWA is the largest women’s medical organization in the country. Panel discussions for balancing life and medicine, lunch with women faculty, heart health presentations, and 3rd and 4th year mentoring.

Asian Pacific American Medical Students Association (APAMSA)
Contact: Case: Florence Lin (fls28@case.edu), Ravi Venkatesh (ravi.venkatesh@case.edu), Nolan Walther (nolan.walther@case.edu) Shelley Chang (sxc149@case.edu). Cleveland Clinic: Alan Siu (siua@ccf.org), Jun Xu (xuj@ccf.org)
Description: APAMSA: Not just for Asians. APAMSA is a medical student group dedicated to two specific aims: To educate medical students and health professionals in general about important health issues that affect Asian-Americans here and abroad. As a future physician, you will certainly encounter Asians in your practice, shouldn’t you know how to treat them effectively? If you are interested in learning about health issues that you won’t get in everydayclass and would like to make a positive impact on your community, then APAMSA is the group for you. Best yet, it is free to join!

Boys & Girls Club Tutoring
Joseph Fouche (jef20)

Case Against Tobacco (CAT)
Contact: Jonah Stulberg-Presdent (jjs42)
Description: Case Against Tobacco seeks to eliminate the morbidity and mortality associated with tobacco use through prevention, cessation, legislation and research. Case Against Tobacco coordinates tobacco related activities and provides a means of communication between Case and the greater community on tobacco related issues. In addition to connecting Case medical students to larger initiatives such as Smokefree Ohio, Case Against Tobacco is responsible for running large programs such as the Case Tar Wars Initiative and the Kick Start Program, prevention programs aimed at 4th -8th grade students in greater Cleveland.

Case For Life
Contact: Joe Sweigart (jrs61), Laura Campbell (lcd10)
Description: The mission of the Case For Life group of Case School of Medicine is to provide information necessary to understanding the complexities of life issues in medicine, raise awareness to pro-life perspectives, foster dialogue and personal reflections to reach informed decisions, and to encourage physician leadership in exploring and advocating for life issues. The group is dedicated to reducing the number of abortions performed in the medical profession. We envision a Case community in which all members appreciate the ethical and medical intricacies of life issues, as well as how those issues directly relate to the practice of medicine. We aim to promote an environment respectful of pro-life perspectives and in which all members are adequately informed about life issues to allow for meaningful discourse and informed decision making. This group is politically independent and not affiliated with any particular religion.

Cardiology Interest Group
Contact: Albert Luo (akl9)
Description: This is the first year of the Cardiology Interest Group. Our purpose is to introduce students to the exciting and diverse career options offered within the cardiology specialty, as well as to help students explore cardiology research opportunities. Throughout the course of the year, we hope to invite noted physicians from the Cleveland Clinic and University Hospitals to share their experiences as cardiologists working in leading heart care centers.

Christian Medical Association (CMA)

Contact: Christie Park (cep14), Florence Lin (fls28)
Description: CMA is a student led Christian fellowship for medical students that aims to foster relationships and spiritual growth. Our activities include bimonthly meetings, bible studies, fellowship events, outreach, mentoring, and prayer clusters.

Committee of Student Representatives (CSR)
Contact: John Mafi -President (jmni18), Jane Park-Vice-President (jhp16), Erin Broadus-Secretary (ecb16), James Choi-Treasurer (jic47), Eddie Jones-SCME Chair (edl14), Liz Alofs-Social Chair (ela10)
Description: CSR serves as the student government of the medical school, working to improve student life and serve as the main line of communication between students, faculty, and the administration. We coordinate events relating to diversity, community service, the alumni office, education resources, personal development, social outings, and send representatives to meetings of the Committee on Medical Education, Professional Council, Faculty in Medicine, as well as the national Organization of Student Representatives. We also compile the weekly feedback received by your faculty chairs from the students. Meetings are the 2nd Tuesday of every month and are open to the medical school community.

Complementary Medicine Interest Group (CMIG)
Contact: Dan Einstein (dpc)
Description: The Complimentary Medicine interest group supports those medical students who are interested in complementary, alternative and holistic medical modalities. We are dedicated to learning more about these modalities in order to provide our patients comprehensive medical care, to inform our peers, and finally to strengthen the relationship between all medical practitioners.

Dermatology Interest Group
Contact: Adriane Boyle (amb60), Jessica Rasntegar (jcr27)
Description: The Dermatology Interest Group exists to give information to students considering dermatology as a specialty. In the past, the group has hosted several events, such as a resident panel and a clinical workshop in dermatology. Through our organization, students will have an opportunity to get more exposure and experience in dermatology during their pre-clinical years.
Doc Opera
Contact: Bridget Combs-Director (bcc4), Julie Eppich-Director (jle10), Tyler Gifford-Director (txg46)
Description: Doc Opera is a show made up of videotaped skits and parodied songs targeting the medical school, medical community, life in Cleveland, and everything else that goes along with being a Case medical student. It is newly written, directed, and performed by medical students (and faculty) each year, and the proceeds are donated to a designated non-profit health-oriented organization.

Emergency Medicine Interest Group (EMIG)
Contact: Kristin Kuzma (ckk14)
Description: The EMIG strives to introduce students to the exciting specialty of Emergency Medicine through lectures, hands-on clinical skills labs, and networking opportunities with residents and attending physicians in the field.

Faith and Medicine
Contact: Paul Gunn (pfg4), Bishoy Gad (bgd24)
Description: We will explore the role that faith plays in the lives and care of our patients.

Family Medicine Interest Group (FMIG)
Contact: Nhu Hang-Communications Chair (nht2), Evelyn Morely-Education Chair (egm8), Doug Pepple-Community Service Chair (dpa6), Carrie Tuten-Administrative Chair (cct11)
Description: The Family Medicine Interest Group aims to develop the interest and knowledge in all students who have the “heart of a family doctor” to become active in leadership, education, and promotion of the ideals that are core family medicine values including relationship centered care, academic excellence, professionalism and humanism, integrity, and service through mentorship and community action. These ideals are promoted through educational workshops, lectures, special events, and for those committed to family medicine through their third and fourth year, an honors leadership program.

Healthy Boys and Girls Program
Contact: Joseph Fouche (jef20), Sara Heron (shh5)
Description: The Healthy Boys and Girls’ program established at Case provides youth in the surrounding underserved urban community with up-to-date health information, while at the same time providing medical students with experience of teaching in the community, and forging a relationship between the School of Medicine and the local urban community. Currently, the program visits the West Side Club and the King Kennedy Club, and instructs the children on a wide range of health topics, including physical fitness, mental health, and personal hygiene.

Holden Surgical Interest Society (Holden)
Contact: Tazo Inui-President (tsi2), Dave Matteson-Vice President (dtm6), Geoff Langham-Secretary (gel5)
Description: Holden was started by the surgical departments of UH and MetroHealth to help medical students gain exposure to the surgical specialties. Holden wants to establish and encourage contact between surgeons and students interested in their areas of expertise. There will be guest lecturers, workshops, opportunities for students to share their experiences, and many other activities.

Internal Medicine Interest Group (IMIG)
Contact: Jessica Bazick (jgb14), Vincent Chan (vbc), Nolan Walther (ndw7)
Description: IMIG serves to provide students with exposure and networking opportunities in the area of internal medicine and/or its subspecialties. Annual events include 1. An introductory talk by Dr. Armitage explaining what Internal Medicine is. 2. A panel of currently practicing internists and specialists explaining what they do on a day to day basis. 3. A department dinner at the end of the year attended by physicians and students. This year, we will be introducing some new clinical intro workshops, where students may experience the clinical procedures within the specialties of internal medicine as they progress through the corresponding academic committees.

International Health Interest Group
Silvia Chiang (ssc15), Patrick Elliot (pfe4), Dave Beverslius (ddb11), Laura Janneck (lmj17)
LGBTM – Dante Roulette (gdr4), Dan Wei (ddw8)
Medical Students for Choice (MSFC)
Contact: Millie Gentry-Student Coordinator (mcg19), Kathryn Feldman-Student Coordinator (krf11), Christine Gosen – Secretary (cgl10), Christina Shenko-Treasurer (cas32), Karen Gibbins-Education Chair (kkg7), Stephanie Tarkowsky-Community Liaison (smt15)
Description: Focusing on reproductive health through educating medical students and working with faculty to improve curriculum coverage of reproductive health topics. Panel discussions, counseling techniques, lunch seminars, movies, annual conferences, and more. Welcoming anyone curious for knowledge or with an interest to get involved! Keep an eye out for an interactive lunch session. Men, don’t be shy! Email christine.gosen@case.edu to get on the list-serve in advance.

Military Medicine Interest Group (MMIG)
Contact: Jessie Cassada-President (jlc20), Emily Link-Vice-President (elc4)
Description: MMIG is a recent addition to the student organizational body. The goal of the group is to raise military awareness at Case SOM. It is open to both civilian and HPSP students. It is non-political and not an attempt at recruitment. Activities include guest speakers, volunteering in support of our country and troops and military informational discussions. It also aims to build a local support network for HPSP students.

Neuro Interest Group
Contact: Jenn Lin (jlj23)
Description: The Neuro IG is a diverse group representing neurology, neurosurgery, and basic neuroscience. Our goal is to connect students with prominent faculty members in their field of interest, upper-classmen who are in the process of applying to residency programs, as well as other fellow students who are currently conducting research in various neuro fields. We will have periodic meetings throughout the year focusing on issues related to residency matching, research, and a general meet-and-greet with the faculty.

Obstetrics/Gynecology Interest Group (OB/GYN Interest Group)
Contact: Kathryn Feldman (krf11), Karen Gibbins (kkg7)
Description: The objectives of the OB/GYN Interest Group are 1) to help students understand the dynamics of a career in OB/GYN, 2) to promote clinical skills relevant to women's
health, 3) to match students with OB/GYN mentors based on their interests, 4) to understand the residency application process for OB/GYN. Members are encouraged to join the American College of Obstetricians and Gynecologists. This is a new organization at Case School of Medicine and all students with an interest in women’s health are encouraged to participate.

Oncology Interest Group
Contact: Rashedah Eke-Oduru - President (rae8)
Description: The goal of the Oncology Interest Group is to increase student awareness and interest in the various fields of oncology which encompass the disciplines of internal medicine, pediatrics, and surgery. The organization will highlight the breadth of career options and encourage advancement in cancer research. In addition, support will be given to local and national anti-cancer efforts through volunteer work, fundraising, and supplemental educational opportunities.

Orthopaedics Interest Group
Contact: Mark Sando (mjs73), Chad Fortun (cmf15)
Description: The mission of the orthopaedics interest group is to provide students with an open forum to learn about and discuss opportunities in the field. Through faculty lectures, discussion panels, and shadowing experiences, the group aims to expose students to the general practice of orthopaedics as well as inform students of recent innovations. By educating members about orthopaedic residency programs, the group hopes to provide students with information to better prepare them for application to this competitive field.

Otolaryngology (E.N.T.) Interest Group (ENTIG)
Contact: Adriane Boyle (amb60), John Heaphy (jch36)
Description: Our goal is to help students, especially those in their preclinical years, to explore the field of Otolaryngology. This means providing opportunities to learn about the field, about the research taking place at affiliated institutions, as well as to learn about what it really takes to become and be an otolaryngologist.

Pediatric Interest Group (Peds IG)
Contact: Jane Park (jhp16), Maya Kido (mmk35), Jessica Bazick (jgb14), Iris Kuo (ixk37), Lacey Benson (ljb23)
Reach Out and Read: Christie Park (cep14), Florence Lin (flx128)
Description: The Pediatric Interest Group is geared towards providing students with opportunities for education, mentorship and community service in the field of pediatric medicine. We accomplish this through a variety of projects and events that allow students to interact with both patients and physicians in the Cleveland area.

Phi Delta Epsilon (PDE)
Eddie Jones (elj4), Iris Kuo (ixk37), Jane Park (jhp16), Christine Gosen (clg10), Hadele Banna (hbh53)
A national service medical student organization with flexible and fun involvement in various activities in the community. PhiDE also gives you the opportunity to join a network of physicians nationwide who share a devotion to education and philanthropy. Events include Medwish, food/clothing drives, Ronald McDonald House, Cleveland Food Bank, Habitat for Humanity and volunteer work at Rainbow Hospital (a Carnival for the kids). We’re open to all suggestions!

Physicians for Human Rights (PHR)
Silvia Chiang (ssc15), Patrick Elliot (pfe4), Dave Beversluis (dwb11), Laura Janneck (ljm1j7)
Description: Physicians for Human Rights (PHR) is a national public health organization dedicated to helping the millions of children in the world who suffer from cleft lip and palate through free surgery for children, free training for doctors and research to find a cure. Smile Train provides free surgery and related treatment, which is performed by local medical teams in local hospitals in developing countries. This student organization exists to support the national organization in its goals and to allow students interested in craniofacial reconstruction to get involved in the reconstructive plastic surgery community.

Student Committee on Admissions (SCA)
Contact: Lei Lei (lxl94), Christine Gosen (clg10), Brandon Maughan (bmc16), Christina Shenko (cas32), Ryan Chamberlain (rjc28)
Description: The SCA functions to manage all aspect of student involvement in Office of Admissions activities. This includes: (1) Recruiting activities, (2) the new Student Interviewing program, and (3) student involvement on the Admissions Committee. The SCA works under the direct oversight of the deans of admissions.

Student National Medical Association (SNMA)
also are required. Elective course work and, for the thesis M.S. and Ph.D. students, laboratory rotations and research, complete the graduate students’ program of study. Research areas of particular strength among faculty in the Department of Anatomy include biological anthropology, cell injury, control of respiration, and non-molecular developmental neurobiology. The department has existing collaborative research efforts with basic scientists in several clinical departments, including medicine, orthopaedics, pediatrics, neurology, and neurosurgery. Please see the Department of Anatomy Web site for additional information.

**SCHOOL OF MEDICINE**

Contact: Ostranda Williams (ow2), Teresa Edwards (tme8)

Description of Organization: The Student National Medical Association is committed to supporting current and future underrepresented minority medical students, addressing the needs of underserved communities, and increasing the number of clinically excellent, culturally competent and socially conscious physicians.

**Unite for Sight/Prevent Blindness Ohio**

Contact: Christopher Gee (cjg15), Shamill Patel (ssp4), Jeffery Goshe (jmg20), Fahhad Farukhi (ff), Mazen Aways (mxa38)

Description: Unite for Sight serves to develop vision health education programs for the underserved population and raise funds and eyeglasses for international aide efforts. Numerous national and international opportunities exist. Prevent Blindness Ohio provides free vision screening at local clinics, vision education programs, insurance assistance, eyeglasses donation program, and school programs for the underserved population.

**DEPARTMENT OF ANATOMY**

Room WG-46, School of Medicine
Phone 216-368-2433
http://www.case.edu/med/anatomy/

The development of independence in research and experience in teaching are essential factors for scholars. The goal of the Department of Anatomy is to provide individuals with the skills and experiences that will allow them to develop and maintain successful careers as researchers and teachers. The strengths of both the faculty and students of the department help lead to the achievement of this goal. The graduate program in anatomy fulfills all requirements of the university’s School of Graduate Studies. Graduate studies in the Department of Anatomy can lead to the master of science degree in applied anatomy and to the doctor of philosophy degree. The master’s degree may be obtained as part of a joint degree program for qualified individuals participating in other programs at the university, such as the joint M.D./M.S. degree. Every graduate student in the Department of Anatomy must successfully complete 19 credits in the core curriculum of anatomical sciences, human gross anatomy, histology, neuroanatomy and embryology. An additional two credits offered by the department in seminar and research presentations

**COURSE DESCRIPTIONS (ANAT)**

ANAT 312. Basic Histology (3)
Fundamental histology course covering microscopic structure, nomenclature, and function of normal cells, tissues, and organs (human emphasis) to provide a sound foundation for bioengineering, premedical and pre-dental students.

ANAT 353. Anatomy for the Artist (3)
Reflecting the interdisciplinary nature of medical illustration, the course will have two complementary components. Morning sessions will involve instruction in human anatomy followed by direct observation and drawing of that anatomy from the cadaver. The entire body will be covered, including both the internal structures as well as those that directly impact the surface anatomy, to provide the student with a comprehensive understanding of the human form in its totality. Afternoon sessions will have students study the perceptual problems of drawing from the live model, focusing mainly on the developing human. A detailed description of development will be presented, focusing mainly on the developing human.

ANAT 375. Human Evolution: The Fossil Evidence (3)
This course will survey the biological and behavioral changes that occurred in the hominid lineage during the past five million years. In addition to a thorough review of the fossil evidence for human evolution, students will develop the theoretical framework in evolutionary biology. Recommended preparation: ANTH 377, BIOL 225. Offered as ANAT 375, ANTH 375, ANAT 475 and ANTH 475. Prereq: ANTH 103.

ANAT 377. Human Osteology (4)
This course for upper division undergraduates and graduate students will review the following topics: human skeletal development and identification; and forensic identification (skeletal aging, sex identification and population affiliation). Offered as ANAT 377, ANTH 377, ANAT 477 and ANTH 477.

ANAT 391. Embryology (3)
A detailed description of development will be presented, focusing mainly on the developing human. Discussions and presentations will also include several developing systems that have served as useful models in experimental embryology for deciphering mechanisms responsible for producing adult metazoan organisms. Offered as ANAT 391 and ANAT 491.

ANAT 398. Anatomy Departmental Seminar (1)
During the first half of the course, the organization, preparation, and delivery of oral scientific presentations are discussed. During the second half of the course, students, faculty, and invited speakers give presentations. These presentations include literature reviews and/or summaries of individual research projects. Reports on current research opportunities and ethical issues will also be presented.

ANAT 399. Independent Study (1 - 4)
Laboratory research project. Student must obtain approval of a supervising Anatomy department professor before registration and list the professor’s name on the schedule card.

ANAT 400. Research Rotation (0 - 6)
One semester-long laboratory rotation in a selected faculty research laboratory designed to introduce the student to all aspects of modern laboratory research including the design, execution, and analysis of original experimental work.

ANAT 411. Gross Anatomy (6)
This in-depth, cadaver dissection-based, course covers all aspects of human gross anatomy. The course is modeled after a traditional medical school gross anatomy curriculum and taught by the School of Medicine, Department of Anatomy faculty. It is divided into three sections: thorax and abdomen; pelvis/perineum and limbs/back; and head and neck. One hour of lecture will precede 3 hours of dissection laboratory Monday, Wednesday, and Friday. Lectures and dissection labs will cover all human anatomy, and students should be prepared to devote more time that the scheduled hours of 1:00 to 5:00pm. Dissection labs are open 24 hours 7 days a week. Recommended preparation: B.A./B.S., or fourth year undergraduate science major.

ANAT 412. Histology and Ultrastructure (4)
Comprehensive functional histology course integrating microscopic identification (‘structure plus nomenclature’) of normal cells, tissues, and organs with aspects of their cell biology, biochemistry, and physiology (‘function’). Topical coverage includes complete (‘head-to-toe’) tissue and organ survey with human emphasis.

ANAT 413. General Histology Laboratory (2)
Microscopic structure of tissues and organs. Laboratory course associated with ANAT 412 (see ANAT 412 description). Recommended preparation: ANAT 312 or ANAT 412 or concurrent enrollment.

ANAT 414. Neurological Anatomy (3)
This course provides a current and comprehensive survey of the structure of the human nervous system. It covers concepts which will be of practical value to students needing an understanding of the working mechanisms of the nervous system. The viewpoints of three closely dependent fields, neuroanatomy, neuropathology and neurology, are presented, not
with a view to covering them exhaustively but in the belief that a truly useful understanding of the morphology of the nervous system can only be attained by bringing together these three disciplines.

ANAT 415. Neurological Anatomy Laboratory (1)
This laboratory course provides an adjunct to ANAT 414, Neurological Anatomy. It affords the student the opportunity to learn the complex three-dimensional anatomy of the human central nervous system from photographs of brain slices and sections, from glass slides of human brain sections, from actual brain slices, and from dissection of the brain. The material will be approached not only through traditional methods of studying regional morphology but also by "following" the components of functional systems through the spinal cord, brain stem, and/or forebrain. Animated, three-dimensional, and color imagery will also be employed. Recommended preparation: ANAT 414 or concurrent enrollment.

ANAT 420. Forensic Pathology (3)
Forensic Pathology is a discipline where medicine and the law meet. Forensic pathologists strive to determine the cause, manner, and mechanism of death, and how to prevent unnatural death from occurring. This course reviews the field of forensic pathology, from sudden natural death, to homicide, to child abuse. Students will be exposed to an autopsy, and tour a crime laboratory. These tours are mandatory. Grading is based on performance on an examination and review and presentation of a forensic paper. Actual case material will be used. Students are therefore expected to maintain the highest professional and ethical standards.

ANAT 424. Neural Integrative and Regulatory Mechanisms (3)
This course is designed as a sequence to ANAT 414, Neurological Anatomy, or any other "introductory" course in neuroanatomy. Topics to be addressed include central regulation of pain, the regulation of somatic and visceral motor activity, neurotransmitter substances, the basal forebrain, the blood-brain barrier, levels of consciousness, sleep-wake mechanisms, cognitive behaviors and memory. Appreciation of the three-dimensional anatomical anatomy and vasculature of the spinal cord and brain will be gained through brain dissection and study of stained and unstained sections. Recommended preparation: ANAT 414 or permission.

ANAT 425. Techniques in Microscopy (3)
The microscopic technique course is designed for students to learn the basic knowledge and skills on light microscopy. Students will learn, through demonstration and hands-on experience, how to prepare complete microscopic slides. Routine histological stains, histochemical and immunohistochemical stains will be covered. Some knowledge about electron microscopy and confocal laser scanning microscopy will also be introduced.

ANAT 429. Medical Microscopic Anatomy (3)
This course covers condensed material in a microscopic anatomy course in most U.S. medical school curricula. It is intended for students who are interested in professional schools of medicine, dentistry, nursing or allied health sciences or who simply want to learn the structure and functions of cells, tissues and organs of the human or mammalian body. It is for students who want to learn the subject matter in a shorter summer session. It also serves as a review course for health professional students. The course will cover basic biology of cells and tissue types of the body. It will further cover how cells and tissues are organized to perform specific functions in organs and organ systems. The format includes lectures followed by laboratory sessions on the same topic using microscope slides and PowerPoint presentations. Optional weekly or biweekly review sessions will be scheduled for students who need these extra sessions.

ANAT 431. Statistical Methods I (3)
Application of statistical techniques with particular emphasis on problems in the biomedical sciences. Basic probability theory, random variables, and distribution functions. Point and interval estimation, regression, and correlation. Problems whose solution involves using packaged statistical programs. First part of year-long sequence. Offered as ANAT 431, BIOL 431, EPBI 431, and MPH 431.

ANAT 435. Morphometrics of Biological Shape (3)
Morphometrics is the measurement of biological shape. This course will focus on the collection of data, especially landmarks, from biological forms directly and especially via imaging. We will use best fit and interpolant algorithms (Geometric Morphometrics) to compare two and three dimensional landmark configurations of an individual over time, different individuals to each other, and individuals to average forms. The results are interpreted with standard multivariate statistical techniques. These tools are especially relevant to applications in medical imaging and other areas of biometrics. Background in linear algebra and basic statistics is desirable. This course is offered every other year, in odd numbered years. Recommended preparation: multivariate statistics course, familiarity with linear algebra, and permission of instructor.

ANAT 451. Writing and Reviewing Scientific Papers and Grants (2)
This is a graduate level course in writing scientific reports, i.e., theses, articles, and grants. The course includes weekly writing assignments and practice in analyzing and reviewing scientific papers. Students will also write a brief but complete paper. Recommended preparation: Undergraduate degree.

ANAT 452. Writing a Scientific Paper (2)
For graduate and post-doctoral students. Participants must have experimental data (not necessarily complete) with which they will write a full scientific paper. Course is limited to two participants.

ANAT 462. Advanced Principles of Developmental Biology (3)
Same as BIOL 362 except the required term paper is an NIH-format research proposal. Recommended preparation: BIOL 216. Offered as ANAT 462 and BIOL 462.

ANAT 467. Topics in Evolutionary Biology (3)
The focus for this course on a special topic of interest in evolutionary biology will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution. ANAT/ANTH/GEOL/PHIL 467/BIOL 468 will require a longer, more sophisticated term paper, and additional class presentation. Offered as ANTH 367, BIOL 368, GEOL 367, PHIL 367, ANAT 467, ANTH 467, BIOL 468, GEOL 467, and PHIL 467.

ANAT 475. Human Evolution: The Fossil Evidence (3)
This course will survey the biological and behavioral changes that occurred in the hominid lineage during the past five million years. In addition to a thorough review of the fossil evidence for human evolution, students will develop the theoretical framework in evolutionary biology. Recommended preparation: ANTH 377, BIOL 225. Offered as ANAT 375, ANTH 375, ANAT 475 and ANTH 475. Prereq: ANTH 103.

ANAT 477. Human Osteology (4)
This course for upper division undergraduates and graduate students will review the following topics: human skeletal development and identification; and forensic identification (skeletal aging, sex identification and population affiliation). Offered as ANAT 377, ANTH 377, ANAT 477 and ANTH 477.

ANAT 491. Embryology (3)
A detailed description of development will be presented, focusing mainly on the developing human. Discussions and presentations will also include several developing systems that have served as useful models in experimental embryology for deciphering mechanisms responsible for producing adult metazoan organisms. Offered as ANAT 391 and ANAT 491.

ANAT 497. Scientific Presentations (1)
These courses provide a foundation and experience for making scientific presentations. Scheduled simultaneously with ANAT 498 and students from both courses are present, but the requirements for passing differ. Students in ANAT 497 prepare PowerPoint and poster presentations. Oral presentations by students taking ANAT 498 will occur during the class periods for the remainder of the semester. Students taking 497 and 498 must participate in these discussions. Students must take ANAT 497: Scientific Presentations before ANAT 498: Departmental Seminar.

ANAT 498. Anatomy Departmental Seminar (1)
These courses provide a foundation and experience for making scientific presentations. Scheduled simultaneously with ANAT 497 and students from both courses are present, but the requirements for passing differ. Students in ANAT 497 prepare PowerPoint and poster presentations. Oral presentations by students taking ANAT 498 will occur during the class periods for the remainder of the semester. Students taking 497 and 498 must participate in these discussions. Students must take ANAT 497: Scientific Presentations before ANAT 498: Departmental Seminar.

ANAT 499. Special Topics (1-12)
This course is designed to provide students with the opportunity to study an advanced topic in an area of specialization to which the student does not have access in formal courses. Recommended preparation: Undergraduate degree.
Seminar.

ANAT 499. Independent Study (1 - 4)
Laboratory research project. Student must obtain approval of a supervising Anatomy department professor before registration and list the professor’s name on the schedule card.

ANAT 503. Readings and Discussions (1 - 3)
In-depth consideration of special selected topics through critical evaluation of the literature. Student must obtain approval of supervising Anatomy department professor before registration.

ANAT 513. Surgical Anatomy of the Thorax and Abdomen (4)
This course is intended for graduate and fourth-year medical students interested in surgery and surgical subspecialties. This integrated course will review basic gross anatomy, provide advanced training in gross and surgical anatomy, introduce common clinical problems and their anatomical consequences, and basic surgical approaches. Recommended preparation: ANAT 411 and permission of instructor.

ANAT 515. Surgical Anatomy: Orthopaedic Musculoskeletal (4)
This orthopaedic musculoskeletal anatomy course is offered to M.S. in Applied Anatomy students and Musculoskeletal (4) basic surgical approaches. Recommended preparation: ANAT 411 and permission of instructor.

ANAT 516. Surgical Anatomy: Head and Neck (4)
Students will build on their understanding of basic gross, histological, pathologic, and embryonic anatomy of the head and neck. Human cadaveric dissection, radiographic aids, and clinical case reports of head and neck pathologies will be studied as to how they can inform the surgical approach to lesion removal and other therapeutic surgical interventions. Students participate in approximately one or two surgical intervention labs per week. Each is then followed by a student-led presentation and discussion in a "grand rounds" atmosphere. Surgical approaches covered include: cranial cavity, skull base, orbit, mandibulofacial, oral, otic, pharyngeal, and airway. Students are required to prepare for, attend and participate in all presentations, dissection sessions, and surgical intervention laboratories. There are two essay examinations, one at the start of class and another at the end of the course. Recommended preparation: ANAT 411, ANAT 412, ANAT 413, ANAT 414, ANAT 415, and ANAT 491 and permission of instructor.

ANAT 523. Histopathology of Organ Systems (3)
Comprehensive course covering the underlying basic mechanisms of injury and cell death, inflammation, immunity, infection, and neoplasia followed by pathology of specific organ systems. Material will include histological ‘structure’ and physiological ‘function’ aspects related to pathology (human emphasis). Recommended preparation: ANAT 412 or permission of instructor. Offered as ANAT 523 and PATH 523.

ANAT 530. Medical Sculpture: Basic Facial Reconstruction (2)
This introductory course takes a step-by-step approach to forensic facial reconstruction. Students will study the placement and function of head and neck muscles and learn about average tissue depths. An oil-based clay will be used to add muscles and contours to a human skull cast at the depth indicated by tissue markers to successfully recreate facial features.

ANAT 531. Medical Sculpture: Advanced Facial Reconstruction (2)
Students must be able to interpret soft tissue data with a minimal amount of help. Students will be provided a cast human skull on which to complete a facial reconstruction using an oil-based clay using tissue depth data information from that skull. Once completed, a photograph of that individual is available to compare the achieved likeness. A final exercise will have students advance the age of the individual using age rendering techniques (adaptable to work with fugitives and missing persons). Recommended preparation: ANAT 530.

ANAT 601. Research (1 - 18)
Predoctoral laboratory research.

ANAT 610. Oxygen and Physiological Function (3)
Lecture/discussion course which explores the significance and consequences of oxygen and oxygen metabolism in living organisms. Topics to be covered include oxygen transport by blood tissues, oxygen toxicity, and mitochondrial metabolism. Emphasis will be placed on mammalian physiology with special reference to brain oxidative metabolism and blood flow as well as whole body energy expenditure and oxidative stress related to disease. Offered as ANAT 610 and PHOL 610.

ANAT 611. Practicum in Human Gross Anatomy (1 - 3)
A course of study designed especially for the preparation of teachers that involves the supervised practical application of previously studied theory. Students accepted into ANAT 611 must participate in one of three sections of the course (as described below). Participation is defined as preparing a prosecution prior to each dissection laboratory and being present to teach in each dissection laboratory. The opportunity exists, at the discretion of the course director, to present classroom lectures. Presentation of classroom lectures is not required. The teaching experience obtained will be obtained in ANAT 611- Human Gross Anatomy. Teaching will be guided, supervised, and evaluated by the appropriate faculty from the department of anatomy. The three sections of ANAT 611 and the subjects covered are: Trunk Gross Anatomy (6 weeks), Musculoskeletal Gross Anatomy (3 weeks), Head & Neck Gross Anatomy (4 weeks). Recommended preparation: ANAT 411 and permission of instructor.

ANAT 614. Practicum in Neurological Anatomy (1)
A course of study designed especially for the preparation of teachers that involves the supervised practical application of previously studied theory. The graduate student will administer all laboratory sessions, assisting students with identification of structures and with understanding the functional aspects of neuroanatomical pathways. The graduate student will meet with the course director once per week to discuss the student’s performance and progress and to plan for upcoming class sessions. The course director will assist the student in developing the organizational skills necessary to be a course director as the student learns to anticipate questions, define problematic areas, and recognize varying learning styles. The graduate student will be evaluated by the course director with reference to the graduate student’s overall progress and performance as a teacher. Recommended preparation: ANAT 414.

ANAT 651. Thesis M.S. (1 - 9)
Master’s Thesis Plan A.

ANAT 691. Practicum in Embryology (1)
A course of study designed especially for the preparation of teachers that involves the supervised practical application of previously studied theory. In the first half of the course, the graduate student will meet with small groups of three to four students on a twice-weekly basis to guide them in preparing their weekly classroom presentations. Each week, the graduate student will meet with the course director to evaluate the organization and quality of the classroom presentations and to discuss an organizational plan for the presentations scheduled for the next week. In the second half of the course, the graduate student will deliver at least two but no more than four lectures covering basic and advanced topics in human embryology. At least one week prior to each lecture, the graduate student will meet with the course director to review the material to be presented and to plan the lecture. The graduate student will be evaluated by both the students and the course director with respect to the lectures the graduate student presents in the second half of the course. Recommended preparation: ANAT 491.

ANAT 701. Dissertation Ph.D. (1 - 18)
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

DEPARTMENT OF ANESTHESIOLOGY AND PERIOPERATIVE MEDICINE
Lakeside Hospital Room 2532
Phone 216-844-8077/Fax 216-844-7349
www.anesthesiaprogram.com

Master of Science in Anesthesiology (MSA)
The Master of Science in Anesthesiology (MSA) Program mission is to graduate skilled and compassionate anesthesiologist assistants. The admission policy reflects this goal. Applicants are considered on a variety of parameters.
which measure academic ability, communication skills, clinical aptitude, and personality traits.

Admission to the MSA program requires that the following criteria are met:

A. Bachelor’s degree from an accredited college or university

Documentation of each of the prerequisites listed below having been completed with a grade of B or higher within five (5) years prior to the application deadline at an accredited American or Canadian institution of higher learning. For those courses that have been repeated, the highest grade will be used in the calculation.

- one semester of biochemistry
- one year of biology with laboratory
- one year of anatomy with laboratory (human preferred)
- one year of physiology
- one year of chemistry with laboratory
- one year of organic chemistry with laboratory
- one year of physics with laboratory
- one year of calculus for premedical/life sciences OR one semester of calculus I & one semester of statistics (with a calculus I prerequisite)*
- one year of English with expository writing*

*If any of the above courses marked with an asterisk were completed (with a grade of B or higher) in excess of five (5) years prior to the application deadline, they will meet the prerequisite criteria if the composite score of the MCAT is 25 or higher.

A. Medical College Admission Test
- minimum composite score of 20
- test must have been completed within 3 years of application deadline
- when the MCAT has been taken more than once, component scores from different exams may not be combined

Applicants with international undergraduate, graduate or advanced degrees must meet the standard admission requirements listed above. International application requirements also include the TOEFL (Test of English as a Foreign Language) OR the IELTS (International English Language Testing System) and Educational Credential Evaluation Reports for foreign transcripts.

All information must be received by the deadline, October 1st. Candidates participate in interviews with members of the Admission Committee, which is comprised of faculty and staff members of the MSA program. All academic requirements must be completed satisfactorily before matriculation. Prospective candidates are permitted and encouraged to shadow an anesthetist in the OR. Prior approval for this visitation is required.

The 24-month program includes 63 credit hours (six semesters) of classroom and clinical instruction. The first three semesters integrate basic science and clinical instruction. During the remaining 3 semesters, students complete month-long rotations in all subspecialties of anesthesiology: ambulatory surgery, burns and trauma, cardiovascular surgery, general surgery, neurosurgery, obstetrics, pediatrics, surgical intensive care unit. Clinical training focuses on all types of anesthesia including general, epidural, spinal and peripheral nerve blockade.

Instruction is also provided in advanced patient care monitoring techniques and pretesting, calibration and operation of anesthesia delivery systems and monitors. At Case our personal approach and rigorous educational standards produce compassionate and highly skilled anesthesiologist assistants.

The MSA Program is accredited by the Commission on Accreditation of Allied Health Education Programs (CAAHEP) and is based on the Standards for Anesthesiologist Assistant Programs. Graduates sit for the Certification Examination administered by the National Commission for Certification of Anesthesiologist Assistants (NCCAA) and co-sponsored by the National Board of Medical Examiners (NBME).

Additional information may be found on the Master of Science in Anesthesia Program Web site at www.anesthesiaprogram.com.

**COURSE DESCRIPTIONS (ANES)**

**ANES 403. Physical Methods for Anesthesiologist Assistants (2)**
Basic concepts in electricity, gas/liquid interfaces, acid/base balance, immunology, hematology, statistics, and computer systems needed for subsequent work.

**ANES 440. Patient Monitoring and Instrumentation I (2)**
Students are taught the proper balance between circuits and engineering concepts and the clinical application of anesthesia instrumentation. Monitors and devices used in the operating room are studied with respect to principles of operation, calibration, and interpretation of data. A hands-on laboratory is utilized to maximize direct contact to the instrumentation of the profession.

**ANES 441. Patient Monitoring and Instrumentation II (3)**
Continuation of ANES 440. Recommended preparation: ANES 440.

**ANES 456. Applied Physiology for Anesthesiologist Assistants I (3)**
Basic and applied human systems physiology with emphasis on topics and areas of special concern to the anesthetist.

**ANES 458. Applied Physiology for Anesthesiologist Assistants II (3)**
Continuation of ANES 456. Recommended preparation: ANES 403 and ANES 456.

**ANES 460. Introduction to Anesthesia (2)**
Introduction to basic concepts dealing with clinical anesthesia. Medical terminology, human anatomy, medical chart interpretation and drug dosage calculations.

**ANES 461. Orientation to Clinical Experience (3)**
Introduction to experience in the operating room with emphasis on the fundamental procedures and techniques used in administering an anesthetic. Preoperative assessment, IV placement techniques, airway management, intraoperative patient care and postoperative management are all emphasized in this course. BLS (basic life support) certification is required for course completion. Recommended preparation: Acceptance in the M.S.A. program.

**ANES 462. Anesthesia Clinical Correlation I (1)**
A series of conferences presented by students that applies to anesthetic theory as it relates to the clinical experience. Specific anesthetic situations are emphasized. Recommended preparation: ANES 460.

**ANES 463. Anesthesia Clinical Experience I (3)**
A continuation of the preparation, observation, and hands-on learning format initiated in ANES 461. Patient management and technical skills are refined with close attention to the didactic course work. A comprehensive clinical examination is administered at the end of the semester. ACLS (Advanced Cardiac Life Support) certification is required for course completion. Recommended preparation: ANES 461.

**ANES 464. Anesthesia Clinical Correlation II (1)**
A spectrum of case presentation conferences presented by the students dealing with basic and major problems in anesthesia management. Medical and surgical history of individual patients and the outcomes of anesthesia and surgery are emphasized. Journal Club and Morbidity and Mortality conferences are included. Recommended preparation: ANES 462.

**ANES 465. Anesthesia Clinical Experience II (4)**
A continuation of ANES 463. A comprehensive clinical examination is administered at the end of the semester. PALS (Pediatric Advanced Life Sup-
Introduction to physiological model-based simulation using on-screen computer simulation and mannequins. Emphasis is placed on improving appropriate anesthesia-related basic science knowledge, manual skills in anesthesiology machine checkout, drug and equipment setup, safety inspections, and performing anesthesia for uncomplicated surgical cases.

ANES 486. Physiological Model-Based Simulation I (1)
An extension of ANES 485 with emphasis on improving or exercising knowledge of anesthesia-appropriate basic science, the use of more advanced equipment and techniques for uncomplicated surgical cases with an introduction to crisis management. Recommended preparation: ANES 485.

ANES 487. Physiological Model-Based Simulation II (1)
An extension of ANES 486 emphasizing the physical techniques aspects of crisis management, team work and rescue in anesthesia, including support for and review of training in Basic Life Support and Advanced Cardiac Life Support. Recommended preparation: ANES 486.

ANES 490. Ethics, Law and Diversity for Anesthesiologist Assistants (2)
This course will focus on three topics. First, a discussion of legal practice as it applies to health care including basics of medical jurisprudence, negligence, and how to avoid a lawsuit. Second, a discussion of ethical theory including the principles of medical ethics, do not resuscitate, truth telling, and assessment of competence. Last, a discussion on diversity that will focus on the differences and similarities among people and how these factors influence patient care. The final grade will be based on an essay and a multiple choice exam.

ANES 499. Clinical Remediation (1 - 10)
(Credit as arranged.) Course offered to the student one time during the program of study which remediates "C" or below work in a clinical course.

ANES 580. Fundamentals of Anesthetic Sciences II (1)
The second-year equivalent of ANES 480. An examination is administered at the end of each semester. Recommended preparation: ANES 480.

ANES 585. Physiological Model-Based Simulation III (1)
A review of critical crisis management and rescue techniques which are not often seen in practice. (Course will be scheduled either Fall or Spring Semester based on external rotation schedule.) Recommended preparation: ANES 487.

ANES 599. Clinical Remediation (1 - 10)
(Credit as arranged.) Course offered to the student one time during the program of study which remediates "C" or below work in a clinical course.
three-year program receive a stipend, and tuition costs are covered by the department. The students pursue flexible and individually designed schedules, which prepare them for independent research projects in the second and third years of the program. The program simultaneously develops background knowledge and technical skills in modern biochemistry, which can be applied to several career paths. A more complete description of the program, admission policies, and financial aid is available from the departmental office.

Master of Science in Biochemistry Degree

The program leading to the M.S. degree in biochemistry is designed to provide students with knowledge of the latest advancements in biochemistry and related fields. It is intended for students who desire to pursue a career not directly involved with research, such as teaching, or various administrative positions in the pharmaceutical industry. Students typically enroll in three courses for each of four semesters.

REQUIRED COURSES ARE:

- BIOC 407 (General Biochemistry) and BIOC 408 (Molecular Biology). Other lecture courses are selected by the students in consultation with academic advisors who are assigned to the students upon matriculation into the program. A more complete description of the program and admission policies is available from the departmental office.

Ph.D. in Biochemistry

The aim of the Ph.D. in biochemistry program is to prepare students for careers in teaching and research in biochemistry. The emphasis of the doctoral program is on research culminating in the completion of an original independent research project under the guidance of a faculty member in the biochemistry program. The research areas in the department are described later in this section. In addition to the research activities, graduate students participate in formal courses both within and outside the department, formal and informal seminars, and discussions of current literature. Schedules are flexible and are individually tailored to each student’s needs. Although students choose from the various tracks within the department, they are broadly trained in modern aspects of biochemistry and become familiar with techniques and literature in a variety of areas. Many collaborative projects with other departments also are available to broaden the spectrum of training offered. Most students select a multidepartmental, integrated curriculum in cellular and molecular biology in addition to specialized courses in biochemistry.

Most Ph.D. students in biochemistry are admitted through the Biomedical Sciences Training Program (BSTP). This program, which combines thirteen graduate programs in the School of Medicine, is described under a separate listing in this General Bulletin. A complete description of the program, including research activities, admission policies, and financial aid, may be obtained from the departmental office or the BSTP coordinator.

Medical Scientist Training Program

Students may pursue a Ph.D. in biochemistry as part of the combined M.D./Ph.D. program. Information on this program may be obtained from the departmental office or the Medical Scientist Training Program coordinator. Please see the separate listing in this publication for information on the MSTP program.

MD/MS in Biomedical Investigation Students may pursue a Master of Science Degree in biochemistry by completing some additional course work in biochemistry and by completing a years worth of research. This program requires five years of study with tuition and stipend provided for the year of research. Please see the separate listing in this General Bulletin for information on the MD/MS program.

J.D./M.S. in Biochemistry

This program allows students admitted to the School of Law an opportunity to pursue a master of science degree in Biochemistry as part of an additional year of study. Such training adds expertise to students who anticipate careers in patent law or in areas related to biotechnology or pharmaceutical research. Please see the separate listing in the publication materials provided by the School of Law on this program.

RESEARCH AREAS

Research of Department of Biochemistry faculty members covers a broad spectrum of topics from events at the level of electron movement in biochemical reactions to the intracellular trafficking of proteins. Research in the department is broadened by collaborations with faculty in other university departments and with scientists at other Cleveland research institutions. The specific areas of active research within the department are outlined below.

Proteins and Enzymes

Proteins are components of all living tissue, and their function is critical for life processes. Understanding the chemical mechanisms of enzymatic catalysis is essential for determining the role of individual proteins in human disease. Biochemistry faculty study a variety of proteins and enzymes ranging from growth factors to oncoproteins.

Structural Biology

The function of a protein is determined by its three-dimensional structure and interactions. Faculty apply many modern techniques to the determination of macromolecular structures, including X-ray crystallography, and multidimensional heteronuclear NMR, fluorescence, Raman, and circular dichroism spectroscopy. Macromolecules under investigation include transcarboxylase, ribosomes, DNA-protein complexes, and neurochemical enzymes.

Regulation of Gene Expression

The elucidation of mechanisms regulating gene expression is a major goal of modern biology. Biochemistry faculty study the control of transcription by hormones and other regulatory molecules, the interaction between proteins and DNA, the function of oncogenes, the basal and hormone mediated transcriptional machinery, and the processing and translation of RNA.

Cell Biology

The control of the metabolism, differentiation and cell signaling within and between cells is an area of active investigation.

Metabolic Regulation

Biochemistry faculty investigate the control of metabolism in animals, such as dietary and hormonal regulation of gene expression. Transgenic murine technology allows the study of the impact of gene ablation on metabolic processes.

COURSE DESCRIPTIONS (BIOC)

BIOC 307. General Biochemistry (4)
Overview of the macromolecules and small molecules key to all living systems. Topics include: protein structure and function; enzyme mechanisms, kinetics and regulation; membrane structure and function; bioenergetics; hormone action; intermediary metabolism, including pathways and regulation of carbohydrate, lipid, amino acid, and nucleotide biosynthesis and breakdown. One semester of biology is recommended. Offered as BIOC 307, BIOC 407, and BIOL 407. Prereq: CHEM 223 and CHEM 224.
BIOC 308. Molecular Biology: Genes and Genetic Engineering (4)

An examination of the flow of genetic information from DNA to RNA to protein. Topics include: nucleic acid structure; mechanisms and control of DNA, RNA, and protein biosynthesis; recombinant DNA; and mRNA processing and modification. Where possible, eukaryotic and prokaryotic systems are compared. Special topics include yeast as a model organism, molecular biology of cancer, and molecular biology of the cell cycle. Current literature is discussed briefly as an introduction to techniques of genetic engineering. Recommended preparation for BIOC 408 and BIOC 408: BIOC 307 or BIOL 214. Offered as BIOC 308, BIOL 308, BIOC 408, and BIOL 408. Prereq: BIOC 307 or BIOL 215.

BIOC 312. Proteins and Enzymes (3)

Aspects of protein and nucleic acid function and interactions are discussed, including binding properties, protein-nucleic acid interactions, kinetics and mechanism of proteins and enzymes, and macromolecular machines. Recommended Preparation: CHEM 301. Offered as BIOC 312 and BIOC 412. Prereq: BIOC 307.

BIOC 334. Structural Biology (3)

Introduces basic chemical properties of proteins and discusses the physical forces that determine protein structure. Topics include: the elucidation of protein structure by NMR and by X-ray crystallographic methods; the acquisition of protein structures from data bases; and simple modeling experiments based on protein structures. Offered as BIOC 334, BIOL 334, BIOC 434, and BIOL 434. Prereq: BIOC 307.

BIOC 373. Biochemistry Sages Seminar (3)

Discussion of current topics in biochemical research using readings from the scientific literature. The goals are for the student: 1) to discuss and critically analyze selections from the biochemical literature; 2) to gain a broader understanding of important topics not formally covered in the didactic courses; and 3) to learn to write in the style of journals in the field of biochemistry. Prereq: BIOC 307 and BIOC 308. Restricted to majors in Biochemistry. SAGES Dept Seminar.

BIOC 391. Research Project (1–9)

(Credit as arranged.) Offered on a pass/fail basis only. Maximum 9 hours total credit.

BIOC 393. Senior Capstone Experience (3)

Students will complete their Capstone Projects, begun in BIOC 391. Pertinent research activities will depend on the nature of the student's project. The student will meet regularly with their Capstone advisor, at least twice monthly, to provide progress reports, discuss the project, and for critique and guidance. By the end of this course, the student will have completed their SAGES Senior Capstone research project, written a project report in the form of a manuscript, and presented their project reports orally in the department and at the Senior Capstone Fair, or its equivalent. Prereq: BIOC 307 and BIOC 308. SAGES Senior Cap.

BIOC 401. Impacts of Intellectual Property on Biomedical Research (1)

This course will expose students to the challenges and opportunities related to intellectual property when developing biomedical technologies within the context of nonprofit research institutions. The course will examine the effects that patent law has on research strategy, funding availability and follow-on funding availability. Special attention will be paid to the dynamics between the potential for profit, the need for translational research and institutional and individual conflicts of interest.

BIOC 407. General Biochemistry (4)

Overview of the macromolecules and small molecules key to all living systems. Topics include: protein structure and function; enzyme mechanisms, kinetics and regulation; membrane structure and function; bioenergetics; hormone action; intermediary metabolism, including pathways and regulation of carbohydrate, lipid, amino acid, and nucleotide biosynthesis and breakdown. One semester of biology is recommended. Offered as BIOC 307, BIOC 407, and BIOL 407. Prereq: CHEM 223 or CHEM 224.

BIOC 408. Molecular Biology: Genes and Genetic Engineering (4)

An examination of the flow of genetic information from DNA to RNA to protein. Topics include: nucleic acid structure; mechanisms and control of DNA, RNA, and protein biosynthesis; recombinant DNA; and mRNA processing and modification. Where possible, eukaryotic and prokaryotic systems are compared. Special topics include yeast as a model organism, molecular biology of cancer, and molecular biology of the cell cycle. Current literature is discussed briefly as an introduction to techniques of genetic engineering. Recommended preparation for BIOC 408 and BIOL 408: BIOC 307 or BIOL 214. Offered as BIOC 308, BIOL 308, BIOC 408, and BIOL 408.

BIOC 412. Proteins and Enzymes (3)

Aspects of protein and nucleic acid function and interactions are discussed, including binding properties, protein-nucleic acid interactions, kinetics and mechanism of proteins and enzymes, and macromolecular machines. Recommended Preparation: CHEM 301. Offered as BIOC 312 and BIOC 412.

BIOC 420. Molecular Genetics of Cancer (3)

Cancer is a genetic disease, not only in the Mendelian sense of inheritance, but also in the sense that it is caused by somatic mutation. The targets of mutation are a set of proto-oncogenes and tumor suppressor genes whose products govern cellular proliferation, death and differentiation. The objectives of this course are to examine the types of genes that are the targets of mutational activation or inactivation and the mechanistic outcome of mutational changes that lead to oncogenesis. The course will also probe viral mechanisms of oncogenesis related to the products of cellular proto-oncogenes or tumor suppressor genes. In the course of these examinations we will explore the genetic and molecular genetic approaches used to identify and study oncogenes and tumor suppressor genes. Students should be prepared to present and discuss experimental design, data and conclusions from assigned publications. There will be no exams or papers but the course will end with a full-day, student-run symposium on topics to be decided jointly by students and instructors. Grades will be based on class participation and symposium presentation. Offered as BIOC 420, MBIO 420, MVIR 420, PATH 422, and PHRM 420. Prereq: CBIO 453 and CBIO 455.

BIOC 430. Advanced Methods in Structural Biology (3)

Provides students with an in-depth introduction to biophysical techniques used to quantify macromolecular structures. A major part of the course will deal with the use of nuclear magnetic resonance to derive a 3-D structures of macromolecules in solution. Other topics include electron spin resonance, absorption, fluorescence and circular dichroism spectroscopies, Raman and infrared spectroscopies and methods used in modeling. Offered with BIOC 431, “Advanced Methods Biology II” in alternate years. BIOC 430 deals with protein hydrodynamics and thermodynamics, crystallography, and mass spectrometry. The course will be mostly lecture based. This course will provide an extensive overview for graduate students specializing in structural biology. Offered as BIOC 430, CHEM 430, PHOL 430 and PHRM 430.

BIOC 431. Advanced Methods in Structural Biology II (3)

This course provides an introduction to biophysical techniques for graduate students who are interested in structural biology and biophysical chemistry. Offered with BIOC 430, “Advanced Structural Biology I” in alternate years. Advanced Methods I (430) focuses on NMR and optical spectroscopies. Advanced Methods II deals with protein hydrodynamics and thermodynamics, crystallography, and mass spectrometry.

BIOC 434. Structural Biology (3)

Introduces basic chemical properties of proteins and discusses the physical forces that determine protein structure. Topics include: the elucidation of protein structure by NMR and by X-ray crystallographic methods; the acquisition of protein structures from data bases; and simple modeling experiments based on protein structures. Offered as BIOC 334, BIOL 334, BIOC 434, and BIOL 434.

BIOC 452. Nutritional Biochemistry and Metabolism (3)

Mechanisms of regulation of pathways of intermediary metabolism; amplification of biochemical signals; substrate cycling and use of radioactive and stable isotopes to measure metabolic rates. Recommended preparation: BIOC 307 or equivalent. Offered as BIOC 452 and NTRM 452.

BIOC 460. Introduction to Microarrays (3)

Microarray technology is an exciting new technique that is used to analyze gene expression in a wide variety of organisms. The goal of this course is to give participants a hands-on introduction to this technology. The course is intended for individuals who are preparing to use this technique, including students, fellows, and other investigators. This is a
hands-on computer-based course, which will enable participants to conduct meaningful analyses of microarray data. Participants will gain an understanding of the principles underlying microarray technology, including: theory of sample preparation, sample processing on microarrays, familiarity with the use of Affymetrix Microarray Suite software and generation of data sets. Transferring data among software packages to manipulate data will also be discussed. Importation of data into other software (GeneSpring and DecisionSite) will enable participants to mine the data for higher-order patterns. Participants will learn about the rationale behind the choice of normalization and data filtering strategies, distance metrics, use of appropriate clustering choices such as K-means, Hierarchical, Self Organizing Maps. Prereq: CBIO 455.

BIOC 475. Protein Biophysics (3)
This course focuses on in-depth understanding of the molecular biophysics of proteins. Structural, thermodynamic and kinetic aspects of protein function and structure-function relationships will be considered at the advanced conceptual level. The application of these theoretical frameworks will be illustrated with examples from the literature and integration of biophysical knowledge with description at the cellular and systems level. The format consists of lectures, problem sets, student presentations. A special emphasis will be placed on discussion of original publications. Offered as BIOC 475, CHEM 475, PHOL 475, PHRM 475, and NEUR 475.

