GENERAL BULLETIN 2009-2011
THE UNIVERSITY

UNIVERSITY MISSION
Case Western Reserve University improves people's lives through preeminent research, education and creative endeavor.

We realize this goal through:
• Scholarship that capitalizes on the power of collaboration.
• Learning that is active, creative and continuous.
• Promotion of an inclusive culture of global citizenship.

UNIVERSITY VISION
We aspire to be recognized internationally as an institution that imagines and influences the future.

Toward that end, we will:
• Support advancement of select academic fields as well as new areas of interdisciplinary excellence.
• Provide students with the knowledge, skills and experiences necessary to become leaders in a world of rapid change and increasing interdependence.
• Nurture a community of scholars who are cooperative, collegial and committed to mentoring and inclusion.
• Build on our relationships with world-class health care, cultural, educational, and scientific institutions in University Circle and across greater Cleveland.

ACCREDITATION
Case Western Reserve University is accredited at the institutional level by the Higher Learning Commission of the North Central Association of Colleges and Schools:

30 North LaSalle Street, Suite 2400
Chicago, Illinois 60602-2504
Office: 312-263-0456
Toll free: 800-621-7440
Fax: 312-263-7462
http://www.ncalhc.org

In addition, several of the university's individual programs are accredited by nationally recognized professional associations, including:
• AACSB International - Association to Advance Collegiate Schools of Business (accountancy and business)
• Engineering Accreditation Commission of ABET, Inc. (engineering)
• Computing Accreditation Commission of ABET, Inc. (computer science)
• Accreditation Council for Cooperative Education (cooperative education programs)
• American Bar Association (law)
• American Board of Genetic Counseling (genetic counseling)
• American Chemical Society (chemistry)
• American Council of Nurse Midwives (nurse midwifery)
• American Dental Association (dental medicine)
• American Medical Association and Association of American Medical Colleges, Liaison Committee on Medical Education (medicine)
• American Psychological Association (clinical psychology)
• American Speech-Language-Hearing Association (speech pathology)
• Association of American Law Schools (law)
• Commission on Accreditation for Dietetics Education, American Dietetic Association (didactic program in dietetics, dietetic internship)
• Commission on Accreditation of Allied Health Education Programs (anesthesiologist assistant)
• Council on Accreditation of Nurse Anesthesia Educational Programs (nurse anesthesia)
• Council on Education for Public Health (public health)
• Council on Social Work Education (applied social sciences)
• National Association of Schools of Music (music)
• National League for Nursing (nursing)
• Ohio Department of Education, Division of Teacher Education and Licensure (art education and music education)

The university is chartered as an educational institution under the laws of the State of Ohio and holds a Certificate of Authorization from the Ohio Board of Regents.

For further information, contact the university's Center for Institutional Research online at http://www.case.edu/president/cir/cirhome.htm/.

THE UNIVERSITY
http://www.case.edu

Case Western Reserve University is one of the nation's leading independent research universities, with programs that encompass the arts and sciences, engineering, the health sciences, law, management, and social work.

Although its origins date to 1826, the university in its present form is the result of the 1967 federation of Case Institute of Technology and Western Reserve University. The two institutions had shared adjacent campuses since the late nineteenth century and were involved in cooperative efforts for many years. Western Reserve College was founded in 1826 in Hudson, Ohio, a town 26 miles southeast of Cleveland. The college took its name from that of the region, which at the time of the American Revolution, was known as the Western Reserve of Connecticut. In 1882, renamed Western Reserve University and boasting a medical school in addition to its undergraduate programs, the institution moved to the Cleveland site that later became known as University Circle. There it joined the Case School of Applied Science, founded in 1880 through the bequest of Leonard Case Jr., a leading benefactor and Cleveland civic leader. The name Case Institute of Technology was adopted in 1947 to reflect the institution's growing stature in the sciences and engineering.

ACADEMIC PROGRAMS
The academic programs of the university are administered through the College of Arts and Sciences and seven professional schools, including applied social sciences, dental medicine, engineering, law, management, medicine and nursing, with coordination provided by the president and the provost. The major academic divisions of the university are described below, along with a listing of their principal offerings. These units cooperate with each other and with affiliate institutions in University Circle to offer interdisciplinary and joint degree programs at the undergraduate and graduate levels.

The College of Arts and Sciences (est. 1992, but tracing its origins to 1826) offers courses of study leading to B.A. and B.S. degrees. The college houses educational and research programs in the arts, humanities, social sciences, physical and biological sciences and mathematics. Departmental faculty also conduct research and offer instruction leading to master's and doctoral degrees in these fields. The
The Case School of Engineering (est. 1992, but tracing its origins to 1880) offers curricula leading to the B.S. degree in a wide range of engineering disciplines. Departmental faculty also offer advanced instruction leading to the M.S. and the Ph.D. in these fields, conduct a substantial body of research, and maintain close ties to industry as well. The school features a practice-oriented degree, the Master of Engineering (M.E.), tailored for employed engineers seeking to advance their knowledge. The Institute for Management and Engineering or TiME, a joint venture of the Case School of Engineering and the Weatherhead School of Management, confers the Master of Engineering and Management (M.E.M.) degree.

The School of Graduate Studies (est. 1892) confers M.A., M.S., M.F.A., M.P.H., M.M.A., and Ph.D. degrees upon students who have completed advanced study in the arts, humanities and social sciences, biological and physical sciences, engineering and selected disciplines related to various professional fields. The school is an administrative unit, working closely with the deans and faculty in the university's colleges and professional schools who provide instruction and mentoring for graduate students.

The Mandel School of Applied Social Sciences (est. 1916) offers curricula leading to the Master of Science in Social Administration (M.S.S.A.) degree in social work, and to the Ph.D. degree in social welfare. The school also operates a continuing education program for social work practitioners in the community. In collaboration with the College of Arts and Sciences and the schools of law and management, the Mandel School administers the Mandel Center for Nonprofit Organizations. Through the Mandel Center, a fully developed graduate program in nonprofit management, the Mandel School and the Weatherhead School of Management offer a joint program leading to the Master of Nonprofit Organizations (M.N.O.) degree.

The School of Dental Medicine (est. 1892) offers a curriculum leading to the Doctor of Dental Medicine (D.D.M.) degree and postdoctoral training in several dental specialties leading to the Master of Science in Dentistry. In conjunction with its curriculum, the school operates a campus-based dental clinic where dental students provide faculty-supervised dental services to the campus community and to area residents. In collaboration with the School of Medicine (beginning 2007), the school also offers course work leading to the Doctor of Dental Medicine-Doctor of Medicine or D.M.D.-M.D., a new dual-degree program that combines clinical dentistry with primary care medicine.

The School of Law (est. 1892) offers a broad range of courses leading to the J.D. degree. The J.D. is also offered as part of dual-degree programs with the College of Arts and Sciences and the schools of applied social sciences, management, and medicine. The school provides graduate instruction leading to the LL.M. in U.S. and global legal studies. As part of its curriculum, the school operates the Milton A. Kramer Law Clinic Center in which law students, under faculty supervision, provide legal and advocacy services to clients from the community. The school administers several interdisciplinary centers including the Law-Medicine Center, the Canada-United States Law Institute, the Frederick K. Cox International Law Center, and a seminar for federal judges sponsored by the Federal Judicial Center. The law school also participates in the Mandel Center for Nonprofit Organizations.

The Weatherhead School of Management (est. 1967) offers curricula leading to bachelor's, master's, and doctoral degrees in management, accounting, organizational behavior, operations research, and other areas of business administration. The school also offers an executive degree, the Executive Doctor of Management (E.D.M.). Members of the school's faculty also provide instruction in economics for undergraduate students pursuing the B.A. degree through the College of Arts and Sciences. The school offers a wide range of educational programs for professional managers and participates in the Mandel Center for Nonprofit Organizations and the Institute for Management and Engineering (TiME).

The School of Medicine (est. 1843) offers a curriculum leading to the M.D. degree. This curriculum, developed at the school and emulated worldwide, features an interdisciplinary approach to organ systems and introduces students to clinical work and patients as early as the first year. The school's preclinical departments offer instruction leading to the M.S., Ph.D., and M.D.-Ph.D. degrees in the biomedical sciences. Faculty in the school are extensively involved in biomedical research. Full-time faculty in the school's clinical disciplines also have a major commitment to patient care and close supervision of medical students' involvement in patient services in a network of affiliated hospitals and clinics.

The Frances Payne Bolton School of Nursing (est. 1923) offers curricula leading to professional degrees in nursing. The Bachelor of Science in Nursing (B.S.N.) degree emphasizes acute care and clinical practice. The school's practice doctorate, the Doctor of Nursing Practice degree (D.N.P.) is similar in concept to practice doctorates in other professions such as medicine (M.D.), law (J.D.), and dentistry (D.D.S.). D.N.P.-prepared nurses are equipped for leadership roles in nursing practice, business, administration, clinical research, and academia. The school also offers instruction leading to the Master of Science in Nursing (M.S.N.) degree in several nursing specialties, and to the Ph.D. in nursing. The school's faculty members maintain an active research program as well as interdisciplinary projects with colleagues in other schools at the university.

PHILOSOPHY STATEMENT ON EDUCATIONAL OUTCOME ASSESSMENT

Case Western Reserve University commits to a comprehensive educational outcome assessment program, wherein we measure how our students have changed, what knowledge has been learned, and what competencies have been developed. Our educational outcome assessment programs will not only provide information on how well we are achieving our objectives, but also identify what types of programs and experiences have the most powerful impacts. The ultimate goal is to incorporate continuous evaluation into the educational culture for the improvement of programs and for enhancing the distinctiveness of our university.

Education outcome assessments will be based on the core vision and mission of each school and the university as a whole. The faculty, empowered by adequate resources and support to carry out assessment activities, accepts that educational outcome assessment is a part of academic duties. Outcome assessment is embraced as a means that can lead to improvements in teaching and learning, plus provide evidence of teaching effectiveness for institutional purposes.
CLEVELAND
From a settlement that began centuries ago on the banks of the Cuyahoga River, Cleveland has grown into a metropolis of close to 3 million people. The heritage of this Great Lakes port includes industrial achievement as well as cultural and scientific advances. The Cleveland area is headquarters for many of the nation’s major corporations. The city is also a major banking center; the Fourth District Federal Reserve Bank, one of 12 in the nation, is located here.

Health care is another thriving Cleveland industry. Dozens of hospitals and medical centers are concentrated in the area. University Hospitals, the Cleveland Clinic, the MetroHealth Medical Center, and others have attained international recognition for outstanding patient care and contributions to medical research.

Greater Cleveland is dotted with shopping malls, theaters, and opportunities for sports and amusement. The latter include Lake Erie, the 17,000-acre Metropark system; professional baseball, football, and basketball teams; and facilities for softball, skiing, hiking, cycling, picnics, and other activities. More than 60 ethnic groups live in Cleveland; seasonal festivals continue traditions brought to the region from throughout the world.

UNIVERSITY CIRCLE
Case Western Reserve University is located in University Circle, a 550-acre concentration of more than 40 cultural, medical, educational, religious, and social service institutions located at the eastern edge of the city. In addition to Case Western Reserve University, which is the largest institution in University Circle, the community includes Severance Hall, home of the world-famous Cleveland Orchestra; the Cleveland Museum of Art, housing one of the nation’s finest collections; the Cleveland Institute of Music; the Cleveland Institute of Art; University Hospitals; the Western Reserve Historical Society; the Cleveland Botanical Garden; the Cleveland Museum of Natural History; and many others. All are within walking distance of the university.

University Circle attracts visitors worldwide and from throughout the region to its concerts, theater performances, athletic events, art shows, public lectures, exhibits, and restaurants. Housing, shopping, and recreational facilities are all located in the area.

UCITE
University Center for Innovation in Teaching and Education
101 Allen Memorial Medical Library Building
Phone 216-368-1224; Fax 216-368-0197
http://www.case.edu/provost/UCITE
E-mail ucite@case.edu

The purpose of UCITE is to support faculty in their research and teaching and to encourage change and innovation in teaching. It does this through a combination of informal seminars and workshops (about fifty per year) led by UCITE personnel and campus faculty; special programs with invited outside speakers of renown and expertise; and individualized services (such as class visitation, mentoring, presentation skills, accent reduction, and consultation) to faculty who request them. UCITE also serves as a research, planning, and implementation resource for the many education-related initiatives undertaken on campus.

UCITE also conducts programs for new faculty. These serve an important function for faculty: development and socialization to the university culture, as well as to growth of teaching skills.

UCITE administers grants programs that are designed to encourage faculty members to develop and experiment with their teaching and education activities. The Glennan Fellows Program provides five stipends of $6,500 annually from the income of an endowment provided by the Glennan family. Selected fellows must be tenure-track but untenured faculty members who exhibit outstanding talent as both teachers and scholars. Awards are made on the basis of proposals, which they submit following nominations by their peers. It is a significant honor to serve as a Glennan Fellow, and these junior faculty become recognized as leaders and role models for other junior faculty.

UCITE also offers programs such as the Learning Fellows seminar, a semester-long course on teaching open to all faculty members.

Support in the form of gifts and donations by alumni and friends is continually being sought. These funds are used to provide additional teaching grants to university faculty members. For a more complete listing of services and events, go to the UCITE website.

UCITE is administered by a director and an associate director. The center has a full-time administrative assistant.

INFORMATION TECHNOLOGY SERVICES
http://www.case.edu/its

Information Technology Services (ITS) offers a wide variety of state-of-the-art technology applications, tools, and services to enrich the university’s learning, teaching, and research environment. Services managed include:
- The university’s high speed switched gigabit Ethernet network
- Wireless deployment to the campus community
- Personal productivity and general-purpose software packages, generally at no cost, through the online Software Center
- Support and training services to assist users in maximizing use of technology resources
- Academic and instructional systems such as Blackboard and MediaVision Courseware
- Campus-wide application software, such as e-mail and group calendaring
- Campus-wide collaborative software, including Adobe Connect
- Telephone services, including Voice over IP and unified messaging
- Audio/video/videoconferencing/streaming services
- Internal administrative systems

ITS Services
Instructional Technology & Academic Computing (ITAC)
http://www.case.edu/its/itac

ITAC supports current technologies that enhance teaching and learning at Case Western Reserve University. Through technology support and professional development, ITAC supports the university community in its endeavor to experience, explore, collaborate and extend learning beyond its traditional boundaries. Services include:
- MediaVision Courseware, videoconferencing, iTunes, YouTube
- Technology-enhanced classrooms
- Video production, streaming video and web casting
- Event Support
- Emerging instructional technologies
- 3D and virtual experiences
- Innovative multimedia
- BlackboardStudent technology consultants

Software Services
http://softwarecenter.case.edu

Case Western Reserve faculty, staff and students are eligible to download software packages over the university network. Packages and tools include:

- Personal productivity and general purpose software packages, including:
  - Microsoft Office Suite
  - Calendar
  - Virus protection
  - Desktop publishing
  - Operating System upgrades
  - Mathematical and statistical packages and tools and programming languages

**eStore**
http://www.case.edu/its/estore

Case Western Reserve University strategic partnerships with many premier technology manufacturers allow the university to offer university faculty, staff, and students cutting-edge technology products and services at highly advantageous educational discounts. Products available at the eStore include computers, backup services, high speed internet, cellular phones, and other accessories.

**Information Security Office**
http://www.case.edu/its/security

Managing risk to assure confidentiality, integrity and availability of information, information systems and critical infrastructure. This office is responsible for:

- Creation and enforcement of university-wide policies
  - University IT Policies
  - University Security Policies
  - Coordination with compliance and various policies through established Governance processes
- Development and operation of network defenses and plans
  - Network monitoring and defense
  - Incident response
  - Disaster recovery planning
- Creation and implementation of relevant and appropriate security controls
  - 3-Tier information architecture
  - Vulnerability Management
  - Identity Management
  - Risk Management
- Training and education of all faculty, staff and students in security risks
  - Security awareness program
  - Management training

**Research Computing**
http://www.case.edu/its/researchcomputing

The mission of ITS Research Computing is to facilitate cost-effective access to IT resources for the research community at Case Western Reserve University. These resources include high performance computing services, database hosting and programming services, server hosting and administration services, and pre-award IT consultation. ITS Research Computing is prepared to engage with faculty in technologies as they emerge at the university, including, for example, visualization and grid technologies, and incorporate them into the suite of centrally supported services.

**Help Desk**
http://help.case.edu

The Help Desk, powered by PerceptIS, provides computing support to the university community. Walk-in centers are conveniently located around campus. Check website for hours. Services include:

- Troubleshooting and technical assistance
- Telephone support available twenty-four hours a day, seven days a week
- Dispatching, if necessary, of technical assistants to residence halls to resolve user problems
- Annual service contracts provide unlimited dispatch to campus locations

**Telephone Services**
http://phone.case.edu

Telephone Services offers Voice Over IP phone service to Case Western Reserve University administrative offices and residence halls. It also manages the university’s Unified Messaging voicemail system, which delivers voicemail messages to a university email account.

**UNIVERSITY LIBRARIES**
http://www.case.edu/dir/libraries.html

All Case Western Reserve University’s libraries support the university’s undergraduate, graduate and professional programs. Combined, their collections contain over 2.5 million volumes. The libraries maintain individual websites to facilitate communication of their unique services to the university community. Collections of electronic databases and electronic journals are shared and available for all university faculty, staff, and students through the campus network or authorized remote access.

**Kelvin Smith Library (KSL)** is open to all members of the university community, with collections and services supporting the faculty, staff, undergraduate, and graduate students of the College of Arts and Sciences, the Case School of Engineering, the Weatherhead School of Management, and the general administration of the university. The main collection of KSL is over 1.7 million volumes. The Astronomy and Music Libraries are branches of KSL and are housed within their respective departments. KSL has access to more than 54,000 serials and periodicals and has a large retrospective collection housed in the Retrospective Research Collections Center located in Cedar Avenue Service building. KSL’s collection also includes audiovisual materials, government documents, special collections, and digital collections. KSL provides staff and services in support of teaching and research, including expert reference assistance in-person and online, ILLiad interlibrary loan services and electronic article delivery, Course Reserves and Electronic Reserves, the Center for Statistics and Geospatial Data, the Freedman Digital Library, Language Learning and Multimedia Services Center and the International News Commons. During the academic

**UNIVERSITY ARCHIVES**
http://www.case.edu/its/archives

University Archives manages university records and publications to ensure the preservation of a reliable institutional memory. The office, which manages a collection of over 12,000 linear feet (approximately 25 million pages) and over 40 gigabytes that document the university’s life from 1826 to 2009, offers the following services:

- Research and reference services to help discover the who, what, where, when, how and why of Case Western Reserve University history and development
- Duplication services (digital, xerographic, and fax copies) of most documents
- Records services to assist in managing active records and guidance in transferring records to the University Archives
- Digitization of select, high-demand materials for ease of access and use

**CASE WESTERN RESERVE UNIVERSITY**
semesters, KSL is open 24 hours, 7 days a week.

The Mandel School of Applied Social Sciences (Mandel School) has the distinction of being one of the few schools of social work that maintains a professional library for the use of its students, staff, faculty, and alumni as well as for the general university community. The Lillian F. and Milford J. Harris Library contains over 40,000 volumes and subscriptions to 250 periodicals and about 900 video and audio items to support Mandel School academic programs. The library also has a variety of electronic media and other materials, which are available for classroom use by faculty. The library’s website provides information resources for social work students, faculty, practitioners, and other human service workers in Greater Cleveland.

The Cleveland Health Sciences Library operates in two locations: the Allen Memorial Medical Library and the Health Center Library. The Cleveland Health Sciences Library collections support programs in the biological sciences, medicine, nursing and dentistry and are open to all university students, faculty and staff. The CHSL total collections number over 400,000 volumes. The collection consists of books, theses, nearly 2,000 subscriptions to journals, government documents, audiovisual items, and electronic resources. The collection in the Dittrick Medical History Center contains archives, rare books and artifacts for research in the history of medical technology.

The Judge Ben C. Green Law Library is located in the School of Law and has more than 300,000 volumes including complete collections of statutory and case law, law reviews, the National Reporter System, state reports, administrative reports and current law services. There is also an extensive British collection and special collections in taxation, labor law and foreign investments. The law library’s website provides core links to legal information resources, government agencies and legislative history resources.

The Library Catalog is the university’s comprehensive online, public access catalog and also has holdings of the Cleveland Institute of Music, Cleveland Institute of Art and the Siegal College of Judaic Studies. The Library Catalog has search and display functions for the records of all volumes in the campus and affiliated libraries and is accessible through any web browser. The Library Catalog also provides quick links to the libraries’ websites, research databases, electronic journals, OhioLINK consortium materials, and major local libraries. Computer workstations are located in each university library to facilitate use of all digital library information resources. Network access allows researchers to search the resources of the university’s libraries and the OhioLINK catalog from any port on the campus network, from the Kelvin Smith Library wireless network or through university-authenticated remote access.

Case Western Reserve University is a founding member of the OhioLINK consortium, which provides a shared, unified catalog for eighty-nine colleges and universities, as well as the State Library of Ohio. The OhioLINK Central Catalog, at 47.6 million items, provides access to many electronic journals and theses, media resources, and online databases. Authorized faculty, students, and staff enjoy automated online borrowing and renewals of book and media materials, as well as onsite borrowing privileges at OhioLINK member libraries.

Case Western Reserve University students may apply for a Cleveland Public Library CLEVNET card, which expands access to many local city and county libraries in the area. Other libraries in University Circle include the Cleveland Institute of Art, the Cleveland Institute of Music, the Cleveland Museum of Art, the Western Reserve Historical Society, the Cleveland Museum of Natural History, and the Cleveland Botanical Garden Library.

The university is a member of the Association of Research Libraries (ARL), which comprises 123 North American research libraries.

DENTAL CLINIC
Phone: 368-3200
Fax: 368-3204
http://dental.case.edu/patients/

The School of Dental Medicine of Case Western Reserve University maintains a clinic that provides dental services to students and faculty, as well as the general public. The Dental Clinic is dedicated to training dental students in the skills necessary to be competent dental practitioners and to being lifelong learners to provide the best possible patient care under the direct supervision of the practicing dental faculty. Students and their family dependants covered by the university medical plan receive some dental services covered 100 percent and others at a discounted rate. Students should refer to their medical plan for more specific information.

The School of Dental Medicine also provides dental benefit plans for faculty and staff of the university. Care is provided in general practice and in all the specialties and is available through the dental clinics on campus.

THE UNIVERSITY

AUXILIARY SERVICES

University Bookstore
Thwing Center
Phone 216-368-2650
http://www.case.bncollege.com
Fax 216-368-5205

The University Bookstore, located in Thwing Center, serves as the source for all required and recommended course materials that include new and used textbooks and CaseNotes (custom-produced course packets designed by faculty for their classes). In addition to course books, the University Bookstore features complete reference sections and a large general book department, quality school and office products, a broad selection of clothing and gift items, and a variety of convenience foods and beverages. The University Bookstore also offers special book orders and custom orders of clothing and gifts for groups and organizations. In addition to all the textbooks for medical, dental, and nursing programs, the department features a complete medical reference section, medical equipment, and supplies.

The University Bookstore is open 8:30 a.m. to 5:30 p.m. Monday to Thursday, and 8:30 a.m. to 5 p.m. on Friday. Saturday hours are 11 a.m. to 3 p.m. Hours are subject to change at the start of each semester, for summer, breaks, and special events. Please check the website for current hours of operation. The bookstore accepts cash, checks, major credit cards, debit cards, CaseCash, and department requisitions.

University Printing Services is a full-service
print facility, designed to serve the printing
needs of faculty, staff, and students. With
two convenient copy centers, full service
bindery department, and a centrally located
business office, staff provides such services
as photocopying, printing or finished docu-
ment needs. Specific amenities include: black
and white photocopying, color copying, stan-
dard university items, business cards, letter-
head, envelopes, offset printing, scanning,
CD burning, foil stamping, thesis/hardcover
binding, wide format printing, campus mail
envelopes, promotional items, full finishing
capabilities, specialty papers, passport photos,
and much more.

Free pickup and delivery is provided from all
campus locations and staff can help clients
print directly from their desktop to printing
services’ black and white and color copiers.

Please check the website for a full range of
products and services. Order items online at
http://www.case.edu/finadin/auxserv/printsrv/print.html/.

TRANSPORTATION

http://shuttle.case.edu

A free shuttle bus system runs throughout the
week to serve the 550-acre University Circle
area. In the evenings, a loop bus runs ap-
proximately every 20 minutes over a specific
campus route. Please see bus schedules, which
are available on the buses, in Access Services,
Thwing Center, and several other buildings,
for the specific operating hours for each shuttle.
In addition, Regional Transit Authority
bus routes run through the heart of Uni-
versity Circle, linking the campus with the greater
community. Rapid Transit trains run directly
from the campus to Cleveland Hopkins Inter-
national Airport.

CAMPUS PARKING

http://parking.case.edu

Parking on campus is not allowed except by
permit, and then only in the areas for which
the permit is valid. Students attending classes
for more than 12 credit hours (undergraduate)
or more than 9 credit hours (graduate) must
purchase a full-time permit. Graduate stu-
dents registered for 651 or 701 courses must
purchase full-time permits. Students living in
residence halls and fraternities must obtain
parking permits if they maintain cars while in
residence. Resident student parking is granted
with a confirmed housing assignment. Cur-
cent proof of part-time parking is required when
a request for a part-time parking per-
mit is made. Summer session permits are also
available.

Information for renewal of permits for the
next academic year is available during the
spring semester. Students must resolve all out-
standing parking violations prior to renewal.
All students registered at the university must
abide by the parking rules of the Joint Park-
ing Systems, which includes Case Western
Reserve University, University Hospitals, and
University Circle Inc. Complete copies of the
rules are available at the Standard Parking Of-
fice and at Access Services.

Violators are subject to fines and, if fines are
not paid, to towing. A person charged with a
violation has the opportunity of re-appealing
in person with counsel, if desired, before the
Joint Parking Systems Appeals Committee.
Failure to pay a fine will ultimately result in
the withholding of transcripts.

Information about parking may be requested
from Access Services, Crawford Hall, 10900
Euclid Avenue, Cleveland, Ohio 44106-7084
(216-368-2273) or see the university parking
website at http://parking.case.edu/.

UNDERGRADUATE ADMISSION

http://admission.case.edu

Admission to Case Western Reserve Univer-
sity is competitive. Primary consideration is
given to measures of academic performance
such as grades, level of courses completed, and
SAT or ACT scores. Class rank and extracur-
ricular accomplishments are also important
factors. Letters of recommendation and a
personal written statement to accompany the
application for admission are also carefully
considered. Students are not required to take
the SAT Subject Tests. An informational ad-
mission interview is recommended but not
required. All applications for admission are
submitted online.

FIRST YEAR APPLICANTS

Application Dates and
Notification of Admission

First-year applicants are students who have
not enrolled in course work at a college or
university after graduation from high school.
Students seeking to enroll in the fall may use
any of three application plans. Those who
wish to receive early notification of their ad-
mission status should indicate their prefer-
ence for Early Action and meet the November
1 application deadline. They will be noti-
fied of the Admission Committee’s decision
by December 15. Early Action admission is
non-binding; students admitted under this
plan are free to apply to other colleges and,
if admitted, have until May 1 to accept an
offer of admission. Students who wish to be
considered for the Pre-Professional Scholars
Program (PPSP) must submit their applica-
tions by December 1. By March 1 they will
be notified about admission to the university,
and by the same date a select number appli-
cants will be invited to interview for the PPSP.
Finalists are selected by April 15. The regular
application deadline is January 15. Applicants
indicating an interest in Regular Decision by
this deadline will be notified of their ad-
mission by April 1. PPSP and Regular Decision
admitted students are expected to accept the
offer of admission by May 1.

Case Western Reserve University does not ad-
mit first-year students for the spring or sum-
mer sessions. If unusual circumstances apply,prospective students should contact the Office
of Undergraduate Admission.

Enrollment is contingent upon successful
completion of secondary school work and
graduation. Students must arrange to have
final semester grades sent to the Office of Un-
dergraduate Studies.

Secondary School Preparation

All entering first-year students are expected to
have completed rigorous, full-credit academic
work in secondary school, including four years
of English, three years of mathematics, three
years of social studies, three years of science—
two of which must be laboratory science, and
two years of foreign language. A fourth year
of mathematics is expected of students plan-
ning to concentrate in mathematics, science,
or engineering. Students planning to pursue
premedical studies or concentrations in math-
ematics, science, or engineering should have
three years of laboratory science, including
biology, chemistry, and physics. For students interested in the liberal arts, we recommend an additional unit of social studies and foreign language.

TESTS
Applicants must submit scores directly from either the ACT or the SAT. Students electing to take the ACT must complete the Writing Test component. It is recommended that these tests be taken no later than December of the senior year of high school. International students, those who are not U.S. citizens or permanent residents, are required to take the TOEFL unless their SAT Critical Reading and Writing scores are each above 550. The recommended minimum TOEFL score is 550(PBT), 213 (CBT) or 80 (iBT).

INTERVIEW
An informational interview is recommended as part of the admission process, but it is not required. Interviews, group information sessions, and student guided campus tours are offered most weekdays. The Admission Office is open on select Saturdays for group information sessions and campus tours. The office is closed on holidays. Students may arrange appointments at our website or by calling:
Case Western Reserve University
Office of Undergraduate Admission
Wolstein Hall
11318 Bellflower Rd.
Cleveland, Ohio 44106-7055
Phone 216-368-4450
E-mail admission@case.edu
http://admission.case.edu

APPLICATION PROCESS
Before an admission decision can be made, the applicant must submit the following:
1. An application including the required personal written statement and Case Western Reserve University supplement. The application is available through the Common Application at http://commonapp.org.
2. The secondary school report, including class rank, courses and grades from school years 9 through 11, and senior year courses in progress. It is the applicant’s responsibility to request that the high school guidance office prepare the secondary school report and mail it with an official high school transcript to the Office of Undergraduate Admission.
3. Scores from the ACT or SAT testing agencies.
4. Written recommendations from a high school counselor (required) and a teacher (optional).

APPLICATION PROCESS
All admission decisions will be mailed by April 1. Enrollment is contingent on successful completion of secondary school work and graduation. Students must arrange to have a final, official high school transcript sent to the Office of Undergraduate Studies.

ACCEPTANCE OF ADMISSION
Case Western Reserve University subscribes to the College Board Candidate’s Reply Date Agreement. Under this agreement, admitted candidates have until May 1 to accept or decline the offer of admission.

Note: Applicants who have been offered admission by a college or university that requires a response before May 1 (except when applying under a binding Early Decision plan) should contact that college or university to ask for an immediate extension of its deadline until all the colleges applied to have responded. They should also contact the Office of Undergraduate Admission to inform the Admission Committee of the problem.

Case Western Reserve University subscribes to the National Association of College Admission Counselors’ Statement of Principles of Good Practice.

ENROLLMENT DEPOSIT
Students who accept the offer of admission must complete the enrollment confirmation website and submit a non-refundable enrollment deposit of $500 to reserve a place in the entering class. If a student does not complete both steps by May 1, the Office of Undergraduate Admission will permit enrollment only on a space available basis.

Advanced Placement and Proficiency Examinations
Case Western Reserve University grants degree credit and placement in advanced courses on the basis of the College Board Advanced Placement Examinations and the International Baccalaureate (IB) Diploma or the International Baccalaureate higher level examinations. The determination of credit and placement is made by the appropriate academic departments. An Advanced Placement score of 4 or higher or an IB higher level examination score of 5, 6, or 7 may receive favorable consideration. It is the student’s responsibility to have Advanced Placement scores sent to the Office of Undergraduate Studies. Students may also receive college credit on the basis of proficiency examinations administered by individual departments.

TRANSFER APPLICANTS
Transfer applicants are students who have enrolled in a college or university after graduation from high school is considered a transfer student; transfers are considered for admission for the fall semester, spring semester, or summer session. In order to provide adequate time for evaluation, applications should be completed as early as possible by the appropriate deadline. The deadline for fall semester is May 15, for spring semester it is October 15, and the deadline for summer session is April 15. The degree requirements for all students are established by the undergraduate colleges. For specific requirements for transfer students, please see the appropriate section under “Undergraduate Studies.” It is generally expected that the final two academic years will be taken in residence at the university.

Each transfer applicant is asked to submit:
1. An application including the required personal written statement and Case Western Reserve University supplement. The application is available through the Common Application at http://commonapp.org
2. An official high school transcript.
3. Official transcripts from each college or university attended.
4. The College Official’s Report from the supplement to the Common Application, completed by an academic dean or advisor.
5. A letter of recommendation from a college or university professor.
6. The university’s mid-semester report form.
7. If available, SAT or ACT scores. The scores may be included with the high school transcript or sent directly to the university from the testing service.

Transfer applicants will be notified of the admission decision shortly after the file is complete. In order to enroll, students must complete the enrollment confirmation website and submit a non-refundable $500 deposit by the deadline cited in the letter of admission. Offers of admission are contingent upon satisfactory completion of work in progress at another college or university. In order to evaluate transfer credit, the Office of Undergraduate Admis-
sion must receive a complete official transcript of all work taken and course descriptions.

**BINARY (3-2) PROGRAM**

In cooperation with a number of liberal arts colleges, Case Western Reserve University offers the Binary (3-2) Program in engineering, in which students complete three years of study in the liberal arts college and two years in engineering at the Case School of Engineering and receive degrees from both colleges. For further details, consult the program description found under “Undergraduate Studies.”

**SPECIAL ADMISSION PROGRAMS**

Students seeking a B.A. degree in music from Case Western Reserve University must audition with faculty in the music department. Auditions can be arranged before or after enrollment at Case Western Reserve University. Students admitted for a music major can enroll in theory, performance, and composition classes at Cleveland Institute of Music.

Students seeking to enroll in the dual degree program in music, which provides B.A. or B.S. degree from Case Western Reserve University and a B.M. degree from Cleveland Institute of Music, should apply for admission through the Cleveland Institute of Music.

Students seeking to major in art education must submit a portfolio for review by Case Western Reserve University art studio faculty. Portfolio review can be arranged before or after enrollment. Students admitted for an art education major can enroll in theory, performance, and composition classes at Cleveland Institute of Art.

For information regarding admission as a transient student or an adult non-degree student, and admission to the PreCollege Scholars Program, can find information at http://www.case.edu/provost/ugstudies/visitingstu.htm/.

**REGISTRATION**

http://www.case.edu/provost/registrar/registrar.html
(Summer, Fall and Spring)

Students register at the time indicated on the University Registrar’s website or as indicated by individual graduate/professional school registrars. Undergraduate student registration for fall begins in April and continues through the beginning of classes in August; undergraduate student registration for spring begins in November and continues through the beginning of classes in January. Only those students who have no outstanding financial obligations to the university are eligible to register. The University Controller bills those who register early for the next semester, with payment due by the specified deadline before the start of the next semester. At registration just prior to the beginning of classes, students must have paid all previous charges and be able to pay or have financial aid equal to one-half of that semester’s tuition and fees. The “Schedule of Classes” is available electronically and can be accessed from the University Registrar’s website at: http://www.case.edu/provost/registrar/registrar.html/ or through the Student Information System (SIS) at http://www.case.edu/sis/.

The University Registrar’s website includes the academic calendar, the dates for late registration and drop/add, and the Student Information System includes a complete real time listing of courses offered. Students use SIS to register for classes and a listing of registration start dates for each school is available from the University Registrar’s website. No zero-credit only registrations (e.g., zero-credit physical education courses) are allowed, unless approved as part of ongoing degree programs.

**COURSES OF INSTRUCTION**

All courses at the university, except courses in the Medical School, Law School, School of Dental Medicine and School of Nursing, are numbered according to the following plan:

- 100-199 Elementary courses
- 200-299 Intermediate courses
- 300-399 Advanced undergraduate courses
- 400-499 Lower level graduate courses (some are open to undergraduates; consult with the appropriate department)
- 500 and above Advanced graduate courses

Roman numerals (I, II, etc.) after course titles indicate segments of a multicourse sequence. Arabic numerals in parentheses after course titles indicate the semester credit hours for each course.

**VETERANS’ COORDINATOR**

The Veterans’ Coordinator, housed in the Office of the University Registrar, 110 Yost Hall, administers the regulations governing the educational benefits and opportunities open to veterans under various federal laws. The office maintains close contact with the Veterans Administration and is the only office authorized to verify veterans’ attendance. For information call 216-368-4310.

**GRADING SYSTEM**

The following grading system is used at Case Western Reserve University:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Meaning</th>
<th>Quality Points</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Excellent</td>
<td>4.000</td>
<td></td>
</tr>
<tr>
<td>A-</td>
<td>3.666</td>
<td>1</td>

**Notes:**

1. Schools of Applied Social Science, Dental Medicine, Law only
2. Schools of Dental Medicine, Law only
3. Not applicable for Schools of Applied Social Science, Nursing

- AD Successful Audit
- AP Advanced Placement (test/transfer credit)
- AS Advanced Subsidiary (test/transfer credit)
- COM Commendable (School of Medicine only)
- CR Non-graded course, Award credit for course
- H Honors (Schools of Law, Medicine only)
- I Incomplete
- IB International Baccalaureate (test/transfer credit)
- M Met Expectations (School of Medicine only)
- NC No Credit for a credit/no credit course (School of Law only)
- NG Unsuccessful Audit (Graduate and Professional Schools only)
- NOG Non-graded course, does not earn credit
- NP Not passing
- P Pass
- PR Proficiency
R  In progress, for courses that extend beyond one semester
RPT  Repeated Course (through Summer 2006)
S  Satisfactory (master’s/doctoral thesis, EMBA seminar courses, Schools of Law, Medicine only)
SA  Special Audit
TR  Transfer (test/transfer credit)
U  Unsatisfactory (master’s/doctoral thesis, EMBA seminar courses, Schools of Law, Medicine only)
W  Withdrawal from a class
WD  Withdrawal from all classes for a term
WF  Withdrawn under Academic Regs. 5 & 6 (Law only)

First Year Undergraduates: (effective fall 2005)
For the first two semesters of enrollment and after consultation with a dean in the Office of Undergraduate Studies, matriculated students who are beginning their college studies may withdraw from a course at any time during the semester, but no later than the last day of classes. Any course for which a grade of W is assigned will not be posted on the official transcript. This policy is not available for transfer students and does not apply to the summer session.