BIOC 476. Cellular Biophysics (4)
This course focuses on a qualitative understanding of cellular processes. It is designed for students who feel comfortable with and are interested in analytical and quantitative approaches to cell biology and cell physiology. Selected topics in cellular biophysics will be covered in depth. Topics include theory of electrical and optical signal processing used in cell physiology, thermodynamics and kinetics of enzyme and transport reactions, single ion channel kinetics and excitability, mechanotransduction, and transport across polarized cell layers. The format consists of lectures, problem sets, computer simulations, and discussion of original publications. The relevant biological background of topics will be provided appropriate for non-biology science majors. Offered as BIOC 476, NEUR 477, PHOL 476, PHRM 476.

BIOC 515. Endocrine Pharmacology (3)
Seminar lecture course on regulation at the molecular level of selected interrelated endocrine systems. Offered as BIOC 515 and PHRM 515.

BIOC 519. Molecular Biology of RNA (3)
Selected topics regarding editing, enzymatic function, splicing, and structure of RNA. Offered as BIOC 519, CLBY 519, and MBIO 519.

BIOC 521. Chromatin Structure and Transcription (3)
A critical review of selected topics and current literature on the role of chromatin structure in the regulation of gene expression. Offered as BIOC 521 and GENE 521.

BIOC 555. Emerging Concepts in Cell Regulation (3)
This course will cover the general principles of cell regulation with an emphasis on the emerging novel mechanisms of signal transduction. The traditional areas of receptor tyrosine kinases, G-protein coupled receptors will be examined but the focus will be on the roles novel mechanisms such as regulated proteolysis, ubiquitin proteasomal degradation, protein acetylation etc. in signal transduction and gene expression. This will be a literature-based course which will depend on critical evaluation of research papers, reviews and accompanied with in-depth discussion. Recommended preparation: CBIO 453. Offered as BIOC 555, CLBY 555, and PATH 555.

BIOC 599. RNA Structure and Function (3)
This course will cover fundamental aspects of modern RNA biology with emphasis on the interplay of three dimensional structure of nucleic acids and their function. The main focus of the course is on the recent discoveries that indicate a prominent role of RNA as a major regulator of cellular function. Topics discussed will include an introduction to RNA structure, folding and dynamics, RNA/RNA and RNA-protein interactions, and role of RNA in catalysis of biological reactions in ribosome and the role of other catalytic RNAs in tRNA biogenesis, pre-mRNA splicing, and viral replication. The course also covers the recently discovered RNA regulatory switches, large noncoding regulatory RNAs, and the role of RNA in human diseases and novel, RNA-based therapeutics. Offered as BIOC 599, CLBY 599, and MBIO 599.

BIOC 601. Biochemical Research (1-18)
Credit as arranged.

BIOC 605. Independent Project in Biochemical Research (1-18)
Credit as arranged. Limited to students in the M.S. program in biochemical research. Prereq: BIOC 407 and BIOC 601.

BIOC 611. Biochemistry Seminar I (1)
Student presentations of topics from the current scientific literature unrelated to the student's research project. Participants are required to present a seminar.

BIOC 612. Biochemistry Seminar II (1)
Discussion of current research.

BIOC 617. Special Topics in Biochemistry (3)
Special topics courses on areas of current interest in biochemistry.

BIOC 618. Special Topics in Biochemistry (3)
Special topics courses on areas of current interest in biochemistry.

BIOC 620. Transcription and Gene Regulation (3)
This course covers mechanisms of transcription that play critical roles in biological processes. It is designed to develop scientific thinking in designing experiments and evaluating the merits of research papers. Students will be able to present two to three 30-minute talks. Topics include: 1) structure and function of RNA polymerases; 2) accessory factors involved in initiation, elongation, and termination; 3) regulation transcription; 4) transcriptional co-activators and corepressors; 5) regulation of transcription factor activity. A take-home exam will be conducted at the final week. Grades will be based on presentations and take-home exam. Offered as BIOC 620 and MBIO 620.

BIOC 641. Proposition I (2)
Design of research proposal.

BIOC 643. Proposition II (2)
Design of research proposal.

BIOC 651. Thesis M.S. (1 - 6)
(Credit as arranged.)

BIOC 701. Dissertation Ph.D. (1 - 18)
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

DEPARTMENT OF BIOETHICS
Room TA-200, School of Medicine
Stuart J. Youngner, M.D., Susan E. Watson
Professor of Biomedical Ethics and Chair
Phone: 216-368-6196
http://www.case.edu/med/bioethics/bioethics.html

The Department of Bioethics provides a forum for the study and discussion of ethical issues in medicine. Its mission is to improve public and professional understanding of the ethical issues involved in health sciences research, health care delivery, and health policy development through teaching, research and community dialogue.

The department has offices at the Case's School of Medicine and at MetroHealth Medical Center and has faculty from multiple disciplines, including philosophy, religion, law, political science, anthropology, history, sociology, nursing and medicine.

Department faculty teach in both core and elective components of the medical school curriculum, undergraduate courses in ethics, and an intensive course in ethics of scientific work for Ph.D. students in the Biomedical Sciences Training Program. The department also has a highly successful master's degree program in bioethics.

Department faculty have gained international prominence for research in many areas of biomedical ethics that collectively address the concerns of the School of Medicine's spectrum of biomedical disciplines.

The Department of Bioethics publishes a newsletter, Bioethics Update. Bioethics Update contains information and articles on a variety of ethical issues of interest to both professional and lay communities. It is published three times a year and features faculty research
SCHOOL OF MEDICINE

and activities, department events, and master's degree alumni information.

The department has a website where visitors can read Bioethics Update online, obtain information about the master's degree and Ph.D. programs, and learn about department and faculty activities: http://www.case.edu/med/bioethics/bioethics.html/.

Master of Arts in Bioethics Degree
The Department of Bioethics offers a program leading to the Master of Arts degree in bioethics, emphasizing the interdisciplinary and inter-professional nature of the field. This graduate program is designed to provide advance training in bioethics for students and professionals who anticipate encountering ethical issues in the course of their primary careers.

The 27 credit-hour degree can be earned full-time in one year or part-time in up to three years. Core courses are taught by department faculty and are scheduled so that part-time students can continue their professional responsibilities while completing the degree.

The Master of Arts program provides students with a firm understanding of the intellectual content of the study of bioethics, of bioethical literature, and of the underlying philosophical arguments and empirical assumptions that inform it. Students are taught to understand the institutions and structures of health care and the ethical issues that arise in medical practice. They are trained to identify and analyze a range of clinical ethics issues.

All students pursuing a Master of Arts degree in bioethics are required to complete the interdisciplinary core of 12 credit hours (the equivalent of four courses) in the first two semesters of their first year of study.

The courses, BETH 401: Foundations in Bioethics I, and BETH 402: Foundations in Bioethics II, each six credits, examine 10 basic topic areas in bioethics: death and dying, the therapeutic relationship, method and theory in bioethics, organ transplantation, health care justice, defining health care needs, reproduction and fertility, families, babies and children, research ethics and genetics. Classes meet two evenings per week for seminar sessions (two hours per session).

Another required course is BETH 405: Clinical Ethics Rotation (three credits). This course requires a minimum of 8 hours of clinical experience per week during the 10-week rotation. Students spend most of their time observing rounds in relevant services (intensive care units, pediatrics, geriatrics, etc.) with leading clinicians at several area hospital sites. Students must complete rotations at two sites. At the conclusion of each rotation, students are familiar with the clinical, psychological, social, professional, and institutional contexts in which ethical problems arise. Also, they are able to identify, analyze and understand ethical issues as they develop.

In addition, all students must complete 12 credit hours of electives. Electives are selected in consultation with a faculty advisor. Electives must enhance the student's understanding of bioethical issues and must be relevant to the student's academic goals.

The department currently offers dual-degree programs with the School of Medicine (M.D./M.A.), the School of Medicine's Department of Genetics (Ph.D./M.A.), the School of Law (J.D./M.A.), the Frances Payne Bolton School of Nursing (M.S.N./M.A.), the School of Medicine’s Public Health program (MPH/MA) and Mandel School of Applied Social Sciences (MSSA/MA) at Case. Students must apply and be accepted to each program to qualify.

Commencing in the fall semester of 2007, the department will offer a new research ethics track within the MA program, designed to prepare specialists who will pursue research ethics-related work as a primary career (IRB coordinators, research administration, etc.) or who will use this specialized training to enhance their primary careers (investigators, regulators, etc.). In addition to the core seminars BETH 401 and 402, discussed above, the research ethics track will feature a modified clinical ethics rotation, focused on IRB work and research ethics activities, and four research ethics electives.

Admission policies conform to those of Case Western Reserve University School of Graduate Studies. In general, an applicant for admission and concurrent financial consideration must have completed application forms on file by March 1 for the fall semester.

PH.D. in Bioethics
The increasing complexity of the healthcare system has resulted in a growing need for investigators who can conduct research to address pressing social problems in bioethics. The objective of the bioethics doctoral program is to train scholars who will have specific expertise in the conceptualization, design and conduct of empirical research concerning bioethics questions. Graduates will:

• obtain grounding in the philosophical basis of bioethics to conceptualize and analyze moral problems;
• develop a theoretical perspective to guide their research;
• be proficient in empirical methodologies (both qualitative and quantitative) so that they can conduct research in bioethics problems; and
• become researchers who can develop and conceptualize timely and meaningful research questions in bioethics.

Graduates of the program have a wide range of opportunities, including careers as independent investigators, serving as a bridge between colleagues in the traditional medical humanities and those in clinical and basic-science departments, and employment in academic bioethics centers, clinical and basic science departments in medical schools and schools of public health, government agencies, and public policy institutes.

Each student will receive a full scholarship and a $20,000-per-year graduate assistantship.

Course of Study
• Minimum of 51 credit hours of course work for candidates with bachelor's degrees; minimum of 42 credit hours for candidates with master's degrees
• 18 credit hours of dissertation coursework
• 125 research hours (supervised research experiences with Department faculty)
• Training in research ethics
• Comprehensive examination preceding advancement to candidacy
• Defense of dissertation proposal
• Completion of dissertation
• Defense of dissertation

CORE COURSEWORK
(see course descriptions for more information)

• Foundations in Bioethics I & II
• Clinical Ethics Rotation
• Advanced Seminar on Methods in Normative Bioethics I & II
• Empirical Research Methods and Design in Bioethics I & II
• Statistical Methods and Data Management in Bioethics I & II
• Grant Writing
• Critical Readings in Bioethics
• Research hours

Additional course work: three credit hours each in advanced statistics, methods and study
design, and theory from the social sciences, and six credit hours of elective courses

**Enrollment in the Doctoral Program**

The doctoral program is highly selective. Candidates should have a strong theoretical background in the social sciences or philosophy, preferably in the form of a master's degree in a relevant discipline or a clinical degree. Candidates also must demonstrate the ability to work with quantitative data and demonstrate promise of integrating theory and empirical application.

- Applicants must complete an interview and submit:
  - Transcripts (undergraduate and graduate if applicable)
  - GRE scores — verbal, analytic and quantitative sections. Scores will be considered in relation to the applicant's other credentials. Applicants may submit scores of other standardized tests in addition to the GRE.
  - Three letters of recommendation
  - A letter to the admission committee detailing the applicant's general interests in bioethics and the candidate's past training and current research interests
  - Completed Case Western Reserve University graduate school application form

**COURSE DESCRIPTIONS (BETH)**

**BETH 271. Bioethics: Dilemmas (3)**

We have the genetic technology to change nature and human nature, but should we? We have the medical technology to extend almost any human life, but is this always good? Should we clone humans? Should we allow doctor-assisted suicide for the terminally ill? This course invites students from all academic disciplines and fields to examine current and future issues in bioethics—e.g., theory and methods in bioethics; death and dying; organ transplantation; genetics; aging and dementia; fertility and reproduction; distributive justice in health care access. The course will include guest lecturers from nationally-known Bioethics faculty. Offered as BETH 271, PHIL 271.

**BETH 315. International Bioethics: Policy and Practice (3)**

Taught by Case and international faculty, this course will include 7-10 days of intensive didactic and experiential learning in one of several "host" countries. Examples of sites include: Free University of Amsterdam and University of Utrecht in the Netherlands; University of Paris in France; and Ben Gurion University in Israel. It will afford a unique opportunity to gain perspective on important bioethics issues in different societies, i.e., euthanasia, public health policies, access to healthcare, and stem cell research. At the international site, students will spend 6 hours per day (5 days) in seminar (including didactics, discussion, and guided-observation clinical experience). There will be two 3-hour preparatory sessions, required reading, and two 3-hour post trip sessions. Requirements: preparation, attendance, and class participation, a 12-15 page paper (graduate credit). Graduate credit will also require students to prepare a presentation for a post-intensive session. Enrollment will be capped at 25. This course has an additional fee to cover costs of travel and lodging. Limited scholarships are available. Offered as BETH 315 and BETH 415.

**BETH 401. Foundations in Bioethics I (6)**

The first of the two required seminar courses, this course covers five basic topic areas in bioethics: death and dying; health professional-patient relationship; method and theory in bioethics; organ transplantation; and ethics and children. The course meets twice weekly and is taught in seminar format by Center faculty members who are experts on specific topics. Preentry.

**BETH 402. Foundations in Bioethics II (6)**

This course completes the required seminar core and covers the basic bioethics topic areas: health care justice; defining 'health care needs'; reproduction and fertility ethics; research ethics; and ethics in genetics. The course meets twice weekly and is taught in seminar format by Center faculty members who are experts on specific topics. Recommended preparation: BETH 401.

**BETH 405. Clinical Ethics Rotation (1.5 - 3)**

In this course, students will become familiar with the clinical, psychological, social, professional, and institutional context in which ethical problems arise. This course exposes students to clinical cases, to hospital ethics committees and ethics consultation programs, to institutional review boards (IRB), and to hospital policies covering the "do not resuscitate" orders (DNR), advance directives, withdrawal of artificial feeding, organ procurement and transplantation, and medical futility. Requires minimum of 8 total hours of rotation experience per week during two semester 10-week rotations. Locations for this course include: MetroHealth Medical Center, University Hospitals of Cleveland, and the Hospice of the Western Reserve. Recommended preparation: BETH 401 or concurrent enrollment.

**BETH 414. International Health Research Ethics (3)**

This course will introduce students to the health and social sciences to key ethical issues that arise in international health research. The course will include intensive reading and case-based discussion of current ethical and moral quandaries posed by research conducted in the international arena. Five full-day sessions are planned. Each day will be divided into a series of formal presentations and active, group-based discussions around topics that include: the theoretical and practical aspects of ethics and public health research; current international ethics principles, standards, and declarations; key tools and concepts for unpacking ethical issues in international health research; issues in informed consent and conflict of interest; "reasonable availability" and the conduct of clinical trials; cutting-edge international genetics research; and, the responsibility of researchers to the international health community. Course evaluation is based on class participation, a written exercise, and a case analysis.

**BETH 415. International Bioethics: Policy and Practice (3)**

Taught by Case and international faculty, this course will include 7-10 days of intensive didactic and experiential learning in one of several "host" countries. Examples of sites include: Free University of Amsterdam and University of Utrecht in the Netherlands; University of Paris in France; and Ben Gurion University in Israel. It will afford a unique opportunity to gain perspective on important bioethics issues in different societies, i.e., euthanasia, public health policies, access to healthcare, and stem cell research. At the international site, students will spend 6 hours per day (5 days) in seminar (including didactics, discussion, and guided-observation clinical experience). There will be two 3-hour preparatory sessions, required reading, and two 3-hour post trip sessions. Requirements: preparation, attendance, and class participation, a 12-15 page paper (graduate credit). Graduate credit will also require students to prepare a presentation for a post-intensive session. Enrollment will be capped at 25. This course has an additional fee to cover costs of travel and lodging. Limited scholarships are available. Offered as BETH 315 and BETH 415.

**BETH 417. Introduction to Public Health Ethics (3)**

The course will introduce students to theoretical and practical aspects of ethics and public health. This course will help students develop the analytical skills necessary for evaluating of ethical issues in public health policy and public health prevention, treatment, and research. Requirements: preparation, attendance, and class participation, a 12-15 page paper (graduate credit). Graduate credit will also require students to prepare a presentation for a post-intensive session. Enrollment will be capped at 25. This course has an additional fee to cover costs of travel and lodging. Limited scholarships are available. Offered as BETH 315 and BETH 415.

**BETH 418. Ethical Issues in Genetics/Genomics (3)**

This course is designed to familiarize graduate students with the major controversies over the generation and use of new human genetic information. Topics will include the spread of predictive genetic testing, prenatal diagnosis, genetic discrimination, human genetic variation research, eugenics, genetic counseling, and the limits of human gene therapy.

**SCHOOL OF MEDICINE**

The course will be conducted as a seminar, involving discussions of readings, guest speakers, and student presentations.

**BETH 414. International Health Research Ethics (3)**

This course will introduce students in the health and social sciences to key ethical issues that arise in international health research. The course will include intensive reading and case-based discussion of current ethical and moral quandaries posed by research conducted in the international arena. Five full-day sessions are planned. Each day will be divided into a series of formal presentations and active, group-based discussions around topics that include: the theoretical and practical aspects of ethics and public health research; current international ethics principles, standards, and declarations; key tools and concepts for unpacking ethical issues in international health research; issues in informed consent and conflict of interest; "reasonable availability" and the conduct of clinical trials; cutting-edge international genetics research; and, the responsibility of researchers to the international health community. Course evaluation is based on class participation, a written exercise, and a case analysis.

**BETH 415. International Bioethics: Policy and Practice (3)**

Taught by Case and international faculty, this course will include 7-10 days of intensive didactic and experiential learning in one of several "host" countries. Examples of sites include: Free University of Amsterdam and University of Utrecht in the Netherlands; University of Paris in France; and Ben Gurion University in Israel. It will afford a unique opportunity to gain perspective on important bioethics issues in different societies, i.e., euthanasia, public health policies, access to healthcare, and stem cell research. At the international site, students will spend 6 hours per day (5 days) in seminar (including didactics, discussion, and guided-observation clinical experience). There will be two 3-hour preparatory sessions, required reading, and two 3-hour post trip sessions. Requirements: preparation, attendance, and class participation, a 12-15 page paper (graduate credit). Graduate credit will also require students to prepare a presentation for a post-intensive session. Enrollment will be capped at 25. This course has an additional fee to cover costs of travel and lodging. Limited scholarships are available. Offered as BETH 315 and BETH 415.

**BETH 417. Introduction to Public Health Ethics (3)**

The course will introduce students to theoretical and practical aspects of ethics and public health. This course will help students develop the analytical skills necessary for evaluating of ethical issues in public health policy and public health prevention, treatment, and research. Requirements: preparation, attendance, and class participation, a 12-15 page paper (graduate credit). Graduate credit will also require students to prepare a presentation for a post-intensive session. Enrollment will be capped at 25. This course has an additional fee to cover costs of travel and lodging. Limited scholarships are available. Offered as BETH 315 and BETH 415.

**BETH 418. Ethical Issues in Genetics/Genomics (3)**

This course is designed to familiarize graduate students with the major controversies over the generation and use of new human genetic information. Topics will include the spread of predictive genetic testing, prenatal diagnosis, genetic discrimination, human genetic variation research, eugenics, genetic counseling, and the limits of human gene therapy.
SCHOOL OF MEDICINE

This course is open to graduate students with an interest in health-related bioethics. Enrollment preference will be given to Masters-level bioethics students in the Research Ethics Track (RET). The course provides students with a comprehensive study of critical issues in research ethics, including the modern history of research ethics in science and medicine, the ethics of clinical trial design and conduct, advanced issues in informed consent, the ethics of animal experimentation, and key issues in genetics research. Coursework will include case studies and in-depth readings to highlight topic areas. Discussions of ethical and regulatory frameworks that influence decision-making, policy development, and the conduct of biomedical and social-behavioral science research will allow students to explore the nuances, gaps, challenges, and concerns present in research, particularly research involving human subjects. Topics will be addressed within the framework of integrating research ethics into the scientific process. Students are expected to lead class discussions and write a course-relevant paper. Enrollment will be limited to 15 students. Class will meet weekly for 3 hours.

BETH 421. Research Ethics Practicum (1.5)
The Research Ethics Practicum (80 hours, 1.5 CREDITS) is designed to complement the theoretical and conceptual training received in the course, Critical Issues in Research Ethics. By way of a series of campus-wide rotations, students learn about the practical, everyday side of research administration, compliance, and scientific review. Students will work with key staff in research ethics centers, and observe their day-to-day operations, as well as attend institutional review board (IRB) and Institutional Animal Care and Use Committee (IACUC) meetings. They will become familiar with human subjects, animal, and tissue research regulations and policies as these are applied in an institutional/academic research context. Students will also spend time in a clinical trials unit and tour animal care facilities. The practicum has the following overall objectives: (1) students will be able to identify, analyze, and understand research ethics issues as they develop in the context of actual institutional research governance (2) students will gain an understanding of methods of ethical research design and implementation.

BETH 422. Clinical Ethics: Theory & Practice (3)
This course will focus on both theoretical and practical issues in clinical ethics. Clinical ethics will be distinguished from other areas of bioethics by highlighting distinctive features of the clinical context which must be taken into account in account in clinical ethics policy and practice. Fundamental moral and political foundations of clinical ethics will be examined, as well as the role of bioethical theory and method in the clinical context. Topical issues to be considered may include informed consent; decision capacity; end of life decision making; confidentiality and privacy; the role and function of ethics committees; ethics consultation; the role of the clinical ethicist; decision making in various pediatriac settings (from neonatal through adolescent); the role of personal values in professional life (e.g., rights of conscience issues, self disclosure and boundary issues); dealing with the chronically non-adherent patient; ethical issues in organ donation and transplant; health professional-patient communication; medical mistakes; and other ethical issues that emerge in clinical settings.

BETH 423. Stem Cells: Ethics and Policy (3)
This graduate-level course addresses major issues in the science, ethics, and politics of stem cell research. Over the past decade, embryonic stem cell research has emerged as one of the world’s most controversial areas of biomedical research. While new forms of stem cell research have emerged recently which appear to sidestep the debate over the use of human embryos, these new forms of stem cell research raise a host of problems in their own right. Furthermore, as stem cell research marches toward clinical applications for patients, the scientific and ethical issues will continue to evolve in evermore complex directions. In order to fully appreciate the ethical and policy issues at the cutting edge of stem cell science, one needs a sound grasp of the science of stem cell research. Thus this course is designed to take a science-based approach to the ethics of stem cell research. (No prior knowledge of stem cell biology is presupposed.)

BETH 440. Science and Society Through Literature (3)
This course will examine the interaction of scientific investigation and discovery with the society it occurs in. What is the impact of science on society and, as importantly, what is the effect of society on science? An introduction will consider the heliocentric controversy with focus on Galileo. Two broad areas, tuberculosiasis and the Frankenstein myth, will then be discussed covering the period 1800-present. With tuberculosis, fiction, art and music will be examined to understand the changing views of society towards the disease, how society’s perception of tuberculosis victims changed, and how this influenced their treatments and research. With Frankenstein, the original novel in its historical context will be examined. Using fiction and film, the transformation of the original story into myth with different connotations and implications will be discussed. Most classes will be extensive discussions coupled with student presentations of assigned materials. Offered as PHRM 340, BETH 440, PHRM 440, and HSTY 440.

BETH 496. Public Policy and Aging (3)
Overview of aging and the aged. Concepts in the study of public policy. Policies on aging and conditions that they address. The politics of policies on aging. Emergent trends and issues. Offered as ANTH 498, BETH 496, EPBI 408, GERO 496, HSTY 480, MPH 408, NURS 479, NURS 579, POSC 480, and SOCI 496.

BETH 501. Advanced Seminar in Bioethics (3)
Special topics of interest, such as advanced studies in theory and method in bioethics, ethics and reproduction, the ethics of research with human subjects, religion and medicine, historical perspectives on medical ethics, cross-cultural issues in bioethics, or ethics in applied settings such as hospitals and long term care facilities. Seminar typically taught by visiting professor in intensive format. Consult the term roster of courses for the specific topic. Recommended preparation: BETH 401 or concurrent enrollment.

BETH 504. Critical Readings in Bioethics (3)
This course will focus on both normative (traditional) and descriptive (empirical) approaches to bioethics. It will be co-directed by two faculty members, one with a specialization in normative bioethics and one with a specialization in descriptive bioethics.

BETH 505. Methods in Normative Bioethics I (3)
The first of the two required Methods seminars is designed to give graduate students an intensive introduction to the modes of moral reasoning that have been adopted and adapted by contemporary Bioethics, and the major critical perspectives that have been brought to bear upon them.

BETH 506. Methods in Normative Bioethics II (3)
The second of the two required Methods seminars is designed to give graduate students an intensive introduction to the modes of moral reasoning that have been adopted and adapted by contemporary Bioethics, and the major critical perspectives that have been brought to bear upon them.

BETH 507. Research Design in Bioethics I (3)
The first of two empirical research courses will introduce students to theoretical and methodological approaches in the design and implementation of empirical research on topics in biomedical ethics. Students will be provided with a comprehensive and robust exploration of empirical models for the development of bioethics research and the skills for critically assessing the optimal methods for designing studies relevant to ethical issues in biomedicine.

BETH 508. Research Design in Bioethics II (3)
The second of two empirical research courses will introduce students to theoretical and methodological approaches in the design and implementation of empirical research on topics in biomedical ethics. Students will be provided with a comprehensive and robust exploration of empirical models for the development of bioethics research and the skills for critically assessing the optimal methods for designing studies relevant to ethical issues in biomedicine.

BETH 509. Statistical Methods in Bioethics I (3)
The first of two required Statistical Methods will focus on basic concepts of distributions of random variables, point and interval estimation, statistical hypotheses, correlation and regression; and survey of statistical methods in analysis of variance, categorical data analysis, survival data analysis, non-parametric methods, generalized linear model and multivariate techniques. Students will also be introduced to data management strategies and computer applications in database management. Topics in the use of statistical packages will be introduced and used to solve data-intensive problems and projects.
BETH 510. Statistical Methods in Bioethics II (3)
The second of two required Statistical Methods will focus on basic concepts of distributions of random variables, point and interval estimation, statistical hypothesis, correlation and regression; and survey of statistical methods in analysis of variance, categorical data analysis, survival data analysis, non-parametric methods, generalized linear model and multivariate techniques. Students will also be introduced to data management strategies and computer applications in database management. Topics in the use of statistical packages will be introduced and used to solve data-intensive problems and projects. Prereq: BETH 509.

BETH 511. Grant Writing (3)
This course will teach students the fundamentals of writing a grant proposal. We will concentrate on NIH-style applications, although the principals of grant writing can be applied to any venue. In the process of working through devising a research question and study design, students will be encouraged to use this as an opportunity to think about their dissertation topic. In addition to applying theoretical and research design knowledge gained through their core course work, the course will also teach students about how to complete application forms and to create a budget. We will also familiarize students with the peer review process. Each student will produce a draft grant application. The students will form a mock peer review section and will critique the grants.

BETH 512. Clinical Ethics Rotation - Ph.D. (1.5)
In this course students will become familiar with the clinical, psychological, social, professional, and institutional context in which ethical problems arise. This course exposes students to clinical cases, to hospital ethics committees and ethics consultation programs, to institutional review boards (IRB), and to hospital policies covering the “do not resuscitate” orders (DNR), advance directives, withdrawal of artificial feeding, organ procurement and transplantation, and medical futility. Requires minimum of 10 total hours of rotation experience per week during two semester 10-week rotations. Locations for this course include: MetroHealth Medical Center, University Hospitals of Cleveland, and the Hospice of the Western Reserve. Recommended preparation: BETH 520/521 or concurrent enrollment.

BETH 520. Foundations in Bioethics I - Ph.D. (3)
The first of the two required seminar courses, this course covers five basic topic areas in bioethics: death and dying; health professional-patient relationship; method and theory in bioethics; organ transplantation; and ethics and children. The course meets twice weekly and is taught in seminar format by Center faculty members who are experts on specific topics.

BETH 521. Foundations in Bioethics II - Ph.D. (3)
The second of the two required seminar courses, this course covers five basic topic areas in bioethics: death and dying; health professional-patient relationship; method and theory in bioethics; organ transplantation; and ethics and children. The course meets twice weekly and is taught in seminar format by Center faculty members who are experts on specific topics.

BETH 602. Special Topics in Bioethics (1 - 3)
Students will explore particular issues and themes in biomedical ethics in depth through independent study and research under the direction of a faculty member.

BETH 701. Dissertation Ph.D. (1 – 18)
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

BIOMETRICS

THE FIRST YEAR

Coursework
Students take an integrated series of courses in cell and molecular biology (CBIO 453 and 455). This one-semester course emphasizes the molecular approach that forms the basis of modern biology. Qualified students also may take more specialized elective courses.

Research Rotations
The research rotations allow the student to sample areas of research and become familiar with faculty members and their laboratories. The main purpose of these rotations is to aid the student in selecting a laboratory for the thesis work. Students are encouraged to begin their rotations in July. Doing so gives them the opportunity to complete one rotation during the summer before classes begin at the end of August. A minimum of three rotations must be completed during the year.

Choosing a Thesis Advisor
During the first year, students select an advisor for the dissertation research. Each student also joins the training program with which the advisor is affiliated. Once a student has chosen a program, the specific requirements of that program are followed to obtain the Ph.D. The emphasis of the Ph.D. work is on research, culminating in the completion of an original, independent research thesis. Participating Training Programs

- Anatomy
- Biochemistry
- Biology
- Cell Biology
- Molecular Biology and Microbiology
- Molecular Virology
- Molecular and Cellular Basis of Disease and Immunology
- Molecular, Developmental, and Human Genetics
The Cell Biology Program provides educational and research opportunities through its journal clubs and colloquia and through graduate training toward the Ph.D. degree. The research environment includes all the basic science departments of the School of Medicine, the Department of Biology, and several laboratories at University Hospitals of Cleveland and the Cleveland Clinic Foundation. These departments collectively cover a diverse set of areas of contemporary interest in the cell biology of higher animals, plants, yeast and other microorganisms. These include the extra cellular matrix, secretion and endocytosis, cell adhesion, the cytoskeleton, the nuclear envelope, and others. Many of these areas interface with local research in biochemistry, genetics, immunology, molecular biology, neuroscience, pharmacological sciences, and physiology and biophysics.

First-year graduate students follow the Correlated Curriculum in Cell and Molecular Biology (CBIO 453 and 455, 8 credit hours) along with students from all graduate departments. They also complete three laboratory rotations (starting July 1) among the laboratories of training faculty, which span the entire campus. The goal of the rotations is to guarantee that the student has sufficient breadth of familiarity with cell biology faculty to allow him or her to make the best choice of a permanent research laboratory. In all cases, this selection must be made, with the consent of the sponsor and his or her department, before nine months have elapsed. First-year students also actively participate in the weekly Cell Biology Journal Club and attend the cell biology colloquia.

During the subsequent years, students devote most of their time to laboratory research, while also attending courses, seminars and journal clubs and participating in occasional national/international Cleveland cell biology symposia organized by the program. Past or planned topics include Membrane Traffic in Health and Disease (1996), Cell Biology of Huntington's Disease and Related Disorders (2000), Perspectives on the Fragile X Syndrome (2001), and Regulation of Functions of the Nucleus (2004).

The elective courses may be given by any department or program on campus. Students must take a total of 36 credit hours of courses and maintain a B average.

Preparation for the qualifying exam and the writing of research proposals and the dissertation match the norm of the department in which the student elects to do his or her thesis work; however, the content of the exams and proposal(s) must have a clear emphasis on cell biology itself.

All efforts should be made to complete the Ph.D. within four years. It is expected that the student will be the first author of at least two articles accepted for publication in highly regarded scientific journals.

CELL BIOLOGY PROGRAM (CBIO)

REQUIRED (FIRST YEAR)

- **CBIO 453-456. Correlated Curriculum in Cell and Molecular Biology (12 credits)**
- **CLBY 422. Topics in Cell Biology (3 credits).**
- Electives are listed on the Cell Biology Program Web site.
- **CLBY 701. Dissertation (credit as arranged)**

PARTICIPATING FACULTY

Josephine Adams  
Erik Andrulis  
Susann Brady-Kalnay  
Carleen Carlin

Alan Zhu  
Richard Zigmond

COURSE DESCRIPTIONS (CBIO AND CLBY)

**CBIO 453. Cell Biology I (4)**

Part of the first semester curriculum for first year graduate students along with CBIO 455. This course is designed to give students an intensive introduction to prokaryotic and eukaryotic cell structure and function. Topics include membrane structure.
and function, mechanisms of protein localization in cells, secretion and endocytosis, the cytoskeleton, cell adhesion, cell signaling and the regulation of cell growth. Important methods in cell biology are also presented. This course is suitable for graduate students entering most areas of basic biomedical research. Undergraduate courses in biochemistry, cell and molecular biology are excellent preparation for this course. Recommended preparation: Undergraduate biochemistry or molecular biology.

CBIO 455. Molecular Biology I (4)
Part of the first semester curriculum for first year graduate students along with CBIO 453. This course is designed to give students an intensive introduction to prokaryotic and eukaryotic molecular biology. Topics include protein structure and function, DNA and chromosome structure, DNA replication, RNA transcription and its regulation, RNA processing, and protein synthesis. Important methods in molecular biology are also presented. This course is suitable for graduate students entering most areas of basic biomedical research. Undergraduate courses in biochemistry, cell and molecular biology are excellent preparation for this course. Recommended preparation: Undergraduate biochemistry or molecular biology.

CBIO 518. Signaling via Cell Adhesion (3)
Molecular mechanisms by which cells interact with and are regulated by extracellular matrices and other cells. Offered as CBIO 518, CLBY 518, MBIO 518, and NEUR 518.

CELL BIOLOGY PROGRAM (CLBY)
Master's Degree Programs
Thesis (Plan A) and non-thesis (Plan B) master of science degree programs are offered to students who have completed an undergraduate degree program from an accredited university or college. Course schedules are arranged to accommodate individuals who wish to enroll on a part-time basis. Both programs require a total of 27 semester hours at the 400 level or higher. A minimum of 27 semester hours of formal course work is required for the non-thesis degree, and a minimum of 18 semester hours is required for the thesis degree. The remaining nine hours required for completion of Plan A must be fulfilled with research credits (EVHS 651). Students enrolled in Plan B must pass a comprehensive examination before being awarded the degree. The requirements for the master's program must be completed within five consecutive calendar years after matriculation.

Ph.D. Program
Admission to the doctoral degree program may follow successful completion of the undergraduate degree or master's degree program. A minimum of 36 semester hours of graduate study is required for students entering with an undergraduate degree, and 18 semester hours typically are required for students who have completed an M.S. degree program. A proposal-type examination is required before admission to candidacy. Award of the Ph.D. degree is dependent on completion of the course work requirements, 18 hours of dissertation research credit (EVHS 701 or 702) and an original, independent research project under the guidance of a faculty advisor, as well as the submission and defense of a written dissertation. There is no foreign language requirement.

FINANCIAL SUPPORT
Financial support is available for Ph.D. candidates and for a limited number of full-time master's degree candidates.

For more information
Those interested in obtaining applications should contact Karen E. Hendershot, department administrator, at 10900 Euclid Ave., Cleveland, Ohio 44106-4940, telephone (216) 368-5959, or e-mail keh2@case.edu, or contact Carole S. Jackson, department assistant, at (216) 368-5961 or csj3@case.edu. For further information, contact Karen E. Hendershot by the aforementioned means or Martina L. Veigl, Ph.D., at 11001 Cedar Ave., Cleveland, Ohio 44106-7047, telephone (216) 844-7525, or e-mail mlv2@case.edu.
CLBY 488. Yeast Genetics and Cell Biology (3)
This seminar course provides an introduction to the genetics and molecular biology of the yeasts S. cerevisiae and S. pombe by a discussion of current literature focusing primarily on topics in yeast cell biology. Students are first introduced to the tools of molecular genetics and special features of yeasts that make them important model eukaryotic organisms. Some selected topics include cell polarity, cell cycle, secretory pathways, vesicular and nuclear/cytosplasmic transport, mitochondrial import and biogenesis, chromosome segregation, cytoskeleton, mating response and signal transduction. Offered as CLBY 488, GENE 488, MBIO 488, and PATH 488.

CLBY 511. Cell Biology Seminar (1)
The Cell Biology Seminar provides a forum for presentation and discussion of contemporary issues in Cell Biology. Students, fellows, local faculty and guest speakers present both research talks and journal clubs.

CLBY 512. Cell Biology Seminar (1)
The Cell Biology Seminar provides a forum for presentation and discussion of contemporary issues in Cell Biology. Students, fellows, local faculty and guest speakers present both research talks and journal clubs.

CLBY 518. Signaling via Cell Adhesion (3)
Molecular mechanisms by which cells interact with and are regulated by extracellular matrices and other cells. Offered as CBIO 518, CLBY 518, MBIO 518, and NEUR 518.

CLBY 519. Molecular Biology of RNA (3)
Selected topics regarding editing, enzymatic functions, splicing, and structure of RNA. Offered as CBIO 519, CLBY 519, and MBIO 519.

CLBY 525. Transport and Targeting of Macromolecules in Health and Disease (3)
Each class includes introductory lecture, followed by student participation in interactive discussion of 3 to 5 research publications. At the end of the course, the students are expected to submit a paper or a short research proposal on any of the topics discussed during the course. Recommended preparation: CBIO 453, CBIO 454, CBIO 455, and CBIO 456. Offered as CLBY 525 and PATH 525.

CLBY 555. Emerging Concepts in Cell Regulation (3)
This course will cover the general principles of cell regulation with an emphasis on the emerging novel mechanisms of signal transduction. The traditional areas of receptor tyrosine kinases, G-protein coupled receptors will be examined but the focus will be on the roles novel mechanisms such as regulated proteolysis, ubiquitin proteasomal degradation, protein acetylation etc. in signal transduction and gene expression. This will be a literature-based course which will depend on critical evaluation of research papers, reviews and accompanied with in-depth discussion. Recommended preparation: CBIO 453. Offered as CBIO 555, CLBY 555, and PATH 555.

CLBY 599. RNA Structure and Function (3)
This course will cover fundamental aspects of modern RNA biology with emphasis on the interplay of three dimensional structure of nucleic acids and their function. The main focus of the course is on the recent discoveries that indicate a prominent role of RNA as a major regulator of cellular function. Topics discussed will include an introduction to RNA structure, folding and dynamics, RNA/RNA and RNA-protein interactions, and role of RNA in catalysis of biological reactions in ribosome and the role of other catalytic RNAs in tRNA biogenesis, pre-mRNA splicing, and viral replication. The course also covers the recently discovered RNA regulatory switches, large noncoding regulatory RNAs, and the role of RNA in human diseases and novel, RNA-based therapeutics. Offered as BIOC 599, CLBY 599, and MBIO 599.

CLBY 601. Special Problems (1 - 18)
This is the listing for independent research. Students should enroll in this course once they have selected their laboratory for Ph.D. research. The number of credit hours depends on how many didactic courses they are following at the same time. Once they have passed their qualifying examination they should register for CLBY 701.

CLBY 701. Dissertation Ph.D. (1 - 18)
This is the listing for independent research toward the Ph.D. The number of credit hours depends on how many didactic courses students are following at the same time. Students may register for this course only once they have passed their qualifying examination. Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

DEPARTMENT OF ENVIRONMENTAL HEALTH SCIENCES

Room W-G19, School of Medicine
Phone (216) 368-5962
http://casemed.case.edu/dept/evhs/evhs.htm

The Department of Environmental Health Sciences is devoted to the study of the mechanisms of action, epidemiology studies and controlled clinical trials. Recommended preparation: EVHS 429.

EVHS 401. Fundamentals of Environmental Health Sciences: Biochemical Toxicology (3)
This course details the fundamentals of biochemical toxicology. Specific topics include oxidation-reduction reactions, Phase I and II xenobiotic metabolism and mechanisms of cellular toxicity. Also, this course focuses on pharmacology. General principles of pharmacology, drug transport and absorption, drug metabolism, neuropharmacology, immunopharmacology and pharmacokinetics are discussed.

EVHS 402. Fundamentals of Environmental Health Sciences: Risk Assessment (3)
This course presents an overview of the scientific approaches used to determine whether environmental agents are potentially dangerous to people. In this course, criteria utilized for establishing exposure limits is presented. A variety of assays which can be employed to assess the impact of environmental exposure on normal and genetically susceptible individuals are studied. These include: numerous animal tests, short term toxicity and mutagenicity tests, functional assays, molecular techniques to delineate mechanisms of action, epidemiology studies and controlled clinical trials. Recommended preparation: EVHS 429.

EVHS 405. Effects of Exposure to Env Toxins (3)
This course provides an introduction to toxic agents found in the environment and presents an overview of chemical and physical agents which have acute toxic and/or genotoxic effects on cells. Toxicity, mutagenicity, carcinogenicity, teratogenicity and the potential for exposure to these agents through environmental, occupational and medicinal routes are discussed. This topic will be covered at both the molecular and the clinical level. Discussion of clinical cases will be included. Prereq: EVHS 401 and EVHS 402.

EVHS 429. Introduction to Environmental Health Sciences
Health (3)
This is a survey course of environmental health topics including individual, community, population, and global issues. Introduction to risk management, important biological mechanisms, and age and developmental impacts are covered in an overview fashion. A practical inner city home environment experience is included. Offered as EVHS 429 and MPHP 429.

EVHS 502. Genetic Toxicology II: DNA Damage and Repair (3)
This course provides an in-depth consideration of agents which alter DNA directly or indirectly through effects on its synthesis and examines the mechanisms and repair processes through which cells respond to this damage. The class consists of formal lectures which introduce each topic, and analysis of up-to-date literature on topics representative of major current areas of interest in this field. Topics covered include fidelity of DNA replication, excision repair, mismatch repair, transcription-linked repair, SOS repair and recombinational repair. Other DNA damage responses controlling decision points between DNA repair and apoptosis are also considered. Agent-specific DNA damage, such as that caused by agents leading to bulky adducts, AP sites, base-base mismatches and damage to DNA bases, are considered in the context of specific repair processes responding to these DNA insults in procaryotes and eukaryotes. Recommended preparation: EVHS 401 and 402.

EVHS 506. Independent Study in Environmental Health Sciences (1 - 6)
EVHS 510. Molecular Oncology (3)
This course explores the role of environmental factors in causing alterations in cellular mechanisms which lead to cancer. Emphasis is placed on genetic and other regulatory alterations leading to cell transformation. The possible role of oncogenes and suppressor genes in these processes and the mechanisms through which chemotherapy and immunotherapy manifest toxicity for cancer cells are considered.

EVHS 651. Master’s Thesis Research (1 - 9)
EVHS 701. Dissertation Ph.D. (1 - 9)
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

DEPARTMENT OF EPIDEMIOLOGY AND BIOSTATISTICS
Room W-G57, School of Medicine
Phone 216-368-3197
http://epbiwww.case.edu/

The Department of Epidemiology and Biostatistics offers graduate programs leading to the master of science, doctor of philosophy, M.D./Ph.D., and master of public health degrees. Students may select a division in one of the following programs: biostatistics, epidemiology, genetic and molecular epidemiology, health services research, and public health.

Epidemiology is the study of the distribution and determinants of disease in human populations. Epidemiologic studies are concerned with the determination of risk factors for a particular disease, such as cigarette smoking and bladder cancer. After risks are determined, epidemiologists concern themselves with interventions to prevent, treat or change the behavior to reduce the probability of disease.

The study of biostatistics includes design and analysis of experimental studies such as clinical trials and non-experimental studies, theory of probability and statistics, mathematical and statistical modeling, and knowledge of methodology used to evaluate the properties of statistical procedures. It also includes a competency in computers, which encompasses programming, statistical software use, and database management. Biostatistical methods are utilized in almost all medical research.

Genetic and molecular epidemiology encompasses the study of genetic and environmental factors that determine the distributions and dynamics of health outcomes in populations. Investigating such outcomes entails using tools from both the field of human genetics and the field of epidemiology. Numerous human disorders appear to result from the joint action of genes and environment, providing the genetic epidemiologist with ample opportunity for making important contributions to the study of human disease.

According to the Institute of Medicine, health services research is a “multidisciplinary field of inquiry, both basic and applied, that examines the use, costs, quality, accessibility, delivery, organization, financing and outcomes of health care services to increase knowledge and understanding of the structures, processes, and effects of health services for individuals and populations.” The health services research division prepares professionals to design and implement sophisticated studies of complex health services issues and problems using a wide range of quantitative and qualitative analytic techniques. Graduates are prepared for careers in academe, industry, and an array of health-oriented organizations and agencies.

A master of public health degree is designed to prepare students to address the broad mission of public health, defined as “enhancing health in human populations, through organized community effort,” utilizing education, research and community service. Public health practitioners are prepared to identify and assess the health needs of different populations, and then to plan, implement and evaluate programs to meet those needs. It is the task of the public health practitioner to protect and promote the wellness of humankind. For more information about the master of public health degree program, please see “Other Degree Programs” in the medical school section of this General Bulletin or contact the department.

Department faculty are nationally recognized and have more than $9.5 million in grants that support projects including HIV/VTB research in Uganda, the search for genes that cause disease, cancer prevention and control, studies of interventions to change human behaviors that promote good health, design of clinical trials, studies to change high-risk behaviors related to AIDS, studies of public policies concerning the health of the elderly, and cost/benefit studies of medical interventions. The department has offices at the university, the Memory and Aging Center, the Louis Stokes Cleveland Department of Veteran's Affair Medical Center, and MetroHealth Medical Center, the latter nationally recognized as a premier public hospital. The department also maintains a scientific computer center comprised of 15 servers. Several very large national health care and demographic databases (including Medicare, Medicaid, and Vital Statistics databases) are stored on the servers and are used for faculty and student research and educational projects.

COURSE DESCRIPTIONS (EPBI)

EPBI 408. Public Policy and Aging (3)
Overview of aging and the aged. Concepts in the study of public policy. Policies on aging and conditions that they address. The politics of policies on aging. Emergent trends and issues. Offered as ANTH 498, BETH 496, EPBI 408, GERO 496, HSTY 480, MPHP 408, NURS 479, NURS 579, POSC 480, and SOCI 496.

EPBI 411. Introduction to Behavioral Health (3)
Using a biopsychosocial perspective, an overview of the measurement and modeling of behavioral, social, psychological, and environmental factors related to disease prevention, disease management, and health promotion is provided. Offered as EPBI 411 and MPHP 411.

EPBI 414. Introduction to Statistical Computing (3)
This course introduces the use of computers in epidemiologic investigations and biostatistical applications. Topics covered include the computer operating system UNIX, the use of the Internet to access and obtain databases, and database and spreadsheet concepts, along with instruction in the use of SAS software for database management, spreadsheet construction, statistical analysis, and graphics, with a cursory review of SPSS. Primary emphasis in on
developing the knowledge and familiarity required for running these particular programs in connection with data collection, analysis, and presentation of results in clinical studies. Studies will be required to complete assignments using personal computers and UNIX systems maintained by the department. Knowledge of basic statistics in beneficial, as this course does not teach statistical analysis, but it is not vital to learning the material in this course.

EPBI 419. Topics in Urban Health in the United States (3)
This course examines patterns of urban health and disease across the life course among marginalized populations and communities. We will examine the socio-environmental contexts that impact health status (i.e., racism, health disparities, neighborhood context, and environmental stressors). Readings from epidemiology, sociology, and public health literature will provide a foundation for the multiple factors and processes that impact health. Offered as EPBI 419 and MPHP 419.

EPBI 431. Statistical Methods I (3)
Application of statistical techniques with particular emphasis on problems in the biomedical sciences. Basic probability theory, random variables, and distribution functions. Point and interval estimation, regression, and correlation. Problems whose solution involves using packaged statistical programs. First part of year-long sequence. Offered as ANAT 431, BIOL 431, EPBI 431, and MPHP 431.

EPBI 432. Statistical Methods II (3)
Methods of analysis of variance, regression and analysis of quantitative data. Emphasis on computer solution of problems drawn from the biomedical sciences. Design of experiments, power of tests, and adequacy of models. Offered as BIOL 432, EPBI 432, and MPHP 432. Prereq: EPBI 431 or equivalent.

EPBI 433. Community Interventions and Program Evaluation (3)
This course prepares students to design, conduct, and assess community-based health interventions and program evaluation. Topics include assessment of need, evaluator/stakeholder relationship, process vs. outcome-based objectives, data collection, assessment of program objective achievement based on process and impact, cost-benefit analyses, and preparing the evaluation report to stakeholders. Recommended preparation: EPBI 490, EPBI 431, or MPHP 405. Offered as EPBI 433 and MPHP 433.

EPBI 435. Survival Data Analysis (3)
Basic concepts of survival analysis including hazard function, survival function, types of censoring: non-parametric models; extended Cox models; time dependent variables, piece-wise Cox model, etc; sample size requirements for survival studies. Prereq: EPBI 432.

EPBI 441. Biostatistics I (3)
Sampling techniques and statistical methods applicable to data derived from sampling surveys. Principles of random sampling, stratification, systematic sampling, and cluster sampling. Emphasis on sampling problems encountered in surveying human populations. Recommended preparation: EPBI 432.

EPBI 442. Biostatistics II (3)
This course deals with the basic concepts and applications of nonparametric statistics. Topics will include distribution-free statistics, one sample rank test, the Mann-Whitney and Kruskal Wallis tests, one sample and two sample U-statistics, asymptotic relative efficiency of tests, distribution-free confidence intervals, point estimation and linear rank statistics. Recommended preparation: EPBI 441. Offered as EPBI 442 and MPHP 442.

EPBI 443. Applied Multivariate Analysis (3)

EPBI 448. Genetic Analysis Programs (3)
Theory underlying software developed specifically for the genetic analysis of family data. The course will focus mainly on the programs in the S.A.G.E. (Statistical Analysis for Genetic Epidemiology) program package, but will also cover other programs that are available. Use of these programs to determine genetic components of complex traits and writing up reports summarizing the results. Recommended preparation: EPBI 452 and EPBI 457.

EPBI 450. Clinical Trials and Intervention Studies (3)
Issues in the design, organization, and operation of randomized, controlled clinical trials and intervention studies. Emphasis on long-term multicenter trials. Topics include legal and ethical issues in the design; application of concepts of controls, masking, and randomization; steps required for quality data collection; monitoring for evidence of adverse or beneficial treatment effects; elements of organizational structure; sample size calculations and data analysis procedures; and common mistakes. Recommended preparation: EPBI 431 or consent of instructor. Offered as EPBI 450 and MPHP 450.

EPBI 451. Principles of Genetic Epidemiology (1 - 3)
A survey of the basic principles, concepts and methods of the discipline of genetic epidemiology, which focuses on the role of genetic factors in human disease and their interaction with environmental and cultural factors. Many important human disorders appear to exhibit a genetic component; hence the integrated approaches of genetic epidemiology bring together epidemiologic and human genetic perspectives in order to answer critical questions about human disease. Methods of inference based upon data from individuals, pairs of relatives, and pedigrees will be considered. The last third of the course (1 credit) is more statistical in nature. Offered as EPBI 451, GENE 451, and MPHP 451. Prereq: EPBI / MPHP 431 and EPBI/MPHP 490 or MPHP 405.

EPBI 452. Statistical Methods for Genetic Epidemiology (1 - 3)
Analytic methods for evaluating the role of genetic factors in human disease, and their interactions with environmental factors. Statistical methods for the estimation of genetic parameters and tests of genetic hypotheses, emphasizing maximum likelihood methods. Models to be considered will include such components as genetic loci of major effect, polygenic inheritance, and environmental, cultural and developmental effects. Topics will include familial aggregation, segregation and linkage analysis, ascertainment, linkage disequilibrium, and disease marker association studies. Recommended preparation: EPBI 431 and EPBI 451.

EPBI 453. Categorical Data Analysis (3)
Descriptive and inferential methods for categorical data with applications: bivariate data; models for binary and multinomial response variables, with emphasis on logit models; loglinear models for multivariate data; model fitting using the maximum likelihood approach; model selection and diagnostics; and sample size and power considerations. Topics in repeated response data as time allows. Recommended preparation: EPBI 441.

EPBI 454. Population Genetics for Genetic Epidemiology (3)
This course will cover basics of population genetics (mutation, migration, natural selection) as well as topics such as random mating populations and inbred populations. Emphasis will be placed on migration studies and on linkage disequilibrium mapping. Measures on linkage disequilibrium, methods for linkage disequilibrium mapping of disease genes and the use of isolated versus outbred population in linkage of disequilibrium mapping will be discussed. Recommended preparation: EPBI 431.

EPBI 457. Genetic Linkage Analysis (3)
Methods of analyzing human data to detect genetic linkage between disease traits, discreet and continuous, and polymorphic markers. Both model-based maximum likelihood (lod score) and model-free robust methods will be discussed. Additional topics covered will include measures of informativeness, multipoint analysis, numerical methods and mod score analysis. Prereq: EPBI 432. Coreq: EPBI 451.

EPBI 458. Statistical Methods for Clinical Trials (3)
This course will focus on special statistical methods and philosophic issues in the design and analysis of clinical trials. The emphasis will be on practically important issues that are typically not covered in standard biostatistics courses. Topics will include: randomization techniques, intent-to-treat analysis, analysis of compliance data, equivalency testing, surrogate endpoints, multiple comparisons, sequential testing, and Bayesian methods. Offered as EPBI 458 and MPHP 458. Prereq: EPBI 432 or MPHP 432.