EXPLANATION OF GRADES
The responsibility for assigning grades rests exclusively with the instructor of a course or section, who must announce the general method of grading to his/her class at the beginning of the course. Grades in all courses are reported to the University Registrar at the end of each semester for all students and at midterm for undergraduates (midterm grades are not considered part of the student’s permanent academic record). Changes to student grades must be reported on grade change cards and have all required signatures.

I (INCOMPLETE)
The grade of I is assigned at the discretion of an instructor provided that:
1. There are extenuating circumstances, explained to the instructor before the assignment of the grade, which clearly justify an extension of time beyond the requirements established for other students in the class. It is the student’s responsibility to notify the instructor of the circumstances preventing completion.
2. The student has been passing the course and only a small segment of the course remains to be completed, such as a term paper, for which the extenuating circumstances justify a special exception.
An Incomplete grade may not be assigned if a student is absent from a final examination, unless the dean has authorized the absence. Unauthorized absence from a final examination will result in a failing grade. When the student completes the work, the Incomplete is changed to an A, B, C, D, F, or NP. (Note: not all schools award all of these grades, see first paragraph of “Grading System” above.)

For Undergraduate Students: All work for the Incomplete grade must be made up and the change of grade recorded in the Office of the University Registrar, by the date specified by the instructor, but no later than the 11th week of the session following the one in which the Incomplete grade was received. In certain cases (such as students on probation or graduating students), the dean may establish an earlier date for completion of courses with Incomplete grades. When a student fails to submit the work required for removing the Incomplete by the date established, the instructor shall transmit to the Registrar a final grade that assumes a failing performance for the missing work. In the absence of the assignment of a grade by the instructor the Registrar will convert the I to F when the deadline for making up Incomplete grades from a previous semester has passed. Failure to meet this deadline for removing the Incomplete will result in a failing grade. An instructor may elect to give the grade of F or NP if the Incomplete is not removed within the specified time limit. For Students in the Graduate and Professional Schools: In order to receive credit for a course marked Incomplete, the student must complete the work by the date specified by the instructor and in no event later than the end of the next regular semester (fall or spring). If the student fails to remove the Incomplete within the specified time, he or she forfeits the privilege of completing the course for credit, and the grade becomes a permanent Incomplete unless the instructor elects to give a grade of F.

S (SATISFACTORY)
The grade of S given graduate students in the School of Graduate Studies indicates satisfactory progress in evaluating exclusively thesis and dissertation research. The grade S is not counted in determining quality averages. The alternative to a grade of S is U (Unsatisfactory). The grade of I (Incomplete) may not be used in evaluating thesis and dissertation research. In other graduate/professional schools, the grade of S may indicate passing performance in designated courses and advanced seminars.

R (CONDITIONAL)
The grade of R is used for work, such as undergraduate thesis and project laboratories, that extends more than one semester and, upon completion of the thesis or project, will be changed to the letter grade awarded for the completed work. The R grade assigned in ENGL 148 indicates that a student must re-enroll in ENGL 148. In the following semester; the R grade in ENGL 148 remains on the student’s record and is not subject to replacement by the final grade earned in ENGL 148.

AD (AUDIT) AND NG (UNSUCCESSFUL AUDIT)
The grade of AD (audit) will be given when a student has officially registered to audit a course and has satisfied the requirements specified by the instructor for this grade. The grade of NG (unsuccessful audit, graduate, and professional schools only) will be given when a student has officially registered to audit a course and has not satisfied the requirements specified by the instructor.

UNDERGRADUATE STUDENTS
A student may audit a course with the dean’s or advisor’s approval and the consent of the instructor of the course. An auditor receives no credit for the course.

Registration in a course cannot be changed from audit to credit or the reverse after the end of the drop/add period. At the beginning of the course, the student and instructor should reach agreement regarding the requirements to be met for a grade of AD. The grade of AD is entered on the student’s transcript if approved by the instructor of the course. If the instructor does not approve the grade AD, the enrollment is not posted on the transcript. A student may take for credit a course he or she audited in an earlier semester.

GRADUATE/PROFESSIONAL STUDENTS
Dental students: Courses toward degree programs in the School of Dental Medicine may not be audited.

The following statements apply to the Schools
of Graduate Studies and Management: The instructor may designate that the student has not completed all requirements for auditing the course and that NG (Unsuccessful Audit) be recorded on the student’s transcript. A course once audited may not be repeated for credit, nor may any course for which credit has been given be repeated for credit toward degree requirements. Students will be permitted to change their registration in a course from credit to audit (AD), or the reverse, with written consent of their advisor and the instructor only if the change is officially made on or before the date specified in the academic calendar for the given term.

Other graduate and professional schools: Please refer to individual school sections of this publication, or to individual school student handbooks.

W (PARTIAL WITHDRAWAL)
The grade of W will be given if a student officially withdraws from a course on or before the date specified in the academic calendar for the given term. After this date, the grade as determined by the instructor will be posted.

WD (COMPLETE WITHDRAWAL)
The grade WD is assigned by the University Registrar for complete withdrawal from all course work for the semester. All withdrawal requests are to be submitted to the University Registrar prior to the last day of class.

GRADE-POINT AVERAGES
Grade-point averages are calculated by multiplying the number equivalent of the letter grade by the number of credit hours for the course. The semester grade-point average is computed by dividing the total grade points earned at the university by the sum of the credit hours for all courses included in the grade-point calculation.

The cumulative grade-point average is computed by dividing the total grade points earned at the university by the sum of the credit hours for all courses included in the grade-point calculation.

PASS-NO PASS
See specific colleges and schools for information about courses that may be taken on a pass-no pass basis and similar options.

STUDENT RECORDS
The Family Educational Rights and Privacy Act of 1974 (FERPA) contains several provisions that are important to students. First, the university may not release personally identifiable student records to a third party, with certain specific exceptions, unless the third party has requested the information in writing and the student has consented, again in writing, to its release. The university may release directory information about a student, however, unless the student submits a written request that any or all such information not be released. Second, a student may request, in writing, an opportunity to inspect and review the student’s official files and records maintained by the university and may, if appropriate, challenge the accuracy of those records. The university is permitted a reasonable time, not to exceed 45 days, to respond to such a request. Third, a student may file with the Family Policy and Regulations Office of the U.S. Department of Education a complaint concerning what he or she believes to be the university’s failure to comply with FERPA. Finally, a student may obtain from the Registrar a copy of this policy, which the university has adopted to meet the requirements of FERPA. The information below is presented in compliance with the provisions of FERPA, which require the university to notify students annually of their rights and the university’s policies and procedures. Specific procedures may vary slightly among the schools and colleges of the university, and each student is encouraged to inquire at his or her own dean’s office if any question arises.

ACCESS TO FILES
A student may request, in writing, an opportunity to review the contents of the student’s educational file. Certain materials are excluded from review as specified in FERPA. Among these are:

• Records kept in the sole possession of faculty, staff, and other personnel, used only as a personal memory aid, and not accessible to any other person except a temporary substitute for the maker of the record.
• Records created and maintained by law enforcement units solely for law enforcement purposes that are not maintained by persons other than law enforcement officials.
• Records created and maintained by a physician, psychiatrist, psychologist, or other professional or paraprofessional acting in that capacity in connection with the provision of treatment to a student. Such records can, of course, be reviewed by a physician or other appropriate professional of the student’s choice.
• Employment records of a student made and maintained in the normal course of business. Such employment records may be obtained in the Student Employment Office or Human Resources under the policies applicable to those offices.
• Financial records of a student’s parents, or any information contained therein.
• Confidential letters and statements of recommendation placed in the file before January 1, 1975.
• Records for which the student previously waived his or her right of access.
• Records that contain only information about a person after that person is no longer a student, such as alumni records.

The office to which the request is made will arrange an appointment within a reasonable period of time (not to exceed 45 days) for the student to review the file in the presence of a member of the office staff.

FERPA affords students certain rights with respect to their educational records. Students may ask the university to amend a record that the student believes is inaccurate or misleading. The student should write to the university official responsible for the record, clearly identifying the part of the record the student wants changed, and specify why it is inaccurate or misleading. If the university decides not to amend the record as requested by the student, the university will notify the student of the decision and advise the student of his or her right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.

The student may request copies of those records to which he or she has access under the terms of FERPA. The student will be charged a nominal fee per page for these copies.
RELEASE OF PERSONALLY IDENTIFIABLE RECORDS

FERPA affords the student the right to consent to disclosures of personally identifiable information contained in the student’s educational records, except to the extent that FERPA authorizes disclosure without consent. One exception, which permits disclosure without consent, is disclosure to school officials with legitimate educational interests. A school official is defined as a person employed by the university in an administrative, supervisory, academic, or support staff position (including law enforcement unit and health staff); a person or company with whom the university has contracted (such as an attorney, auditor, or collection agent); a person serving on the Board of Trustees; or assisting another school official in performing his or her tasks. A school official has a legitimate educational interest if the official needs to review an education record in order to fulfill his or her professional responsibility.

Upon request, the university discloses education records without consent to officials of another school in which a student seeks or intends to enroll. The university also discloses education records to organizations conducting studies for educational agencies or institutions under certain circumstances.

DIRECTORY INFORMATION

For the convenience of faculty and fellow students, FERPA provides for a category known as directory information, which may be released without requesting the eligible student’s specific prior consent. Rather, the act requires that students be notified annually of the types of information included in this category and be given an appropriate period in which to express, in writing, any preference that such information about themselves not be released. For this purpose, directory information is defined to include

- Name (including both maiden name and married name, where applicable)
- Address, telephone listing, and electronic mail address
- Date and place of birth
- Major field of study
- Anticipated graduation date
- Enrollment Status (undergraduate or graduate, full-time or part-time)
- Dates of attendance
- Degrees and awards received
- Participation in officially recognized sports and activities

- Weight and height (members of athletic teams)

Any student who would prefer that the university not release such information about himself or herself should so notify the Office of the University Registrar, in writing, prior to the first week of classes in the fall semester. Students entering the university at midyear may submit such notice during the first week of classes of the spring semester.

TRANSCRIPTS

A transcript of grades will be released only upon written request of the student, either in person or by mail. A fee is charged for each transcript copy. Transcripts will not be issued to, or on behalf of, students who have not discharged all delinquent obligations to the university.

POLICY ON SEXUAL HARASSMENT

It is the policy of Case Western Reserve University to provide a positive, discrimination-free educational and working environment. Sexual harassment is unacceptable conduct that will not be tolerated. All members of the university community share responsibility for avoiding, discouraging, and reporting any form of sexual harassment.

Members of the university community found in violation of this policy may be disciplined, up to and including being discharged for cause or being expelled from the university. Retaliation against persons raising concerns about sexual harassment is prohibited and will constitute separate grounds for disciplinary action, up to and including discharge or expulsion from the university.

This policy and the accompanying procedures shall serve as the only internal university forum of resolution and appeal of sexual harassment complaints.

The policy is available online at http://www.case.edu/stuaff/shpp/harasspolicy.html, in the offices of Equal Opportunity and Diversity, Student Affairs, the Office of the Provost, and at other offices throughout campus. Consultation and advice are available in the offices of Equal Opportunity and Diversity and Student Affairs. See the section, “Student Affairs,” for policies and procedures regarding sexual assault.

STUDENT RIGHT TO KNOW

The Student Right to Know and Campus Security Act requires that universities throughout the country produce statistics and information on the following subjects: 1) retention and graduation rates (http://www.case.edu/provost/registrar/gradrate.html/); 2) financial assistance available to students and requirements and restrictions imposed on Title IV aid; 3) crime statistics on campus (http://www.case.edu/finaid/security/protserv/protserv.html/); 4) athletic program participation rates and financial support; and 5) other institutional information including: the cost of attendance, accreditation and academic program data, facilities and services available to disabled students, and withdrawal and refund policies.

Data on retention and graduation rates is available in the Office of the Provost in Albert Hall (216-368-4389) and is posted on the Registrar’s website (http://www.case.edu/provost/registrar/registrar.html/). Information on financial assistance, including descriptions of application procedures and forms, may be obtained from the Office of University Financial Aid (http://finaid.case.edu/), Yost Hall (216-368-4530). Information concerning athletic program participation and financial support may be obtained from The Physical Education and Athletics Department, Veale Center (216-368-2867). Other institutional information, such as that listed in number 5, above, may be obtained from the Office of the Provost and in the various undergraduate, graduate, and professional schools’ registrars’ offices. Case Western Reserve University’s annual security report (http://www.case.edu/finaid/security/protserv/protserv.html/) includes statistics for the previous three years concerning reported crimes that occurred on campus, in certain off-campus buildings owned or controlled by the university, and on public property within, or immediately adjacent to and accessible from, the campus. The report also includes institutional policies concerning alcohol and drug use, crime prevention, the reporting of crimes, sexual assault, and other matters. To obtain a copy of this report contact the Protective Services Office at 216-368-2908.

EXCEPTIONS TO POLICIES

Requests for exceptions to any academic or administrative policy must be submitted within three months of the end of the semester for which the exception is sought.
UNIVERSITY ADMINISTRATION

March 1, 2009

Glenn Nicholls
Vice President for Student Affairs

Jeanine Arden Ornt
Vice President, General Counsel and Secretary of
the Corporation

John Siders
Sr. Vice President for Finance and Chief
Financial Officer

Lynn T. Singer
Deputy Provost and Vice President for Academic
Programs

FINANCIAL INFORMATION

FINANCIAL INFORMATION
All financial obligations to the university must be discharged before a student can graduate and obtain a degree. A student will not be considered to have registered in the university until all tuition and fees have been paid in full or deferred in accordance with the deferred payment plan outlined at the end of this section. Checks and money orders should be made payable to Case Western Reserve University and should show the name and SIS User ID (a seven digit institutionally-assigned number) of the student for whom payment is made.

TUITION CHARGES
Students registered in the undergraduate colleges and the School of Nursing will be charged tuition according to the following schedule for 2009–2010:

- 1 to 11 credit hours (credit or audit)
  $1,496 per semester hour for students entering fall 2006 and later
- $1,436 per semester hour for students entering prior to fall 2006
- 12 or more credit hours (credit or audit)
  $179,750 per semester for students entering fall 2006 and later
  $17,475 per semester for students entering prior to fall 2006.

Students registered in the School of Graduate Studies and Mandel School will be charged according to the following schedule for 2009–2010:

- 1-11 credit hours (credit or audit)
  $1,375 per semester hour
- 12- And above credit hours (credit or audit) in Graduate Studies
  $16,500 per semester

Students enrolled in undergraduate courses for the summer session will be charged at a rate, which is one-half of the previous semester’s per credit hour charge.

Registration in the fall or spring semester for more than 9 credit hours of dissertation research or more than a total 16 graduate credit hours requires special permission of the dean of graduate studies. Such permission is also necessary for summer session registration in excess of 6 graduate credit hours.

DENTAL MEDICINE
Students who entered the School of Dental Medicine in fall 2006 will be charged $49,486 for the 2009-2010 academic year. Students who entered the dental program after fall 2006 will pay $49,780 for the 2009-2010 academic year. Dental medicine students pay additional tuition for each summer clinic. For summer 2009, this amount is $2,265.

MEDICINE
The tuition rate for students is $45,930.

MANAGEMENT
Students in the various programs administered by the Weatherhead School of Management have a tuition rate established for the duration of the program at time of entry.

Full-time students entering the Accelerated MBA program in fall 2009 will be charged $18,500/semester. Full-time MBA students entering fall 2009 are charged $18,500/semester for 12-20 hours. Students entering prior to fall 2009 are charged $17,661/semester for 12-20 hours. Credit hours in excess of 20 during a semester will be assessed an additional $1,542 per credit hour for new students and $1,439 per credit hour for continuing students. The part-time MBA rate will be $1,542 per credit hour. Part-time MBA students enrolling for more than 12 credit hours will pay $18,500 plus $1,542 for each credit hour over 12. First-year students in the Executive Master of Business Administration program are charged $41,400 for the academic year 2009–2010. Second-year students will pay $40,320 for the academic year and $9,660 for summer 2009. Students in the Executive Doctor of Management program will be charged $37,300 if they entered prior to fall 2008 for the 2009–2010 academic year. Students entering fall 2009 will be charged $45,000 for the 2009–2010 academic year. Students in the MSM-BA, MAcc, MSM-SC, MSM-OR, or MSM-Finance will pay $18,500 for 12 or more hours. The part-time rate is $1,542 for the 2009–2010 academic year.

LAW
In the School of Law, students pursuing a J.D. degree, taking 10 credit hours or more will be charged $38,575 for the 2009-2010 academic year if entering the program in fall 2009. Students who entered prior to fall 2009 will be charged $38,050. The part-time rate is $1,607 per semester.

MANDEL SCHOOL
In the Mandel School of Applied Social Sciences, a student in the master’s program will be charged $16,500 per semester for the 2009–2010 academic year for enrollment between 12 and 16 credits in a semester. The part-time rate of $1,100 applies to students taking 11-credits in a semester. Full-time students enrolled for credit hours in excess of 16 will be assessed an additional $1,100 per credit hour. Doctoral candidates will be charged $1,375 per credit hour to a maximum of $16,500 per semester for registrations of 12 or more credit hours. Students enrolled in the Mandel Center for Nonprofit Organizations will be charged $1,375 per credit hour to a maximum of $16,500 per semester for 12 or more credit hours.

SPECIAL FEES—NOT REFUNDABLE

APPLICATION FEES
Required with all applications for admission. This fee is payable at the time of filing the application. It is not refundable and no portion will be applied to tuition.

Applied Social Sciences: $0
Dental Medicine: $45
Graduate Studies: $50 (not required for non-degree students)
Law: $40 (paper application only); free online
Management: $50
Medicine: $85
Nursing: $75 (D.N.P. & M.S.N.); $50 (Ph.D)

The university’s medical plan fee is automatically billed at the beginning of the fall semester and spring semester (spring semester coverage extends through the summer) to all students registered for one or more credit hours. The
### FINANCIAL INFORMATION

Medical plan provides coverage for medical care not available at the University Health Service. Students registered for one or more credit hours are eligible to use the University Health Service regardless of their participation with the medical plan. Students who have alternate medical insurance may waive the university's medical plan fee each semester by completing an online waiver form. The deadline date for completing the waiver process is stated on the website. Remember, this fee is billed twice a year; therefore, a waiver must be completed twice a year.

#### LATE REGISTRATION FEE
Required of students who register after classes have begun: $25

#### TRANSCRIPT FEE
There is a $5 fee assessed for each transcript request.

#### STUDENT ACTIVITIES FEE
Undergraduate: $144 per semester for students entering prior to fall 2006; $140 per semester for students entering fall 2006 and after.
- Dental Medicine: $110 per semester
- Graduate: .85% of the per credit hour tuition rate per semester ($12/semester for 2009–2010)
- Law: $52 per semester
- Nursing: $15 per semester (D.N.P., & M.S.N.); $7.50 per semester (Ph.D.) $65 Background Check
- Medicine: $15 per semester

#### CO-OP FEE
- First time participants: $150
- Subsequent placements: $75

#### CLINICAL PRACTICE FEE
All nursing undergraduates are charged a clinical practice fee in the fall semester of each year. For the 2009–2010 academic year, the clinical practice fee is $225.

#### LABORATORY FEE
- Dental Medicine: $295 per semester

#### LEASING FEE
- Dental Medicine: $128.50 per semester

#### COMPUTER LEASING FEE
- Dental Medicine: $90 per semester

#### GRADUATION FEE
- Doctor of Philosophy: $87
- This fee for the doctorate includes the cost of microfilming the doctoral dissertation by University Microfilms, Ann Arbor, Michigan, which is a requirement for the degree.

#### IN ABSENTIA FEE
Paid by undergraduate degree candidates who are registered in an approved program at another institution: $500.

#### TUITION DEPOSIT
- Mandel School of Applied Social Sciences: $100 (non-refundable)
- Dental Medicine: $1,000 (non-refundable)
- Nursing (Graduate Entry DNP and MSN Nurse Anesthesia): $200 (non-refundable)
- Law: $200 spring deposit and $400 summer deposit (both non-refundable)
- Management: $500 (non-refundable)
- Undergraduate: $500 enrollment deposit (non-refundable)

#### SPECIAL NURSING FEES
- FPB/NSNA insurance, B.S.N. students: $30 per year
- Malpractice insurance, B.S.N. $29 per year

#### OTHER EXPENSES (ESTIMATED)
- Books, Supplies, and Equipment
  - Nursing—Level I: $1,755 Level II: $1,305; Levels III and IV: $1,245
  - Medicine—$4,000 year (students must also supply their own microscopes; contact School of Medicine for requirements)
  - Dentistry—first year: $11,711; second year: $6,503; third year: $3,935; fourth year: $6,025
- Law: $1,325 per year
- Management: $3025 for first-year students; $1,325 for second year students
- Housing and Meals (On Campus)
  - See “Office of Housing and Residence Life” in the Student Affairs section of this Bulletin.

#### PERSONAL PROPERTY INSURANCE
Students are responsible for their personal property while on campus. The university assumes no responsibility for loss of or damage to a student’s personal property, and the university insurance program does not cover such losses. Many “homeowner policies” purchased by a student’s family provide coverage for such perils as fire, water, and theft. If this coverage does not exist, the student may wish to consider the purchase of a separate policy.

#### POLICY FOR TUITION PAYMENT
Students enrolled in fall, spring, and summer terms for courses of full term length may arrange to pay bills for tuition and fees in two installments. At least one-half of the total bill must be paid at registration; the remainder must be paid by October 9 for the fall semester, March 9 for the spring semester, and July 9 for the summer session. Any remainder after the dates specified will be considered delinquent and will be assessed a late payment charge of 1.5 percent per month. Students registering as transient from another institution must pay the tuition and fees in full at the time of registration. Case Western Reserve University provides a Tuition Made E-Z Payment Plan. This ACH process will automatically debit a designated checking account on a monthly basis and apply the credits electronically to the student’s account. This process will eliminate the need for writing checks and the cost of postage. Information on this plan is available through the Bursar’s Office at 216-368-2226 or the Bursar’s Office website at www.case.edu/bursar/controller/st_ar.htm/.

Case Western Reserve uses the e-mail system to send out monthly billings. The e-mail is sent around the 25th of every month. Students and authorized third parties can view the student’s account in the Student Information System (SIS) for an up to date accounting of the outstanding balance. Students and authorized third parties can also view and/or pay the bill through the Student Information System (SIS) with an e-check or Discover Card. Please note that there is a service charge of 1.77% on a Discover card payment.

#### REFUNDS
It is the policy of Case Western Reserve University that a refund from a scholarship, a grant, a loan or other assistance will be issued only after all charges payable to the university for an entire semester have been satisfied. If the gift assistance and loans for a semester exceed the student’s charges for that semester, a refund will be issued during that semester. Since a refund cannot be processed until after the end of the late registration/drop/add
A student who completely withdraws from a fall or spring semester must pay a percentage of the tuition charge. The percentage charged is based on the number of weeks classes have been in session at the time of withdrawal.

<table>
<thead>
<tr>
<th>WEEK</th>
<th>AMOUNT OF CHARGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-2</td>
<td>0%</td>

<td>4-</td>
<td>50%</td>
</tr>
<tr>
<td>5</td>
<td>75%</td>
</tr>
<tr>
<td>6</td>
<td>100%</td>
</tr>
</tbody>
</table>

There is no tuition refund after the 5th week of classes.

In the summer session a student’s withdrawal from a class may change the amount of tuition charged. The amount of tuition charged after withdrawing or dropping a class is based on the percentage of class elapsed prior to the processing of the withdrawal.

<table>
<thead>

<tr>
<td>40%</td>
<td>100%</td>
</tr>
</tbody>
</table>

There is no tuition refund after the class has been in session for 40% of the scheduled term.

The university will refund any tuition paid for a semester by any student in good standing who is inducted into the armed forces before the end of that semester and who does not receive credit for the work completed during that semester.

**RETURN OF FEDERAL AND INSTITUTIONAL STUDENT**

**FINANCIAL INFORMATION**

This policy applies to students who withdraw or are dismissed and refunds for these students are determined according to the following policy:

2. A student’s withdrawal date is the date the student began the institution’s withdrawal process by submitting a completed withdrawal form to the dean’s office of the school of enrollment. The form must be signed by representatives of all specified departments, including a representative of the dean’s office of the school of enrollment. Students who leave the university without official notification will be considered to have withdrawn as of the midpoint of the semester or the last date of attendance at an academically related activity as documented by the university.

3. Refunds on tuition and room and board, if contracted with the university, will be prorated on a weekly basis based on the university calendar up through the fifth week of the semester. There are no refunds after that time.

4. Federal aid and institutional aid is earned in a prorated manner on a per diem basis based upon the university calendar up to the 60 percent point in the semester. Federal and all other aid is viewed as 100 percent earned after that date.

5. In accordance with federal regulations, when financial aid is involved, refunds are allocated in the following order:

6. Any funds received in excess of the amount earned must be returned to the funding source. If the return of unearned federal assistance causes any portion of the student’s tuition and other charges to be unpaid, the student will be billed by the university.

7. Refunds and adjusted bills will be sent to the student’s Case Western Reserve e-mail account following withdrawal.

**PARTIAL WITHDRAWAL**

A student who withdraws from a course or courses after the normal drop/add period without completely withdrawing from the university is not entitled to a tuition refund for the course or courses dropped. At the discretion of the dean of a school, a partial tuition refund may be authorized in cases in which unforeseen and unavoidable circumstances necessitate that a student withdraws from a course or courses, and the student does not wish to withdraw completely. Federal, state, or institutional aid may be adjusted to reflect the adjusted tuition cost in accordance with federal, state, and institutional rules, regulations, and policies. These may require a minimum level of enrollment to receive any assistance from a specific program.

**FINANCIAL ASSISTANCE**

An important consideration for nearly every student is how much higher education will cost and how much the student will be expected to provide toward that cost. Students should not assume that they will be unable to attend Case Western Reserve University for financial reasons. Each year more than half of the entering class receives financial assistance. Sources of support are many and varied. Students and parents are encouraged to investigate the financial aid opportunities at Case Western Reserve University. For undergraduate students, in addition to a comprehensive program of financial assistance based on a student’s demonstrated need, the university offers academic awards based solely on academic merit. Individual students may be eligible for the Financial Aid Program or the Academic Awards Program, or both. Scholarship and university controlled grant support are restricted to tuition only, unless otherwise noted. An individual student may not receive gift assistance from university programs or scholarship funds in excess of full tuition.

Case Western Reserve University has established academic prizes to recognize the out-
standing academic achievement of its students in the pursuit of their educational programs and objectives. These prizes are announced at honors assemblies at the conclusion of each academic year. In recognition of its commitment to scholarship and research excellence, Case Western Reserve University permits the first $500 of any academic prize received at the honors assemblies to be awarded to a student without affecting other university scholarship or grant assistance. In instances in which federal or state regulations would mandate a reduction in need-based assistance, financial aid and scholarship policy will result in a reduction of up to $500 in self-help assistance (loan and job), if possible, before any grant or scholarship assistance will be adjusted.

For graduate and professional students, in addition to extensive loan assistance and in some cases opportunities for employment, a number of schools and departments offer assistantships and/or grant and scholarship aid. Financial aid information may be found online at http://finaid.case.edu/. Information regarding application procedures, eligibility criteria, financial aid definitions, university scholarships and grants, and student employment is currently available. The university’s financial aid website has direct links to other financial aid websites that provide current financial aid publications. Prospective and current students can search for external scholarships by connecting to the fastWEB free scholarship search home page. Students may direct specific questions to the Office of University Financial Aid using the “Ask the Financial Aid Counselor” link. The counselors will respond via the Internet.

A secure link on the financial aid website, briefCase, provides students and applicants 24-hour access to the status of the application and actual financial aid award. Students will use briefCase to obtain current information on the financial aid process and assistance awarded.

FINANCIAL AID POLICY

A student at Case Western Reserve University may receive assistance for academic excellence, financial need, or both. Academic excellence is recognized by the Academic Awards Program and other scholarship programs of the undergraduate colleges and by various assistantships, fellowships, scholarships and other awards of individual departments in the School of Graduate Studies and several of the professional schools. A student who wishes to apply for financial assistance based on merit should contact the admissions office of the appropriate college or school.

The term “financial aid” refers to assistance awarded to meet demonstrated financial need. The university’s policy regarding the determination of financial need and the awarding of financial aid is presented below. This policy is administered by the Office of University Financial Aid (except for the School of Medicine).

NEED-BASED AID POLICY

Case Western Reserve University assumes that a student’s family will make available from its income and assets a reasonable contribution toward the cost of attending the university. The university will assist a family to make up the difference between the family’s contribution and the cost of attendance. In its effort to employ an equitable method of evaluating requests for financial assistance, the university requires that all new undergraduate students complete the Free Application for Federal Student Aid (FAFSA) which provides the university with an objective means of determining a reasonable educational contribution. All continuing undergraduate students are requested to submit the FAFSA to the processing center and send other documents directly to the Office of University Financial Aid for use in determining eligibility and the amount of financial aid to be awarded. Graduate and professional students are required to complete the FAFSA and submit the other documents directly to the Office of University Financial Aid.

The analysis of the application documents considers the family’s annual income and accumulated assets, with allowances for family size, the number of dependent family members attending postsecondary educational institutions, retirement needs, and other factors. A determination is also made of the amount a student may be expected reasonably to contribute toward college expenses from savings and employment. Financial need is computed by subtracting the student and parental contributions from the cost of attendance, also called student’s budget. This budget includes the actual cost of tuition and fees, an allowance for housing and meals, books and supplies, miscellaneous personal and incidental expenses, and transportation. An undergraduate student’s financial aid award consists generally of three basic types of financial assistance non-repayable gift or grant assistance, repayable loans, and student employment during the school year. A graduate or professional student’s financial aid award is primarily in the form of loan assistance, although other types of aid may be awarded. Most gift assistance is in the form of assistantships, fellowships, or scholarships. Case Western Reserve University adheres to the principle that a student’s need-based financial assistance may not exceed demonstrated financial need.

Because financial aid is initially awarded without regard to any other aid a student may receive from other sources (university or non-university), a student’s financial aid may be adjusted if additional assistance is received. It is the obligation of each financial aid recipient to report the amount, terms, and sources of other assistance not included in the university’s financial aid award. This includes any work, loan, or gift assistance not incorporated in the financial aid package. Any significant change in the family’s financial circumstances (an increase or decrease of $300 or more in income or assets) should be reported to the Office of University Financial Aid. The amount of an individual’s financial aid will vary from year to year as the individual’s financial need varies. The determination of eligibility for financial aid is usually based on the prior calendar year’s income. Normally, financial aid is awarded with the expectation that it will be renewed each year upon reaplication on the basis of funds available, continued demonstrated financial need, and satisfactory academic performance and conduct. Each applicant will be considered for all programs of financial assistance for which he or she is eligible.

In most cases, students who are classified as independent are not required to provide information on their parents’ finances. For purposes of receiving financial aid, a student is considered independent who is:

1. Twenty-four years of age or older by December 31 of the year for which aid is requested; or
2. An orphan or ward of the court or in foster care at age 13 or older; or
3. A veteran of the U.S. Armed Forces or on active duty in the U.S. Armed Forces for purposes other than training; or
4. Married; or
5. A graduate or professional student; or
6. Not married but with children or legal dependents other than a child or spouse who receive more than one-half their support from the student and who live with the stu-
If the student did not file a tax return, a Student Affidavit of Income must be completed and submitted to the Office of University Financial Aid. This form is available from the Office of University Financial Aid. In addition, applicants must complete a Case Western Reserve University Financial Aid Form. All application forms are available for downloading and printing from the Financial Aid website at http://faid.case.edu under “Forms and Publications.”

Applicants should respond promptly to the request for verification documents because federal regulations prevent the disbursement of federal funds until this process has been completed.

Transfer students are evaluated for all sources of financial aid. Transfer students must submit the Free Application For Federal Student Aid. In addition, transfer students must complete a Case Western Reserve University Financial Aid Form. Undergraduate students admitted to either the Integrated Graduate Studies or the Bachelor of Science/Master of Science program must include a memorandum of departmental financial support with their annual application. To maintain continued eligibility for undergraduate aid, the student must register for a 12-credit-hour, full-time undergraduate course load and meet all other requirements of undergraduate aid awards. Undergraduate financial aid eligibility including federal, state, and institutional gift assistance normally terminates after ten semesters of enrollment, regardless of degree completion.

For more information about application procedures, review the on-line publication, “undergraduate financial aid and scholarships” at http://faid.case.edu under “forms and publications.”

Graduate and Professional Students

Following is a summary of procedures for applying for need-based assistance by school.

Students in the School of Medicine should contact the Financial Aid Office in the School of Medicine.

In most instances it is the policy of the Office of University Financial Aid to meet the first $20,500 of financial need with a Stafford Loan. All financial aid application forms are available from the admission offices of the various schools or the Office of University Financial Aid. Some schools may have specific application forms for institutional funds. Check with the admissions office of the graduate/ professional school for information on the application procedures and forms. (Students of the School of Medicine should obtain all application forms from the School of Medicine’s Financial Aid Office.)

Each student in or applying to a dual-degree program must request and provide the Office of University Financial Aid with a memorandum detailing financial support that the student will receive from each school involved in the dual-degree program.

Mandel School of Applied Social Sciences

First-year students or first-time financial aid applicants must submit:

1. A Free Application for Federal Student Aid (FAFSA) Federal Code E00084
2. To the Office of University Financial Aid:
   a. A Case Western Reserve form.
   b. If selected for verification, assigned copy of the student’s (and, where appropriate, the student's spouse's) prior year federal income tax return and W-2 forms; if a tax return was not filed, a completed Student/Spouse Affidavit of Income.
   c. A memorandum from the Mandel School of Applied Social Sciences specifying the amount and types of aid, if any, the student will be receiving from the School.

Continuing students must submit:

1. A Free Application for Federal Student Aid (FAFSA) Federal Code E00084
2. To the Office of University Financial Aid:
   a. A Case Western Reserve form.
   b. If selected for verification, a signed copy of the student’s (and, where appropriate, the student’s spouse’s) prior year federal income tax return and W-2 forms; if a tax return was not filed, a completed Student/Spouse Affidavit of Income.
   c. A memorandum from the Mandel School of Applied Social Sciences specifying the amount and types of aid, if any, the student will be receiving from the School.

School of Dental Medicine

All financial aid applicants must submit:

1. New and continuing students: A Free Application for Federal Student Aid (FAFSA)
2. To the Office of University Financial Aid:
   a. A Case Western Reserve form.
   b. A signed copy of the parents’ prior-year federal income tax return and W-2 forms if applying for funds through the Department of Health and Human Services.
   c. If selected for verification, signed copy of the student’s (and, where applicable, the student’s spouse’s) prior year federal income tax return and W-2 forms; if a tax return was not filed, a completed Student/Spouse Affidavit of Income.
   d. A financial aid transcript from any previous U.S. dental school attended (transfer students and applicants to the graduate master’s programs only).

School of Graduate Studies
New and continuing students must submit:
a. A Free Application for Federal Student Aid (FAFSA) Federal Codes E00078.
e. All financial aid applicants must submit the following documents:
   a. A Case Western Reserve form.
   b. If selected for verification, signed copy of the student’s (and, where applicable, the student’s spouse’s) prior year federal income tax return and W-2 forms; if a tax return was not filed, a completed Student/Spouse Affidavit of Income.
   c. A memorandum from the Weatherhead School of Management specifying the amount and types of aid, if any, the student will receive from the school.
   d. A memorandum from the Mandel Center for Nonprofit Organizations indicating the amount and kind of assistance, if any, the student will receive from the School of Law.

Weatherhead School of Management
All financial aid applicants must submit the following documents:
2. To the University Office of Financial Aid:
   a. A Case Western Reserve form.
   b. If selected for verification, signed copy of the student’s (and, where applicable, the student’s spouse’s) prior year federal income tax return and W-2 forms; if a tax return was not filed, a completed Student/Spouse Affidavit of Income.
   c. A memorandum from the Mandel Center for Nonprofit Organizations indicating the amount and kind of assistance, if any, the student will receive from the school.

School of Law
All applicants for financial aid must submit:
2. To the Office of University Financial Aid:
   a. A memorandum from the School of Law to the Office of University Financial Aid will be submitted on behalf of each student, indicating the amount and kind of assistance, if any, the student will receive from the School of Law.
   b. A Case Western Reserve form.
   c. A financial aid transcript from any graduate master’s program.

School of Medicine
All financial aid applicants must submit a Free Application for Federal Student Aid (FAFSA) Federal Code E00079 and complete the electronic Need Access application provided by the Access Group.

Frances Payne Bolton School of Nursing Graduate Programs
The following procedures must be observed for all Doctor of Nursing (D.N.P.), M.S.N., and Ph.D. students seeking financial aid based on need:
1. All new and continuing students must submit a Free Application for Federal Student Aid (FAFSA) Federal Code E00083.
2. Some new students may be required to submit a Financial Aid Transcript from the college or university previously attended. The transcripts are to be sent to the Office of University Financial Aid at Case Western Reserve University.
3. All new and continuing students must submit to the Office of University Financial Aid:
   a. A Case Western Reserve form.
   b. If selected for verification or applying for funding through the Federal Nursing Loan administered by the U.S. Department of Health and Human Services, a signed or certified copy of the student’s and spouse’s (if applicable) prior year federal income tax return and W-2 forms. If a tax return was not filed, a completed Student/Spouse Affidavit of Income;
   c. A memorandum from the Mandel Center for Nonprofit Organizations indicating the amount and kind of assistance awarded for each term.

Mandel Center for Nonprofit Organizations Students applying for scholarships must apply directly to the Mandel Center. One application is sufficient to apply for any scholarship available. The following procedure applies to those students who wish to borrow through the educational loan programs, in addition to any scholarship(s) received. Students must be enrolled at least halftime to qualify for federal educational loans.

All financial aid applicants must submit:
2. To the Office of University Financial Aid:
   a. A Case Western Reserve form.
   b. If selected for verification, a signed or certified copy of the student’s and spouse’s (where applicable) prior year federal income tax return and W-2 forms; if a tax return was not filed, a completed Student/Spouse Affidavit of Income.
   c. A memorandum from the Mandel Center for Nonprofit Organizations indicating the amount and kind of assistance, if any, the student will receive from the school.