EPBI 459. Longitudinal Data Analysis (3)
This course will cover statistical methods for the analysis of longitudinal data with an emphasis on application in biological and health research. Topics include exploratory data analysis, response feature analysis, growth curve models, mixed-effects mod-
ells, generalized estimating equations, and missing data. Prereq: EPBI 432.

EPBI 460. Health Research Methods I (3)
This is a course in research methods focusing on practical issues in the conduct of health services research studies. Topics include: an overview of health services research; ethics in health services research; proposal writing and funding; the relationship between theory and research; formulating research questions; specifying study design and study objectives; conceptualizing and defining variables; validity and reliability of measures; scale construction; operationalizing health research relevant variables using observation, self and other report; and secondary analysis; formatting questionnaire; developing analysis plans; choosing data collection methods; sampling techniques and sample size; carrying out studies; preparing data for analysis; and reporting of findings. Offered as EPBI 460 and MPH 460.

EPBI 461. Health Research Methods II (3)
Focus on measurement strategies for key health services research concepts including case mix, severity of illness, functional status, and patient outcomes. Examine the interplay between physician practice patterns, geography, standards of care, and practice guidelines and patient management and outcomes. Statistical methods especially useful in health services research (e.g., cost/effectiveness and cost/benefit analysis, conjoint analysis, utility assessment, and meta-analysis) will be introduced as well as examining approaches to the assessment of care quality. Recommended preparation: EPBI 460 or consent of instructor.

EPBI 462. Computation Methods in Genetic Epidemiology (3)
Methods for computing genetic likelihoods and estimating genetic parameters; Elston-Stewart algorithm, IBD computation; Markov chain Monte Carlo methods; Gibbs sampling; Newton-Raphson; E-M algorithm. Prereq: EPBI 457 and EPBI 482.

EPBI 464. Obesity and Cancer: Views from Molecules to Health Policy (3)
This course will provide an overview of the components of energy balance (diet, physical activity, resting metabolic rate, dietary induced thermogenesis) and obesity, a consequence of long term positive energy balance, and various types of cancer. Following an overview of energy balance and epidemiological evidence for the obesity epidemic, the course will proceed with an introduction to the cellular and molecular biology of energy metabolism. Then, emerging research on biologically plausible connections and epidemiological associations between obesity and various types of cancer (e.g., colon, breast) will be presented. Finally, interventions targeted at decreasing obesity and improving quality of life in cancer patients will be discussed. The course will be cooperatively-taught by a transdisciplinary team of scientists engaged in research in energy balance and/or cancer. Didactic lectures will be combined with classroom discussion of readings. The paper assignment will involve application of course principles, lectures and readings. Offered as EPBI 464, MPH 464.

EPBI 467. Cost-Effectiveness Analysis in Health Care (3)
Evaluation of alternative medical treatments and drug therapies. Topics include cost-benefit, cost-effectiveness and cost-utility analysis. Measuring costs, benefits and health outcomes. Quality of life and other measures of effectiveness will also be addressed. Emphasis on case studies, course project, and evaluation of publications. Some decision analysis and policy implications will also be included. Offered as EPBI 467 and MPH 467.

EPBI 468. The Continual Improvement of Healthcare: An Interdisciplinary Course (3)
The focus of this course is on collaborative work for the benefit of patients and community. Seminar classwork is combined with a field project, in which interdisciplinary student teams apply what they have learned to the improvement activities of a local health care organization. Successful completion of the course depends on participation in seminar sessions and completion of the interdisciplinary student team project. Offered as EPBI 468, NURS 468, and MPH 468.

EPBI 471. Statistical Aspects of Data Mining (3)

EPBI 472. Special Topics in Statistical Genetics (1 - 4)
Various topics in statistical genetics will be discussed, depending on student interest and needs. Examples of topics are paternity and zygosity testing, path analysis for genetic epidemiology, the analysis of racial admixture and modeling such phenomena as imprinting and anticipation. The course will consist of four modules. A student may, in consultation with the instructor, elect to take 1 - 4 modules for the corresponding amount of credit. Recommended preparation: EPBI 452.

EPBI 473. Integrative Cancer Biology (3)
This is a project-focused research level course in integrative cancer biology, an emergent field in which mathematical models and computer simulations are used to synthesize various forms of cancer data to yield experimentally testable scientific hypotheses. The course is designed for oncologists and cancer biologists who are interested in learning how to apply mathematics and a high level programming language (the freeware R) to analyzes of cancer research data. Data on all levels will be considered, ranging from epidemiological datasets to DNA microarray datasets. Recommended preparation: BIO 407, EPBI 432.

EPBI 474. Principles of Practice-Based Network Research (3)
Practice-based research networks (PBRNs) are organizations of community-based healthcare practices that engage in clinical research and practice improvement. In the U.S., there are more than 100 of these dynamic, collaborative organizations that enable the translation of research into practice and practice into research. They also frequently engage in developing and refining methods to improve healthcare quality. This course is designed to provide students with a foundation in PBRN methods and principles, including: introduction to PBRNs, methods for collaborating with community practices, PBRN-building strategies, PBRN data collection methods, statistical issues in network research, community-based participatory research, human subjects’ protection issues in PBRNs, quality improvement research in PBRNs, funding for PBRN research, and writing PBRN research findings for publication. Each 2.5 hour class session will feature a lecture followed by a discussion of readings from the literature. Students will develop a PBRN research or quality improvement proposal during the semester. Offered as EPBI 474, FAMD 474, MPH 474.

EPBI 477. Internship at Health-Related Government Agencies (3)
This independent study course will incorporate a one-semester-long internship at health-related government agencies (Ohio Department of Health, Ohio Department of Job and Family Services, or Cleveland City Health Department). The choice of the agency will depend on the student’s academic interests and research goals. The objective is to develop a level of familiarity with the organizational and operational aspects of such agencies, and to gain an understanding of agencies’ and bureaus’ interactions with the legislative body, as well as the processes of developing, implementing, managing, and monitoring health initiative. The instructor and the liaison persons at the agencies will be responsible for planning structured encounters of interns with key administrators and policy makers, and to select a research project, based on the intern’s research interests and the agency’s research priorities. Interns will be required to submit a draft of the report to the instructor at the end of the semester. The approved, final report will be submitted to the agency. The project will be evaluated for its methodological soundness and rigor. Students will be required to be at the agency one day a week. Recommended preparation: EPBI 515. Offered as EPBI 477 and MPH 477.

EPBI 480. Introduction to Mathematical Statistics (3)
An introduction to statistical inference at an intermediate mathematical level. The concepts of random variables and distributions, discrete and continuous, are reviewed. Topics covered include: expectations, variance, moments, the moment generating function; Bernoulli, binomial, hypergeometric, Poisson, negative binomial, normal, gamma and beta distribution; the central limit theorem; Bayes estimation, maximum likelihood estimators, unbiased estimators, sufficient statistics; sampling distributions (chi-square, t) confidence intervals, Fisher information; hypothesis testing, uniformly most powerful tests and multi-decision problems. Prereq: EPBI 431.

EPBI 481. Theoretical Statistics I (3)
Topics provide the background for statistical infer-

EPBI 482. Theoretical Statistics II (3)
Point estimation; maximum likelihood, moment estimators. Methods of evaluating estimators including mean squared error, consistency, “best” unbiased and sufficiency. Hypothesis testing; likelihood ratio and union-intersection tests. Properties of tests including power function, bias. Interval estimation by inversion of test statistics, use of pivotal quantities. Application to regression. Graduate students are responsible for mathematical derivations, and full proofs of principal theorems. Recommended preparation: MATH 223 or STAT 445. Offered as EPBI 482 and STAT 445.

EPBI 484. Geographic Medicine and Epidemiology (1 - 3)
This course focuses on the epidemiology, prevention, treatment, and control of tropical and parasitic diseases. Emphasis will be placed on the triad of agent, host, and environment for infectious disease impacting global health. Three distinct modules will focus on specific examples such as malaria, helminths, bacteria, or viruses. Active class participation is required through discussions, case studies, and group projects. Recommended preparation: EPBI 490, EPBI 491 and a microbiology course or consent of instructor. Offered as EPBI 484, INTH 484, and MPHP 484.

EPBI 488. Gender, Ethnicity, and Health Research (3)
This course is designed to acquaint students with the literature addressing the constructs of race, ethnicity, gender and social class; to examine critically the contexts in which these constructs are often applied; and to assess the relationship between each of these constructs and access to health care, quality of care, and health outcome. Offered as EPBI 488 and MPHP 488.

EPBI 490. Epidemiology: Introduction to Theory and Methods (3)
Epidemiologic principles and methods needed to understand population-based statements of illness and health. Descriptive epidemiology: analytic, community-based, and biostatistics. Analytic epidemiology and epidemiologic inference. Classification, morbidity and mortality rates, sampling, screening, epidemiologic models, field trials, controlled epidemiologic surveys, sources of bias, and causal models. Recommended preparation: STAT 201 or STAT 207 or STAT 312 or equivalent. Offered as EPBI 490 and MPHP 490.

EPBI 491. Epidemiology: Case-Control Study Design and Analysis (3)
This course builds upon EPBI 490 with a comprehensive study of the concepts, principles, and methods of epidemiologic research. The course content specifically focuses on the case-control study design and provides a framework for the design, analysis, and interpretation of case-control studies. Rigorous, problem-centered training includes exposure measurement, subject selection, validity, reliability, sample size and power, effect modification, confounding, bias, risk assessment, matching, and logistic regression. Individual and group data projects will be analyzed using SAS statistical software. Offered as EPBI 491 and MPHP 491. Prereq: EPBI/MPHP 431 and EPBI/MPHP 490.

EPBI 492. Epidemiology: Cohort Study Design and Analysis (3)
This course provides a comprehensive introduction to the cohort study. Particular emphasis is placed on cohort study design and cohort data analysis. The course will cover the conceptual framework underlying cohort studies, planning and conducting a cohort study, basic concepts of time, exposure and outcome, and methods in the analysis of longitudinally collected data. Analytic methods covered in the class include, but are not limited to: analysis of age, period, and cohort effects, analysis of incidence rates, analysis of repeated measures, and analysis of time-to-event data. Students will have the opportunity to conduct analysis of data obtained from an actual cohort study using a statistical package of their choice. Offered as EPBI 492 and MPHP 492. Prereq: EPBI 431 and EPBI 490 or equivalents.

EPBI 493. Chronic Disease Epidemiology (3)
This course is intended for graduate students in epidemiology and M.P.H. students who are interested in chronic disease epidemiology and prevention. The course will cover: 1) overview of concepts in chronic disease epidemiology and etiology, study design in epidemiologic research, and causal inference; 2) major chronic diseases in the U.S. populations and prevention; and 3) cancer screening. For each specific disease of interest, the lecture is structured according to 4 major components: 1) basic epidemiology; 2) risk factors and etiology; 3) prevention (and screening); and 4) controversies and future research. Offered as EPBI 493 and MPHP 493. Prereq: EPBI 490 or equivalent.

EPBI 494. Infectious Disease Epidemiology (1 - 3)
The epidemiology, prevention and control of representative infectious disease models. Emphasis on the triad of agent, host, and environment and the molecular and genetic basis of agent and host interaction in the population. Recommended preparation: EPBI 490, EPBI 491, and a microbiology course or consent of instructor. Offered as EPBI 494, INTH 494, and MPHP 494.

EPBI 495. Mental Health Epidemiology (3)
This course explores the epidemiology of diseases affecting the brain, including various forms of mental illness and neuro logical disorders. The course utilizes a cross-disciplinary approach and draws on science, sociology, history, and. Offered as EPBI 495 and MPHP 495.
and invited guests. These activities give students the opportunity to improve their ability to: 1) critically evaluate research literature in epidemiology; 2) lead effectively a discussion of a research article; and 3) organize and deliver oral presentations based on published literature and their own research endeavors. Some sessions are devoted to didactic training and hands-on experience with career-related tasks and skills such as grant writing, proposal evaluation, and manuscript review. The specific content of the seminar for any given semester will be determined jointly by the students and faculty in the Division of Epidemiology. Enrollment is limited to students in the Division of Epidemiology of the Department of Epidemiology and Biostatistics.

**EPBI 508. Ethics, Law, and Epidemiology (3)**

This course is designed to provide epidemiology students with basic knowledge about the ethical and legal principles underlying epidemiological research. This is not a public health law class. Issue papers are assigned on a weekly basis. Each issue paper requires that the student analyze the situation depicted and apply the principles learned. Some issue papers may require that the student draft a proposed rule, a portion of legislation, or a document such as an informed consent form. Other exercises may require that students critique an existing agency rule or legislation. Offered as EPBI 508 and MPH 508. Prereq: EPBI 490 and EPBI 491 or equivalents.

**EPBI 510. Health Disparities (3)**

This course aims to provide theoretical and application tools for students from many disciplinary backgrounds to conduct research and develop interventions to reduce health disparities. The course will be situated contextually within the historical record of the United States, reviewing social, political, economic, cultural, legal, and ethical theories related to disparities in general, with a central focus on health disparities. Several frameworks regarding health disparities will be used for investigating and discussing the empirical evidence on disparities among other subgroups (e.g., the poor, women, uninsured, disabled, and non-English speaking populations) will also be included and discussed. Students will be expected to develop a research proposal (observational, clinical, and/or intervention) rooted in their disciplinary background that will incorporate materials from the various perspectives presented throughout the course, with the objective of developing and re-inforcing a more comprehensive approach to current practices within their fields. Offered as CRSP 510, EPBI 510, MPH 510, NURS 510, and SASS 510.

**EPBI 515. Secondary Analysis of Large Health Care Data Bases (3)**

Development of skills in working with the large-scale secondary data bases generated for research, health care administration/billing, or other purposes. Students will become familiar with the content, strength, and limitations of several data bases; with the logistics of obtaining access to data bases; the strengths and limitations of routinely collected variables; basic techniques for preparing and analyzing secondary data bases and how to apply the techniques to initiate and complete empirical analysis. Recommended preparation: EPBI 414 or equivalent; EPBI 431 or EPBI 460 and EPBI 461 (for HSR students).

**EPBI 592. Special Topics in Epidemiology (1 - 10)**

Short, intensive courses on current research topics, statistical analyses, methodological issues or intervention approaches related to epidemiology, particularly infectious disease, chronic disease, behavioral and social epidemiology. Course hours and requirements vary by topic each semester.

**EPBI 601. Master's Project Research (1 - 18)**

**EPBI 602. Practicum (1 - 3)**

**EPBI 651. Thesis M.S. (1 - 18)**

**FAMD 502. International Health Practice (3)**

This course aims to provide practical knowledge to prepare students to serve and study for international health work particularly in complex humanitarian emergencies. The course is organized and discussed from the perspective of health care professional. This course is intended for graduate-level students in medicine, nursing, public health, social work, and medical anthropology. Historical development of the discipline, key methodological issues, and essential principles in key topics will be discussed in multidisciplinary approach. Offered as FAMD 502 and MPH 502.

**FAMD 601. Independent Study (1 - 18)**

**FAMD 651. Thesis M.S. (1 - 18)**

**DEPARTMENT OF FAMILY MEDICINE**

The Department of Family Medicine offers a master's degree in family medicine. The program includes basic training in biostatistics, epidemiology and research methods, with a specific emphasis on the family. The department is a national leader in primary care research and is one of three national research centers funded by the American Academy of Family Physicians.

**COURSE DESCRIPTIONS (FAMD)**

**FAMD 431. Applied Statistics in Medical Education (3)**

**FAMD 474. Principles of Practice-Based Network Research (3)**

Practice-based research networks (PBRNs) are organizations of community-based healthcare practices that engage in clinical research and practice improvement. In the U.S., there are more than 100 of these dynamic, collaborative organizations that enable the translation of research into practice and practice into research. They also frequently engage in developing and refining methods to improve healthcare quality. This course is designed to provide students with a foundation in PBRN methods and principles, including: introduction to PBRNs, methods for collaborating with community practices, PBRN-building strategies, PBRN data collection methods, statistical issues in network research, community-based participatory research, human subjects’ protection issues in PBRNs, quality improvement research in PBRNs, funding for PBRN research, and writing PBRN research findings for publication. Each 2.5 hour class session will feature a lecture followed by a discussion of readings from the literature. Students will develop a PBRN research or quality improvement proposal during the semester. Offered as EPBI 474, FAMD 474, MPH 474.

**FAMD 502. International Health Practice (3)**

This course aims to provide practical knowledge to prepare students to serve and study for international health work particularly in complex humanitarian emergencies. The course is organized and discussed from the perspective of health care professional. This course is intended for graduate-level students in medicine, nursing, public health, social work, and medical anthropology. Historical development of the discipline, key methodological issues, and essential principles in key topics will be discussed in multidisciplinary approach. Offered as FAMD 502 and MPH 502.

**DIVISION FOR ADOLESCENT HEALTH**

2027 Cornell Road
Barbara A. Cromer, M.D., Director
Frederick C. Robbins, M.D., Professor of Child and Adolescent Health
Phone 216-368-3770
http://www.case.edu/med/adolescent-health/blah.html

The School of Medicine established the Center for Adolescent Health in 1990 in recognition of the multidimensional biopsychosocial problems of contemporary youth. It was formed by educators and researchers from a variety of disciplines seeking to bring their expertise to bear on the serious problems facing youth. The center became a Division of Adolescent Health in Family Medicine in 2005. The mission has remained the same. It seeks to address these issues through an integrated, transdisciplinary approach that incorporates research, professional education, programmatic intervention and collaboration between Case and community agencies and programs.

This unique program has four objectives:

1) To promote and coordinate collaborative research activities relevant to adolescents;
2) To provide interdisciplinary educational training at undergraduate, post-baccalaureate, and post-graduate levels for profes-
sionals interested in adolescent health, including an adolescent track in the Master in Public Health Program at the Medical School;
3) To serve as a resource for Greater Cleveland community agencies that provide services for adolescents; and
4) To help promote the development of rational public policies addressing health and social issues that concern youth.

For information about the adolescent health track of the master of public health degree, please see "Other Degree Programs" in the medical school section of this General Bulletin or contact the center. A certificate in adolescent health also is offered; please contact the center for more information.

Although based at the School of Medicine, the division has developed relationships with other schools and departments at Case and the community at large. In addition, the division is the umbrella organization for Cuyahoga County’s Adolescent Consortium, a networking organization for more than 100 local youth-serving agencies. The center also provides program evaluation services and consultation to community-based youth-serving projects, as well as establishing and maintaining a countywide Adolescent Health Risk Behavior database.

Current research interests of the faculty include adolescent health promotion and resilience, sexuality, mental health, substance abuse prevention and violence.

COURSE DESCRIPTIONS (ADHT)

ADHT 485. Adolescent Development (3)
Adolescent Development can be viewed as the overarching framework for approaching disease prevention and health promotion for this age group. This course will review the developmental tasks of adolescence and identify the impact of adolescent development on youth risk behaviors. It will build a conceptual and theoretical framework through which to address and change adolescent behavior to provide new and better options in cancer prevention, diagnosis and treatment to the people of Northeast Ohio. The center is one of the 39 National Cancer Institute-designated comprehensive cancer centers.

The Case Comprehensive Cancer Center supports and coordinates all of the cancer research conducted by researchers and clinicians at the School of Medicine, the University, University Hospitals of Cleveland, and Cleveland Clinic. By providing a platform for multidisciplinary and transdisciplinary research across these campuses, the Cancer Center promotes the translation of basic science advances as rapidly as possible into research involving humans and human cancers and then into clinical research activities. The goal of the more than 310 members is to discover basic processes in cancer, to develop innovative population based research efforts, and to evaluate patients with cancer to provide new and better options in cancer prevention, diagnosis and treatment to the people of Northeast Ohio. The center is one of the 39 National Cancer Institute-designated comprehensive cancer centers.

Researchers and clinicians associated with the Case Comprehensive Cancer Center participate in one or more of nine organized interdisciplinary programs, each focused on a different area of cancer research: Cancer Genetics; Cell Proliferation and Cell Death; Radiation and the Cellular Stress Response; Molecular Basis of Oncogenesis, Stem Cells and Hematologic Malignancies, Genitourinary Malignancies; Developmental Therapeutics; Behavioral Prevention and Population based research; and Aging and Cancer. These research efforts are facilitated by seventeen shared resource facilities supported by the center that provide essential services for cancer center members. The cross-disciplinary interactions catalyzed by these research programs create a rich training environment, and members participate in five National Cancer Institute-sponsored interdisciplinary training programs.

CENTER FOR ADVANCEMENT OF MEDICAL LEARNING
Director, to be announced

CENTER FOR BIO-ARCHITECTONICS
Room BRB 8-17, School of Medicine
Raymond J. Lasek, Ph.D. (Anatomy),
Professor and Director
Phone 216-368-2390

Bio-architectonics is the study of complex biological architectures. The center was established in 1986 to explore biological architectures in medicine, and it has focused specifically on the teaching of medical anatomy.

CENTER FOR CLINICAL INVESTIGATION
For more information, contact Daniel Anker
dxa2@case.edu

CENTER FOR GLOBAL HEALTH AND DISEASE
Fourth Floor, Iris S. and Bert L. Wolstein Research Building
James W. Kazura, M.D., Professor of International Health, Medicine, and Pathology and Director
Phone 216-368-6321

The Center for Global Health and Diseases in the School of Medicine was established in 2002 by the integration of the Division of Geographic Medicine and the Center for International Health. The Center for Global Health and Diseases links the numerous international health resources of the university, its affiliated institutions, and the northern Ohio community in multidisciplinary programs of research and education related to global health. The challenges presented by world health problems are enormous, and the opportunities presented to the university community are great. In meeting these challenges and in responding to these opportunities, those affiliated with the center have the opportunity to promote health in the world and to enrich the community. The Center and its faculty engage in basic and applied biomedical research on diseases of developing countries as well as interdisciplinary studies of microbial threats to the American public, including agents of bioterrorism. Thus, the scope
of the center includes education and service as well as basic and clinical investigations of human health and disease.

Faculty members have primary appointments in the center, which is an administratively independent unit within the Division of General Medical Sciences of the School of Medicine. Secondary appointments are held in various departments in the School of Medicine, including medicine, genetics, epidemiology and biostatistics, and pathology and other units within the university. The center endeavors to foster programs that encourage creative people from many disciplines and cultures to work toward solutions of global health and disease issues (e.g., Departments of Anthropology, Biology and Mathematics in the College of Arts and Sciences). Its efforts are thus built on a strong base of specialized strengths from many academic disciplines. The center is currently a national leader in National Institutes of Health-supported studies of the major infectious diseases of developing countries. Faculty use cutting-edge approaches to examine the molecular, genetic and immunologic basis of susceptibility to infectious diseases such as malaria, river blindness, lymphatic filariasis, schistosomiasis and leishmaniasis. Center faculty have been successful in expanding the scope of their work to major viral diseases that threaten not only populations of developing countries but also American civilian and military populations. Examples include smallpox, Rift Valley fever, dengue, HIV and Epstein-Barr virus, the agent that underlies Burkitt’s lymphoma, the major childhood cancer of the tropics. Faculty with primary appointments in the center have major overseas research collaborations in Kenya, Papua New Guinea and Brazil. Faculty with secondary appointments in the center, from the division of infectious diseases in the Department of Medicine, division of pediatric infectious diseases in the Department of Pediatrics, and the Department of Epidemiology and Biostatistics, have long-standing research and educational activities in Uganda and Brazil focused on tuberculosis and HIV infection.

Educational programs sponsored by the center include electives in international health and population biology and genetics of infectious diseases, overseas rotations for medical students, and training programs at the university for visiting students and scholars from developing countries. In the Greater Cleveland community, substantial international expertise and experience exists in corporate, private, institutional and voluntary agency sectors. Citizen interest and commitment is high. The center seeks to provide a focal point for this interest, encouraging cooperative activities among these groups and academic units of the university. Specific objectives of the center:

1) Linkages. To foster interdisciplinary and intercultural linkages related to international health in the university and the community.
2) Training. To promote training programs throughout the university that will equip a cadre of scientists from diverse backgrounds to address global health issues.
3) Research. To conduct and facilitate collaborative, multidisciplinary research programs focused on major diseases of public health significance in developing countries as well as the United States.
4) Application. To work with institutions and agencies in developing countries to help design and establish research and education programs that meet their needs and function as models of sustainable health systems.

CENTER FOR PROTEOMICS AND MASS SPECTROMETRY

Biomedical Research Building, Ninth Floor
Phone 216-368-1490
Mark R. Chance, Ph.D., Professor of Physiology, and Biophysics, and Director

The Center for Proteomics and Mass Spectrometry in the School of Medicine was established in 2005. The Case Proteomics Center (CPC) was created, in part, to strengthen Cleveland’s presence in modern proteomics and mass spectrometry research to make the region a leader in the field. The vision for the Center has been shaped over the past several years by the senior leadership of the School of Medicine, and more recently, has been further developed in conjunction with the Center’s director, Mark Chance, Ph.D., with the Center’s grand opening in February 2006. One of the primary goals of the CPC is to develop an infrastructure of sophisticated equipment that facilitates and maximizes shared equipment usage, as well as to offer a wide array of proteomics services including 2D gel and mass spectrometry analyses.

Proteomics entails the in depth structural analysis of individual proteins in human and animal cells. In studying proteins and their changes, researchers are able to identify the causes of, and therefore the treatments of, human disease. The School of Medicine has established the Center for Proteomics and Mass Spectrometry to perform research to better understand the genetic and environmental bases of disease as well as provide new technologies to diagnose diseases such as cancer, heart disease, and diabetes. New technologies in mass spectrometry are also allowing protein expression, localization, structure, post-translational modifications, and interactions to be studied in increasing detail and on a genome wide scale. The center is also developing and applying state of the art structural proteomics technologies to understand the function and interactions of macromolecular complexes.

The CPC has a wide range of facilities and equipment available for the use of the Case community. These include biochemistry and computation facilities and equipment such as a Thermo-Finnegan Fourier Transform LTQ mass spectrometer, GE/Amersham 2-D gel DIGE system, Applied Biosystems Q-star mass spectrometers, Thermo-Finnegan DECA XP-Plus and LTQ instruments, Beckman Biomec FX robotic liquid handling systems, a Pro-TOF 2000 MALDI mass spectrometer, as well as additional ion trap instruments with LC-systems.

The center also offers a wide range of seminars, workshops, and possibilities for individual training. These activities are posted on the CPC Web site. For a list of services and to explore opportunities to collaborate, please visit the Web site: http://casemed.case.edu/proteomics/ or e-mail: proteomics@case.edu.

CENTER FOR PSYCHOANALYTIC CHILD DEVELOPMENT

Hanna Perkins Center
19910 Malvern Road
Shaker Heights OH 44122-2823
Phone 216-929-0216
Thomas F. Barrett, Ph.D., Director

The Center for Psychoanalytic Child Development was created in the Case School of Medicine after Thomas F. Barrett, Ph.D., director of the Hanna Perkins Center for Child Development, was named the John A. Hadden Jr., M.D., Professor in Psychoanalytic Child Development in late 2001. The purpose of the center is to promote the understanding of the emotional development of children, how they experience and deal with feelings and conflicts, how their inner lives interact with the outer world in the process of growing up, and the interaction between emotional development, physical development and the external environment. Activities organized in the center’s initial stages have included an elective course in the medical school curriculum, about the
emotional development of children; consulta-
tion with the school’s Center for Adolescent Health; and participation in the formative stages of a research project focused on children in whom attention deficit hyperactivity disorder has been diagnosed. In 2003, a child analyst joined a pediatric preceptor to discuss the observations of students conducting well-baby exams in the Family Clinic of University Hospitals of Cleveland. In the future, the center hopes to collaborate in many more joint endeavors to study the emotional and physical interactions of the growing child. For more information, contact Dr. Barrett using the information appearing at the beginning of this write-up or write Elizabeth Fleming at the same address, or call her at 216-929-0220.

CENTER FOR RNA MOLECULAR BIOLOGY
Room W-TT3, School of Medicine
Timothy W. Nilsen, Ph.D., Professor and Director of Center
Phone 216-368-1606
http://www.rnaresearch.org

Formally established in 2001, the goal of the Center for RNA Molecular Biology is to create a focus of excellence in the study of all aspects of RNA metabolism, including molecular biology and cell biology, and to investigate the potential clinical and commercial applications of these studies. The center strives for a national reputation for excellence in research and training of both graduate students and medical students, while maintaining interactions with other departments, centers and programs at Case Western Reserve, University Hospitals of Cleveland, and the Cleveland Clinic.

The primary faculty in the center and secondary faculty housed in other university departments and the Cleveland Clinic Foundation form a highly cohesive group. Current research areas include the roles of protein factors in cis- and trans-splicing of mRNA, mechanisms of cis- and trans-splicing in nematodes, protein-dependent RNA catalysis, RNA-RNA and RNA-protein interactions studied by nuclear magnetic resonance, apolipoprotein B RNA editing, RNA editing in Physarum, the structure and catalytic function of RNA, RNA helicases, alternative pre-mRNA processing, the subcellular organization of RNPs in mammals, mRNA splicing in S. cerevisiae, mRNA transport in S. cerevisiae, pre-mRNA splicing by the major and minor spliceosomes, alternative splicing in Drosophila, and the control of gene expression and protein folding.

Center faculty participate in teaching first-year graduate and medical student courses, as well as special-topics graduate courses. Graduate students are encouraged to apply directly to the Biomedical Sciences Training Program or to the Department of Biochemistry or to the Department of Molecular Biology and Microbiology; see the listings for these areas elsewhere in the School of Medicine section of this publication.

CENTER FOR SCIENCE, HEALTH AND SOCIETY
Case Western Reserve University
School of Medicine
Health Center Library, Robbins Building
Suite R106
216-368-2059
http://www.case.edu/med/cshs/index.htm
Nathan A. Berger, M.D.
Hanna-Payne Professor of Experimental Medicine; Professor of Medicine, Oncology and Biochemistry; Director, Center for Science, Health and Society

Recognizing that the successful futures of Case Western Reserve University, the City of Cleveland, and the County of Cuyahoga are integrally related, the Center for Science, Health and Society (CShS) was created in 2002 to focus the efforts of the University and the city in a significant new collaboration to impact the areas of health and healthcare delivery systems through community outreach, education, and health policy. The Center, based in the School of Medicine, with university wide associations is engaging the many strengths of the University and the community to:
1. Improve the health of the community
2. Educate and empower the community to become better consumers of healthcare and more informed and stronger advocates for healthcare policy and legislation in their own interests
3. Encourage members of the community to enter careers in the biomedical workforce and healthcare professions

The Center has engaged the community at the level of the individual and the neighborhood, in public and private schools, at civic and faith-based organizations, and at the level of governmental agencies and community leadership to identify community problems, perceptions, assets and resources; advise the community of faculty skills, assets and expertise; and, catalyze community service based scholarship that benefits community interests and promotes mutual enhancement.

CENTER FOR HEALTH CARE RESEARCH AND POLICY
Rammelkamp Research and Education Building, second floor,
MetroHealth Medical Center
Phone: 216-778-3902
Fax: 216-778-3945
Web site: www.chrp.org
Randall D. Cebul, M.D., Director of Center
Professor of Medicine and Epidemiology and Biostatistics

The two-fold mission of the Center for Health Care Research & Policy is to: 1) improve the health of the public by conducting research that improves access to health care, increases the quality and value of health care services, and informs health policy and practice; and 2) lead education and training programs that promote these goals. Formally established in 1994, the Center’s mission is carried out by a cross-disciplinary faculty who both lead and collaborate with other scholars in Northeast Ohio and beyond. A core faculty of 17 is extended by affiliated Senior Scholars throughout the university, assisted by an able staff and over 30 grant-supported research associates. The Center’s home at MetroHealth’s Rammelkamp Research and Education Building is an outstanding venue for collaborative research, mentoring of students and junior faculty, and cross-disciplinary seminars.

The Center’s research and training focuses in programmatic areas that reflect national health care priorities as well as high impact problems in adults. Center Programs pertain to chronic conditions, especially stroke, obesity and diabetes, and kidney disease, and to problems in aging. Programs are complemented by methods-focused Units, including biostatistics and evaluation, health care decision making, health economics, and quality measurement and improvement. A recent initiative in clinical research informatics will capitalize on growing institutional capacities in electronic medical records and clinical decision support. Center faculty view Northeast Ohio as a laboratory for research, recognizing the national relevance of regional challenges and opportunities.

Center faculty assume leadership roles in federally-supported degree-granting training programs in Health Services Research and Clinical Investigation and teach in the core curriculum of the School of Medicine. See the listings for related training programs elsewhere in this bulletin or contact the Center.

INTERNATIONAL HEALTH

CASE WESTERN RESERVE UNIVERSITY
INTH 301. Fundamentals of Global Health (3)
This course seeks to integrate the multiple perspectives and objectives in global health by investigating how the disciplines of Biology, Medicine, Anthropology, Nursing, Mathematics, Engineering analyze and approach the same set of international health problems. Students will develop a shared vocabulary with which to understand these various perspectives from within their own discipline. The focus sites will emphasize issues related to the health consequences of development projects, emergency response to a health care crisis and diseases of development in presence of underdevelopment. Offered as INTH 301 and INTH 401. Prereq: Junior or senior.

INTH 401. Fundamentals of Global Health (3)
This course seeks to integrate the multiple perspectives and objectives in global health by investigating how the disciplines of Biology, Medicine, Anthropology, Nursing, Mathematics, Engineering analyze and approach the same set of international health problems. Students will develop a shared vocabulary with which to understand these various perspectives from within their own discipline. The focus sites will emphasize issues related to the health consequences of development projects, emergency response to a health care crisis and diseases of development in presence of underdevelopment. Offered as INTH 301 and INTH 401. Prereq: Graduate student.

INTH 484. Geographic Medicine and Epidemiology (1 - 3)
This course focuses on the epidemiology, prevention, treatment, and control of tropical and parasitic diseases. Emphasis will be placed on the triad of agent, host, and environment for infectious disease impacting global health. Three distinct modules will focus on specific examples such as malaria, helminths, bacteria, or viruses. Active class participation is required through discussions, case studies, and group projects. Recommended preparation: EPBI 490, EPBI 491 and a microbiology course or consent of instructor. Offered as EPBI 484, INTH 484, and MHPH 484.

INTH 494. Infectious Disease Epidemiology (1 - 3)
The epidemiology, prevention and control of representative infectious disease models. Emphasis on the triad of agent, host, and environment and the molecular and genetic basis of agent and host interaction in the population. Recommended preparation: EPBI 490, EPBI 491, and a microbiology course or consent of instructor. Offered as EPBI 494, INTH 494, and MHPH 494.

INTH 551. World Health Seminar (1)
This seminar (also called the World Health Interest Group) examines a broad range of topics related to infectious disease research in international settings. Areas of interest are certain to include epidemiology, bioethics, medical anthropology, pathogenesis, drug resistance, vector biology, cell and molecular biology, vaccine development, diagnosis, and sociocultural factors contributing to or compromising effective health care delivery in endemic countries. Speakers will include a diverse group of local faculty, post-doctoral and graduate student trainees, as well as visiting colleagues from around the world.

OTHER CENTERS

Center for AIDS Research
The Case Western Reserve University/University Hospitals Center for AIDS Research (Case CFAR) has been continually funded by the National Institutes of Health since its initiation in April 1994. There are currently twenty CFAR’s in the United States. The Case CFAR is the only one located in the Midwest. The Case CFAR has a mandate to coordinate basic and clinical research activities and to promote interdisciplinary research in HIV infection and AIDS. Comprising more than 140 faculty researchers at the Schools of Medicine, Nursing, Arts and Sciences, and Law, the Case CFAR provides core resources, seminars, lectureships, publications and developmental funding to promote and strengthen the AIDS research programs at the University and its affiliated institutions. Case CFAR membership includes scientists and clinicians from Case, University Hospitals of Cleveland, MetroHealth Medical Center, The Cleveland Veterans Administration Center, the Cleveland Clinic Foundation, and several international locations. Current key areas of research strength include a) international aspects of AIDS; b) AIDS clinical research; c) HIV immunology; d) molecular virology; e) mycobacterial disease; f) AIDS-related malignancies; and g) HIV prevention.

For more information you may contact Robert Bucklew, Case CFAR Outreach Coordinator at 216-844-2247 or at rob2@case.edu. Additional information may be obtained on the CFAR’s website at www.clevelandactu.org.

Center For Stem Cell and Regenerative Medicine
Phone 216-368-3614
http://stemcellcenter.case.edu
Stanton L. Gerson, M.D., Director and Debra S. Grega, Ph.D., Executive Director

The Center for Stem Cell and Regenerative Medicine is a multi-institutional center composed of investigators from Case Western Reserve University, University Hospitals of Cleveland, the Cleveland Clinic, Athersys, Inc., and Ohio State University. Building on the 20 year history of adult stem cell research in northeast Ohio, the Center was created in 2003 with a $19.4 million award from the State of Ohio as a Wright Center of Innovation. An additional $8 million award in 2006 from the State of Ohio’s Biomedical Research and Commercialization Program further validated the Center’s ability to achieve its mission to utilize human stem cell and tissue engineering technologies to treat human disease.

The Center is providing a comprehensive and coordinated “bench to bedside” approach to regenerative medicine, including basic and clinical research programs, biomedical and tissue engineering programs, and the development and administration of new therapies to patients. Center members gain access to an impressive breadth of non-embryonic stem cell types including ASC (adipose stem cells), CTP (Connective Tissue Progenitors), HSC (hematopoietic stem cells), HBI (hemangioblast (AC133) from umbilical cord blood), MSC (mesenchymal stem cells), MAPC (multipotent adult stem cells), and NSC (neural stem cells/oligodendrocyte progenitors) as well as a number of core facilities located on the Case, Cleveland Clinic, and University Hospital campuses. Leveraging its investigators’ exceptional track records in stem cell, tissue engineering and “first in the nation” stem cell clinical trials, the Center is promoting cutting-edge research which is translating into clinical and commercial applications. Current clinical applications being investigated include heart disease, adult stem cell transplantation, cancer, genetic disorders, and neurodegenerative diseases such as multiple sclerosis.

Center for Translational Neuroscience
7th Floor, School of Medicine, Department of Neurosciences
Phone: 216-368-5473
Fax: 216-368-4650
Web site: http://case.edu/med/CTN/
Robert H. Miller, Ph.D., Director

The Center for Translational Neuroscience is an effort to develop scientific interactions between basic scientists and clinicians, with the goal that these interactions will promote understanding of the pathology of neurological diseases and develop novel therapeutic strategies for the treatment of those diseases. Monthly Translational Neuroscience Interest Group meetings facilitate discussions about current research in neurological development and diseases. Faculty of the center will eventually span three Cleveland institutions: Case Western Reserve University, University Hospitals of Cleveland, and the Cleveland Clinic Foundation.

The Cleveland Center for Structural Biology
The Cleveland Center for Structural Biology (CCSB) is an association of researchers at different Cleveland institutions who study structure-function relationships and proper-
ties of large molecules that are involved in disease states. The center serves as a focal point to bring together researchers with interest in Structural Biology, to generate a stimulating research and educational environment, and to facilitate and promote interactions between structural biologists and medical colleagues. In addition, the CCSB attracts high-caliber faculty, research associates and students to the area and generates resources for major research equipment. In these ways, the CCSB plays a key role in promoting biomedical research in Northern Ohio. For more information, visit http://structuralbiology.case.edu/.

The Heart and Vascular Research Center
The Heart and Vascular Research Center (HVRC) was established to promote excellence in cardiovascular research at MetroHealth Medical Center and Rammelkamp Center for Education and Research. The center was developed using a cross-disciplinary integrative approach to exploit the extraordinary range of outstanding investigative talent of the institution. Our aim is to develop novel insights to mechanisms, diagnosis, and treatment of cardiovascular disease by applying state-of-the-art engineering, molecular, cellular, organ level, and clinical investigative approaches to specific cardiac disease states. A very important aspect of the HVRC is its promotion of an outstanding training environment for developing the next generation of cardiovascular investigators. HVRC faculty are affiliated with the Departments of Biomedical Engineering, Physiology and Biophysics, Developmental Biology, and Neuroscience at Case Western Reserve University.

Mary Ann Swetland Center for Environmental Health
Dorr G. Dearborn, Ph.D., Director
http://casemed.case.edu/swetland/
Mt. Sinai Skills and Simulation Center
http://casemed.case.edu/msssc/

The Mt. Sinai Skills and Simulation Center (MSSSC) is one of a few locations worldwide that coordinate a standardized patient program and technical simulation at one location. It will benefit from a unique partnership with the Israeli National Center for Simulation, MSR, at the Chaim Sheba Medical Center. The MSSSC is currently located in a building owned by the Louis Stokes Cleveland VA Medical Center and situated at the corner of East 105th Street and Wade Park. This beautiful facility is only temporary. Eventually, the MSSSC will move to the West Quad area. Its permanent location on the site of the Mount Sinai Hospital will be an enduring tribute to our visionary benefactors. The MSSSC occupies the first floor of the building. The VA Medical Center is constructing a Learning X Change on the upper level.

Rammelkamp Center for Education and Research
Providing expert clinical care depends on medical research. Every aspect of treatment is based on this research. From its very start as one of the first public hospitals in our country, the MetroHealth Medical System (formerly Cleveland City Hospital and Cuyahoga County Metropolitan Hospital) has recognized that the fundamental building block for improving patient care is quality medical research-research that investigates the most difficult health problems faced by our community. And that has been the tradition of MetroHealth - what we have done and will continue to do. The MetroHealth System is among the ten largest employers in Cuyahoga County and comprises a 732-bed hospital, ten community health centers, and two nursing homes. The Rammelkamp Center is an 80,000-square-foot research building that houses Case investigators on the Metro campus.

From its beginning as a Bedlington city hospital in 1837, the MetroHealth Medical System has been dedicated to the science of improving health care. In 1914, Dr. Roy Scott, a cardiovascular researcher, became known for his excellence in clinical research and education. Throughout the 1930s, 1940s, and 1950s, MetroHealth’s prominent scientists advanced clinical care by conducting meaningful research to improve our community’s health. Dr. Robert Stecher, a prominent researcher in rheumatology; Dr. Frederick Robbins, who received the Nobel prize for research leading to isolation of the polio virus; and Dr. Charles Rammelkamp, a Lasker Award winner whose research led to eradication of rheumatic fever and glomerulonephritis as sequelae of streptococcal infection. Today Hunter Peckham, Ph.D., a member of the National Academy of Engineering, works with investigators in the Departments of Orthopedics and Physical Medicine and Rehabilitation to develop and pilot devices to improve function of spinal cord injury patients. Other prominent programs include centers focused on kidney disease research, heart and vascular disease research, health services research and reducing health disparities. Our ongoing commitment to academic and clinical excellence, coupled with extensive capabilities in biotechnology, bioengineering, genetics, and population science will assure that the Rammelkamp Center for Education and Research continues to grow as one of the major research and training centers in the country. For more information: http://www.metrohealthresearch.org/.

Tuberculosis Research Unit
W. Henry Boom, M.D., Director
http://www.tbresearchunit.org/

DEPARTMENT OF GENETICS

School of Medicine
Biomedical Research Building
Phone 216-368-3431
http://genetics.case.edu/

The Department of Genetics embraces a unified program devoted to outstanding research and teaching in all areas of genetics, with particular emphases on genomics, human genetics and animal models, development, and chromosome structure and function. Faculty conduct internationally recognized research programs in each of these areas. The also are committed to training the next generations of leading genetics researchers. The department has three special programs: the Center for Human Genetics, the Center for Computational Genomics, and the Genomic Medicine Institute (descriptions appear later in this narrative).

Programs offered lead to the Ph.D., combined M.D./Ph.D. degree, or M.S. with a special emphasis in either genetic counseling or bioinformatics and systems biology. Students are encouraged to pursue a program of research and study that meets their goals and interests. Advanced courses are offered in specialized areas as outlined later in this section.

Students participate in ongoing journal clubs, research seminars and grand rounds. A program of departmental and interdisciplinary seminars by outstanding visiting scientists provides regular exposure to a broad range of current research in genetics.

The department accepts direct on-line applications (see Genetics Web site) to the doctoral program by those who have significant prior research experience in genetics and are committed to careers in genetics research. Alternatively, the department also participates in the integrated Biomedical Sciences Training Program (BSTP, please see separate listing in this publication and/or BSTP Web site). Students interested in pursuing the combined M.D./
Ph.D. program are admitted through the Medical Scientist Training Program (MSTP), please see separate listing in this publication). Those students interested in careers in genetic counseling may apply directly to the Genetic Counseling Training Program in the department.

The Center for Human Genetics is an integral part of the Department of Genetics and consists of both research and clinical laboratories involved in human and clinical genetics. This center supports research and clinical programs focusing on the molecular basis of inherited disease, human genetic disease mapping, and the genetic dissection of complex disease, as well as providing clinical care and training for postdoctoral fellows and genetic counseling students.

The Center for Computational Genomics is an interdisciplinary research and training program involving faculty in the Department of Epidemiology and Biostatistics in the School of Medicine and in the Department of Electrical Engineering and Computer Science in the School of Engineering. The center provides opportunities to combine research in genetics, genomics, epidemiology, bioinformatics, computer science, and systems biology.

The Genomic Medicine Institute is a joint program involving the Cleveland Clinic Foundation and Case. Its emphasis involves translating discoveries in basic and clinical research to clinical practice. The mission is to exploit the discoveries in genomics, epidemiology, ethics, pharmacology, genetics and physiology to revolutionize the practice of medicine.

**COURSE DESCRIPTIONS (GENE)**

**GENE 367-1. Commercialization and Intellectual Property Management (0)**

This interdisciplinary course covers a variety of topics, including principles of intellectual property and intellectual property management, business strategies and modeling relevant to the creation of start-up companies and exploitation of IP rights as they relate to biomedical-related inventions. The goal of this two-semester course is to address issues relating to the commercialization of biomedical-related inventions by exposing law students, MBA students, and Ph.D. candidates in genomics and proteomics to the challenges and opportunities encountered when attempting to develop biomedical intellectual property from the point of early discovery to the clinic and market. Specifically, this course seeks to provide students with the ability to value a given technological advance or invention holistically, focusing on issues that extend beyond scientific efficacy and include patient and practitioner value propositions, legal and intellectual property protection, business modeling, potential market impacts, market competition, and ethical, social, and healthcare practitioner acceptance. The course will meet over two consecutive semesters—fall and spring—and is six credit hours (three credits each semester). During these two semesters, law students, MBA students, and Ph.D. candidates in genomics and proteomics will work in teams of five (two law students, two MBA students, and one Ph.D. candidate), focusing on issues of commercialization and IP management of biomedical-related inventions. The instructors will be drawn from the law school, business school, and technology-transfer office. To be eligible for this course, law students must also have a B.S. or equivalent in the life sciences, such as biology, biochemistry, genomics, molecular biology, etc. Offered as LAWS 367, MGMT 467, and GENE 467.

**GENE 367-2. Commercialization and Intellectual Property Management (6)**

This interdisciplinary course covers a variety of topics, including principles of intellectual property and intellectual property management, business strategies and modeling relevant to the creation of start-up companies and exploitation of IP rights as they relate to biomedical-related inventions. The instructors will be drawn from the law school, business school, and technology-transfer office. To be eligible for this course, MBA students and one Ph.D. candidate, focusing on issues of commercialization and IP management of biomedical-related inventions. The instructors will be drawn from the law school, business school, and technology-transfer office. To be eligible for this course, law students must also have a B.S. or equivalent in their primary discipline or field of study. Offered as LAWS 367, MGMT 467, and GENE 467.

**GENE 451. Principles of Genetic Epidemiology (1 - 3)**

A survey of the basic principles, concepts and methods of the discipline of genetic epidemiology, which focuses on the role of genetic factors in human disease and their interactions with environmental and cultural factors. Many important human disorders appear to exhibit a genetic component; hence the integrated approaches of genetic epidemiology bring together epidemiologic and human genetic perspectives in order to answer critical questions about human disease. Methods of inference based upon data from individuals, pairs of relatives, and pedigrees will be considered. The last third of the course (1 credit) is more statistical in nature. Offered as EPBI 451, GENE 451, and MHPH 451.

**GENE 467-1. Commercialization and Intellectual Property Management (0)**

This interdisciplinary course covers a variety of topics, including principles of intellectual property and intellectual property management, business strategies and modeling relevant to the creation of start-up companies and exploitation of IP rights as they relate to biomedical-related inventions. The goal of this two-semester course is to address issues relating to the commercialization of biomedical-related inventions by exposing law students, MBA students, and Ph.D. candidates (in genetics and proteomics) to the challenges and opportunities encountered when attempting to develop biomedical intellectual property from the point of early discovery to the clinic and market. Specifically, this course seeks to provide students with the ability to value a given technological advance or invention holistically, focusing on issues that extend beyond scientific efficacy and include patient and practitioner value propositions, legal and intellectual property protection, business modeling, potential market impacts, market competition, and ethical, social, and healthcare practitioner acceptance. The course will meet over two consecutive semesters—fall and spring—and is six credit hours (three credits each semester). During these two semesters, law students, MBA students, and Ph.D. candidates in genomics and proteomics will work in teams of five (two law students, two MBA students, and one Ph.D. candidate), focusing on issues of commercialization and IP management of biomedical-related inventions. The instructors will be drawn from the law school, business school, and technology-transfer office. To be eligible for this course, law students must also have a B.S. or equivalent in the life sciences, such as biology, biochemistry, genomics, molecular biology, etc. Offered as LAWS 367, MGMT 467, and GENE 467.
The Genetics Journal Club is a graduate-level course designed to encourage audience participation. The intent of this class is to expose students to cutting edge topics in Genetics and to instill teaching and leadership skills.

**GENE 508. Bioinformatics and Computational Genomics (3)**
This course is designed to provide an understanding of theory and application of computational methods for molecular biology research. The course will be divided into four primary sections: DNA methods, protein methods, structure analysis (RNA and protein) and phylogenetic analysis. Special emphasis will be placed on the use and development of tools to search and analyze large amounts of sequence data generated as part of the Genome Projects in human, Drosophila and other eukaryotic organisms. The course offers extensive hands-on computational training using UNIX, Web and PC-based software. As such, for every hour of lecture material there will be two corresponding hours of computational laboratory time. In the initial year, enrollment will be limited to five students. Preference will be given to senior-level genetics graduate students or post-doctoral fellows. Recommended preparation: GENE 500 and GENE 504 or permission of instructor.

**GENE 511. Grant Writing and Reviewing Skills Workshop (3)**
This is an introductory graduate course in grant writing and reviewing skills. During this course each student will write a research grant on a topic of his or her choice. Proposals may form the basis for the written component of the preliminary examination in the Genetics Department. Students will also participate in editing and reviewing the proposals of their classmates. Prereg: GENE 500 and GENE 504 or consent of instructor.

**GENE 513. Developmental Genetics (3)**
This course focuses on the genetic control of animal development. Topics covered include the organization of genetic regulatory circuits which govern the determination of embryonic axes, germ layers and cell fates as well as the cell interactions and cell movements which lead to emergence of the basic body plan of the organism. Emphasis is placed on the use of the genetic approach and genetic tools to uncover the molecular basis of these developmental processes. Recommended preparation: GENE 500 and GENE 504.

**GENE 516. Introduction to Clinical Genetics (3)**
The major focus of this course is to allow graduate students in Human Genetics to become familiar with the medical genetics and counseling aspect of the genetics evaluation and counseling process. It provides the student an opportunity to see an application of bench research in the clinical arena as well as to observe and appreciate the various functions, roles and responsibilities of different members of the medical genetics team. Course includes seminars and clinical observations.

**GENE 521. Chromatin Structure and Transcription (3)**
A critical review of selected topics and current literature on the role of chromatin structure in the regulation of gene expression. Offered as BIOL 521 and GENE 521.

**GENE 523. Embryonic Patternin g in Development (3)**
This course will focus on current understanding of patterning mechanisms in animal development. The seminal contributions of Turing, Crick, Lawrence, Wolpert, and Lewis will be covered, as will the most recent advances in the field. Models and theory will be considered, in addition to experimental analysis and the identification of patterning molecules. The course will end with a consideration of how development changes to create different adult morphologies over the course of evolution.

**GENE 524. Advanced Medical Genetics: Cytogenetics (2 - 3)**
Fundamental principles regarding clinical cytogenetics including discussion of autosomal numerical and structural abnormalities; sex chromosome abnormalities; population cytogenetics; mosaicism; uniparental disomy; contiguous gene deletions, and cancer cytogenetics.

**GENE 525. Advanced Medical Genetics: Clinical Genetics (2 - 3)**
Fundamental principles regarding congenital malformations, dysmorphology, and syndromes. Discussion of a number of genetic disorders from a systems approach: CNS malformations, neurodegenerative disorders, craniofacial disorders, skeletal dysplasias, connective tissue disorders, hereditary cancer syndromes, etc. Discussions also include diagnosis, etiology, genetics, prognosis and management.

**GENE 526. Advanced Medical Genetics: Molecular and Quantitative Genetics (2 - 3)**
Molecular: Fundamental principles of gene structure; mechanisms, detection and effects of mutations; imprinting; triplet repeat disorders; X-chromosome inactivation; application of molecular analysis to genotype/phenotype correlations and gene therapy. Quantitative: Fundamental principles of pedigree analysis, segregation analysis, Bays theorem; linkage analysis and disequilibrium; risk assessment and consanguinity.

**GENE 527. Advanced Medical Genetics: Biochemical Genetics (2 - 3)**
Fundamental principles of metabolic testing; amino acid disorders; organic acid disorders; peroxisomal disorders; mitochondrial disorders; etc. Discussion of screening principles and newborn screening as well as approaches to diagnosis, management and therapy for metabolic diseases.