TYPES OF AID
Gift and Scholarship Aid
Aid Available to Undergraduate, Graduate, and Professional Students
Ukrainian Student Assistance Fund Scholarship
Available to students in the Case School of Engineering, the College of Arts and Sciences, the School of Graduate Studies, and each of the professional schools, this scholarship stipulates that the applicant must be a full-time student in good standing, must demonstrate financial need, and normally must have at least one parent or grandparent who was born in the Ukraine. The student must be a U.S. citizen or permanent resident and must be otherwise eligible for need-based financial assistance.

Undergraduate Aid related to Academic Achievement or Potential, Awarded by Case Western Reserve University
(Follow the application procedures indicated above, unless otherwise indicated.)

Academic Awards Program
The following academic awards, honoring distinguished faculty, alumni, and benefactors of the university, are offered to qualified applicants for admission as freshmen. Transfer students are ineligible. These awards are renewable for each of the four years of undergraduate study, provided high academic achievement is maintained.

Three full-tuition Albert W. Smith Scholarships for freshmen accepted in engineering, science, or mathematics.

Two full-tuition Treuhaft Scholarships for freshmen accepted in engineering, science, or mathematics.

Four full-tuition Andrew Squire Scholarships for freshmen accepted in the arts, humanities, natural sciences, social and behavioral sciences, management and accountability.

Two full-tuition Adelbert Alumni Scholarships for freshmen accepted in the arts, humanities, natural sciences, social and behavioral sciences, management and accountability.

One $20,000 Curtis Lee Smith Scholarship every four years for a first-year student accepted in the arts, humanities, natural sciences, social and behavioral sciences, management or accountability.

One $20,000 Elizabeth Walker Scholarship every four years for a first-year student accepted in the arts, humanities, natural sciences, social and behavioral sciences, management, or accountability.

Two full-tuition Congressional Black Caucus Scholarships

One full-tuition Milton A. Wolf Scholarship
A Trustee’s Scholarship for selected freshmen entering the College of Arts and Sciences, the Case School of Engineering, the Frances Payne Bolton School of Nursing, or the Weatherhead undergraduate program. (Value for freshmen entering in 2009 is $22,500.) The university may establish annual limits on the number of Trustee’s Scholarships to be offered.

A President’s Scholarship for selected first-year student entering the College of Arts and Sciences, the Case School of Engineering, the Frances Payne Bolton School of Nursing or the Weatherhead undergraduate program. (Value for freshmen entering in 2009 is $27,500.) The university may establish annual limits on the number of President’s Scholarships to be offered.

A Provost’s Scholarship for selected first-year students entering the College of Arts and Sciences, the Case School of Engineering, the Frances Payne Bolton School of Nursing or the Weatherhead undergraduate program (Value for freshmen entering in 2009 is $17,500.) The university may establish annual limits on the number of Provost’s Scholarships to be offered.

Provost’s Special Scholarships for selected first-year students entering the College of Arts and Sciences, the Case School of Engineering, the Frances Payne Bolton School of Nursing, or the Weatherhead undergraduate program who demonstrate superior academic performance, and who have encountered economic or educational obstacles that affected their college preparation. Applicants from inner-city and remote rural schools, including Indian reservations, and members of underrepresented minority groups, are encouraged to apply. Students with special talents and significant extracurricular and community activities are encouraged to apply as well. (Value for freshmen entering in 2009 is $20,000.) The university reserves the right to limit the number of Provost Special Scholarships offered.

Dean’s Scholarships are offered to selected first-year students in the College of Arts and Sciences, Case School of Engineering, the Frances Payne Bolton School of Nursing, or the Weatherhead undergraduate program. (Value for freshmen entering in 2009 is $15,000.) The university reserves the right to limit the number of Dean’s Scholarships offered.

Faculty Scholarships are offered to selected first-year students in the College of Arts and Sciences, Case School of Engineering, or the Weatherhead undergraduate program. (Value for freshmen entering in 2009 ranges from $5,000 to $10,000.) The university reserves the right to limit the number of Faculty Scholarships offered.

Renewal of Scholarships
Scholarships are renewable for each year of undergraduate study provided that the student meets the renewal criteria established for the student’s class. A student may receive scholarship assistance for no more than eight semesters of continuous undergraduate course work or until the student completes the number of continuous semesters of full-time undergraduate course work to receive a degree, whichever is less.

Student records are reviewed at the end of each academic year for renewal of scholarship assistance regardless of the number of semesters for which the student was enrolled during the academic year. The student must meet both a qualitative and quantitative standard for scholarship renewal.

The minimum standards for continuation are:

a) Cumulative hours earned after matriculation at Case Western Reserve (not including AP/IB/transfer or Pre-College Scholar credit earned prior to matriculation at the University)

At end of first year: 21 semester hours
At end of the second year: 54 semester hours*
At end of the third year: 84 semester hours*

*For students participating in an approved off-campus program (Cooperative Education, Practicum, Junior Year Abroad, or Washington Semester) an adjustment is made in the number of hours expected.

b) A cumulative scholarship GPA of 2.5 at the end of the first year, and a cumulative scholarship grade point average of 3.0 thereafter.**

**Scholarship GPA: No courses are eliminated from a student’s record for the purpose of calculating the “Scholarship GPA.” The “Scholarship GPA” is the student’s cumulative GPA; unless the student has used the Repeat Option or has earned any F grades in the

FINANCIAL INFORMATION
Freshman year that do not appear on the official transcript. If a scholarship recipient has used the Repeat Option for any course or has earned any F grades that do not appear on the official transcript, the original grades will be included in the computation of the cumulative grade average for the purpose of determining eligibility for scholarship continuation.

If a scholarship recipient's achievement falls below the standard, the scholarship is terminated. A student planning to take a leave for one semester must obtain approval prior to the leave of absence in order for a scholarship to be deferred and re-activated upon re-enrollment.

Students are expected to maintain a full time course load (12 or more credit hours in a regular semester to receive the scholarship. Students in the final semester of study who do not require a full time course load to complete degree requirements may petition the Office of Undergraduate Studies for use of a pro-rated amount of the scholarship for enrollment on at least a half time basis.

Students should consult the Handbook for Undergraduate Students for complete details regarding the renewal of the scholarships.

Music and Theater Arts Scholarship
Case Western Reserve offers scholarships to prospective first-year students who plan to major in Music or Theater Arts. Individual scholarships range from $2,000 to $22,500 per year. Scholarships are renewable for each of the four years of undergraduate study, or until the attainment of the baccalaureate degree, whichever comes first. To be considered for the scholarship, students will audition with the specified department.

Minority Scholars Program
A special program of academic preparation, career counseling, internships, and mentoring is offered for selected minority students. Program participants may qualify for special financial assistance designated for low income or disadvantaged students. To apply, a student must identify himself or herself as an underrepresented minority to the Office of Undergraduate Admission. Minorities who are underrepresented in higher education include Native Americans, African Americans, Mexican Americans, Puerto Ricans, Native Alaskans, and Native Pacific Islanders.

National Merit Scholarships
Case Western Reserve University sponsors at least 25 four-year scholarships for National Merit Scholarship Corporation finalists who have listed Case Western Reserve University as their first-choice institution. Scholarships range from $500 to $2,000 per year.

Case School of Engineering Alumni Association Scholarships
The Case School of Engineering Alumni Association provides scholarship assistance to selected juniors and seniors who have demonstrated outstanding academic achievement and participation in extracurricular activities.

Alden Undergraduate Fellowship in Systems Engineering
Several scholarships of varying amounts are offered for the junior and senior years to students in Case School of Engineering who have declared a major in systems engineering. Contact the Department for further details.

James Dysart Magee Scholarships
Two or more scholarships are awarded annually to seniors in the Integrated Graduate Studies programs in economics and the social and behavioral sciences.

Trustee’s, President’s, and Provost’s Scholarships for Upper-Class Students
Recipients will be chosen from students not previously receiving these or similar scholarships. All first, second, and third year students will be eligible for consideration provided that the student has achieved a minimum 3.75 cumulative GPA at the university and has earned at least 30, 60, or 90 credit hours respectively at Case Western Reserve after the freshman, sophomore, or junior year of study. AP credit and transfer credit will not be considered. Recipients will be selected from eligible applicants who have attained a record of achievement, participation, and leadership at Case Western Reserve University that distinguishes them from their peers. Recipients will be selected by the Committee on Academic Standing.

The following scholarships will be available:
• One Trustee’s Scholarship
• Two President’s Scholarships
• Four Provost’s Scholarships

Students may obtain an application after February 15 in the Office of Undergraduate Studies or the Office of University Financial Aid. Applicants must submit the completed application and a letter of recommendation from a faculty member by April 15 to the Office of Undergraduate Studies.

The scholarships are renewable through the fourth year of undergraduate study or completion of the undergraduate degree, whichever comes first. A student must achieve a cumulative 3.0 GPA, full time undergraduate status, and earn at least thirty additional credit hours during each subsequent year to retain the scholarship.

Community College Transfer Scholarships Program
Two scholarships are offered to selected graduates of community colleges for admission as transfer students. These scholarships of $10,000 each are renewable at the same level for up to two additional years of full time undergraduate study, provided that the recipient earns at least thirty credit hours each year at Case Western Reserve University with at least a 3.0 cumulative GPA.

Undergraduate Aid Based on Financial Need and Contingent upon Satisfactory Academic Progress, Awarded by Case Western Reserve University
(Follow the application procedures outlined above, unless otherwise indicated.)

GRANTS-IN-AID FROM THE SCHOOLS
Grants-in-aid comprise non-repayable gift assistance which varies according to the amount of unmet financial need but which may not exceed tuition.

Federal Supplemental Educational Opportunity Grants (FSEOG)
Students with financial need may receive a Federal Supplemental Educational Opportunity Grant. The FSEOG is awarded to students with great financial need who would be unable to attend the University without this grant. Grants may range from $200 to $4,000 per year.

UNDERGRADUATE AID AWARDED OUTSIDE CASE WESTERN RESERVE UNIVERSITY
Federal Pell Grant
The Federal Pell Grant program is a federal grant program through which a student can receive a maximum of $5,350 (for 2009-
2010). The student must apply for the Federal Pell Grant by completing the Free Application for Federal Student Aid (FAFSA). Within two weeks of filing, the student will receive an electronic or paper Student Aid Report, and the Office of University Financial Aid will receive the results electronically. The amount of Federal Pell Grant the student is eligible to receive will be determined according to federal payment tables that are updated annually. The U.S. Department of Education requires that eligibility for a Federal Pell Grant be determined before any other federal aid can be awarded.

**Non-Public, Need-Based Block Grant**

The proposed State of Ohio biennial budget bill for academic years 2009-2010 and 2010-2011 includes a proposal to provide a block grant to each Ohio institution of higher education to be awarded on the basis of the highest financial need to undergraduate students who are Ohio residents. This proposal is subject to change and final approval from both the Ohio General Assembly and the Governor of the State of Ohio no later than June 30, 2009.

**War Orphans Scholarship Program**

The state of Ohio provides scholarship assistance to children of veterans who were killed in action during times of war, who received a service-connected disability of at least 60 percent, or who are totally disabled. The veteran must have entered the service as a resident of Ohio. The scholarship provides a sum of money equal to the average of tuition and fees of state-assisted institutions to students who attend eligible private institutions in the state of Ohio. Students should contact the Student Assistance Office of the Ohio Board of Regents for further details.

**Other State Scholarship and Grant Programs**

The states of Delaware, Maryland, Michigan, Pennsylvania, Rhode Island, and Vermont have state scholarship or grant programs for residents. The recipients of these state scholarship or grant programs may use this assistance at any eligible college or university. Students should contact their high school guidance directors or the appropriate state agency for further information.

**ROTC**

U.S. Army and Air Force Scholarships are available on a competitive basis. The scholarships pay a portion or all of the recipient’s tuition, laboratory, textbook, and incidental fees. Recipients also receive a tax-free stipend ranging from $250 to $400 on a monthly basis during the academic year. Students compete for three or four year scholarships. Case Western Reserve University provides matching grants to assist with tuition for up to ten new students each year.

**OTHER GRANTS AND SCHOLARSHIPS**

Many students receive grants or scholarships from companies, community organizations, ethnic or religious groups, or fraternal organizations. Students are encouraged to seek such outside assistance. It is a condition of receiving financial assistance from the University that the student notifies the Office of University Financial Aid of all assistance received from outside the university, whether paid directly to the university or to the student.

**Mandel School of Applied Social Sciences**

MANDEL SASS SCHOLARSHIPS

Scholarships are awarded to full-time, intensive, and international students in varying amounts, as determined by financial need and academic merit. These scholarships are renewable, provided the recipient meets eligibility requirements and availability of funds.

**School of Dental Medicine**

ALUMNI SCHOLARSHIPS

The School of Dental Medicine, with the support of the Alumni Association, awards a number of four-year partial tuition scholarships to entering students of outstanding achievement and potential.

**American Dental Association (ADA) Endowment and Assistance Fund**

The ADA provides competitive scholarships to second year Dental Medicine students. Selection criteria include U.S. citizenship; demonstrated need of at least $2,500; cumulative GPA of 3.0 on a 4.0 scale. Each dental school is allowed to provide two students with an application. Eligibility to apply is determined by the scholarship committee of the School of Dental Medicine. The application deadline is June 15.

**American Dental Association (ADA) Endowment Fund Minority Dental**

FINANCIAL INFORMATION

**Student Scholarship Program**

The ADA offers scholarships for second year minority Dental Medicine students. Selection criteria include demonstration of financial need and cumulative GPA of 2.5 on a 4.0 scale. Each dental school is allowed to provide two students with an application. Eligibility to apply is determined by the scholarship committee of the School of Dental Medicine.

**Armed Services Scholarship Program**

The Army, Navy, and Air Force permit selected students to be commissioned as officers in their programs. Terms and conditions of each branch scholarship program are available from the Health Professions recruiter for the specific branch of service.

**National Health Service Corps**

National Health Service Corps offers scholarship benefits to recipients including tuition, fees, and a stipend. Participants are obligated for a full year of service for each year of benefits with a minimum obligation of two years. Further information is available through the School of Dental Medicine.

It is suggested that applicants check with local fraternal and community organizations and with their local dental societies.

**School of Graduate Studies**

**FELLOWSHIPS, TRAINEESHIPS, ASSISTANTSHIPS AND AWARDS**

The university has approximately 1,000 competitive awards for the support of full-time study in the School of Graduate Studies. These include a variety of fellowships, traineeships, and assistantships, and are assigned through most of the departments offering graduate degree programs. Most awards are granted for study beginning in the fall semester. New students are eligible for award consideration at the time they apply for admission. The general deadline for completed applications for admission with financial aid consideration is March 1 for the following semester.

**OTHER RESOURCES**

The Office of Research Administration has access to a terminal-based data system (SPIN) that can provide information on a variety of additional public and private sources for financial assistance.

**School of Law**
School of Medicine

Scholarships

It is the policy of the School of Medicine to use its limited scholarship funds to assist those students whose financial needs are so great that, if they were all met by loans, the burden of indebtedness would be extreme. No scholarships are granted merely because of academic excellence to students whose personal and family resources are adequate to meet the costs of a medical education. Minority group students selected for admission to the medical school are eligible to apply for aid from:

**National Medical Fellowships, Inc.**
110 West 32nd St.
New York, NY 10001-3205

It is desirable for eligible students (African-Americans, Mexican-Americans, mainland Puerto Ricans, and Native Americans) to initiate such applications promptly after they are accepted.

**Fellowships**

Many students seek opportunities to devote vacation months to intensive study of some subject in which they have become interested. Summer research fellowships are made available to students to enable them to engage in such investigations under the supervision of a faculty sponsor. The present policy is to provide, insofar as possible, a stipend of $1,200, with the requirement that the student devote a minimum of two months of full-time effort to the project. Support for the vacation research fellowship program comes from many sources.

**Federal Scholarship Programs**

Branches of the military service and the National Health Service Corps offer scholarship benefits to recipients including tuition, fees, and a stipend. Participants are obligated for a full year of service for each year of benefits with a minimum obligation of two years. Further information about these programs may be obtained from the local recruiting office of the armed forces or through the financial aid office at the School of Medicine.

**Frances Payne Bolton School of Nursing**

**Doctorate of Nursing Practice (D.N.P.)**

Grants-in-Aid are awarded to full-time students of the D.N.P. program who demonstrate financial need and maintain satisfactory academic progress. Some of these are from endowments but the majority is contributions from alumni of the school.

**M.S.N. and Ph.D. Students**

The following grants and scholarships are available through the School of Nursing:

Professional Nurse Traineeships are federal traineeships designed for M.S.N. students preparing for teaching, administration, or specialization in a particular field of nursing practice. Students must be enrolled at least half-time (5 credit hours) both fall and spring semesters to qualify. Students entering in the spring will qualify if they commit to at least a half-time enrollment thereafter. Professional Nurse Traineeships may be used for master's study for up to 18 months. The current level of funding pays for approximately 1 to 1 1/2 credit hours per semester.

National Research Service Awards for Individual Predoctoral Nurse Fellowships are awarded under the authority of the Public Health Service Act to nurses for predoctoral training in specified areas of nursing. These awards are made to individuals selected in national competition. Applicants must be enrolled for study leading to the Ph.D. in nursing and be sponsored by faculty of the School of Nursing.

Research and/or teaching graduate fellowships/assistantships may be available to part-time or full-time students who are registered nurses based upon academic merit and prior relevant academic and/or work experience. A fellowship/assistantship carries a revision of tuition for 1.5 to 6 hours each semester plus a small monthly stipend in exchange for 20 hours of work per week for the 15-week semester. To apply for the fellowship/assistant, check the appropriate space on the School of Nursing application form.

**Nurse Faculty Loan**

The U.S. Department of Health and Human Services provides funding through the Nurse Faculty Loan Program to assist students in pursuing doctoral degrees in the field of nursing, with the goal of becoming an educator at the college or graduate level. Eligible students must be enrolled on at least a half-time basis, be U.S. citizens or nationals, and not be in default on a federal loan. Loan funds may be used to cover tuition, fees, books, lab expenses, and reasonable education expenses.

**Loan Assistance**

Loans Awarded by Case Western Reserve Office of University Financial Aid

---

**FINANCIAL INFORMATION**

**Law School Scholarships**

Each year a number of scholarships are awarded to entering students on the basis of merit. The scholarship is renewable provided the recipient maintains the requisite GPA. Funds for these scholarships are provided from the generous support of alumni and friends of the law school. Scholarships are awarded in varying amounts up to full-tuition, depending upon academic performance and availability of funds.

**Weatherhead School of Management**

In addition to participating in federal financial aid programs, the Weatherhead School of Management sponsors its own programs of financial assistance for qualified MBA and M.Acct. students. The Weatherhead School programs include scholarships, grants, and loans. All requests for financial aid should be submitted no later than April 1. Because the availability of financial aid is limited, students are encouraged to apply as early as possible for such aid. Decisions concerning admission and financial aid are made independently of one another. Applying for financial aid will neither help nor hinder an applicant’s chances for admission.

To apply for any of the Weatherhead Scholarships, check the appropriate space on the application for admission. Scholarship decisions are made on a rolling basis until funds are exhausted.

**Scholarships**

The Weatherhead School awards a limited number of scholarships each year to entering full-time MBA and M.Acct. students. Primary consideration is given to students who have demonstrated a high level of academic achievement in undergraduate studies in conjunction with outstanding scores on the GMAT. Relevant work experience is also evaluated. To be considered for admission, scholarship funds are available to students who have demonstrated a high level of academic achievement in undergraduate studies in conjunction with outstanding scores on the GMAT. Relevant work experience is also evaluated. To be considered for admission, scholarship decisions are made on a rolling basis until funds are exhausted.

**M.S.N. and Ph.D. Students**

The following grants and scholarships are available through the School of Nursing:

Professional Nurse Traineeships are federal traineeships designed for M.S.N. students preparing for teaching, administration, or specialization in a particular field of nursing practice. Students must be enrolled at least half-time (5 credit hours) both fall and spring semesters to qualify. Students entering in the spring will qualify if they commit to at least a half-time enrollment thereafter. Professional Nurse Traineeships may be used for master’s study for up to 18 months. The current level of funding pays for approximately 1 to 1 1/2 credit hours per semester.

National Research Service Awards for Individual Predoctoral Nurse Fellowships are awarded under the authority of the Public Health Service Act to nurses for predoctoral training in specified areas of nursing. These awards are made to individuals selected in national competition. Applicants must be enrolled for study leading to the Ph.D. in nursing and be sponsored by faculty of the School of Nursing.

Research and/or teaching graduate fellowships/assistantships may be available to part-time or full-time students who are registered nurses based upon academic merit and prior relevant academic and/or work experience. A fellowship/assistantship carries a revision of tuition for 1.5 to 6 hours each semester plus a small monthly stipend in exchange for 20 hours of work per week for the 15-week semester. To apply for the fellowship/assistant, check the appropriate space on the School of Nursing application form.

**Nurse Faculty Loan**

The U.S. Department of Health and Human Services provides funding through the Nurse Faculty Loan Program to assist students in pursuing doctoral degrees in the field of nursing, with the goal of becoming an educator at the college or graduate level. Eligible students must be enrolled on at least a half-time basis, be U.S. citizens or nationals, and not be in default on a federal loan. Loan funds may be used to cover tuition, fees, books, lab expenses, and reasonable education expenses.

**Loan Assistance**

Loans Awarded by Case Western Reserve Office of University Financial Aid
These loans are awarded on the basis of financial need. A loan will probably be a part of a package awarded in response to an application for financial assistance.

**Federal Perkins Loan**

Perkins Loans enable students to borrow up to $40,000 through graduate school (up to $20,000 as an undergraduate). Repayment begins six months after graduation or after the student ceases enrollment on at least a half-time basis. To be eligible a student must be a citizen of the United States or have a permanent resident visa, be at least a half-time student making satisfactory progress toward a degree, and establish financial need for the loan. The Federal Perkins Loan may be awarded to undergraduate students and graduate and professional students in all programs except the School of Medicine.

**HEALTH PROFESSION**

**Student Loans (HPSL)**

Awarded to students in the School of Dental Medicine and School of Medicine who demonstrate financial need, HPSL is a federal loan that enables eligible students to borrow at 5 percent simple interest, with repayment made over a ten-year period. Parental information must be provided by all students wishing consideration for these funds.

**Federal Nursing Loan Program**

Only D.N.P. and M.S.N. students in the School of Nursing are being awarded the limited federal loans provided under the Nursing Student Loan Program. They may receive up to $4,000 per year, depending upon financial need and availability of funds. Interest is 5 percent, and repayment begins when the student completes the program or ceases to be enrolled at least half time.

**University Loans**

A university loan is a low-interest long-term loan provided to a student to assist with educational expenses. Repayment is made over a ten-year period after graduation or over a ten-year period after the student ceases enrollment on at least a half-time basis. Interest is 8 percent.

a) Undergraduate

Forty-eight loan funds have been established for undergraduate students. Loans are awarded by the Office of University Financial Aid on the basis of need.

b) Graduate and Professional

The Mandel School of Applied Social Sciences has a small amount of loan money available to meet financial need after federal loan availability has been exhausted. These loans are awarded by the Office of University Financial Aid.

A number of loan funds have been established for students in the School of Dental Medicine. Loans from these funds are awarded only to meet cases of exceptional need that cannot be met by other funding, and some of these funds are restricted to certain classes and categories of students.

The School of Law provides low-interest, long-term loans to students with unmet need who have exhausted all other available assistance.

The Weatherhead School of Management has loan funds for MBA students who demonstrate financial need.

Loans are available to students in the School of Medicine from funds given to the School of Medicine for that purpose. The Medical Alumni Association Rotating Loan Fund, augmented each year by contributions from graduates of the school, is a major source of aid for currently enrolled students.

The Frances Payne Bolton School of Nursing has several loans funds available to assist students with exceptional financial need as determined by the Office of University Financial Aid.

The interest is subsidized (paid) by the U.S. Federal Government. All undergraduate students must apply for the Federal Pell Grant. Application forms for the Federal Stafford Loan Program may be obtained from a bank or other lending institution, or from the Office of University Financial Aid. The appropriate forms must then be submitted to the Office of University Financial Aid. All applicants for Stafford Loans must submit the following:

1. A Free Application for Federal Student Aid (FAFSA).
2. To the Office of University Financial Aid:
   b. If a student is selected for verification, a signed copy of the parents’ prior year federal income tax return, including all schedules and W-2 forms (in the case of dependent students).
   c. A signed copy of the student’s prior year federal income tax return, including all schedules and W-2 forms (and where appropriate, the student’s spouse’s), or, if a tax return was not filed, a completed Student/Spouse Statement of Income.
   d. In the case of students enrolled or admitted to the Mandel School of Applied Social Sciences, School of Graduate Studies, School of Law, Weatherhead School of Management, Mandel Center for Nonprofit Organizations, or the D.N.P., M.S.N. or Ph.D. program of the Frances Payne Bolton School of Nursing, the Office of University Financial Aid also requires a memorandum from the school specifying
FINANCIAL INFORMATION

the admission status, number of credit hours enrolled for each term, current academic standing, and the amount of other financial assistance, if any, being awarded. The student should allow at least 8 to 10 weeks between submission of the forms to the Office of University Financial Aid and receipt of the loan proceeds.

e. All first-time Stafford Loan borrowers must complete a loan entrance interview to acquaint themselves with the rights and responsibilities of federal loan borrowers. This information session may be handled online and must be completed before the promissory note may be signed or funds disbursed.

Unsubsidized Loans

Unsubsidized Federal Stafford Loans require the same enrollment criteria. The interest rate is 6.8% for all students. Borrowers are responsible for paying the interest during the in-school and deferment periods. Borrowers may choose to make periodic interest payments to the lender/servicer, or opt to have the accrued interest capitalized (added on to) the principal loan amount. Borrowers who do not qualify for the maximum amount under a subsidized loan may borrow an unsubsidized loan up to the maximum allowable loan amount. All undergraduate students are eligible to borrow up to $2,000 in unsubsidized Stafford Loan in addition to the $3,500, $4,500, or $5,500 annual maximum in subsidized Stafford. The maximum aggregate Stafford loan amounts for dependent students are $5,500 per year for freshmen, $6,500 per year for sophomores, $7,500 per year for juniors and seniors, and $20,500 per year for graduate students. Independent undergraduate students are eligible for an additional unsubsidized loan in the amounts of $4,000 per year for freshmen and sophomores, $5,000 per year for juniors and seniors, and $12,000 per year for graduate students. Students enrolled in the Schools of Medicine and Dental Medicine are eligible to borrow an additional $20,000 annually. The application process is identical to that for the subsidized loans. Undergraduate students must apply for and have eligibility determined for the Federal Pell Grant and all students must have eligibility for the subsidized loan determined before borrowing an unsubsidized loan. Promissory notes are completed online at the SallieMac website.

Federal Parent Loans for

Undergraduate Students (FPLUS)

Many lending institutions participate in the FPLUS program, through which a parent may borrow on behalf of a dependent undergraduate student up to the difference between the cost of education and any other financial assistance awarded. Students must be enrolled at least half time (6 credit hours per semester), be admitted to or enrolled in a degree-seeking program, and be making satisfactory academic progress. Interest and repayment begin 60 days after disbursement of the loan. The interest rate is fixed at 8.5 percent. There is no aggregate borrowing limit. Eligibility is not based on need, but a Case Western Reserve Application for Financial Aid must be submitted to the Office of University Financial Aid. The loan applications may be obtained from lending institutions such as banks, credit unions, and savings and loan associations or a parent may apply online and select from several lenders. The student should allow at least 8 to 10 weeks between submission of the forms to the Office of University Financial Aid and receipt of the loan.

Graduate PLUS Loan

Beginning July 1, 2006, graduate and professional students are eligible to borrow under the PLUS Loan Program up to the cost of attendance, minus other estimated financial assistance. The terms and conditions applicable to the Parent PLUS apply to the Graduate/Professional PLUS Loans. The applicant may not have an adverse credit history, must file the Free Application for Federal Student Aid (FAFSA), and apply for the maximum eligibility under the Federal Subsidized and Unsubsidized Stafford Loan Program. The interest rate is a fixed 8.5 percent.

Federal Consolidation Loans

Borrowers with outstanding indebtedness through the William D. Ford Federal Direct Loan Program, Federal Stafford Loan, Unsubsidized Stafford Loan, Federal Supplemental Loan for Students, National Direct Student Loan, Federal Perkins Loan, or Health Professions Student Loan programs may consolidate their loans, provided the loans are not in default or if in default, the borrower must have made satisfactory repayment arrangements with the lender. Consolidation may occur during the repayment period or the grace period preceding repayment.

Limited deferments of principal are available. The variable interest rate is capped at 8.25 percent. Repayment terms may include graduated or income-sensitive repayment schedules. The repayment period is tied to the amount consolidated and may extend up to thirty years.

Interested borrowers should contact their lenders for additional information and referrals to participating agencies. Borrowers under the William D. Ford Federal Direct Loan program may contact the Servicing Center’s Consolidation Department or the Office of University Financial Aid.

Outside Loan Programs

Several lenders offer low interest educational loans to students and/or parents. These loans are in addition to or alternatives to the Federal Stafford and PLUS Programs. Interest rates are variable, based on the LIBOR (London Inter-Bank Offered Rate). Interest payments must be paid during the in-school period. Students in the schools of Medicine and Law may use other loan programs and should consult their school of enrollment for additional information and application materials.

Frances Payne Bolton School of Nursing

OHIO NURSE EDUCATION ASSISTANCE LOAN PROGRAM (NEALP)

This program was created to assist the state of Ohio in meeting nursing shortages by providing assistance to students enrolled in approved nurse education programs and to encourage these students to remain in Ohio as they enter the nursing profession. These loans are available to students pursing the B.S.N. and D.N.P. degrees.

Eligibility requirements include:
1. Ohio residency
2. U.S. citizenship or permanent residency
3. Acceptance or enrollment in an approved R.N. nurse education program.
4. Demonstration of intent to practice nursing within the state of Ohio after graduation.
5. Owe no refund nor be in default on any state or federal educational loan or grant.
6. Satisfactory academic record that places student in good academic standing.

NEALP loans are limited to $3,000 per year with an aggregate limit of $12,000. Financial need must be demonstrated through the filing of the Free Application for Federal Student Aid (FAFSA). Upon graduation, a student may be eligible for debt cancellation at the rate of twenty percent (20 percent) per year.

CASE WESTERN RESERVE UNIVERSITY
PART-TIME EMPLOYMENT

for a maximum of four years (80 percent) if the borrower is employed in the clinical practice of nursing within the state of Ohio.

Borrowers who complete the entire service obligation will be required to repay twenty percent (20 percent) of the loan plus interest. Borrowers who do not complete the service obligation must repay the entire outstanding loan balance plus interest. Applications are available from the Office of University Financial Aid. The application deadline is June 1.

STUDENT EMPLOYMENT

Case Western Reserve University offers a variety of part-time employment opportunities to its students and recognizes that student employment is a valuable form of financial assistance as well as a practical learning experience. Students must enroll on at least half time during a regular semester to be classified as student employees and be employable through the Office of Student Employment for hourly jobs. Students enrolled on a less than half time basis should contact Kelly Services in the Office of Human Resources to be placed on temporary payroll. The university has made a commitment to utilize student employees whenever possible. To fulfill this commitment, the Office of Student Employment, a division of the Office of University Financial Aid, has been established to centralize information about employment opportunities, provide standardized practices and procedures for employment, prevent discrimination, and increase the number and variety of available jobs on campus and in the community.

Federal College Work Study Program

The Federal College Work Study Program is a federally sponsored employment program designed to aid at least half-time degree-seeking students with financial need. A Federal Work Study award is awarded as part of the financial aid package and provides the opportunity for job placement and a maximum level of earnings. The Office of University Financial Aid determines a student’s eligibility and the amount of the work award. The employer pays a portion of the student’s salary and the federal government subsidizes the remainder. Employment opportunities are available on campus and with not-for-profit agencies in the surrounding community.

Campus Jobs

This program is funded by the university through departments on campus and offers part-time employment to at least half-time degree-seeking students. Students not demonstrating financial need but interested in securing on-campus employment may apply to the Office of Student Employment. Students not on financial aid who obtain jobs on campus on their own initiative are permitted to work provided there is no student with a financial need qualified and willing to take the job offered. All students working on campus must clear their employment with the Student Employment Office. International students must obtain a Social Security number from the U.S. Social Security Administration and permission to work from the University Office of International Student Services.

SATISFACTORY ACADEMIC PROGRESS FOR FINANCIAL AID

Case Western Reserve University has established guidelines for determining whether students are making satisfactory academic progress for financial aid purposes. Federal regulations require that in order to receive Title IV assistance, all students must maintain a standard of satisfactory academic progress, as determined by the university. Title IV assistance comprises the following: Federal Pell Grants, Federal Supplemental Educational Opportunity Grants, Federal Perkins Loans, Federal College Work Study awards, Federal Stafford Loans (subsidized and unsubsidized), loans under the FPLUS program, and any state grants funded by the State Student Incentive Grant program. A Case Western Reserve University undergraduate student must satisfy the minimum number of semester hours and earn the minimum cumulative GPA listed in the table below. A half-time student must have successfully completed one half of the minimum number of semester hours with at least the minimum cumulative GPA in the table below:

<table>
<thead>
<tr>
<th>YEAR AT UNIVERSITY</th>
<th>SEMESTER HOURS COMPLETED</th>
<th>CUMULATIVE GRADE-POINT AVERAGE</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1</td>
<td>21</td>
</tr>
<tr>
<td></td>
<td>2</td>
<td>43</td>
</tr>
<tr>
<td></td>
<td>3</td>
<td>67</td>
</tr>
<tr>
<td></td>
<td>4</td>
<td>91</td>
</tr>
<tr>
<td></td>
<td>5</td>
<td>115</td>
</tr>
<tr>
<td></td>
<td>6</td>
<td>139</td>
</tr>
</tbody>
</table>

(If a student has an uneven number of semesters, then the mid-point between the necessary semester hours completed for the year before and the year after will be the appropriate expectation. For example, if a student has completed five semesters and a determination is required of hours completed, then 55 would be considered satisfactory, i.e., the midpoint between 43 and 67.)

Procedure: If, after two semesters at Case Western Reserve, the student fails to meet the criteria for satisfactory academic progress, the student is placed on financial aid warning. While on financial aid warning, a student may continue to receive Title IV aid for one semester. At the end of that semester, if the student is still not meeting the criteria, he or she is placed on financial aid probation. While on financial aid probation, a student may not receive any Title IV aid but may be eligible for other assistance, including university grants-in-aid. If, after a semester on financial aid probation, the student still does not meet the criteria for satisfactory academic progress, the student is removed from all institutional financial aid. A student will be restored to good standing if found to be making satisfactory academic progress at the end of a semester on warning, probation, or separation. However, aid may be restored only once following financial aid separation. Students in financial aid good standing will have their satisfactory academic progress reviewed at the end of the spring semester. Students below good standing will have their status reviewed each semester. Appeals may be made on grounds of mitigating circumstances; such appeals should be addressed to the associate director of financial aid.

For further details of financial aid policy and procedure regarding Satisfactory Academic Progress, consult the Office of University of Financial Aid.

Graduate and Professional Students

Since each graduate/professional school of the university differs in length of program and in method of evaluation, there is a different method of measuring Satisfactory Academic Progress for Title IV aid for each school, although the same general principles and procedures apply as indicated above. For specific information about how satisfactory academic progress is determined for an individual school or program, please consult the Office of University Financial Aid.
The University Office of Student Affairs provides leadership in the development of services and programs that supplement experiential learning of university students and enrich student life. The staff of the Office of Student Affairs attempts to promote an environment which provides positive, developmental experiences for all students. Additionally, the office serves as an ombudsman, focusing attention on the rights and responsibilities of students within the university community. The Office of Student Affairs is a central source of information about university policies and procedures that affect student life and co-curricular programs and services. Students should feel free to contact the Office of Student Affairs for resolution of specific problems and for referral to other university offices and campus agencies. Services of the Vice President’s office, itself, include orientation, minority affairs, free admission to the Cleveland Orchestra and Cleveland Play House through weekly ticket drawings, facilitation of the Fee Access program and distribution of the Little Blue Book, crisis intervention, the judicial/disciplinary process, and student research.

### STUDENT AFFAIRS ADMINISTRATION

### CAREER CENTER

206 Sears Library Building
*Phone 216-368-4446; Fax 216-368-4759*
http://studentaffairs.case.edu/careers

The Career Center offers individualized assistance, programs, and technological resources to educate students in the development of lifelong career management skills, the attainment of work experience, and the integration of academic and career plans. The Career Center offers programs and resources to address career development issues such as:

- Identifying career interests and related options
- Learning more about specific career fields
- Choosing a major and setting career goals
- Applying for admission to graduate and professional schools
- Obtaining relevant work experience through internships, practica, and summer employment
- Targeting and researching prospective employers
- Preparing effective cover letters, resumes, and other written communications
- Identifying current job openings
- Preparing for interviews

### SPECIFIC SERVICES AND RESOURCES INCLUDE:

- Individual career counseling and job search guidance
- Career exploration programming and special services for 1st-year and undecided students
- Accenture Career Resource Library
- Occupational information, career references, and computer workstations
- Comprehensive web site of career/employment resources
- Dun & Bradstreet’s Million Dollar Directory
- Career Network—mentoring, shadowing and networking program for students to connect with alumni
THE CENTER FOR CIVIC ENGAGEMENT AND LEARNING
Thwing Center
Phone 216-368-6960
E-mail commservice@case.edu
http://studentaffairs.case.edu/civicservice

The Center for Civic Engagement and Learning connects students and community through service. The center coordinates both curricular and cocurricular activities that promote learning through service to communities locally, nationally, and internationally. Service learning venues include academic course work, work-study positions, residence hall and Greek Life programs, the University Circle Literacy Corps., and weekly service opportunities.

The Center for Civic Engagement also offers regular, weekly, and bi-monthly opportunities for community service through the Case SERVES projects; assists faculty and students in designing and implementing community-based courses and SAGES capstone projects; coordinates on-going volunteer and work study tutoring; and schedules Days of Service for one-time community service projects.

EDUCATIONAL SERVICES FOR STUDENTS (ESS)
Sears Building, Room 470
Phone 216-368-5230; Fax 216-368-8826
http://studentaffairs.case.edu/education

Educational Services for Students (ESS) empowers students to achieve their potential as active, confident learners and as full participants in a community of scholars and researchers. ESS offers academic programs, services, and individual consultations. Students seeking help with study skills and/or time management strategies are encouraged to make an appointment to see an ESS staff member and to check out programs and resources at the ESS website.

The Plain Dealer Electronic Learning Center (PDELC) offers printing and computing to everyone at Case Western Reserve University and the surrounding community. During the fall and spring semesters, approximately 1400 undergraduates each month use the center to work on papers and projects, meet with study groups, and write their resumes and cover letters. The PDELC is home to one of the Print2Here printers, which provides up to 500 pages of free printing for undergraduate students. A variety of assistive technology is available for those who require screen readers, screen magnification, document magnification, voice input, or document readers.

The PDELC is a less-formal computer environment which invites collaborative learning and peer support. It is also the sight of various workshops, including the Presentation Skills workshops conducted by ESS staff. The PDELC staff is available to assist with any problems. A card swipe system is utilized to gather demographic information to help improve our services, and meet our students’ computing needs.

Supplemental Instruction
The Supplemental Instruction (SI) program provides regularly scheduled student facilitated group study sessions for traditionally challenging courses. SI sessions are free and participation is completely voluntary. Attending sessions allows students to ask questions, review notes, practice problems, prepare for exams, and reinforce material that already know in a relaxed environment. Sessions are led by SI leaders—students who have successfully completed the course, are recommended by the professor, and have been trained by ESS.

During SI sessions, the SI leader will facilitate an activity related to recent material covered in the lecture. The goal is to involve students with the material and to introduce good study skills and habits. Some activities may include a practice quiz, vocabulary building, creating review sheets, or collectively working on problems on the board. Depending on the number of SI leaders for a course, there may be anywhere from two to six 90-minute sessions per week. Visit http://studentaffairs.case.edu/education/resources/supplemental/ for details and to view the complete SI schedule.

Peer Tutoring
Peer tutors are undergraduate students who have been nominated by their professors and trained by ESS to work with students on an individual and/or group basis in many undergraduate courses. Peer tutors can help students clarify course content and assignments, connect class notes and readings, and help practice problem solving. Additionally, peer tutors can help students reinforce what they already know, model new ways of learning, monitor their progress over several sessions, and prepare students for addressing specific questions with the professor. Graduate Teaching Assistant Training
UNIV 400 A and B, which consists of an orientation and four required seminars for new graduate TAs, is designed to develop skills in communication and teaching. This course is required of students with graduate appointments that include instructional responsibilities. Students have a total of two consecutive semesters to complete either UNIV 400A or UNIV 400B. Students who do not complete the course within the first semester will receive an Incomplete (I). They do not need to re-register for the next semester. Once students complete the course, they will receive Pass (P). If students do not complete the course within two consecutive semesters, they will receive No Passing grade (NP).

PROF DEVELOPMNT FOR INTERNATIONAL TAS UNIV 400C
UNIV 400A. Professional Development for Graduate Teaching Assistants (0)
An orientation and the four required seminars for new TAs designed to develop skills in communication and teaching. Required of students with graduate appointments that include instructional responsibilities. Students have a total of two consecutive semesters to complete either UNIV 400A or UNIV 400B. Students who do not complete the course within the first semester will receive an Incomplete (I). They do not need to re-register for the next semester. Once students complete the course, they will receive Pass (P). If students do not complete the course within two consecutive semesters, they will receive No Passing grade (NP).

UNIV 400B. Professional Development for Int'l Graduate Teaching Assistants (0)
In addition to satisfying the requirements of UNIV 400A, ITAs are required to attend a special half-day ITA orientation, which is scheduled each August and to participate in an evaluation of spoken English. Students have a total of two consecutive semesters to complete either UNIV 400A or UNIV 400B. Students who do not complete the course within the first semester will receive an Incomplete (I). They do not need to re-register for the next semester. Once students complete the course, they will receive Pass (P). If students do not complete the course within two consecutive semesters, they will receive No Passing grade (NP).

UNIV 400C. ITA Communication Skill Development (0)
Small group, interactive course that concentrates on American culture, pronunciation, idiomatic usage, and English grammar. Required of all new ITAs.
who do not meet the minimum requirements on the SPEAK evaluation.

UNIV 401. Teaching with Technology for Graduates at Case (0)
As the integration of instructional technology into the university classroom becomes increasingly important, graduate students have an increasing need to explore the potential of technology-supported learning activities and how they might be useful and productive in enhancing a student’s learning experiences and outcomes. This course provides knowledge of and hands-on experience with educational technologies with an emphasis on uses as instructional tools not only in the classroom but how these new tools can make a significant difference in learning in any setting. This course will offer graduate students hands on experience using available technologies, strategies on initiating and guiding particular technology-supported learning activities, discussion about the different roles technology might play in a classroom, and consideration of the best uses of technology in all teaching and learning activities. Participants will learn to use technologies to enhance current lessons, use appropriate technologies to support, manage, enhance, and assess student learning, and to improve overall communication with students.

UNIV 410. Teaching/Clinical Practicum (1 - 9)
This course is designed for graduate students who are either teaching or involved in clinical or other internship practicums and require full-time student status. Permit required.

Commuter Services
Commuter services for undergraduate commuting students are provided through the office of Educational Services for Students (ESS). A Commuter Assistant (CA) team spearheads commuter services by hosting commuter events, advocating for commuter concerns, and maintaining the Rock Bottom Lounge, located in Thwing Center West and organizes the Annual Commuter Appreciation Day. The Rock Bottom Lounge is open Monday through Friday, 8 a.m. to midnight, Saturday from 10 a.m. to midnight, and Sunday from noon to midnight. Commuters may obtain card access to the lounge’s exterior door by visiting Educational Services for Students (ESS) located in Sears 470 during business hours. The exterior entrance is located on the bookstore side of Thwing Center. All commuters are welcome to use the lounge, which contains lockers, a pool table, a television and VCR, and a kitchenette with refrigerator and microwave oven.

Disability Resources
Students with disabilities seeking accommodations should disclose their disability and provide supporting documentation to Disability Resources in Educational Services for Students (ESS).

Documentation will be reviewed in order to determine the student’s eligibility for accommodation and the type of accommodation needed. Matriculating and enrolled students may submit an online disclosure form available at the Disability Resources website http://studentaffairs.case.edu/education/disability/. Upon receipt of verifying documentation to Disability Resources the review process will begin. Students are encouraged to make an appointment to meet with a staff member from Disability Resources at any time before, during, or after the admission process to discuss individual concerns.

Students may submit a disclosure form and documentation for review at any time during their tenure at Case Western Reserve University. However, accommodations and services cannot be provided retroactively. Students with disabilities must be proactive in their requests for services, equipment, and other accommodations. Students who suspect they have an undiagnosed disability should make an appointment to meet with a staff member.

It might be possible to arrange for an evaluation through either University Health Services or University Counseling Services.

Students with disabilities that require assistance with parking, transportation, housing, academic, or any other area involving their participation in university activities should seek accommodations through Disability Resources. Staff will facilitate access through appropriate departments on campus. Disability Resources staff are available to do an information program for any student group. All students are welcome to meet with a member of the Disability Resources staff to discuss any disability-related issues.

Prometric Testing Center
The Prometric Testing Center provides computer-based testing for various certification tests and entrance exams such as the Graduate Record Exam (GRE) and the Medical College Admission Test (MCAT). Candidates who are seeking information about a test and the registration process are encouraged to visit the Prometric website (prometric.com). The test center also offers the Miller Analogies Test, (MAT) and conducts certified proctoring for Independent Study exams. The test center is located in the Sears Library, Room 440. Candidates seeking information and the registration process for the internet-based Test of English as a Foreign Language (TOEFL) should visit http://www.toefl.org. This website will provide the test dates available at Case Western Reserve University in Sears 464.

HOUSING, RESIDENCE LIFE & GREEK LIFE

Undergraduate Housing
Case Western Reserve University believes strongly in the value of the living and learning environment that is provided on campus. In addition to the opportunities to meet new people and to develop a sense of campus community, students appreciate the convenience of being close to classrooms, libraries, laboratories, and other campus facilities. Because of this, Case Western Reserve has a two-year residency requirement. Students who live within forty miles of the university may commute from home.

To enrich the college experience, the Housing, Residence Life & Greek Life Program is designed to meet the needs of residential students throughout their time on campus. The program is designed to meet the specific needs of first year, second year and upperclass students by exploring the academic and social expectations students experience as they progress through their university education.

Each residence hall is staffed with trained undergraduate students (residence assistants), graduate students (assistant coordinators, and graduate resident mentors), and professional staff (coordinators of residence education).

In addition to administering the daily operation of the buildings, the staff works to meet the academic, interpersonal, social and community needs of their populations. Staff members also work with students in developing quality programs, projects, and social activities in the residence halls. Through a variety of programs, students explore personal and social issues, make new friends, and discover opportunities for personal and intellectual growth. The staff members know the university community resources and are committed to helping each student benefit to the fullest extent from his or her college experience.

The First Year Experience
The first year at the university is the begin-
ning of an exciting time of learning about the many opportunities and resources available on campus, in University Circle, and beyond. To facilitate and maximize this learning, all first year students who reside in University Housing live together in one of four Residential Colleges: Cedar Residential College, Juniper Residential College, Magnolia Residential College, and Mistletoe Residential College. Programs are designed specifically to assist students in their transition to the university, involving various departments across campus. Each Residential College consists of three residence halls, each Residential College housing approximately 100 students. Residential Colleges are staffed by full-time, live-in Coordinators of First Year Residence Education (FYC). With offices located in the Residential Colleges, the FYCs strive to build a community where students can live, learn, and reach their maximum potential.

The Second Year and Upperclass Experiences
The second year is a time of continued social and academic adjustment, and a time when students are expected to commit to a particular academic major. Therefore, the focus of the Second Year Experience is the emphasis on the exploration of academic, career and personal decisions, engaging in leadership opportunities, traditions, and mentoring relationships and creating a personal vision for the upperclass years. Upperclass students are faced with many questions and decisions regarding their future. The Upperclass Experience is designed to ease the transition to life after graduation. In collaboration with numerous other Student Affairs and academic offices, the Residence Life Staff works to provide information and services designed to assist upperclass students in their decision making process.

Fraternities and Sororities
Greek Life is the largest campus activity at the university, involving 30 percent of the undergraduate population in the twenty-four fraternity and sorority chapters. All of the chapters belong to one of the two umbrella organizations which govern the Greek community and link the chapters to the campus. The Panhellenic Council coordinates the activities of the seven sororities, while the Interfraternity Congress governs the seventeen fraternities. The Greek community also supports the Order of Omega, a society that recognizes outstanding Greek leaders, and Gamma Sigma Alpha, a scholastic honor society for Greeks with a grade point average above 3.60. The Greek Life staff, including the director of greek life, assistant director of greek life and coordinator of greek life, are full-time staff members who offer administrative, supervisory, counseling, and related services to all facets of Greek life. The Black Greek Council (BGC) is the governing organization of the eight historically Black Greek fraternities and sororities represented at Case Western Reserve University. The five national sororities are Alpha Chi Omega, Alpha Phi, Delta Gamma, Phi Mu, and Phi Sigma Rho. There is one local interest group sorority—Sigma Psi.

The seventeen national fraternities are Alpha Epsilon Pi, Beta Theta Pi, Delta Kappa Epsilon, Delta Tau Delta, Delta Upsilon, Lambda Chi Alpha, Phi Delta Theta, Phi Kappa Psi, Phi Kappa Tau, Phi Kappa Theta, Sigma Alpha Epsilon, Sigma Chi, Sigma Nu, Sigma Phi Epsilon, Theta Chi, Zeta Beta Tau, and Zeta Psi. Nineteen chapters reside in houses on either the north or south campus. The other five chapters reside in residence halls or do not have an organized house.

North Residential Village
The North Residential Village (NRV) is situated just a few blocks from Cleveland’s renowned museums, cultural centers, and the humanities and social sciences classroom buildings. The NRV is the home to twelve residence halls with beautifully landscaped outdoor areas, recreational fields and a dining commons. It is also home to three sororities and seven fraternities. It offers students a variety of living arrangements convenient to classes and community resources. Cedar Residential College (Taft, Smith, Tyler), Juniper Residential College (Norton, Raymond, and Sherman), Mistletoe Residential College (Pierce, Hitchcock, and Storrs) feature double rooms and some single rooms with community bathrooms and floor lounges. Also in the North Residential Village are areas designed to meet the needs of second year and upperclass students. Clarke Tower provides suite-style living with single and double room options for second year students. The Village at 115, is an apartment-style option for upperclass students and offers one- to nine-bedroom apartments around new athletic fields.

In the center of the North Residential Village community, students can find Leutner Commons, which houses Leutner Dining Commons and L3, where meals are served for all North Residential Village residents.

Wade Commons houses a Resource Center, which consists of satellite offices for the Office of Undergraduate Studies, the Center for Women, the SAGES writing center, and the Peer Helper Network. There is also a fireplace lounge, a walk-in tutoring center, and the NRV Area Office. The NRV Area Office is the central location for picking up packages, filing maintenance requests and distributing room keys for the North Residential Village residents.

South Residential Village
A mix of second year and upperclass students live in the seven, suite-style residence halls, and nine fraternity and three sorority houses located on Murray Hill Road and Carlton Road that make up the South Residential Village. Glaser House, Kusch House, and Michelson House are three high-rise undergraduate halls located on Carlton Road. Alumni House, Howe House, Staley House, and Tippit House are located on Murray Hill Road. Each suite has six private bedrooms that share a furnished living room area and bathroom. Also within the South Residential Village is Fribbley Commons, which houses Fribbley Dining Commons, a twenty-four hour study lounge, two classrooms, satellite offices for the Office of Undergraduate Studies and the SAGES writing center, and the SRV Area Office. The SRV Area Office is the central location for picking up packages, filing maintenance requests, and distributing room keys for South Residential Village residents.

Students with Disabilities
Students who have a disability that requires special accommodations should contact the Coordinator of Disability Services at 216-368-5230. For more information, see the “Disability Resources” section in this General Bulletin or go to: http://studentaffairs.case.edu/education/disability/.

Room Rates
For the most up-to-date rate information, please visit our website at http://studentaffairs.case.edu/living/resources/documents/. The following accommodations are currently available for Case Western Reserve students:

Doubles (North Residential Village), Singles (North and South Residential Villages), One-to nine-person apartments (North Residential Village).

Meal Plan
For the most up-to-date meal plan rate information, visit our website at http://www.case.edu/diningservices/.

The following meal plans are available to all students. First- and second-year students must choose from the Standard or Gold Meal plans. A Halal/Kosher meal plan is also available.

Graduate Housing

There is currently no graduate housing available. However, to assist graduate students in identifying off-campus housing, the Office of Housing, Residence Life & Greek Life suggests visiting ALOHA, the off-campus housing listing service available online at http://studentaffairs.case.edu/living/housing/off-campus/. ALOHA lists apartments and houses for rent that are a short distance from campus. ALOHA is updated daily.

INTERNATIONAL STUDENT SERVICES

210 Sears Building
Phone: 216-368-2517; Fax: 216-368-4889
E-mail: ISSNews@case.edu
http://studentaffairs.case.edu/international/

The Office of International Student Services (ISS) supports and enhances the international student experience at Case Western Reserve University. The office provides assistance with immigration procedures, social/cultural adjustment, housing questions, health care concerns, financial matters, and legal issues. The office acts as a liaison with off-campus agencies, such as the U.S. Department of Homeland Security, the U.S. Department of State, embassies, educational resource centers, the International Institute of Education, and Homeland Security, the U.S. Department of Homeland Security. The ISS Office supports the university’s goal to internationalize. The office partners with other offices, departments, and divisions at the university to nurture the growth of an international community and to help develop a campus environment that is responsive to their needs. More than eighty different countries are represented on campus. Every fall, a special orientation is held for newly arrived international students. The ISS Office sponsors an International Club, a student lounge and study room, cross-cultural workshops, an annual international dinner, and several other social gatherings. An electronic news list keeps students up to date on immigration policies, special events on campus and in the community, and other matters of particular interest to international students. Many nationality-based student organizations provide additional opportunities for international students to meet others with similar interests and experiences.

Case Western Reserve University has been authorized under federal law to enroll non-immigrant alien students in both F-1 and J-1 visas.

Students from Other Countries

Case Western Reserve University will consider for admission highly qualified students who are not citizens of the United States. An international student who is admitted to study at the university may face problems of living in a different cultural environment and negotiating an unfamiliar academic system. It is anticipated that the student can solve such problems if he or she has an excellent academic record, understands rapidly spoken English, and can speak, read, and write English with facility. In addition to completing the regular application materials, a student from another country must take several other steps.

Financial Resources

International Students must submit a letter from their sponsor and a bank statement verifying the sponsor’s willingness and ability to fund a Case Western Reserve University education. For the 2008-2009 academic year, sponsors of undergraduate students must demonstrate an ability to contribute $49,744. (The cost of graduate and professional school programs vary from $36,256 to $76,078. Please contact the Office of International Student Services to get the appropriate amount for your intended program of study.) Case Western Reserve provides no financial assistance or need-based scholarships to international undergraduate students. Graduate and professional school students may qualify for a limited number of tuition grants and assistantships provided by certain academic departments. These grants are made available to unusually well-qualified students. A decision on these awards is made only after a student has been admitted to a program of study at the university.

Before the student leaves his or her home country, it is very important to inquire about the regulations regarding the transfer of funds. In addition to expenditures for travel, the student should have at least $1,200 in U.S. dollars on arrival in Cleveland to meet initial expenses. Foreign bank drafts made out to Case Western Reserve University may take as long as one month to redeem (cash) at this university. It is advisable to draft a check on a bank located in the United States. Traveler’s checks are recommended in place of currency.

Employment

International students on F-1 or J-1 Visas may work on campus provided that they 1) maintain status, and 2) do not work more than a total of 20 hours per week while school is in session. They may be employed on campus full-time during school holidays and vacation periods.

English Requirement

Applicants from other countries must be able to speak, read, write, and comprehend English. A score of at least 550 on the paper-based Test of English as a Foreign Language (TOEFL), a score of 213 on the computer-based TOEFL, or a score of 80 on the TOEFL Internet-based test (iBT) is the general requirement for admission to most programs at Case Western Reserve University. (Please go to the TOEFL website at http://www.toefl.org for more information about the TOEFL test.) Completion of the ELS Language Center Level 112 with at least a 3.0 average is also acceptable. To learn more about the ELS Language Centers, please go to http://www.els.com. Applicants who are required to submit TOEFL scores may be tested again for English placement before they are permitted to register.

Applicants are exempt from the TOEFL requirements if they 1) speak English as their native language; 2) have completed a bachelor’s degree or higher at a foreign university where the instruction was in English; 3) qualify for admission on the basis of U.S. high school graduation (rank in the class and SAT scores); 4) have completed six semester hours of sophomore-level English literature in a U.S. college or university; or 5) have earned a bachelor’s degree or higher in a U.S. college or university with instruction in the English language.

For additional information about the English requirement, please contact the admissions office for your specific academic program.
OFFICE OF STUDENT AFFAIRS

Medical Insurance
All students must carry medical insurance. No exceptions are allowed. Refer to the University Health Service section of this Bulletin for details.

Passports and Visas
When accepted by the university, the student will be sent a letter of admission and the appropriate form with which he or she may obtain a student visa for entry into the United States. The form for the U.S. visa will be issued by the Office of International Student Services only after receipt of a statement indicating sufficient financial support (for example, a letter of scholarship, a bank statement of deposited funds, or an affidavit of support) for one full year of tuition and living expenses. Students who are admitted as transfers from other U.S. colleges and universities will be contacted by the Office of International Student Services regarding the procedures to be followed. To meet U.S. government regulations, an undergraduate student on an F-1 or J-1 visa must take at least 12 credit hours of coursework each semester, and a graduate student must register for at least 9 credit hours.

Applications
Prospective undergraduates should send application materials by January 15 for fall semester or by October 15 for spring semester to:
Case Western Reserve University
Office of Undergraduate Admission
11318 Bellflower Road
Cleveland, Ohio 44106-7055
U.S.A.

Certified translations of academic credentials into English should be submitted with the official copies of all credentials.

Students applying to graduate and professional school programs should contact their specific academic departments or professional school office of admission for information regarding application procedures and deadlines.

MULTICULTURAL AFFAIRS
The Office of Multicultural Affairs (OMA) 450 Sears Building
Phone 216-368-2904
http://studentaffairs.case.edu/multicultural/
The Office of Multicultural Affairs encourages, supports, and facilitates the success of all Case Western Reserve University students by providing opportunities for diverse interaction and cultural education that occurs outside of the classroom environment.

The OMA supports the university’s mission to recruit, retain, and graduate underrepresented students. The OMA guides students to available resources throughout the university and strives to ensure that multicultural student’s needs are recognized and addressed. The OMA collaborates with departments campus-wide to support efforts such as individual tutoring, master tutor study groups, college success workshops, academic advising, counseling, developing a sense of community, social and cultural enrichment programs, and career development opportunities. The office involves students, faculty, administrators, and staff to create a campus environment that promotes intellectual development, independent thinking, self-confidence, and appreciation of ethnic and cultural diversity. The OMA welcomes all students to become involved in their office’s efforts to educate, appreciate, collaborate, and build bridges for an inclusive welcoming society.

STUDENT ACTIVITIES AND LEADERSHIP
Thwing Center
Phone 216-368-2679
http://studentaffairs.case.edu/activities

The Office of Student Activities and Leadership has made a commitment to providing a variety of leadership opportunities to students. Student activities and leadership opportunities are available in a multitude of ways. Students may become involved within the Undergraduate Student Government or in planning all campus programs with the University Program Board. There are approximately 165 student clubs and Class Officers, offering many opportunities for leadership and participation in a variety of social, cultural, and recreational events. The Student Activities and Leadership Office is home to several university traditions, including Relay for Life, Halloween at the Farm, Homecoming, Springfest, and the Hudson Relay.

The Undergraduate Student Government (USG) holds elections each spring for student representatives of academic colleges, commuter and each fall for first year residential colleges. The student government acts as a liaison between the students and the faculty, administration, and other appropriate groups and fulfills legislative and executive functions. The Executive Committee plans the agenda for assembly meetings every other week and sets long-range goals. The Finance Committee recommends recognition and budget allocations for undergraduate student organizations. The Finance Committee also advises the student government on the management of special project funds. Student Life Committee works to improve the quality of cocurricular life on campus and maintains a grievance process whereby students may express their opinions. The Vice President for Academic Affairs, an elected undergraduate representative serves as a voting member of the university-wide Faculty Senate. Each class elects class officers, who coordinate large- and small-scale programs.

The University Program Board (UPB) presents all-campus social, educational, cultural, and recreational activities. Committees made up of undergraduate volunteers develop activities in accordance with their interests. UPB is structured under five different committees and the executive board. The Traditions Committee coordinates many events for Welcome Days, Homecoming, Family Weekend, Halloween at the Farm and Hudson Relays. The Concert Committee is the largest of the UPB committees, developing free shows every Wednesday night at the Spot. They also book large-scale bands and offer larger concert experiences for the Case Western Reserve student. The Arts and Entertainment Committee develops coffeehouse events, purchases tickets for Cleveland events and theatre productions. Special Events Committee coordinates Fall and Spring Break trips, skiing excursions and purchases tickets for Cleveland sporting events. Cultural Development coordinates lectures and other events which enhance the culture of the Case Western Reserve student. Thwing Tuesday’s is the newest committee, creating fun and creative activities every Tuesday in Thwing Center.

The Interfraternity Congress/Panhellenic Council
The council oversees the activities of the Greek social organizations on campus. In the spring, they plan Greek Week activities and an all-campus party.

Advisory Board
The Advisory Board works with the director of Thwing Center in making policy and developing facilities. Students, staff, faculty, and alumni serve on the Advisory Board. Each undergraduate class elects officers to plan class activities, and direct each of the more than 100 student organizations.

SQUIRE VALLEEVUE FARM

36
The University Farm, consisting of the Squire Valleeveue and Valley Ridge properties, is located on Fairmount Boulevard about ten miles east of campus in the Village of Hunting Valley.

389-acre property that includes within its boundaries forests, ravines, waterfalls, meadows, ponds, a self-contained natural watershed, seven residences, many other structures, and several miles of roads and trails. Several historic facilities are designed for education, research, and recreation. The buildings accommodate research and instructional laboratories, classrooms, and a state-of-the-art greenhouse. The Sheep Barn, Pink Pig (a rustic lodge with overnight accommodations), and Manor House facilities are used for conferences, retreats, and recreation. There is also a five-mile running (or cross-country skiing) trail, a nature trail, several picnic areas, and playing fields for volleyball and softball. University activities at Squire Valleeveue Farm include undergraduate and graduate academic courses, on-site research, intercollegiate athletic events, picnics, continuing education courses, and retreats. The University Farm is open and available to all students, faculty, and alumni. Utilization of the buildings and large picnic shelters must be in accordance with University Farm policies and be secured by completing the on-line reservation form.

THWING CENTER

Thwing Center
Phone 216-368-2660
http://studentaffairs.case.edu/thwing/

Thwing Center, the student union of Case Western Reserve University, is located in the heart of campus. The architectural award-winning building represents many years of proud service to Case Western Reserve University students, faculty, alumni and guests. The facility houses food services and pub, the campus bookstore, an elegant ballroom, meeting rooms, notary service, postal substation, cyber cafe, ATMs, student and administrative offices, and lounges for study and relaxation.

Thwing Center is named for Charles Franklin Thwing, President of Western Reserve University from 1890 until 1921 and a great advocate for students. The facility is a mixture of several buildings in differing architectural styles: the historic, home-like Thwing West – former Hitchcock Hall (built in 1897); Thwing East – former Thwing Hall (built in 1908); and a modern atrium joining them in 1980.

Thwing Center combines the traditions of a major independent university with a relaxing informality that puts everyone at ease and helps make any event rewarding and memorable. Meeting rooms in Thwing Center can be reserved online at http://studentaffairs.case.edu/thwing/.

Media Board

Media Board is a student group comprised of representatives from each of Case Western Reserve’s student media organizations. It promotes responsible forums of student expression in the various media. The Board supervises and reviews the operations of all undergraduate student publications and broadcast media. Thwing Center Administrative Office coordinates the Media Board.

Member organizations include The Athenian (Humor Magazine, Case Reserve Review (literary Magazine, Discussions (Undergraduate Research Journal), Engineering & Science Review, Film Society, Ignite TV, The Observer, Retrospect (Yearbook), and WRUW 91.1 FM radio station.

These groups are all student run and they always welcome new members. Any interested students should check the Media Board website for more information at http://studentaffairs.case.edu/groups/mediaboard/.

In addition, any media oriented student group interested in becoming a member of the Media Board is welcome to apply for membership and should contact the Media Board Chair at mediacboard-chairman@case.edu.

The Media Board provides a valuable outlet for creative students to work on the student newspaper, at the campus radio station, on literary reviews, and with the film society.

Film

The CWRU Film Society Phone 216-368-CINE (2463) http://films.case.edu

An unusually large number of films are shown at Case Western Reserve University. The Film Society shows outstanding motion pictures four times weekly at Strosacker Auditorium. These range from popular films to foreign art films. The Film Society publishes a calendar of offerings each semester. It is one of the few university film societies to show films in 70 mm and Dolby stereo. Other student organizations also show films centering on their interests or for special events.

Publications

Students may practice journalism and management on any of seven different publications. The undergraduate student newspaper on campus, The Observer, is published weekly during the academic year. Other campus publications include a yearbook, Retrospect; a literary magazine, Case Reserve Review; a technical magazine, the Engineering and Science Review; and a humor magazine, the Athenian.

Radio Station – WRUW

W RUW-FM 91.1
112200 Bellflower Road
Cleveland, OH 44106
Studio phone: 216-368-2208
Office phone: 216-368-2207
http://www.wruw.org

The university’s student-operated radio station, WRUW-FM 91.1, which operates at 15,000 watts, is open to all students interested in radio broadcasting and engineering.

TRIO PROGRAMS

(Upward Bound and Talent Search)
131 Yost Hall
216-368-3750
216-368-6640
http://studentaffairs.case.edu/trio/upward-bound/

Upward Bound is the oldest of the precollege programs at Case Western Reserve University. Established in 1966, the program is designed to prepare low income and potential first-generation college high school students for successful postsecondary studies. High school students, grades nine through twelve, attending Cleveland Public Schools are eligible for participation in the program. Upward Bound operates year-round and includes a six-week summer residential component and a well-developed academic year component.

UNIVERSITY COUNSELING SERVICES AND COLLEGIATE BEHAVIORAL HEALTH

Center for Collegiate Behavioral Health
University Health Service
Call 216-368-2510
E-mail: mindbody@case.edu
University Counseling Services
University Counseling Services (UCS) and the Divisions of Collegiate Behavioral Health (CBH) and Prevention and Recovery Services (PRS) provide individual, group and couples counseling, psychiatric consultation, psychological and learning disabilities testing, and referrals for community services for all undergraduate, graduate, and professional school students and their spouses or partners. In general, these services are offered on a short-term basis (usually twelve or fewer sessions) to help students make adjustments in their personal, social, and educational areas of life. The staff of the UCS and its divisions understand the need to maintain confidentiality; therefore, we will not disclose information to any other party -- for example, faculty, parents, or future employers -- without written permission from the student. Release of information without written consent would occur only in cases of imminent harm to one’s self or to another adult or child, or when compelled by law or court ruling to do so.

There are two locations on the Case Western Reserve campus: The Counseling Service in the Sears Library Building, second floor and the Center for Collegiate Behavioral Health at the University Health Service building. Both services are staffed with professional social workers, counselors, psychologists, psychiatrists, and substance abuse intervention and prevention specialists who are experienced in helping college students.

The MindBody Connection newsletter and website at http://studentaffairs.case.edu/counseling/mindbody/ illustrate our commitment to the promotion of healthy life choices for our students and the entire university community. Free workshops, groups and seminars are also offered each semester on topics including test anxiety management, interpersonal learning groups, meditation and stress reduction, overcoming shyness, students in recovery, global nomads, eating and nutrition groups and sleep hygiene. Also, the Sex, Drugs, and Rock n’ Roll Conference is an annual student conference for the appreciation of popular culture and for the prevention of alcohol and substance abuse among college students.

For more information regarding our services and current groups, please call or visit our website.

University Health Service (UHS) is served by health care professionals whose special interest is in college health. These include board-certified nurse practitioners and physician-specialists (internal medicine, pediatrics, family practice), psychologists, psychiatrists, registered nurses, social workers and a licensed dietician. All students registered for one or more credit hours may use any of the services offered within UHS during fall and spring semester AT NO CHARGE. Students who choose to waive the Student Medical Plan (insurance) are still eligible to use our services without charge. If laboratory tests or x-rays are ordered, then the student will receive a bill from the provider of these services (usually University Hospitals of Cleveland), and they, in turn, submit these bills to their own insurance for consideration of reimbursement.

Primary Care
Care for most acute illness (infections, injuries, etc.) is delivered by the staff of the Primary Care Clinic. Students are seen by appointment (there are urgent, same day appointments available every day – the earlier a student calls, the more likely they can be seen the same day.) Whenever possible, we try to have the student receive care from the same provider at each visit, in order to improve continuity of care. There are several specialty clinics available within UHS during the regular school year. These include Women’s Clinic (for annual gynecologic exams; evaluation of such things as irregular menstrual periods, breast lumps, etc), diagnosis and treatment of genital infections; prescription of birth control), Skin Clinic (for treatment of acne, warts, mole removal, etc), and Allergy Clinic. If more sub specialized care is required, students are referred to appropriate physicians in the Cleveland metropolitan area.

Labs/X-ray/Emergency Room
For any of these services that are provided outside UHS (usually by University Hospitals of Cleveland), students will receive a bill. They need to submit a copy of the itemized bill to the University Medical Plan or their own insurance for consideration of payment.

Medications
In some cases, over-the-counter medications or frequently prescribed drugs are provided without charge to students, but only when part of the prescribed treatment plan (UHS does not have a pharmacy). In other cases, students may receive a written prescription for medications that they may fill at a nearby pharmacy of their choice. If they have the Student Medical Plan, they are automatically enrolled in a co-pay drug plan administered by Envision Rx.

Hospitalization
In those unusual situations when students require inpatient care, they will be referred to one of the many excellent facilities available nearby. Where this occurs will depend on the student’s medical needs as well as their medical insurance requirements. On occasion following hospitalization, a student may be asked to meet with a member of the University Counseling Service or UHS staff to determine their ability to return to full campus life.

Notification of Illness/Privacy
In general, UHS does not notify any third parties regarding a student’s illness. It is the student’s decision whom to notify and when this might be appropriate. UHS believes strongly in the student’s right to privacy. UHS staff will notify a student’s immediate family in case of illness or injury after consent has been obtained from the student. Specific medical information about a student’s illness is confidential and privileged. In cases of life threatening emergencies, notification will be made without prior consent. In other cases, the UHS staff will work with the student to have the student do the notification of family members, whenever possible.

A nurse, physician, and counselor are available by beeper, 24 hours a day, 7 days a week during the regular fall and spring semesters. They can be reached by calling the main UHS phone at 216-368-2450. This will reach the Answering Service who can page them. The on-call staff assists students in making decisions about what situations are truly medical emergencies and where best they can access the services that they need. In case of obvious severe illness or injury, students should proceed directly to the nearest Emergency Room and then notify the Health Service later. Students
will be billed directly for the services they receive. It is their responsibility to initiate insurance claims for these expenses. Assistance in filing claims for those enrolled in the Student Medical Plan is available within UHS.

Medical Records/HIPAA
Information from a student’s medical record is only available to staff within UHS and not to anyone outside of UHS, without the express written consent of the student. University Counseling Services records are maintained separately and are only released in accordance with their own policies and procedures. The student’s written authorization is required, except in the case of life-threatening emergencies.

Excuses
If a student must miss a class, a laboratory, or an exam because of illness, it is the student’s responsibility to notify the relevant faculty member directly. UHS does not issue excuses. In circumstances of prolonged illness or hospitalization, UHS (with the student’s permission) may notify the appropriate academic dean.

What We Need from Each New Student
Each new student should receive in the mail information regarding the Immunization form and brief Medical History (whom to notify in case of emergency). They should complete these and return them to the Health Service. (It might be helpful to keep a copy of the Immunization History before mailing it in, for future records, travel abroad, etc.)

The Immunization History may be completed by a family physician, or students may send a copy of their school immunization record. A tuberculin skin test (Mantoux) is required of all students in the healthcare professions (medicine, dentistry, nursing, applied social sciences, podiatry). These will be provided without charge after arrival on campus.

Students who have not been immunized because of illness or religious beliefs should document that for our records. In some instances, they might be excluded from classes and residence halls in the event of an outbreak of a vaccine-preventable disease. Refer http://studentaffairs.case.edu/health.

Student Medical Plan
The Student Medical Plan provides coverage, within the stated guidelines, for medical services rendered outside the University Health Service (typically lab tests, X-rays, prescriptions, hospitalization, etc.). A fee for this plan is automatically billed each fall and spring semester to all students enrolled for one or more credit hours. Students with alternative coverage for such expenses may waive the Student Medical Plan by indicating this as they register for courses online or accessing the waiver option in the Student Information System. A waiver must be completed each semester by the deadline stated (check the Medical Plan website for the appropriate dates).

When a student is enrolled for the Medical Plan in the spring semester, coverage automatically applies through the summer until August 1.

Students taking a leave of absence because of a personal medical condition may be eligible to extend that coverage one additional semester, if already covered by the Medical plan (inquire at UHS for further information 216-368-3050).

For additional information about the Student Medical Plan, go to the Medical Plan website at http://studentaffairs.case.edu/medicalplan/ or call 216-368-3050.

All students should receive a brochure about the current Student Medical Plan yearly. Additional copies may be obtained by calling 216-368-3050.

Dependent Coverage
Information regarding optional medical coverage for dependent spouse, domestic partner, or children is available at UHS.

OTHER RESOURCES FOR STUDENTS

The Arts
Students interested in the arts have numerous opportunities for involvement. Eldred Theater offers dance and drama activities. Students interested in the visual arts may work with the Mather Gallery Committee. Students with musical interests may participate in several performing organizations, including the Case Western Reserve University Marching Band, two jazz bands, the Wind Ensemble, the University Circle Chorale, the Glee Club, and the University Circle Chamber Orchestra. The Department of Music has information on auditions.

Honerary Societies
Case Western Reserve has four major undergraduate honoraries. Several more are based on specific fields of interest. Tau Beta Pi and Eta Kappa Nu are engineering honoraries. Mortar Board, a national honorary society for full-time senior students, recognizes scholarship leadership, and service. Phi Beta Kappa, a national honorary society, recognizes outstanding scholarship in the liberal arts and sciences. Outstanding students may qualify for election to membership in the second semester of the senior year. A few specially gifted students may be elected to membership as juniors.

Religious Activities
The three staffed campus ministries recognized by the university are the Newman Catholic Campus Ministry, the Hillel Foundation, and the United Protestant Campus Ministries. These centers sponsor worship services and religious education activities, as well as general programs oriented to the interest of all students. In addition, the campus has several other religious organizations open to all students. A Muslim prayer room is located in Sears Building.

STANDARDS OF CONDUCT
A student enrolling in the university assumes an obligation to behave in a manner compatible with the university’s function as an educational institution. It is clear that in a community of learning, willful disruption of the educational process destruction of property, dishonesty, and interference with the rights of other members of the university cannot be tolerated. The university retains the right to maintain order within the university and to exclude those who are disruptive to the educational process. Student organizations are held accountable for their actions through their leadership. Representative officers of organizations are held responsible for group action to the extent they are judged to have control of such action. The following principles are the basis for the Standards of Conduct at Case Western Reserve University:

- Respect
- Integrity
- Tolerance
- Safety
- Cooperation
- Pride
- Civility
- Responsibility
• Honesty

Conduct that is subject to university disciplinary action includes:

1. Interference with freedom of speech or movement, or intentional disruption or obstruction of teaching, research, administration, or other functions on university property.

2. Actual or threatened physical harm or mental abuse of any person on university premises or at functions sponsored or supervised by the university.

3. Refusal to comply with the directions of university officials, instructional or administrative, acting in performance of their duties.