**GENE 528. Principles and Practices of Genetic Counseling (3)**
Fundamental principles needed for the practicing genetic counselor. Topics include skills in obtaining histories (prenatal, perinatal, medical, developmental, psychosocial and family); pedigree construction and analysis, physical growth and development; the genetic evaluation; the physical examination and laboratory analyses; prenatal issues, prenatal screening and diagnosis; and teratogenicity.

**GENE 529. Psychosocial Issues in Genetic Counseling (3)**
Fundamental principles regarding the psychosocial aspects of genetic disease and birth defects, its psy-
chological and social impact on the individual and family. Topics include the genetic counseling interview process, issues regarding pregnancy and prenatal diagnosis, chronicity, death and loss. Cultural issues and their impact on the genetic counseling session are addressed. Resources for families are also explored. Basic interviewing skills are presented. Students will have an opportunity for practice of skills through role play and actual interviewing situations.

**GENE 530. Ethical and Professional Issues in Genetic Counseling (2)**
Professional issues inherent in medical genetics and genetic counseling are addressed, including ethical, legal, religious, and cultural concepts. Fundamental principles of ethics are explored in some depth as they relate to genetic issues, such as autonomy and informed consent; use of the NSGC Code of Ethics is emphasized. Genetic counseling roles and responsibilities and aspects of a career as a professional are explored.

**GENE 532. Clinical Practicum in Genetic Counseling (1 - 6)**
This clinical practicum provides the student an opportunity to function as a genetic counselor by preparing for cases; obtaining appropriate histories; determining risks; performing psychosocial assessments; discussing disease characteristics, inheritance, and natural history; providing anticipatory guidance and supportive counseling using medical and community resources; and follow-up. Students rotate through four clinical areas and one laboratory and will register for a total of 12 hours over the course of the program. Recommended preparation: Admission to Genetic Counseling Training Program.

**GENE 534. Neurogenetics (3)**
This course will explore how principles of genetics can be used as tools to study the complex organization of the nervous system. Examples will be drawn from all relevant model organisms including nematode, fruit fly, mouse, and human. Meant primarily for students with an interest in neuroscience, this course will offer a strong foundation in genetic principles using examples drawn from the neuroscience literature. Students in other disciplines, especially genetics, will benefit from the examples to learn important aspects of the neurosciences ranging from behavior to development. These interdisciplinary features make this course unique in its offerings and a valuable addition to many students’ course of study. Recommended preparation: CBIO 453 and CBIO 455. Offered as GENE 534 and NEUR 534.

**GENE 537. Microscopy-Principles and Applications (3)**
This course provides an introduction to various types of light microscopy, digital and video imaging techniques, and their applications to biological and biomedical sciences via lectures and hands-on experience. Topics covered include geometrical and physical optics: brightfield, darkfield, phase contrast, DIC, fluorescence and confocal microscopes; and digital image processing. Offered as GENE 537, MBIO 537, and PHOL 537.

**GENE 601. Research in Genetics (1 - 9)** (Credit as arranged.)
**GENE 651. Thesis M.S. (1 - 9)** (Credit as arranged.) Master’s Thesis Plan A.
**GENE 701. Dissertation Ph.D. (1 - 9)** (Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

**INTEGRATED BIOLOGICAL SCIENCES**
Room T-401, School of Medicine
Phone 216-368-3404

These courses are open only to students in combined M.D./Ph.D. programs such as the Medical Scientist Training Program (MSTP) and the Health Services Research Program. These courses use the curriculum of the first two years of the School of Medicine to provide a general education in biomedical science and medicine for graduate credit. The courses do not provide specialized research training, which is provided by the curricula of specific graduate programs. Please see the separate listings for these programs in this General Bulletin. For more information, contact:

**MEDICAL SCIENTIST TRAINING PROGRAM**
Program Manager
School of Medicine
10900 Euclid Ave.
Cleveland, Ohio 44106-4936
Phone: 216-368-3404

**COURSE DESCRIPTIONS (IBIS)**

**IBIS 401. Integrated Biological Sciences I (1 - 9)**
A four-semester sequence encompassing anatomy, biochemistry, physiology, pharmacology, pathology, and microbiology.

**IBIS 402. Integrated Biological Sciences II (1 - 9)**
A continuation of IBIS 401.

**IBIS 403. Integrated Biological Sciences III (1 - 9)**
A continuation of IBIS 402.

**IBIS 404. Integrated Biological Sciences IV (0 - 9)**
A continuation of IBIS 403.

**IBIS 405. Integrated Biological Sciences I (1 - 9)**
**IBIS 406. Integrated Biological Sciences II (1 - 9)**
**IBIS 407. Integrated Biological Sciences III (1 - 9)**
**IBIS 408. Integrated Biological Sciences IV (1 - 9)**

**IBIS 411. Clinical Science I (2)**
**IBIS 412. Clinical Science II (2)**
**IBIS 413. Clinical Science III (2)**
**IBIS 414. Clinical Science IV (0 - 2)**
**IBIS 415. Clinical Science I (1 - 9)**
**IBIS 416. Clinical Science II (1 - 9)**
**IBIS 417. Clinical Science III (1 - 9)**
**IBIS 418. Clinical Science IV (1 - 9)**
**IBIS 424. Integrated Biological Sciences in Medicine (6)**
This course is open only to candidates enrolled in the M.D./M.S. program (University plan). Registration is for the Spring semester of the second year in medical school. The course will cover the areas of cardiology, pulmonary, hematology, renal physiology and gastroenterology. Assessment will be by examination (to include quizzes, multiple choice questions, and essays). Recommended preparation: First three semesters of medical school and currently a medical student in good standing.

**IBIS 434. Integrated Biological Sciences in Medicine (6)**
This course is open only to candidates enrolled in the M.D./M.S. program (College plan). Registration is for the Spring semester of the second year in medical school. The course content includes the areas of hematology, gastroenterology and renal physiology. Students will also be required to participate in Process of Discovery. Assessment of performance will be through reaching required levels of competency for the medical areas identified above and by the evaluation of a term paper. Recommended preparation: First three semesters of medical school and currently a medical student in good standing.

**IBIS 435. Integrated Biological Science in Medicine-University (6)**
This course is open only to candidates in the M.D./M.S. program (University plan). Registration is typically for the Spring semester of the second year in medical school. The course content includes the areas of hematology, gastroenterology and renal physiology. (Students will also be required to participate in Process of Discovery.) Assessment of performance will be through reaching required levels of competency for the medical areas identified above and by the evaluation of a term paper. Recommended preparation: First three semesters of medical school and currently a medical student in good standing.

**IBIS 451. Clinical Science (for M.D./M.A. Bioethics Students) (3)**
**IBIS 461. Clinical Science (for M.P.H./M.D. Students) (1 - 6)**
**IBIS 466. Medical School Electives (for M.P.H./M.D. Students) (1 - 6)**

**COURSE DESCRIPTIONS (IBMS)**

**IBMS 500. Being a Professional Scientist (0)**
The goal of this course is to provide graduate students with an opportunity to think through their
professional ethical commitments before they are tested, on the basis of the scientific community's accumulated experience with the issues. Students will be brought up to date on the current state of professional policy and federal regulation in this area, and, through case studies, will discuss practical strategies for preventing and resolving ethical problems in their own work. The course is designed to meet the requirements for "instruction about responsible conduct in research" for BSTP and MSTP students supported through NIH/ADAMHA institutional training grant programs at Case. Attendance is required.

IBMS 600. Exam in Biomedical Investigation (0)
Students are required to pass an examination established for each student, generally reflecting the preparation and oral defense of a written report on the project. Prereq: Must be enrolled in MD/MS Biomedical Investigation program.

DEPARTMENT OF MOLECULAR BIOLOGY AND MICROBIOLOGY
Room W200, School of Medicine
Phone 216-368-3420
http://www.case.edu/med/microbio/index.htm

The Department of Molecular Biology and Microbiology provides a focus within the School of Medicine for the study of the growth and development of microorganisms at the molecular level. Many of the research programs in the department concern fundamental mechanisms using the tools of molecular biology: How is gene expression controlled? What is the role of RNA processing and surveillance in gene expression? How do surface molecules regulate molecular signaling events? Other questions under investigation are specific to microorganisms: How do bacteria and viruses survive in their chosen environment? How do they deal with the host's potent immune response? What genes are responsible for their pathogenesis? How is the latency and reactivation of infection achieved? How can we use our results to improve prevention, diagnosis and treatment of infectious diseases?

We study microbial systems both for the insights that they bring to the study of molecular and cellular biology and to improve our understanding of infectious diseases. Viruses provide exquisitely adapted probes of the host cell's normal functions. Historically, studies of viruses have provided numerous insights into the control of gene expression at the transcriptional, post-transcriptional, and translational levels. Fundamental processes, such as repression of gene expression, splicing, reverse transcription, capping of messenger RNA, internal initiation of protein synthesis, processing of membrane proteins through the Golgi apparatus, and the identification of oncogenes, were all initially uncovered through studies of viruses. Despite the availability of potent anti-microbial drugs, microbial pathogenesis gives rise to severe complications including blindness, paralysis, and neurological defects and can lead to chronic diseases including cancer, heart, lung or kidney disease. Recently, the challenges posed by infectious disease have been exacerbated by the emergence of new pathogens, such as the SARS, AIDS and West Nile Viruses, but also of generation of new bacterial and viral strains that display increased resistance to antimicrobial drugs. It is only by developing a thorough understanding of the biology of pathogenic microbes, their host organisms, and how the two interact during infection that improved strategies for prevention and treatment of infectious diseases can be achieved.

Current faculty in the department and our distinguished adjunct faculty all have nationally-funded research programs. Many of our faculty serve on study sections of national agencies, publish in the most prestigious journals, serve as editors of journals, and take leadership positions in throughout Case School of Medicine. We also enjoy numerous collaborations with faculty in the Departments of Biochemistry, Neuroscience, and Genetics, the Case Comprehensive Cancer Center, the Center for AIDS Research, and the Center for RNA Molecular Biology, because of our shared research interests. All these activities create a vibrant scientific environment.

The department is currently in a period of rapid expansion. The School of Medicine has made a strong commitment to faculty recruitment in the areas of molecular virology and in bacterial development and pathogenesis. There is a tremendous opportunity for synergy among our faculty as we initiate new programs in microbial pathogenesis and virology that utilize genetic and molecular analysis of microorganisms. We will work toward the completion of the genomic sequence for a vast array of organisms, including man, the availability of transgenic animals with specific immunological defects, and advances in bacterial and viral genetics, we are in a unique position to understand the genetic basis for bacterial and viral pathogenesis. The development of multidisciplinary programs that provide for productive interactions with our clinical colleagues studying infectious diseases and exploit genetics, microbiology, and modern biochemistry, including structural biology, in the study of microorganisms will be the key to our long-term success.

COURSE DESCRIPTIONS (MBIO)
MBIO 399. Undergraduate Research (1 - 3)
Permits qualified undergraduates to work in a faculty member's laboratory.

MBIO 420. Molecular Genetics of Cancer (3)
Cancer is a genetic disease, not only in the Mendelian sense of inheritance, but also in the sense that it is caused by somatic mutation. The targets of mutation are a set of proto-oncogenes and tumor suppressor genes whose products govern cellular proliferation, death and differentiation. The objectives of this course are to examine the types of genes that are the targets of mutational activation or inactivation and the mechanistic outcome of mutational changes that lead to oncogenesis. The course will also probe viral mechanisms of oncogenesis related to the products of cellular proto-oncogenes or tumor suppressor genes. In the course of these examinations we will explore the genetic and molecular genetic approaches used to identify and study oncogenes and tumor suppressor genes. Students should be prepared to present and discuss experimental design, data and conclusions from assigned publications. There will be no exams or papers but the course will end with a full-day, student-run symposium on topics to be decided jointly by students and instructors. Grades will be based on class participation and symposium presentation. Offered as BIOC 420, MBIO 420, MVIR 420, PATH 422, and PHRM 420. Prereq: CBIO 453 and CBIO 455.

MBIO 434. Mechanisms of Drug Resistance (3)
Resistance to drugs is an important health concern in the new millennium. Over the past century, modern medicine has developed and prescribed drugs for various ailments and diseases with known therapeutic benefit. Since the discovery of antibiotics by Dr. Fleming, we have struggled with a new complication in infectious diseases, development of drug resistance. This course will focus on and compare the drug resistant mechanisms selected by viruses, bacteria, parasites, fungi, and tumor cells. Topics to be covered include antiretroviral resistance (e.g., AZT and protease inhibitors), antibiotic resistance (e.g., B-lactams), resistance to chemotherapeutic agents, and resistance to anti-malarial drugs (e.g., chloroquine). Offered as MBIO 434, MVIR 434, and PHRM 434.

MBIO 435. Seminar in Molecular Biology/ Microbiology (1)
Graduate students will attend the departmental seminar given by all graduate students in the Department of Molecular Biology and Microbiology, in the Molecular Virology Program, and in the Cell Biology Program, as well as give a seminar on their own thesis research. Students will be evaluated by the faculty member in charge of that student's seminar with input from the students' own thesis committee. After each student presenter will meet with other graduate students for peer-review of the content, delivery, and style of the
MBIO 445. Molecular Biology and Pathogenesis of RNA and DNA Viruses (3)
Through a combination of lectures by Case faculty and guest lecturers, along with student discussion of current literature, this course emphasizes mechanisms of viral gene expression and pathogenesis. RNA viruses to be discussed include positive, negative, and retroviruses. DNA viruses include SV40, adenovirus, herpes, papilloma, and others. Important aspects of host defense mechanisms, antiviral agents, and viral vectors will also be covered. Students will be evaluated based on their quality of presentation of course papers assigned to them and their overall participation in class discussions. Offered as MBIO 445 and MVIR 445.

MBIO 446. Virus–Host Interactions (3)
Viruses and their hosts have co-evolved for millions of years and, as a result, viruses have evolved intricate and fascinating mechanisms for evading host defenses. Understanding how viruses interact with the host is fundamental to counteracting or preventing viral infections. For example, viruses that fail to block host defenses are avirulent and candidates for vaccines. Emerging viral infections are a major public health concern and a subject of this course. The course consists of lectures and in-depth analysis of published studies on virus-host interactions. Outstanding local and external lecturers from across the U.S. will participate in teaching this course. In addition, students will deliver one presentation to the class during the course. Offered as MBIO 446 and MVIR 446.

MBIO 486. HIV Immunology (3)
This course will examine the unique immunology of HIV disease. The course content will include the study of HIV pathogenesis, immune control, immune dysfunctions, HIV prevention and immune restoration. Students will be expected to attend lectures and participate in class discussions. A strong emphasis will be placed on placing HIV research in the area of HIV immunology. Offered as PATH 486 and MBIO 486.

MBIO 488. Yeast Genetics and Cell Biology (3)
This seminar course provides an introduction to the genetics and molecular biology of the yeasts S. cerevisiae and S. pombe by a discussion of current literature focusing primarily on topics in yeast cell biology. Students are first introduced to the tools of molecular genetics and special features of yeasts that make them important model eukaryotic organisms. Some selected topics include cell polarity, cell cycle, secretory pathways, vesicular and nuclear/cytoskeletal transport, mitochondrial import and biogenesis, chromosome segregation, cytoskeleton, mating response and signal transduction. Offered as CLBY 488, GENE 488, MBIO 488, and PATH 488.

MBIO 513. Bacterial Virulence and Host Interactions (2)
The goal of this seminar course is to familiarize students with bacterial virulence mechanisms and how they interact with the host. The focus will be on current literature pertaining to this field. While the molecular basis of bacterial virulence mechanisms will be the main focus, some time will be spent on the host immune response. Topics covered will include adhesion/pili, secretion mechanisms, AB toxins, bacterial invasion and intracellular survival, regulation of virulence gene expression. Offered as CBIO 453 and CBIO 455 or equivalent courses.

MBIO 518. Signaling via Cell Adhesion (3)
Molecular mechanisms by which cells interact with and are regulated by extracellular matrices and other cells. Offered as CBIO 518, CLBY 518, MBIO 518, and NEUR 518. Prereq: CBIO 453 and CBIO 455.

MBIO 519. Molecular Biology of RNA (3)
Selected topics regarding editing, enzymatic function, splicing, and structure of RNA. Offered as BIOC 519, CLBY 519, and MBIO 519.

MBIO 520. Principles of Microbiology (3)
This course provides lectures and small group discussions of the cellular and molecular mechanisms by which certain bacterial viruses, and parasites execute normal and pathologic conditions in human hosts. The biology, genetics, and physiologic properties of these infectious agents are considered in light of the mechanisms by which they induce pathogenic conditions in their human hosts. The course is intended for graduate students advanced beyond the core curriculum of course work in molecular biology and microbiology areas of specialization. Offered as CBIO 453 and CBIO 455.

MBIO 521. HIV and AIDS: Research and Care (3)
AIDS and HIV disease represent a continuing medical challenge both here in the U.S. and abroad. Currently there are over 25 million people worldwide who are living with AIDS. Basic research into HIV also represents one of the major focuses of contemporary virus and immunological research. This course is designed to expose both M.D. and Ph.D. students to the major problems in HIV research. Because of the multidisciplinary nature of AIDS research, the course will span the spectrum from fundamental molecular biology to clinical translational research. All students (no matter what their degree course) will be given an opportunity to participate in outpatient HIV care and also to participate in a scientific research project. Offered as MBIO 521 and MVIR 521. Prereq: CBIO 453 and CBIO 455.

MBIO 522. Protein Phosphorylation and Cell Regulation (3)
This intensive seminar course will emphasize signaling pathways mediated by protein phosphorylation/dephosphorylation. Bacterial signaling mediated by histidine/asparragine phosphorylation and regulation of cellular physiological events will be reviewed. Then eucaryotic cell signaling will be reviewed from the surface of the cell and into the nucleus. This includes receptor-dependent phosphorylation/dephosphorylation reactions, cytoplasmic signaling intermediates, protein translation processes dependent upon phosphorylation, and nuclear regulatory pathways with emphasis on transcriptional mechanisms. In addition to faculty lectures, students will be reviewing the current literature and will present a research proposal based on the current concepts in the field that they choose to cover. Offered as MBIO 522 and MVIR 522. Prereq: CBIO 453 and CBIO 455.

MBIO 524. Trends in Prokaryotic Cell and Developmental Biology (3)
Did you know the (i) all building blocks for the eukaryotic cytoskeleton are also present in prokaryotes, that (ii) bacteria rely on dynamic actin-like structures to segregate chromosomes/plasmids and regulate cell polarity, that (iii) oscillating waves of cyclin-like regulators control progression of the bacterial cell cycle, that (iv) a novel secondary messenger, cyclic di-GMP, has been identified that triggers a physiological and morphological transition in bacteria and that (v) bacterial cell-cell interactions can elicit morphological changes that bear remarkable similarities to organogenesis in flies, worms, and vertebrates? In this advanced graduate course, recent insights on the cell and developmental biology of prokaryotes will be discussed and analogies drawn to those that exist in eukaryotes. Studies on the bacterial model organisms Escherichia coli, Bacillus subtilis, Caulobacter crescentus, Vibrio spp., Myxococcus xanthus and Streptomyces coelicolor have altered our view of the bacterial cell, demonstrating that at the most fundamental level cells operate in a remarkable similar way, regardless of whether they contain a nucleus or not.

MBIO 525. Advances in Biological Imaging (3)
Sometimes the smallest fish can make the biggest splash. Aeuroaea victoria is a tiny jellyfish that likes to turn blue light into green, and in doing so has inspired the greatest romance in Cell Biology since the invention of the electron microscope. The green fluorescent protein (GFP) from this bioluminescent hydromedusa has been used to light up everything from Christmas trees to bunny rabbits to viral particles. If a picture is worth a thousand words a movie is worth at least a few hundred pictures and GFP, as well as its many derivatives, affords the average molecular biologist the opportunity to direct the movie of his life’s study. This advanced graduate course will focus on the theory and application of fluorescent microscopy to modern Biology. Lectures will discuss microscope technologies, fluorescent probes, live cell reagents and practical limitations to current technologies. Student run sessions will review current literature and discuss innovative applications of the technology. Prereq: CBIO 453 and CBIO 455.

MBIO 537. Microscopy–Principles and Applications (3)
This course provides an introduction to various types of light microscopy, digital and video imaging techniques, and their applications to biological and biomedical sciences via lectures and hands-on experience. Topics covered include geometrical and...
physical optics; brightfield, darkfield, phase contrast, DIC, fluorescence and confocal microscopes; and digital image processing. Offered as GENE 537, MBIO 537, and PHOL 537.

MBIO 599. RNA Structure and Function (3)
This course will cover fundamental aspects of modern RNA biology with emphasis on the interplay of three dimensional structure of nucleic acids and their function. The main focus of the course is on the recent discoveries that indicate a prominent role of RNA as a major regulator of cellular function. Topics discussed will include an introduction to RNA structure, folding and dynamics, RNA/RNA and RNA-protein interactions, and role of RNA in catalysis of biological reactions in ribosome and the role of other catalytic RNAs in tRNA biogenesis, pre-mRNA splicing, and viral replication. The course also covers the recently discovered RNA regulatory switches, large noncoding regulatory RNAs, and the role of RNA in human diseases and novel, RNA-based therapeutics. Offered as BIOC 599, CLBY 599, and MBIO 599.

MBIO 601. Research in Molecular Biology and Microbiology (1 - 18)

MBIO 620. Transcription and Gene Regulation (3)
This course covers mechanisms of transcription that play critical roles in biological processes. It is designed to develop scientific thinking in designing experiments and evaluating the merits of research papers. Students will be able to present two to three 30-minute talks. Topics include: 1) structure and function of RNA polymerases; 2) accessory factors involved in initiation, elongation, and termination; 3) regulation transcription; 4) transcriptional co-activators and corepressors; 5) regulation of transcription factor activity. A take-home exam will be conducted at the final week. Grades will be based on presentations and take-home exam. Offered as BIOC 620 and MBIO 620. Prereq: CBIO 453 and CBIO 455.

MBIO 651. Thesis M.S. (1 - 18)
MBIO 701. Dissertation Ph.D. (1 - 18)
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

MOLECULAR MEDICINE PROGRAM
Lerner Research Institute/ NA2-05
Phone 216-445-4593
E-mail: ticknoc@ccf.org

The Molecular Medicine Program provides educational and research opportunities leading to the Ph.D. degree. This program is designed to integrate clinical knowledge into a rigorous basic science curriculum and to foster translational research endeavors.

First-year graduate students follow the progressive Core Curriculum consisting of MMED 410 through 416, 501, and 612. They will complete three laboratory rotations (starting mid-July) among the laboratories of training faculty, which span the entire campus. Students will be exposed to trainer research projects during the Frontiers of Molecular Medicine seminar and journal club series taken the first summer and each semester thereafter. The goal of the rotations and the Frontiers of Molecular Medicine seminar series in the first year is to guarantee that the student has sufficient breadth of familiarity with Molecular Medicine faculty to allow him or her to make the best choice of a permanent research laboratory. In all cases, this selection must be made by the end of the second semester of year 1.

During subsequent years, students will devote the majority of their time to thesis research, while attending advanced graduate courses, seminars, and journal clubs. Advanced elective courses may be chosen from any department or program on campus, with the approval of the graduate program director and the student’s thesis committee. Students must take a total of 36 semester hours of courses and maintain a B average.

The qualifying exam will be comprised of preparing and defending a grant application in the NIH/NRSA format. The topics of the grant can be in a related area of investigation to the student’s research but cannot resemble projects that are ongoing in the laboratory of the Research Advisor. At least one aim of this proposal will consist of a specific translational or clinical aim.

All efforts should be made to complete the Ph.D. within four years. All students are expected to submit two or more first-authored primary research publications in peer-reviewed scientific journals. At least one manuscript should be accepted for publication prior to the thesis defense.

PH.D. PROGRAM

COURSEWORK

Students begin in July by first taking MMED410 Human Physiology and Disease. The student will follow a progressive curriculum including Proteins, Membranes, and Bioenergetics; Metabolism and Pharmacology; Nucleic Acids, Gene Expression, and Gene Regulation; Mammalian Genetics; Cell Biology; and Infection and Immunity. The core series concludes with a course in Principles of Clinical Research for the Ph.D. Investigator, and a one-semester mentored Clinical Experience.

RESEARCH ROTATIONS

The research rotations allow the student to sample areas of research and become familiar with faculty members and their laboratories. The main purpose of these rotations is to aid the student in selecting a laboratory for the thesis work. Students will begin their rotations in July. A minimum of three rotations must be completed during the year.

CHOOSING A THESIS ADVISOR

After the second semester of the first year students select an advisor for the dissertation research. The emphasis of the Ph.D. work is on research, culminating in the completion of an original, independent research thesis.

COURSE DESCRIPTIONS (MMED)

MMED 400. Research Rotations (0)
Research rotations are conducted to expose the student to several laboratory environments, a variety of research problems and numerous laboratory techniques as well as to assist them in the selection of their Research Advisor. Rotations will begin immediately upon enrollment and continue through the second semester of the first year. Usually rotations will last 12 weeks, however if a student decides that he/she is not interested in the assigned laboratory a shorter rotation is appropriate. The student is responsible for arranging each rotation with an approved trainer with the consultation of the graduate program director. To assist in this endeavor, the graduate program director will provide a list of approved trainers who have space, time and money to support a graduate student. During the rotation, students are expected to participate in all lab and departmental activities, e.g., lab meetings and seminars. At the completion of a rotation the student is required to submit a written Rotation Report including an outline of the problem being studied, a description of the experimental approaches, a discussion of the results of performed experiments as well as future directions.

MMED 401. Fundamentals of Molecular Medicine and Translational Research (8)
Overview of Molecular Biology and Cell Biology with emphasis on areas of relevance to human health and disease. Topics include: basic cell structure; protein structure and function; genomic organization and expression, including basic genetics, DNA repair and recombination, transcriptional regulation, RNA processing and translation; membrane structure and function, including membrane protein biosynthesis and function; cell signaling pathways, including hormone and drug action; metabolism and energetics.

MMED 404. Frontiers in Molecular Medicine Seminar (1)
In the Frontiers in Molecular Medicine Seminar
series, faculty from the department of Molecular Medicine and guest lecturers will discuss ongoing translational research.

MMED 410. Introduction to Human Physiology and Disease (4)
The purpose of this course is to give an introduction to the physiology of the major human organ systems, as well as selected associated pathophysiology. The course will provide a physiological basis for subsequent study and research in Molecular Medicine. The integration of clinical faculty into the course will emphasize the importance of bringing scientific knowledge to bear on clinical problems, a theme which will be stressed throughout the Molecular Medicine curriculum. The course will also acquaint students with medical terminology.

MMED 411. Lipids, Membranes and Proteins (2)
The course will include a combination of interactive lectures and problem-based interactive seminars. Each week will conclude with at least one clinical correlation where the weekly topic is presented in the context of a clinical problem. Topics to be covered include: protein structure, function, and enzymeology; protein synthesis, modification and turnover; biological membranes and transport through membranes; and bioenergetics.

MMED 412. Metabolism and Introduction to Principles of Pharmacology (2)
The course will include a combination of interactive lectures and problem-based interactive seminars. Each week will conclude with at least one clinical correlation where the weekly topic is presented in the context of a clinical problem. Topics to be covered include: carbohydrate metabolism; amino acid and nucleotide metabolism; lipid metabolism and lipoproteins; regulation of metabolism; and principles of pharmacology.

MMED 413. Nucleic Acids, Gene Expression, and Gene Regulation (2)
The course will include a combination of interactive lectures and problem-based learning. Each week will conclude with at least one clinical correlation where the weekly topic is presented in the context of a clinical problem. Topics to be covered include: DNA structure, chromosome structure, replication and repair; RNA synthesis and RNA processing, the organization of eukaryotic genes and the genetic code and translation; and gene regulation.

MMED 414. Mammalian Genetics (2)
The course focuses on genetics, genomics, and bioinformatics, and it will include a combination of interactive lectures, problem-based learning and a week-long group project. Topics to be covered include: genetic variation; linkage studies; association studies; complex traits, linkage disequilibrium, the Hap Map, pharmacogenetics; genome-wide expression studies; and mouse models for human disease, and bioinformatics.

MMED 415. Cell Biology (2)
The course will include a combination of interactive lectures and problem-based learning. Each week will conclude with at least one clinical correlation where the weekly topic is presented in the context of a clinical problem. Topics to be covered include: cell structure and organelles, prokaryotes/eukaryotes; intracellular compartments and protein sorting; receptors/endocytosis/rafts; the nucleus; cell communication; and mechanics of cell division.

MMED 416. Host Defense: Infection and Immunity (2)
The course will include a reading program, lectures, and weekly problem-based student-led presentations. Weeks 1 and 2 are dedicated to establishing the scope of the field and forming vocabulary. Week 3 and part of Week 4 will cover immune mechanisms. The remainder of the course will deal with clinical aspects of immunobiology. On a regular basis Clinical Correlations, relevant to weekly topics, are integrated into the material. Topics to be covered include: biology and molecular biology of infectious agents; fundamentals of immunology; innate and adaptive responses to infection, immune effector mechanisms; and clinical aspects of immunobiology.

MMED 501. Principles of Clinical and Translational Research for Laboratory-Based Investigators (4)
To give an introduction to the ethical, statistical, methodologic and informatics basis of clinical and translational research. Topics will include the history of clinical and translational research, regulatory aspects of human subjects research, clinical trials study design, conflicts of interest, human subjects recruitment, research and publication ethics, technology transfer, biobank construction and utilization, and clinical and research database construction and utilization. In addition, students will be introduced to principles of biostatistics and clinical epidemiology relevant to clinical and translational research and gain expertise in statistical tool use through problem based learning sets.

MMED 504. Seminars in Advanced Research in Medicine (1)
The goal of Advanced Research in Medicine 2, Friday Research Seminars (ARM2), is to facilitate student understanding of the bidirectional nature of research and to instill excitement about the way in which novel research results in advances in clinical medicine. A series of 18 accomplished, well-respected researchers will interact with students for 60 minutes per week, challenging the students to think about novel research questions and their relationships to current clinical challenges linked thematically to the theme of the week. The emphasis of ARM2 Friday Research Seminars is on the content of the research and how this research may impact and change clinical practice in the future. Each week, a student from the class will be assigned to moderate the session. The student moderator will introduce the speaker and will be responsible for ensuring that adequate interactive discussion occurs. In addition, four sets of 2-week sessions each will be devoted to small group sessions. The goal of the 2-week sessions is for the students to develop a research plan directly related to the organ system featured in the presentations.

MMED 601. Dissertation Research (1 - 9)
Research leading toward the Ph.D. dissertation in Molecular Medicine.

MMED 612. Clinical Experience (2)
Each student will be assigned a Clinical Mentor who will co-advice the student and serve on both the Qualifying Examination Committee and Thesis Committee. The Clinical Mentor will develop an individualized curriculum for the student in consultation with the thesis research mentor and program director. The curriculum will be organized around the integrated, multidisciplinary disease groups at the Clinic. The students will attend and actively participate in the regularly scheduled multidisciplinary clinical conference organized by their disease group (most meet for one hour every week or every other week), usually involving a combination of case presentations and research presentations. At the conclusion of the semester the student will make a presentation to the group focused on a relevant translational research problem. The Clinical Mentor will also organize a series of supervised site visits (with Mentor) to various locations where students will observe clinician interactions with patients to better understand the disease from the patient perspective and to disease-related diagnostic and research laboratories.

MMED 701. Dissertation Ph.D. (1 - 9)
Research leading toward the Ph.D. dissertation in Molecular Medicine. Recommended preparation: Advancement to candidacy in MMED. Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

MOLECULAR VIROLOGY PROGRAM
The last two decades have witnessed the development of molecular virology as one of the most productive, rewarding and clinically important avenues of biomedical research. The study of viruses has never been more important than it is today due to the recognition of human immunodeficiency virus as the etiologic agent of AIDS and to the role of viruses, such as other retroviruses and human papillomaviruses, in causing cancer. Molecular virology, however, is no less exciting on a purely scientific level. The relatively small sizes of viral genomes coupled with their use of most cellular machinery to replicate has led to the selection of viruses as model systems to study biological processes such as transcription, translation, splicing, and DNA replication. Furthermore, because viruses introduce genetic material into cells as part of their life cycle, they are being used as vectors for gene therapy. Areas of strength of molecular virology program faculty include viral replication; virus-cell interactions, including mechanisms of interferon action; viral oncogenesis; and the use of viral vectors for gene therapy. Advanced-course subjects include RNA viruses, DNA viruses, immunology of infectious diseases, and
RNA and DNA biosynthesis.

The Molecular Virology Program is part of the Biomedical Sciences Training Program. For more information about the Molecular Virology Program, please visit the Biomedical Sciences Training Program website at http://www.case.edu/med/BSTP/index.html.

Write: Biomedical Sciences Training Program, School of Medicine, Case Western Reserve University, 10900 Euclid Ave., Cleveland Ohio 44106-4934
call: 216-368-3347; or
e-mail Deborah Noureddine, BSTP coordinator, at drn2@case.edu.

MOLECULAR VIROLOGY (MVIR)

Course Descriptions

MVIR 420. Molecular Genetics of Cancer (3)
Cancer is a genetic disease, not only in the Mendelian sense of inheritance, but also in the sense that it is caused by somatic mutation. The targets of mutation are a set of proto-oncogenes and tumor suppressor genes whose products govern cellular proliferation, death and differentiation. The objectives of this course are to examine the types of genes that are the targets of mutational activation or inactivation and the mechanistic outcome of mutational changes that lead to oncogenesis.

The course will also probe viral mechanisms of oncogenesis related to the products of cellular proto-oncogenes or tumor suppressor genes. In the course of these examinations we will explore the genetic and molecular genetic approaches used to identify and study oncogenes and tumor suppressor genes. Students should be prepared to present and discuss experimental design, data and conclusions from assigned papers. There will be no exams or papers but the course will end with a full-day, student-run symposium on topics to be decided jointly by students and instructors. Grades will be based on class participation and symposium presentation.

Offered as BIOC 420, MBIO 420, MVIR 420, PATH 422, and PHRM 420. Prereq: CBIO 453 and CBIO 455.

MVIR 434. Mechanisms of Drug Resistance (3)
Resistance to drugs is an important health concern in the new millennium. Over the past century, medicine has developed and prescribed drugs for various ailments and diseases with known therapeutic benefit. Since the discovery of antibiotics by Dr. Fleming, we have struggled with a new complication in infectious diseases, development of drug resistance. This course will focus on and compare the drug resistant mechanisms selected by viruses, bacteria, parasites, fungi, and tumor cells. Topics to be covered include antiretroviral resistance (e.g., AZT and protease inhibitors), antibiotic resistance (e.g., B-lactams), resistance to chemotherapeutic agents, and resistance to anti-malarial drugs (e.g., chloroquine). Offered as MBIO 434, MVIR 434, and PHRM 434.

MVIR 435. Seminar in Molecular Biology/Microbiology (1)
Graduate students will attend the departmental seminar given by all graduate students in the Department of Molecular Biology and Microbiology, in the Molecular Virology Program, and in the Cell Biology Program, as well as give a seminar on their own thesis research. Students will be evaluated by the faculty member in charge of that student's seminar with input from the students' own thesis committee. After each seminar, the student presenter will meet with other graduate students for peer-review of the content, delivery, and style of the seminar. Peer reviewers will also be evaluated for the quality of their input. Offered as CLBY 435 and MBIO 435 and MVIR 435.

MVIR 445. Molecular Biology and Pathogenesis of RNA and DNA Viruses (3)
Through a combination of lectures by Case faculty and guest lecturers, along with student discussion of current literature, this course emphasizes mechanisms of viral gene expression and pathogenesis. RNA viruses to be discussed include positive, negative, and retroviruses. DNA viruses include SV40, adenovirus, herpes, papilloma, and others. Important aspects of host defense mechanisms, antiviral agents, and viral vectors will also be covered. Students will be evaluated based on their quality of presentation of course papers assigned to them and their overall participation in class discussions. Offered as MBIO 445 and MVIR 445. Prereq: CBIO 453 and CBIO 454 and CBIO 455 and CBIO 456.

MVIR 446. Virus-Host Interactions (3)
Viruses and their hosts have co-evolved for millions of years and, as a result, viruses have evolved intricate and fascinating mechanisms for evading host defenses. Understanding how viruses interact with the host is fundamental to countering or preventing viral infections. For example, viruses that fail to block host defenses are avirulent and candidates for vaccines. Emerging viral infections are a major public health concern and a subject of this course. The course consists of lectures and in-depth analysis of published studies on virus-host interactions. Outstanding local and external lecturers from across the U.S. will participate in teaching this course. In addition, students will deliver one presentation to the class during the course. Offered as MBIO 446 and MVIR 446. Prereq: MVIR 445.

MVIR 481. Immunology of Infectious Diseases (3)
Lectures and discussion on the immune response to infectious organisms, including bacteria, viruses and parasites. Emphasis on human responses but includes discussions of animal models. Other topics include vaccines and infections in immune-compromised hosts. Recommended preparation: PATH 416 or consent of instructor. Offered as MVIR 481 and PATH 481.

MVIR 521. HIV and AIDS: Research and Care (3)
AIDS and HIV disease represent a continuing medical challenge both here in the U.S. and abroad. Currently there are over 25 million people worldwide who are living with AIDS. Basic research into HIV also represents one of the major focuses of contemporary virus and immunological research.

This course is designed to expose both M.D. and Ph.D. students to the major problems in HIV research. Because of the multidisciplinary nature of AIDS research, the course will span the spectrum from fundamental molecular biology to clinical translational research. All students (no matter what their degree course) will be given an opportunity to participate in outpatient HIV care and also to participate in a scientific research project. Offered as MBIO 521 and MVIR 521.

MVIR 522. Protein Phosphorylation and Cell Regulation (3)
This intensive seminar course will emphasize signaling pathways mediated by protein phosphorylation/dephosphorylation. Bacterial signaling mediated by histidine/asparrate phosphorylation and regulation of cellular physiological events will be reviewed. Then eucaryotic cell signaling will be reviewed from the surface of the cell and into the nucleus. This includes receptor-dependent phosphorylation/dephosphorylation reactions, cytoplasmic signaling intermediates, protein translation processes dependent upon phosphorylation, and nuclear regulatory events with emphasis on transcriptional mechanisms. In addition to faculty lectures, students will be reviewing the current literature and will present a research proposal based on the current concepts in the field that they choose to cover. Offered as MBIO 522 and MVIR 522.

MVIR 601. Research (1 - 18)
Grade of S/U only.

MVIR 701. Dissertation Ph.D. (1 - 18)
Grade of S/U only. Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

DEPARTMENT OF NEUROSCIENCES

Room E-653, School of Medicine
Phone 216-368-6251
http://neurowww.case.edu/

Neurosciences are the last great frontier in the biological sciences. How the nervous system functions to process information and mediate behavior, and how it forms during embryonic development and is modified to encode experience, are central questions in the neurosciences. Answering these questions requires a multidisciplinary approach combining the tools of electrophysiology, anatomy, biochemistry and molecular biology in studies of animals and tissue culture models.

The department offers a Ph.D. program that provides interdisciplinary training in modern neurosciences through a combination of course work, seminars and research experience. Medi-
al students are encouraged to pursue research projects with neuroscience faculty and/or to make neurosciences an area of concentration.

Neuroscientists at Case are using state-of-the-art techniques and instrumentation to study several aspects of nervous system function, including neural circuitry and plasticity, development and regeneration, and cellular and molecular neurobiology. Techniques used include patch and voltage-clamping neuronal membranes to study ion channels, gene cloning, sequencing and other molecular and genetic approaches to study the structure, function and regulation of neuronal proteins; electron microscopy, confocal and other imaging methods to study development and function of synapses; immunocytochemical techniques to study the molecular and biochemical basis of nervous system development and plasticity; and traditional anatomical, biochemical and physiological techniques.

**COURSE DESCRIPTIONS (NEUR)**

**NEUR 402. Principles of Neural Science (3)**
Lecture/discussion course covering concepts in cell and molecular neuroscience, principles of systems neuroscience as demonstrated in the somatosensory system, and fundamentals of the development of the nervous system. This course will prepare students for upper level Neuroscience courses and is also suitable for students in other programs who desire an understanding of neurosciences. Recommended preparation: CBIO 453. Offered as BIOL 402 and NEUR 402.

**NEUR 405. Cellular and Molecular Neurobiology (3)**
Cell biology of nerve cells, including aspects of synaptic structure physiology and chemistry. The application of molecular biological tools to questions of synaptic function will be addressed. Recommended preparation: BIOL 473.

**NEUR 408. Functional Neuroanatomy (3)**
This course is designed to give students a broad appreciation of the various subdivisions, nuclear groups, and axon tracts in the human brain and spinal cord. There will not only be an emphasis on the understanding of the 3-dimensional arrangement of neuroanatomical pathways that constitute the major circuits in the CNS but also a current perspective of their functions. Lectures in this course will be a selected subgroup of those that constitute the Nervous System Committee of the 2nd year medical school curriculum. Students taking NEUR 408 will also participate in selected review session, small group conferences as well as lab, which includes a dissection of a human brain.

**NEUR 411. Neurobiology of Disease (3)**
Designed to show how basic research in neuroscience has contributed to the management of clinical problems in human neurology and to discuss some of the further challenges posed by human disease for research in neurobiology. The general format will include clinical descriptions of patient presentation, discussion of the disease mechanisms and an analysis of contributions of cellular and systems neuroscience to understanding of the human disorder. Specific topics to be discussed include ischemia and Stroke, Neurodegenerative Diseases such as Alzheimer's Parkinson's Brain Tumors, Mood Disorders, and Demyelinating diseases such as Multiple Sclerosis. Recommended preparation: NEUR 402 or NEUR 405.

**NEUR 415. Neuroscience Seminars (1)**
Current topics of interest in neurosciences. Students attend weekly seminars. From this series, students prepare critiques. No credit is given for less than 75% attendance.

**NEUR 425. Stem Cell Biology and Therapeutics (3)**
This course is intended to teach current understanding of stem cells as it relates to their characterization, function, and physiologic and pathological states. The course will expose students to the current understanding of various types of stem cells, including embryonic and adult stem cells of various tissues, techniques for their isolation and study. Experimental models and potential biomedical therapeutic applications will be discussed. The course will be taught by the faculty of the “Center for Stem Cell and Regenerative Medicine” who are affiliated with multiple departments of Case Western Reserve University, Cleveland Clinic Foundation and the partnering biomedical companies. Offered as NEUR 425 and PATH 425.

**NEUR 427. Neural Development (3)**
Topics include cell commitment, regulation of proliferation and differentiation, cell death and trophic factors, pathfinding by the outgrowing nerve fiber, synapse formation, relationships between center and periphery in development and the role of activity. Offered as BIOL 427 and NEUR 427.

**NEUR 432. Biochemical and Molecular Aspects of Vision (3)**
Increasingly, progress in the study of visual science is requiring multidisciplinary approaches that draw from the areas of biochemistry, genetics, molecular biology, neuroscience and pathology. We have recognized this fact and have adapted this course to fit the needs of tomorrow's scientists. This course encompasses the basic science aspects of the eye. Subjects include retinal anatomy and function; biochemical, molecular aspects of retinal disease and cataract; cellular and molecular neuroscience aspects pertinent to the visual system. Offered as NEUR 432, PATH 432, and PHRM 432.

**NEUR 435. Vision: Molecules to Perception (3)**
The organization, physiology, and function of the vertebrate visual system are considered in detail. The visual pathway from retina to LGN and visual cortex is described with an emphasis on circuits that produce successively more complex receptive field properties. Classic papers and current literature form the basic course material. Assessment is based on student presentations, class participation, and a term paper. Recommended preparation: NEUR 402 or consent of department.

**NEUR 473. Introduction to Neurobiology (3)**
How nervous systems control behavior. Biophysical, biochemical, and molecular biological properties of nerve cells, their organization into circuitry, and their function within networks. Emphasis on quantitative methods for modeling neurons and networks, and on critical analysis of the contemporary technical literature in the neurosciences. Term paper required for graduate students. Offered as BIOL 373, BIOL 473, and NEUR 473.

**NEUR 474. Neurobiology of Behavior (3)**
In this course, students will examine how neurobiologists interested in animal behavior study the linkage between neural circuitry and complex behavior. Various vertebrate and invertebrate systems will be considered. Several exercises will be used in this endeavor. Although some lectures will provide background and context on specific neural systems, the emphasis of the course will be on classroom discussion of specific journal articles. In addition, students will each complete a project in which they will observe some animal behavior and generate both behavioral and neurobiological hypotheses related to it. In lieu of examinations, students will complete three written assignments, including a theoretical grant proposal, a one-page Specific Aims paper related to the project, and a final project paper. These assignments are designed to give each student experience in writing biologically-relevant documents. Classroom discussions will help students understand the content and format of each type document. They will also present their projects orally to the entire class. Recommended preparation: BIOL 216. Offered as BIOL 374, BIOL 474, and NEUR 474.

**SAGES Dept Seminar**

**NEUR 475. Protein Biophysics (3)**
This course focuses on in-depth understanding of the molecular biophysics of proteins. Structural, thermodynamic and kinetic aspects of protein function and structure-function relationships will be considered at the advanced conceptual level. The application of these theoretical frameworks will be illustrated with examples from the literature and integration of biophysical knowledge with description at the cellular and systems level. The format consists of lectures, problem sets, and student presentations. A special emphasis will be placed on discussion of original publications. Offered as BIOC 475, CHEM 475, PHOL 475, PHRM 475, and NEUR 475.

**NEUR 476. Neurobiology Laboratory (3)**
Introduction to the basic laboratory techniques of neurobiology. Intracellular and extracellular recording techniques, forms of synaptic plasticity, patch clamping, immunohistochemistry and confocal microscopy. During the latter weeks of the course students will be given the opportunity to conduct an independent project. One laboratory and one discussion session per week. Recommended preparation for BIOL 476 and NEUR 476: BIOL 216. Offered as BIOL 376, BIOL 476 and NEUR 476.
NEUR 477. Cellular Biophysics (4)
This course focuses on a quantitative understanding of cellular processes. It is designed for students who feel comfortable with and are interested in analytical and quantitative approaches to cell biology and cell physiology. Selected topics in cellular biophysics will be covered in depth. Topics include theory of electrical and optical signal processing used in cell physiology, thermodynamics and kinetics of enzyme and transport reactions, single ion channel kinetics and excitability, mechanotransduction, and transport across polarized cell layers. The format consists of lectures, problem sets, computer simulations, and discussion of original publications. The relevant biological background of topics will be provided appropriate for non-biology science majors. Offered as BIOL 476, NEUR 477, PHOL 476, PHRM 476.

NEUR 478. Computational Neuroscience (3)
Computer simulations and mathematical analysis of neurons and neural circuits, and the computational properties of nervous systems. Students are taught a range of models for neurons and neural circuits, and are asked to implement and explore the computational and dynamic properties of these models. The course introduces students to dynamical systems theory for the analysis of neurons and neural learning, models of brain systems, and their relationship to artificial and neural networks. Term project required. Students enrolled in MATH 478 will make arrangements with the instructor to attend additional lectures and complete additional assignments addressing mathematical topics related to the course. Recommended preparation: MATH 223 and MATH 224 or BIOL 300 and BIOL 306. Offered as BIOL 378, COGS 378, MATH 378, BIOL 478, EME 478, ECES 478, MATH 478 and NEUR 478.

NEUR 479. Seminar in Computational Neuroscience (3)
Readings and discussion in the recent literature on computational neuroscience, adaptive behavior, and other current topics. Offered as BIOL 479, EME 479, ECES 479, and NEUR 479.

NEUR 482. Drugs, Brain, and Behavior (3)
This course is concerned with the mechanisms underlying neurochemical signaling and the impact of drugs on those mechanisms. The first half of the course emphasizes the fundamental mechanisms underlying intra- and extracellular communication of neurons and the basic principles of how drugs interact with the nervous system. The second half of the course emphasizes understanding the neural substrates of disorders of the nervous system, and the mechanisms underlying the therapeutic effects of drugs at the cellular and behavioral levels. This course will consist of lectures designed to give the student necessary background for understanding these basic principles and class discussion. The class discussion will include viewing video examples of behavioral effects of disorders of the nervous system, and analysis of research papers. The goal of the class discussions is to enhance the critical thinking skills of the student and expose the student to contemporary research techniques. Offered as BIOL 382, BIOL 482, and NEUR 482.

NEUR 518. Signaling via Cell Adhesion (3)
Molecular mechanisms by which cells interact with and are regulated by extracellular matrices and other cells. Offered as CBIO 518, CLBY 518, MBIO 518, and NEUR 518.

NEUR 534. Neurogenetics (3)
This course will explore how principles of genetics can be used as tools to study the complex organization of the nervous system. Examples will be drawn from all relevant model organisms including nematode, fruit fly, mouse, and human. Meant primarily for students with an interest in neuroscience, this course will offer a strong foundation in genetic principles using examples drawn from the neuroscience literature. Students in other disciplines, especially genetics, will benefit from the examples to learn important aspects of the neurosciences ranging from behavior to development. These interdisciplinary features make this course unique in its offerings and a valuable addition to many students’ course of study. Recommended preparation: CBIO 453 and CBIO 455. Offered as GENE 534 and NEUR 534.

NEUR 540. Advanced Topics in Neuroscience Ethics (0)
This course offers continuing education in responsible conduct of research for advanced graduate students. The course will cover the nine defined areas of research ethics through a combination of lectures, on-line course material and small group discussions. Six 2-hr meetings per semester. Maximum enrollment of 15 students with preference given to graduate students in the Neurosciences program. All neurosciences graduate students must complete this course during their 3rd or 4th year.

NEUR 601. Research in Neuroscience (1 - 18)
NEUR 651. Master’s Thesis (M.S.) (1 - 6)
(Credit as arranged.) Recommended preparation: M.S. candidates only.

NEUR 701. Dissertation Ph.D. (1 - 18)
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

DEPARTMENT OF NUTRITION
School of Medicine, Room WG 48
Henri Brunengraber, M.D., Ph.D., Chair
Edith Lerner, Ph.D., Vice Chair
Phone 216-368-2440
Fax 216-368-6644
http://www.case.edu/med/nutrition/home.HTML

The department’s focus is on human nutrition and the application of the science of nutrition to the maintenance and improvement of health. Undergraduate programs are designed for students interested in nutritional biochemistry and metabolism, molecular nutrition, professional study in dietetics, public health nutrition, medicine, dentistry or nursing. Graduate programs emphasize dietetics, public health nutrition, nutritional biochemistry and molecular nutrition.

The Department of Nutrition offers programs leading to the bachelor of science degree in nutrition, bachelor of arts degree in nutrition, bachelor of arts degree in nutritional biochemistry and metabolism, bachelor of science degree in nutritional biochemistry and metabolism, master of science degree in nutrition, master of science degree in public health nutrition, and doctor of philosophy degree. A nutrition minor is available. Specialty programs are available in areas such as maternal and child nutrition or gerontology. The specialty is in addition to the basic graduate degree.

Special announcements describing the various programs and providing additional information are available from the department.

FACULTY
Henri Brunengraber, M.D., Ph.D.
(Université de Liege)
Professor and Chair of Department

Edith Lerner, Ph.D.
(University of Wisconsin Madison)
Associate Professor and Vice Chair of Department

Hope Barkoukis, Ph.D.
(Case Western Reserve University)
Assistant Professor

Colleen Croniger, Ph.D.
(Case Western Reserve University)
Assistant Professor

Paul Ernsberger, Ph.D.
(Northwestern University)
Associate Professor

Maria Hatzoglou, Ph.D.
(University of Athens)
Professor

Takhir Kasumov, Ph.D.
(Moscow State)
Instructor

Mary Beth Kavanagh, M.S.
(Case Western Reserve University)
Instructor

Janos Kerner, Ph.D.
(Hungarian Academy of Sciences)
Assistant Professor

Jane Korsberg, M.S.
(Case Western Reserve University)
Instructor

Danny Manor, Ph.D.
(Yeshiva University)
Associate Professor
Duna Massillon, Ph.D. (Montreal)
Assistant Professor

Isabel M. Parraga, Ph.D. (Case Western Reserve University)
Associate Professor

Stephen Previs, Ph.D. (Case Western Reserve University)
Assistant Professor

Tamara Randall, M.S. (Case Western Reserve University)
Instructor

Alison Steiber, Ph.D. (Michigan State University)
Assistant Professor

James Swain, Ph.D. (Iowa State University)
Assistant Professor

Kou-Yi Tserng, Ph.D. (Illinois at Chicago)
Associate Professor

Jonathan Whittaker, M.R.C.P. (University College School of Medicine, London, U.K.)
Associate Professor

Associate Faculty

SECONDARY APPOINTMENTS

Saul Genuth, M.D. (Case Western Reserve University)
Professor

Sharon Groh-Wargo, Ph.D. (Case Western Reserve University)
Assistant Professor

Richard W. Hanson, Ph.D. (Brown University)
Professor

Douglas S. Kerr, M.D., Ph.D. (Case Western Reserve University)
Professor

John Kirwan, Ph.D. (Ball State)
Associate Professor

Laura Nagy, Ph.D. (University of California – Berkeley)
Professor

William Stanley, Ph.D. (University of California-Berkeley)
Associate Professor

Anthony Tavill, M.D. (Manchester-England)
Professor

ADJUNCT/CLINICAL APPOINTMENTS

Phyllis Allen, M.S. (Case Western Reserve University)
Adjunct Instructor

Janet Anselmo, M.S. (Case Western Reserve University)
Adjunct Instructor

Johanna Asarian-Anderson, M.P.H. (University of California -Los Angeles)
Adjunct Instructor

Casey Atkinson, B.S. (Youngstown State University)
Adjunct Instructor

Joan Atkinson, M.S. (Case Western Reserve University)
Adjunct Instructor

Anika Avery-Grant, M.S. (Case Western Reserve University)
Adjunct Instructor

Cynthia Bayerl, M.A. (Boston University)
Adjunct Instructor

Cynthia Blackburn, M.S. (Kent State University)
Adjunct Instructor

Carmen Blakely-Adams (Michigan State University)
Adjunct Instructor

Elizabeth Boone, B.S. (Ohio University)
Adjunct Instructor

Josephine Ann Cialone, M.S. (Case Western Reserve University)
Adjunct Instructor

Nenita Clemente, M.S. (Case Western Reserve University)
Adjunct Instructor

Cheri Collier, M.S. (Case Western Reserve University)
Adjunct Instructor

Susan Comfort, M.S. (Case Western Reserve University)
Adjunct Instructor

UNDERGRADUATE (NTRN)

Major Programs
The undergraduate degree in nutrition is appropriate for students who wish to: (1) pursue graduate programs in nutritional biochemistry, molecular nutrition, dietetics, public health nutrition or other biomedical sciences; (2) enter professional schools of dentistry, medicine, or nursing; (3) apply to dietetic internships or approved experience programs in order to prepare for the professional practice of dietetics; (4) pursue technical careers in the food or pharmaceutical industry. This major offers flexibility in course selection within a framework of general program requirements. The selection of courses depends on the student's choice of emphasis. Students wishing to qualify for admission to professional or graduate programs need to include specific courses considered prerequisites for admission. Students interested in applying to dietetic internships must meet specific course requirements (Didactic Program in Dietetics) as required by the Commission on Accreditation for Dietetics Education of the American Dietetic Association. These requirements are met in the courses that comprise the Didactic Program in Dietetics (DPD). The DPD at Case Western Reserve University is currently granted Accreditation by the Commission on Accreditation for Dietetics Education of the American Dietetic Association, 216 W. Jackson Blvd., Chicago, IL 60606-6995, 312-899-5400. A department advisor should be consulted in the freshman year to plan the dietetics course work.

Nutrition
Bachelor of Science degree requires the completion of SAGES, PHED 101, 102, and the following courses:
NTRN 201, 342, 343, 363, 364, 397, 398, and three NTRN electives
CHEM 105, 106, 113, 223
BIOL 214; BIOL 216 or BIOL 348; BIOC 307; STAT 201 or 243 or 312 or 313 or ANTH 319 or PSCL 282 or EPBI 431
Bachelor of Arts degree requires the completion of SAGES, PHED 101, 102, and the following courses:
NTRN 201, 342, 343, 363, 364, 397, 398 and two NTRN electives
CHEM 105, 106, 223
BIOL 214; BIOL 216 or BIOL 348
BIOC 307

Nutritional Biochemistry and Metabolism
Bachelor of Arts degree requires the completion of SAGES, PHED 101, 102, and the following courses:
NTRN 201, 342, 363, 364, 397, 398, 452 and one NTRN elective: 3hrs at 300-level or above
MATH 125, 126 (or 121, 122)
CHEM 105, 106, 113, 223 (or 323), 224 (or 324), 233, 234
BIOL 214, 215
BIOL 216 or BIOL 348
PHYS 115, 116
BIOC 307, 334
Bachelor of Science degree requires the completion of SAGES, PHED 101, 102, and the following courses:
NTRN 201, 342, 363, 364, 397, 398, 452 and one NTRN elective: 3 hours at 300-level or above
MATH 121 (or 123), 122 (or 124), 223 (or 227), 224 (or 228)
ENGR 131
CHEM 105, 106, 113, 223 (or 323), 224 (or 324), 233, 234
BIOL 214, 215
BIOL 216 or BIOL 348
PHYS 121 and 122 or 123 and 124; 221 or 223
BIOC 307, 334

Minor Programs
The basic sequence for a minor program consists of NTRN 201, Nutrition (3); NTRN 343, Dietary Patterns (3); and an additional 9 hours of nutrition courses, selected from:
# Bachelor of Science in Nutrition - Human Nutrition Major

## First Year

### Fall
- **CHEM 105** Principles of Chemistry I 3
- **SAGES** First Seminar 4
- **NTRN 201** Nutrition 3
- **PHED 101** Physical Education 0

### Spring
- **CHEM 106** Principles of Chemistry II 3
- **CHEM 113** Principles of Chemistry Laboratory 2
- **BIOL 214** Genes and Evolution 4
- **PHED 102** Physical Education 0

## Second Year

### Fall
- **NTRN 342** Food Science 5
- **CHEM 223** Introductory Organic Chemistry I 3
- **SAGES** University Seminar *Strongly recommended, but not required* 3

### Spring
- **CHEM 233** Introductory Organic Chemistry Lab * 2
- **NTRN 343** Dietary Patterns 3
- **CHEM 224** Introductory Organic Chemistry II * 3
- **CHEM 234** Introductory Organic Chemistry Lab * 2
- **SAGES** University Seminar 3
- **STAT 201** Statistics for Social & Life Sciences *Strongly recommended, but not required* 3

## Third Year

### Fall
- **BIOL 348** Human Anatomy and Physiology 4
- **BIOC 307** General Biochemistry 4
- **PHED 102** Physical Education 0

### Spring
- **CHEM 224** Introductory Organic Chemistry II 3
- **CHEM 234** Introductory Organic Chemistry Lab II 2
- **SAGES** University Seminar 2
- **Elective** 3

## Fourth Year

### Fall
- **NTRN 363** Human Nutrition I: Energy, Protein, Minerals 3
- **NTRN 398** Senior Capstone Experience 3
- **NTRN 397** Capstone Proposal Seminar 3
- **NTRN Elective** 3

### Spring
- **CHEM 224** Introductory Organic Chemistry II 3
- **BIOL 348** Human Anatomy and Physiology 4
- **PHYS 115** Introductory Physics I 4
- **NTRN 397** Capstone Proposal Seminar 3

## Bachelor of Arts in Nutrition - Nutritional Biochemistry and Metabolism Major

## First Year

### Fall
- **MATH 125** Mathematics I 4
- **CHEM 105** Principles of Chemistry I 3
- **SAGES** First Seminar 4
- **PHED 101** Physical Education 0

### Spring
- **MATH 126** Mathematics II 4
- **CHEM 106** Principles of Chemistry II 3
- **CHEM 113** Principles of Chemistry Lab 2
- **CIOL 214** Genes and Evolution 4

## Second Year

### Fall
- **BIOL 348** Human Anatomy and Physiology 4
- **BIOC 307** Biochemistry 4

## Master of Science in Nutrition Degree

This degree program offers two options. For those pursuing the thesis option, 30 semester hours of a planned program of study are required, including six to nine semester hours of...
research, as well as a final oral defense of the thesis. The non-thesis option requires 30 semester hours and a final written, comprehensive examination.

All candidates are required to take 15 semester hours of nutrition, including six hours of advanced human nutrition. In addition, students are encouraged to pursue complementary studies in the biomedical, social and behavioral sciences. The plan of study may vary considerably depending on the education, goals and specific interests of each student. Students may elect to focus on nutritional biochemistry and metabolism, and molecular nutrition. The individual program also may be planned to fulfill the academic requirements for dietetic registration (Didactic Program in Dietetics).

Master of Science in Public Health Nutrition/Internship Degree

The primary goal of this program is to prepare nutrition specialists to function in public health/community agencies. A minimum of 30 semester hours of combined academic work and field experience is required to earn the degree. Course work focuses on human nutrition, dietetics, and the public health sciences. Field experience is concurrent with course work utilizing local community agencies for direct application of theory to practice. The final phase of the program is an eight-week, full-time experience with a public health agency that has a strong nutrition component. The student works closely with an advisor throughout the program, on an individual basis.

In addition to the general public health program, students may elect to specialize in maternal and child nutrition or gerontology. The gerontology specialty is certified through the Center on Aging and Health located on campus. Each specialty requires additional semester hours of academic work. A portion of the field experience is specified for either population group.

For students wishing to become eligible to take the registered dietitian (R.D.) examination, the program also currently is granted accreditation by the Commission on Accreditation for Dietetics Education (CADE) of the American Dietetic Association as an internship. CADE is a specialized accrediting body recognized by the Commission on Recognition of Post-secondary Accreditation and the United States Department of Education.

Coordinated Dietetic Internship/ Master's Degree Program

The Coordinated Dietetic Internship/Master's Degree Program combines academic work with clinical practice at either of the dietetic internships at University Hospitals of Cleveland or the Louis Stokes Cleveland Department of Veterans Affairs Medical Center. A minimum of 27 semester hours is required. Admission is contingent on the student's being selected and matched to one of the hospitals. Appointment to these internships follows the admission procedure outlined by the Commission on Accreditation for Dietetics Education of the American Dietetic Association. Contact the Department of Nutrition for information regarding application.

Doctor of Philosophy in Nutrition Degree

The Doctor of Philosophy degree in nutrition is awarded for study and research in nutrition. Areas of concentration are nutritional biochemistry and metabolism, and molecular nutrition. Additional information about graduate degree programs may be obtained from the department.

COURSE DESCRIPTIONS (NTRN)

NTRN 201. Nutrition (3)
The nutrients, their functions, food sources, and factors affecting human needs throughout life.

NTRN 328. Child Nutrition, Development and Health (3)
The relationship between nutrition and physical/cognitive growth and development of the child from the prenatal period through adolescence, including individuality, maturation and biological needs. Nutritional influences (nutrient requirements, food choices, and nutritional/feeding problems) and effects on health are emphasized.

NTRN 342. Food Science (3)
Chemical, physical and biological properties of food constituents and their interactions in food preparation and processing and practical application of processing methods and their effect on nutritional quality and acceptability. Laboratory and lecture. Prereq: CHEM 106.

NTRN 343. Dietary Patterns (3)
Examination of the food supply in the United States as it is affected by production, processing, marketing, government programs, regulation, and consumer selection. Nutritional evaluation of dietary patterns of different cultures. Recommended preparation: NTRN 201 or consent.

NTRN 351. Food Service Systems Management (3)
The application of organizational theory and skills in the preparation and service of quantity food. Laboratory experience in professional food service are included. Graduate students will analyze one aspect of food service management in depth. Offered as NTRN 351 and NTRN 451. Prereq: Nutrition major or consent of instructor.

NTRN 360. Guided Study in Nutrition Practice (3)
Methods for the provision of nutrition services to individuals and groups. Principles of professional practice including ethics, standards, and regulatory issues. Recommended preparation: NTRN 363 or NTRN 433 or consent.

NTRN 363. Human Nutrition I: Energy, Protein, Minerals (3)
Chemical and physiological properties of specific nutrients, including interrelationships and multiple factors, in meeting nutritional needs throughout the life cycle. Recommended preparation: NTRN 201, CHEM 223 and BIOL 348 or equivalent.

NTRN 364. Human Nutrition II: Vitamins (3)
Chemical and physiological properties of vitamins, including interrelationships and multiple factors, in meeting nutritional needs throughout the life cycle. Prereq: NTRN 363.

NTRN 365. Nutrition in Disease (4)
Application of nutrition principles to the problems of diet in disease. Prereq: NTRN 363 and BIOL 307 or equivalent or consent of instructor.

NTRN 371. Special Problems (1–3)
Independent reading, research, or special projects supervised by a member of the nutrition faculty. Prereq: Junior or senior standing.

NTRN 372. Special Problems (1–3)
Independent reading, research, or special projects supervised by a member of the nutrition faculty. Prereq: Junior or senior standing.

NTRN 388. Seminar in Nutrition (1–3)
Prereq: Junior or senior standing.

NTRN 390. Undergraduate Research (3–9)
Guided laboratory research in nutritional biochemistry or molecular nutrition under the sponsorship of a nutrition faculty member.

NTRN 397. Capstone Proposal Seminar (3)
In this departmental seminar course, students will conceptualize, develop and prepare a written plan, known as the “Capstone Proposal,” for their senior Capstone project (NTRN 398: Senior Capstone Experience). Discussion will include, but not be limited to basic research principles, different types of research, ethics and IRB procedures. The Capstone Proposal shall include the project design, aims, methodology, budget, data analysis and presentation. Upon completion of this course, students will have confirmed student/Capstone advisor and, if applicable, mentor relationships, written a Capstone proposal and given an oral presentation of their proposal at a departmental colloquium. Prereq: NTRN 201 and NTRN 342. SAGES Dept Seminar

NTRN 398. Senior Capstone Experience (3)
Students will implement their “Capstone Proposal” projects as designed in NTRN 397: Capstone Proposal Seminar. Pertinent research activities will
depend on the nature of the student’s “Capstone Proposal” project. The student will meet regularly with their Capstone advisor, at least twice monthly, to provide progress reports, discuss the project, and for critique and guidance. By the end of this course, the student will have completed their SAGES Senior Capstone research project and presented their project results/findings orally at the Senior Capstone Fair and at a departmental colloquium. Pre-req: NTRN 397. SAGES Senior Cap

NTRN 399. Senior Project (3)

NTRN 433. Advanced Human Nutrition I (4)
Emphasis on reading original research literature in energy, protein and minerals with development of critical evaluation and thinking skills. Recommended preparation: NTRN 201 and CHEM 223 and BIOL 348 or equivalent.

NTRN 434. Advanced Human Nutrition II (3)
Emphasis on reading original research literature on vitamins with development of critical evaluation and thinking skills. Recommended preparation: NTRN 433 or consent.

NTRN 435. Maternal and Child Nutrition (3)
Study of current research literature on nutrition for pregnancy, lactation, infancy and childhood, including assessment and requirements. Recommended preparation: Nutrition major or consent of instructor.

NTRN 437. Evaluation of Nutrition Information for Consumers (3)
Reading and appraisal of food and nutrition literature written for the general public, including books, periodicals, and audio and visual sources. Pre-req: Graduate standing and Nutrition or Public Health Nutrition major or consent of instructor.

NTRN 438. Trends in Diet Therapy (3)
Evaluation and interpretation of modern concepts of nutrition related to abnormalities requiring dietary modifications. Pre-req: NTRN 365.

NTRN 440. Nutrition for the Aging and Aged (3)
Consideration of the processes of aging and needs which continue throughout life. The influences of food availability, intake, economics, culture, physical and social conditions and chronic disease as they affect the ability of the aged to cope with living situations. Recommended preparation: Nutrition major or consent of instructor.

NTRN 446. Advanced Maternal Nutrition: Special Topics (3)
Analysis of the problems commonly associated with high-risk pregnancies and fetal outcome. Discussion of causes, mechanisms, management and current research. Recommended preparation: NTRN 435 or consent.

NTRN 451. Food Service Systems
Management (3)
The application of organizational theory and skills in the preparation and service of quantity food. Laboratory experience in professional food services are included. Graduate students will analyze one aspect of food service management in depth. Offered as NTRN 351 and NTRN 451. Pre-req: Nutrition major.

NTRN 452. Nutritional Biochemistry and Metabolism (3)
Mechanisms of regulation of pathways of intermediary metabolism; amplification of biochemical signals; substrate cycling and use of radioactive and stable isotopes to measure metabolic rates. Recommended preparation: BIOC 307 or equivalent. Offered as BIOC 452 and NTRN 452.

NTRN 454. Isotope Trace Methodology (3)
Stable and radioactive isotopes in metabolic research concentrating on the design of in-vitro and in-vivo investigative protocols using mostly stable isotopes and mass spectrometric analysis; critical interpretation of data from the recent literature; and pathway identification and kinetics. Recommended preparation: BIOC 407.

NTRN 455. Molecular Nutrition (3)
Nutrient control of gene expression in mammalian cells and deregulation of expression of these genes. The molecular basis of nutrition-related diseases, such as diabetes mellitus, PKU, and LDL-receptor deficiency, will be discussed. The application of genetic manipulation to metabolism and nutrition will be evaluated. Recommended preparation: BIOC 407.

NTRN 460. Sports Nutrition (3)
Study of the relationships of nutrition and food intake to body composition and human performance. Laboratory sessions include demonstrations of body composition and fitness measurements and participation in a research project. Recommended preparation: NTRN 363 or NTRN 433 or consent.

NTRN 516. Seminar in Dietetics I (4)
Study of scientific basis for clinical and community nutrition practice and developments in food service systems management. Recommended preparation: Dietetic internship.

NTRN 517. Seminar in Dietetics II (4)
Study of scientific basis for clinical and community nutrition practice and developments in food service systems management. Recommended preparation: Dietetic internship.

NTRN 528. Introduction to Public Health Nutrition (3)
Philosophy, objectives, organization, and focus of government and voluntary agencies with emphasis on nutrition components. Recommended preparation: Public health nutrition majors only.

NTRN 529. Nutritional Epidemiology (3)
This course uses epidemiology as a tool for assessing potential causal associations between dietary excesses, deficiencies and imbalances to the prevalent chronic diseases. It addresses the epidemiologic aspects of nutrition related chronic diseases, for example, the multi-factorial nature of etiology.

Recommended preparation: Statistics and Public Health Nutrition students only.

NTRN 530. Public Health Nutrition (3)
Analysis of public health programs in government and voluntary health agencies and the effect of legislation. Emphasis on integration with other disciplines working in public health settings and the role of a public health nutritionist.

NTRN 531. Public Health Nutrition Field Experience (1 - 6)
Individually planned public health experience. May be concurrent with course work in local agencies or in blocks of full-time work with a city, county, or state health agency. Pre-req: Open to public health nutrition students only. Consent of instructor.

NTRN 532A. General Nutrition Care (1 - 3)
Individually arranged clinical experience.

NTRN 532C. Specialized Public Health Nutrition Field Experience (1 - 3)
Individually arranged clinical experience. Pre-req: Public Health Nutrition students only. Consent of instructor.

NTRN 532D. Hospital Dietetics (1 - 3)
Individually arranged clinical experience.

NTRN 532E. Clinical Research: Methods in Nutrition and Metabolism (3)
Individually arranged.

NTRN 533. Nutritional Care of Neonate (3)
Nutritional assessment and management of high-risk newborns with emphasis on prematurity and low birth weight. Review of current literature coordinated with clinical experience in the neonatal intensive care unit. Issues on follow-up included. Recommended preparation: NTRN 435 or consent.

NTRN 534. Advanced Public Health Nutrition Field Experience (1 - 6)
Individually planned advanced public health experience. Pre-req: Open to public health nutrition students only.

NTRN 550A. Advanced Community Nutrition (3)
Development of skills needed by the community dietitian. Emphasis on effective tools for service development and delivery. Recommended courses of action for the professional.

NTRN 550B. Seminar: Dietetics (1)

NTRN 551. Seminar in Advanced Nutrition (1)
Ph.D. students meet weekly to discuss topical journal articles. Students gain experience in critical evaluation of research and develop presentation and communication skills. Discussion of research integrity and ethics. Students participate in departmental seminars with invited speakers.

NTRN 561. Investigative Methods in Nutrition (1 - 4)
Research methods appropriate for nutrition research. Methods for conducting research in nutrition and food sciences, food service management and dietetics. Designing research proposals. Pre-req: Nutrition
DEPARTMENT OF PATHOLOGY
Case Western Reserve University
School of Medicine
Department of Pathology
10900 Euclid Avenue
Cleveland, OH 44106-7288
216-368-3611
http://www.case.edu/med/pathology/
Increasingly, progress in the study of visual science includes pathological aspects, neurodegeneration, genetic aspects, protein conformation and cell biology in conditions such as Alzheimer’s disease, Parkinson’s disease, amyotrophic lateral sclerosis and prion diseases. Students read assigned primary literature and present and discuss these in class.

PATH 425. Stem Cell Biology and Therapeutics (3)
This course is intended to teach current understanding of stem cells as it relates to their characterization, function, and physiologic and pathological states. The course will expose students to the current understanding of various types of stem cells, including embryonic and adult stem cells of various tissues, techniques for their isolation and study. Experimental models and potential biomedical therapeutic applications will be discussed. The course will be taught by the faculty of the “Center for Stem Cell and Regenerative Medicine” who are affiliated with multiple departments of Case Western Reserve University, Cleveland Clinic Foundation and the partnering biomedical companies. Offered as NEUR 425 and PATH 425.

PATH 430. Oxidative Stress and Disease Pathogenesis (1)
Oxidative stress and free radicals are implicated in a number of disease processes including aging, arthritis, emphysema, Alzheimer’s disease and cancer. Lecture course with discussion of recent studies concerning the formation and destructive mechanisms of free radicals in the context of various disease processes. Students read assigned papers and discuss them in class.

PATH 432. Biochemical and Molecular Aspects of Vision (3)
Increasingly, progress in the study of visual science is required multidisciplinary approaches that draw from the areas of biochemistry, genetics, molecular biology, neuroscience and pathology. We have recognized this fact and have adapted this course to fit the needs of tomorrow’s scientists. This course encompasses the basic science aspects of the eye. Subjects include retinal anatomy and function; biochemical, molecular aspects of retinal disease and cataract; cellular and molecular neuroscience aspects pertinent to the visual system. Offered as NEUR 432, PATH 432, and PHRM 432.

PATH 435. Tissue Engineering and Regenerative Medicine (3)
This course will provide advanced coverage of tissue engineering with a focus on stem cell-based research and therapies. Course topics of note include stem cell biology and its role in development, modeling of stem cell function, controlling stem cell behavior by engineering materials and their microenvironment, stem cells’ trophic character, and state-of-the-art stem cell implementation in tissue engineering and other therapeutic strategies. Offered as EBME 425 and PATH 435. Prereq: EBME 325 or equivalent and graduate standing.

PATH 444. Neurodegenerative Diseases: Pathological, Cell. & Molecular Perspectives (3)
This course, taught by several faculty members, encompasses the full range of factors that contribute to the development of neurodegeneration. Subjects include pathological aspects, neurodegeneration, genetic aspects, protein conformation and cell biology in conditions such as Alzheimer’s disease, Parkinson’s disease, amyotrophic lateral sclerosis and prion diseases.

PATH 477. Cellular and Molecular Basis of Immune Dysfunction (3)
Lectures and student presentations focusing on immunologic mechanisms of tissue injury, disorders of the immune response and diseases of immunocompetent cells. Hypersensitivity, allergy, immune complex disease, immune deficiency, lymphoma and multiple myeloma discussed from chemical, cellular and physiological perspectives. Recommended preparation: PATH 416 or consent of instructor.

PATH 480. Logical Dissection of Biomedical Investigations (3)
Path 480 is an upper level graduate course encompassing discussion and critical appraisal of both published and pre-published research papers, book chapters, commentaries and review articles. Emphasis will be placed on evaluating the logical relationship between experimental design and experimental data to conclusions drawn. Thus, the course will aim to develop students’ capacities for independent thinking and critical analysis. Half of the course will be devoted to an analysis of fundamental conceptual issues pertaining to immunology, but this material will be applicable to a wide variety of fields. The other half of the course will be devoted to the analysis of papers that have been submitted for publication (with the students acting as primary reviewers of these papers). Our expectation is that this course will have practical relevance for students by providing them with methods to review their own prepublication manuscripts and eliminate common errors. It should also give students the tools to question widely held beliefs in diverse biomedical fields. Recommended preparation is completion of the C3MB curriculum and 2nd year or higher graduate school training. Previous exposure to immunology and molecular biology will be helpful but not required.

PATH 481. Immunology of Infectious Diseases (3)
Lectures and discussion on the immune response to infectious organisms, including bacteria, viruses and parasites. Emphasis on human responses but includes discussions of animal models. Other topics include vaccines and infections in immuno-compromised hosts. Recommended preparation: PATH 416 or consent of instructor.
Offered as MVIR 481 and PATH 481.

PATH 486. HIV Immunology (3)
This course will examine the unique immunology of HIV disease. The course content will include the study of HIV pathogenesis, immune control, immune dysfunctions, HIV prevention and immune restoration. Students will be expected to attend lectures and participate in class discussions. A strong emphasis will be placed on reviewing scientific literature. Students will be asked to help organize and to administer an HIV immunology journal club and will be asked to prepare a written proposal in the area of HIV immunology. Offered as PATH 486 and MBIO 486. Prereq: PATH 416 or permission from the instructor.

PATH 487. Cell Biology of the Nucleus (3)
Discussion of current cell biology research on the structure and functions of the nuclear envelope, the matrix and chromatin. Recommended preparation: CBIO 453 and CBIO 454 or consent of instructor. Offered as CLBY 487 and PATH 487.

PATH 488. Yeast Genetics and Cell Biology (3)
This seminar course provides an introduction to the genetics and molecular biology of the yeasts S. cerevisiae and S. pombe by a discussion of current literature focusing primarily on topics in yeast cell biology. Students are introduced to the tools of molecular genetics and special features of yeasts that make them important model eukaryotic organisms. Some selected topics include cell polarity, cell cycle, secretory pathways, vesicular and nuclear/cytosolic transport, mitochondrial import and biogenesis, chromosome segregation, cytoskeleton, mating response and signal transduction. Offered as CLBY 488, GENE 488, MBIO 488, and PATH 488.

PATH 510. Basic Pathologic Mechanisms (4)
An interdisciplinary introduction to the fundamental principles of molecular and cellular biology as they relate to the pathologic basis of disease. Lectures, laboratories, conferences.

PATH 511. Experimental Pathology Seminar I (1)
Weekly discussions of current topics and research by students, staff and distinguished visitors.

PATH 512. Experimental Pathology Seminar II (1)
Weekly discussions of current topics and research by students, staff and distinguished visitors.

PATH 520. Basic Cancer Biology and the Interface with Clinical Oncology (3)
This is an introductory cancer biology course that is intended to give students a broad and basic overview of Cancer Biology and Clinical Oncology. The course will cover not only fundamental principles of cancer biology, but will also highlight advances in the pathobiology and therapeutics of cancer. Classes will be of lecture and discussion format, with emphasis on critically reading original journal articles. The specific topics presented will include carcinogenesis, oncogenes, tumor suppressor genes, genetic epidemiology, DNA repair, growth factor action/signal transduction, apoptosis, cell cycle control, cell adhesion, angiogenesis, tumor cell heterogeneity, metastasis, chemotherapy, photodynamic therapy, gene therapy, signal transduction inhibitor therapy, chemoprevention, and clinical oncology of the breast, prostate, lymphatic tissue, colon and other related malignancies. Course grades will be from participation/discussion, presentation and mid-term/final exams. Recommended preparation: CBIO 453 and CBIO 455. Offered as PATH 520 and PHRM 520.

PATH 521. Special Topics in Cancer Biology and Clinical Oncology (1)
This one credit hour course in Cancer Biology is in-
tended to give students an opportunity to do independent literature research while enrolled in PHRM 520/PATH 520. Students must attend weekly Hematology/Oncology seminar series and write a brief summary of each of the lectures attended. In addition, students must select one of the seminar topics to write a term paper which fully reviews the background related to the topic and scientific and clinical advances in that field. This term paper must also focus of Clinical Oncology, have a translational research component, and integrate with concepts learned in PHRM 520/PATH 520. Pharmacology students must provide a strong discussion on Therapeutics, while Pathology students must provide a strong component on Pathophysiology of the disease. Recommended preparation: CBIO 453 and CBIO 455, or concurrent enrollment in PHRM 520 or PATH 520. Offered as PATH 521 and PHRM 521.

PATH 523. Histopathology of Organ Systems (3)
Comprehensive course covering the underlying basic mechanisms of injury and cell death, inflammation, immunity, infection, and neoplasia followed by pathology of specific organ systems. Material will include histological (structure) and physiological (function) aspects related to pathology (human emphasis). Recommended preparation: ANAT 412 or permission of instructor. Offered as ANAT 523 and PATH 523.

PATH 525. Transport and Targeting of Macromolecules in Health and Disease (3)
Each class includes introductory lecture, followed by student participation in interactive discussion of 3 to 5 research publications. At the end of the course, the students are expected to submit a paper or a short research proposal on any of the topics discussed during the course. Recommended preparation: CBIO 453, CBIO 454, CBIO 455, and CBIO 456. Offered as CBIO 525 and PATH 525.

PATH 555. Emerging Concepts in Cell Regulation (3)
This course will cover the general principles of cell regulation with an emphasis on the emerging novel mechanisms of signal transduction. The traditional areas of receptor tyrosine kinases, G-protein coupled receptors will be examined but the focus will be on the novel mechanisms that regulate proteolysis, ubiquitin proteosomal degradation, protein acetylation etc. in signal transduction and gene expression. This will be a literature-based course which will depend on critical evaluation of research papers, reviews and accompanied with in-depth discussion. Recommended preparation: CBIO 453. Offered as CBIO 555, CLBY 555, and PATH 555.

PATH 601. Special Problems (1 - 18)
Research on the nature and causation of disease and on host factors which tend to protect against disease. Special courses and tutorials in subspecialty areas of general and/or systemic anatomic and/or clinical pathology.

PATH 651. Thesis M.S. (1 - 18)
PATH 701. Dissertation Ph.D. (1 - 18)
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

DEPARTMENT OF PHARMACOLOGY
Room W-357, School of Medicine
Phone 216-368-4617
http://pharmacology.case.edu/

The Department of Pharmacology offers training leading to M.S., Ph.D. or M.D./Ph.D. degrees for highly qualified post-undergraduate candidates committed to academic research careers in the biomedical sciences. Adequate preparation in the biological sciences, mathematics, organic chemistry, and physics or physical chemistry is a prerequisite for admission.

Multidisciplinary training, carried out by faculty in pharmacology and other basic science departments, emphasizes molecular, cellular, physiological, and clinical aspects of the pharmacological sciences. Areas of faculty expertise include drug/xenobiotic metabolism; receptor-ligand interactions, and biochemical reaction mechanisms; cell biology of signaling pathways; structure-function of membrane components; endocrine and metabolic regulation; cell surface and nuclear receptors, hormonal regulation of gene expression; cancer biology and therapeutics, bacterial and viral pathogenesis, neuroscience/neuropsychopharmacology, and drug resistance.

Students seeking the Ph.D. degree are admitted directly into the Department of Pharmacology through the Molecular Therapeutics Training Program or through the Biomedical Sciences Training Program (BSTP, please see separate listing in this publication), each of which provides an introduction to many related training areas within the biomedical field during the first year. The training program is divided into three phases. The first phase allows students to follow an integrated first-year sequence of course work that involves a core curriculum in cell and molecular biology. In addition, the first year includes three research rotations that allow the students to sample areas of research and become familiar with faculty members and their laboratories. Selection of a specific training program and thesis advisor is made before the end of the first year. The second phase involves a two part course in intensive Pharmacology study, oral presentations and laboratory experience, which cumulates in a comprehensive written exam designed to challenge students to apply key concepts in new context.

After advancing to Ph.D. candidacy by passing the comprehensive written exam, students select one of four advanced tracks in Pharmacology. Choice among the tracks is based on the area of research expertise of the thesis advisor and the student’s interest in specific coursework. The four tracks are: Cancer Therapeutics, Membrane Biology and Pharmacology, Molecular Pharmacology and Cell Regulation, and Translational Therapeutics.

The Ph.D. degree is awarded to students who complete a research project leading to two original and meritorious scientific contributions that are submitted for publication to leading journals in the field of study. At least one manuscript must be accepted for publication before scheduling the Ph.D. thesis defense.

Students who desire the combined M.D./Ph.D. degrees are admitted to the Medical Scientist Training Program (MSTP, please see separate listing in this publication). These students participate in the two-year integrated preclinical curriculum of the School of Medicine (University Program), which features clinical correlation of basic biologic concepts. Combined degree students who select the Ph.D. in pharmacology undertake a series of advanced courses, research rotations, preliminary examinations and dissertation research in the same manner as that described above.

Although training efforts by the Department of Pharmacology are primarily directed toward the award of the Ph.D. degree, training for the M.S. degree is offered also in a variety of contexts. For example, research assistants in the Department who seek educational advancement may pursue the M.S. degree via Plan A (thesis) or Plan B (coursework only). Medical students who seek to specialize in Pharmacology during the scholarly research component of their preclinical program may pursue the M.S. degree. Employees in the Biotechnology Industry may seek advanced training in Pharmacology by pursuing the M.S. degree at Case. Finally, a Ph.D. candidate who is unable to complete the Ph.D. requirements for extraordinary reasons may petition to have earned credits transferred to fulfill M.S. degree requirements.

Facilities
The Department of Pharmacology occupies about 25,000 net square feet distributed among several locations, namely the Biomedical Research Building, the School of Medicine Harland Goff Wood Building and the adja-
酚木医学研究塔。设施包括广泛的显微镜和组织学研究设备，以及专门研究化学技术和方法，涉及基因和染色体技术，包括分子杂交、细胞荧光和X射线晶体学。

**COURSE DESCRIPTIONS (PHRM)**

**PHRM 301. Undergraduate Research (1 - 18)**

This course will examine the interdependence of scientific investigation and discovery with the society it occurred in. What is the effect of science on society and, importantly, what is the effect of society on science? An introduction will consider the heliocentric controversy with focus on Galileo. Two broad areas, tuberculosis and the Frankenstein myth, will then be discussed covering the period 1800-present. With tuberculosis, fiction, art, and music will be examined to understand the changing views of society towards the disease, how society's perception of tuberculosis victims changed, and how this influenced their treatments and research. With Frankenstein, the original novel in its historical context will be examined. Using fiction and film, the transformation of the original story into myth with different connotations and implications will be discussed. Most classes will be extensive discussions coupled with student presentations of assigned materials. Offered as PHRM 340, BETH 440, PHRM 440, and HSTY 440.

**PHRM 400. Research Experience in Pharmacology (0 - 1)**

Research rotation in pharmacology.

**PHRM 401. Principles of Pharmacology I (3)**

This course focuses on human physiology of organ systems that are involved in determining the time course of drug action in vivo (pharmacokinetics). Emphasis will be placed on fundamental principles of pharmacokinetics, including the absorption, distribution, metabolism, and excretion of drugs. Mathematical concepts needed to understand appropriate administration of drugs and maintaining therapeutic concentrations of drugs in the body will be discussed. A second broad area of emphasis is on fundamental principles of drug action within the body (pharmacodynamics), including drug-receptor theory, log dose-response relationships, therapeutic index, receptor turnover, and signal transduction mechanisms. This is a highly interactive course in which faculty lectures are minimized and student-directed learning is emphasized. An animal laboratory explores the actions of cardiovascular drugs in an in vivo setting. This 3-credit hour course meets 6 hours per week during the first half of the Spring semester (January through mid-February).

**PHRM 402. Principles of Pharmacology II: The Molecular Basis of Therapeutics (3)**

This course focuses on the chemical and biochemical properties of therapeutic agents, molecular mechanisms of therapeutic action including kinetic and thermodynamic principles of enzyme catalysis and drug-receptor interactions, signal transduction, the genetic basis of disease states, and interindividual variation in response to drugs. The primary learning objective is to develop a self-directed, critical approach to the evaluation and design of experimental research in the broad context of specific diseases. This is a team-taught course involving focal lectures by faculty followed by student-directed learning experiences including discussion, problem solving applications, and primary literature presentations. A laboratory exercise introduces experimental methodologies widely applied during the study of molecular interactions between therapeutic agents and receptor targets to reinforce fundamental principles of molecular drug action. This 3 credit hour course meets 6 hours per week mid-February through April.

**PHRM 403. Public and Professional Views of Modern Therapeutics (3)**

This course will present the students with headline news stories from the popular press along with pertinent published articles from the scientific literature. The object is to engage the student in critical evaluation of the scientific literature and news reports to discern the scientific basis for decisions such as removal of drugs from the market. The course will focus on topics such as Cox-2 Inhibitors and Heart Disease, Antidepressant Use for Adolescents, and Parkinson's Disease and Stem Cell Therapy, among others. Evaluation will be based on participation in student-led discussion sessions, weekly topical quizzes, and on written critiques of the primary literature.

**PHRM 412. Membrane Transport Processes (3)**

Membranes and membrane transporters are absolutely required for all cells to take up nutrient, maintain membrane potential and efflux toxins. This course will consider the classification and structure of membrane transport proteins and channels, examine the common mechanistic features of all systems and the specific features of different classes of transporter. Understanding the physiological integration of transport processes into cell homeostasis and consideration of transporters and channels as drug targets will be a goal. Course format is minimal lecture, primarily student presentations of primary literature papers. Offered as PHOL 412, PHRM 412. Prereq: CBIO 453 and CBIO 455.

**PHRM 420. Molecular Genetics of Cancer (3)**

Cancer is a genetic disease, not only in the Mendelian sense of inheritance, but also in the sense that it is caused by somatic mutation. This course will consider the interactions and structure of membrane transport proteins and channels, examine the common mechanistic features of all systems and the specific features of different classes of transporter. Understanding the physiological integration of transport processes into cell homeostasis and consideration of transporters and channels as drug targets will be a goal. Course format is minimal lecture, primarily student presentations of primary literature papers. Offered as PHOL 412, PHRM 412. Prereq: CBIO 453 and CBIO 455.

**PHRM 431. Advanced Methods in Structural Biology (3)**

Provides students with an in-depth introduction to biophysical techniques used to quantify macromolecular structures. A major part of the course will deal with the use of nuclear magnetic resonance to derive 3-D structures of macromolecules in solution. Other topics include electron spin resonance, absorption, fluorescence and circular dichroism spectroscopy, Raman and infrared spectroscopy, and methods used in modeling. Offered with BIOL 431, "Advanced Methods Biology II" in alternate years. BIOL 430 deals with protein hydrodynamics and thermodynamics, crystallography, and mass spectrometry. The course will be mostly lecture based. This course will provide an extensive overview for graduate students specializing in structural biology. Offered as BIOL 430, CHEM 430, PHOL 430 and PHRM 430.

**PHRM 432. Biochemical and Molecular Aspects of Vision (3)**

Increasingly, progress in the study of visual science is requiring multidisciplinary approaches that draw from the areas of biochemistry, genetics, molecular biology, neuroscience and pathology. We have recognized this fact and have adapted this course to fit the needs of tomorrow's scientists. This course encompasses the basic science aspects of the eye. Subjects include retinal anatomy and function, biochemical and molecular aspects of retinal disease and cataract; cellular and molecular neuroscience aspects pertinent to the visual system. Offered as NEUR 432, PATH 432, and PHRM 432.

**PHRM 434. Mechanisms of Drug Resistance (3)**

Resistance to drugs is an important health concern in the new millennium. Over the past century, modern medicine has developed and prescribed drugs for various ailments and diseases with known therapeutic benefit. Since the discovery of antibiotics by Dr. Fleming, we have struggled with a new complication in infectious diseases, development of drug resistance. This course will focus on and compare the drug resistant mechanisms selected by viruses, bacteria, parasites, fungi, and tumor cells. Topics to be covered include antiretroviral resistance (e.g., AZT and protease inhibitors), bacterial resistance (e.g., B-lactams), resistance to chemotherapeutic agents, and resistance to anti-malarial drugs (e.g., chloroquine). Offered as MBIO 434, MVIR 434, and PHRM 434.
PHRM 440. Science and Society Through Literature (3)
This course will examine the interaction of scientific investigation and discovery with the society it occurred in. What is the effect of science on society and, importantly, what is the effect of society on science? An introduction will consider the heliocentric controversy with focus on Galileo. Two broad areas, tuberculosis and the Frankenstein myth, will then be discussed covering the period 1800-present. With tuberculosis, fiction, art and music will be examined to understand the changing views of society towards the disease, how society's perception of tuberculosis victims changed, and how this influenced their treatments and research. With Frankenstein, the original novel in its historical context will be examined. Using fiction and film, the transformation of the original story into myth with different connotations and implications will be discussed. Most classes will be extensive discussions coupled with student presentations of assigned materials. Offered as PHRM 340, BETH 440, PHRM 440, and HSTY 440.

PHRM 466. Cell Signaling (3)
This is an advanced lecture/journal/discussion format course that covers cell signaling mechanisms. Included are discussions of neurotransmitter-gated ion channels, growth factor receptor kinases, cytokine receptors, G protein-coupled receptors, steroid receptors, heterotrimic G proteins, ras family GTPases, second messenger cascades, protein kinase cascades, second messenger regulation of transcription factors, microtubule-based motility, actin/myosin-based motility, signals for regulation of the cell cycle, signals for regulation of apoptosis. Offered as CLBY 466 and PHOL 466 and PHRM 466.

PHRM 475. Protein Biophysics (3)
This course focuses on in-depth understanding of the molecular biophysics of proteins. Structural, thermodynamic and kinetic aspects of protein function and structure-function relationships will be considered at the advanced conceptual level. The application of these theoretical frameworks will be illustrated with examples from the literature and integration of biophysical knowledge with description at the cellular and systems level. The format consists of lectures, problem sets, and student presentations. A special emphasis will be placed on discussion of original publications. Offered as BIOL 475, CHEM 475, PHOL 475, PHRM 475, and NEUR 475.

PHRM 476. Cellular Biophysics (4)
This course focuses on a quantitative understanding of cellular processes. It is designed for students who feel comfortable with and are interested in analytical and quantitative approaches to cell biology and cell physiology. Selected topics in cellular biophysics will be covered in depth. Topics include theory of electrical and optical signal processing used in cell physiology, thermodynamics and kinetics of enzyme and transport reactions, single ion channel kinetics and excitability, mechanotransduction, and transport across polarized cell layers. The format consists of problem sets, computer simulations, and discussion of original publications. The relevant biological background of topics will be provided appropriate for non-biology science majors. Offered as BIOC 476, NEUR 477, PHOL 476, PHRM 476.

PHRM 506. Central Nervous System Pharmacology (3)
Principles of neurotransmission in the central nervous system: the pharmacology of drug-induced alterations in these central systems and neurochemical basis of behavior and selected neurological and psychiatric diseases. Lecture seminar.

PHRM 511. Pharmacology Seminar Series (1 - 0)
Current topics of interest in the pharmacologist sciences.

PHRM 513. Structural Journal Club (1)
Current topics of interest in structural biology, and protein biophysics. Offered as PHOL 513 and PHRM 513.

PHRM 515. Endocrine Pharmacology (3)
Seminar lecture course on regulation at the molecular level of selected interrelated endocrine systems. Offered as BIOL 515 and PHRM 515.

PHRM 520. Basic Cancer Biology and the Interface with Clinical Oncology (3)
This is an introductory cancer biology course that is intended to give students a broad and basic overview of Cancer Biology and Clinical Oncology. The course will cover not only fundamental principles of cancer biology, but will also highlight advances in the pathobiology and therapeutics of cancer. Classes will be of lecture and discussion format, with emphasis on critically reading original journal articles. The specific topics presented will include carcinogenesis, oncogenes, tumor suppressor genes, genetic epidemiology, DNA repair, growth factor action/signal transduction, apoptosis, cell cycle control, cell adhesion, angiogenesis, tumor cell heterogeneity, metastasis, chemotherapy, photodynamic therapy, gene therapy, signal transduction inhibitors, and clinical oncology of the breast, prostate, lymphatic tissue, colon and other related malignancies. Course grades will be from participation/discussion, presentation and mid-term/final exams. Recommended preparation: CBIO 453 and CBIO 455. Offered as PATH 520 and PHRM 520.

PHRM 521. Special Topics in Cancer Biology and Clinical Oncology (1)
This one credit hour course in Cancer Biology is intended to give students an opportunity to do independent literature research while enrolled in PHRM 520/PATH 520. Students must attend weekly Hematology/Oncology seminar series and write a brief summary of each of the lectures attended. In addition, students must select one of the seminar topics to write a term paper which fully reviews the background related to the topic and scientific and clinical advances in that field. This term paper must also focus of Clinical Oncology, have a translational research component, and integrate with concepts learned in PHRM 520/PATH 520. Pharmacology students must provide a strong discussion on Therapeutics, while Pathology students must provide a strong component on Pathophysiology of the disease. Recommended preparation: CBIO 453 and CBIO 455, or concurrent enrollment in PHRM 520 or PATH 520. Offered as PATH 521 and PHRM 521.

PHRM 525. Topics in Cell and Molecular Pharmacology (0 - 18)
Individual laboratory research project under the guidance of a pharmacology sponsor. Projects will reflect the research interest of the faculty sponsor, including molecular endocrinology, neuropharmacology, receptor activation and signal transduction, molecular mechanisms of enzyme action and metabolic regulation.

PHRM 527. Pathways to Personalized Medicine (3)
This is a course of independent study designed to take the student from the bedside to the bench and back again. Students will select a problem from a list of important therapeutic issues related to variability in drug responsiveness and design a research program to elucidate its molecular, biochemical, genetic and pathophysiological basis. The resulting research proposal is expected to be multidimensional and include molecular, cellular, whole animal and clinical investigations. To guide the process students will assemble a mentoring group including at least one member of the Translational Therapeutics Track Faculty, a clinician working in the clinical realm in which the problem originates and a basic scientist with relevant experience. The written proposal will be defended orally. Recommended preparation: 1st year Pharm Graduate required courses.

PHRM 528. Classic and Contemporary Approaches to Drug Discovery (3)
This course will provide the student with a deeper understanding of the mechanism of drug action and target validation. The first portion of the course will describe the basis for classical approaches in drug discovery that include kinetic and thermodynamic analyses for small molecule interactions with enzymes and receptors. The second portion of the course will describe new technologies and agents such as interference RNA and peptoids as therapeutic agents. The final section will describe pre-clinical and clinical trials as well as practical issues for start-up companies and licensing agreements.

PHRM 555. Current Proteomics (3)
This course is designed for graduate students across the university who wish to acquire a better understanding of fundamental concepts of proteomics and hands-on experience with techniques used in current proteomics. Lectures will cover protein/peptide separation techniques, protein mass spectrometry, bioinformatics tools, and biological applications which include quantitative proteomics, protein modification proteomics, interaction proteomics, structural genomics and structural proteomics. Laboratory portion will involve practice on the separation of proteins by two-dimensional gel electrophoresis, molecular weight measurement of proteins by mass spectrometry, peptide structural characterization by tandem mass spectrometry and protein identification using computational tools. The instructors’ research topics will also be discussed. Recommended preparation: CBIO 453 and
CBIO 455.

PHRM 601. Independent Study and Research (1 - 18)

PHRM 651. Thesis M.S. (1 - 18)

PHRM 701. Dissertation Ph.D. (1 - 18)

Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Department of Physical Medicine and Rehabilitation

Phone 216-778-3205
Gary S. Clark, M.D., C.P.E.
Professor, Chair, and
Residency Program Director

Physical medicine and rehabilitation (P M & R) is a medical specialty devoted to restoring people's maximal functional ability following a wide variety of disabling medical conditions, from traumatic brain injury and spinal cord injury to acute and chronic back or knee pain. In 1995, the Center for Physical Medicine and Rehabilitation was created to coordinate and expand the research and training activities of the medical school that are devoted to the rehabilitation of people with disabling conditions and injuries. In 2002, a full academic department was established in recognition of the significant growth in the scope of education and research in the field.

The goals of the department:

1) To foster high-quality, innovative research that concerns impairments, disabilities and handicaps resulting from illness, injury and developmental processes and that focuses on health-related improvement (physical, cognitive, behavioral and social) in human functioning and quality of life.

2) To promote and conduct effective teaching and training of principles and methods for rehabilitation of people with disabling chronic conditions and injuries at the undergraduate, graduate and post-graduate levels of medical education.

3) To enhance the quality and access to physical medicine and rehabilitation clinical services at university-affiliated medical centers.

4) To foster collaborative rehabilitation training and research among clinicians and basic scientists from a wide range of disciplines within the university.

The department's faculty includes physicians and psychologists with varied backgrounds who have a broad array of clinical and research interests. Current areas of research focus include 1) enhancing motor recovery and functional ability following paralysis from spinal cord injury, brain injury and stroke; 2) improving methods for managing bladder and bowel dysfunction following spinal cord injury; and 3) outcomes research related to health and human functioning, from specific functional abilities that can be enhanced by individual therapy methods to the cost-benefit of integrated trauma and rehabilitation care systems. Many opportunities are available for physicians, graduate students and allied health trainees to gain knowledge and skills related to clinical rehabilitation and/or related research areas.

Graduate Programs

The Department of Physiology and Biophysics at Case is a multidisciplinary department ranked among the top in the country. The department includes 60 active faculty members, more than 100 post-doctoral associates, and sixty, full-time Ph.D., M.D./Ph.D., and Master of Science degree students. The training programs are designed to provide a mentored training environment that maximizes faculty-student interaction.

As outlined below, the department offers Ph.D., M.D./Ph.D. and Master of Science degrees. These programs are tailored to prepare students for successful careers in biomedical, pharmaceutical and industrial research. The department offers multiple graduate-level programs, each of which uses state-of-the-art molecular, cell biology, and biophysical approaches to study physiological questions at a variety of different organizational levels. The goal is to provide an outstanding training opportunity. The major goals of the Ph.D. programs are to provide students with a broad knowledge base in organ systems and integrated physiology and in-depth expertise and outstanding research potential in the fields of cellular and molecular physiology and molecular and cellular biophysics. These goals are accomplished using a series of foundation and advanced topic courses, skill development courses, laboratory rotations and thesis research.

Admission Requirements for the Ph.D. Programs

Applications to the program are available from and should be submitted to the Department of Physiology and Biophysics. Typically, entering students will have a B.A., B.S. or M.Sc. degree in physical or life sciences. Requirements for admission:

- An appropriate undergraduate or master's degree.
- Undergraduate/graduate transcripts.
- GRE scores (plus TOEFL for international students).
- Three letters of recommendation.

Status of admission to the program is determined by a committee of faculty members based on application information and (often) candidate interviews. Normally, students enter the program in the fall semester.

Students should apply for financial assistance when they apply to the program. A majority of admitted students receive cost-of-living stipend support, health insurance and full tuition remission for the duration of their studies in the program.

Ph.D. and M.S. Programs

New students are advised and mentored by the Physiology Graduate Education Committee until they pass their Ph.D. qualifying exam (usually at the end of their second fall semester). After passing the qualifying exam, the student initiates thesis research under the direction of a specific mentor. Progress is then monitored by a graduate thesis committee.

The program of study consists of a core of courses that are completed during the first year. In addition, the students participate in three laboratory rotations by the end of their first full year of study. These rotations enable the student to sample the diverse research areas represented in the program and assist the student in making a well-informed choice of a thesis laboratory. Students also are required to attend the seminar series of either or both of the sponsoring departments throughout the duration of their studies, to gain wide exposure to cutting-edge research.

Elective courses provide an opportunity for advanced study relevant to the student's particular research interest.

Near the beginning of their second year of study, students in good standing (>3.1 G.P.A. and a minimum of 1 "C") choose their research preceptor and take their Ph.D. qualifying exam, a written/oral exam. The written segment involves preparing a qualifying exam research proposal, the topic for which is chosen from several provided by the faculty. The
oral exam tests the student on general course knowledge, understanding of laboratory rotation research, and a defense of the qualifying exam research grant.

Following satisfactory completion of the qualifying exam, the student and research advisor submit a list of four to six faculty to serve on the student’s thesis committee. This list is submitted to the director of graduate education for approval/revision in consultation with the Committee on Graduate Education. The research progress of the student is then overseen by this committee through a series of periodic progress report meetings.

Specific requirements for graduation include satisfactory general knowledge in cell and molecular biology, and molecular/cellular biophysics, specific expertise in the student’s chosen area of research, completion of the dissertation, and completion and acceptance of two first authored manuscripts in an excellent to outstanding peer-reviewed scientific journal.

Ph.D. in Cell and Molecular Physiology
This program is designed to provide students with training in state-of-the-art molecular and cellular technologies including gene cloning, transgenic methodology, and advanced microscopy. Research programs within the department span diverse fields focusing on fundamental cell and molecular biological questions in the context of normal cell physiology and pathology of disease states.

Ph.D. in Molecular and Cellular Biophysics
This program emphasizes quantitative methods and equips students to study cell and protein structure and function using state-of-the-art instrumentation and computing. The Department hosts outstanding research programs in the areas of structural biology and on cellular ion channels and ion transporters.

Ph.D. in Systems and Integrated Physiology
This program focuses on studies of the response of cells and organs in the whole-body environment. Researchers apply state-of-the-art methodologies to study cardiovascular, neuronal, gastrointestinal, renal, integumental, immune biology. The program supports a thriving graduate training program designed to train the next generation of systems biologists.

Ph.D. for M.D.s
To address the need to train M.D.-scientists, the Department of Physiology and Biophysics has instituted an accelerated Ph.D. program specifically geared to physicians interested in research. The key features of the program are its selectivity in terms of admissions qualifications—it is open only to those holding medical degrees—and its accelerated nature based on accelerated course learning and research training. The program is subdivided into advanced specialty courses (cell physiology electives) and hands-on research training and problem-solving (laboratory rotations, departmental seminars, qualifying examination, and thesis research). All students enrolled in the program must fulfill the general academic regulations for doctoral degrees as set forth by the School of Graduate Studies. Application is open to any individual holding a medical degree or expecting to receive one before entry into the program. Selection for admission is based on the applicant’s potential for independent and innovative research as evidenced by an outstanding academic record in basic science disciplines, previous research experience, and three letters of recommendation. The full-time plan of study consists of a minimum of 22 semester hours of course work and 18 semester hours of thesis research. The program can be linked to research-oriented residency programs such as the Clinical Investigator Pathway, approved by the American Board of Internal Medicine, and similar programs in pediatrics and surgery.

M.D./Ph.D.
This program consists of the core medical training in the Case School of Medicine with advanced graduate research training in any of the disciplines outlined above, leading to a combined M.D./Ph.D. degree. The program consists of the core medical training plus advanced graduate courses during the first two to three years, and finally clinical training leading to the M.D. degree. The combined degree program strives to optimize coursework and research experience for future physicians interested in medical research and academic careers.

Master of Science in Physiology
This program offers an excellent foundation for future careers in biomedical professions, academic or pharmaceutical research, by providing cell, molecular, and systems level coursework and research experience. The program includes one year of advanced coursework and hands-on laboratory experience, followed by a year of intensive laboratory investigation in a mentored environment. Students help choose their own research focus from a wide array of research areas represented within the Department. The program also is intended to serve as a stepping-stone for individuals seeking preparation for entry into Ph.D. or M.D. programs.