4. Theft or vandalism of university property or that of a member of the university community or campus visitor.

5. All forms of dishonesty, including cheating, plagiarism, knowingly furnishing false information to the university, forgery and alteration or misuse of university documents, records, or instruments of identification.

6. Unauthorized carrying or possession on university premises of firearms or of any weapon with which injury, death, or destruction may be inflicted.

7. Violations of civil law on university premises or in connection with university functions.

8. Violation of published university rules and regulations.

ACADEMIC INTEGRITY POLICY

Definition of Violations

All forms of academic dishonesty including cheating, plagiarism, misrepresentation, and obstruction are violations of academic integrity standards. Cheating includes copying from another’s work, falsifying problem solutions or laboratory reports, or using unauthorized sources, notes or computer programs. Plagiarism includes the presentation, without proper attribution, of another’s words or ideas from printed or electronic sources. It is also plagiarism to submit, without the instructor’s consent, an assignment in one class previously submitted in another. Misrepresentation includes forgery of official academic documents, the presentation of altered or falsified documents or testimony to a university office or official, taking an exam for another student, or lying about personal circumstances to postpone tests or assignments. Obstruction occurs when a student engages in unreasonable conduct that interferes with another’s ability to conduct scholarly activity. Destroying a student's computer file, stealing a student’s notebook, and stealing a book on reserve in the library are examples of obstruction.

Discussing, Reporting and Adjudicating Violations

If a faculty member suspects that an undergraduate student has violated academic integrity standards, the faculty member shall advise the student and the departmental chair and consult with the dean of undergraduate studies about the appropriate course of action. Before speaking with the student, the faculty member also may choose to consult with the chair or dean about academic integrity standards. If the faculty member, in consultation with the dean, determines that the evidence is not adequate to charge the student with a violation, the matter will be dropped. Otherwise, the following procedures will be followed:

First Violations

If the faculty member and the student agree that a violation has occurred, and the violation is determined to be a first violation (the university has no record of previous violations by the student of the university’s Standards of Conduct, the faculty member shall choose either to sanction the student or to refer the case to the academic integrity board. If the faculty member chooses to sanction the student, the minimum sanction is failure in the work in question and the maximum sanction is failure in the course. The faculty member will be provided with a standard reporting form to be signed by both the student and faculty member.

However, the case will be referred to the assistant vice president for student affairs for Integrity Board action if either:

1. the student claims not to have violated academic integrity standards or the student disagrees with the sanction imposed by the professor;

2. the faculty member feels that the seriousness of the first offense warrants presentation to the academic integrity board;

3. the faculty member, after consultation with the dean, prefers to have the academic integrity board investigate or adjudicate the alleged violation, or prefers that the board sanction the student.

The signed report form from a faculty member or the finding of responsibility by the academic integrity board will become part of the student’s university judicial file. Students found responsible for a first violation will be required, in addition to any other sanctions imposed, to attend an ethics education program or to complete an ethics exercise as assigned by the dean of undergraduate studies or the assistant vice president for student affairs.

Subsequent Violations

If the university judicial file indicates that the student suspected of a violation has been responsible for one or more previous violations of the university’s Standards of Conduct, the case will be referred to the assistant vice president for student affairs for Integrity Board action.

Misrepresentation and Obstruction

Reports of suspected academic misrepresentation or obstruction occurring in settings other than the classroom will be referred to the assistant vice president for student affairs for Integrity Board action.

Academic Integrity Board

If a suspected or known violation of academic integrity standards warrants consideration by the Academic Integrity Board, the assistant vice president for student affairs (or his or her designee) will convene the board. The board will be comprised of three students (voting members) appointed by the Undergraduate Student Government, two faculty (voting members) appointed by the Executive Committee of the Faculty Senate and two administrators (non-voting members). One administrator will be a dean from the office of undergraduate studies. The other administrator, the associate vice president for student affairs or his or her designee, will chair the board. All members of the board may question witnesses. Academic integrity board procedure, the vote required for the determination of responsibility, and the evidence standard will be the same as those for the university judicial board.

Should the board find the student not responsible for a suspected violation, the faculty member and the student will be so informed. The faculty member will be asked to evaluate the student’s performance in the assignment in question and to issue a grade based on his or her normal grading practices.

If the board finds a student responsible for a violation of academic integrity standards, the
board will notify the student and the faculty member. The board can sanction violations by issuing failure in the work in question, failure in the course, university disciplinary warning, university disciplinary probation, university disciplinary suspension, or expulsion.

In cases in which the academic integrity board finds a student responsible for a second or subsequent violation, the minimum sanction will be failure in the course; the maximum penalty will be expulsion.

If the academic integrity board finds a student responsible for misrepresentation or obstruction, the minimum sanction will be university disciplinary probation; the maximum penalty will be expulsion.

### Violations Reported After Voluntary Withdrawal or Academic Separation

Suspected violations of academic integrity standards reported after a student voluntarily withdraws or is academically separated will be investigated and adjudicated. A student who withdraws or is academically separated during the investigation and adjudication of a suspected violation may be asked to appear at a hearing or, if the student fails to appear, have his or her case heard in absentia. If the student is found responsible for a violation, sanctions can be imposed.

### Violations Reported After Graduation

In the event that a suspected violation of academic integrity standards is reported after graduation, the assistant vice president for student affairs will make a determination as to the feasibility of investigation and adjudication. Graduation will not preclude investigation or adjudication of a suspected violation when those processes are feasible. If a student is found responsible for a violation and the sanction imposed makes the student ineligible to earn his or her degree, the degree may be revoked.

### Maintenance of Records

Violations of academic integrity standards are considered violations of the university’s Standards of Conduct and will be recorded in the student’s judicial record. University judicial files are maintained by the assistant vice president for student affairs in the Office of Student Affairs.

### GUIDELINES ON ALCOHOL

The university will conform to all state and local laws controlling the sale and use of alcoholic beverages. It is illegal to sell, provide, or serve beer, wine, or liquor to anyone who is under the legal age (21). Servers of alcohol and sponsors of social events must be aware of and comply with all state statutes and with university policies and procedures. The following regulations apply to all events at which students are present:

GUIDELINES: the university expects responsible behavior of students who choose to drink alcoholic beverages and requires an environment free of coercion for those who choose to abstain. Therefore, students must adhere to guidelines provided by the university for responsible and legal consumption of alcoholic beverages, individual students must accept responsibility for their own behavior and should demonstrate a concern for the safety and well-being of others in the university community. All the following apply:

1. The sponsors of events where alcohol is served must file an Alcohol Use Permit in the Office of Student Affairs at least three business days prior to the event. A copy of this form will be needed for student groups to reserve any university facility for events where alcohol is served.
2. Open containers of alcoholic beverages are generally prohibited in public places according to state law unless a university permit is obtained. Public areas are defined to include patios, balconies and any other area outside a facility. Other specifically restricted in some university areas including Squire Valleeve Farm, Harkness and Amasa Stone Chapels, and at university athletic events.
3. At all events where alcohol is served, an effective procedure must be established and adhered to for certifying those legally of age to drink. To obtain alcoholic beverages a valid driver’s license or other valid legal document showing proof of age must be presented. A Case Western Reserve I.D. card may be required for admission.
4. When alcohol is sold, temporary For F-2 permits will be required in accordance with state laws. The sale of alcohol is defined to include such methods for defraying the cost of the beverage or event as sale by the glass or container, advance ticket sales, and cover charges at the door.
5. At all events where alcohol is served, non-alcoholic beverages must be provided by the sponsor of the event. The amount of alcoholic beverage provided should reflect the proportion of those attending the event who are legally eligible to drink; the amount of non-alcoholic beverages provided should be sufficient to serve the number of people attending the event who are too young to drink or choose not to drink alcohol.
6. No one should be coerced, even subtly, to drink or overindulge, and the rights of those who choose to abstain must be respected.
7. When alcohol is served, food must be provided by the sponsor of the event in adequate amounts to last through the event.
8. The type and amount of security required for an event will be determined according to the following factors: the nature of the event, the number of people attending the event, whether an alcoholic beverage is served, and whether cash will be on hand.
9. Social events which encourage drinking or drunkenness as themes and the advertisement of such events are considered inappropriate and will not be permitted. Neither the cost nor brand of alcoholic beverage may be advertised in Ohio.
10. When beer is provided, it must be served to individuals in single servings in containers of 16 ounces or less. When wine or liquor is provided, it must also be served in appropriately sized glasses.
11. The serving of alcohol must cease at least one-half hour before the scheduled end of an event.
12. When entertainment is included in the event, the type of entertainment and the duration must be listed on the Alcohol Use Permit.
13. The gift of alcohol as a reward for any student activity or contest is prohibited.
14. Individuals or groups violating state law or university student alcohol policy will be subject to disciplinary action. Additional information on the Student Alcohol Policy and the university’s commitment and expectation are included in the Student Services Guide.

### GRIEVANCE PROCEDURE

Case Western Reserve University has established a mechanism whereby students of the university may express a grievance against the actions of other students or members of the faculty. Details of the grievance procedure are included in the Student Services Guide, an annual publication of the University Office of Student Affairs. Students who wish to have a specific problem reviewed should contact Student Affairs.

### University Appeals Board
The University Appeals Board has jurisdiction over student appeals of disciplinary actions. Appeals to the board must be presented in writing to the Vice President of Student Affairs. The board normally reviews the case on the record alone.

DRUG POLICY
Case Western Reserve University has the responsibility to provide its students, employees, and the public with the safest environment possible. The university also has an interest in promoting the highest standard of health and welfare among its students, staff, and faculty. It is therefore the policy of Case Western Reserve University to discourage the use of controlled substances. The unlawful manufacture, distribution, dispensation, possession, or use of a controlled substance is prohibited in and on property owned or operated by Case Western Reserve University. Further information regarding the university’s drug policy is available at http://studentaffairs.case.edu/handbook/policy/university/drugs.html.

UNIVERSITY POLICY ON E-MAIL COMMUNICATIONS WITH STUDENTS
Official communications from the university may be sent electronically using the student’s university-assigned e-mail address. The university expects that students will read such official university communications in a timely fashion. Students who choose to forward e-mail from their university account to another e-mail address remain responsible for receiving and reading official university communications.

SEXUAL ASSAULT POLICY
Case Western Reserve University is a community dependent upon trust and respect for its constituent members—students, faculty, and staff. Sexual assault is a violation of that trust and respect; it will not be tolerated. The university strongly encourages persons who have been sexually assaulted to report the assault, to seek assistance and to pursue judicial action or sanctions for their own protection and that of the entire campus community. Complete details on the university’s policy and reporting procedure are included on the university’s website at www.case.edu/provost/sexualconduct

SMOKING POLICY
The university has accepted the opinion of the Surgeon General that smoking is the largest preventable cause of illness and premature death. Since the university has substantial commitments to health-related research and teaching, it has a parallel commitment to protect the health environment of students, employees and guests.

Therefore, and in compliance with the State of Ohio smoking ban set out in Chapter 3794 of the Ohio Revised Code, the university does not permit smoking in any of its buildings or structures, including in residence halls or in university vehicles. In addition, all outside walkways and grounds of university property are smoke-free, except for specific university-designated smoking areas. The medical, dental and nursing schools and the health sciences podium and the health sciences garage are entirely smoke-free and do not have any university-designated smoking areas.
PHYSICAL EDUCATION
AND ATHLETICS
The Veale Convocation, Recreation and Athletic Center
Phone: 216-368-2867/2420
http://studentaffairs.case.edu/athletics/default.html

The Department of Physical Education and Athletics offers the student a variety of opportunities from challenging academic classes to vigorous recreational activities.

Case Western Reserve University sponsors 19 intercollegiate varsity sports. These are football, soccer, cross country, basketball, wrestling, swimming, baseball, tennis, and indoor and outdoor track for men and volleyball, basketball, swimming, indoor and outdoor track, tennis, cross country, soccer, and softball for women.

The Spartans are charter members of the University Athletic Association, (UAA), sharing the belief that academic excellence and athletic excellence are equally important. The UAA includes Brandeis University, Carnegie Mellon University, Emory University, New York University, University of Chicago, University of Rochester, and Washington University in St. Louis.

The department sponsors a variety of intramural and club sport activities, including archery, cheerleading, crew, cycling, fencing, ice hockey, lacrosse, kendo, kung fu, squash, table tennis, taekwondo, ultimate frisbee, and volleyball. Sport clubs are available to all students, faculty, and staff. Intramural competition is available in more than 40 activities, and more than one-half of undergraduates participate for relaxation, physical fitness, and a chance to improve skills.

FACULTY
Freeman Blade, B.S.
(Instructor)
Eastern Montana State College
Assistant Women’s Basketball Coach

Chris Conlon, M.A.
(Instructor)
Johns Hopkins University
Head Men’s and Women’s Swim Coach

Tiffany Crooks, B.S.
(Ashland University)

Greg Debeljak, M.A.
(John Carroll University)
Instructor
Head Football Coach

Robert Del Rosa, M.A.
(Western Reserve College)
Instructor
Assistant Director of Athletics
Head Wrestling Coach

Dave Diles, Ed.D.
(University of Michigan)
Director of Athletics and Chair, Department of Physical Education and Athletics

Matt Engleander, B.A.
(The College of Wooster)
Instructor
Head Baseball Coach

Karen Farrell, M.S.
(University of Massachusetts at Amherst)
Instructor
Head Volleyball Coach
Assistant Athletic Director/SWA

Susan Higgins, M.A.
(Minnesota University at Mankato)
Instructor
Head Athletic Trainer

David M. Hutter, Ph.D.
(The Ohio State University)
Professor

Patrick Kennedy, M.S.
(University of Maryland)
Associate Professor
Assistant Athletic Director
Director of Intramurals and Coordinator of Club Sports

Erin Lake, M.Ed.
(Bowling Green State University)
Instructor
Assistant Athletic Trainer

Kathy Lanese, B.S.
(Ohio University)
Instructor
Head Men’s and Women’s Cross Country Coach
Assistant Women’s Track and Field Coach

Marcus Macalla, M.A.
(John Carroll University)

Instructor
Assistant Football Coach

Sean McDonnell, M.A.
(LeMoyne College)
Instructor
Head Men’s Basketball Coach

Todd McGuinness, B.S.
(Bethany College)
Instructor
Assistant Men’s Basketball Coach

Mina Moore, B.S.
(Wayne State University)
Instructor
Associate Director, Intramurals

Dan Palmer, M.A.
(N.E. Illinois University)
Instructor
Head Men’s Soccer Coach

Jennifer Reimer, M.Ed.
(Bowling Green State University)
Instructor
Head Women’s Basketball Coach

Stephen Rubin, B.A.
(Emory University)
Instructor
Head Men’s and Women’s Track Coach

Jerry Schuplinski, M.A.
(John Carroll University)
Instructor
Assistant Football Coach

Chris Shenberger, M.S.
(Georgia State University)
Instructor
Assistant Athletic Trainer

Derek Slesh, M.A.
(Cleveland State University)
Instructor
Assistant Football Coach

Todd Wojtowski, MBA
(The Citadel)
Instructor
Head Men’s and Women’s Tennis Coach

Frank Zatko, Ph.D.
(Case Western Reserve University)
Instructor
Assistant Men’s and Women’s Swim Coach
LIFETIME SPORTS PROGRAM

The department has designed an instructional program of modern activities and lifetime sports. Each semester, fifteen to twenty-five co-educational lifetime sports classes are offered. Freshmen, who have a one-year physical education requirement, have first priority in electing PHED 010 to 199. Others who have completed the requirement may audit classes.

A number of popular, advanced lifetime sports activities are also offered for one hour of academic credit. Advanced skills, strategy, and coaching are taught (PHED 200 to 299).

RECREATIONAL ACTIVITIES AND INTERCOLLEGIATE ATHLETICS

The intramural program provides a continuous schedule of activities throughout the year. Individual and team sports are available to students in several divisions: university housing, fraternity, women, coed, graduate, and open. Intercollegiate varsity athletic competition is available in ten sports for men and nine sports for women.

UNDERGRADUATE (PHED)

Course Descriptions

PHED 10A. Cardio Games (First Half) (0)
Cardio Games emphasizes conditioning of the aerobic and anaerobic systems through fun and energetic games such as Ultimate Frisbee, Tag, Dodge Ball, Flicker Ball and more. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 10B. Cardio Games (Second Half) (0)
Cardio Games emphasizes conditioning of the aerobic and anaerobic systems through fun and energetic games such as Ultimate Frisbee, Tag, Dodge Ball, Flicker Ball and more. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 11A. Jump Rope Training (First Half) (0)
This class is designed to help students develop quickness, agility, balance, strength, power, and endurance through jump rope training. Students will learn rope-handling skills, jumping techniques and training routines to help supplement training for fitness and performance. Workouts and progressions are included for warm-up, cool-down, fitness components and sport-specific training. Prereq: Undergraduate degree seeking student.

PHED 11B. Jump Rope Training (Second Half) (0)
This class is designed to help students develop quickness, agility, balance, strength, power, and endurance through jump rope training. Students will learn rope-handling skills, jumping techniques and training routines to help supplement training for fitness and performance. Workouts and progressions are included for warm-up, cool-down, fitness components and sport-specific training. Prereq: Undergraduate degree seeking student.

PHED 12A. Badminton (First Half) (0)
This class provides the student with the basic skills, footwork and strategies necessary to play the sport of badminton. Emphasis is placed on skill development through instruction and drills as well as singles and doubles match play. This class is appropriate for all students. Students with special needs can be accommodated. Prereq: Undergraduate degree seeking student.

PHED 12B. Badminton (Second Half) (0)
This class provides the student with the basic skills, footwork and strategies necessary to play the sport of badminton. Emphasis is placed on skill development through instruction and drills as well as singles and doubles match play. This class is appropriate for all students. Students with special needs can be accommodated. Prereq: Undergraduate degree seeking student.

PHED 13A. Rock Wall Climbing (First Half) (0)
This course is designed to give students a comprehensive introduction to the skills, safely, terminology and equipment used in the sport of recreational activity of rock climbing. Prereq: Undergraduate degree seeking student.

PHED 13B. Rock Wall Climbing (Second Half) (0)
This course is designed to give students a comprehensive introduction to the skills, safely, terminology and equipment used in the sport of recreational activity of rock climbing. Prereq: Undergraduate degree seeking student.

PHED 14A. Indoor Rowing (First Half) (0)
This course introduces the student to basic indoor rowing techniques, skills, and equipment. Students will learn conditioning programs to prepare the student to continue in recreational, fitness or competitive rowing programs. Prereq: Undergraduate degree seeking student.

PHED 14B. Indoor Rowing (Second Half) (0)
This course introduces the student to basic indoor rowing techniques, skills, and equipment. Students will learn conditioning programs to prepare the student to continue in recreational, fitness or competitive rowing programs. Prereq: Undergraduate degree seeking student.

PHED 15A. Cross Country Skiing (First Half) (0)
Prereq: Undergraduate degree seeking student.

PHED 19A. Golf (First Half) (0)
Prereq: Undergraduate degree seeking student.

PHED 19B. Golf (Second Half) (0)
Prereq: Undergraduate degree seeking student.

PHED 20A. Cross Country Skiing (Second Half) (0)
Prereq: Undergraduate degree seeking student.

PHED 21A. Hatha Yoga (First Half) (0)
This course provides an introduction to Hatha Yoga, presenting body awareness, basic philosophy, breathwork, postures and meditation techniques. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 21B. Hatha Yoga (Second Half) (0)
This course provides an introduction to Hatha Yoga, presenting body awareness, basic philosophy, breathwork, postures and meditation techniques. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 22A. Intermediate Hatha Yoga (First Half) (0)
This course utilizes the basics of Hatha Yoga including body awareness, philosophy, breathwork, and postures with emphasis on increased strengthening, increased aerobic segments, and more challenging postures. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 22B. Intermediate Hatha Yoga (Second Half) (0)
This course utilizes the basics of Hatha Yoga including body awareness, philosophy, breathwork, and postures with emphasis on increased strengthening, increased aerobic segments, and more challenging postures. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 23A. Aquatic Volleyball (First Half) (0)
Prereq: Undergraduate degree seeking student.

PHED 23B. Aquatic Volleyball (Second Half) (0)
Prereq: Undergraduate degree seeking student.

PHED 24A. Jogging (First Half) (0)
Prereq: Undergraduate degree seeking student.

PHED 24B. Jogging (Second Half) (0)
Prereq: Undergraduate degree seeking student.

PHED 25A. Power Volleyball (First Half) (0)
This class introduces volleyball skills, techniques, strategies, rules and scoring. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 25B. Power Volleyball (Second Half) (0)
This class introduces volleyball skills, techniques, strategies, rules and scoring. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 26A. Racquetball (First Half) (0)
This course teaches racquetball skills and strategies for team and individual play. Course content includes terminology, skill development, scoring, etiquette and safety. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 26B. Racquetball (Second Half) (0)
This course teaches racquetball skills and strategies for team and individual play. Course content includes terminology, skill development, scoring, etiquette and safety. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 27A. Indoor Group Cycling (First Half) (0)
A stationary cycling program set to motivational music. Students will learn how to use and set up the bike and how to create a challenging workout using sprints, jumps and climbs. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 27B. Indoor Group Cycling (Second Half) (0)
PHED 28A. Squash (First Half) (0)
Students will be introduced to the skills, techniques and strategies necessary to play the sport of squash. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 28B. Squash (Second Half) (0)
Students will be introduced to the skills, techniques and strategies necessary to play the sport of squash. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 30A. Swimming - Endurance (First Half) (0)
This class is for individuals who have mastered intermediate swimming skills and wish to develop advanced swimming skills and greater swimming endurance. Prereq: Undergraduate degree seeking student.

PHED 30B. Swimming - Endurance (Second Half) (0)
This class is for individuals who have mastered intermediate swimming skills and wish to develop advanced swimming skills and greater swimming endurance. Prereq: Undergraduate degree seeking student.

PHED 31A. Tennis (First Half) (0)
Students will learn the tennis skills and strategies necessary for both singles and doubles play. Emphasis is placed on stroke development, rules, scoring and etiquette. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 31B. Tennis (Second Half) (0)
Students will learn the tennis skills and strategies necessary for both singles and doubles play. Emphasis is placed on stroke development, rules, scoring and etiquette. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 34A. Weight Training (First Half) (0)
This class focuses on muscular strength and endurance training through individualized weight training programs. Emphasis is placed on appropriate use of equipment and safety procedures. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 34B. Weight Training (Second Half) (0)
This class focuses on muscular strength and endurance training through individualized weight training programs. Emphasis is placed on appropriate use of equipment and safety procedures. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 40A. Basketball (First Half) (0)
This class introduces basketball skills, techniques, rules and basic offense and defense. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 40B. Basketball (Second Half) (0)
This class introduces basketball skills, techniques, rules and basic offense and defense. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 41A. Softball (First Half) (0)
Prereq: Undergraduate degree seeking student.

PHED 42B. Indoor Soccer (Second Half) (0)
Students will learn the skills, techniques and strategies to play the sport of indoor soccer. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 44A. Core Yoga (1st Half) (0)
This course combines Hatha Yoga postures, Pilates exercises, body awareness and breathwork while focusing on deep stabilizing abdominal muscles. Students will combine stretching and strengthening to improve posture and flexibility and create balance in the physical body. Students will learn slow, controlled movements to help tone and condition. Prereq: Undergraduate degree seeking student.

PHED 44B. Core Yoga (2nd Half) (0)
This course combines Hatha Yoga postures, Pilates exercises, body awareness and breathwork while focusing on deep stabilizing abdominal muscles. Students will combine stretching and strengthening to improve posture and flexibility and create balance in the physical body. Students will learn slow, controlled movements to help tone and condition. Prereq: Undergraduate degree seeking student.

PHED 45A. Introduction to Speed and Agility Training (0)
This introductory course is intended for the student with an interest in training of speed and agility specific to their sport interest. The course will focus on the aspects of physical training necessary for the development of speed and agility and improved athletic performance. Prereq: Undergraduate degree seeking student.

PHED 45B. Introduction to Speed and Agility Training (0)
This introductory course is intended for the student with an interest in training of speed and agility specific to their sport interest. The course will focus on the aspects of physical training necessary for the development of speed and agility and improved athletic performance. Prereq: Undergraduate degree seeking student.

PHED 50A. Personal Safety Awareness (First Half) (0)
This class focuses on safety and preventative techniques. Emphasis is placed on self-protection. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 50B. Personal Safety Awareness (Second Half) (0)
This class focuses on safety and preventative techniques. Emphasis is placed on self-protection. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 55A. Cardio-Fitness (First Half) (0)
This class presents the components of physical fitness through conditioning activities utilizing equipment such as stairclimbers, treadmills, and elliptical trainers. Students will evaluate their fitness levels and learn how to put together an individualized workout program. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 55B. Cardio-Fitness (Second Half) (0)
This class presents the components of physical fitness through conditioning activities utilizing equipment such as stairclimbers, treadmills, and elliptical trainers. Students will evaluate their fitness levels and learn how to put together an individualized workout program. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 100. Independent Activity (0 - 10)
This course is designed to allow the student to write individual fitness goals, compose an individual fitness program specific to the goals and execute the individual program. Students are required to participate in a pre and post-testing program and must achieve a minimum of 75% for each test component (national norms) in order to participate in Independent Activity. The course instructor must approve all programs. The student will be required to maintain a detailed activity log.

PHED 105. CPR/First Aid (0)
Students will learn the basic first aid and CPR skills necessary to act in an emergency. Automated external defibrillation training is included. This class involves both lecture and hands-on work. Students will have the opportunity to achieve Basic Rescuer certification at the completion of the class.

PHED 108. Fencing (0)
Fencing is the art of swordsmanship. Students will learn fencing skills such as on guard, lunge, attack, parry and touch. Students will learn the rules of competition and have the opportunity to compete during class time.

PHED 111. Sport Orienteering/Rock Wall Climbing (0)
This course combines the sport of orienteering in which orienteers use a map and compass to locate points in the landscape and the activity of rock climbing.

PHED 120. Skin and Scuba Diving - Advanced students. Prereq: Undergraduate degree seeking student.
PHED 127. Water Safety Instructors (0)
Recommended preparation: Emergency Water Safety or Lifeguarding Certificate.

PHED 129. Life Guarding (0)
Recommended preparation: Advanced swimming skills.

PHED 130. Wellness (0)
This lecture class teaches the components of physical fitness as well as evaluation techniques, fitness assessment, body composition, nutrition and weight control information. This class is appropriate for all students.

PHED 131. Personal Fitness (0)
Personal Fitness is a full semester class that teaches the components of physical fitness through both lecture and activity. Students will assess their fitness levels and learn conditioning activities to improve flexibility, cardiovascular endurance, muscular strength and endurance. Nutrition, weight control and concepts of wellness are covered in this class. This class is appropriate for most students.

PHED 140. Modern Jazz Dance (0)

PHED 141. Dance (0)
This course is designed to introduce the student to dance. Students will be exposed to a variety of dances including contemporary, jazz, folk and formal dancing. Students will learn how choreography is mounted and how dancers remember it. The class is appropriate for beginners as well as students with dance experience.

PHED 142. Social Dance (0)

PHED 170. Varsity Baseball (0)

PHED 171. Varsity Basketball (Men) (0)

PHED 172. Varsity Basketball (Women) (0)

PHED 174. Varsity Cross Country (Men) (0)

PHED 175. Varsity Cross Country (Women) (0)

PHED 178. Varsity Football (0)

PHED 180. Varsity Soccer (Men) (0)

PHED 181. Varsity Soccer (Women) (0)

PHED 182. Varsity Swimming (Men) (0)

PHED 183. Varsity Swimming (Women) (0)

PHED 184. Varsity Tennis (Men) (0)

PHED 185. Varsity Tennis (Women) (0)

PHED 186. Varsity Track and Field (Men) (0)

PHED 187. Varsity Track and Field (Women) (0)

PHED 188. Varsity Volleyball (0)

PHED 189. Varsity Wrestling (0)

PHED 190. Varsity Softball (Women) (0)

PHED 203. Body Conditioning - Advanced (1)

PHED 204. CPR/First Aid (1)
Students will learn the basic first aid and CPR skills necessary to act in an emergency. Automated external defibrillation training is included. This class involves both lecture and hands-on work. Students will have the opportunity to achieve Basic Rescuer certification at the completion of the class. This class section does not satisfy the Physical Education requirement.

PHED 208. Racquetball - Advanced (1)

PHED 211. Skin and Scuba Diving - Advanced (1)
Recommended preparation: Skin and Scuba Certification.

PHED 215. Water Safety Instructors (1)
Recommended preparation: Emergency Water Safety or Lifeguarding Certificate.

PHED 216. Weight Training II (1)
This class is for the student with weight training experience and/or the student who has successfully completed the basic weight training program and wishes to continue training in an advanced program. Advanced skill development, program development and safety are emphasized. This class section does not satisfy the Physical Education requirement.

PHED 217. Life Guarding (1)
Advanced physical education activities. Advanced instruction in sports, limited to upperclassmen. This course may lead to certification in lifeguarding. Recommended preparation: Advanced swimming skills.

PHED 218. Wellness (1)

PHED 219. Weight Training III (1)
Prereq: PHED 216.

PHED 320. Psychology of Sport (2)
The major psychological dimension underlying an individual's participation in sport. Selected areas that influence the acquisition of physical skill and performance in sports.

PHED 325. Officiating Basketball (2)
Administrative procedures, promotion, managerial relationships, scheduling, tournaments, budgeting, scoring systems, and officiating.

PHED 332. Introduction to Sports Medicine (3)
This class provides a detailed introduction to the foundation of Sports Medicine. Students will understand the complexities of sports medicine and athletic training through classroom lecture, structured laboratory and clinical hours. Topics covered in this class include roles and responsibilities of the sports medicine team, injury pathology, injury prevention, evaluation and management of injury.

PHED 334. Orthopedic Assessment of the Upper Extremity (3)
This class provides students with hands on experience that prepares them to perform orthopedic assessments within the field of athletic training. Students learn to take medical histories, palpate bony and soft structures, perform range of motion, neu-
**DEGREE PROGRAMS OFFERED**

a. Available only as a second major.
b. Includes dietetics.
c. The Medical Scientist Training Program.
d. Combined degree by special arrangement for selected students who hold acceptances in the School of Medicine.
e. Degrees conferred jointly by the Mandel School of Applied Social Sciences and the Weatherhead School of Management in association with the Mandel Center for Nonprofit Organizations.
f. Available as the undergraduate portion of the Bachelor of Science in Engineering/Master of Science program.
g. Available as the graduate portion of the Bachelor of Science in Engineering/Master of Science program.
h. Joint five-year Doctor of Medicine/Master of Science

(Kent State University)
Director of Degree Audit and Data Service

Margaret N. Clark, M.A.
(Case Western Reserve University)
Degree Audit and Information Services Analyst

Jane Buder Shapiro, Ph.D.
(Case Western Reserve University)
Health Professions Advisor

JoAnne Urban Jackson, J.D.
(Northwestern University)
Pre-Law Advisor

Case Western Reserve University confers baccalaureate degrees based on programs offered by the faculties of the Case School of Engineering, the College of Arts and Sciences, the Frances Payne Bolton School of Nursing, the School of Medicine, and the Weatherhead School of Management. In addition, the university offers several baccalaureate programs jointly with the Cleveland Institute of Art and the Cleveland Institute of Music. The faculties and administration are dedicated to offering educational programs that enable undergraduates to achieve disciplinary literacy in one or more major fields, to acquire educational breadth through study across the natural sciences, humanities and arts, and social sciences, and to learn to think critically and to communicate effectively. Furthering the university mission, the educational programs aim to foster the development of qualities of integrity, creativity, leadership, and societal engagement.

The bachelor's degree programs engage students in in-depth study in one field (the major), as well as general education or core requirements. Overlap among the general education and core curricula for the various bachelor's degree programs allows students flexibility in the choice of majors and degree program. Foundational courses and seminars introduce students to modes of inquiry, thought, and communication in the natural sciences, humanities and arts, and social sciences.

Advisors for first-year students, departmental advisors, other faculty, and deans assist students in selecting from approximately sixty alternative curricula and major concentrations a field of study suited to each student's interests and qualifications. Highly motivated and responsible students whose educational and career goals are better served through an individualized course of study may pursue academic programs of their own design through a Dean's Approved Major.

Students with broad educational interests and goals may pursue concurrently two or more majors or the Bachelor of Arts degree or two or more majors for the Bachelor of Science in Engineering degree, or may earn two bachelor's degrees, completing both a Bachelor of Arts degree and a Bachelor of Science degree, or fulfilling the requirements for two Bachelor of Science degrees. The Bachelor of Music degree offered by the Cleveland Institute of Music may be combined with either a Bachelor of Arts or a Bachelor of Science degree. Qualified students who wish to accelerate their undergraduate and graduate or professional studies may earn the opportunity to begin in the senior year advanced study toward a graduate or professional degree.

The university provides undergraduates with a rich variety of experiential learning opportunities off campus as well as on campus and in University Circle. Programs that engage students in curriculum-related employment include the Cooperative Education Program, the Practicum Program, and internships. Study Abroad, the exchange program with Fisk University, and the Washington Semester immerse students in educational environments that build global and national knowledge and perspective. Research opportunities for undergraduates abound at the university, in University Circle institutions, and in Cleveland. Individual departments offer independent study opportunities to motivated and qualified students; some departments offer courses that incorporate practical field experience or community service. The location of the university in University Circle, with its outstanding array of cultural, educational, and health care institutions, and the proximity and accessibility of the university's various professional schools and their facilities enable undergraduates to draw upon diverse and distinctive resources to enrich their education.

DEGREE PROGRAMS

Case Western Reserve University offers a broad range of programs in the liberal arts and sciences, engineering, management, accountancy, and nursing leading to the Bachelor of Arts (B.A.), and the Bachelor of Science (B.S.) degrees. These programs provide depth through concentrated study in a major field and breadth through the fulfillment of general education or core curriculum requirements, and open electives.

The B.A. is available in more than forty fields in the humanities and arts, the social and behavioral sciences, and the natural sciences and mathematics. In addition, B.S. programs are offered in accounting, computer science, the natural sciences, mathematics, statistics, art education, music education, management, nursing, and nutrition. The B.S. in Engineering is available in twelve major fields.
UNDERGRADUATE STUDIES

The Bachelor of Music (B.M.) degree is offered through the Joint Program in Music of Case Western Reserve University and the Cleveland Institute of Music. Students who are candidates for the B.M. enroll in the Cleveland Institute of Music. Listed below are all the undergraduate degrees offered by the university.

Bachelor of Arts

Bachelor of Science in:

- Accounting
- Applied Mathematics
- Art Education
- Astronomy
- Biochemistry
- Biology
- Chemistry
- Computer Science
- Geological Sciences
- Management
- Mathematics
- Mathematics and Physics
- Music Education
- Nursing
- Nutrition
- Nutritional Biochemistry and Metabolism
- Physics
- Statistics
- Systems Biology

Bachelor of Science in Engineering Major fields:

- Aerospace Engineering
- Biomedical Engineering
- Chemical Engineering
- Civil Engineering
- Computer Engineering
- Electrical Engineering
- Engineering Physics
- Materials Science and Engineering
- Mechanical Engineering
- Polymer Science and Engineering
- Systems and Control Engineering
- Engineering (undesignated)

With the exceptions of engineering physics and the undesignated major in engineering, all of the engineering programs listed above are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET, Inc.).

GENERAL REQUIREMENTS FOR ALL BACHELOR’S DEGREES

The bachelor’s degree programs require students to study one field in depth (the major) and to complete general education requirements or a core curriculum as appropriate to the major field and degree program selected. There is overlap among core curricula and general education requirements, which allows students flexibility in the choice of majors and degree programs.

Every candidate for a baccalaureate degree from the university must:

a) complete a foundation curriculum (core curriculum or general education requirements), as specified for the degree sought, that incorporates the requirements of the Seminar Approach to General Education and Scholarship (SAGES);

b) complete a course of studies with a cumulative grade point average of no less than 2.000 for work taken at Case Western Reserve University;

c) earn in residence at Case Western Reserve University a minimum of 60 semester hours, of which at least 30 must be earned after the student achieves senior status; and

d) complete two semesters of physical education. This is completed through a combination of half and/or full semesters in Physical Education activity courses.

There are four foundation curricula that incorporate the SAGES curricular requirements:

1. Arts and Sciences General Education Requirements, required for the Bachelor of Arts (B.A.) and the following Bachelor of Science (B.S.) degrees: applied mathematics, art education, astronomy, biochemistry, biology, chemistry, geological sciences, mathematics, mathematics and physics, music education, nutrition, nutritional biochemistry and metabolism, physics, statistics and systems biology.

2. Engineering Core Curriculum, required for the Bachelor of Science in Engineering (B.S.E.) degree. Required, with specific course exceptions, for the Bachelor of Science (B.S.) degree in computer science.

3. School of Nursing General Education Requirements, required of all candidates for the Bachelor of Science in Nursing (B.S.N.) degree.

4. Weatherhead School of Management General Education Requirements, required of students who are candidates for the Bachelor of Science (B.S.) degree in accounting, and in management.

SAGES

The Seminar Approach to General Education and Scholarship (SAGES) provides a foundation in critical thinking, written and oral communication, the use of information, quantitative reasoning, engagement with ethical issues and diversity, and exposure to experimental and theoretical approaches to understanding human culture and behavior, scientific knowledge, and methods of research through the following:

1. First Seminar, taken in the first semester, introduces students to the seminar format through reading, discussion, and intensive writing, and incorporates activities with University Circle institutions. First Seminar will be selected from offerings in the Life of the Mind, the Natural World, the Social World, or the Symbolic World.

*Transfer Students only: Transfer students who have completed the English composition/expository writing requirement with a grade of C or higher at the college/university at which they previously matriculated will receive transfer credit for FSCC T100 (3 – 6 semester hours) and will be required to complete a supplemental 1-semester-hour SAGES introductory seminar – FSTS 100.

2. Two University Seminars, taken after the First Seminar and before the end of the student’s second year, and selected from seminars that address specific topics that fall under broad themes: Thinking About the Social World, Thinking About the Symbolic World, Thinking About the Natural World.

3. Writing Portfolio, comprising writing assignments selected from the First Seminar and University Seminars. The Writing Portfolio is submitted for evaluation after completing the final University Seminar. Writing competence must be established in order to fulfill the university’s English Composition requirement for graduation.