Program of Study for Ph.D. in Cell and Molecular Physiology

FIRST YEAR FALL

COURSE (CREDIT HOURS)
- PHOL 432 Cell Structure and Function (3)
- PHOL 456 Proteins and Nucleic Acids (3)
- PHOL 468 Membrane Physiology (3)
- PHOL 498-01 Physiology and Biophysics Seminar (1)
- PHOL 505-01 Laboratory Research Rotation (3)

FIRST YEAR SPRING

COURSE (CREDIT HOURS)
- PHOL 466 Cell Signaling (3)
- PHOL 480 Physiology of Organ Systems (3)

COURSE DESCRIPTIONS (PHOL)

PHOL 351. Independent Study (1 - 6)
This course is a guided program of study in physiology textbooks, reviews, and original articles. Guided laboratory projects to reproduce and extend classical physiological experiments are offered to the undergraduate science major. This course is being offered in conjunction with the Graduate level course PHOL 451. Students are required to consult with the faculty member whose work they have interest in and plan their individual experience.

PHOL 398. Physiology and Biophysics Departmental Seminar (1)
Weekly one-hour reviews from invited speakers describing their research. Students will present literature reviews or summaries of their research.

PHOL 411. Membrane Transport Processes (3)
Membranes and membrane transporters are absolutely required for all cells to take up nutrient, maintain membrane potential and efflux toxins. This course will consider the classification and structural features of membrane transport proteins and channels, examine the common mechanistic features of all transport systems and the specific features of different classes of transporter. Understanding the physiological integration of transport processes into cell homeostasis and consideration of transporters and channels as drug targets will be a goal. Course format is minimal lecture, primarily student presentations of primary literature papers. Offered as PHOL 411, PHRM 412.

PHOL 419. Applied Probability and Stochastic Processes for Biology (3)
Applications of probability and stochastic processes to biological systems. Mathematical topics will include: introduction to discrete and continuous probability spaces (including numerical generation of pseudo random samples from specified probability distributions), Markov processes in discrete and continuous time with discrete and continuous sample spaces, point processes including homogeneous and inhomogeneous Poisson processes and Markov chains on graphs, and diffusion processes including Brownian motion and the Ornstein-Uhlenbeck process. Biological topics will be determined by the interests of the students and the instructor. Likely topics include: stochastic ion channels, molecular motors and stochastic ratchets, actin and tubulin polymerization, random walk models for neural spike trains, bacterial chemotaxis, signaling and genetic regulatory networks, and stochastic predator-prey dynamics. The emphasis will be on practical simulation and analysis of stochastic phenomena in biological systems. Numerical methods will be developed using both MATLAB and the R statistical package. Student projects will comprise a major part of the course. Offered as BIOL 319, ECECS 319, MATH 319, BIOL 419, EBME 419, and PHOL 419.

PHOL 430. Advanced Methods in Structural Biology (3)
Provides students with an in-depth introduction to biophysical techniques used to quantify macromolecular structures. A major part of the course will deal with the use of nuclear magnetic resonance to derive 3-D structures of macromolecules in solution. Other topics include electron spin resonance, absorption, fluorescence and circular dichroism spectroscopies, Raman and infrared spectroscopies and methods used in modeling. Offered with BIOC 431, “Advanced Methods Biology II” in alternate years. BIOC 430 deals with protein hydrodynamics and thermodynamics, crystallography, and mass spectrometry. The course will be mostly lecture based. This course will provide an extensive overview for graduate students specializing in structural biology. Offered as BIOC 430, CHEM 430, PHOL 430 and PHRM 430.

PHOL 432. Cell Structure and Function (3)
This course provides knowledge regarding cell structure and function, chiefly in mammalian cells but also in relevant model systems. The basic structure of the cell is discussed, as are various systems that regulate this structure. Topics to be covered include DNA transcription, translation and protein synthesis, intracellular transport, cell interaction with the external environment, cell cycle regulation, cell death and differentiation, signal transduction, and cell specialization and organization into tissues. The course emphasizes lectures and problem-based discussions with an emphasis on faculty-directed student self-learning. The major goals of this course are to provide students with a working knowledge of the cell to facilitate understanding of the scientific literature, and to familiarize students with current techniques in cell biology.

PHOL 451. Independent Study (1 - 18)
Guided program of study using physiology textbooks, research reviews, and original research articles. An independent laboratory research project may also be included.

PHOL 456. Proteins and Nucleic Acids (3)
The goal of this course is to provide a basic working knowledge of protein structure/function and molecular biology. The course begins with a discussion of protein structure and enzyme catalysis followed by protein purification and characterization. The course then addresses concepts relating to the application of modern molecular biology techniques. Students are taught how to clone genes and use these clones in animal and cell-based studies. The overall goal is to provide students with an understanding of proteins and genetic approaches that can be used in experimental work and to facilitate comprehension of the scientific literature. Offered as BIOC 457 and PHOL 456.

PHOL 466. Cell Signaling (3)
This is an advanced lecture/journal/discussion format course that covers cell signaling mechanisms. Included are discussions of neurotransmitter-gated ion channels, growth factor receptor kinases, cytokine receptors, G protein-coupled receptors, steroid receptors, heterotrimetric G proteins, ras family GTPhases, second messenger cascades, protein kinase cascades, second messenger regulation of transcription factors, microtubule-based motility, actin/myosin-based motility, signals for regulation of cell...
cycle, signals for regulation of apoptosis. Offered as CLBY 466 and PHOL 466 and PHRM 466.

PHOL 468. Membrane Physiology (3)
This student-guided discussion/journal course focuses on biological membranes. Topics discussed include thermodynamics and kinetics of membrane transport, oxidative phosphorylation and bioenergetics, electro-physiology of excitable membranes, and whole and single channel electrophysiology, homeostasis and pH regulation, volume and calcium regulation. Offered as CLBY 468 and PHOL 468.

PHOL 475. Protein Biophysics (3)
This course focuses on in-depth understanding of the molecular biophysics of proteins. Structural, thermodynamic and kinetic aspects of protein function and structure-function relationships will be considered at the advanced conceptual level. The application of these theoretical frameworks will be illustrated with examples from the literature and integration of biophysical knowledge with description at the cellular and systems level. The format consists of lectures, problem sets, and student presentations. A special emphasis will be placed on discussion of original publications. Offered as BIOC 475, CHEM 475, PHOL 475, PHRM 475, and NEUR 475.

PHOL 476. Cellular Biophysics (4)
This course focuses on a quantitative understanding of cellular processes. It is designed for students who feel comfortable with and are interested in analytical and quantitative approaches to cell biology and cell physiology. Selected topics in cellular biophysics will be covered in depth. Topics include theory of electrical and optical signal processing used in cell physiology, thermodynamics and kinetics of enzyme and transport reactions, single ion channel kinetics and excitability, mechanotransduction, and transport across polarized cell layers. The format consists of lectures, problem sets, computer simulations, and discussion of original publications. The relevant biological background of topics will be provided appropriate for non-biology science majors. Offered as BIOC 476, NEUR 477, PHOL 476, PHRM 476.

PHOL 480. Physiology of Organ Systems (3)
This course presents an advanced introduction to the fundamental physiological principles governing the major organ systems in mammals. The function of the nervous, endocrine, digestive, muscle, circulatory, respiratory, and urinary systems are discussed. At the conclusion of the semester, integrative aspects of the major organ systems will be illustrated through consideration of exercise and high altitude physiology. Offered as BIOL 480 and PHOL 480.

PHOL 498. Physiology and Biophysics Departmental Seminar (1)
Weekly one-hour reviews by invited speakers of their research. Students present literature reviews or summaries of their research.

PHOL 505. Laboratory Research Rotation (3)
One-semester experience in a selected faculty research laboratory designed to introduce the student to all aspects of modern laboratory research including the design, execution and analysis of original experimental work. Recommended preparation: Consent of instructor and scheduled laboratory.

PHOL 512. Skeletal Biology (3)
This is an advanced graduate level course for students interested in the morphogenesis, structure, function, and maintenance of the skeletal system taught jointly by faculty from Case Western Reserve University (CWRU), Cleveland Clinic Foundation (CCF), and the Northeastern Ohio Universities College of Medicine (NEOUCOM). It will meet twice per week for 90 minutes per session. The format will include an overview of the topic by the responsible faculty, followed by a discussion of important papers on the topic. The students will be expected to discuss the papers for each session and grading will be based on those discussions. The intent of the course is to enable students to understand the important problems in skeletal biology and both classical and modern approaches for solving them.

PHOL 513. Structural Journal Club (1)
Current topics of interest in structural biology, and protein biophysics. Offered as PHIL 513 and PHRM 513.

PHOL 514. Cardiovascular Physiology (3)
The goal of this course is to provide the student with a solid foundation in cardiovascular physiology and pathophysiology. The course will begin by providing a solid foundation in the structure, phenotype and function of cardiac and vascular muscle. In addition, electrophysiology and metabolism will be addressed. Both basic physiology and more advanced topics, such as pathophysiology, will be covered using a journal club format. (Twice weekly; 1.5hrs/ class.) Student participation is required.

PHOL 519. Cardio-Respiratory Physiology (3)
This course is designed to integrate systemic, cellular and molecular aspects of cardio-respiratory systems in physiological and pathophysiological states. The course requires prior knowledge of basic physiology of the cardiovascular systems. Extensive student participation is required. Instructors provide a brief overview of the topic followed by presentation and critical appraisal of recent scientific literature by students.

PHOL 522. Special Topics in Cardiac Electrophysiology (3)
Introduction to current topics in cellular cardiac electrophysiology and cardiac ion channel structure, function, and regulation. The format includes informal lectures as well as student presentations and class discussion of current literature.

PHOL 530. Technology in Physiological Sciences (3)
This lecture/discussion/journal course focuses on techniques in the physiological sciences. Topics include spectroscopy, microscopy, and electrophysiology. The theory and practice are covered with an emphasis on examples taken from the scientific literature.

PHOL 537. Microscopy-Principles and Applications (3)
This course provides an introduction to various types of light microscopy, digital and video imaging techniques, and their applications to biological and biomedical sciences via lectures and hands-on experience. Topics covered include geometrical and physical optics; brightfield, darkfield, phase contrast, DIC, fluorescence and confocal microscopes; and digital image processing. Offered as GENE 537, MBIO 537, and PHOL 537.

PHOL 601. Research (1 - 18)
Cellular physiology laboratory research activities that are based on faculty and student interests.

PHOL 610. Oxygen and Physiological Function (3)
Lecture/discussion course which explores the significance and consequences of oxygen metabolism in living organisms. Topics to be covered include oxygen transport by blood tissues, oxygen toxicity, and mitochondrial metabolism. Emphasis will be placed on mammalian physiology with special reference to brain oxidative metabolism and blood flow as well as whole body energy expenditure and oxidative stress related to disease. Offered as ANAT 610 and PHOL 610.

PHOL 651. Thesis M.S. (1 - 18)
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.
FRANCES PAYNE BOLTON SCHOOL OF NURSING

HISTORY

The Frances Payne Bolton School of Nursing has a proud heritage beginning with the Lakeside Hospital Training School for Nurses established in 1898. With a generous endowment from Frances Payne Bolton, who was the first congresswoman from Ohio, the School of Nursing was established in 1923 as a school within Western Reserve University. In 1969, Western Reserve University and Case Institute of Technology merged forming the current university, Case Western Reserve University. Consistently, the Bolton School is ranked among the leading schools in U.S. News and World Report and in funding from the National Institutes of Health. Graduate-level specialty majors have been in the top 10.

The Bolton School is noted for its innovation, leadership and excellence in education, research and practice. To support this mission, the school has thirteen endowed chairs, the largest number in the world for a school of nursing. The Bolton School is a World Health Organization Collaborating Center in Home Care. The Sarah Cole Hirsh Center for Best Nursing Practices Based on Evidence was established in 1998 was the first national center of its kind.

STRATEGIC VISION

Mission

Within the mission of Case Western Reserve University, the Frances Payne Bolton School of Nursing builds on a tradition of innovation and a commitment to the highest standards of excellence to provide the very best nursing education, research, clinical scholarship, and professional service locally, nationally, and internationally.

Priorities

The Frances Payne Bolton School of Nursing is committed to global leadership in nursing. The discovery, transmission, and use of knowledge are at the core of our work. Knowledge of health and illness in individuals, families, groups, and communities, both locally and internationally, provides the context for our work. The ultimate test of the validity of our vision is the results, over time, of the contributions of our faculty and graduates.

Purpose

The purpose of the Frances Payne Bolton School of Nursing is to provide an environment that permits individuals to develop their personal and professional capabilities, including the sense of responsibility for continued learning; to learn as efficiently and effectively as possible; to find enjoyment, excitement, and challenge in the pursuit of knowledge and its application; and to develop behaviors that enable them to function in a changing, complex society. As an integral component of Case Western Reserve University, the school assumes responsibility for the preparation of individuals committed to excellence and leadership in professional nursing. The faculty of the school accepts the responsibility for teaching and scholarly inquiry as integral parts of the educational process.

Philosophy

The School of Nursing has set forth the following philosophy to accomplish the stated mission.

Nursing is an academic discipline and profession. Nursing as an academic discipline is a distinctive branch of human knowledge fundamental to nursing practice, nursing education, and nursing administration, and to the continuous development of the profession. The distinctive perspective of nursing includes a focus on the metaparadigm concepts of persons, environment and nursing. The specific conceptual focus within the Bolton School is the health-seeking mechanisms and behaviors of human beings. Some of those mechanisms and behaviors are innate; others are learned or developed and may be subject to the influence of nurses’ knowledgeable ministrations. The body of nursing knowledge is continuously advanced, structured, and restructured as a consequence of a range of methods including scientific inquiry, philosophic inquiry, historiographical inquiry, and clinical evaluation.

Scientific inquiry within nursing is designed to discover, advance, and clarify knowledge about determinants and correlates of optimal biological, psychological, and social functioning; physical, emotional and spiritual comfort; and individual and group attainment of health goals in multiple environments and under a variety of circumstances (including illness and injury) attendant to birth, living, development, decline and death. Philosophic inquiry is undertaken to clarify the values that underlie consumers’ and nurses’ responsibilities for human health promotion, the ethics of nursing practice, and the nature of the body of knowledge known as nursing. Historical inquiry is undertaken to document significant influences (by events and individuals) on the development of nursing over time as a body of knowledge and as a profession. Clinical evaluation is designed to test and verify the relative efficacy of strategies used in nursing administration, consultation, education, and practice, and the means employed to advance nursing knowledge.

Professional nurses have mastery over a body of scientific and humanistic knowledge that is fundamental to their particular kinds of practice. They selectively use this knowledge in the execution of their professional responsibilities and in the attainment of professional goals. Those involved in differentiated nursing practices employ nursing technologies (skills and approaches that represent the application of scientific knowledge), using artistry in the execution of their professional responsibilities. Professional nurses’ several, particular practices are guided by a code of professional ethics and also by knowledge about the individuals and groups whom they serve. The nurse’s professional goal is to appraise accurately and to enhance effectively the health status, health assets, and health potentials of individuals, groups, families, and communities and to promote the initiative and independence of those they serve in the attainment of reasonable health goals, mutually agreed upon by consumers and by nurses as their health care providers. Nursing practice includes assisting persons in the maintenance of health, detecting deviations from health, assisting persons in the restoration of health, and supporting persons during life. These responsibilities are
accomplished through a systematic and deliberative process. Nursing practice includes independent and interdependent functions and nurses are an integral part of the health care system.

Other beliefs essential to nursing that are shared by the faculty are stated below:

Individuals and Groups
- Individuals have commonalities, but each person is unique and has worth.
- Individuals are in constant interaction with the environment.
- Individuals have a capacity to grow and develop.
- Human behavior is purposeful and involves choices that are directed toward meeting the individual’s needs.
- Individuals and groups have rights and responsibilities in relation to the promotion of optimal health.
- Individuals have the responsibility for making decisions about their health and have the potential to act on these decisions.
- Most individuals possess the capability for making appropriate decisions, although there are times when these abilities are diminished or absent.

Learning
- Individuals are capable of changing their behavior through the process of learning.
- The need and ability to learn continues throughout life.
- Learning is affected by interaction between the individual and the environment.
- Learning is enhanced when consideration is given to individual differences in cognitive styles.
- The responsibility for learning resides in the individual learner.
- The learning process is an individual endeavor; stimulation of the process is a joint responsibility of teacher and learner working toward common goals.

Cultural Diversity
- Learning is affected by interaction between the individual and the environment.
- Learning is enhanced when consideration is given to individual differences in cognitive styles as well as cultural background and influences.

Health
- Health is a dynamic, ever-changing state.
- Health is influenced by an individual’s heredity, environment, and lifestyle.

Health Care
- Health care encompasses all activities necessary to promote optimal physiological, psychological, and social functioning.
- Health care is rendered by the individual alone or in collaboration with health care providers, including nurses, and extends throughout the life span of the individual.
- Health care is complex and depends on the skills, resources, and cooperative efforts of consumers and health care providers.
- A recognized need exists in society to organize effectively the delivery of health care services.
- A variety of providers, each offering a unique and specific service, may be present in an organized health care system.
- The primary contribution of nursing to the health care system is to assist individuals and groups to attain, maintain, and regain optimal health.
- Health care professionals (including nurses) and consumers collaborate to define health; to identify factors inimical to health; to limit, reduce, or eliminate threats to health; to determine human and material resources necessary to provide health care services; and to evaluate and improve health services.
- Collaboration among health professionals and consumers can lead to the achievement of health care delivery systems that provide care that is available, accessible, feasible, acceptable, of optimal quality, sustained, and cost effective.
- Relevant concepts are further defined by faculty as follows:

Optimal Level of Health
The highest achievable level of function and security. This includes physiological function and environmental (physical security, psychosocial function, and security), and personal growth.

Health-Seeking Behaviors
The range of mental and physical activities consciously performed to maintain, attain, or regain optimal health.

Environment of Care
The “place” and phenomenal field where a nurse encounters clients who need assistance in maintaining, attaining, or regaining competence in striving for health, and where the nurse performs acts for clients to facilitate health-seeking behaviors (when they cannot do for themselves).

Professional Encounter
A person’s competence in matters related to health is dynamic and is influenced by genetic endowment and life experiences. At times a person requires assistance in improving competence. At these times, the nurse may enter into a relationship with the person (client) to facilitate the client’s health-seeking behaviors as he/she strives toward an achievable level of health. The client and nurse may view this relationship differently. The professional encounter requires a reciprocal relationship in which the nurse, as a professional expert with the client’s assent, influences the behavior of the client. The client in turn evokes responses from the nurse. The professional encounter is the initiation of a relationship between a nurse and a person requiring nursing care. The relationship is reciprocal in nature and may be initiated by either the client or nurse. Through the relationship mutual goal setting regarding health attainment is sought. When a nurse and client interact within the professional relationship, each performs functions deriving from their positions within a particular social context. The context (human-physical environment) in which the encounter occurs will have varying influence on both the client and nurse based on the cognitive, perceptual and emotional capacities of both. Although the environment in its physical representation is essentially the same for both, the perceptions of the client and nurse are different. The attributes that they bring to the relationship are shaped by intervening variables.

Nursing Strategies
Nursing strategies can be categorized according to the function they serve in facilitating clients’ health-seeking behaviors. A tentative classification scheme according to the function strategies is set forth below. Within each category there are multiple behaviors from which the nurse can select depending on the nature of the clients’ assets and deficits. Also, each category is open to the discovery of more activities than are presently known. Each category focuses on facilitating health-seeking behaviors.

Compensating: Performing selected activities
or measures (including monitoring) for clients when they are unable to do these activities.

Teaching: Performing actions intended to induce learning.

Counseling: Assisting clients to examine alternative course of action.

Supporting: Promoting clients’ ability to cope, adapt and change.

Stimulating: Promoting clients’ desire to perform health-seeking behaviors.

Advocating: Intervening on behalf of the client to overcome obstacles that are interfering with health-seeking behaviors.

Comforting: Providing an environment that promotes ease and well being.

The choice of nursing strategies for enhancing client’s health-seeking behaviors is based on assessment of these behaviors and the intervening variables to determine the assets and deficits and potential for engaging in behaviors that are directed toward attaining, maintaining or regaining an optimal level of health.

CENTERS OF EXCELLENCE

SARAH COLE HIRSH INSTITUTE FOR BEST NURSING PRACTICES BASED ON EVIDENCE

Established in 1998, the Sarah Cole Hirsh Institute for Best Nursing Practices Based on Evidence develops and promotes evidence-based practice in nursing. Historically, nursing and medical practices have been based, in part, on expert opinion and tradition, creating variations in practice and often subjectivity in judgment. Through the integration of research and practice, the Hirsh Institute stimulates the use of best nursing practices based on evidence as a basis for delivering superior health care, and shaping the next phase of nursing research.

CENTER FOR RESEARCH AND SCHOLARSHIP

The Center for Research and Scholarship provides a variety of services to support the research and scholarship efforts of faculty, students, and postdoctoral fellows, including management of the internal and external funding process. The center provides faculty and students with current funding opportunities that are available, assists in the development of research proposals, and disseminates research results regionally, nationally, and internationally. The center staff assists in the submission of Human Subjects Research reviews to the affiliated institutional review boards. The center provides support for all stages of faculty members’ manuscript submission including submission and tracking. Four full-time employees staff the center. A conference room and a workroom are available within the center for both faculty and student investigators.

INTERNATIONAL HEALTH PROGRAMS

The Bolton School houses a World Health Organization Collaborating Center for Nursing, one of only 12 in the United States. The focus of the Collaborating Center is home care nursing education and research. In addition, there are a variety of international health opportunities for students of all levels, including study abroad programs and short-term programs for international health experiences. Short study programs are offered to international nurses, specifically designed to meet their individual objectives.

ACCREDITATION

The Bachelor of Science in Nursing and Master of Science in Nursing programs are accredited by the National League for Nursing Accrediting Commission

National League For Nursing Accrediting Commission
61 Broadway-33rd Floor
New York, NY 10006
212-363-5555 Ext. 153

FACILITIES

Instructional Facilities

With a highly qualified faculty engaged in teaching, research, and community service, the Bolton school offers high quality academic programs. Instruction includes lectures, seminars, individual conferences and small group discussions, and clinical experiences under the guidance of a preceptor. Modern research and educational facilities include computer and skills laboratories.

Clinical Facilities

Instructional facilities are abundant and varied. The University Hospitals of Cleveland is a 947-bed academic medical center and is an aggregate of specialized hospitals that includes Alfred and Norma Lerner Tower, Samuel Mather Pavilion and Lakeside Hospital for adult medical/surgical care; Rainbow Babies and Children’s Hospital; University MacDonald Women’s Hospital; University Ireland Cancer Center; and skilled nursing and rehabilitation services. University Hospitals is part of the University Hospitals Health System with services provided at 100 locations in 40 northern communities. The Cleveland Clinic Health System has 2,957 beds and is comprised of the Cleveland Clinic Foundation and Fairview Hospital, Health Hill Hospital for Children, Lakewood Hospital, Lutheran Hospital, Maryland Hospital, Euclid Hospital, Hillcrest Hospital, Huron Hospital, and South Pointe Hospital. MetroHealth Medical Center is a regional referral center with 690-
beds for medical/surgical care to adults and children. It is a trauma I center with a burn center and 143-bed rehabilitation facility specializing in spinal cord injuries, only one of 19 in the nation. MetroHealth also has the Clement Center for Family Care, a neighborhood outpatient center, and a 291 bed skilled nursing care center. These hospitals are major clinical resources.

Additional opportunities are available in a variety of health, social, and educational agencies. These include, for example, American Red Cross, Benjamin Rose Institute, Hospice of the Western Reserve, Cleveland Psychiatric Institute, Kenneth W. Clement Center for Family Health Care, Judson Park Retirement Community, Hospice of the Western Reserve, Visiting Nurses Association, Cleveland Public Health Department, the Ohio Permanente Medical Group and many others.

Libraries

The Kelvin Smith Library, a 144,000 square foot building completed in 1996, houses most of the collections of Case Western Reserve University. This includes over 1,290,000 monographs, 7,363 serial titles, U.S. Government publications, company annual reports, newspapers, CDs, technical reports, over 12,000 DVDs and videos, and more. The library enables users to integrate both traditional resources and state-of-the-art technology into teaching, research, and learning. A variety of seating styles accommodates 900 people and provide electrical ports for connecting personal laptop computers. Case Western Reserve's wireless network enables personal laptops to have internet access throughout the library. Two multimedia rooms include scanners and sound and video digitizers. Available are individual study spaces, meeting rooms, conference areas, and social gathering places. Thirty miles of compact movable shelving allows the library to keep much of its collection onsite for immediate access to print materials. The user-friendly interface to the online catalog, databases, and other resources allows library staff to focus their attention on working in-depth with faculty and students.

In addition to the Kelvin Smith Library, students and faculty have access to the following libraries located on campus: the Cleveland Health Sciences Libraries, supporting programs in dentistry, medicine and nursing; the School of Law Library; the Lillian and Milford Harris Library in the Mandel School of Applied Social Sciences; the Kulas Music Library; and the Astronomy Library. Altogether, collections at the Case Western Reserve libraries encompass more than 1.8 million volumes, nearly 14,000 serials and periodicals, and a wide range of electronic information resources, including a CD-ROM reference database that is accessible through the Case Western Reserve network. These include OhioLINK, a state-funded network that links the libraries of 17 public universities, 23 community/technical colleges, 44 private colleges, and the State Library of Ohio and also offers access to research databases and other information resources.

The Health Sciences Libraries, which consist of the Health Center Library and the Allen Memorial Library, serve as the major libraries for holdings related to nursing, medicine, dentistry, nutrition, and biology. The Health Center Library adjacent to the School of Nursing houses nearly 350,000 volumes, 2,780 current periodicals, and audiovisual materials. Approximately 8,800 volumes are specifically nursing texts, and more than 100 journals are nursing publications. The library also houses a historical collection of nursing materials. The most current and heavily used books are placed on reserve to insure their availability to students. Faculty also place materials on reserve for use in the library. There are 18 public workstations to access the internet, and the library also provides wireless access for those with properly-equipped laptop computers.

UNIVERSITY INFORMATION TECHNOLOGY SERVICES

Information Technology Services (ITS) stewards, manages, and protects the university’s extensive technology resources and supports innovative, state-of-the-art technology applications, tools, and services to enrich learning, teaching, and research at Case Western Reserve.

Services managed include:

- The university’s high-speed network, which provides switched gigabit ethernet to each and every student, faculty and staff computers
- Wireless (802.11g) deployment with over 1300 access points to the campus community and beyond
- The Software Center that provides personal productivity and general-purpose software packages, including e-mail, calendaring and other applications
- Help Desk and support services to assist users in maximizing use of technology resources
- Deployment and operation of academic and instructional systems such as Blackboard
- Operation of application software such as e-mail and group calendaring
- Delivery off, including Voice over IP
- Delivery of audio/video services (including cable TV and videoconferencing)
- Development and operation of internal administrative systems
- University archives and records.

Help Desk

The Help Desk, powered by PerceptIS, provides computing support to the university community. It is open seven days a week. Services include:

- Troubleshooting and technical assistance through e-mail, telephone and walk-ins
- Dispatching, if necessary, of technical assistants to residence halls to resolve user problems
- Case management record to track problems and ascertain satisfactory closure of technical issues
- Technical support for television and video users
- Management of networked high speed laser printers in Wade and Fribley Commons.

Instructional Technology and Academic Computing (ITAC)

ITAC supports current technologies that enhance teaching and learning at Case Western Reserve University. Through technology support and professional development, ITAC supports the university community in its endeavor to experience, explore, collaborate and extend learning beyond its traditional bounds.

Services include:

- MediaVision – Video conferencing, streaming media, online
- Courseware and IP Television
- New Media Studio - digital technology to create interactive learning environments
- 3D experiences and innovative multimedia
- Faculty Support - Provides support for faculty in using teaching technologies.
- Student Technology Consultants - Employ students to assist faculty.

Software Services

Faculty, staff and registered students are eligible to download a variety of software packages that the university has purchased and made

650
available through site licenses with software manufacturers. Packages and tools include:

- Personal productivity and general-purpose software packages, including:
- Microsoft Office Suite
- E-mail
- Spam controls
- Enterprise calendaring
- Virus protection
- Operating systems
- Desktop publishing
- Drawing and painting systems
- CAD
- Mathematical and statistical packages and tools, and programming languages
- Courseware and collaborative tools providing online assessments and simulations (e.g., notes, exam keys, syllabi, text, and reference materials), scanned images and digital movies
- Online databases providing reference works, access to library holdings, locator materials, and a wide variety of both general purpose and specific databases.

**Telephone Services**

Telephone Services offers phone service, cell service, and Voice over IP.

Services include:

- On-campus, local and long-distance service
- High-speed Internet service and discounts
- Electronic access to account information, billing, and payment services
- Voicemail notification via e-mail and audio access to voicemail via computer
- Caller ID and other optional features
- Sprite cellular service at preferential and discounted rates

**Television Services**

ITS Television Services provides on-campus users, including students in residence halls, who have cable-ready televisions and video receivers to access the following services:

40 channels, including two on campus channels with local original programming

The university’s enterprise streaming media solution and production facilities designed and deployed by ITS Television Services.

**FRANCES PAYNE BOLTON SCHOOL OF NURSING INFORMATION TECHNOLOGY SERVICES**

The Frances Payne Bolton School of Nursing has its own Information Technology Services Department. This department manages and oversees all computer related operations within the school. Furthermore, the team assists faculty, staff and students with any computer problems, issues, needs, or equipment purchase. The Bolton School has its own Help Desk and provides troubleshooting of problems and repairs to all school-owned equipment. The School of Nursing has two computer laboratories and a Cyber-Café where student have access to computers and network-access connection for hooking up their laptops along with wireless network access. The main computer lab is located on the second floor and the Cyber-Café is located on the ground floor. These two areas are available during the weekdays, evenings, and weekend on a 24 hours basis. The second lab (Center for Bioinformatics) is located within the Learning Resource Center (LRC) on the ground floor and is only available when not used for classroom activities during weekdays from 9:00 a.m. to 5:00 p.m.

**Learning Resource Center (LRC)**

The Learning Resource Center (LRC) is a state of the art facility comprised of four academic support units, the Cyber Café, the Center for Bioinformatics and Health Promotion, the Multi-media Simulation Center and the Clinical Teaching Center. The School of Nursing students have the opportunity to advance their nursing skills by active participation in hands-on training sessions that demonstrate the real-life aspects of nursing. Our experienced learning support staff strives for competence, confidence and excellence. The staff is available by appointment to meet with students individually in order to review a particular skill, practice with SimMan, CathSim, SimBaby, or utilize the Bioinformatics lab to work with various nursing software packages. SimMan and SimBaby are high-tech human patient simulators that breathe, have a pulse, and maintain heart-rhythm and blood pressure. They simulate almost any patient emergency situation and are programmable to provide the most life-like responses with immediate feedback for student learning. CathSim is an intravenous trainer, which uses virtual reality-based patients to teach intravenous (IV) catheterization. They give students the ability to choose the patient they will start an IV on, depending on their particular clinical setting. The program offers immediate feedback and opportunities for review to enhance the nursing skills needed in real life environments.

The School of Nursing is equipped with four technology-enhanced classrooms, which allow our faculty to use powerful tools in teaching to engage the students with learning. The classrooms are equipped with a Dell computer, VHS DVD combo player, a ceiling mounted video projection system, a document camera, wall-mounted speakers, and a touch panel controlled LCD Monitor.

**ORGANIZATIONS**

**Student Organizations**

All enrolled students are members of their respective undergraduate or graduate student organizations that promote collegialship among students and provide social, cultural activities and educational. They are also members of the National Student Nurses’ Association, and after paying dues, member of the Bolton School’s chapter of this organization. Ph.D. students elect one member and one alternate to the Graduate Student Senate of the School of Graduate Studies. All minority undergraduate nursing students are automatically members of the Minority Student Nurses Association, which fosters collegialship among minority students. The Nurses’ Christian Fellowship is an affiliate of the Inter-Varsity Christian Fellowship. Selected by the student organizations, students also are members of some standing committees of the Bolton School. There are a variety of international student associations on campus as well.

**SIGMA THETA TAU**

Sigma Theta Tau is an international professional honor society, and Alpha Mu is the chapter at the Bolton School. Members are selected from students enrolled in one of the school’s nursing programs or nurses in the community with a B.S.N., M.S.N., Ph.D. or N.D. degree. Candidates are chosen based on superior scholastic achievement, potential for leadership and desirable personal qualities.

**ALUMNI ASSOCIATION**

Upon graduation, all nursing students are inducted into the Alumni Association. This begins a life-long membership and relationship with the School of Nursing. An elected board of directors and officers administer the association. Alumni are generous in their support of the school and provide funds for students and the Bolton School through the Annual Fund and other gifts and bequests. Activities of the alumni are reported in the FPB Nursing mag-
azine published by the nursing school.

ADMINISTRATION

May L. Wykle, Ph.D., R.N., F.A.A.N., F.G.S.A.

Margaret A. Wheatley, Ph.D., R.N. (Case Western Reserve University) 
Instructor of Nursing and Minority Fellow, SAMHSA at ANA

**BACHELOR OF SCIENCE IN NURSING**

The B.S.N. program emphasizes intensive and early clinical experience, a strong foundation in acute and critical care nursing and a commitment to service to our community. Our students begin their clinical experience in the first term of the freshman year and complete their program with a 300-hour clinical preceptorship in the senior year. Students graduate with 1600 hours of clinical experience, far exceeding that of other schools of nursing.

The student-learning environment includes traditional classrooms, world-class clinical facilities, community settings and the Learning Resource Center (LRC). The LRC consists of four activity centers: the Clinical Teaching Center; the Center for Bio-informatics and Health Promotion; the Multimedia Simulation Center; and the Cyber Café. Clinical experiences occur in Cleveland’s nationally and internationally renowned health care facilities including the University Hospitals of Cleveland, the Cleveland Clinic and the Metropolitan Health System. Students also have extensive experience in community health departments, community centers and the Cleveland Municipal School District.

The opportunities available to students are limitless. Students are encouraged to participate in interdisciplinary research projects with senior faculty. They have the opportunity to explore health issues in the global arena, to study in international sites as part of their standard curriculum. International activities are supported by the Bolton School’s World Health Organization (WHO) Collaborating Center.

Graduates have a foundation in the discipline of nursing, demonstrate leadership in clinical practice, use clinical inquiry to advance practice, become involved in research, and assume responsibility for their own professional development.

**Characteristics of the Graduate**

- Teaches and counsels individuals, families and other groups about health, illness and health seeking behaviors
- Critiques and applies research findings to clinical practice
- Provides direct patient care and assumes leadership role in directing nursing care to individuals, groups and families
- Participates and assumes beginning leadership roles
- Uses principles of ethics and the professional code as a framework for decision making
- Works effectively as a member of an interdisciplinary health care team
- Uses effective communication techniques with diverse clients, colleagues, and information systems
- Describes process of health care policy development

**Admission Requirements**

**FRESHMAN**

- Application for undergraduate admission to the Case Western Reserve University
- Recommendation from secondary school report/counselor
- Secondary school transcript
- Writing sample
- SAT/ACT scores

**TRANSFER**

- Application for undergraduate admission to the Case Western Reserve University
- Secondary school transcript
- Teacher recommendation
- Statement of good standing
- College transcripts
- Personal statement
- SAT/ACT scores

**Degree Requirements**

Candidates for the Bachelor of Science in Nursing degree must complete the following:

1. Minimum of 125 hours as specified by the requirements with a 2.0 GPA
2. A minimum of C for all courses taken in nursing and science
3. A minimum of 50 credit hours in 300 and 400 level courses
4. Both the university mandated general education requirements and the nursing major as prescribed by the School of Nursing.

**Progression in the B.S.N. Program**

Progression in the Bachelor of Science in Nursing program is contingent upon satisfactory academic achievement in all required courses. To maintain satisfactory academic standing, ...
students must attain a GPA of 2.0 or above by the end of their junior year and must obtain a C or above in all nursing and science courses. Although the university accepts a D as a passing grade, the grading policy of the Bolton School is A, B, C, F. Students who receive two unsatisfactory grades (D or F) in nursing and/or natural and behavioral science courses will be subject to separation from the School of Nursing. See the Undergraduate Student Handbook for a description of the criteria for academic standing.

Students who receive a grade of Incomplete (I), given at the discretion of the instructor for the course, must complete course requirements by the eleventh week of the following semester. It is the student's responsibility to notify the instructor of the circumstances preventing completion of all assigned work. In the absence of notification or adequate justification, the instructor may give the student a final grade that assumes a failing grade for the missing work. If a student fails to submit the work required for removing the Incomplete by the date established by the instructor or by the eleventh week of the following semester, the grade will convert from I to F.

Students who receive an F for a nursing course must register for that course the next semester it is offered. If the overall GPA falls below the required cumulative GPA, the student is placed on academic probation. If the GPA does not improve the next semester, the Academic Standing Committee will review the student's record to determine whether extenuating circumstances warrant an additional semester of probation or separation from the university.

Curriculum
This four-year generic program for high school graduates leads to a B.S.N. degree. Upon successful completion of the program, graduates will be eligible to sit for the examination for licensure as a registered nurse (R.N.). The School of Nursing has the right to determine a student's readiness to sit for the NCLEX-RN examination and the right to restrict testing until the student demonstrates a readiness to pass this examination. This examination is given by State Boards of Nursing, and satisfactory completion of this examination enables the graduate to practice as a R.N. in the state for which the examination was written.

The B.S.N. program includes nursing, science and liberal arts courses. A minimum 125 credit hours, with at least 50 credits from upper division courses, are required for awarding of the B.S.N. degree. Students must meet the university requirements for graduation. The ratio of clinical hours to credit hours is 4 to 1, and for laboratory hours, it is 2 to 1. The program plan for entry-level students to the B.S.N. program is located on the next page.

R.N./B.S.N. Entry Option
Registered nurse graduates of an associate or diploma program in nursing can obtain their B.S.N. by fulfilling the core requirements of the university and the upper division nursing courses developed specifically for this program.

ADMISSION REQUIREMENTS
• Completion of an accredited program in nursing with a minimum GPA of 2.5
• Current R.N. licensure in the State of Ohio
• Transcripts of all academic work
• No preadmission testing

PROGRAM REQUIREMENTS
Based on successful performance on the NCLEX-RN, 30 semester hours of proficiency in clinical nursing will be granted. Sixty semester hours of course work is the maximum amount that can be accepted as transfer credit toward the 62 hours of the university’s core requirements. However, only 15 semester hours of course work will be accepted for transfer credit after matriculation. Upon the satisfactory completion of the required 30 hours of upper division division courses and the 32 hours of proficiency in clinical nursing (total of 124 credits), students will be granted a Bachelor of Science in Nursing degree. Transfer credit will be evaluated for content and equivalence to university courses by the appropriate academic department. To be considered by transfer, course syllabi may have to be provided along with the academic transcript.

NURSING CORE REQUIREMENTS
To satisfy university core requirements, 62 semester hours of coursework must be completed in the following areas:
• English Composition
• Natural and Mathematical Sciences
• Arts and Humanities
• Social Sciences
• Global and Cultural Diversity
• Physical Education

MASTER OF SCIENCE IN NURSING (M.S.N.)
The Master of Science in Nursing program prepares registered nurses for advanced practice specialization either as a nurse practitioner, clinical specialist, nurse midwife or nurse anesthetist. In addition, an M.S.N. in nursing informatics is offered. Dual-degree programs are offered in bioethics (M.S.N./M.A.), anthropology (M.S.N./M.A.), business administration (M.S.N./M.B.A.), and public health (M.S.N./M.P.H.).

Characteristics of the Graduate
• Develops and teaches educational offerings and provides consultation with other professionals/populations and communities about health, illness and health-seeking behavior
• Identifies clinical research problems, initiates utilization of research and participates in scientific inquiry
• Assumes functions and role of the Advanced Practice Nurse
• Assumes leadership positions in organizations at the local/state/national level
• Applies ethical principals in Advanced Practice Nursing
• Initiates interdisciplinary teams to enhance practice
• Establishes effective communication systems among clients and colleagues
• Contributes to health policy development through active participation in legislative processes

Entry Options
R.N. WITH NATIONAL CERTIFICATION IN ADVANCED NURSING PRACTICE
This M.S.N. completion program is designed to assist certified advanced practice nurses to complete a Masters of Science in Nursing degree. Registered nurse applicants must have a Bachelor in Nursing Science from an accredited nursing program. Applicants must have certification from a national accrediting organization as a nurse practitioner, clinical nurse specialist, nurse midwife, nurse anesthetist or AORN first assistant. The national certification in advanced nursing practice takes the place of the clinical coursework in the specialty where the person holds certification. A Master of Science in Nursing can be obtained by completing 18 credits at the Bolton School of Nursing. These include the core courses in Inquiry, Professional Development and Advanced Practice.

Course Hours

656

CASE WESTERN RESERVE UNIVERSITY
R.N./M.S.N. Entry Option
Registered nurse graduates of an associate degree or diploma nursing program may enter the Masters of Nursing program after completing undergraduate pre-requisites for graduate level nursing courses.

R.N. WITH A B.S. OR B.A. DEGREE
Applicants with a B.A. or B.S. degree from an accredited college or university in a field other than nursing and who have graduated from NLNAC or AACN accredited associate degree or diploma programs may submit a portfolio detailing professional accomplishments and experiences. If the portfolio is approved, the applicant may enter the Master of Science in Nursing program directly.

R.N. WITH B.S.N. DEGREE
Applicants with a B.S.N. degree from an AACN or NLNAC accredited nursing program are admitted directly into the Master of Science in Nursing program.

ADMISSION REQUIREMENTS
- Three professional recommendations (1 clinical, 1 academic, 1 current)
- Eligible for R.N. licensure in Ohio
- Satisfactory scores on the Miller Analogies Test (MAT) or the Graduate Record Examination (GRE).
- Completion of an accredited first professional degree program in nursing.
- Within 5 years of admission and prior to registering for NURS 425, satisfactory completion of a college or university statistics course with content comparable to NURS 201.
- Applicants who do not meet the above requirements may be referred to the M.S.N. Admissions Committee for special consideration, and may be required to fulfill additional prerequisites and demonstrate clinical nursing proficiency.

PROGRAM REQUIREMENTS
Candidates for a Master of Science in Nursing with a B.S.N. degree or a Certificate in Professional Nursing must satisfactorily complete a minimum of 36 semester hours of graduate study or 18 credits if admitted in the Master’s completion option. Students seeking specialty certification as a nurse practitioner, clinical specialist, nurse midwife or nurse anesthetist must complete the specified Nursing Clinical courses. A maximum of 9 semester hours of credit in approved graduate courses, where a grade of B or above was attained, may be accepted from another accredited university. This credit will be evaluated for transfer upon receipt of the official transcript and syllabi for the courses to be reviewed. The clinical interests, learning needs and career goals of students are considered when the academic program is designed. Research experience forms an integral part of graduate study in nursing. Degree requirements must be completed within five years after initial enrollment in the School of Nursing. The ratio of clinical class-
partners, these projects are a unique component of the Bolton School’s master’s curriculum. Community agencies that participate include but are not limited to the Hospice of the Western Reserve, The Heath Museum of Cleveland, the American Red Cross Greater Cleveland Chapter, school districts in the Cleveland area, and the Cleveland Municipal School District.

PROGRESSION REQUIREMENTS

Progression in the M.S.N. program is contingent on a cumulative GPA of 3.0 and passing grades in all courses (A, B, C, P or S). If the cumulative GPA falls below 3.0 during any semester, the student will be placed on academic probation. To be removed from probation, the student must have a cumulative GPA of 3.0 or higher in the next academic semester he/she is registered. If the student fails to be removed from academic probation at this time, he/she may be separated from the School of Nursing.

The grade of incomplete (I) will be given at the discretion of the instructor for work not completed in the semester. The “Arrangement to Resolve a Grade of Incomplete” form must be completed prior to the end of the semester or the instructor may assign a grade of U or F. A grade of I must be removed by the end of the semester following the one in which the course was taken or before the student enrolls in a course for which the initial course is a prerequisite. No credit is given for an I grade. A student who receives a grade of F or U for a required course must register for the course the next semester it is offered to continue in the M.S.N. program. If the grade of U or F is in a course that is not required for the M.S.N. program, the student may register for the same course or a substitute course and achieve a passing grade to continue in the M.S.N. program. If the student receives a grade of F or unsatisfactory performance (F, U & NP) in two courses, he/she will be excluded from the Bolton School.

DEGREE REQUIREMENTS

The Master of Science in Nursing program requires a minimum of 36 semester hours of graduate credit for the student who enters with a B.S.N. degree. Other degree requirements must be fulfilled for those entering with the portfolio or R.N./M.S.N. entry options. A maximum of 9 semester hours of credit in approved graduate courses, where the student obtained a grade of B or above, may be transferred to meet program requirements. To be awarded a M.S.N. degree, the student must have a cumulative GPA of 3.0 and received satisfactory grades in all nursing courses taken for credit as a M.S.N. student. Degree requirements must be completed within 5 years of initial enrollment.

NURSE PRACTITIONER

Nurse practitioners promote optimal health, detect illness and facilitate restoration and maintenance of health. They often function independently in a variety of settings. Two specialties are available for acute care nurse practitioners and six specialties are available in primary care. These programs contain at least 500 hours of clinical experience. Graduates are eligible to sit for the national certification examinations for these specialties.

Acute Care Nurse Practitioner

There are practice requirements for these specialties. One year of experience in acute care is required for the Acute Care Nurse Practitioner. A concentration in flight nursing is available within the Acute Care Nurse Practitioner major. One year of experience in neonatal intensive care is required for the Neonatal Nurse Practitioner.

*The Advanced Practice Core courses are co-requisites or prerequisites for the clinical nursing courses. Clinical Nursing Courses must be taken in the semester and sequence listed above. Clinical course availability is based upon enrollment.*

### Primary Care Nurse Practitioners

This major is now offered in distance format with only 8 trips to Cleveland if you are a full-time student.
Adult Oncology/Palliative Care Nurse Practitioner
This option will begin fall 2009. See website for program plan.

Family Nurse Practitioner Program Plan
This major is now offered in distance format with only 8 trips to Cleveland if you are a full-time student.

*Notes: The Advanced Practice Core courses are co-requisites or pre-requisites for the clinical nursing courses. Clinical Nursing Courses must be taken in the semester and sequence listed above. Clinical course availability is based upon enrollment.

**NURSE ANESTHESIA**

Nurse anesthesia focuses on preoperative evaluation, intra-operative management and postoperative evaluation of patient anesthesia care. Nurse anesthetists are primarily responsible for direct patient care and are prepared as expert clinicians.

Clinical courses provide students with opportunity to give direct patient care, participate in staff education programs and identify clinical topics for research. Students work one-on-one with a clinical preceptor with expertise in nurse anesthesia. The student will take part in administering general and regional anesthesia in persons of all ages. The management of emergency operations, obstetrics, pediatrics and neurosurgery are an integral part of the clinical experience. Graduates will be eligible to take the certification examination administered by the Council on Certification of Nurse Anesthetists.

All applicants must have at least one year of recent experience in one of the following acute care settings: recovery room, emergency room, or medical, surgical, neonatal or pediatric intensive care. Applicants for the Nurse Anesthesia Program will be reviewed on a rolling basis.
NURSE MIDWIFERY

Nurse-midwifery practice is the independent management of women’s health care, focusing particularly on pregnancy, childbirth, the postpartum period, care of the neonate, and the family planning and gynecological needs of women from adolescence to senescence. Certified nurse-midwives practice within a health care system that provides for consultation, collaboration or referral as indicated by the health status of the client. The CNM practices in accord with the Standards for the Practice of Nurse-Midwifery, as defined by the American College of Nurse-Midwives (ACNM).

Nurse-midwife students work individually with a clinical preceptor in a variety of out-patient, in-patient, and out of hospital settings. Graduates will be eligible to take the certification examination administered by the American Midwifery Certification Board (formerly the ACNM Certification Council, Inc.). With the addition of 3 clinical hours in NURS 559 students are eligible for dual certification in Women’s Health.

CLINICAL NURSE SPECIALIST

There are two specialty tracks in the Clinical Nurse Specialist program, Medical-Surgical Clinical Nurse Specialist, and Public Health Clinical Nurse Specialist. Clinical Nurse Specialists are expert clinicians in a specialized area of nursing practice. The specialty may be identified in terms of: A population, a setting, a disease or medical subspecialty, a type of care, or a type of problem. Clinical Nurse Specialists practice in a wide variety of health care settings. In addition to providing direct patient care, the CNS influences care outcomes by providing expert consultation for nursing staffs and by implementing improvements in health care delivery systems. The focus of the public health nurse specialist is on...
mobilizing and empowering the community to act on its own behalf in matters affecting health and well-being. Interventions by the public health specialist are designed in collaboration with the community and interdisciplinary personnel. Such interventions focus on the promotion, protection, and restoration of health and the prevention of disease and disability. Graduates of these tracks are eligible to sit for certification examinations as a clinical nurse specialist.

NURSING INFORMATICS
The Nursing Informatics specialization emphasizes the preparation of graduates who can analyze nursing information requirements, design systems, manage information and its technological requirements, identify system implementation strategies, implement user training strategies, and evaluate system effectiveness in clinical, educational, administrative, and research venues. Students in Nursing Informatics will specialize in an area of interest within Nursing Informatics. These areas include but are not limited to: systems analysis and design, emerging technologies, database management, and organizational implementation of information systems. An internship of one semester will provide an opportunity for the student to obtain practical experience as a Nursing Informatics Specialist (NIS) in a variety of clinical, educational, research and administrative settings. The program includes 500 hours that may be credited toward the required 2000 hours for certification as a Nursing Informatics Specialist through the ANCC.

M.S.N./M.A. (ANTHROPOLOGY) JOINT DEGREE

The Master of Science in Nursing/Master of Arts in Anthropology joint degree provides students with the unique combination of crosscultural expertise in medical anthropology and clinical expertise in nursing. Students must complete a minimum of 19 credits in nursing core courses, 12 to 22 credits in clinical major courses, and a minimum of 18 credits in anthropology courses, distributed as indicated below. The actual number of credits depends upon the major selected. This curriculum plan reflects clinical nursing majors other than nurse anesthesia and community health. Choice of electives should guarantee that minimum credit requirements are met. All students must pass the Masters Qualifying Examination in Anthropology.

M.S.N./M.B.A. JOINT DEGREE
The Master of Science in Nursing/Masters in Business Administration joint degree program is designed for nurses with managerial and organizational skills needed to manage patient care environments or health programs and to participate in the strategic and operational leadership of health care agencies. This program integrates nursing and management courses taken concurrently. A three-hour practicum must be taken in one semester.

M.S.N./M.P.H. DEGREE
The focus of the M.S.N. clinical specialization is on the development of skills necessary for the comprehensive assessment and diagnosis of the health status of communities and populations. The use of program planning models for development of community or population need based programs is emphasized and thorough program evaluation techniques are stressed. The Master of Public Health Program, operated by the School of Medicine and the School of Graduate Studies, prepares students for the broad mission of public health, defined as “enhancing health in human populations through organized community effort” utilizing education, research and community service. The dual-degree program will not only prepare nurses to sit for the American Nurses Credentialing Center (ANCC) clinical specialty exam in Advanced Public Health Nursing, but also will prepare nurses to assume leadership roles in the overall planning, organizing, and delivery of care to populations and communities. See website: http://fpb.case.edu/MSN/MSNMPH.shtml

JOINT PROGRAMS WITH FRONTIER NURSING SERVICE

M.S.N./CNEP
The Community-Based Nurse-Midwifery Education Program (CNEP) is a distance education program leading to a certificate in nurse-midwifery. Students complete course and clinical work in their communities. CNEP is housed in the Frontier School of Midwifery and Family Nursing in Hyden, Kentucky. The program is administered by a Certified Nurse-Midwife with over 40 Certified Nurse-Midwifery faculty members. Through an innovative affiliation agreement, students attending CNEP receive full course credit towards a Master’s Degree in Nursing from Case Western Reserve University. Degree requirements must be completed within 5 years of completion of CNEP.

Course of Study for M.S.N./CNEP Curriculum

SCIENTIFIC INQUIRY
- NURS 405 3
- NURS 425 3
- NURS 502 2
- NURS 503 1-2
- Total 10-11

M.S.N./CFNP
The Community-Based Family Nurse Education Program (CFNP) is an innovative joint degree program with the Frances Payne Bolton School of Nursing at Case Western Reserve University. The program is designed for aspiring family nurse practitioners who complete course and clinical work in their communities. The program is designed with a 24 month full-time or a 36 month part-time option. The Master’s degree is awarded by Case Western Reserve University. Degree requirements must be completed within 5 years of completion of CFNP courses at Frontier Nursing Service. For more information, contact:

CASE WESTERN RESERVE UNIVERSITY
Frances Bolton Payne School of Nursing Student Services
and D.N.P. (Level IV) degrees and prepares students for roles in a variety of advanced practice nursing specialties with additional electives as clinical or educational leaders.

- Post Master's D.N.P. Program: The post-M.S.N. portion of the D.N.P. program prepares nurses with M.S.N. degrees to be clinical leaders. Students acquire in-depth knowledge in nursing theory, research, policy, and education or management.

Scholarly Project: All students completing the D.N.P. program prepare a scholarly project.

**Characteristics of the Graduate**

- Initiates and develops educational offerings and provides consultation with other professions/populations and communities about health, illness and health seeking behavior
- Initiates, designs, conducts, directs and reports clinical research studies or projects
- Assumes functions and role of Advanced Practice Nurse and evaluates system-wide processes and directs changes in outcomes
- Assumes leadership positions of increasing complexity at the local/state/national levels
- Analyzes ethical issues in generating policy and practice recommendations
- Develops systems to establish and promote interdisciplinary teams
- Evaluates communication systems and generates new models to effect system change
- Analyzes impact of health care policy on delivery systems and implements changes

**Progression in the D.N.P. Program**

**ACADEMIC PERFORMANCE**

Progression in the Doctor of Nursing Practice degree program is contingent upon satisfactory academic achievement in all required courses. To maintain satisfactory academic standing, students enrolled for the postlicensure component of the D.N.P. degree must attain a grade point average of 3.0 or above. C, the lowest passing grade is regarded as borderline performance. An overall GPA of 3.0 is required to progress to the post-licensure component of the Graduate Entry D.N.P. Program.

If a student’s semester grade point average is less than 3.0 or the overall GPA is less than 3.0, the student will be placed on probation and an individualized plan will be developed and documented. The student will be removed from probation when the overall GPA is 3.0 or higher. If the student is on probation for two semesters, the student’s record will be reviewed by the Executive Committee to determine whether extenuating circumstances warrant an additional semester of probation or whether the student should be separated from the program.

D.N.P. students in the postlicensure component of the Doctor of Nursing Practice program must select the letter grade option (A, B, C, F, or W) when registering for all required nursing courses (except scholarly project or practicum hours) and achieve a minimum grade point average of 3.0 for the semester.

In the event that a student’s cumulative grade point average falls below a 3.0 during any semester of matriculation, the student will be placed on academic probation. In order to remove the academic probation the student must, in the next semester for which he or she is registered, achieve grades at a level sufficient to increase the overall GPA to a 3.0. If a student on academic probation fails to be removed from that status within one academic semester following the one with academic difficulty, the student will be excluded from the program.

Students who enter the Doctor of Nursing Practice program at the prelicensure level must achieve a cumulative grade point average of 3.0 or above in all courses taken for credit as a D.N.P. student at the Frances Payne Bolton School of Nursing to be awarded the D.N.P. degree. Students who enter the Doctor of Nursing Practice program at the postlicensure level must achieve a cumulative grade point average of 3.0 or above in all courses taken for credit as a D.N.P. student at the Frances Payne Bolton School of Nursing to be awarded the D.N.P. degree. All D.N.P. students must successfully defend the scholarly project.

When a student receives a grade of F for a required course, the student must register for that course the next semester in which the course is available. Doctor of Nursing Practice degree students who receive two failing grades indicating unsatisfactory performance (F, NP, or U) in required courses will be excluded from the School of Nursing.

Progression from one semester to the next in the Prelicensure Component of the D.N.P. Program is contingent upon passing grades in all courses taken in the preceding semester.

The grade of incomplete (I) will be given at the discretion of the instructor for work not completed in the semester. A grade of I must be removed by the end of the semester following the one in which the course was taken or before the student enrolls in a course for which the initial course is a prerequisite. No credit is given for an I grade. The I will remain a permanent part of the transcript if the student fails to complete course requirements within the next semester.

**Approval of R.N. Licensure Applications**

In order to have the “Program Completion” section of the application R.N. Licensure approved by the Program Director, students must meet the following criteria:

1) Qualify for the “Certificate of Professional Nursing”/MN degree
2) Demonstrate readiness to take the NCLEX-RN Examination by achieving at least a minimum score on a NCLEX-RN predictor exam. (Refer to separate procedure on “Demonstrating Readiness to the NCLEX-RN Exam for details).

**Scholarly Project**

The D.N.P. program culminates in successful completion of a scholarly project, which may be an independent thesis or an applied research project. The scholarly project is designed by the student in collaboration with a 3-member committee approved by the Director of the D.N.P. Program. The project must be a significant contribution to existing nursing knowledge and suitable for publication in a peer reviewed journal or a book. The procedures and written product must conform to the regulations of the Bolton School of Nursing. The student must follow the appropriate approval process before applying for IRB approval (if necessary) and proceeding with the scholarly project. For a description of the independent scholarly project, see the website:

http://fpb.case.edu/DNP/program.shtml

The scholarly project could be a program needs assessment with program development and evaluation, evaluation of an existing program, development of an assessment instrument/protocol for clients, a cost/benefit analysis of program models, research or other scholarly project as approved. The scholarly project will be developed in consultation with the student’s project committee and approved by the committee in a formal proposal defense.

Students must successfully defend their completed scholarly project in an oral examination with their committee members who are responsible for certifying that it meets acceptable scholarly standards. The defense is open to faculty and students; the chair determines whether the defense is open to those outside of
the university. The committee determines the adequacy of the oral examination and written product. A student will pass if two or more of the committee members agree that the student successfully responded to questions during the defense and the written product met scholarly standards.

Degree Requirements
Candidates for the Doctor of Nursing Practice degree must complete all required courses, including the courses required in their master level clinical major. Post licensure students will be awarded a Master of Science in Nursing if they meet the degree requirements for this degree.

TIME FRAME FOR COMPLETION OF DEGREE:
• Graduate entry students (non-nurses) must complete the program within 7 years of initial enrollment.
• Post-licensure entry students must complete the D.N.P. program within 5 years.
• Post-master's entry students must complete the D.N.P. program within 4 years.
• D.N.P. students who do not complete the D.N.P. program within the above timeframe should send a letter to the Director of the Doctor of Nursing Practice program with a request for an extension and a proposed plan for completing the remaining requirements.
• Records of students who do not complete the program within the specified timeframe will be re-evaluated in terms of the curriculum in effect at the time of review. The student may be required to take additional course work to graduate.

Graduate entry D.N.P. Program
The first four semesters of the Graduate Entry Program is the prelicensure portion that includes all course work necessary to sit for the professional nursing licensing examination (NCLEX-RN) required to practice nursing. During this portion of the program, the student receives instruction in nursing theory, clinical skills, and the nursing sciences. Effective through the class entering fall 2008, students who successfully complete the prelicensure curriculum are awarded the Certificate of Professional Nursing. Beginning with the class entering fall 2009, the program will allow the approval of the Ohio Board of Regents, to award the MN (Master of Nursing) degree on successful completion of the pre-licensure curriculum. After passing the NCLEX, the student may practice as a registered nurse (R.N.) while completing the post licensure portion of the D.N.P. program.

ENTRY OPTIONS
• Post-Baccalaureate: Graduates from an accredited college or university with a baccalaureate degree in a non-nursing field.
• Senior Year in Professional Studies: Students currently enrolled in a 4-year baccalaureate program at an accredited liberal arts college after 3 years of study.

ADMISSION REQUIREMENTS
• B.A. or B.S. with acceptable GPA (3.0 cumulative; 2.5 natural science; 2.5 behavioral sciences). A grade of C (2.0) or higher is required for individual pre-requisite courses.
• English Composition: One course or integrated equivalent; at least 3 credits.
• Chemistry: One course in general or inorganic chemistry and one course in organic chemistry or biochemistry equivalent to Case Western Reserve University’s BIOL 121 within 5 years prior to enrollment (lab preferred). At least 6 credits total.
• Human Anatomy and Physiology: At least 6 credits within 5 years prior to enrollment.
• Microbiology: one course with lab within 5 years prior to enrollment. At least 4 credits.
• Sociology or Anthropology: one course, at least 3 credits. Psychology: one course, at least 3 credits.
• Human Growth and Development Across the Lifespan: one course at least 3 credits.
• Statistics: one course equivalent to Case Western Reserve University’s NUND 201 or STAT 201 (must include ANOVA) required within 5 years of enrollment in the program. At least 3 credits.
• GRE General Test: Satisfactory scores required (minimum of Verbal-500, Quantitative-500, and either Analytical-500 OR Analytic Writing 4.0)
• Miller Analogies Test (MAT): Satisfactory scores required (minimum of 45 (before 10/04) or 400 (after 10/04)

Senior Year in Professional Studies
A student in college with a formal arrangement with the Bolton School may enroll in the Senior Year in Professional Studies leading to R.N. licensure and then graduate study in nursing.

The Bolton School has existing SYPS agreements with some undergraduate institutions. Contact the Office of Student Services for more information. Applicants whose undergraduate institutions do not have an agreement with the Bolton School may arrange a Senior Year in Professional Studies on an individual basis. Information about arranging this program is available from Office of Student Services.

Students earn a B.A. or B.S. from the participating college or university upon successful completion of the first year of the D.N.P. program.

Students at Case Western Reserve University must apply through the undergraduate dean of their respective schools at the beginning of their junior year. To be awarded a B.S. or B.A. degree at the end of the successful completion of the first year of the D.N.P. program, the following must be met:
• Completion of the Case Western Reserve University Core Curriculum and two semesters of physical education, unless excused from the latter.
• Completion of three quarters of the major and minor concentration requirements
• Completed at least 90 semester hours of academic credit of which the final 60 hours being while in residence with no more than 6 semester hours earned in courses taken in another institution, either by cross-registration or by approved transfer of credit.

Progression from one semester to the next in the Pre-licensure, M.S.N. and D.N.P. components of the D.N.P. Program is contingent upon passing grades in all courses taken in the preceding semester and an overall GPA of 3.0. (Refer to the School of Nursing Bulletin for full policy on progression.)

NOTE: Successful completion of all pre-licensure courses is necessary to sit for the Professional Nursing Licensing Examination (NCLEX-RN). The Bolton School has the right to determine a student’s readiness to sit for the examination.

MENTAL HEALTH NURSING

D.N.P. Postlicensure Program

After completing the prelicensure portion of the D.N.P. program, students select an advanced practice specialty. R.N.s with a diploma, ADN, B.S.N., or non-nursing B.A. or B.S. may enter in this portion of the D.N.P. program. For those entering with a B.S.N., course work consists of master level courses in the chosen specialty, D.N.P. core courses and a D.N.P. thesis or research project. After successful completion of the course requirements for masters clinical track, the student receives a Masters of Science in Nursing degree and is eligible to sit for national certification examinations in advanced nursing practice. The Acute Care Nurse Practitioner, Acute Care Pediatric Nurse Practitioner, Neonatal Nurse Practitioner and Nurse Anesthetist specialties have requirements for clinical experience before entering these clinical tracks (See descriptions of each specialty requirements in the Master of Science of Nursing section). The D.N.P. core requirements prepare the student in clinical or educational leadership and nursing inquiry. An independent thesis or research project is a component of the post licensure portion of the program.

ENTRY OPTIONS
- R.N. with a diploma or associate degree in nursing from an accredited school (See R.N./M.S.N. program described under the masters program)
- R.N. with a B.S. or B.A. degree in a discipline other than nursing (See portfolio option described under the masters program)
- Nurse with a B.S.N. degree
- Nurse with a M.S.N. degree

Admission Requirements

R.N. WITH DIPLOMA AND ASSOCIATE DEGREE
- See the description of the R.N.-M.S.N. program described under the masters of nursing program.
- Satisfactory completion of undergraduate pre-requisites for the masters of nursing program.
- Written statement of academic and career objectives and research interest.
- The Graduate Record Examination, including verbal, quantitative and analytical sections.

R.N. WITH B.S. OR B.A. OTHER THAN NURSING
- See the description of the portfolio option described under the master’s of nursing program.
- Written statement of academic and career objectives and research interest
- The Graduate Record Examination, including verbal, quantitative and analytical sections.

R.N. WITH A B.S.N.
- Graduated from an accredited college or university with a baccalaureate degree in nursing with an overall GPA of 3.0 (in a 4 point system) or above is required. The Graduate Record Examination, including verbal, quantitative and analytical sections.
- Transcripts from all colleges and universities where academic work was done
- Interview with faculty to discuss career plans. This can be done by phone.
- Additional evidence of academic ability may be required.
- Undergraduate records will be reviewed for comparability to the prelicensure portion of the D.N.P. program. Additional coursework may be required.
- Written statement of academic and career objectives and research interest
- Students must complete the M.S.N. level inquiry courses before beginning the upper-level D.N.P. theory and research courses.

R.N. WITH A M.S.N.
- Graduated from an accredited college or university with a masters degree in nursing with an overall GPA of 2.75 (in a 4 point system) or above is required.
- Satisfactory scores on the Graduate Record Examination (GRE) or Miller Analogies Test (MAT). This may be waived by the Post-Masters/D.N.P. Program Director.
- Transcripts from all masters coursework.
- Interview with faculty to discuss career plans. This can be done by phone, but personal interviews are preferred.
- Written statement of academic and career objectives and research interest
- Nationally certified or qualified to sit for a national certification exam in advanced practice nursing.
- Completion of a college or university statistics course with content comparable to CASE STAT 201 within 5 years of entry into the Post-Masters D.N.P. Program.

DOCTOR OF NURSING PRACTICE PROGRAM

D.N.P. III (postlicensure):
- Students who complete Level I and II of the D.N.P. program (prelicensure) move into D.N.P. III as an R.N., having already completed core courses for the M.S.N.
- Students who enter in Level III of the D.N.P. program will complete the M.S.N prior to, or concurrently with, the D.N.P. IV curriculum. NURS 503 will not be needed.
- Students entering at the D.N.P. III level follow the curriculum stated for the selected M.S.N. specialty (see curricula in the M.S.N. section of this Bulletin) while also completing the D.N.P. IV Clinical Leadership or Educational Leadership electives AND A Scholarly Project. The M.S.N. course NURS 503 is not needed for the D.N.P.

D.N.P. IV (concurrent with or post-M.S.N.):
- Students who enter in Level IV of the D.N.P. program also select one of two elective sequences in 1)Clinical Leadership or 2) Educational Leadership In spring 2009, the DNP IV program Implemented a revised curriculum. For the required sequence of courses, see the website (http://fpb.case.edu/DNP/program.shtml). Students who were admitted before fall 2008, will complete the curriculum in place at that time.

DOCTOR OF PHILOSOPHY IN NURSING

The Ph.D. program is a post baccalaureate degree program designed to prepare scientists who initiate and conduct research relevant to nursing. Expertise in clinical nursing and competence in research are required to prepare scholars to disseminate knowledge into
clinical practice and nursing education. To achieve excellence in the academic program, students engage in activities consistent with the areas of research excellence of the faculty. Moreover, the faculty is committed to the intellectual growth of the student, which is achieved through mentorship and collaboration in scholarship.

The Ph.D. student concentrates on the organization and development of knowledge requisite to nursing practice for service to a population. The population may include age group (children, adults), focus of service (individual, family, or community) and position on the continuum of health (health and wellness, acute and chronic disruptions in health). Ph.D. students are culturally diverse, and many develop and apply knowledge relevant to global health needs.

Characteristics of the Graduate

- Develops, implements, and evaluates educational offerings, individually and in collaboration with others, related to research and nursing theory.
- Synthesizes and generates knowledge for the discipline of nursing.
- Identifies health issues amenable to research; disseminates knowledge and evidence to improve health.
- Assumes leadership positions of increasing complexity at the local/state/national and international levels.
- Identifies and analyzes ethical issues and standards related to science and knowledge development.
- Develops systems to establish and promote interdisciplinary teams in the scientific community.
- Generates and disseminates knowledge relevant to health care policy.
- Uses and promotes the development of effective communication strategies that support scholarship and the dissemination of research findings.

Entry Options

- Registered nurses with a Bachelor’s of Science in Nursing degree.
- Registered nurses with a Master’s of Science in Nursing or Master’s in Nursing degree.

Admission Requirements

Applicants to the Ph.D. program in nursing apply to the School of Graduate Studies. Applications and information for admission are available from the Bolton School. Application requirements are:

1. A professional degree (B.S.N., M.N., or M.S.N.) from an accredited nursing program.
2. Three recommendations describing professional nursing competence, potential for success in the Ph.D. program and for making a significant contribution to nursing science. Two of these recommendations should be from Ph.D. prepared individuals, preferably in nursing.
3. Satisfactory performance on the Graduate Record Examination that includes quantitative, verbal and analytical sections.
4. Statement of academic and career objectives and how the applicant’s research interest is consistent with the research expertise of the faculty.
5. Official college or university transcripts for all previous graduate and undergraduate education are required.
6. Written responses to questions contained in the application packet.
7. Interview with two faculty members. This can be done by phone.
8. International applicants are required to supply official copies of TOEFL exam scores that meet these minimal scores: paper-based - 550, computer-based - 213, and internet-based - 79.

Program Requirements

COURSE REQUIREMENTS

The Ph.D. program is a post-baccalaureate program, and course requirements provide a foundation for a dissertation. Programs are individually planned so that applicants with a M.S.N. degree with a clinical nursing major with supervised practice can build on their prior masters’ education. Students entering with a B.S.N. degree will be required to take NURS 507 Clinical Knowledge and NURS 508 Context of Care. A minimum of 54 semester credits in core requirements is required, and courses are listed below. Additional course work may be required and will be determined by the faculty advisor.

NURS 511 Strategies for Theory Development 3

Dissertation (NURS 701) Min. 18

NURS 703; Dissertation Fellowship

To register for NURS 701, the academic advisor and associate dean for doctoral education must provide written permission that is submitted to the dean of graduate studies. Students who have not been advanced to candidacy status (successful completion of course work and candidacy examination) may register for not more than 3 credit hours of NURS 701 per semester. They must maintain continuous limited registration for NURS 701 until advanced to candidacy status. A maximum of 6 credit hours may be taken prior to advancement to candidacy. After advancement to candidacy, students can register for up to 9 credits of NURS 701 per semester. When students complete 18 credits of NURS 701, they may subsequently register for a minimum of 1 credit hour a semester.

Students who have been advanced to candidacy and have met all coursework requirements, including 18 credit hours of NURS 701, and are within their five-year time limit for completion of the degree, but have not completed the dissertation, can register for Dissertation Fellowship (NURS 702) upon recommendation to the School of Graduate Studies. Students may take NURS 702 for a maximum of four consecutive semesters. Students are
considered to have full-time appointment (9 credit hours of 702), and tuition is charged at the rate of one credit hour. If the dissertation is not completed and defended in the fourth semester of the fellowship, the Ph.D. candidate must register for a minimum of one credit hour of NURS 701 each semester.

Research Practicum
A research practicum is required before taking the candidacy examination (described below). The research process is complex and course work provides the student with only theoretical understanding. The integration of research concepts and their application can best be learned through practical experience. The research practicum provides the hands on experience in the daily functioning of a research study. Often presentations and publications with faculty are outcomes of this experience.

The student works with a faculty mentor on that faculty’s research for 240 hours within the first two years of study. The academic advisor, student and faculty mentor who the student will be working with will develop objectives for the research practicum. It is recommended that the practicum begin during the first year of study. The practicum must be completed before the student will be advanced to candidate status.

Dissertation
The dissertation is an independent research study designed by the student in collaboration with a four member dissertation committee approved by the associate dean of doctoral education in the School of Nursing. Three of the members should be from the School of Nursing; while the fourth member must be from a department within Case Western Reserve that is outside of Nursing. The dissertation must be a significant contribution to existing nursing knowledge and suitable for publication in a peer reviewed journal or a book. Students must prepare their own dissertations, and joint dissertations are not permissible. The procedures and written dissertation must conform to the regulations of the School of Graduate Studies.

Progression in the Ph.D. Program
ACADEMIC PERFORMANCE AND PROGRESSION
Students who enter the Ph.D. in nursing program with an M.S.N. are expected to complete all coursework (36 credits) within four years of matriculation. Students entering with a B.S.N. are expected to complete all coursework (42 credits) within six years of matriculation. Students who are unable to complete the required courses within the specified time frame must submit a petition for an extension to the associate dean of graduate studies in the school of nursing and the dean of graduate studies.

A student who receives a grade of F for a required course must register for the course the next semester it is offered. If the student receives a grade of F or unsatisfactory performance (F, U & NP) in two courses, the student will be separated from the Ph.D. in Nursing program.

A grade of incomplete (I) will be assigned only for extenuating circumstances, and only when a student fails to complete a small segment of the course. The student must complete the “plan for resolution of incomplete grade” form to the associate dean for doctoral education in the school of nursing and the dean of graduate studies before the final date when grades are due in the semester during which the course was taken. All work for the Incomplete grade must be made up, and the change of grade recorded in the Office of the University Registrar, by the date specified on the form described above. Unresolved Incomplete grades will remain permanently on the student’s academic record, if the work is not made up by the designated deadline. A student who has a permanent Incomplete for a required course must retake the course in a later term. If the student cannot complete the work for the Incomplete by the specified deadline, he or she must petition for an extension which must be endorsed by the instructor, and explain the reasons why the work has not been completed, and include a new date for completion. Students are allowed only one extension of no more than one additional semester to complete the work.

A cumulative GPA of 3.0 must be maintained. If the cumulative GPA falls below 3.0, the student will be placed on academic probation. If the student does not raise the GPA to 3.0 or above in the next semester enrolled, the student will be separated from the university.

Students must maintain continuous registration throughout their degree programs unless granted a leave of absence. Students who do not register for an academic term will be automatically withdrawn from the program. They must then petition for reinstatement to continue graduate study. The associate dean for doctoral education and the dean of graduate studies must approve the petition before students may register for further coursework. In each case of readmission with full standing, the student will receive a letter stating the terms of readmission, including future time limits for the degree program and the past course work that will be credited toward the degree. If more than 24 months have elapsed since the last registration, the School of Graduate Studies may request more information.

ADVANCEMENT TO CANDIDATE STATUS
To advance to candidate status, Ph.D. students must pass an oral candidacy examination and provide a written research proposal at the time of the examination. The examination and proposal are evidence of the student’s knowledge and ability to synthesize and apply research methodologies and existing knowledge. The oral examination focuses on the nursing discipline, research methods, statistics, and substantive knowledge. The candidacy committee consists of three Bolton School faculty members who hold doctorates with a focus on research.

The student works with the candidacy committee to develop a research proposal. During this time, the student enrolls in NURS 671 “Proposal Development”. A minimum of 3 credits of NURS 671 is required, and the student may be required to take up to 12 credits of this course, if needed, to complete the proposal. Prior to scheduling the candidacy examination, the student must have completed the research practicum and all course requirements with a cumulative GPA of 3.0.

The candidacy committee determines the adequacy of responses to the oral examination and the research proposal presented at the time of the examination. A student who fails the candidacy examination may be permitted within one year of the failing the examination to retake it, provide a written response to questions from the committee or submit a revision of the proposal. The committee may also require additional course work. A student who fails the examination a second time will be separated from the Ph.D. in Nursing program.

A student who is not advanced to candidacy may not undertake further study for credit towards a Ph.D. degree and is officially separated from the university.

Proposal Defense
The purpose of the proposal defense is for
students to demonstrate their synthesis and application of substantive knowledge and research methods and statistics. Students defend their dissertation proposal to their dissertation committee comprised of three nursing faculty members who hold doctorates with a focus on research and another doctorally prepared member from another department within the university. Additional voting or non-voting members may be included. The written dissertation proposal is presented to the committee three weeks prior to the proposal defense. The dissertation committee determines the adequacy of the responses to questions and the dissertation proposal. A student not passing the proposal defense may be required to repeat the defense, revise the proposal or provide written responses to questions. The student must pass the proposal defense before pursuing human subject’s approval and before implementing the dissertation.

Dissertation Defense
Students must successfully defend their dissertation in an oral examination with the dissertation committee who are also responsible for certifying that it meets acceptable scholarly standards.

The student must provide a copy of the dissertation to committee members at least 10 days before the defense. The dissertation defense must be scheduled with the School of Graduate Studies three weeks prior to the defense. The time and place of the dissertation defense must be announced publicly within the university. The dissertation defense is open to Case Western Reserve University faculty and students, but the dissertation chair determines whether the defense is open to others outside of Case Western Reserve University.

The dissertation committee determines the adequacy of the oral examination and written dissertation. A student will pass if no more than one voting member dissents.

Degree Requirements
A student will be awarded a Ph.D. degree upon completion of all required coursework in their curriculum as detailed in their program of study. All students must complete 36 semester hours of course work at the university. A cumulative GPA of 3.0 or above in all courses taken for credit (excluding grades of S) as a Ph.D. student at the university is required for awarding the Ph.D. degree.

Graduate students are considered to be in residence when they are fully engaged in academic work. Ph.D. students must be registered for a minimum of six consecutive academic terms (fall, spring and/or summer) from matriculation to a period not exceeding five years after the first credited hour(s) of dissertation research (701). The time period in which a leave of absence is taken does not count towards the residency requirement. Within the context of continuity of registration, departments may enact other restrictions. In such instances, the departmental requirements take precedence and must formally be disclosed to the student at matriculation. Continuous registration is mandatory for all graduate students unless on an approved leave from the School of Graduate Studies.

All dissertation requirements for the Ph.D. degree must be completed within five years from the first time a student registers for dissertation credit (NURS 701), including leaves of absences. If the student fails to complete the degree requirements within this 5-year time period, including leaves, they may request a 1-year extension approved by the advisor, associate dean for doctoral education in the School of Nursing and the dean of graduate studies. If the degree requirements are still not met during this extension or an extension was never approved, the student will be separated from the School of Nursing. They may reapply to the Ph.D. program to continue to study using an abbreviated application process. After a review of the application and the student’s academic record, the Ph.D. Admissions Committee makes recommendations about re-admission and additional coursework that may be required to the associate dean for doctoral education in the School of Nursing.

OTHER STUDENT CATEGORIES

Non-degree Students
An applicant with basic preparation in nursing may apply to register as a non-degree student for up to 9 credits. The application form is available on the Nursing School Registrar’s website for M.S.N. and D.N.P. programs and the Office of Graduate Studies Admissions for the Ph.D. program. The applicant must obtain written permission from the faculty teaching the course and the associate dean for doctoral programs in the Bolton School for those taking Ph.D. courses. Clinical courses may not be taken as a non-degree student. Continuation of this status is at the discretion of the administrative officer of the Bolton School. Status as non-degree student does not imply acceptance into the Bolton School. If the non-degree student applies for admission to the Bolton School, course work completed as a non-degree student will be evaluated on an individual basis for its applicability to degree requirements within the time frame for the degree.

Special Students
Special students are those who take a specified course of study designed to meet an individual’s needs. They must meet the admission requirements for the program where the majority of class work will be done. Their status and satisfactory performance will be reviewed after one year. Students completing M.S.N. courses to obtain a certificate in any advanced practice nursing major will be admitted as special students.

If a special student decides to pursue a graduate degree, the approval of the associate dean of academic programs must be obtained. Entrance into the degree program will be considered the date when the student enrolled in the first course work as a special student. These courses must have been taken within the last five years. If more than five years have elapsed since the course work as special student was done, the student must meet the current academic requirements for the major selected.

International Students
International students may enroll in the masters, nursing doctorate and Ph.D. programs. They must meet the admission requirements for the program that they select. In addition, application should be submitted approximately one year before the desired date of enrollment. English translations of transcripts are required.

Each applicant must document the ability to speak, read and write English as evidenced by satisfactory performance on the Test of English as a Foreign Language (TOEFL). The Educational Testing Service administers the test.

Educational Testing Service (ETS)
TOEFL
www.toefl.org

Students whose native language is English are exempt. For those whose native language is not English, a score of 550 (PBT), 213 (CBT), or 80 (IBT) is desired. Students must take English courses at the English Language Services Center (ELS) at Case Western Reserve University and students must complete English courses through the Level 112. Students
who demonstrate English language proficiency may request to be exempt from these courses.

Present evidence of adequate financial resources to meet the expenses of full time study and travel expenses to and from Cleveland. Financial assistance is not available from the Bolton School. The student must arrange for a sponsor who will provide full financial support. The sponsor must document their ability to financially support the student, including costs of tuition and fees, room and meals, books, incidentals and travel expenses.

Students applying to clinical programs must be eligible for licensure as a registered nurse (R.N.) before any clinical courses are taken. To obtain R.N. licensure, the student can either 1) obtain licensure in a state other than Ohio and apply for reciprocity in Ohio, or; 2) sit for the licensure examination (NCLEX-RN) in Ohio. For information on how to become licensed in any state, you must obtain information from the specific state where you wish to become licensed. For the individual addresses of each State Board of Nursing, contact the National Council of State Boards of Nursing. National Council of State Boards of Nursing www.ncsbn.org

Once admitted to the Bolton School, an application form for a student visa will be sent to the student. Upon enrollment at the university, the student must subscribe to the Student Medical Insurance Plan or proved proof of other medical insurance coverage.

FINANCIAL ASSISTANCE
The following is a brief description of the financial aid opportunities available to students at the Bolton School of Nursing. Undergraduate students can find a more detailed description of undergraduate aid at http://finaid.case.edu from the University Financial Aid Office. Some types of aid are not available to all students, and the awarding of some grants and scholarships may make you ineligible to receive other grants or scholarships. If you have questions or would like more information, contact either The Bolton School of Nursing or Case Western Reserve University Financial Aid Offices.

Undergraduate
Undergraduate students, those enrolled in the B.S.N. and R.N.-B.S.N. programs have a variety of financial assistance available, including federal and state need-based aid, and merit-based grants and scholarships.

THE BOLTON SCHOLARSHIP
Students seeking a B.S.N. are awarded the Bolton Scholarship. Individual awards may be as much as $15,000 per year for a maximum of four years for the B.S.N. program, and three years for transfer B.S.N.. This scholarship is not need based. Additional scholarships are awarded to students demonstrating extraordinary merit and/or exceptional need.

MERIT-BASED AID
Case Western Reserve offers several full and partial-tuition merit-based scholarships. These are generally renewable for all four years of study if high academic performance is maintained. To be eligible for university scholarships, students apply by January 15 and submit SAT or ACT scores and be admitted to the university. Contact the University Financial Aid Office for more information.

NEED-BASED AID
For all need-based aid, students are encouraged to complete the Free Application for Federal Student Aid (FAFSA) by February 1 (or as soon after as possible). From this information, and the Case Western Reserve Financial Aid Application, a student’s family contribution is determined. This is calculated solely on the financial circumstances of the student’s family, and does not take cost of tuition into consideration. Once the family contribution is calculated, it is subtracted from the estimated cost of attendance (tuition, room, board, fees, books, transportation and miscellaneous expenses) to calculate the student’s financial need. The financial need is the amount that may be covered by Case Western Reserve’s financial aid programs. A student’s financial aid award or “package” may consist of up to three different components: grants, loans and employment.

Graduate
Graduate programs at the Bolton School of Nursing are the M.S.N., D.N.P., Ph.D., R.N.-M.S.N., and the joint degree programs (M.S.N./M.B.A., M.S.N./M.P.H., and M.S.N./M.A.).

Full- and Half-Time Students
Full-time enrollment is at least 9 credit hours fall and spring semesters, and at least 6 credit hours, summer sessions. Half-time enrollment is 5-8 credit hours fall and spring semesters, and 3-5 credit hours summer session. To be eligible for financial aid for summer session, the student must also be eligible for aid in the following fall and/or spring semesters.

Federal Loans
All students are encouraged to complete the Free Application for Federal Student Aid (FAFSA). Information from this form and the Case Western Reserve University Financial Aid application will be used to determine the student’s financial need, and the amount of loan for which they are eligible. The majority of students receive enough loans to cover the estimated cost of tuition and expenses.

There are two basic types of federal loans: subsidized and unsubsidized. Both types of loan repayments do not begin until a student’s enrollment falls below half-time or six months after graduating, whichever comes first. Students may begin repayments earlier if they choose.

Subsidized loans do not accrue interest until after you graduate or fall below half-time enrollment. Unsubsidized loans begin accruing interest immediately, although it does not need to be paid until repayments begin.

Federal PLUS Loan for Graduate Students
The Federal Grad PLUS Loan is designed to assist graduate and professional students in financing a portion of their educational expenses. The program enables these students borrow up to the yearly cost of education minus other financial aid received. PLUS Loans are not need-based, but the student borrower must demonstrate acceptable credit. Students must borrow the full amount of their Subsidized and Unsubsidized Federal Stafford Loans before borrowing through this program. The Grad PLUS Loan is available only to U.S. citizens or permanent residents who are enrolled at least half-time in a degree-seeking program.

PRIVATE LOANS
For those students who do not receive federal loans or wish to borrow more money than is provided by Grad PLUS loans, private lenders may be an option.

PART-TIME STUDENTS
Students enrolled in less than 5 credit hours fall and spring semesters, and less than 3 credit hours summer sessions are NOT eligible for federal aid. However, some private lending
agencies do give loans to part-time students. Contact the Bolton School of Nursing Financial Aid Office for more information.

INTENSIVE STUDENTS
Students enrolled only in intensive courses are NOT eligible for federal aid because regulations require enrollment in courses that span at least a ten-week period, but students may receive loans from some private lending agencies. Contact the Bolton School of Nursing Financial Aid Office for more information.

SCHOLARSHIPS AND GRANTS
Some of the following grants, scholarships and assistantships are given directly by the Bolton School of Nursing, while others are outside sources of assistance. Students should seek other sources of assistance on their own. Direct questions regarding the following grants and scholarships to the Bolton School of Nursing Financial Aid Office.

PROFESSIONAL NURSE TRAINEESHIP GRANT
This Department of Health and Human Services grant, awarded to the Bolton School of Nursing, is distributed to M.S.N. students and postlicensure D.N.P. students seeking the M.S.N. In most cases, students must be enrolled at least half-time, i.e. 5 credit hours for two or more semesters. No application is required.

NATIONAL HEALTH SERVICE CORPS SCHOLARSHIP
This is an excellent opportunity for full-time students in the Family Nurse Practitioner and Nurse Midwifery programs. Awarded from the Bureau of Primary Health Care (BPHC), National Health Service Corps (NHSC) Scholarship Program, the scholarship includes full tuition and a monthly stipend. There is a one-year work commitment (minimum of two years) for each year or partial year the scholarship is awarded. To fulfill the work commitment, awardees must obtain employment in an under-served public or private facility approved by the National Health Service Corps. Employment is not necessarily with the federal government. Employment opportunities can be found across the United States in urban, suburban and rural settings. This Scholarship is very competitive and seeks applicants who are dedicated to the mission of the BPHC. Applications are available from the Bolton School of Nursing Financial Aid Office, in late February. Application deadline is in late March.

THE D.N.P. STUDENT GRANT
Prelicensure D.N.P. students may receive this Bolton School of Nursing Grant. Based on financial need, $1,000 - $3,000 is an award for each year of the prelicensure component of the D.N.P. program.

OTHER GRANTS
Some advanced practice majors have additional financial assistance available. Please contact the Bolton School of Nursing Financial Aid Office.

EMPLOYMENT
Many employers of health care professionals offer tuition assistance of varying levels. While you should not expect that the assistance would cover your entire tuition, it is often a significant amount. Check with your employer for more information.

Student employment may be available at the Bolton School of Nursing or at other campus locations. Also, part-time employment may be available at local hospitals or other health care agencies.

OTHER RESOURCES
There are many private scholarships, grants and loans available to undergraduate and graduate students. Students should check local organizations (i.e. churches, parents’ employers, students’ employers and service organizations). Public libraries have books on scholarships, and the Internet is another good source of information. When searching or applying for scholarships always be alert for scams. While most scholarships are legitimate, there are some that are not.

SEARCHING ON THE WORLD WIDE WEB
FASTWEB (www.fastweb.monster.com) is a free search service. After completing a profile, this services searches through its database to identify scholarships that may meet student’s eligibility.

Since the database is continually updated, check back often. Also, complete numerous profiles that cover all of the student’s qualifications and interests because different profiles may produce different results.

FINAID (www.finaid.com) is a financial aid information page. It covers a wide variety of financial aid topics, including sources of aid, private loans and links to several free scholarship search services.

UNIVERSITY HOUSING

| Room | $5,240-8,100 |
| Board plan | $1,779-1,947 |
| Health Insurance | $1,100 |
| Hepatitis B Immunization | $200 |

*1-11 credit hours is considered part-time, 12+ hours is considered full time. D.N.P. students will be charged the per credit rate for any credits in excess of 18. M.S.N. students will be charged per credit hour.
ADDITIONAL COSTS

B.S.N.
- University Activity Fee: $263
- Clinical Practice Fee: $220
- Nursing Activity Fee: $15
- Bus Fee: $50

ENROLLMENT DEPOSIT
- (no refund) $500
- (Deposits are applied toward in the fall semester.)

D.N.P. AND M.S.N.
- Student Activity Fee: $30
- Transportation
- (Students must make arrangements for their own transportation for field experiences in selected courses)

Application fee
- (not-refundable) $75
- Place-in-class deposit
- (not-refundable) $200
- Books and Supplies

B.S.N. AND D.N.P.
- Year I: $1770
- Year II: $1225
- Year III: $1160
- Year IV: $1140
- Personal Expenses: $1,250
- FPB/NSNA (optional): $26

M.S.N. AND PH.D.
- Student Activity Fee M.S.N.: $30
- Ph.D.: $40
- Books and Supplies: $1240
- Insurance Premiums (Per Annum)
- Professional and personal liability ($1,000,000 limit): $79-158
- Personal Expenses
- Including transportation for field experiences $800

EXPENSE FOR THE SUMMER SESSION
Tuition is one-half fall/spring tuition per semester hour for undergraduate courses. Information about the cost of living (room and board) is available from the university housing office.

FINANCIAL OBLIGATIONS

All financial obligations to the university must be discharged before a student can graduate and obtain a degree. Failure to attend classes and/or failure to pay tuition does not constitute withdrawal. Checks and money orders should be made payable to Case Western Reserve University and should show the name of the student for whom payment is made.

PAYMENT OPTIONS
Checks and money orders should be in U.S. dollars, drawn on a U.S. bank, and made payable to Case Western Reserve University. Please include your student I.D. number and/or social security number on the check or money order. Payments may be mailed to:
Student Accounts Receivable
Yost Hall, Room 115
10900 Euclid Avenue
Cleveland, OH 44106

E-Checks can be made on our QuikPAY™ site at https://www.quikpayasp.com/cwru/payer.do. This is the university’s online billing and payment system that allows you to submit payment through a checking or savings account on line.

Discover® card payments can be made on our QuikPAY™ site. This transaction carries a 1.77% transaction fee that will be added to your transaction. (See above for the web locator.)

Wire transfers of funds for payment on account at Case Western Reserve may be handled through any full service bank in your area. For further information please contact the Bursar’s Office at 216-368-2226, or e-mail us at: bursar@case.edu.

TUITION MADE E-Z PAYMENT PLAN
Tuition made E-Z Payment Plan is an ACH process for automatically debiting your checking account. Your payments can be made electronically monthly without the hassle or cost of writing checks or paying postage. For more information please call 216-368-2226 or visit our website at http://www.cwru.edu/finance/manager/bursar.htm.

DEFERRED PAYMENTS
Students enrolled in fall and spring semesters for courses of semester length may arrange to pay bills for tuition and fees in two installments. At least half of the total tuition bill must be paid at registration; the remainder must be paid within 60 days. Any remainder of the date specified will be considered delinquency, with a late fee added per month.
Tuition and other fees for summer session are due and payable in full at registration.

REFUNDS
A student who withdraws during fall or spring semester must pay a percentage of the tuition charge. The amount is based on the number of weeks classes have been in session at the time of withdrawal. See university roster for specific dates. There is no tuition refund after the eighth week of classes.
A student who withdraws from the university during summer session must pay a percentage of the tuition charge. The amount, 20 percent per week, is based on the number of weeks classes have been in session at the time of withdrawal. There is no tuition refund after the fourth weeks of classes.

COURSE DESCRIPTIONS (NUAN)

NUAN 449. Chemical and Physical Properties of Anesthesia (2)
Introduction and elaboration of basic chemical and physical principles as they relate to clinical nurse anesthesia practice. An in-depth study of organic and biochemical principles, structure/activity, relationships and their significance in pharmacology. Emphasis will be on the integration and practical application of these principles to clinical nurse anesthesia practice.

NUAN 450. Pharmacological Strategies in Anesthesia Practice (2)
Application of pharmacokinetic and pharmaco-dynamic principles as they relate to specific anesthetic and adjunct drugs used in anesthesia practice. Integration of this information into clinical area regarding anesthetic uses, dosages, and side effects of these classes of drugs is emphasized. Coreq: NUAN 449.

NUAN 451. Physiological Variables and Responses I: Respiratory System (2)
A detailed study of the anatomic structures and related physiochemical mechanisms governing respiratory function in health and disease. Assess the functional integrity of this system utilizing all pertinent objective and subjective data. Consider the impact of anesthetic agents and techniques on this system and how one can plan anesthetic to facilitate health-seeking behaviors as a patient attempts to attain, maintain or regain optimal health. Implications for all types of surgery in view of effect of anesthesia on respiratory system, however, special attention on surgery involving this specific system. Coreq: NUAN 449.

NUAN 452. Physiological Variables and Responses II: Cardiovascular (3)
A detailed study of the anatomic structures and related physiochemical mechanisms governing cardiovascular function in health and disease. Assess the functional integrity of this system utilizing all pertinent objective and subjective data. Consider
the impact of anesthetic agents and techniques on this system and how one can plan anesthetic to facilitate health-seeking behaviors as patients attempt to attain, maintain, or regain optimal health. Implications for all types of surgery in view of effect of anesthesia on cardiovascular system, however, special attention on surgery involving this specific system. Coreq: NUAN 451.

NUAN 453. Physiological Variables and Responses III: Peds, OB, Endo & Geriatrics (4) Study of health-seeking behaviors and intervening variables with special consideration of the anatomy, physiology, and pathophysiology of the pediatric and obstetric, endocrine and geriatric patient. Focus will be on the integration of this information into the nurse anesthesia care to support the health-seeking behaviors of these patients. Coreq: NUAN 451 and NUAN 452.

NUAN 454. Physiological Variables and Responses IV: Renal and Neurologic Systems (3) Systematic investigation of the physiologic factors related to health-seeking behaviors with special emphasis on pathophysiologic of the renal and neurological systems. Focus will be on the integration of this knowledge into the planning, implementation, and evaluation of patients requiring nurse anesthesia intervention. Coreq: NUAN 453.

NUAN 455. Anesthesia Nursing I (2) An introduction to the art and science of nurse anesthesia including basic anesthetic principles and beginning clinical practicum to introduce the student to anesthetic equipment and operating room environment. This course is designed to give the student practical information regarding administration of safe anesthesia.

NUAN 456. Anesthesia Nursing II (1) Progressive, guided instruction on clinical and ethical management of clients undergoing all forms of anesthesia. This unit includes the history of nurse anesthesia relevant to contemporary anesthetic practice, legal and ethical aspects of anesthesia delivery, and patient/client interaction strategies. The course is designed to give the nurse exposure to career expectations in nurse anesthesia; as well as prepare him/her in administration of safe, routine anesthetic with moderate amount of instructor intervention. Coreq: NUAN 455.

NUAN 457. Anesthesia Nursing III (1) Graduated, guided instruction in clinical management of clients receiving various types of anesthesia. Focus is on the preparation and planning for anesthesia utilizing Schlofledt paradigm. Includes actual administration of anesthesia for clients exhibiting more complicated pathophysiology. More advanced technical instruction and experience. Correlation of didactic and clinical materials, as well as continuous evaluation of student progress are integral to this course. Coreq: NUAN 456.

NUAN 551A. Nurse Anesthesia: Advanced Practice I (2) Individual in-depth study of advanced clinical nurse anesthesia in such specialty areas as neurosurgical, cardiovascular, obstetric and pediatric anesthesia. The nurse learns to handle more difficult, specialized patients who are at a higher risk. Emphasis is on more complex management with advanced monitoring techniques, use of pharmacological agents and handling higher stress situations. Students develop and utilize practical clinical applications of nurse anesthesia theory. Coreq: NUAN 457.

NUAN 551B. Nurse Anesthesia: Advanced Practice I (1) (See NUAN 551A.) Coreq: NUAN 551A.

NUAN 551C. Nurse Anesthesia: Advanced Practice I (1) (See NUAN 551A.) Coreq: NUAN 551B.

NUAN 552. Nurse Anesthesia: Advanced Practice II (1) The continuation of advanced, independent clinical nurse anesthesia administration. Emphasis is on management of higher risk patients for more difficult procedures, performing total anesthetic care with minimum of anesthesiologist supervision, and readiness for transition from student to graduate status. Coreq: NUAN 551A and NUAN 551B and NUAN 551C.

Course Descriptions (NUND)

NUND 400. Guided Study (1 - 6) Selected topics in basic nursing. May include clinical experiences.

NUND 401. Introduction to the Discipline and Practice of Nursing (7.5) This course is an introduction to the discipline and practice of nursing. Factors influencing health and illness will be explored. Selected nursing strategies and interventions designed to support the maximum health potential of the adult client will be incorporated into lab sessions and practiced in a variety of settings. Small group seminars will be used to examine historical, societal, and legal influences on nursing and the role of functions of the professional nurse. Coreq: NUND 402 and NUND 410.

NUND 402. Introduction to Pharmacology (3) This course introduces basic principles of pharmacology and pharmacotherapeutics. A survey of characteristics and uses of major drug groups with an emphasis on nursing implications is presented. Coreq: NUND 401 and NUND 410.

NUND 403A. Nursing Informatics (1) This course will introduce students to the concept of health informatics and the role nurses play in the management of information in supporting all areas of nursing including clinical practice, education, research, and administration. Using case studies, lecture and class discussion. Students will develop an awareness of the importance of nursing involvement in the design, implementation, and use of information systems and other technologies. Coreq: NUND 401.

NUND 404A. Inquiry A for the Graduate Entry DNP (2) This course provides an introduction to conceptual and theoretical thinking. Students will examine knowledge development in nursing, conceptual structures, and the use of theory in nursing practice and research. Coreq: NUND 401.

NUND 404B. Inquiry B for the Graduate Entry DNP (2) This course is a continuation of NUUND 404A GE Inquiry A. It completes the introduction to conceptual and theoretical thinking and begins examination of the research process in nursing. The student will examine scientific inquiry and scientific investigation, including the research process. Coreq: NUND 404A

NUND 404C. Inquiry C for the Graduate Entry DNP (2) This course is a continuation of NUUND 404B GE Inquiry B. It expands the examination of scientific investigation in nursing and includes data management, analysis, and interpretation; critique of existing research; and applications for nursing practice. Coreq: NUND 404B.

NUND 405. Altered Human Functioning (3) Introduction to basic pathophysiologic outcomes of selected intervening variables that alter human physiologic and cognitive functioning. This course builds on the student's foundation of normal anatomy and physiology. Recommended preparation: completion of first semester of D.N.P. program.

NUND 406. Aging in Health and Illness (2) This course will explore the concept of aging in health and illness with an emphasis on the older adult as an individual with the capacity to grow and develop. Coreq: NUUND 401 and NUUND 410.

NUND 407. Acute Care Nursing of the Adult (8.5) The focus of this course is the integration of the nursing process in clinical practice. Human responses to significant health events and alterations are analyzed. Application of relevant physiology, psychosocial dimensions, and pharmacology are included. Particular emphasis is placed on nursing strategies, interventions, and the evaluation of their effectiveness in the care of the acutely ill adult. Coreq: NUUND 401, NUUND 402, NUUND 343, NUUND 403, NUUND 404A, and NUUND 410.

NUND 408. Introduction to Concepts of Genetics in Nursing (1) Introduction to the theories and concepts relevant to human genetics and genomics and their applications in health care.

NUND 409A. Professional Role Development: Leadership (1) This seminar is the second in a series designed to address professional role development. The seminar focuses specifically on leadership development in nursing. Coreq: NUUND 401.

NUND 410. Health Assessment (2.5) Comprehensive introduction to the assessment skills required for a successful nursing practice. Basic skills, such as vital signs, are taught along with a system by system approach to physical examination. Taking a health and psychosocial history is integrated into the course. The course is taught concurrently with anatomy and physiology, concepts of nursing practice, and strategies and interventions...
for alterations in functioning. Coreq: NUND 401 and NUND 402.

NUND 411A. Public Health Nursing A (2)
This is the first of a two course sequence in public health nursing - health promotion-disease prevention for groups, populations, and communities. This course will focus on enhancing the health and health-seeking behaviors of groups and populations. Coreq: NUND 405, NUND 406, NUND 407, NUND 408, NUND 409A.

NUND 411B. Public Health Nursing B (2)
This is the second of a two course sequence in public health nursing - health promotion-disease prevention for groups, populations, and communities. This course will focus on enhancing the health and health-seeking behaviors of a selected community. Coreq: NUND 411A.

NUND 413. Issues and Ethics in Health Care (2)
Designed to introduce the students to the principles underlying ethical issues and methods of rational decision making. Fundamental theories will be reviewed and opportunity provided, using case analysis, to apply the theories in addressing ethical dilemmas common to modern health care. Recommended preparation: Enrolled in 4th semester of N.D. pre-licensure program, or permission of course faculty. Coreq: NUND 401.

NUND 414. Concepts of Management (3)
Study of basic concepts relative to leadership and working with groups of people in providing nursing care. Concepts include: decision making, power, authority, roles, teaching-learning, evaluation, leader behaviors, work groups, legal aspects, change. Recommended preparation: Enrolled in 4th semester of N.D. pre-licensure program, or permission of course faculty. Coreq: NUND 413 or permission of course faculty.

NUND 415. Parents and Neonates in Health and Illness (4)
This course introduces biological, psychosocial, and developmental concepts applicable to the nursing care of women, newborns, and families during the childbearing cycle. Emphasis is placed on assessment and identification of health needs as parents and neonates respond to the changes inherent in the childbearing cycle. Strategies related to nursing care of parents and neonates are discussed. The clinical experience focuses on the direct application of these concepts and strategies in the care of patients in various perinatal settings. Prereq: NUND 401, NUND 404, NUND 405, NUND 407, NUND 408, NUND 409A, NUND 411.

NUND 416. Infants, Children, and Adolescents in Health and Illness (4)
The study of infants, children, and adolescents and their health-seeking behaviors from a developmental perspective. Emphasis is on healthy infants, children, and adolescents as well as infants, children, and adolescents with common, acute, and chronic illness within the context of their family environment. Nursing strategies focus on interventions to promote, restore, and maintain health and foster growth and development. These strategies are based on understanding advanced concepts of children's and adolescents' responses in acute health/illness states. Recommended preparation: 3-credit hour Growth and Development course. Prereq: NUND 404, NUND 405, NUND 407, NUND 408, NUND 409A, NUND 411.

NUND 417. Psychiatric Mental Health Nursing (4)
This course is designed to address psychiatric and mental health nursing concepts. The focus is on clients with acute and chronic psychiatric disorders and their mental health. Nursing strategies that are appropriate for assessment and intervention with individuals, families, and groups to facilitate optimal mental health will be discussed and practiced. Prereq: NUND 407 and NUND 408.

NUND 441. Management in Advanced Practice (3)
This course focuses on management issues and concepts related to those who will be practicing nursing as advanced practitioners. Seminars will focus on integrating legal, fiscal, quality improvement, informatic concepts and other intervening variables that affect environments of care. As an integrating part of the course, students will design and develop a nursing practice organization project that pertains to their clinical or management interests.

NUND 450. Applied Statistics (3)
This course provides an advanced overview of the assumptions and applications necessary to analyze and interpret questions and research related to clinical practice. Emphasis will be on statistical interpretation of research. During the course, data management, statistical analysis, and data interpretation, as well as univariate, bivariate, and multivariate statistics such as ANOVA and ANCOVA will be examined. The data analysis process will be examined and deconstructed throughout the course. Prereq: STAT 201 or equivalent within past 5 years.

NUND 478. Curriculum and Instruction (3)
The purpose of this course is to explore the theoretical underpinnings of education and to examine innovative approaches to critical thinking. Students are provided the opportunity to analyze philosophical and principles of education along with teaching and learning styles. The course will focus on curriculum planning and development congruent with the philosophy and objectives of a nursing program. Curriculum development includes determination of program and course objectives, along with selection and organization of appropriate learning experiences to meet these objectives. Techniques for instruction in the classroom, laboratory, and clinical settings are explored. Offered as NUND 478 and NURS 578.

NUND 479 Theoretical Foundations of Educational Testing and Evaluation (2)
In this course, an overview of educational measurement and evaluation is provided. Methods of evaluating teaching effectiveness, student learning, and student performance are explored, with particular emphasis placed on test construction and analysis. Offered as NUND 479 and NURS 619. Prereq: Coreq: NUND 478.

NUND 480. (1) Action Research and Program Evaluation
This course introduces the student to the concept of purposeful evaluation. The applicability of action research and evaluation to the change process and the potential for continuous improvement within various venues will be explored. The iterative, participative, and emergent nature of generation of new knowledge and practice innovations will be discussed. Offered as NUND 480 and NURS 620. Prereq or Coreq: NUND 479.

NUND 481. Teaching Practicum (2)
In this preceptored teaching practicum, the student may engage in classroom, laboratory, and clinical teaching assignments in nursing. The student will be expected to use current educational theory and nursing knowledge in completing the practicum experience (minimum 60 hours). Prereq or Coreq: NUND 480.

NUND 483. Health Care Planning and Policy and Information Management Systems (3)
An exploration of the nurse's role in health care policy and planning and information systems. Overview of issues in health care policy and planning, including the socio-political and economic context of health and health-seeking behaviors. Health care policy and planning at the local, state, and federal levels will be explored. Ethical dimensions of public policy formulations and implementation will be highlighted. The application of computer technology in health care and nursing will be explored. Following an introduction to hardware and software, special consideration will be given to clinical and administrative applications of information technology.

NUND 493. Population-Based Maternal-Child Nursing: Issues, Research, Policy & Inter (3)
This course focuses on broadening the knowledge base of pediatric and family nurse practitioner students to include aggregate-based health assessment and policy issues. This course is designed to build upon the students’ previously acquired knowledge of the nurse’s role in health policy analysis and planning, and the community health. Emphasis will be placed on the assessment of women’s health and children’s health at the community level, and the development of programmatic interventions to address identified needs. Students are expected to extend their expertise with policy analysis through development of a proposal to implement policy changes specific to needs identified within the population of women and children. Coreq: NUND 483

NUND 500. D.N.P. Thesis (1 - 6)
Systematic investigation of a clinically based research problem selected by the student for independent study. This includes proposal refinement and acceptance, data analysis and thesis completion under thesis committee supervision. Prereq: NURS 521.