4. Department Seminar, generally taken in the junior year in the student’s major field, that focuses on discipline-specific methods and modes of inquiry and communication.

5. Senior Capstone, a one- or two-semester capstone project integrating the knowledge, initiative, problem-solving skills, and powers of communication developed by the student. Substantial writing and a final public presentation are required.

Information about specific department seminars and capstones is available from department academic representatives and on the searchable schedule of classes website at:
GENERAL BULLETIN 2009-2011

REQUIREMENTS FOR SPECIFIC DEGREES

Students are expected to complete a bachelor’s degree in a timely fashion and will ordinarily be subject to the degree requirements in place at the time of matriculation at Case Western Reserve University, although they may choose to update their requirements to those included in a later Handbook for Undergraduate Students. If a student extends study towards a bachelor’s degree beyond 10 years after first matriculation as an undergraduate student, the major-field department(s) will review the student’s academic record and may update major field requirements. Also, if the student has not already completed the applicable general education requirements in place at the time of matriculation, the appropriate dean in the school offering the major will also review the student’s academic record and may update general education requirements.

BACHELOR OF ARTS DEGREE

(College of Arts and Sciences)

Candidates for the Bachelor of Arts degree, in addition to meeting the general requirements for bachelor’s degrees as described above, must also complete the following requirements:

1. A minimum of 120 semester hours earned.
   a) No more than 42 hours beyond the 100 level in any one department may be applied to the 120 hour total.
   b) The 120 semester hours must include at least 90 semester hours in arts and sciences. These credits may be drawn from those offered by the College of Arts and Sciences as well as those in economics, biochemistry, nutrition and computer science. (Students completing both a B.A. and B.S. degree are exempted from six hours of the 90 hour arts and sciences requirement for the B.A.)
2. The SAGES General Education Requirements of the College of Arts and Sciences.
3. A minimum of 30 semester hours of courses at the 300-400 level.
4. The requirements for a major as specified in this bulletin for each department or program. A major requires a minimum of 30 semester hours, at least 24 of which are taken in the major department or program. For all courses taken in the major department and for which grades are averaged, and for all courses taken to satisfy major requirements and for which grades are averaged, a B.A. candidate must earn a minimum cumulative average of 2.0. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields. Transfer students must complete at Case Western Reserve University at least half the hours required in the major department.

Major Concentrations Available for the B.S.

- American Studies*
- Anthropology
- Art History
- Asian Studies (including Asian language)
- Asian Studies (without Asian language)*
- Astronomy
- Biochemistry
- Biology
- Chemistry
- Classics
- Cognitive Science
- Communication Sciences
- Computer Science
- Economics
- English
- Environmental Geology
- Environmental Studies*
- Evolutionary Biology*
- French
- French and Francophone Studies
- Geological Sciences
- German
- German Studies
- Gerontological Studies*
- History
- History and Philosophy of Science
- International Studies
- Japanese Studies
- Mathematics
- Music
- Natural Sciences*
- Nutrition
- Nutritional Biochemistry and Metabolism
- Philosophy
- Physics
- Political Science
- Pre-Architecture*
- Psychology
- Religious Studies
- Sociology
- Spanish
- Statistics
- Teacher Education*
- Theater Arts
- Women's and Gender Studies
- World Literature

*indicates may be taken only as a second major

Any student interested in developing for the B.A. a major of his or her own design may submit, before the end of the sophomore year, a program proposal to the Office of Undergraduate Studies for approval by the Dean’s Committee.

BACHELOR OF SCIENCE DEGREE

(College of Arts and Sciences)

Candidates for the Bachelor of Science degrees, in addition to meeting the general requirements for bachelor’s degrees as described above, must also complete the following requirements:

1. A minimum of 120-133 hours as specified by the requirements for each B.S. program.
2. A minimum of 30 semester hours of courses at the 300-400 level.
3. The SAGES General Education Requirements of the Arts and Sciences. For some B.S. programs, the SAGES General Education Requirements of the Arts and Sciences have been modified and incorporated into the degree requirements as presented in this bulletin in the section devoted to each department or program.
4. The requirements for a major field as presented in this bulletin in the section devoted to each department or program. For all courses taken in the major department and for which grades are averaged, and for all courses taken to satisfy major requirements and for which grades are averaged, a candidate for a B.S. from the College of Arts and Sciences must earn a minimum cumulative average of 2.0. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields. Transfer students must complete at Case Western Reserve University at least half the hours required for the major.

Major Concentrations for the B.S.

- Applied Mathematics
- Art Education
- Astronomy
- Biochemistry
- Biology
- Chemistry
- Geological Sciences
- Mathematics
SAGES GENERAL EDUCATION REQUIREMENTS OF THE COLLEGE OF ARTS AND SCIENCES

SAGES is an innovative undergraduate experience designed to establish foundations for academic inquiry. Students fulfill their College of Arts and Sciences General Education Requirements with a sequence of specially developed seminars and selected courses. Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer may be used to satisfy general education requirements.

SAGES Program Seminars

(13 semester hours)

The First Seminar*

(4 semester hours, to be taken in the first semester of enrollment)

The First Seminar focuses on the development of critical thinking and communication skills through the use of a variety of approaches, media, and perspectives to explore the human mind and the nature of inquiry. This course is designed to strengthen writing and analytical skills while building a foundation in ethics, information literacy, and cultural diversity. Select from:

First Seminar: The Life of the Mind (FSCC 100) or First Seminar: Natural World (FSNA 1xx) or First Seminar: Symbolic World (FSSY 1xx)

*Transfer Students only: Transfer students who have completed the English composition/expository writing requirement with a grade of C or higher at the college/university at which they previously matriculated will receive transfer credit for FSCC T100 (3 – 6 semester hours) and will be required to complete a supplemental 1-semester hour SAGES introductory seminar – FSTS 100.

University Seminars

(6 semester hours, minimum of two seminars, to be completed in the first two years of enrollment as specified below)

After completion of the First Seminar, students must complete two University Seminars, with each seminar selected from a different thematic group and from a thematic group different from that of the student’s First Seminar. Each University Seminar explores one of three themes, with the content determined according to the interests of the faculty. University Seminars provide continued experience in critical reading, writing, and oral communication as well as information literacy, ethics, and cultural diversity. Select from:

University Seminar: Thinking About the Natural World (USNA 2xx); University Seminar: Thinking About the Social World (USSO 2xx); University Seminar: Thinking About the Symbolic World (USSY 2xx)

Department Seminar

(3 semester hours)

The Department Seminar includes seminar-based discussion as well as instruction and experience in the kinds of writing characteristic of the Department Seminar’s discipline. The Department Seminar may be taken in the department of the student’s major or in another department. A course used to fulfill the Department Seminar requirement may not also be used to fulfill a Breadth Requirement.

University Composition Requirement

Students develop a Writing Portfolio comprised of final graded writing assignments from the First Seminar and University Seminars. The Writing Portfolio is submitted for evaluation after completing the final University seminar. Writing competence must be established in order to fulfill the university’s English Composition requirement for graduation.

Physical Education

(Must total 2 full semesters at zero credits)

Students choose from half- and full-semester course offerings to be completed in the first year.

Breadth Requirements

(18 semester hours – minimum of six 3- or 4-semester hour courses)

NOTE: Two courses used to fulfill requirements for the major also may be used to fulfill the breadth requirements.

Arts and Humanities

(6 – 8 semester hours)

Two 3- or 4-semester hour Arts and Humanities courses. Select from:

Arabic (ARAB), Art History (ARTH), Art Studio (ARTS), Chinese (CHIN), Classics (CLSC), Dance (DANC), English (ENGL), French (FRCH), German (GRMN), Greek (GREK), Hebrew (HBRW), History (HSTY), Italian (ITAL), Japanese (JAPN), Latin (LATN), Music - General (MUGN), Music - History (MUHM), Music - Theory (MUTH), Philosophy (PHIL), Portuguese (PORT), Religion (RLGN), Russian (RUSN), Spanish (SPAN), Theatre (THTR), World Literature (WLIT)

Natural and Mathematical Sciences

(6 - 8 semester hours)

Two 3- or 4-semester hour Natural and Mathematical Science courses. Select from:

Astronomy (ASTR), Biochemistry (BIOC), Biology (BIOL), Chemistry (CHEM), Geology (GEOL), Mathematics (MATH), Nutrition (NTRN), Physics (PHYS), Statistics (STAT)

Social Sciences

(6 semester hours)

Two 3-semester hour Social Science courses. Select from:

Anthropology (ANTH), Cognitive Science (COGS), Communication Sciences (COSI), Economics (ECON), Political Science (POSC), Psychology (PSCL), Sociology (SOCI)

Quantitative Reasoning

(3 – 4 semester hours)

Each student must complete at least one 3- or 4-semester hour course identified as a mathematical reasoning course. Such a course may also be used to fulfill a major or minor requirement, and/or one of the breadth requirements. Select from:

ANTH 319, ENGR 131, MATH 121, 123, 125, 150, PHIL 201, PSCI 282, STAT 201

Global and Cultural Diversity

(3 – 4 semester hours)

Each student must complete at least one 3- or 4-semester hour course identified as a global and cultural diversity course. Such a course may also be used to fulfill a major requirement and/or one of the breadth requirements. Select from:

include and specify a senior capstone. Courses meeting this requirement include the

SAGES Senior Capstone (3 - 6 semester hours)
The Senior Capstone assimilates the knowledge and skills gained throughout the educational process. Students engage in a unique one or two-semester experience designed in consultation with a faculty member. Each Senior Capstone must include key elements:

a) Demonstration of critical thinking and writing skills;
b) Regular oversight by the Capstone advisor;
c) Periodic reporting of progress;
d) Regular writing (e.g., drafts, progress reports, critiques) throughout the project including a final written report which may be a thesis or equivalent document associated with the project or activity (e.g., such pursuits as performance, experiment, live case analysis, or creative writing), as approved by the department of capstone origin;
e) Oral reports including a final public presentation at the Senior Capstone Fair, a conference, a performance, a public lecture, a teaching presentation, or other, as approved by the department of capstone origin.

Courses meeting this requirement include the designation “Approved SAGES Capstone” in their course descriptions. Some majors include and specify a senior capstone.

BACHELOR OF SCIENCE IN ENGINEERING DEGREE

(Case School of Engineering) Candidates for the Bachelor of Science in Engineering (B.S.E.) degree, in addition to meeting the general requirements for bachelor’s degrees as described above, must also complete the following requirements:

1. A minimum of 128-133 hours as specified by the requirements for each B.S.E. program.
2. The SAGES Engineering Core Curriculum.
3. The requirements for the specific engineering major as presented in this bulletin in the section devoted to each department or program.

Major Fields Available for the B.S.E.
- Aerospace Engineering
- Biomedical Engineering
- Chemical Engineering
- Civil Engineering
- Computer Engineering
- Electrical Engineering
- Engineering Physics
- Materials Science and Engineering
- Mechanical Engineering
- Polymer Science and Engineering
- Systems and Control Engineering
- Engineering (undesignated)

With the exceptions of engineering physics and the undesignated major in engineering, all of the engineering programs listed above are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

BACHELOR OF SCIENCE IN COMPUTER SCIENCE DEGREE

(Case School of Engineering) Candidates for the Bachelor of Science in Computer Science degree, in addition to meeting the general requirements for bachelor’s degrees as described above, must also complete the following requirements:

1. A minimum of 127 hours.
2. The SAGES Engineering Core Curriculum, with the exception of ENGR 200, ENGR 210 and ENGR 225.
3. The requirements for the computer science major as presented in this bulletin.

SAGES ENGINEERING CORE CURRICULUM OF THE CASE SCHOOL OF ENGINEERING

The SAGES Engineering Core curriculum of the Case School of Engineering provides a foundation in mathematics and sciences for programs in engineering and in computer science leading to the Bachelor of Science degree. The Engineering Core Curriculum is also designed to develop communication skills and to provide a body of work in the humanities and social sciences.

SAGES is an innovative undergraduate experience designed to establish foundations for academic inquiry. Students fulfill their Case School of Engineering General Education Requirements with a sequence of specially developed seminars and selected courses. Course credit earned by Advanced Placement, National Baccalaureate, proficiency examination, and transfer may be used to satisfy general education requirements.

SAGES Program Seminars (13 semester hours)

The First Seminar* (4 semester hours, to be taken in the first semester of enrollment)

The First Seminar focuses on the development of critical thinking and communication skills through the use of a variety of approaches, media, and perspectives to explore the human mind and the nature of inquiry. This course is designed to strengthen writing and analytical skills while building a foundation in ethics, information literacy, and cultural diversity. Select from:

First Seminar: The Life of the Mind (FSCC 100) or First Seminar: Natural World (FSNA 1xx) or First Seminar: Social World (FSSY 1xx) or First Seminar: Symbolic World (FSSY 1xx)

*Transfer Students only: Transfer students who have completed the English composition/expository writing requirement with a grade of C or higher at the college/university at which they previously matriculated will receive transfer credit for FSCC T100 (3 – 6 semester hours) and will be required to complete a supplemental 1-semester hour SAGES introductory seminar – FSTS 100.

University Seminars (6 semester hours, minimum of two seminars, to be completed in the first two years of enrollment as specified below)

After completion of the First Seminar, students must complete two University Seminars, with each seminar selected from a different thematic group and from a thematic group different from that of the student’s First Seminar. Each University Seminar explores one of three themes, with the content determined according to the interests of the faculty. University Seminars provide continued experience in critical reading, writing, and oral communication as well as information literacy, ethics, and cultural diversity. Select from:

- University Seminar: Thinking About the Natural World (USNY 2xx)
- University Seminar: Thinking About the Social World (USSO 2xx)
- University Seminar: Thinking About the Symbolic World (USSS 2xx)

Department Seminar (3 semester hours)
The Department Seminar includes seminar-based discussion as well as instruction and ex-
Breadth Requirements–Humanities and Social Sciences
(15 semester hours)
ENGL 398 (2 semester hours) and ENGR 398 (1 semester hour) and at least 12 semester hours comprised of four 3-semester hour courses or three 4-semester hour courses selected from:

- Humanities: Arabic (ARAB), Art History (ARTH), Art Studio (ARTS), Chinese (CHIN), Classics (CLSC), Dance (DANC), English (ENGL), French (FRCH), German (GRMN), Greek (GREQ), Hebrew (HBRW), History (HSTY), Italian (ITAL), Japanese (JAPN), Latin (LATN), Music: General (MUGN), Music: History (MUHI), Music: Theory (MUTH), Philosophy (PHIL), Portuguese (PORT), Religion (RLGN), Russian (RUSN), Spanish (SPAN), Theater (THTR), World Literature (WLTI)

and/or

- Social Sciences: Anthropology (ANTH), Cognitive Science (COGS), Communication Sciences (COSI), Economics (ECON), Political Science (POSC), Psychology (PSCL), Sociology (SOCI)

SAGES Senior Capstone
(3 – 6 semester hours)
The Senior Capstone assimilates the knowledge and skills gained throughout the educational process. Students engage in a unique one or two semester experience designed in consultation with a faculty advisor. Each Senior Capstone must include key elements:

a) Demonstration of critical thinking and writing skills;
b) Regular oversight by the Capstone advisor;
c) Periodic reporting of progress;
d) Regular writing (e.g., drafts, progress reports, critiques) throughout the project including a final written report which may be a thesis or equivalent document associated with the project or activity (e.g., such pursuits as performance, experiment, live case analysis, or creative writing), as approved by the department of capstone origin;
e) Oral reports including a final public presentation at the Senior Capstone Fair, a conference, a performance, a public lecture, a teaching presentation, or other, as approved by the department of capstone origin.

Courses meeting this requirement include the designation “Approved SAGES Capstone” in their course descriptions. Some majors include and specify a senior capstone.

BACHELOR OF SCIENCE IN NURSING DEGREE

(Frances Payne Bolton School of Nursing)
Candidates for the Bachelor of Science in Nursing (B.S.N.) degree, in addition to meeting the general requirements for bachelor’s degrees as described above, must also complete the following requirements:

1. A minimum of 124 hours
2. The SAGES General Education Requirements for the School of Nursing
3. The requirements for the major in nursing as presented in this bulletin
4. For all courses taken in nursing and science, a minimum grade of C

SAGES GENERAL EDUCATION REQUIREMENTS OF THE FRANCES PAYNE BOLTON SCHOOL OF NURSING

The SAGES General Education Requirements of the Frances Payne Bolton School of Nursing are based upon the SAGES General Education Requirements of the College of Arts and Sciences, and provide a broad educational foundation for the Bachelor of Science in Nursing program.

SAGES is an innovative undergraduate experience designed to establish foundations for academic inquiry. Students fulfill their Frances Payne Bolton School of Nursing General Education Requirements with a sequence of specially developed seminars and selected courses. Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer may be used to satisfy general education requirements.

SAGES Program Seminars
(13 semester hours)
The First Seminar
(4 semester hours, to be taken in the first semester of enrollment)
The First Seminar focuses on the development of critical thinking and communication skills through the use of a variety of approaches, media, and perspectives to explore the human mind and the nature of inquiry. This course is designed to strengthen writing and analytical skills while building a foundation in ethics, information literacy, and cultural diversity. Select from:

First Seminar: The Life of the Mind (FSCC 100) or First Seminar: Natural World (FSNA 1xx) or First Seminar: Social World (FSWO 1xx) or First Seminar: Symbolic World (FSST 1xx)

*Transfer Students only: Transfer students who
have completed the English composition/expository writing requirement with a grade of C or higher at the college/university at which they previously matriculated will receive transfer credit for FSCC T100 (3 – 6 semester hours) and will be required to complete a supplemental 1-semester hour SAGES introductory seminar – FSTS 100.

University Seminars

(6 semester hours, minimum of two seminars, to be completed in the first two years of enrollment as specified below)

After completion of the First Seminar, students must complete two University Seminars, with each seminar selected from a different thematic group and from a thematic group different from that of the student’s First Seminar. Each University Seminar explores one of three themes, with the content determined according to the interests of the faculty. University Seminars provide continued experience in critical reading, writing, and oral communication as well as information literacy, ethics, and cultural diversity. Select from:

University Seminar: Thinking About the Natural World (USNA 2xx); University Seminar: Thinking About the Social World (USSO 2xx); University Seminar: Thinking About the Symbolic World (USSY 2xx)

Department Seminar

(3 semester hours)

The Department Seminar includes seminar-based discussion as well as instruction and experience in the kinds of writing characteristic of the Department Seminar’s discipline. The Department Seminar may be taken in the department of the student’s major or in another department. A course used to fulfill the Department Seminar Requirement may not also be used to fulfill a Breadth Requirement.

University Composition Requirement

Students develop a Writing Portfolio comprised of final graded writing assignments from the First Seminar and University Seminars. The Writing Portfolio is submitted for evaluation after completing the final University seminar. Writing competence must be established in order to fulfill the university’s English Composition requirement for graduation.

Physical Education

(Must total 2 full semesters at zero credits)

Students choose from half- and full-semester course offerings to be completed in the first year.

Breadth Requirements

(at least 30 semester hours – minimum of ten 3 or 4-semester hour courses)

NOTE: Two courses used to fulfill requirements for the major also may be used to fulfill the breadth requirements.

Arts and Humanities

(6 – 8 semester hours)

Two 3- or 4-semester hour Arts and Humanities courses. Select from:

Arabic (ARAB), Art History (ARTH), Art Studio (ARTS), Chinese (CHIN), Classics (CLSC), Dance (DANC), English (ENGL), French (FRCH), German (GRMN), Greek (GREK), Hebrew (HBRW), History (HSTY), Italian (ITAL), Japanese (JAPN), Latin (LATN), Music - General (MUGN), Music - History (MUHI), Music - Theory (MUTH), Philosophy (PHIL), Portuguese (PORT), Religion (RLGN), Russian (RUSN), Spanish (SPAN), Theater (THTR), World Literature (WLIT)

Natural and Mathematical Sciences

(18 semester hours)

(a) Mathematical Reasoning and Analysis (3 semester hours)

ANTH 319 or PSCI 282 or STAT 201

A student who successfully completes any one of these courses is not eligible to enroll in or receive credit for either of the other two.

(b) Natural Sciences (15 semester hours)

BIOL 114, BIOL 116, BIOL 117, BIOL 119, BIOL 121

Social Sciences

(6 semester hours)

(a) SOCI 203 or approved course in human growth and development

(b) Any other 3-semester hour Social Science course. Select from:

Anthropology (ANTH), Cognitive Science (COGS), Communication Sciences (COSI), Economics (ECON), Political Science (POSC), Psychology (PSCL), Sociology (SOCI).

SAGES Senior Capstone

(3 – 6 semester hours)

The Senior Capstone assimilates the knowledge and skills gained throughout the educational process. Students engage in a unique one or two semester experience designed in consultation with a faculty member. Each Senior Capstone must include key elements:

a) Demonstration of critical thinking and writing skills;

b) Regular oversight by the Capstone advisor;

c) Periodic reporting of progress;

d) Regular writing (e.g. drafts, progress reports, critiques) throughout the project including a final written report which may be a thesis or equivalent document associated with the project or activity (e.g., such pursuits as performance, experiment, live case analysis, or creative writing), as approved by the department of capstone origin; and

e) Oral reports including a final public presentation at the Senior Capstone Fair, a conference, a performance, a public lecture, a teaching presentation, or other, as approved by the department of capstone origin.

Courses meeting this requirement include the designation “Approved SAGES Capstone” in their course descriptions. Some majors include and specify a senior capstone.

BACHELOR OF SCIENCE DEGREE

(Weatherhead School of Management)

Candidates for the Bachelor of Science in Accounting and the Bachelor of Science in Management degrees, in addition to meeting the general requirements for bachelor’s degrees as described above, must also complete the following requirements:

1. A minimum of 122 hours.

2. The Weatherhead School of Management SAGES General Education Requirements.

3. A minimum of 30 semester hours of courses at the 300-400 level.

4. The requirements for a major field as presented in this bulletin in the section devoted to each department or program. For all courses taken in the major department and for which grades are averaged, and for all courses taken to satisfy major requirements and for which grades are averaged, a candidate for a B.S. from the Weatherhead School of Management must earn a minimum cumulative average of 2.000. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields. Transfer students must complete at Case Western Reserve University at least half the hours required for the major.

Bachelor of Science degrees conferred by the Weatherhead School of Management are offered in the following fields:

• Accounting

• Management
SAGES GENERAL EDUCATION REQUIREMENTS OF THE WEATHERHEAD SCHOOL OF MANAGEMENT

The SAGES General Education Requirements of the Weatherhead School of Management are based upon the SAGES General Education Requirements of the College of Arts and Science, and provide a broad educational foundation for programs in accounting and management, leading to the Bachelor of Science degree.

SAGES is an innovative undergraduate experience designed to establish foundations for academic inquiry. Students fulfill their Weatherhead School of Management General Education Requirements with a sequence of specially developed seminars and selected courses. Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer may be used to satisfy general education requirements.

SAGES Program Seminars
(13 semester hours)

The First Seminar (4 semester hours, to be taken in the first semester of enrollment)
The First Seminar focuses on the development of critical thinking and communication skills through the use of a variety of approaches, media, and perspectives to explore the human mind and the nature of inquiry. This course is designed to strengthen writing and analytical skills while building a foundation in ethics, information literacy, and cultural diversity. Select from:

First Seminar: The Life of the Mind (FSCC 100)
First Seminar: Natural World (FSNA 1xx)
First Seminar: Symbolic World (FSSY 1xx)

*Transfer Students only: Transfer students who have completed the English composition/expository writing requirement with a grade of C or higher at the college/university at which they previously matriculated will receive transfer credit for FSCC T100 (3 – 6 semester hours) and will be required to complete a supplemental 1-semester hour SAGES introductory seminar – FSTS 100.

University Seminars
(6 semester hours, minimum of two seminars, to be completed in the first two years of enrollment as specified below) After completion of the First Seminar, students must complete two University Seminars, with each seminar selected from a different thematic group and from a thematic group different from that of the student’s First Seminar. Each University Seminar explores one of three themes, with the content determined according to the interests of the faculty. University Seminars provide continued experience in critical reading, writing, and oral communication as well as information literacy, ethics, and cultural diversity. Select from:

University Seminar: Thinking About the Natural World (USNA 2xx)
University Seminar: Thinking About the Symbolic World (USSY 2xx)

Department Seminar
(3 semester hours)
The Department Seminar includes seminar-based discussion as well as instruction and experience in the kinds of writing characteristic of the Department Seminar’s discipline. The Department Seminar may be taken in the department of the student’s major or in another department. A course used to fulfill the Department Seminar Requirement may not also be used to fulfill a Breadth Requirement.

University Composition Requirement
Students develop a Writing Portfolio comprised of final graded writing assignments from the First Seminar and University Seminars. The Writing Portfolio is submitted for evaluation after completing the final University seminar. Writing competence must be established in order to fulfill the University’s English Composition requirement for graduation.

Physical Education
(Must total 2 full semesters at zero credits)
Students choose from half-semester and full-semester course offerings to be completed in the first year.

Breadth Requirements
(at least 27 semester hours – minimum of nine 3 or 4-semester hour courses)
NOTE: Two courses used to fulfill requirements for the major also may be used to fulfill the breadth requirements.

Arts and Humanities
(6 – 8 semester hours)
Two 3- or 4-semester hour Arts and Humanities courses. Select from:

Arabic (ARAB), Art History (ARTH), Art Studio (ARTS), Chinese (CHIN), Classics (CLSC), Dance (DANC), English (ENGL), French (FRCH), German (GRMN), Greek (GREK), Hebrew (HBRW), History (HSTY), Italian (ITAL), Japanese (JAPN), Latin (LATN), Music - General (MUGN), Music - History (MUH), Music - Theory (MUTH), Philosophy (PHIL), Portuguese (PORT), Religion (RLGN), Russian (RUSN), Spanish (SPAN), Theater (THTR), World Literature (WLIT)

Natural and Mathematical Sciences
(17 semester hours)
MATH 125, MATH 126, STAT 207
Any two 3- or 4-semester hour Natural Science courses. Select from:

Astronomy (ASTR), Biochemistry (BIOC), Biology (BIOL), Chemistry (CHEM), Geology (GEOL), Nutrition (NTRN), Physics (PHYS)

Social Sciences
(6 semester hours)
Management majors:
Any two 3-hour Social Science courses except ECON 102*, ECON 103*, or ECON 326**. Select from:

Anthropology (ANTH), Cognitive Science (COGS), Communication Sciences (COSI), Economics (ECON), Political Science (POSC), Psychology (PSCL), Sociology (SOCI)

Accounting majors
COSI 200 or COSI 280, and any 3-semester hour Social Science course except ECON 102* or ECON 103*. Select from:

Anthropology (ANTH), Cognitive Science (COGS), Communication Sciences (COSI), Economics (ECON), Political Science (POSC), Psychology (PSCL), Sociology (SOCI)

**ECON 102 and 103 are included in Accounting and Management major requirements.

**ECON 326 is a Management major requirement.

SAGES Senior Capstone
(3 – 6 semester hours)
The Senior Capstone assimilates the knowledge and skills gained throughout the educational process. Students engage in a unique one or two semester experience designed in consultation with a faculty member. Each Senior Capstone must include key elements:

a) Demonstration of critical thinking and writing skills;
b) Regular oversight by the Capstone advisor;
c) Periodic reporting of progress;
d) Regular writing (e.g. drafts, progress re-
ports, critiques) throughout the project including a final written report which may be a thesis or equivalent document associated with the project or activity (e.g., such pursuits as performance, experiment, live case analysis, or creative writing), as approved by the department of capstone origin; and e) Oral reports including a final public presentation at the Senior Capstone Fair, a conference, a performance, a public lecture, a teaching presentation, or other, as approved by the department of capstone origin.

Courses meeting this requirement include the designation “Approved SAGES Capstone” in their course descriptions. Some majors include and specify a senior capstone.

DUAL UNDERGRADUATE DEGREE PROGRAMS

To qualify for two undergraduate degrees, i.e., a B.A. and a B.S. degree, or two B.S. degrees, a student must satisfy all requirements for each degree, and complete for the second degree thirty semester hours of study beyond the hours required for the first degree. A student may, however, complete two or more Arts and Sciences majors within the 120 hour minimum requirement for the B.A. degree; or two or more Engineering majors within the 128-133 hour minimum requirement for the B.S. in Engineering degree. Students completing both a B.A. and a B.S. degree are exempted from six hours of the 90 hour arts and sciences requirement for the B.A. A student pursuing two degrees is encouraged to meet with a dean in the Office of Undergraduate Studies, 357 Sears Bldg., to discuss requirements. Students who seek a dual-degree program that involves the B.M. must meet Cleveland Institute of Music and Case Western Reserve admission requirements, and seek approval of both the Cleveland Institute of Music and Case Western Reserve University.

MINORS

For the degrees described above, minors are not required. However, students have the option of completing a minor in a discipline other than the major. A minor concentration normally requires 15-18 semester hours and will be indicated on a student’s transcript if the requirements, as outlined below, are fulfilled:

1. A minor program shall consist of no fewer than 15 and no more than 18 semester hours of specified course work.
2. The responsibility for designating the requirements for a minor shall lie with the department offering the minor.
3. With the exception of minors offered by the Case School of Engineering, students must earn a minimum cumulative average of 2.000 for all courses taken to satisfy minor requirements and for which grades are averaged. Transfer students who wish to complete a minor must complete at Case Western Reserve University at least half the requirements for the minor.

Minor Concentrations

- Accounting
- American Studies
- Anthropology
- Art History
- Art Studio (Art Studio/Photography)
- Artificial Intelligence
- Asian Studies
- Astronomy
- Banking and Finance
- Biochemistry

EXPERIENTIAL LEARNING

Inside and outside the classroom, Case Western Reserve University offers undergraduates a variety of experiences that are built on a process of guided inquiry, preparation, action and reflection. Many research, internship, and employment opportunities are aligned with academic programs. Linguistic and cultural immersion characterize the study abroad experience. Courses that incorporate community service or internships into the curriculum forge links between Case Western Reserve undergraduates and schools, neighborhoods, businesses, and governmental and health care institutions in Cleveland and elsewhere.

COURSE-BASED EXPERIENTIAL LEARNING

In disciplines as diverse as psychology, journalism, engineering, Spanish, Russian, nursing, anthropology, history, and biology, Case Western Reserve students engage in experiential learning beyond the on-campus classrooms and laboratories. Experiences that form the basis for reflection and synthesis under the guidance of faculty include working with hospitalized children, designing engineering solutions for a problem presented by a municipal-
THE COLLEGE SCHOLARS PROGRAM

The College Scholars Program, instituted in 1997, is a two-year academic enhancement program open to undergraduates interested in forming a community of learners dedicated both to excellence in individual intellectual pursuits and applying classroom learning to larger world concerns. The program emphasizes broad interdisciplinary learning beyond the requirements of professional or disciplinary competence, connection of academic learning to the larger society, and development of a sense of the relationship between service and leadership. College scholars collaborate with faculty in the design, operation, and evaluation of the curriculum. The program takes up the equivalent of one course for each of four semesters.

ARSC 201. Introduction to College Scholars I (3)
First course for students already admitted to the College Scholars Program. Principles and practice of leadership, learning styles, ethical decision making, group dynamics, and communication skills.

ARSC 301. College Scholars Colloquia I (3)
Students in the second year of the College Scholars Program, in conjunction with CSP faculty, select topics for interdisciplinary study, construct curricula, and invite visiting speakers.

ARSC 302. College Scholars Colloquia II (3)
Continuation of ARSC 301. Multidisciplinary study of selected topics.

ARSC 397. CSP Senior Project I (3)
Year-long independent study project under the guidance of CSP faculty. In the first semester, preproposals are approved and funded and work commences. In the second semester, work is completed and at year end a public presentation of results is made.

International Experience
Qualified students may participate in programs of study or practical experience that immerse them in the culture and language of another country. Up to 36 semester hours of credit may be granted for study as an exchange student at an established foreign university with which Case Western Reserve has an exchange program.

GLOBAL ENGINEERING EXCHANGE PROGRAM (GE3)

The Global Engineering Education Exchange (GE3) program enables qualified engineering and computer science students to receive up to 36 semester hours of academic credit for courses taken at selected engineering institutions and universities in Europe, Asia, Mexico, and Australia, and to have an internship experience in a foreign setting. The program is administered by the Institute for International Education in collaboration with an international consortium of universities that offer engineering that includes Case Western Reserve. Students participating in exchange programs pay tuition to Case Western Reserve University and maintain their student status during the period of the exchange. Information about the GE3 program is available from the study abroad advisor in the Office of Undergraduate Studies.

BILATERAL EXCHANGE PROGRAMS

Case Western Reserve University has bilateral exchange agreements enabling students from overseas institutions to attend the University as visiting students and permitting Case Western Reserve undergraduates to receive academic credit for study at the following institutions:

- University of Lancaster, UK (all majors)
- University of Manchester, UK (humanities, social sciences)
- University of Sheffield, UK (all majors)
- University of Sydney, Australia (management, accounting, economics, sociology, political science)
- ESC de Montpellier, France (management, accounting)
- University of Frankfurt, Germany (management, accounting)
- Universidad Carlos III, Spain (management, economics)
- Bilkent University, Turkey (all majors)
- National Cheng Kung University, Taiwan (all majors)
- National University of Singapore (all majors)
- Chulalongkorn University, Thailand (engineering)

Case Western Reserve undergraduates participating in exchange programs pay tuition to Case Western Reserve University and maintain their student status during the period of the exchange. Information about bilateral exchange programs with other overseas universities is available from the study abroad advisor in the Office of Undergraduate Studies.

STUDY ABROAD

Full-time undergraduate students who have earned a 3,000 grade point average at the university are eligible to apply for study abroad. Up to 36 semester hours of credit may be granted for study at an established foreign university or for approved foreign study programs offered through accredited American universities. The selection of location and institution for study abroad is made in consultation with the study abroad advisor in the Office of Undergraduate Studies, and must be approved by the Office of Undergraduate Studies and the student's major advisor. Students participating in study abroad pay tuition to Case Western Reserve University and maintain their student status during the period of study abroad. Financial aid may be applied to study abroad.

In recent years, Case Western Reserve University undergraduates have studied in Argentina, Australia, Austria, Chile, Denmark, England, Finland, France, Germany, Ghana, India, Ireland, Israel, Italy, Japan, Kenya, Nepal, the Netherlands, New Zealand, Russia, Scotland, Senegal, South Africa, Spain and Sweden.

UNDERGRADUATE COURSES

Some Case Western Reserve courses for undergraduates incorporate short-term overseas experience into the curriculum. Students are encouraged to seek such opportunities by contacting academic departments of interest.

RESEARCH EXPERIENCE

Independent Study and Honors
Most departments offer courses in independent study to their qualified majors. These are advanced level courses and require departmental approval. Students pursuing research under the guidance of a faculty member may register for “Undergraduate Research” and receive degree credit. A number of majors offer outstanding upperclass students the opportunity to follow an honors program by pursuing independent research and special study in seminars. Those who qualify receive the bachelor’s degree with honors in the majors.

Undergraduate Research
SOURCE: Support of Undergraduate Research & Creative Endeavors
Research experience enables students to start from a base of established knowledge to for-
Cooperative Education (Co-op) is a formal program for one-time community service projects. Study tutoring; and schedules Days of Service coordinates on-going volunteer and work-based courses and SAGES capstone projects; assists faculty and students in designing and implementing community-SERVES projects; assists faculty and students acquire positions in various organizations and gain a better understanding of career objectives and academic goals.

Co-op assignments are full-time work experiences that alternate with course work. Students are encouraged to complete two seven-month co-op periods, consisting of a summer and contiguous spring or fall semester. Employers prefer seven month assignments as the duration allows students to become involved with challenging projects related to their field of study. While the co-op experience is voluntary and non-credit, it may lead to credit for engineering senior projects with approval from the student’s major department.

Students are eligible to co-op after their second year, although schedules vary among departments. Binary and transfer students must complete at least one semester of course work at the university prior to admission to the Co-op Program. The Co-op Program does not involve any additional course work, but merely rearranges the academic course load. One faculty member in each participating department serves as the co-op advisor and provides details regarding the optimal semesters for students to be on co-op assignment.

More than 450 employers throughout the United States have expressed interest in participating in the Co-op Program and offer challenging assignments that can lead to offers for permanent employment upon graduation. Generally, organizations pay co-op students approximately two-thirds of the starting salary of a new graduate. In addition to the financial compensation that students receive while on co-op assignment, students often benefit from the higher starting salaries and greater lifetime earnings that can result from the experience acquired from co-op assignments.

Prior to obtaining a co-op position, students are assisted with identifying organizations of interest, designing a professional resume, and refining interviewing skills. The Co-op Program staff will arrange interviews for students with a variety of organizations.

A student who secures a co-op assignment must register for the non-credit Cooperative Education course which will appear on the student’s academic transcript. Registration for Co-op maintains the student’s full-time student status. During the period of the co-op assignment, repayment of student loans is deferred. Academic scholarships are also deferred until the student returns to campus and enrolls for classes. Students begin the co-op process by attending a Co-op Orientation meeting which provides an explanation of the co-op process and necessary paperwork regarding registration, financial aid, housing, and health services. The Co-op Program is housed in the Case School of Engineering and is accredited by the Accreditation Council for Cooperative Education.

PROFESSIONAL PRACTICUM
Practicum is an experiential learning collaboration between a student, an employer, and the student’s practicum advisor (a faculty member), which is coordinated by the Career Center’s Experiential Learning Specialist. The program is open to undergraduate students enrolled in the College of Arts and Sciences and/or the Weatherhead School of Management. The primary goal of a practicum is the intellectual, personal and professional growth of the student. In order to ensure that this goal is achieved, the involved collaborators establish and agree upon learning objectives prior to the start of the practicum. These objectives are reviewed throughout the semester, and the student’s progress is evaluated at both the mid-point and end of the practicum.

While completing a practicum assignment, a student works full-time for a minimum of 14 weeks in a professional setting and does not take classes. The student will maintain full-time student status during the practicum period. Though credit is not awarded, students who successfully complete the practicum assignment will receive transcript notation. A student may participate in up to two practica, but it is recommended that at least one intervening semester be spent on campus. Students interested in participating in a practicum should contact the Career Center a semester prior to the intended practicum assignment.

Washington Center Program
Students receive credit for interning in Washington, D.C., through the Washington Center Program. The emphasis is on practical ex-
experience in the form of a full-time internship which provides the opportunity for intensive research.

For participating in a semester-length program during the fall and spring semester, students receive nine credit hours for their internship course (WASH 002A). For a summer internship, students receive three credit hours (WASH 002D). In addition, students receive three credit hours for developing a portfolio based on their internship experiences (WASH 002B). Also, as part of the Washington Center program, students participate in a seminar and attend a weekly lecture/discussion group (WASH 002C). The credits earned can be counted as general electives or applied to a student’s major or minor, with the prior consent of the individual departments.

WASH 2A. Washington Center Internship (9)
Credit for semester-length internship experience taken as part of the Washington Center Program during Fall or Spring terms.

WASH 2B. Washington Center - Politics and Public Policy Course (3)
Credit for the Politics and Public Policy course taken as part of the Washington Center Program.

WASH 2C. Washington Center - Portfolio (3)
Credit for the student’s portfolio taken as part of the Washington Center Program.

WASH 2D. Washington Center Summer Internship (3)
Credit for semester-length internship experience taken as part of the Washington Center Program during Summer term.

COLLABORATIVE PROGRAMS WITH OTHER COLLEGES

The Binary (3+2) Program in Engineering
The Binary (3+2) Program allows outstanding students to begin their studies at a liberal arts college/university for three years and pursue an engineering degree at Case Western Reserve University for two years. Students graduate with a baccalaureate degree from their first college along with a Bachelor of Science in Engineering from Case Western Reserve University. The combination of the liberal arts education comprised of mathematics, science, humanities, and social sciences, followed by a professional orientation in engineering, provides the binary student with a unique set of skills for their professional career.

In the first three years, students are to fulfill the required mathematics, science, humanities, and social science courses that are comparable to courses at Case.

Students must maintain a 3.000 overall grade point average and a 3.000 in mathematics and science at their liberal arts college. Binary students generally complete 90 semester hours or 135 quarter hours at their college prior to matriculating at Case. Binary applications are to be submitted during the student’s third year. Binary students enter Case as third-year engineering students.

PREPARATION AND ADVISING
At each partner college, a faculty member is designated as the advisor for the Binary Program. Students are encouraged in their first year to meet with the advisor to plan a three-year curriculum that provides a seamless transition to Case Western Reserve University.

At Case, one faculty member in each engineering department serves as the liaison for the students in the major they have selected. These faculty will guide the students in the selection of the courses needed to complete an engineering degree at Case. The Office of Undergraduate Studies reviews and approves all transfer credits from the liberal arts college.

The Binary Program is coordinated through the Office of Engineering Student Programs (OESP) housed in the Dean’s Office of the Case School of Engineering. In addition to the major department of study, the OESP will serve as the “home” for the students and assist them with scholarships and financial aid, experiential opportunities, extra-curricular involvement, and any other areas of interest as the binary students transition to Case.

ACADEMIC GUIDELINES
Coursework taken at the liberal arts college should include the following:

2. Physics: Courses equivalent to one and one half years of physics: PHYS 121, 122 – General Physics I - Mechanics, General Physics II – Electricity & Magnetism with laboratories.
4. Computer Programming: Course(s) covering elementary computer programming with a laboratory for the development of programming skills in Java (ENGR 131 – Elementary Computer Programming).
5. Natural Science: Mathematics or Statistics courses as designated by major department.
6. Humanities and Social Sciences: Must complete at least 21 semester hours of humanities and social science courses.
7. English: Must complete English courses with college level writing proficiency.
8. Physical Education: Complete all physical education requirements at the liberal arts college.

Students may complete courses in one of the basic engineering science areas that will provide background to their studies at Case Western Reserve University. These courses should have the approval of the faculty liaison both at the liberal arts college/university and Case.

For additional information on the Binary Program and the various curricula, please review the website at www.oesp.case.edu/binary

Binary partnerships exist with the following colleges and universities:

1. Albion College, Albion, Michigan
2. Allegheny College, Meadville, Pennsylvania
3. Baldwin-Wallace College, Berea, Ohio
4. Bates College, Lewiston, Maine
5. Bethany College, Bethany, West Virginia
6. Capital University, Columbus, Ohio
7. Centenary College, of Louisiana Shreveport, Louisiana
8. Clarion University, Clarion, Pennsylvania
9. College of Charleston, Charleston, South Carolina
10. College of Wooster, Wooster, Ohio
11. Dickinson College, Carlisle, Pennsylvania
12. Duquesne University, Pittsburgh, Pennsylvania
13. Kenyon College, Gambier, Ohio
14. Lebanon Valley College, Annville, Pennsylvania
15. Marietta College, Marietta, Ohio
16. Miami University, Oxford, Ohio
17. Monmouth College, Monmouth, Illinois
18. Muskingum College, New Concord, Ohio
19. Notre Dame College, South Euclid, Ohio
20. Oberlin College, Oberlin, Ohio
21. Ohio Wesleyan University, Delaware, Ohio
22. Otterbein College, Westerville, Ohio
23. State University of New York, Brockport, New York
24. State University of New York, Cortland, New York
Cross Registration in Northeast Ohio

If approved by the Office of Undergraduate Studies, full-time undergraduates in good academic standing may cross-register at Baldwin-Wallace College, Chanceller University, the Cleveland Institute of Art, the Cleveland Institute of Music, Cleveland State University, Cuyahoga Community College, Hiram College, John Carroll University, Lake Erie College, Lakeland Community College, Lorain County Community College, Notre Dame College of Ohio, and Ursuline College for one course per semester. Approval is normally limited to courses that are not offered at Case Western Reserve University. To cross-register at the Cleveland Institute of Art, a student must have permission from the university’s director of art studios.

Fisk University Exchange Program

An exchange program between Fisk University and Case Western Reserve University enables up to four Case Western Reserve students to spend a semester as visiting students at Fisk each year. Up to four Fisk students may spend a semester at Case Western Reserve each year. Fisk University was founded in 1866 as the first integrated, coeducational school in the United States, and, at its founding, focused on providing a quality liberal arts education to the children of former slaves. Fisk University has a distinguished history as a liberal arts institution. Fisk University was the first historically black college to have chapters of the Phi Beta Kappa and Mortar Board national honorary societies.

Case Western Reserve students who participate in the Case Western Reserve-Fisk Exchange pay tuition to Case Western Reserve University, pay the Fisk room and board fees, and maintain their student status during the period of the exchange. Information about the exchange program is available from the exchange advisor in the Office of Undergraduate Studies.

Joint Program in Art Education

The joint program in art education of Case Western Reserve University and the Cleveland Institute of Art (CIA) enrolls students pursuing the B.S. in Art Education, combining studio art courses at the Cleveland Institute of Art with liberal arts and education courses at Case Western Reserve University. Admission to the program requires application to Case Western Reserve University and presentation of an art portfolio to the Cleveland Institute of Art; credentials must be acceptable to both institutions. For program details, see the section on Art Education in this Bulletin and in the Handbook for Undergraduate Students.

Joint Program in Music

All programs in music are conducted jointly by Case Western Reserve University and the Cleveland Institute of Music, and provide the intimacy and specialization of a professional conservatory, together with the resources of a comprehensive university. Students pursuing a major in music or music education take music theory and lessons at the Cleveland Institute of Music, and take music history and other liberal arts and music education courses at Case Western Reserve University. Students pursuing the B.A. with a major in music, or the B.S. in Music Education apply to and enroll in Case Western Reserve University, while students seeking the B.M. degree apply to and enroll in the Cleveland Institute of Music. For program details, see the Department of Music section in this Bulletin and in the Handbook for Undergraduate Students.

Joint Program in Teacher Licensure

Ohio teacher licensure may be attained by those undergraduate students who complete the approved curriculum of the Case Western Reserve University/John Carroll University Joint Program in Teacher Licensure. Adolescence/Young Adult Teacher Licensure (grades 7-12) is available in Integrated Language Arts (English major), Integrated Social Studies (history major), Integrated Mathematics (mathematics major), Life Sciences (biology major), and Physical Sciences (chemistry or physics major). Multi-age licensure is available in French, Latin, and Spanish. The program requires 35 credit hours in professional education: 12 taken at Case Western Reserve University and 23 taken at John Carroll University. For program details, see section on Education in this Bulletin and in the Handbook for Undergraduate Students.

The undergraduate/graduate programs in art education and music education meet the requirements for teacher licensure, grades pre-K-12. For further information, see departmental information in this bulletin for art history and art, music, and communication sciences.

Reserve Officer Training Corps (ROTC)

Reserve Officer Training Corps (ROTC) programs are available to Case Western Reserve University students through cooperative arrangements with Kent State University for Air Force ROTC and with John Carroll University for Army ROTC. Each of these universities offers military studies, leadership and training courses. Participating students may seek transfer credit at Case Western Reserve for these courses, and may be exempted from the undergraduate physical education requirement. Students who are not recipients of ROTC scholarships may enroll in the first and second year ROTC courses without incurring any military obligation. University students enrolling in ROTC programs are eligible to compete for ROTC scholarships awarded by the Air Force or the Army. See section on Financial Aid for scholarship information.

Air Force ROTC

The Air Force Reserve Officer Training Corps (AFROTC) program provided by Kent State University prepares students for service as officers in the United States Air Force. Through courses in history, management, and leadership, and through practical training, students acquire leadership and management skills, and learn about Air Force career opportunities, the role of the military in American society, the history of air power, and national defense policy.

An agreement between Case Western Reserve University and Kent State University allows full-time Case Western Reserve students to complete aerospace studies courses. The courses are held at Kent State University, which is approximately 35 miles from Case Western Reserve, and are usually scheduled on one or two afternoons during the week. This arrangement allows Case Western Reserve students to participate in either the four- or two-year AFROTC program. Students wanting to enter the two-year program in the junior year must contact the professor of aerospace studies before March of the year before their planned entry.

Air Force ROTC scholarships are available on a competitive basis. Information about courses, registration, and scholarships may be obtained from the Air Force ROTC DET 630, 104 Terrace Hall Annex, Kent State University, Kent, Ohio 44242; telephone: 330-672-2181.

Army ROTC

The Army ROTC program is designed to prepare young college men and women for service as a commissioned Army officer in either the
active duty U.S. Army or the reserve components of the Army Reserve or National Guard. Classes and practical training focus on military skills, officer professionalism, leadership training, and the development of military-related officer and management techniques and procedures.

Students may enroll in Army ROTC classes through cross-registration in the Department of Military Science at John Carroll University, which is approximately five miles from Case Western Reserve. Military science classes are taught at John Carroll University, with some activities also taking place at Cleveland State University or at Case Western Reserve. Army ROTC scholarships are available on a competitive basis. Information about courses, registration, and scholarships may be obtained from the Department of Military Science (ARMY-ROTC), John Carroll University, University Heights, OH 44118-4581; telephone: 216-397-4421

ACADEMIC ADVISING

Academic advising is an important component of the educational program at Case Western Reserve University. Academic advisors assist students in the exploration of academic opportunities at the university and in the selection of courses. Advisors may refer students to other sources of information and assistance at Case Western Reserve. Students are expected to initiate and maintain regular contact with their advisors to address the student’s curricular and career concerns, and to review progress towards graduation. Students are expected to meet with advisors when declaring a major or minor, before registering for classes, and when making corrections to their academic requirements reports.

First Year Advisors

During a student's first year at Case Western Reserve University, the faculty member instructing the student’s SAGES First Seminar serves as the student’s academic advisor. Students and their advisors are expected to explore the student’s academic interests or concerns, as well as educational and career goals, and to seek expert information and advice about academic policies and procedures and about specific academic programs from the Handbook for Undergraduate Students, from newsletters and websites, from the academic department representatives designated as first year resources, and from other sources of advice and counseling on campus. Staff in the Office of Undergraduate Studies, the University Career Center, Educational Services for Students, the Office of Multicultural Affairs, the University Counseling Service, and in specialized programs such as Co-op (cooperative education), SOURCE (research and creative projects), and the Center for Civic Engagement and Learning (community service) are available to support first year students and their advisors with publications, workshops, websites, experiential learning opportunities, and individual communications.

Selection of Majors and Minors; Departmental Advisors

Although some first year undergraduates enter with definite goals, they are not assigned to departmental advisors until they have declared their major. Opportunities for exploration of majors and minors during the first and second semesters include a Choices Fair, departmental information sessions, and individual conversations with faculty and academic advisors. First year students who are ready to declare a major in their first year may do so beginning in November.

Students engaging in further exploration of majors are expected to declare a major no later than the end of the second year. When a student selects a specific major or minor, the department representative assigns a faculty advisor. A choice or change of major or minor is not recorded for any student until the major or minor declaration form, bearing the signature of the student, the name of the advisor, and the signature of the department representative, has been completed and returned to the Office of Undergraduate Studies, 357 Sears Bldg.

After the first year, students who have not declared a major should consult their assigned advisor (noted in their online student information) or the academic representative of an academic department of interest for advice and schedule approval.

Advising in the Office of Undergraduate Studies

The deans and advisors in the Office of Undergraduate Studies are available to answer student and faculty questions about university rules, practices, programs, and resources and to meet with students who are interested in study abroad, accelerated undergraduate to graduate and professional school programs, academic awards, and fellowship and scholarship opportunities. All students who have not declared a major should consult with their first year advisor or with one of the advisors in the Office of Undergraduate Studies for advising and schedule approval. Students with interests in health professions and/or law school are encouraged to seek advice from the pre-health professions advisors and the pre-law advisor in the Office of Undergraduate Studies.

ACADEMIC REGULATIONS

All academic regulations governing undergraduates are administered by the Office of Undergraduate Studies. Academic regulations are subject to change by action of the Faculty Senate Committee on Undergraduate Education and the various committees responsible for the oversight of curriculum and academic standing. For the latest information consult the Handbook for Undergraduate Students.

When circumstances so warrant, a student may submit to the Office of Undergraduate Studies a petition requesting an exception a specific regulation.

ACADEMIC INTEGRITY POLICY

Students, faculty, and administrators share responsibility for the determination and preservation of standards of academic integrity. They must not only adhere to their own personal codes of integrity but also be prepared to educate others about the importance of academic integrity, to take reasonable precaution to discourage violations of academic integrity, and to adjudicate violations.

For students, education about the importance of academic integrity begins during the admissions process. The centrality of integrity to the academic enterprise is reinforced during new student orientation when students engage in discussion about academic integrity. Specific mention of academic integrity and course-specific guidelines should be presented in all classes. Programs and instruction about academic integrity guidelines are offered throughout the students’ undergraduate career.

Faculty and students are expected to uphold standards of academic integrity by taking reasonable precaution in the academic arena. Reasonable precaution involves implementing measures that reduce the opportunities for academic misconduct but do not inhibit inquiry, create disruption or distraction in the testing environment, or create an atmosphere of mistrust.

The vitality of academic integrity is dependent
upon the willingness of community members to confront instances of suspected wrongdoing. Faculty have specific responsibility to address suspected or reported violations as indicated below. All other members of the academic community are expected to report directly and confidentially their suspicion of violation to a faculty member or a dean or to approach suspected violators and to remind them of their obligation to uphold standards of academic integrity.

Definition of Violations
All forms of academic dishonesty including cheating, plagiarism, misrepresentation, and obstruction are violations of academic integrity standards. Cheating includes copying from another’s work, falsifying problem solutions or laboratory reports, or using unauthorized sources, notes or computer programs. Plagiarism includes the presentation, without proper attribution, of another’s words or ideas from printed or electronic sources. It is also plagiarism to submit, without the instructor’s consent, an assignment in one class previously submitted in another. Misrepresentation includes forgery of official academic documents, the presentation of altered or falsified documents or testimony to a university office or official, taking an exam for another student, or lying about personal circumstances to postpone tests or assignments. Obstruction occurs when a student engages in unreasonable conduct that interferes with another’s ability to conduct scholarly activity. Destroying a student’s computer file, stealing a student’s notebook, and stealing a book on reserve in the library are examples of obstruction.

Discussing, Reporting, and Adjudicating Violations
If a faculty member suspects that an undergraduate student has violated academic integrity standards, the faculty member shall advise the student and the department chair and consult with an Undergraduate Studies dean about the appropriate course of action. Before speaking with the student, the faculty member also may choose to consult with the chair or dean about academic integrity standards. If the faculty member, in consultation with the dean, determines that the evidence is not adequate to charge the student with a violation, the matter will be dropped. Otherwise, the following procedures will be followed:

First Violations
If the faculty member and the student agree that a violation has occurred and the violation is determined to be a first violation (the university has no record of previous violations by the student of the university’s Standards of Conduct), the faculty member shall choose either to sanction the student or to refer the case to the academic integrity board. If the faculty member chooses to sanction the student, the minimum sanction is failure in the work in question and the maximum sanction is failure in the course. The faculty member will be provided with a standard reporting form to be signed by both the student and faculty member.

However, the case will be referred to the director of judicial affairs for integrity board action if:
1. the student claims not to have violated academic integrity standards or the student disagrees with the sanction imposed by the professor; and
2. the faculty member feels that the seriousness of the first offense warrants presentation to the academic integrity board; or the faculty member, after consultation with the dean, prefers to have the academic integrity board investigate or adjudicate the alleged violation, or prefers that the board sanction the student.

The signed report form from a faculty member or the finding of responsibility by the academic integrity board will become part of the student’s university judicial file. Students found responsible for a first violation will be required, in addition to any other sanctions imposed, to attend an ethics education program or to complete an ethics exercise as assigned by the dean of undergraduate studies or the director of judicial affairs.

Subsequent Violations
If the university judicial file indicates that the student suspected of a violation has been responsible for one or more previous violations of the university’s Standards of Conduct, the case will be referred to the director of judicial affairs for Academic Integrity Board Action.

Misrepresentation and Obstruction
Reports of suspected academic misrepresentation or obstruction occurring in settings other than the classroom will be referred to the director of judicial affairs for Academic Integrity Board Action.

Academic Integrity Board

If a suspected or known violation of academic integrity standards warrants consideration by the Academic Integrity Board, the director of judicial affairs will convene the board. The board will be composed of three students (voting members) appointed by the Undergraduate Student Government, two faculty (voting members) appointed from a list of faculty members annually identified by the Office of Student Affairs as willing to serve and approved by the Executive Committee of the Faculty Senate and two administrators (non-voting members). One administrator will be a dean from the Office of Undergraduate Studies. The other administrator, the associate vice president from the Office of Student Affairs or his or her designee, will chair the board. All members of the board may question witnesses. Academic Integrity Board Procedure, the vote required for the determination of responsibility, and the evidence standard will be the same as those for the University Judicial Board.

Should the board find the student not responsible for a suspected violation, the faculty member and the student will be so informed. The faculty member will be asked to evaluate the student’s performance in the assignment in question and to issue a grade based on his or her normal grading practices.

If the board finds a student responsible for a violation of academic integrity standards, the board will notify the student and the faculty member. The board can sanction violations by issuing failure in the work in question, failure in the course, university disciplinary warning, university disciplinary probation, university disciplinary suspension, or expulsion.

In cases in which the Academic Integrity Board finds a student responsible for a second or subsequent violation, the minimum sanction will be failure in the course; the maximum penalty will be expulsion.

If the Academic Integrity Board finds a student responsible for misrepresentation or obstruction, the minimum sanction will be university disciplinary probation; the maximum penalty will be expulsion.

Violations Reported after Voluntary Withdrawal or Academic Separation
Suspected violations of academic integrity standards reported after a student voluntarily withdraws or is academically separated will be investigated and adjudicated. A student who withdraws or is academically separated during
the investigation and adjudication of a suspected violation may be asked to appear at a hearing or, if the student fails to appear, have his or her case heard in absentia. If the student is found responsible for a violation, sanctions can be imposed.

Violations Reported after Graduation
In the event that a suspected violation of academic integrity standards is reported after graduation, the director of judicial affairs will make a determination as to the feasibility of investigation and adjudication. Graduation will not preempt investigation or adjudication of a suspected violation when those processes are feasible. If a student is found responsible for a violation and the sanction imposed makes the student ineligible to earn his or her degree, the degree may be revoked.

Maintenance of Records
Violations of academic integrity standards are considered violations of the university’s Standards of Conduct and will be recorded in the student’s judicial record. University judicial files are maintained by the director of judicial affairs in the Office of Student Affairs.

APPLICATION FOR GRADUATION
A student who has completed all graduation requirements in fewer than four years has the choice of graduating early or deferring graduation in order to graduate with his or her class. A student who completes all graduation requirements in four years or more must graduate at that time.

In addition, the student must file an on-line application for the degree through the Student Information System by October 15 for January graduation, by January 15 for May graduation, and by June 15 for August graduation; and the student must have discharged all financial obligations to Case Western Reserve University.

ATTENDANCE
Students are expected to attend classes regularly. Each instructor is free to determine the extent to which absences affect the final grades of students but should make the policy regarding attendance known at the start of the course. Instructors should report excessive absences to the Office of Undergraduate Studies. Instructors who judge a student’s absences to class to be excessive may drop the student from the course with a grade of F. Instructors taking such action must notify the student’s dean in writing.

Mathematics courses which duplicate work taken earlier in high school or in another institution. First year undergraduates who have questions regarding their eligibility to receive credit for foreign language or mathematics courses should see the assistant dean for first year students in the Office of Undergraduate Studies.

COURSE REPETITION
Students have the opportunity to retake a course in which they have received an evaluative grade (A, B, C, D, or F) in order to improve their performance. When a course is repeated, the first grade will remain visible on the transcript, but will be removed from the calculation of the cumulative grade point average and the grade point average for the semester in which the course was first taken. The new grade will then be used for calculation of the cumulative grade point average and the grade point average for the semester in which it was earned, regardless of whether the new grade is higher or lower than the first grade. The student’s transcript will show the comment “GRADE NOT COUNTED. COURSE REPEATED” directly below the original grade. However, if the first attempt of the course resulted in a passing grade, but the second attempt results in a failing grade, then the original grade will remain, both grades will be included in the grade point average calculation, and the student will continue to earn credit for the first attempt. Similarly, if a student withdraws from a course that is being repeated, the original grade will stand. Course repetition may be exercised according to the following conditions:

1. A student may not use the Pass/No Pass Option on a course that is being repeated.
2. An academic action that occurred under the earlier grade is neither reversed nor removed from the record as a result of a change in the semester or cumulative averages that results from the repetition of one or more courses.
3. All grades earned at Case Western Reserve University, including those grades removed as a result of the application of the course repeat policy, will be applied to the Scholarship GPA that is reviewed in order to determine Case Western Reserve University merit-based scholarship retention.
4. The course repeat option may not be exercised after a degree has been awarded.

CAUTION: Students who are the recipients of any form of federal financial aid (grants,
loans, work study, etc.) and repeat a course that previously earned a passing grade must enroll for a minimum of 12 credits for which credit had not been earned previously.

CREDIT BY EXAMINATION

Advanced Placement/International Baccalaureate Examinations

Students may earn degree credit on the basis of advanced examinations taken while in secondary school. Examinations eligible for credit and/or advanced placement include, but are not limited to College Board Advanced Placement Examinations and International Baccalaureate Higher Level Examinations. Determination of the criteria for granting credit and/or placement is made by the appropriate department. In assigning credit or granting advanced placement for credentials from outside the United States, the university is guided by the placement recommendations and grade equivalencies approved by the National Council on the Evaluation of Foreign Educational Credentials.

Proficiency Examinations

Departments within each academic unit offering undergraduate programs may choose to offer students the opportunity to earn course credit in specific courses by proficiency examination. To qualify for proficiency examination credit for a course, the student’s examination performance must demonstrate knowledge and skills at a level no lower than that of an average student who successfully completes the course. Upon notification from the academic department, the Office of Undergraduate Studies will direct the Office of the Registrar to post credit for the course on the transcript. The grade will be recorded as PR, and will not be included in a student’s grade point average.

NOTE: Any student who receives proficiency credit for a course through a proficiency examination administered during a semester when the student is not registered for a full-time schedule (12 or more semester hours) at Case Western Reserve University is charged a fee equal to one-third of the present tuition charge for the course. No fee is charged if the student does not receive credit from the examination.

FINAL EXAMINATIONS

Final examinations normally are required in all courses and must be given during the final examination period at the time assigned by the Registrar; they may not be given during the final week of classes or on Reading Days. Any exception must be approved by the dean of undergraduate studies.

No student will be required to take more than two final examinations on a single day. A student who has three final examinations scheduled for a single day should go to the Office of Undergraduate Studies and obtain the assistance of the dean in arranging to take one of those examinations on an alternative day during the final examination period. Similarly, a student with conflicting examinations should seek the assistance of the dean of undergraduate studies in arranging to have the time of one examination changed.

A student must explain immediately and in writing to the dean of undergraduate studies an absence from a final examination. If the explanation is acceptable, the dean will authorize the assignment of the grade Incomplete and the administration of a make-up examination by the instructor. In the event of an unexcused absence from a final examination, the instructor should assign the student a final grade that assumes a grade of zero on the final examination and is consistent with the grading policy established for the course.

GRADING SYSTEM

See section on Registration.

ASSIGNMENT OF THE INCOMPLETE GRADE

The Incomplete grade (I) is assigned by and at the discretion of the instructor when: a) there are extenuating circumstances, explained to the instructor before the assignment of the grade, which clearly justify an extension of time beyond the requirements established for and met by other students in the class, and b) the student has been passing the course and only a small segment of the course, such as a term paper, remains to be completed. It is the student’s responsibility to notify the instructor of the circumstances preventing completion of all assigned work. In the absence of notification or adequate justification the instructor has the authority to assign the student a final grade that assumes a failing grade for the missing work. An Incomplete grade should not be assigned when: a) a student has been absent for much of the semester and/or has done little of the work required for a course, or b) because a student is absent from a final examination, unless the dean of undergradu-
ing and who are currently enrolled in 12 or more hours.
3. The Pass/No Pass Option can be exercised for only one course during any semester.
4. The Pass/No Pass Option cannot be used for courses being taken for satisfaction of Engineering Core or General Education Requirements.
5. The Pass/No Pass Option cannot be used for courses taken for the satisfaction of requirements of a major or minor concentration.
6. The Pass/No Pass Option cannot be used for courses that are being repeated.
7. Courses which are graded on a Pass/No Pass basis (e.g. PHED 055A) do not preclude the student's use of the Pass/No Pass Option in another course taken that same term.
8. Instructors are not notified of a student's use of this option. They are required to submit evaluative grades for all students and these are converted to Pass/No Pass in the Registrar's Office. The meaning of the P and NP will be noted on the transcript.
9. Once a course is completed under the Pass/No Pass Option, the student CANNOT reverse the Pass/No Pass grade in order to reveal and have posted the actual letter grade earned, or use the course for a purpose for which the use of a Pass/No Pass is prohibited.

NOTE: Students majoring in any Weatherhead School of Management major may not use the P/NP option for any Weatherhead School of Management courses, either required or elective. (ACCT, BAFI, BLAW, ENPT, LHRP, MGMT, MIDS, MKMR, OPMT, ORBH, OPRE, PLCY).

PETITIONS

Students may request exceptions to university rules and curricular requirements by petition to the Office of Undergraduate Studies. Please be reminded that a lack of knowledge of regulations that are published in the University General Bulletin, the Schedule of Courses, or the Handbook for Undergraduate Studies is not justification for an exception. Petition forms are available in the Office of Undergraduate Studies, 357 Sears Bldg. Petitions are referred to the the appropriate committee of the Faculty Senate Committee on Undergraduate Education.

PROFICIENCY EXAMINATIONS

See Credit by Examination, above.

PROMOTION

The standards for promotion are:
- To the sophomore class, 27 hours completed
- To the junior class, 60 hours completed
- To the senior class, 90 hours completed

READING DAYS

Prior to and/or during the final examination period two weekdays are set aside as Reading Days to be used by students for completing assignments and preparing for final examinations. In the fall semester there will be one reading day on Monday of the first exam week and one reading day on Friday of the first exam week. In the spring semester, the two days prior to the beginning of the final exam period are set aside as reading days. These days are not to be used by faculty for scheduling examinations or other course activities that require the attendance of students. They may be used by faculty to schedule review sessions for which attendance is optional.

READMISSION AFTER SEPARATION

See section on Academic Standing

RE-ENROLLMENT AFTER VOLUNTARY WITHDRAWAL

Students who have voluntarily withdrawn from the university and have not taken courses elsewhere following their withdrawal may re-enroll in any semester. Students who have taken courses elsewhere following withdrawal must provide official transcripts of their work with their request for re-enrollment. Upon re-enrollment following a voluntary withdrawal, students retain the hours earned and quality points for courses completed prior to withdrawal. In the first semester of re-enrollment, their academic status is the status in effect at the time of withdrawal, unless that status is changed by action of the Committee on Academic Standing.

TRANSFER CREDIT

Students may receive credit by transfer from another accredited college, university, or technological institute in the United States or from institutions of higher education outside the United States.

At the time of admission to Case Western Reserve University and upon presentation of an official transcript from each institution previously attended, credit will be awarded for courses equivalent or comparable to those offered by the university and completed with a grade of C or better. Any such courses taken prior to the student’s graduation from high school must be listed in the college's catalog among courses offered for degree credit to the college's undergraduates, taken in the company of matriculated college students, and organized and taught by college faculty. In addition, to be considered for transfer credit, such courses must not have been used to fulfill high school graduation requirements. The allocation of transfer credit is determined by the Office of Undergraduate Studies in consultation with the appropriate department.

After matriculation in the university, undergraduates are permitted to earn a maximum of 15 semester hours as transient students at other accredited institutions during the summer. Advance approval from the Office of Undergraduate Studies is required. Credit earned elsewhere after matriculation is not applied toward the 60 hour minimum required in residence.

Credit is not awarded for work done at an unaccredited institution in the United States except by proficiency examination in those departments of Case Western Reserve University offering that opportunity. The award of transfer credit for work done at institutions outside the United States is subject to departmental evaluation and to the recommendations of the National Council on the Evaluation of Foreign Credentials.

A student dismissed for poor scholarship from any institution cannot receive credit for courses taken in the first two sessions after dismissal without permission of the dean of undergraduate studies.

Grades for courses taken at other institutions will not be entered on the student's record nor will they be computed in the student's grade point average.

WITHDRAWAL FROM A COURSE

The First Undergraduate Year:

For the first two semesters of enrollment and after consultation with a dean in the Office of Undergraduate Studies, matriculated students who are beginning their college studies may withdraw from a course at any time during the semester, but no later than the last day of classes. Any course for which a grade of W is assigned will not be posted on the official transcript. This policy is not available for
A student is eligible for separation without a period of separation if they have earned a semester grade point average of 2.000 or higher and have attained the incomplete courses with grades that justify their retention before they will be allowed to continue in the colleges.

Ineligible to Register
Students will be declared “ineligible to register” when they have Incomplete grades which if averaged as F make them eligible for separation. Such students will be required to finish the incomplete courses with grades that justify their retention before they will be allowed to continue in the colleges.

Restoration To Good Standing
Students will be restored to Good Standing at the end of their semester of academic probation if they have earned a semester grade point average of 2.000 or higher and have attained the 2000 cumulative grade point average and cumulative hours that are required for good standing (see above).

Readmission
Students separated for reasons of scholarship may petition for readmission after two regular sessions have elapsed. In determining the period of separation, summer session is considered a regular session. Students readmitted
after being separated for reasons of academic performance will retain earned credit only for those courses passed with a grade of C or better. Readmitted students do not retain quality points earned before separation, and the cumulative grade point average subsequent to readmission will be computed solely on the basis of work completed following readmission. Students readmitted after being separated must thereafter maintain good academic standing. A readmitted student who performs below the level required for good standing will be eligible for permanent separation from the university. Students separated for reasons of academic performance may not offer for transfer credit work taken elsewhere during the two sessions after their dismissal unless such work has been specifically approved in advance by the Office of Undergraduate Studies.

**PROGRAMS ALLOWING ACCELERATION TOWARD PROFESSIONAL DEGREES**

**Senior Year in Professional Studies at Case Western Reserve University**

Students of outstanding ability and attainment who are candidates for the B.A. and who are admitted to professional studies in Case Western Reserve University by the end of the junior year are offered an opportunity to shorten their entire course of studies by one year through the Senior Year in Professional Studies privilege. Application should be made during the second semester of the junior year through the dean of undergraduate studies. This privilege is extended to qualified students who are candidates for the B.A. and who attend the School of Dental Medicine, the School of Medicine, the Frances Payne Bolton School of Nursing, or the Mandel School of Applied Social Sciences of Case Western Reserve University.

A student granted the senior year in professional studies privilege is permitted to substitute the work of the first year in a professional school for that required during the last year in the undergraduate college. Upon the satisfactory completion of the first year’s work in the professional school, the student will be granted the bachelor’s degree from the College of Arts and Sciences. To be eligible for the senior year in professional studies privilege, a student must:

1. Be accepted for admission to professional studies in Case Western Reserve University by the end of the junior year.

2. Meet the following degree requirements:
   a. Completion of the SAGES General Education Requirements of the College of Arts and Sciences and two semesters of physical education, unless excused from the latter.
   b. Completion of three-fourths of the courses required for the major, including three-fourths of the courses required in the major department.
   c. Completion of 84 hours of arts and sciences courses. These credits may be drawn from those offered by the College of Arts and Sciences as well as those in economics, biochemistry, nutrition, or computer science.
   d. Completion of at least 90 semester hours of academic credit, of which the final 60 hours must have been in residence. A student may include in that final 60 hours no more than six semester hours earned in courses completed in other institutions, either by cross registration in regular sessions or by approved transient registration in summer sessions. (Note: Students applying for the Senior Year in Professional Studies in the School of Medicine will generally be expected to have completed at least 117 hours towards the B.A. degree.)

Upon admission to the program, students register in the professional school to which they have been admitted and are subject to the policies, rules and regulations of the professional school. They may, however, continue to receive merit-based undergraduate scholarships and may continue to reside in undergraduate housing during what would normally be their senior year of undergraduate work.

For information, contact the Office of Undergraduate Studies, 357 Sears Bldg., 216-368-2928, e-mail: ugstudies@case.edu.

**Senior Year in Absentia Privilege for Students of Medicine and Dentistry**

Students of outstanding ability and attainment who are candidates for the B.A. and who are offered admission to a medical or dental school other than those at Case Western Reserve University at the end of the junior year are eligible for an opportunity to shorten their entire course of studies by one year through the Senior Year in absentia privilege. Application for this privilege should be made during the second semester of the junior year through the dean of undergraduate studies.

A student granted the Senior Year in absentia privilege is permitted to substitute the work of the first year in a professional school for that required during the last year in the undergraduate college. Upon the satisfactory completion of the first year’s work in the professional school, the student will be granted the B.A. and B.S. from the College of Arts and Sciences. The privilege is extended to qualified students who attend medical schools in the United States or Canada approved by the Association of American Medical Colleges or dental schools in the United States approved by the American Association of Dental Schools.

To be eligible for the Senior Year in absentia privilege, a student must:

1. Attain a cumulative grade point average of at least 3.200 in all courses attempted from the date of admission as an undergraduate.

2. Meet the following degree requirements:
   a. Completion of the Arts and Sciences SAGES General Education Requirements and two semesters of physical education, unless excused from the latter.
   b. Completion of three-fourths of the required courses for the major, including three-fourths of the courses required in the major department.
   c. Completion of 84 hours of arts and sciences courses. These credits may be drawn from those offered by the College of Arts and Sciences as well as those in economics, biochemistry, nutrition, or computer science.
   d. Completion of at least 90 semester hours of academic credit, of which the final 60 hours must have been in residence. A student may include in that final 60 hours no more than six semester hours earned in courses completed in other institutions, either by cross registration in regular sessions or by approved transient registration in summer sessions.

For information, contact the Office of Undergraduate Studies, 357 Sears Bldg., 216-368-2928, e-mail: ugstudies@case.edu.

**For Candidates for the B.S. in Accounting**

There are two programs that integrate graduate and undergraduate work in accounting. These programs are strongly recommended...
for those individuals planning to become certified accounting professionals, particularly as CPAs (Certified Public Accountants).

**Joint B.S. in Accounting/Master of Accountancy (M.Acc.)**

Students who are candidates for the B.S. in accountancy and who wish to earn a master’s degree in accountancy may apply to the B.S./M.Acc. program. Students in the program enroll during the senior year in six hours of M.Acc. courses that will serve toward satisfaction of both the B.S. and M.Acc. degree requirements. Before taking graduate course work, the student must have completed all prerequisites for the course on the undergraduate level and have a “B” average in those prerequisites. Following completion of the B.S., students in the program will enroll in the Weatherhead School of Management to complete an additional 30 hours of courses to satisfy M.Acc. degree requirements. For information, see Professor Larry Parker, 459 Peter B. Lewis Building, 216-368-2065, e-mail: larry.parker@case.edu.

**Accelerated B.S. in Accounting/ Master of Accountancy (M.Acc.) Program**

This program allows motivated students to accelerate their pursuit of both the B.S. and M.Acc. degrees. In addition to applying six credit hours of Weatherhead graduate course work towards their undergraduate degree program, students in this program may begin taking more graduate course work before completing all of their undergraduate degree requirements. To enroll in this program, students must have:

1. Completed 90 hours of undergraduate course work
2. Completed all of the undergraduate Weatherhead SAGES General Education Requirements
3. Completed 36 hours of the Weatherhead Management requirements (including 18 hours of the required Accountancy coursework)
4. Achieved at least a 3.000 overall grade point average. Students in this program will receive both the B.S. and the master’s degree at the end of the program. For the first eight semesters of study, the student will register as an undergraduate in Case Western Reserve University; thereafter, students will register in the graduate professional degree program in the Weatherhead School of Management. For information, see Professor Larry Parker, 459 Peter B. Lewis Building, 216-368-2065, e-mail: larry.parker@case.edu.

**PROGRAMS ALLOWING ACCELERATION TOWARD GRADUATE STUDY**

**Integrated Graduate Studies Program**

The Integrated Graduate Studies Program (IGS) is intended for highly motivated undergraduate students who are candidates for the B.A. and whose objective is a degree at the master’s or doctoral level. Qualified students may be admitted to graduate study for their senior year and pursue the simultaneous completion of requirements for both the master’s and bachelor’s degrees. The baccalaureate will normally be awarded upon completion of the requirements for both degrees, unless a student satisfies all B.A. requirements prior to completing the master’s degree requirements. Students in the IGS Program are exempted from the 42-hour restriction imposed on B.A. candidates for work above the 100-level in a single department. However, the exemption is granted only upon completion of the master’s degree requirements.