NUND 504. Theories for Nursing Practice and Scholarship (3)
This initial course in the Doctor of Nursing Practice program examines the nature of theory, theory development in nursing, and significant conceptu-
Informatics (4)

NUND 506. Leadership in Organizations and Systems (5)
Leadership theory, organization theory and philosophy, culture, structure, processes, information management, and other factors are analyzed for their relevance to health care enterprises. Nursing is examined within the larger context of the health care system. Prereq: NUND 504.

NUND 507. Management in Advanced Nursing Practice (3)
This course is focused on management entrepreneurial concepts and issues related to advanced nursing practice. Seminars will focus on integrating legal, fiscal, quality improvement, and other intervening variables that affect environments of care. Prereq: NUND 506.

NUND 508. Health Policy Development and Implementation (3)
An exploration of the leadership role of nurses and nursing in health policy development and implementation. Overview of issues in health policy, including the socio-political and economic context of health and health-seeking behaviors. Health policy development and implementation at the local, state, national, and global levels will be explored. Ethical dimensions of public policy formulations and implementation will be highlighted. Prereq: NUND 504.

NUND 509. Curriculum and Instruction (3)
The purpose of this course is to explore the theoretical underpinnings of education and to examine innovative approaches to critical thinking. Students are provided the opportunity to analyze philosophies and principles of education along with teaching and learning styles. The focus of this course is on curriculum planning and development congruent with the philosophy and objectives of a nursing program. Curriculum development includes determination of program and course objectives, along with selection and organization of appropriate learning experiences to meet these objectives. Effective techniques for instruction in the classroom, laboratory, and clinical settings are explored. Prereq: NUND 506.

COURSE DESCRIPTIONS (NUNI)

NUNI 431. Advanced Nursing Informatics (4)
This course emphasizes the information needs of clinical users and the flow of information within the health care environment. General systems theory concepts and their applicability to health care information systems will be discussed. Diagnosis of information management problems, formulation of user-friendly solutions, implementation of those solutions, and their subsequent evaluation will be emphasized. Evolving/emerging information technologies will be discussed as well as the role of human-technology interactions in the health care setting. Prereq: NUNI 421, MIDS 409, and NURS 471.

NUNI 499. Internship in Nursing Informatics (5)
This capstone experience consists of four components: the precepted internship in an external health care setting, an outline discussion experience, a leadership seminar, and a comprehensive program examination. This internship is designed to provide the Nursing Informatics student with the opportunity to apply the knowledge and skills acquired through the program to the management of health care information activities. Recommended preparation: Completion of first year of M.S.N.

COURSE DESCRIPTIONS (NUNP)

NUNP 401. Health Promotion in Children and Adolescents (3)
This course introduces the concepts of pediatric primary health care from a developmental perspective. Concepts and theories from nursing and other related disciplines associated with the assessment and care of well children and their families are explored. Clinical application of theories and nursing strategies to optimize health-seeking behaviors in clients and to foster therapeutic relationships are examined. Prereq or Coreq: NUNP 416.

NUNP 410. Health Promotion Across the Life Span (2)
This course introduces health promotion fundamental to advanced practice nursing. Epidemiological principles and international, national and local health promotion goals are examined with emphasis on cultural and environmental principles, individual assessment and evidence-based practice. Diagnostic reasoning and intervention strategies to optimize health-seeking behaviors in clients and to foster therapeutic relationships are examined.

NUNP 412. Neonatal Nurse Practitioner II (4)
This course focuses on the health problems of the high-risk neonate in the context of family, culture, and community. Nursing strategies that enhance, maintain, and restore health in ill neonates and their families. Principles identified for advanced diagnostic and therapeutic approaches specific to the neonate, including pharmacology, are emphasized. Prereq: NUNP 405.

NUNP 413. Neonatal Nurse Practitioner III (3)
Pathophysiology, assessment, and diagnostic approaches specific to neonates with acute problems will be examined. Concepts related to discharge planning collaboration and long-term follow-up will be introduced. Prereq: NUNP 412.

NUNP 414. Neonatal Nurse Practitioner IV (5)
This course focuses on the acute and ongoing health problems specific to the management of neonates with complex health problems. Pathophysiology, assessment, and diagnostic approaches specific to complex health problems of preterm infants, infants with chromosomal aberrations, and infants with multidimensional health problems will be emphasized within the context of their family and community environments. Community-based service learning will be stressed along with follow-up of the infant and family during the first year of life. Emphasis will be placed on consultation and referral processes within multidisciplinary teams. Prereq: NUNP 405, NUNP 412 and NUNP 413.

NUNP 416. Integrated Assessment of the Neonate (2.5)
This course introduces principles fundamental to the integrated assessment of the neonate. It stresses perinatal history taking, gestational age assessment, physical assessment skills, and assessment of genetic
NURS 430. Community Engagement Seminar I (1)

This course is a one credit seminar focused on the delivery of culturally appropriate community based health care and on selected issues contributing to the growing disparities in health care outcomes. Students will engage in a 12 hour field experience in a Cleveland community health facility or school system. The seminar will include two sessions devoted to the reflection and evaluation of the field experience. In addition, each semester will include required attendance at the Rozella Schlotfeldt Public Lectures related to issues contributing to disparities in health care. Prereq: NURS 110 or permission of instructor.

NURS 201. Applied Nutrition in Health and Disease (2)

This course builds upon the student's knowledge of human physiology and metabolism. Nutrient requirements are highlighted as well as changes related to different stages in the lifespan. Contemporary nutritional issues will be addressed. Prereq: BIOL 114 and BIOL 116 or permission of instructor. Coreq: BIOL 117 and BIOL 119.

NURS 210. Community Engagement Seminar II (1)

This course is a one credit seminar focused on the delivery of culturally appropriate community based health care and on the issues of aging and poverty as they contribute to the growing disparities in health care outcomes. Students will engage in a 12 hour field experience in a Cleveland community health facility or school system. The seminar will include two sessions devoted to the reflection and evaluation of the field experience. In addition, each semester will include required attendance at the Rozella Schlotfeldt Public Lectures related to issues contributing to disparities in health care. Prereq: NURS 160 or permission of instructor.

NURS 432. Common and Acute Health Problems of the Adult I (5)

This course introduces the common and acute health problems occurring across the adult life span. A body system approach is used with emphasis on the biological, psychological, social and cultural aspects of care. Pathophysiology, assessment and diagnostic strategies specific to the acute and common problems of adults and adolescents will be stressed. Nursing strategies used to enhance, maintain and restore health will be emphasized. Prereq: NURS 453, NURS 459 and NURS 410. Prereq or Coreq: NURS 430.

NURS 433. Common and Acute Health Problems of the Adult II (3)

This course is a continuation of NURS 432. Emphasis is on the pathophysiology, assessment and diagnostic approaches specific to the adolescent and adult client. Health-seeking behaviors will be stressed within the context of the family and community.

NURS 434. Advanced Management in Adult Primary Care (5)

This course focuses on the health care concepts specific to the management of complex, multidimensional health problems experienced by adolescents and adults within the context of their family and community environments. Pathophysiology, assessment and diagnostic strategies specific to complex health problems in adults are emphasized. The selection of clinical interventions, clinical decision making, and evaluation of strategies used to enhance the health outcomes of adults will be stressed. Prereq: NURS 433.

NURS 439. Family Health Nursing: Health of Children and Adolescents (4)

This course introduces the influence of family dynamics and the information necessary for the practice of primary health care of children and adolescents. The course includes application of the principles of growth and development, disease prevention, and management of common acute and chronic health problems. The impact of the family on child and adolescent development and health is explored. Clinical application of nursing strategies to optimize health-seeking behaviors is emphasized. Prereq: NURS 432.

NURS 443. Acute Health Problems of the Adult (1 - 6)

Emphasis is on the pathophysiology, assessment, and diagnostic approaches specific to acute health problems of adults. The clinical laboratory focuses on development of advanced therapeutics and case management skills. Prereq: NURS 438.

NURS 444. Advanced Management of Acutely Ill Adults (1 - 4)

This course focuses on concepts specific to complex, multidimensional health problems of hospitalized adults. Pathophysiology, assessment, and diagnostic strategies specific to complex health problems are emphasized. Clinical practice focuses on case management of acutely ill hospitalized adults with complex health problems. Prereq: NURS 443.

NURS 449. Primary Care of Older Adults (3)

This course will focus on the assessment of the older adults. These factors are analyzed in various environments. Epidemiological and health behavior models are used to assess health risks, assist with problem identification, primary, secondary, and tertiary prevention strategies. Cultural, ethnic, and developmental issues are addressed. Concepts, assessment strategies, interventions and evaluation approaches specific for older adults are identified. Prereq: NURS 419.

NURS 454. Advanced Management of Complex Problems in the Older Adult (4)

This course focuses on the management of complex multidimensional health problems experienced by older adults and their families in multiple environments of care. Pathophysiology, assessment, and diagnostic strategies specific to complex health problems in older adults are emphasized. Evidence-based management strategies used to enhance the outcomes in older adults to promote health and prevent disability will be stressed. The role of the GNP on care giving teams will be included. Prereq: NURS 449. Coreq: NURS 442.

Course Descriptions (NURS)

NURS 110. Foundations of the Discipline (1)

This course is designed to introduce the student to the practice, profession and discipline of nursing. A futuristic perspective will provide a framework for discussion of the foundation of contemporary nursing practice within a variety of health care settings.
NURS 211. Introduction to Pharmacology (2)  
Introduction to basic principles of pharmacology and pharmacotherapeutics. Review of characteristics and use of major drug groups with emphasis on nursing implications. Prereq: NURS 122 and BIOL 116.

NURS 230. Nursing Care of the Adult I (5)  
This course is the first in a two part series of courses focusing on the application of the nursing process in various settings to the adult experiencing common acute and chronic health alterations. Special emphasis is placed on assessment, diagnostic testing, and nursing interventions as part of the nursing process. Prereq: NURS 122, BIOL 114, and BIOL 117. Coreq: BIOL 121.

NURS 240. Nursing Care of the Adult II (5)  
This course builds upon the knowledge and skills mastered in NURS 230 and NURS 250. Course content and learning opportunities provide students with the information necessary to collaborate with other members of the health care team in providing comprehensive care to adults and older adults. Students will use the nursing process in selecting appropriate nursing interventions for the care of adults experiencing multiple acute and chronic health problems in the acute care setting. Special emphasis is placed on evaluating patient responses and revising the plan of nursing care to optimize expected outcomes. Prereq: NURS 211, NURS 230, NURS 250, and BIOL 121.

NURS 250. Aging in Health and Illness (2)  
This course will explore the concept of aging as a healthy developmental process with a particular focus on the elderly as active, independent, and contributing members of the community. Content will include the physiology of aging, health problems common to the elderly, the psychological, emotional, and sociological aspects of the aging process and policy issues. Prereq: NURS 122, BIOL 114, BIOL 117, and BIOL 119.

NURS 260. Community Engagement Seminar III (1)  
This course is a one credit seminar focused on the delivery of culturally appropriate community based health care and on the issues of culture, ethnicity and socio-economic background as they contribute to the growing disparities in health care outcomes. Students will engage in a 12 hour field experience in a Cleveland health care facility or school system where they will provide health screening and health education services to children and families. The seminar will include two sessions devoted to reflection and evaluation of the field experience. In addition, each semester will include required attendance at the Rozella Schlotfeldt Public Lectures related to issues contributing to disparities in health care. Prereq: NURS 260.

NURS 315. Parents and Neonates in Health and Illness (4)  
This course focuses on the study of childbearing families and their health-seeking behaviors from a developmental perspective. Content includes nursing knowledge and skills related to assessment of health status of parents and neonates. Nursing strategies focusing on interventions to promote, restore, and maintain health are discussed. Prereq: NURS 240, NURS 317, and NURS 342.

NURS 316. Infants, Children, and Adolescents in Health and Illness (4)  
The study of infants, children, and adolescents, and the health-seeking behaviors from a developmental perspective. Emphasis is on healthy infants, children, and adolescents as well as infants, children, and adolescents with common, acute, and chronic illness within the context of their family environment. Nursing strategies focus on interventions to promote, restore, and maintain health and foster growth and development. Prereq: NURS 240, NURS 317, NURS 342.

NURS 317. Psychiatric-Mental Health Nursing (4)  
The course is designed to address health-seeking behavior patterns within the context of psychiatric and mental health nursing concepts. The focus is on clients with psychiatric disorders and their mental health. Nursing strategies that are appropriate for assessment and intervention with individuals, families, and groups to facilitate optimal mental health will be discussed and practiced. Prereq: NURS 230 and NURS 211, or permission of instructor.

NURS 318. Nursing in the Community (4)  
The study of the promotion of health and the primary, secondary, and tertiary prevention of health problems of a population. Focuses on the community as client with nursing care of individuals, families, and groups. The clinical component focuses upon developing and evaluating health promotion programs, family assessment, community assessment, and community-based home care within the context of the community. Recommended preparation: RN license.

NURS 320. Theoretical and Evidence Bases for Best Practice in Nursing (3)  
This course explores the theoretical and evidence bases for best practices in nursing. The course begins with an overview of the theoretical and philosophical underpinnings of nursing practice and nursing science. The course includes an intensive focus on the concept of evidence based practice and the process of evaluation supporting practice. Additionally, the course introduces evaluation models used to determine the effectiveness and quality of existing practice and to recommend improvements. Prereq: STAT 201 and completion of five semesters of B.S.N. program. SAGES Dept Seminar

NURS 341. Concepts of Management (3)  
This course focuses on the study of basic concepts related to leadership, management and working with groups in the provision of nursing care. Concepts include: decision making, power, authority, roles, teaching-learning, evaluation, leader behaviors, work groups, change, legal aspects and quality. Students will apply the key concepts from marketing, law, finance, quality management, and other intervening variables that affect environments of care.

NURS 342. Medical Microbiology, Immunity, and Infectious Disease (4)  

NURS 343. Issues and Ethics in Health Care (2)  
This course is designed to introduce the student to the principles underlying ethical issues and methods of rational decision making. Fundamental theories will be reviewed and opportunity provided, using case analysis, to apply the theories in addressing ethical dilemmas common to modern health care.

NURS 345. Nursing Informatics III: Clinical NIS (2)  
The focus of this course is directed toward the understanding and use of information technologies and systems that support decision making in nursing practice, administration, research and education. Tools such as list servers, the World Wide Web, e-mail and databases may be used to augment the knowledge base in the course. Recommended preparation: RN license. Prereq: NURS 240 or RN license.

NURS 346. Nursing Informatics IV: Applications (2)  
The focus of this course is directed toward the advanced informatics concepts and the implementation of selected applications within the health care setting. Systems analyzed and implemented may range from those used for patient care within the inpatient environment to those used in community or outpatient environments. Affected users of the systems may be clients, families, nursing or other health care professionals. Prereq: NURS 345 or permission.

NURS 350. Concepts and Management in Geriatric Nursing (9)  
This course will introduce concepts of rehabilitation, family nursing, geriatric nursing, and geriatric mental health and assist students in applying these concepts in a long-term care setting. Content will focus on assessment and intervention strategies for health problems common in the older adult. This will include a focus on developmental issues in the elderly, the assessment and management of depression. The course will also include content on assess-
ment and intervention to improve the physical and functional capacities of the elderly, exercise interventions to improve cardiovascular and muscular capacity required for daily activities. Prereq: NURS 351 and NURS 353.

NURS 351. Acute Care II: Management of Care (4)
Application of management concepts in providing nursing care to individuals and groups of patients. Learning opportunities include experiences with members of the multidisciplinary health care team in planning, implementing, and evaluating patient outcomes. Prereq: NURS 240 and NURS 317. Coreq: NURS 353.

NURS 352. Acute Care III (9)
This course focuses on the knowledge and skills necessary to provide nursing care for patients with complex problems. Emphasis is on nursing strategies designed to provide comprehensive care to patients and their families affected by acute illness. Clinical practice is directed toward the care of acutely ill adults. Prereq: NURS 370, NURS 371, NURS 372, NURS 373.

NURS 353. Principles of Critical Care I (4)
This course provides the knowledge and technical skills foundational to the care of critically ill patients. Clinical practice is directed toward the care of the critically ill patient with a focus on patient assessment, use of biotechnical technology, development of psychomotor skills, and planning basic care. Prereq: NURS 240 and NURS 317. Coreq: NURS 351.

NURS 354. Nursing Care of Critically Ill Adults (9)
This course focuses on the integration of knowledge and skills to provide effective and efficient nursing care to critically ill adults. Emphasis is on nursing strategies designed to provide comprehensive care to patients and their families affected by acute illness. Clinical practice is directed toward the care of acutely ill adults. Prereq: NURS 370, NURS 371, NURS 372, NURS 373.

NURS 356. Nursing Care of Critically Ill Neonates, Infants, and Children (9)
This course focuses on the knowledge and skills necessary for beginning practice in the nursing care of critically ill neonates, infants and children. Emphasis is on nursing strategies directed toward the application of basic principles of critical care nursing with attention to special needs of critically ill neonates, infants and children and their families. Prereq: NURS 370, NURS 371, NURS 372, NURS 373.

NURS 360. Community Engagement Seminar V (1)
This course is a one credit seminar focused on the delivery of culturally appropriate community based health care and on the issues of culture, ethnicity and socio-economic background as they contribute to the growing disparities in health care outcomes. Students will engage in a 12 hour field experience in a Cleveland health care facility or school system where they will provide health screening and health education services to children and families. The seminar will include two sessions devoted to reflection and evaluation of the field experience. In addition, each semester will include required attendance at the Rosella Schlofeldt Public Lectures related to issues contributing to disparities in health care. Prereq: NURS 310. Coreq: NURS 351 and NURS 353.

NURS 370. Information Technologies in Health (1)
The focus of this course is the application of advanced information and communication technologies in the health care of communities and populations. Building on a base of consumer informatics, the course will explore Geographic Information Systems (GIS), data mining techniques, telemedicine technology, and advanced communication technologies in the context of global health. Prereq: NURS 315, NURS 316, NURS 345, NURS 351 and NURS 353. Coreq: NURS 371, NURS 372 and NURS 373.

NURS 371. Public Health Nursing (3)
In this course, students will utilize a problem-based approach to develop knowledge and specific competencies in applying key concepts of public health, public health nursing and epidemiology. Through guided observation and classroom experiences, students will discover strategies to assess, plan, implement and evaluate population-focused programs for health promotion and disease prevention. Prereq: NURS 315, NURS 316, NURS 345, NURS 351 and NURS 353. Coreq: NURS 370, NURS 372 and NURS 373.

NURS 372. Health in the Global Community (3)
This course focuses on an analysis of the forces shaping community and global health patterns. Drawing on multidisciplinary sources, this course explores the impact of these global processes as they manifest in the health of our own and other societies. Emphasis is placed on analysis of the broad cultural, environmental, social-economic, and political systems that contribute to health status and outcomes, health policies, and health care delivery around the world. Prereq: NURS 315, NURS 316, NURS 345, NURS 351 and NURS 353. Coreq: NURS 370, NURS 371, and NURS 373. Global & Cultural Diversity

NURS 373. Global Health Practicum (5)
The purpose of this practicum is to provide students with the opportunity to analyze the concepts of health and health care, health policy and finance, culture and ethics through a preceptorized, 10-week community-based immersion experience in local, national, or international settings. Students will apply epidemiological techniques, the skills of negotiation, partnership building, community assessment and nursing science in the identification and analysis of a health problem leading to the development of an intervention. Prereq: NURS 315, NURS 316, NURS 345, NURS 351 and NURS 353. Coreq: NURS 370, NURS 371 and NURS 372. SAGES Senior Cap

NURS 391. Home Health Care Nursing (5)
This course focuses on the knowledge and skills necessary to provide nursing care in home health settings for clients with complex problems. Emphasis is on nursing strategies designed to provide comprehensive nursing care to clients and their families. Clinical practice is directed toward the care of client/family in the home. Recommended preparation: RN license.

NURS 392. Dynamics of Nursing Practice and Management (4)
The focus of this course is management and leadership concepts and their application to nursing practice. Topics such as strategic planning, resource management, organizational structure, legal issues, and delegation will be explored. Recommended preparation: RN license.

NURS 393. New Applications in Nursing Practice Management (4)
The focus of this course is the application of management and leadership concepts in a seminar format and clinical practicum for registered nurses. Students will apply concepts of strategic planning, resource management, organizational structure, and delegation in a health care setting. Recommended preparation: RN license.

NURS 399. Independent Study (1 - 12)
Independent guided study for undergraduate students with special needs or interests.

NURS 400. Guided Study in Nursing (1 - 18)
Independent study for students with special needs and interests.

NURS 401. Statistics for Health Sciences (3)
This course examines statistical methods of analyses of variance and multiple linear regression. Content includes ANOVA, repeated measures analysis of variances, correlation analysis, and multiple linear regression. Learning statistical theories is coupled with practice of data analysis using statistical software. This course is for graduate students in nursing and health sciences. It is not for credit toward any undergraduate or graduate degrees in Statistics. Recommended preparation: completion of basic statistics within five years of admission to program. Prereq: STAT 201.

NURS 404. Emergent Care of the Child (2)
This course incorporates biological, developmental, psychological, emotional, social, and cultural aspects of care. The emphasis is on pathophysiology, assessment, diagnostic approaches, and interventions specific to emergent care of infants, children, and adolescents. Advanced therapeutics are introduced. Recommended preparation: Certification in PALS and neonatal resuscitation or concurrent enrollment in NUNP 444. Prereq or Coreq: NUNP 444.

NURS 405. Inquiry I - Theoretical Foundations (3)
This course provides an introduction to conceptual and theoretical thinking. Students will examine knowledge development in nursing, conceptual structures, and their uses as a basis for nursing practice and research.

NURS 406. Flight Nursing Seminar I (1)
This seminar course provides a forum for preparing students to care for patients requiring air transfer to specialty care facilities. Special emphasis is placed on advanced procedures, flight physiology, and environmental influences on the clinical approach in order to apply acute care competencies to flight nursing practice. Prereq or Coreq: NUNP 443.

NURS 407. Flight Nursing Seminar II (1)
This seminar continues to prepare students to care for patients requiring air transfer to specialty care facilities. Special emphasis is placed on clinical approaches to patient management across the lifespan. Recommended preparation: ACLS, PALS, and neonatal resuscitation certification. Recommended preparation or concurrent enrollment in NUNP 444, NURS 406, NURS 404.

NURS 408 Health Care of the Young Child with a Disability (3)
The focus is on the study of young children with disabilities and chronic conditions. Related issues of development, diagnosis, treatment, and family concerns are included. Continuum of care from hospital to home is considered. Involvement of the family as a member of the health care team is emphasized. Various technologies and feeding strategies for management of children's disabilities are highlighted. Context of care is considered from a multidisciplinary team approach.

NURS 409. Specialty Assessment and Diagnostics in Cardiovascular Nursing (2)
This course provides the basis for the selection and interpretation of assessment and testing strategies during the process of differential diagnosis of cardiovascular problems. Lecture is supplemented with specific clinical lab experiences.

NURS 410. Cardiovascular Nursing Seminar I (1)
This seminar course focuses on cardiac rhythm abnormalities and their management. Prereq or Coreq: NURS 430. Coreq: NURS 409.

NURS 411. Cardiovascular Nursing Seminar II (1)
This seminar course focuses on the management of complex cardiovascular disease. Prereq: NURS 410.

NURS 416. Integrated Assessment of the Neonate for Midwives (1)
This course introduces principles fundamental to the integrated assessment of the neonate. Gestational age assessment, assessment of genetic risks, and physical assessment skills are developed.

NURS 424. Theoretical Basis of Medical/Surgical Nursing II (5)
This course provides the opportunity to explore complex health problems of patients requiring a variety of health care services and support systems. Nursing strategies requiring independent, interdependent, and collaborative activities are evaluated for their efficacy in supporting and assisting the patient’s progress toward health. Clinical experiences are individualized to promote implementation of the Clinical Nurse Specialist role and build upon the student's expertise.

NURS 425. Inquiry II - Research Process (3)
This course emphasizes scholarly inquiry, scientific integrity and scientific investigation. It includes study of the research process, particularly design, sampling, data collection and analysis, and interpretation and reporting of findings. Recommended preparation: NUND 201 or STAT 201. Prereq: NURS 405.

NURS 430. Pharmacology and Therapeutics (3)
Examination of the major categories of pharmacologic agents and application of pharmacologic concepts in the clinical setting. Emphasis is placed on understanding the physiologic action of the drugs, expected patient responses, and major side effects. Major-specific seminars integrate knowledge of pharmacology into clinical practice. Recommended preparation: NURS 453, RN license or consent of instructor.

NURS 438. Theoretical Foundations of Acute Care Nursing (2 - 4)
This course focuses on advanced practice by examining common health and illness phenomena in the acute care setting. Concepts, theories, and phenomena will be analyzed for their relevance in planning and evaluating nursing care strategies and modalities. Individualized clinical experience in the acute care setting with a selected patient population is part of the advanced practicum. Prereq or Coreq: NURS 453 and NURS 459.

NURS 441. Mental Health of Older Adults (1)
This course focuses on discussion of the consultative, investigative, and planning skills to meet the special mental health needs of the elderly. Concepts of mental health promotion, mental illness prevention, knowledge development, implementation, and evaluation of psychotherapeutic nursing strategies are examined. The examination of diverse mental health disorders in the aged mental health service delivery are included.

NURS 442. Mental Health Interventions with Older Adults (1)
This course focuses on the theoretical basis of psychosocial assessment and intervention with older adults and their families, with an emphasis on individual, group, and family interventions. Concepts from individual, family, and group modalities and the process of consultation and education are examined. Students will also learn the components of individual and family assessment in “well elders” and the identification of mental disorders, including problems with memory and cognition. This knowledge base serves as the foundation for developing and applying interventions in practice to meet the mental health needs of older adults. Prereq or Coreq: NURS 441.

NURS 443A. Collaboration, Consultation, & Credentialing in Advanced Practice Nurs (1)
The focus of this course is the process of consultation and collaboration in advanced practice nursing. The organizations that are involved in promoting and assisting advanced practice nurses (APNs) will be addressed. The similarities and differences in the roles of the APN will be explored. The process of credentialing APNs will also be examined.

NURS 443B. Role Development in Advanced Practice (1)
The focus of this course is the study of the multiple roles integrated into advanced practice nursing including principles of management and leadership. Strategies to market the value of the advanced practice nurse (APN) role and the individual APN are addressed.

NURS 443C. Teaching and Learning in Advanced Practice (1)
The focus of this course is the examination of the process of teaching, learning, and evaluation. A variety of teaching modalities applicable across the lifespan will be explored.

NURS 444A. Ethical Issues in Advanced Practice (1)
The focus of this course is ethical decision-making for advanced practice nurses. The interaction between the health care delivery system and ethical decision making is explored.

NURS 444B. Health Care Delivery and Finance in Advanced Practice (1)
The focus of this course is the study of the financial and business factors related to the health care delivery system and advanced practice nursing. Students will discuss strategies related to reimbursement, business practices, billing, and coding.

NURS 444C. Health Policy Legislation and Legal Issues in Advanced Practice (1)
The focus of this course is the critical analysis of health policy and legal issues. Strategies for influencing the regulatory process will be explored.

NURS 445. Infection Control I (3)
Examination of the principles of pathogenicity, transmission, diagnosis, immunization, and therapy of select infectious disease agents and methods of prevention and control of these agents in the community and health care settings. Introduction to application of infection control policies and procedures in a variety of community and clinical settings.

NURS 446. Collaboration and Administration in the Health Care Delivery System (3)
Examination of the influence of the health care delivery environment on the delivery of care and the role of the Advanced Practice Nurse as collaborator within the health care structure. Clinical practice and seminars will focus on the role of the manager in planning, organizing, staffing, directing, and controlling the health care environment for the purpose of improving patient care, facilitating collaborative activities with other health care professionals, and identifying mechanisms to effect change within the health care system. Clinical practice 8 hours per week.

NURS 448. Mental Health Pracitcum with Older Adults (3)
This course focuses on the application and development of psychosocial assessment and intervention with older adults and their families, with an emphasis on individual, group, and family interventions. Concepts from individual, family, and group modalities and the process of consultation will be
applied. The components of individual and family assessment will be applied in “well elder” as well as those with identified mental disorders. Prereq: NURS 441 and NURS 442.

NURS 450. Infection Control II (3)
Examination and application of an infection control program in a community or clinical setting. Content related to bioterrorism or natural disaster situations will be included. Prereq: NURS 495, NURS 496, EPBI 494 and NURS 445.

NURS 453. Physiologic Foundations for Advanced Practice Nursing (4)
This course is designed to build upon the student’s pre-existing knowledge of basic human anatomy, physiology, and nursing science. Selected body systems are examined in order to provide in-depth integration of normal physiologic functions with specific intervening variables and pathologic mechanisms associated with life span development and dysfunction. Recommended preparation: RN license or consent of instructor.

NURS 454. Well Woman Health Care (3)
Study of selected theoretical formulations and models applied by professional nurses in the promotion of growth and wellness in adolescent and adult women. Emphasis on conception, decision making, sexuality and health teaching. Acquisition of knowledge and skill related to physical and psychosocial health assessment of pregnant and nonpregnant clients. Individually planned experiences with nurse faculty who are serving as primary care givers in maternity, family planning and gynecologic care settings. Prereq or Coreq: NURS 453 and NURS 459.

NURS 455. The Childbearing Family (4)
This course will focus on analysis and applications of the nursing strategies to enhance health-seeking behaviors of the pregnant family during the maternity cycle and on the education of parents about the childbearing year. The normal aspects of the pregnant woman and the identification of any deviations from the normal are central to the content. The course will also emphasize the enhancement of the pregnant family’s childbirth experience through utilization of the teaching-learning process. The student will learn to evaluate and apply techniques relative to childbirth education. Clinical experiences will be planned in ante partum, neonatal, childbirth education and home settings. Prereq: NURS 454. Coreq: NURS 430.

NURS 457. Labor and Birth (5)
The focus of this course is the application of nursing theory, practice and research by advanced practice nurses in the promotion of health and wellness of women, newborns and their families during intrapartum and the immediate postpartum period. Emphasis is placed on the health-seeking behaviors of the mother and her family using a holistic approach emphasizing cultural, ethnic and racial diversity in the provision and evaluation of care. Supervised clinical experience includes anticipating and identifying complications and participating in consultations, referrals and collaborative management. Prereq: NURS 455.

NURS 459. Integrated Assessment for Advanced Nursing Practice (3)
This course introduces concepts fundamental to the role of the Advanced Practice Nurse. It stresses health assessment, history taking, interviewing, and physical assessment skills, and provides the basis for decision making, advanced therapeutics and case management. Recommended preparation: RN license or consent of instructor.

NURS 460A. Theoretical Basis for Individual Counseling (1)
This course emphasizes the ongoing development of the counseling relationship across the life span. The professional encounter between the individual and advanced practice nurse will be formulated based on the Helping Model for problem management. Students will differentiate counseling and therapy. Students will also develop and apply crisis intervention skills, interviewing skills and alternative adjunct therapies.

NURS 460B. Theoretical Basis for Individual Psychotherapy (1)
This course will build therapeutic skills for the advanced practice nurse specializing in mental health. Students will master Helping Skills in their interventions with individuals with psychopathology. Prereq: NURS 460A. Prereq or Coreq: SSBT 548 and PSCL 524.

NURS 461. Practicum and Supervision of Individual Therapy (1 - 2)
Direct care experience. Focus on therapeutic process with persons experiencing psychosocial disturbances. Use of nursing strategies to enhance health-seeking behaviors. Examination of genesis of psychopathology: emphasis on methods of assessment, goal setting, intervention, and evaluation. Group and individual supervision. Prereq: NURS 460A.

NURS 462. Practicum and Supervision of Group and Family Therapy (2 - 3)
Direct care experience, formal group and family experience focusing on process, content and leader behavior. The nurse-therapist employs nursing strategies to enhance health-seeking behaviors of family and group. Use of concepts from psychiatry and behavioral and social sciences related to the promotion of mental health and treatment of psychosocial distress in groups and families. Group and individual supervision. Prereq: NURS 460A.

NURS 463. Theoretical Basis of Practice & Supervision in Consultation & Mental Health (1 - 3)
Indirect care experience. Theories of consultation. Adult education. Exploration of issues related to the role of the clinician in the enhancement of health-seeking behaviors of individuals and communities as they strive to achieve optimal levels of health. Examination of the consultative, administrative and educational processes in the practice of consultation and community education. Seminars, group, and individual supervision. Prereq: NURS 460A, NURS 462.

NURS 466. Practicum and Supervision in Role of Clinician (3)
The professional encounter between the psychiatric mental health clinical nurse specialist, staff and agency personnel providing mental health services, and clients receiving services in the context of an environment of care is emphasized. Intrapersonal, interpersonal and extrapersonal variables that influence the health-seeking behaviors of individuals, families and groups as they seek to attain, maintain or regain optimal levels of mental health are employed.

NURS 467. Theory of Family and Group Modalities (2 - 3)
The professional encounter between nurse therapist and the group or group members and the family or family members occurs within the context of an environment of care. The nurse therapist enhances health-seeking behaviors of individuals, families and groups. The nurse therapist employs nursing strategies cognizant of interviewing variables, to facilitate health-seeking behaviors of family and group members. Concepts from family and group theory, family and group literature, and research in family and small group dynamics are selected to provide an eclectic approach to treatment.

NURS 468. The Continual Improvement of Healthcare: An Interdisciplinary Course (3)
The focus of this course is on collaborative work for the benefit of patients and community. Seminar classwork is combined with a field project, in which interdisciplinary student teams apply what they have learned to the improvement activities of a local health care organization. Successful completion of the course depends on participation in seminar sessions and completion of the interdisciplinary student team project. Offered as EPBI 468, NURS 468, and MPH 468.

NURS 471. Organizational Theories (3)
Examination of intervening variables which affect health care organizations including structure, dynamics and processes of change.

NURS 479. Public Policy and Aging (3)
Overview of aging and the aged. Concepts in the study of public policy. Policies on aging and conditions that they address. The politics of policies on aging. Emergent trends and issues. Offered as ANTH 498, BETH 496, EPBI 408, GER 496, HSTY 480, MPH 408, NURS 479, NURS 579, POSC 480, and SOCI 496.

NURS 480. Public Health and Epidemiology (3)
Study of health care problems within the larger social/environmental context. Epidemiology as a method of reasoning leading to the making of causal inferences. Principles underlying epidemiology as a method of study and the scope, potentialities and limitations of this approach. Recommended preparation or concurrent enrollment: Statistics or consent of instructor.

NURS 491. Community Health Nursing I (4)
This is the first course in the Community Health Nursing major. It is designed to introduce students to the specialist practice of community health nursing and emphasizes the importance of population.
based practice. A population or a geopolitical community focus will be identified by the student, and a comprehensive appraisal of its health status conducted. Priority health concerns and strategies to enhance health-seeking behaviors and mechanisms will be identified. Recommended preparation: Undergraduate Community Health Nursing courses; graduate standing in nursing.

NURS 495. Community Health Nursing II (4)
In this course students will design a feasible plan to address the identified priority concern for a selected population or geopolitical community. Program planning models will be examined, and a model useful to address the priority concern selected. Evaluation techniques will be identified and included in the program design. Interventions to enhance health-seeking behaviors based on primary, secondary, and tertiary prevention strategies will be implemented in the clinical component of the course. Prereq: NURS 491.

NURS 496. Community Health Nursing III (4)
This course completes the Community Health Nursing major. Based on work successfully completed during the previous two courses the student will conclude program implementation and conduct a summative evaluation of overall program effectiveness. As part of the leadership experience, the student, in partnership with the community or population, will explore external funding for program continuation. Issues influencing health care delivery and community health nursing practice will be examined. Prereq: NURS 491 and NURS 495.

NURS 499. The Nurse Executive-Personal & Professional Challenges in Health Care (3)
Offered toward end of the M.S.N./M.B.A. program and prepares the graduate for entry into a nurse management role. The focus will be on contemporary role demands in nursing management, ranging from head nurses to vice presidents of nursing to heads of community health and mental health agencies, and taking account of all regions of the U.S. Emphasis will be placed on exploring knowledge and skill requirements of nursing management, current developments (such as nursing values, goals, and tasks), and the strategic and operational configuration of hospitals and other health care agencies.

NURS 500. Master's Thesis (1 - 4)
Systematic investigation of a research problem selected by the student for independent study. Prereq: NURS 415.

NURS 502. Inquiry III - Evidence-Based Nursing Practice (2)
This course focuses on linking research evidence to nursing practice. Processes for implementation and evaluation of evidence-based nursing practice will be included. Prereq: NURS 425.

NURS 503. Inquiry Practicum (1 - 2)
This course focuses on the development of competencies in scientific inquiry. Such competencies are achieved through experiences in participation in a research study or evidence-based project related to nursing science. A written report of the experience is required. Prereq: NURS 415 or NURS 425.

NURS 506. Nursing Epistemology (3)
This course involves the study of knowledge shared among members of the discipline, the patterns of knowing and knowledge development, criteria for evaluating knowledge claims and philosophy of science. The course is a search and discussion experience aimed at enabling graduate students to become knowledgeable about approaches to the study of disciplines and scientific knowledge development. Forces affecting the development of knowledge, the origins of key terms and concepts, and identification of major themes in nursing will be explored.

NURS 507. Clinical Knowledge (3)
This course is structured to allow students to develop clinical knowledge about their area of interest and to begin the process of identifying clinical research questions. Supervision for this experience will be twofold. Students will be placed with an expert clinician with a minimum of a master's degree (in nursing) to identify and arrange relevant clinical experiences. The student and the clinician will work with the course faculty to create opportunities for the student to experience the clinical phenomena of interest, which may include actual "hands-on" experience. Students will also meet regularly with the other students in the course and the course faculty for group supervision that focuses on linking clinical practice issues to research questions. Course requirements would include eight hours of practicum experiences per week.

NURS 508. Context of Care (3)
This course is designed to allow students to explore the social, political, economic, and health care issues that form the context for their clinical phenomena of interest. The intent of this course is for the student to become knowledgeable about the broader forces that affect their clinical problem. Topics might include current research in their field, as well as health policy related to their phenomena, political entities that affect funding, and the regulation of practice in their area of interest. The student will need a content expert to help them plan and coordinate practicum experiences, which should be multiple and varied, and include exposure to both local and state level entities. Prereq: NURS 507 or equivalent.

NURS 510. Health Disparities (3)
This course aims to provide theoretical and application tools for students from many disciplinary backgrounds to conduct research and develop interventions to reduce health disparities. The course will be situated contextually within the historical record of the United States, reviewing social, political, economic, cultural, legal, and ethical theories related to disparities in general, with a central focus on health disparities. Several frameworks regarding health disparities will be used for investigating and discussing the empirical evidence on disparities among subgroups (e.g., the poor, women, uninsured, disabled, and non-English speaking populations) will also be included and discussed. Students will be expected to develop a research proposal (observational, clinical, and/or intervention) rooted in their disciplinary background that will incorporate materials from the various perspectives presented throughout the course, with the objective of developing and reinforcing a more comprehensive approach to current practices within their fields. Offered as CRSP 510, EPBI 510, MPH 510, NURS 510, and SASS 510.

NURS 511. Strategies for Theory Development (3)
This course examines the nature of theory and strategies for theory development in nursing. Students will explore a variety of strategies and select an approach for beginning theory development that addresses nursing phenomena in their area of interest.

NURS 518. Qualitative Research (3)
This course is a study of qualitative research approaches directed toward the development of nursing knowledge. This course will include methods and issues in data collection, analysis, and critique of research findings. It will focus on the philosophico-cultural and epistemological foundations of qualitative research, present an overview of various methodological approaches, examine in depth the criteria for rigor, and analyze ethical issues in qualitative methodologies.

NURS 520. Advanced Nursing Research I (3)
The development of research questions within a nursing framework and related research designs will be studied. The focus of the course will be problem formulation, selected research designs and sampling. Prereq: NURS 504 or consent of instructor.

NURS 521. Advanced Nursing Research II (3)
The discussion of research designs and their rationale for use will be continued. Principles of measurement, study implementation and data analysis will be discussed. The development of a research proposal will be the expected outcome of this two-semester sequence. Prereq: NURS 401 or STAT 401 and NURS 520.

NURS 522. Advanced Internship in Cardiovascular Nursing (1 - 5)
This 600-hour internship is designated to provide the master's prepared ACNP-Cardiovascular Nursing Graduate with the experience needed to enter practice as an APN caring for patients with complex cardiac disorders. Recommended preparation: completion of appropriate NP program. Prereq: NURS 411.

NURS 523. Advanced Internship in Flight Nursing (1 - 5)
This internship is designed to provide the Master’s prepared ACNP-flight nurse concentration graduate with experience needed to qualify for the Certification Examination in Flight Nursing. This experience consists of a 600 hour precepted internship in a flight nursing setting. Recommended preparation: Completion of M.S.N. program focus in Flight Nursing and ACNP certification, certification in ACLS, PALS, and neonatal resuscitation.

NURS 524. Advanced Practicum in Infection Control (1 - 5)
This practicum experience consists of up to 600 hours of a precepted experience in an infection control program setting. This practicum is designed to provide the student with experience needed to qualify for the Certification Examination in infection control.
Control administered by the Certification Board of Infection Control and Epidemiology to receive CIC certification. The student may choose among a public health, acute care, long-term care, or international setting. Prereq: NURS 450.

NURS 530. Advanced Nursing Research Methods I (3)
This course focuses on conceptualization of a research problem within a nursing perspective, threats to validity, sampling, measurement, and survey, quasi-experimental, and experimental designs. The emphasis is on the application on these strategies while encouraging flexibility in conceptualizing a study using different research methods. Students will develop a research study using methods consistent with theoretical and empirical knowledge and the nursing perspective. Coreq: NURS 532.

NURS 531. Advanced Nursing Research II (3)
This course is the second in a two-course sequence of research methods. It focuses on power analysis, data management, experimental and epidemiological designs and designs to assess change. Included is a discussion of ethics and concerns regarding human subjects. The emphasis is on the application of research strategies while encouraging flexibility in conceptualizing a study using different methods. The development of a research proposal is the outcome of this two-semester sequence. Prereq: NURS 530 and NURS 401 or STAT 401 or equivalent.

NURS 532. Basic Statistics: Fundamentals for Analysis (3)
The purpose of this course is to provide the student with the fundamentals needed for analysis of research problems. It will review theoretical foundations of statistical analysis and inference, probability theory, and hypothesis testing. Use of measures of central tendency, basic parametric and non-parametric tests will be discussed, with specific application to health problems. Use of SPSS will be included. Prereq: Graduate standing or permission of instructor.

NURS 557. Advanced Midwifery (6)
In consultation with faculty, students select a nurse-midwifery service where they assume the responsibilities of beginning practitioner for a minimum of 10 weeks of intensive, supervised clinical practice. Synthesis of the nurse-midwifery management process while providing continuity of care integrating all core competency areas is emphasized. Students explore the professional aspects of nurse-midwifery practice. Historical development of the profession is used as a framework for understanding current issues related to nurse-midwifery education and practice in the United States. Prereq: NURS 457.

NURS 559. Advanced Practice in Nursing Care of Women (2 - 4)
Integration of concepts, theories, conceptual, and theoretical models, focused on supporting the health-seeking of women and their families as they contend with intervening factors. Emphasis on psychosomatic, acute and long-term illnesses and their interplay with psychosocial problems encountered by women. Clinical practice and seminars will include providing nursing care to women and their families in all stages of life cycle. Prereq: NURS 455.

NURS 577. M.S.N./M.B.A. Management Practionum (3)
The student will enter the M.S.N./M.B.A. program with a minimum of two years of recent clinical nursing experience, and may or may not have had any management experience. This practicum is designed to provide a guided experience in a management context. NURS 577 will be offered in the spring semester of the second year of the M.S.N./M.B.A. program, after the student has completed nearly all basic courses in both schools. The management practicum will provide onsite experience in management activities. Most practicum sites will be area health care agencies. In some cases, students may alternate opportunities addressing health-related policies in area businesses or corporations. Typical practicum experiences will engage students in management projects, special assignments and/or research. Students are expected to use current management and nursing knowledge and will often use the research process in completing the practicum experience. They will work closely with nurse executives and managers within their organizations. Prereq: NURS 468 and NURS 471.

NURS 578. Curriculum and Instruction (3)
The purpose of this course is to explore the theoretical underpinnings of education and to examine innovative approaches to critical thinking. Students are provided the opportunity to analyze philosophies and principles of education along with teaching and learning styles. The course will focus on curriculum planning and development congruent with the philosophy and objectives of a nursing program. Curriculum development includes determination of program and course objectives, along with selection and organization of appropriate learning experiences to meet these objectives. Techniques for instruction in the classroom, laboratory, and clinical settings are explored. Offered as NUND 478 and NURS 578.

NURS 579. Public Policy and Aging (3)
Overview of aging and the aged. Concepts in the study of public policy. Policies on aging and conditions that they address. The politics of policies on aging. Emergent trends and issues. Offered as ANTH 498, BETH 496, EPBI 408, GERO 496, HSTY 480, MPH 408, NURS 479, NURS 579, POSC 480, and SOCI 496.

NURS 601. Special Problems (1 - 12)
This course is offered, with permission, to Ph.D. students in Nursing undertaking reading in a field of special interest.

NURS 609. Health Care Policy and Planning (3)
Special emphasis will be placed on selected national and international health policy issues that form the socio-political context of nursing care and practice. Health care policy and planning will also be explored. Ethical dimensions of public policy formulations and implementation will be highlighted. The course will also include an exploration of the nurse's role in research in the formation of health care policy and planning. Students will participate in sessions designed to illuminate the policy components and implications of clinical research.

NURS 615. Topical Seminar in Health Science Research (3)
This Ph.D. course is designed to provide in-depth knowledge of research in a given area. Opportunities are provided to apply knowledge for further development of the student's research interests and ideas. An in-depth examination of selected theoretical and methodological approaches to the development of research related to human science will be emphasized. Interrelationships among theory, research, and knowledge from nursing and related disciplines will be explored.

NURS 619. Theoretical Foundations of Educational Testing and Evaluation (2)
In this course, an overview of educational measurement and evaluation is provided. Methods of evaluating teaching effectiveness, student learning, and student performance are explored, with particular emphasis placed on test construction and analysis. Offered as NUND 479 and NURS 619. Prereq: NURS 578.

NURS 620. Action Research and Program Evaluation (1)
This course introduces the student to the concept of purposeful evaluation. The applicability of action research and evaluation to the change process and to continuous improvement within various venues will be explored. The iterative, participative, and emergent nature of generation of new knowledge and practice innovations will be discussed. Offered as NUND 480 and NURS 620. Prereq: NURS 619.

NURS 621. Teaching Practicum (3 - 6)
In this preceptored teaching practicum, the student may engage in classroom, laboratory, and clinical teaching assignments in nursing. The student will be expected to use current educational theory and nursing knowledge in completing the practicum experience (minimum 60 hours). Prereq: NURS 620.

NURS 630. Advanced Statistics: Linear Models (3)
This course is focused on advanced procedures for data analysis and statistical inference in health research. The course is devoted to discussion of linear models, including simple and multiple regression, logistic regression and application to study design. The role of assumptions and theory in guiding the analysis plan is emphasized through lecture, readings, and critical evaluation of published research in the student's area of interest. Prereq: NURS 532.

NURS 631. Advanced Statistics: Multivariate Analysis (3)
This course focuses on selected advanced multivariate topics and procedures in health research. Topics will be covered through lecture, readings, computer analysis as well as critical analysis of published research in the health sciences fields. Topics to be covered in this course include: survival analysis, factor analysis, path analysis, repeated measures ANOVA and advanced regression techniques (logistic, loglinear, mixed models). Prereq: NURS 530 and NURS 531 and NURS 532 and NURS 630.
NURS 671. Proposal Development (1 - 6)
Provides an opportunity for guided development of a candidacy proposal through planned contact with a designated committee of faculty members. The aim is to assist the student in the development of a refined proposal with strong scientific merit. The course should be utilized only by those with a candidacy proposal statement. Minimum 3 hours required for progression in program.

NURS 701. Dissertation Ph.D. (1 - 18)
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

HISTORICAL PROGRAM CODES

This is a list of all historical coding used for academic programs of study at the University.

ACC, Accounting
AFR, Auditing & Financial Reporting
AIN, Artificial Intelligence
AMN, Amer Stud & Museum Stud
AMS, American Studies
ANA, Anatomy
ANE, Anesthesiology
ANP, Applied Anatomy
ANT, Anthropology
APM, Applied Mathematics
APX, Applied Physics
ARC, Architecture
ARE, Art Education
ARH, Art History
ARK, Arts in Technical Age
ARM, Art History & Museum Studies
ARS, Art Studio
ASC, Asian Civilization
ASI, Asian Studies
AST, Astronomy
ATT, Comp/Info Sci (MS-Columbus)
BAF, Banking And Finance
BAS, Applied Social Science
BCH, Biochemistry
BET, Bioethics
BJM, Biometry
BIO, Biology
BIS, Biomedical Sciences
BRS, Biochemical Research
CAP, Adult Clinical Psychology
CBL, Cell Biology
CCN, Critical Care Nursing
CCP, Child Clinical Psychology
CHE, Chemistry
CHI, Chinese
CHL, Community Health Nursing
CHS, Childhood Studies
CIS, Computing and Info Science
CLS, Classics
CLT, Comparative Literature
CMP, Computer Science
CMS, Ceramic and Materials Science
CNM, Certificate in Nonprofit Mgmt
COS, Communication Sciences
CPH, Cell Physiology
CRS, Clinical Research
DAM, Dean's Approved Major
DGA, Develop Genetics And Anatomy
DNC, Contemporary Dance
DNT, Dentistry
DTG, Dental Graduate
EAP, Elec Engr & Applied Physics
EAR, Aerospace Engineering
EBA, Executive MBA
EBI, Biomedical Engineering
ECE, Chemical Engineering
ECI, Civil Engineering

ECL, Clinical Engineering
ECM, Computer Engineering
ECO, Economics
EDM, Executive Doctorate in Mgmt
EDU, Education
EFT, Fluid & Thermal Science
EGL, English
EGM, Engineering Mechanics
EGR, Engineering
EIN, Industrial Engineering
EMA, Macromolecular Science
EMC, Mechanical Engineering
EMM, Metallurgy & Materials Science
EMS, Materials Science & Engr
ENT, Entrepreneurship
ENV, Environmental Engr (Adm. Only)
EPB, Epidemiology & Biostatistics
EPI, Environmental Epidemiology
EPO, Engr Pract Oriented Mast Prog
ERT, Earth Sciences
ESC, Systems Ctrl & Industrial Engr
EST, Environmental Studies
ESY, Systems & Control Engineering
EVH, Environmental Health Sciences
EXP, Exercise Physiology
FAM, Family Medicine
FMG, Financial Management
FRA, Financial Reporting & Attestation
FRC, French
FRS, French Studies
GEM, German
GEN, Genetics
GEO, Geological Sciences
GER, Gerontological Studies
GES, German Studies
GMH, Geriatric Mental Health Nurs
GMS, General Medical Sciences
GNC, Genetics Counseling
GNV, Environmental Geology
GPN, Ger Ment Hlth/Psyc Ment Hlth
GRT, Gerontological Nursing

HOW TO GET TO CASE WESTERN RESERVE UNIVERSITY

The university is about five miles east of downtown Cleveland on Euclid Avenue (U.S. Routes 6, 20, and 322). Most road maps of Ohio have the University clearly indicated.

By Car
Coming from the east via Interstate 90, exit at Martin Luther King Jr. Boulevard. Proceed south for about a mile to the East 105th traffic light; cross over East 105th and keep to the right over the traffic circle, continuing along Martin Luther King Jr. Boulevard to Euclid Avenue. Turn left onto Euclid and watch for the Information Booth at the right.

If coming from the east via Interstate 80 (Ohio Turnpike), exit at Interchange 13 and proceed north on Interstate 480, which merges with Interstate 271. Exit I-271 at Cedar Road and follow it westbound towards Cleveland. Where Cedar starts down a steep hill and lane-switching lights are hanging overhead, look for a sign identifying Case Western Reserve University at the corner of Murray Hill Road (the first light at the bottom of the hill). Continue down Cedar road, staying in the far right-hand lane. You will go under a railroad bridge. Bear right onto Stearns Road at the light. Stay in the right lane and turn right onto Euclid Avenue. Stay in the right lane for one block, then turn right at the light at Adelbert Road. Allen Medical Library is on one corner, and Adelbert Main on the other. Look for the Information booth on the right-hand side of Adelbert.

If coming from the west via the Ohio Turnpike, exit at Interchange 8A and follow Interstate 90 east. In the downtown area, exit on Chester Avenue and proceed east to Euclid Avenue. Turn left onto Euclid and look to the right for the Information Booth. If you are coming from the south via Interstate 71 (or Interstate 77), proceed north until I-71 (or I-77) merges with Interstate 90, take I-90 east, then exit onto Chester eastbound as above.

By Air
Arrive at the Cleveland Hopkins International Airport. The fastest, most economical means of reaching the University from Hopkins is the RTA (Regional Transit Authority) Rapid Transit train eastbound to the University Circle station, which is just south of campus. A free University Circle shuttle bus connects the station with all areas of the campus.

By Train
Arrive at the AMTRAK station in downtown Cleveland. Take the new RTA Waterfront rail line to Tower City and transfer to a train eastbound for University Circle. A free University Circle shuttle bus connects the station with all areas of the campus. Taxis are also available at the AMTRAK station.