Eligibility requirements for participation in the Integrated Graduate Studies Program are:

1. 90 semester hours earned of which the last 60 hours must have been in residence at Case Western Reserve University
2. Completion of the SAGES General Education Requirements of the College of Arts and Sciences and two semesters of physical education; students who have fulfilled all SAGES General Education Requirements except the Senior Capstone will be required to complete the capstone during their first year in the IGS program
3. Completion of three quarters of the requirements for the major concentration, including three quarters of the courses required in the major department
4. Admission to a master’s or doctoral program offered through the School of Graduate Studies

Upon admission to the program, IGS students register as students in the School of Graduate Studies and are subject to the policies, rules and regulations of the School of Graduate Studies. They may, however, continue to receive merit-based undergraduate scholarships and may continue to reside in undergraduate housing during what would normally be their senior year of undergraduate work.

**For Candidates for the B.S. in Nutrition**

Integrated B.S./M.S. in Nutrition

Admission to the Integrated B.S./M.S. in Nutrition program is subject to the same process and requirements as admission to the Integrated Graduate Studies Program described above. Upon successful completion of the program, students earn the B.S. in Nutrition and the M.S. in Nutrition.

**For Candidates for the B.S. in Engineering, Computer Science, Mathematics, Natural Sciences and Statistics**

B.S./M.S. Program

The Integrated B.S./M.S. Program is intended for highly motivated candidates for the B.S. in engineering, computer science, mathematics, natural sciences, or statistics who wish to pursue an advanced degree. Application to the B.S./M.S. program must be made after completion of 75 semester hours of course work and prior to attaining senior status (completion of 90 semester hours). Generally, this means that a student will submit the application during his/her sixth semester of undergraduate course enrollment and will have no fewer than two semesters of remaining B.S. requirements to complete. Applicants in engineering or computer science should consult their departmental B.S./M.S. advisor in the Case School of Engineering. Applicants in mathematics, natural sciences, and statistics should consult the dean of undergraduate studies.

A student admitted to the program may, in the senior year, take up to nine hours of graduate courses (400 level and above) that will count towards both B.S. and M.S. requirements. The courses to be doubled-counted must be specified at the time of application. Any undergraduate course work that is to be applied to the M.S. must be beyond that used to satisfy B.S. degree requirements and must conform to university, school, and department. Students may petition to transfer graduate course work taken prior to application to the B.S./M.S. Program subject to the rules of the Graduate School.

Students for whom the master’s project or thesis is a continuation and development of the senior project should register for Exxx 651 Thesis (or the appropriate project course) during the senior year and are expected to complete all other courses for the B.S. before enrolling in further M.S. course work and thesis (con-
Dentistry. This program requires eight years:

blanced and committed entering fi rst year un-
The fi rst two years of the program are spent in
Six-Year Dental Program

The Pre-Professional Scholars Programs in medicine, dentistry, law, and social work grant
to a few outstanding, entering fi rst year un-
dergraduates conditional commitments of ad-
mission to the appropriate professional school at Case Western Reserve University. These
commitments are honored upon successful
completion of the requirements established
by each professional school. Students admitted
to these programs are relieved of much of the
anxiety and uncertainty associated with pre-
professional studies. Consequently, they
feel free to undertake challenging courses of
study and pursue a variety of interests as they
prepare for professional studies. Pre-Pro-
fessional Scholars are free to choose any of
the bachelor's degrees available in the university.
Participants who wish to change their career
goals or apply for admission to other profes-
sional schools are free to do so.

The Six-Year Dental Program gives exceptionally
able and committed entering fi rst year undergraduates the opportunity to accelerate
their undergraduate and professional studies.

The Early Admission Decision Program in Law is open to outstanding students who have
completed two years of undergraduate study in
the colleges and have taken the Law School
Admission Test (LSAT). Up to four students
per year will be granted a conditional commit-
ment of admission to the Case School of Law.
The commitment will be honored upon suc-
cessful completion of a program planned indi-
vidually with the pre-law advisor. For addi-
tional information, contact Professor JoAnne
Jackson, pre-law advisor, 357 Sears Bldg., 216-
368-2928, e-mail: prelaw@case.edu.

Pre-Professional Scholars Program in Dentistry
Each year, approximately 10 exceptionally
well-qualified high school seniors who plan to pursue careers in dentistry are offered places
in the Pre-Professional Scholars Program in
Dentistry. This program requires eight years:

four years of successful undergraduate study
and four years at the School of Dentistry.

Pre-Professional Scholars in Dentistry are free
to choose a major in an area of interest, but
must take the following courses to fulfill ad-
mission requirements of the School of Den-
tistry:

1. Chemistry: CHEM 105, 106, Principles of
Chemistry I, II; CHEM 113, Principles of
Chemistry Laboratory; CHEM 223, 224,
Introductory Organic Chemistry I, II; and
CHEM 233, 234, Introductory Organic
Chemistry Laboratory I, II

2. Biology: BIOL 214, Genes and Evolution;
BIOL 215, Cells and Proteins; and BIOL
216, Organisms and Ecosystems; and the
associated laboratory courses

3. Mathematics: MATH 125, Calculus I
Physics I, II

They are required to take the Dental Admis-
sion Test in the junior year and achieve an
acceptable level of performance on the test.

Successful progress through the program and
admission to dental studies will be based on
the pre-professional scholar's continuing to
fulfill expectations for outstanding personal
and academic development and on the schol-
ar's achievement of cumulative grade point
average of 3.250 or higher for his or her work
overall, as well as for his or her work in the
required sciences. Successful progress in the
program will be determined individually and
reviewed at regular intervals during the stu-
dent's undergraduate career.

Pre-Professional Scholars in Dentistry who
wish to accelerate their program may apply for
the senior year in professional studies privi-
lege.

Six-Year Dental Program
Each year a few exceptionally well-qualified
high school seniors who plan to pursue careers
in dentistry are offered places in the Six-Year
Dental Program.

The fi rst two years of the program are spent in
undergraduate studies. Students are required
to earn a minimum of 60 semester hours.
They are required to take all of the science
and mathematics courses listed above for the
Pre-Professional Scholars Program in Den-
tistry. If Advanced Placement credit is used to
satisfy some of these science requirements, a
minimum of 30 semester hours in biology,
chemistry, physics, and mathematics must be
taken during the two years of undergraduate
study. Additionally, to meet general education
requirements, students must take one year of
physical education, First Seminar, two Uni-
versity Seminars, one course in the area of
Arts and Humanities, one course in the area of
Social Sciences, and a course in Global and
Cultural Diversity. To qualify for the place re-
served in the School of Dentistry, a student in
the program must achieve the following:

1. A cumulative grade point average of 3.250
or higher for all course work completed.
2. Grades of B or higher in the required cours-
es in biology, chemistry, physics, and math-
ematics.
3. An average score of 18 or higher on both
the academic and PAT portions of the Den-
tal Admission Test of the American Dental
Association. The test must be taken no later
than April of the second year.

Pre-Professional Scholars Program in Law
Each year, approximately twelve exceptionally
well-qualified high school seniors who plan to
pursue careers in law will be offered places in

Pre-Professional Scholars Program in Law at Case Western Reserve University. Pre-Pro-
essional Scholars receive a conditional com-
mmitment of admission to the Case Western
Reserve School of Law, to be honored upon
completion of the bachelor's degree at the
University.

The Pre-Professional Scholars in Law are en-
couraged to gain a wide cultural experience in
their undergraduate studies, to major in the
area that most interests them and to choose
courses in which they will learn habits of rigor
and logical analysis. The law school encourag-
es applications from all majors, including en-
gineering and the sciences. The School of Law
recommends that Pre-Professional Scholars in
Law take courses in accounting, economics,
history, and philosophy and that they gain as
much writing experience as possible, because
the ability to write effectively is critical to suc-
cess in law school and legal practice.

Students admitted to the Pre-Professional
Scholars Program in Law will be guaranteed
a seat in the School of Law upon graduation
from Case Western Reserve University if they
satisfy the following requirements:

1. Graduation from Case Western Reserve
University with rank in the top quarter of
the class.
2. Demonstration of good moral character
sufficient for admission to the bar of the State of Ohio.
3. Participation in the Law School Data Assembly Service and an LSAT score at or above the 65th percentile.

Pre-Professional Scholars Program in Medicine
Each year, approximately 25 exceptionally well-qualified high school seniors who plan to pursue careers in medicine are offered places in the Pre-Professional Scholars Program in Medicine. Pre-Professional Scholars receive a conditional commitment of admission to the University Program of the Case Western Reserve University School of Medicine to be honored upon successful progress toward and completion of the bachelor’s degree. The Pre-Professional Scholars Program in Medicine requires eight years: four years of successful undergraduate study leading to the bachelor’s degree followed by four years in the University Program of the School of Medicine.

Pre-Professional Scholars in Medicine are free to choose from among all of the degree and major programs offered in the university, but must take the following courses to fulfill admission requirements of the School of Medicine:

2. Biology: BIOL 214, Genes and Evolution; BIOL 215, Cells and Proteins; and BIOL 216, Organisms and Ecosystems; and the associated laboratory courses

*PPSP Medical students seeking admission at other medical schools are advised to take MATH 121/125 Calculus I and MATH 122/126 Calculus II as these courses are required by many medical schools.

Pre-Professional Scholars in Medicine are not required to take the Medical College Admission Test (MCAT) for the program. However, if they do take the MCAT, they are expected to earn a score of 32 or higher on the exam. Program participants who have an interest in applying to any other medical schools, or who wish to be considered for a dean’s merit scholarship at the Case Western Reserve School of Medicine, should plan on taking this test.

Pre-Professional Scholars are expected to demonstrate successful progress by meeting the following levels of performance:

1. By the end of the sixth semester, Pre-Professional Scholars in Medicine are expected to attain a cumulative overall grade point average of 3.600, and to maintain that average for the rest of their undergraduate studies.
2. Pre-Professional Scholars in Medicine are expected to earn grades of B or higher in all courses in chemistry, biology and physics. By the end of the sixth semester, they should maintain this average for the rest of their undergraduate studies.
3. Pre-Professional Scholars in Medicine are expected to continue to fulfill expectations for outstanding personal development, including, but not limited to, maintaining academic integrity and adhering to the university’s standards of conduct. (All academic integrity and judicial offenses will be reported to the Case School of Medicine.)

Progress is reviewed with each student at regular intervals in the program. At the end of the third year, Pre-Professional Scholars in Medicine who have met the required levels of performance go through the normal admission procedures for the University Program of the School of Medicine, including submitting an application through the American Medical College Application Service (AMCAS) and an interview. Participants who do not meet the required levels of performance may still be admitted into the University Program of the School of Medicine, but such admission will be subject to review and approval by the School of Medicine’s Admissions Committee.

Successful completion of the Pre-Professional Scholars Program in Medicine guarantees admission only to the University Program of the School of Medicine. Students seeking admission to the Cleveland Clinic Lerner College of Medicine of the Case Western Reserve University School of Medicine must complete a separate application and will be considered in competition with all applicants for that program.

Pre-Professional Scholars Program in Social Work
Each year, as many as ten high school seniors who plan to pursue careers in social work are offered places in the Pre-Professional Scholars Program in Social Work. The program gives a conditional commitment of admission to the Case Western Reserve University Mandel School of Applied Social Sciences to be honored upon successful completion of the bachelor’s degree.

Admission to the master’s degree program in social work at MSASS is dependent upon the following requirements:

1. Graduation from the university with a cumulative grade point average of 3.000 in the junior and senior years.
2. Completion of a minimum of 24 semester hours in the social and behavioral sciences.
3. Continued evidence of a combination of personal qualities which are considered essential for the professional practice of social work.

Pre-Professional Scholars in Social Work who wish to accelerate their program may apply for the senior year in professional studies privilege.

Application Procedures for Pre-Professional Scholars and Six-Year Dental Programs
Prospective students who wish to apply to any of the Pre-Professional Scholars Programs or to the Six-Year Dental Program should apply for admission through the Office of Undergraduate Admission of Case Western Reserve University. All forms are included within the application materials.

The application for admission, supporting test scores and high school transcript, must be submitted to the Office of Undergraduate Admission as early as possible, but no later than December 1.

Students who are admitted to the university and are also deemed eligible for consideration for one of the Pre-Professional Scholars Programs or the Six-Year Dental Program will be notified by March 1 and will be invited for interviews at the appropriate professional schools. The basis for selection for these programs will be dedication to the pursuit of the particular profession, a distinguished high school record, high scores on the college entrance examinations (ACT or SAT), a record of personal accomplishments that attests to a student’s maturity, leadership, and interpersonal skills, and an interview with an admissions officer from the appropriate professional school. Decisions on admission to the programs will be communicated on or about April 15.
Students who are not admitted to these special programs are encouraged to pursue their undergraduate studies and to apply in the normal course to the professional school of their choice, including the professional schools of Case Western Reserve University.

NON-DEGREE STUDENTS

Transient (Visiting) Students

A transient student is one who has begun his or her education at another college or university and intends to return there. The university permits full- or part-time study as a transient student in the summer as well as during the fall and spring semesters. Enrollment must be for credit-bearing courses. Before enrollment, the transient student must present a statement of good standing from the registrar of his or her home college.

Enrollment is limited to 30 semester hours and is subject to the regulations of the student’s college. Transient students must meet all requirements for prerequisites before being admitted to specific courses.

Transient students are not eligible to receive financial aid from Case Western Reserve University. If the student’s home institution has entered into a consortium agreement with Case Western Reserve University, the student should inquire of the home institution regarding eligibility to receive aid through the home institution.

Applications for enrollment as a transient student may be obtained from the Office of Undergraduate Studies, 357 Sears Building.

Pre-College Scholars

The Pre-College Scholars Program at Case Western Reserve University is designed to give highly motivated and able secondary school students the opportunity to enroll in challenging college courses prior to graduation from high school, either in the summer or during the academic year. Admission to the Pre-College Scholars Program is selective and competitive. Case has limited seats available for this program and preference is given to qualified juniors and seniors who have exhausted academic options at their high schools and who are looking for unique educational opportunities. Students must have pursued a rigorous curriculum and achieved academic excellence in all course work. Additional factors considered in admission are the applicant’s standardized test scores (ACT, PSAT, SAT, or other tests of aptitude and/or academic achievement), and the applicant’s academic goals and level of maturity. Pre-College Scholars attend regularly scheduled classes with undergraduate students at Case Western Reserve, and must be able to work well independently at the college level. Questions about the program should be directed to the Office of Undergraduate Studies at 216-368-2928.

Non-Degree Students

Adults who do not already hold a bachelor’s degree may apply through the Office of Undergraduate Studies to enroll for credit in courses for which their education or experience has qualified them, even though they are not pursuing a baccalaureate degree. These non-degree students may study full- or part-time and enroll in the same classes as degree students. They are required to perform up to the same academic standards as degree students.

Non-degree students may be eligible for admission to candidacy for an undergraduate degree program if they meet the requirements for admission to the university. Courses taken for credit as a non-degree student may be applied toward the degree upon acceptance as a degree candidate. A non-degree student who wishes to become a degree candidate must apply through the Office of Undergraduate Admission.

Persons who already hold degrees and wish to continue their studies without actively pursuing an additional degree are welcome to apply to the School of Graduate Studies.

Continuing Education

The university provides academic, non-credit courses for those who seek self-enrichment and professional advancement. Courses are presented both on and off campus. Special workshops and seminars are designed and presented by faculty and in cooperation with various community groups throughout the academic year. Examples of three such programs follow. Participants in these programs are considered students at the university and may obtain student ID cards which entitle them to use the University Libraries, receive a student discount at the bookstore, and take advantage of student rates at campus events. Part-time parking privileges in university assigned parking lots are also available.

Senior Scholars

This program is designed for men and women 50 years of age and older who seek non-credit, university-level courses and the intellectual stimulation provided by being on a college campus.

Three seminars are presented each semester. The majority are taught by university faculty and meet once a week for 11 consecutive weeks. Senior Scholars pay a single fee at the beginning of the academic year which entitles them to two semesters of specially designed seminars and forums. They may participate in all or any parts of the program they choose.

Registration for this program is handled by the Office of Continuing Education, 341 Sears Building, 216-368-2090.

SPECIAL AUDIT

The Special Audit Program provides the adult student with the opportunity to attend a regular university course as a serious but informal observer at half the regular tuition. This program is available only to those not enrolled in a degree program at Case Western Reserve University. Special audit students receive no grades and no academic credit for the courses attended. No transcripts will be issued, but a certificate of attendance will be provided if requested.

Registration for this program is handled by the Office of Undergraduate Studies. No transcripts are necessary to register.

ALUMNI/SENIOR AUDIT

The Alumni/Senior Audit is a program sponsored by the College of Arts and Sciences that enables Case Western Reserve University alumni of all ages and members of the community age sixty-five and older to audit regular College of Arts and Sciences classes for 10 percent of regular tuition. Audit enrollment is limited to ten percent of Case Western Reserve student enrollment and is subject to approval by the specific faculty teaching the course. Auditors do not receive a grade or credit. Courses taken through the audit do not appear on existing transcripts, nor do they generate transcripts for students new to the university. Complete information is available on the Alumni/Senior Audit website at: www.case.edu/artsci/audit/.

HONORS, PRIZES, AND AWARDS

Dean’s Honor Lists

The Dean’s Honor Lists consist of the names of those undergraduate students who have
distinguished themselves by achieving during the previous semester the grade point average required with a minimum of 12 hours earned and who have no Fs or NP's, during the same period. Students with a grade point average of 3.750 or higher will be placed on the Dean's High Honors List. Students with a grade point average of at least 3.500 but less than 3.750 will be placed on the Dean's Honors List. Students whose records include Incompletes become eligible for the Dean’s Honor Lists once all Incompletes have been converted to final grades.

Commencement Honors
Commencement Honors are awarded to the top 35 percent of the graduating class.

- Top 10 percent: summa cum laude
- Next 10 percent: magna cum laude
- Next 15 percent: cum laude

To be eligible for commencement honors, candidates must have:
1. Earned a minimum of 54 hours for evaluative grades (A, B, C, D) in residence at the university.
2. Attained the required percentile ranking on the basis of all work for which grades are averaged at the university.

Honors in the Major
Students who participate in departmental honors programs and satisfy the requirements for such a distinction, as specified by the department, may qualify to receive the degree "with departmental honors."

Phi Beta Kappa
Phi Beta Kappa, a national honor society, recognizes outstanding scholarship in the arts and sciences. The Alpha Chapter of Ohio, one of the first ten established nationally, was established in Western Reserve College in 1847. Students may qualify for election to membership in the second semester of the senior year. A few outstanding students may be elected to membership as juniors.

Tau Beta Pi
Tau Beta Pi is a national honor society which recognizes full-time engineering students for outstanding scholarship, leadership, and service.

Mortar Board
Mortar Board is a national honor society which recognizes full-time senior students for outstanding scholarship, leadership, and service.

Departmental and Collegiate Awards
At honors assemblies at the end of each spring semester, the university presents awards recognizing the outstanding achievement of individual students. The departmental awards are based on achievement in specific academic disciplines. Some of the departmental and collegiate awards are based on a combination of leadership, scholarship, and service. The collegiate awards for students with the best academic records take into account credit load, grades, and the proportion of courses taken for evaluative grades (i.e., not taken Pass/No Pass).

ACCOUNTANCY
- The Apple Growth Partners Scholarship Award
- The Beta Alpha Psi Award for excellence in accounting
- The Beta Alpha Psi Scholars Recognition Award for outstanding scholarship among members of the Pi Chapter
- The Andrew D. Braden Award for Excellence in Auditing and Financial Reporting
- The Cashy Family Scholarship Award
- The Cohen & Co./Beta Alpha Psi Leadership Award
- The Dean's Award for excellence and leadership in accountancy
- The Deloitte and Touche Award to an outstanding junior majoring in Accounting
- The Thomas Dickerson Award for Excellence in Professional Accountancy Studies
- The Ernst and Young Accounting Achievement Award
- The KPMG Peat Marwick Scholarship Award
- The Louis E. Levy Scholars in Accountancy
- The Ohio Society Cleveland Endowment Scholarship
- The PriceWaterhouseCoopers Scholarship Award
- The Skoda, Minotti & Company Award for an outstanding underclassman
- The Wallach-Lee Families Scholarship Award

ANTHROPOLOGY
- The Callender Memorial Award for outstanding achievement in anthropology
- The James Dysart Magee Award for the senior year to an outstanding student in social and behavioral sciences who is also enrolled in the Integrated Graduate Studies Program
- The Ruth and Newbell Niles Puckett Award to a graduating senior for outstanding achievement in anthropology

ART HISTORY
- The Muriel S. Butkin Art History Prize for overall best performance and highest grade point average by an undergraduate art history major
- The Noah L. Butkin Award for the best term paper on an art history topic written by an undergraduate

ART STUDIO
- The Charles E. Clemens Prize for outstanding talent and accomplishment in art
- The William Grauer Award for excellence in art studio courses
- The Doris Young Hartsock Prize for excellence in art education
- The Hazel Gibbs Herbrick Prize for excellence in art education
- The Kennedy Prize for creative work in art
- The Arnold Philip Award for excellence in art

ASTRONOMY
- The Jason J. Nassau Prize was established by the Cleveland Astronomical Society in 1965 in memory of Professor Emeritus Nassau, former head of the Department of Astronomy, who was a member of the faculty for 41 years. It is awarded annually to a senior student in astronomy selected by the faculty of the department.

BIOCHEMISTRY
- The Merton F. Utter Prize to a candidate for the B.A. majoring in biochemistry for outstanding achievement
- The Harland G. Wood Prize for outstanding performance by a graduating senior majoring in biochemistry who is a candidate for the B.S. in Biochemistry

BIOLOGY
- The Daniel Burke Prize for excellence in both biology and chemistry
- The Francis Hobart Herrick Prize for outstanding biological research and academic excellence in biology
- The Russell M. Lawall Prize in Biological Sciences for excellence in both academics and research in biology
- The Flora Stone Mather Alumnae Award for outstanding performance in biology
- The Merton F. Utter Prize to a candidate for the B.A. majoring in biochemistry for outstanding achievement
- The Harold G. Wood Prize for outstanding performance by a graduating senior majoring in biochemistry who is a candidate for the B.S. in Biochemistry

GENERAL BULLETIN 2009-2011
by the Howard Hughes Medical Institute

- The Ralph A. Spengler, Jr. Award for excellence in plant science

- The J. Paul Visscher Memorial Award of the Cleveland Audubon Society to the senior or graduate student who demonstrates outstanding ability and promise in the field of ecology or environmental science

### BIOMEDICAL ENGINEERING

- The Jose Ricardo Alcala Memorial Award for biomedical engineering research

- The Mark Bernstein Memorial Award to a senior biomedical engineering major for outstanding achievement in academics and leadership, contributions to research, and service to the university, department or community

- The Biomedical Engineering Chair’s Award for outstanding academic achievement and service to the biomedical engineering community

- The Biomedical Engineering Faculty Award for outstanding academic achievement, achievement in sports, and service to the biomedical engineering community

- The Biomedical Engineering Research Award for outstanding performance in biomedical engineering research combined with outstanding academic achievement and outstanding achievement in sports

- The Biomedical Engineering Scholarship Award

- The Cristina A. Camardo Award to a biomedical engineering student in recognition of his or her leadership and service within the university community

- The Department of Biomedical Engineering Award for outstanding senior project presentation

- The J. Thomas Mortimer Cooperative Education Award

- Outstanding Industrial Experience Award

### CHEMICAL ENGINEERING

- The Monroe J. Bahnsen Award was established by contributions of friends and associates in memory of Dr. M. J. Bahnsen, Case School of Applied Science ‘29. It is awarded annually to a senior for achievement in chemical engineering whose work in design and research projects has been outstanding.

- The Connie Ilcin Award to the student who exhibits outstanding performance in chemical engineering

- The Carl F. Prutton Chemical Engineering Award was established by Kent H. Smith, ’17, Kelvin Smith, ’22, and Vincent K. Smith in honor of Carl F. Prutton, ’20, for many years head of the Department of Chemistry and Chemical Engineering and a consultant to the Lubrizol Corporation. The prize is awarded to the senior whose academic performance merits his or her selection as outstanding.

- The William H. Schuette Memorial Award is given to a senior whose major field is chemical engineering and whose academic performance, character, and qualities of leadership merit election as outstanding. The award was established by friends and co-workers in memory of Mr. Schuette, ’33, vice president and general manager of Dow Chemical Company.

- The A. W. Smith Prize is presented to the senior in engineering whose major field is chemical engineering, and who has earned the highest record in the junior and senior years in chemical engineering courses. The prize was established by Dr. Carl F. Prutton, ’20, former head of the Department of Chemistry and Chemical Engineering, in memory of Dr. Albert W. Smith, who graduated from Case School of Applied Science in 1887 and was a member of the faculty for 40 years.

### CHEMISTRY

- The Analytical Chemistry Award

- The Hippolyte Gruener Award to a student for merit in chemistry

- The Hypercube Scholar Award

- The Iota Sigma Pi/Frank Hovorka Prize to the woman chemistry major with the highest grade average after three semesters

- The Eli Lilly Award to a sophomore or junior chemistry major pursuing the B.S. degree

- The Charles F. Mabery Prize is awarded to the undergraduate or graduate student presenting the best thesis on a subject connected with research in the Department of Chemistry. The prize was established in 1928 by Professor Charles F. Mabery, former head of the Department of Chemistry.

### COMMUNICATION SCIENCES

- The Crawford Summer Scholarship to the American School of Classical Studies in Athens

- The Abraham Lincoln Fuller Prizes for excellence in the study of Greek or Latin

- The Emma Maud Perkins Prize for excellence in classical studies

### COGNITIVE SCIENCE

- The Cognitive Science Award to the graduating senior for outstanding academic achievement in cognitive science

### COMMUNICATION SCIENCES

- The National Student Speech-Language-Hearing Association Award for outstanding leadership and achievement in communication sciences

- The Outstanding Undergraduate in Communication Studies Award

### ECONOMICS

- The Robert N. Baird Award for academic excellence and leadership in extracurricular activities

- The Marvin J. Barloona Book Award for outstanding performance in economics

- The Dean’s Achievement Award for scholarship and leadership in economics

- The Gardiner Scholarship to a student ma-
The H. W. Kniesner Prize to an outstanding senior in economics
- The James Dysart Magee Award to an outstanding student in economics for the senior year
- The Howard T. McMyler Award to an outstanding student majoring in economics

**ELECTRICAL ENGINEERING AND COMPUTER SCIENCE**
- The ACM Award to the senior judged by the student chapter of the Association for Computing Machinery most likely to have an outstanding professional career
- The Chair’s Award to a student in the Department of Electrical Engineering and Computer Science who shows exceptional academic or leadership potential
- The Donald P. Eckman Award was established by the American Automatic Control Council in memory of Dr. Donald P. Eckman, professor of mechanical engineering and first director of the Systems Research Center. It is given to the senior majoring in systems and control engineering with the best overall achievement in his or her undergraduate program.
- The Electrical Engineering and Computer Science Award for the best senior project
- The Electrical Engineering Service Award is given to the senior performing outstanding service to his or her class.
- The Eta Kappa Nu-I.E.E.E. Award was established by I.E.E.E. and Eta Kappa Nu honorary fraternity. This award is given to the senior student judged by his or her fellow students to possess the qualities necessary for an outstanding professional career in a general field of electrical engineering.
- The National Electrical Engineering Consortium William L. Everit Award to a student who has excelled academically in communications or computers
- The Andrew R. Jennings Award to a senior for excellence in Computer Engineering and Sciences
- The Carolyn J. and John A. Massie ’66 Prize for Computer Engineering and Science awarded to the outstanding junior in computer engineering and science with exceptional research and leadership potential
- The Carolyn J. and John A. Massie ’66 Prize for Computer Engineering and Science awarded to the outstanding sophomore in computer engineering and science with exceptional research and leadership potential
- The W. Bruce Johnson Award was established in 1969 in memory of Dr. W. Bruce Johnson, professor of engineering and head of the Division of Electrical Sciences and Applied Physics. This award is given to a senior for an outstanding project in the area of electrical sciences and applied physics.
- The EECS Research Award to the senior demonstrating exceptional research potential
- The Undergraduate Alumni Capital Award in Systems and Control Engineering to a senior for academic excellence and professional promise

**ENGLISH**
- The Charles E. Clemens Award for talent and accomplishment in writing
- The Finley Foster/Emily M. Hills Poetry Prize for the best poem or group of poems
- The Emily M. Hills Award for the best poem or essay written by a woman in the College of Arts and Sciences
- The Holden Prize for the best English paper written by an upperclass student
- The Kennedy Prize for creative work in English
- The Edith Garber Krotinger Prize for excellence in creative writing
- The Karl Lemmerman Award for formal poetry submitted by undergraduate students

**GEOLOGICAL SCIENCES**
- The Charles S. Bacon Award for outstanding contributions to the Department of Geological Sciences
- The Philip O. Banks Award for outstanding academic achievement in geological sciences
- The Carol W. Walker Award for an outstanding senior project in the Department of Geological Sciences

**HISTORY**
- The Donald Grove Barnes Award to a senior for excellence in history
- The Clarence H. Cramer Award for excellence in research and writing of history
- The Annie Spencer Cutter Prize to a senior for outstanding achievement in history
- The History Department Award for outstanding achievement in history

**MACROMOLECULAR SCIENCE AND ENGINEERING**
- The Hal Loranger Award for Polymer Science was established in 1974 by friends as a memorial to Hal Loranger. This award is given to the outstanding senior in polymer science.
- The Samuel Maron Memorial Award is given to an undergraduate for excellence in polymer research.

**MANAGEMENT**
- The Robert O. Berger Jr. Award to a junior who demonstrates overall achievement in scholarship, as well as notable community participation and leadership
- The Nellie Chittenden Carlton Prize is awarded to a senior in management whose outstanding work in the general field of economics shows the greater promise of leadership. This prize was established by Professor Frank Tracy Carlton, Case Western Reserve University ’95, and his wife, Mrs. Nellie Chittenden Carlton.
- The Dean’s Achievement Award for excellence in scholarship and leadership in management
- The Financial Executive’s Institute Award
- The Roulston Performance Award for outstanding performance in management
- The Kevin J. Semelsberger Prize for excellence in management
- The Iris Wolstein Award for Excellence in Business Venture History to a student whose work on projects and/or course work related to the study of Cleveland business venture history is determined to have made a significant contribution to the understanding of the business development in Northeast Ohio and related environs
- The Wolstein Family Award for Excellence in Business Venture Plan Development to a student enrolled in a major or minor in Weatherhead undergraduate programs whose business venture development plan is considered to have the highest promise to be
UNDERGRADUATE STUDIES

succeedfully initiated

MATERIALS SCIENCE AND ENGINEERING
- The Wesley P. Sykes Prize was established in 1961 by Dr. Wesley Pope Sykes, Case School of Applied Science '16. This prize is awarded to a senior majoring in materials science and engineering who shows outstanding ability in scientific research, especially as evidenced by the quality of his or her senior project.
- The Professor Jack F. Wallace Award to the materials science and engineering student who embodies the dedication and spirit of Professor Wallace

MATHEMATICS
- The Case Alumni Award to an outstanding senior mathematics major
- The Chair's Award to a student contributing to the intellectual life of the majors program
- The Max Morris Prize was established in 1964 by family, friends, and former students in memory of Professor Max Morris to honor his contribution to the teaching of mathematics. This prize is presented to an outstanding undergraduate student in mathematics who is pursuing the B.S. degree.
- The Webster Godman Simon Mathematics Award to a sophomore or junior pursuing a B.A. degree, for excellence in mathematics

MECHANICAL AND AEROSPACE ENGINEERING
- The Robert and Leona Garwin Prize was established in 1977 by Richard L. Garwin, Case Institute of Technology '47. It is given to a student who has demonstrated theoretical scientific ability with experimental competence and inventive talent.
- The Gustav Kuerti Award is given to the senior in mechanical and aerospace engineering who has demonstrated the highest level of scholarship.
- The Anish Shah '91 Award to an outstanding senior in mechanical and aerospace engineering based on academic achievement, extra-curricular activities, and community service
- The Fred Hale Vose Prize was established by Elmer L. Lindseth, Case School of Applied Science '25, to honor Professor Emeritus Fred Hale Vose, former head of the Department of Mechanical Engineering. It is presented to the senior in mechanical engineering who has demonstrated the greatest promise for professional leadership.

MODERN LANGUAGES
- The Arabic Undergraduate Book Prize for high achievement in Arabic
- The Louise Burke French Prize to an outstanding French student
- The Chinese Undergraduate Book Prize for high achievement in Chinese
- The Susie Scott Christopher Prize for excellent contributions to the French program
- The Department of Modern Languages and Literatures Award for outstanding achievement
- The Emile B. deSauze Award for attaining the highest honors in modern languages and literatures
- The Folberth German Prize for excellence in German language and literature
- The French Undergraduate Book Prize for high achievement in French
- The German Undergraduate Book Prize for high achievement in German
- The Hebrew Undergraduate Book Prize for high achievement in Hebrew
- The Italian Undergraduate Book Prize for high achievement in Italian
- The Japanese Undergraduate Book Prize high achievement in Japanese
- The Max Kade Excellence in German Award
- The Florence Keuerleber Prize to an undergraduate student who has seriously pursued and excelled in the study of a modern language while majoring in another area
- The Russian Undergraduate Book Prize for high achievement in Russian
- The Spanish Undergraduate Book Prize for high achievement in Spanish

MUSIC
- The Arthur H. Benade Prize to a senior with a major other than music who has made a notable contribution to music on campus during his or her undergraduate years
- The Charles E. Clemens Prize for talent and accomplishment in music
- The Doris Young Hartsock Prize for outstanding performance in music education
- The Kennedy Prize for creative work in music
- The Lyman Piano Award
- The Joan Terr Ronis Recital Prize to an outstanding undergraduate majoring in music who has made an exceptional contribution to the musical life of the University

NURSING
- The Bolton Scholar Award for Excellence in Acute Care Nursing
- The Bolton Scholar Award for Excellence in Community Health Nursing
- The Bolton Scholar Award for Excellence in Critical Care Nursing
- The Bolton Scholar Award for Excellence in Gerontology
- The Bolton Scholar Award for Excellence in Maternal-Child Nursing
- The Bolton Scholar Award for Excellence in Nursing Informatics
- The Bolton Scholar Award for Excellence in Nursing Research
- The Bolton Scholar Award for Excellence in Pediatric Nursing
- The Bolton Scholar Award for Excellence in Psychiatric/Mental Health Nursing
- The Dean's Award for Outstanding Capstone
- The Director's Award for Outstanding B.S.N. Graduate

NUTRITION
- The Mary Eliza Parker Award for excellence in nutrition and dietetics

PHILOSOPHY
- The Truman P. Handy Philosophical Prizes to outstanding juniors or seniors for excellence in philosophy

PHYSICAL EDUCATION
- The Emily Russell Andrews Award to the senior woman who makes the greatest contribution to the physical education department through scholarship, leadership, participation, and service
- The Philip K. "Nip" Heim Award to the senior man who makes the most outstanding contribution to Case Western Reserve University through the athletic program
- The Dorothy L. Hoza Award to the outstanding freshman, sophomore or junior who has made a strong contribution to the women’s intercollegiate sports program, maintained a high level of academic achievement, shown leadership in the team, and contributed service to the department and university
- The Patricia B. Kilpatrick Award to the outstanding freshman, sophomore or junior who has made a strong contribution to the women’s intercollegiate sports program, maintained a high level of academic achievement, shown leadership in the team, and contributed service to the department and university
- The Emily Russell Andrews Award to the senior woman who makes the greatest contribution to the physical education department through scholarship, leadership, participation, and service
- The Philip K. "Nip" Heim Award to the senior man who makes the most outstanding contribution to Case Western Reserve University through the athletic program
- The Dorothy L. Hoza Award to the outstanding freshman, sophomore or junior who has made a strong contribution to the women’s intercollegiate sports program, maintained a high level of academic achievement, shown leadership in the team, and contributed service to the department and university
- The Emily Russell Andrews Award to the senior woman who makes the greatest contribution to the physical education department through scholarship, leadership, participation, and service
- The Philip K. "Nip" Heim Award to the senior man who makes the most outstanding contribution to Case Western Reserve University through the athletic program
- The Dorothy L. Hoza Award to the outstanding freshman, sophomore or junior who has made a strong contribution to the women’s intercollegiate sports program, maintained a high level of academic achievement, shown leadership in the team, and contributed service to the department and university
- The Emily Russell Andrews Award to the senior woman who makes the greatest contribution to the physical education department through scholarship, leadership, participation, and service
- The Philip K. "Nip" Heim Award to the senior man who makes the most outstanding contribution to Case Western Reserve University through the athletic program
- The Dorothy L. Hoza Award to the outstanding freshman, sophomore or junior who has made a strong contribution to the women’s intercollegiate sports program, maintained a high level of academic achievement, shown leadership in the team, and contributed service to the department and university
• The Krumhansl Family Prize to an outstanding undergraduate woman for her academic accomplishments in the sciences
• The Dayton C. Miller Award was established by the late Herbert A. Erf, Case School of Applied Science ’26, honoring this internationally renowned physicist who served as professor of physics for 50 years. It is given to an outstanding senior in physics for the best thesis.
• The Outstanding Senior in Engineering Physics Award
• The Elmer C. Stewart Memorial Award to an outstanding senior in Physics who has demonstrated achievement in the applications of physics
• The Senior Award for service and scholarship in physics

POLITICAL SCIENCE
• The James Dysart Magee Award for the senior year, to an outstanding student in social and behavioral sciences enrolled in the Integrated Graduate Studies Program
• The Flora Stone Mather Alumnae Award for outstanding academic performance in political science

PSYCHOLOGY
• The Stephen Bednarik Memorial Award to an outstanding senior majoring in psychology
• The James Dysart Magee Award for the senior year, to an outstanding student in social and behavioral sciences enrolled in the Integrated Graduate Studies Program
• The Flora Stone Mather Alumnae Award for outstanding academic performance in psychology

RELIGIOUS STUDIES
• The Ranner Family Prize to a graduating senior for the highest academic achievement in the study of religion

SOCIOLOGY
• The Stella Berkeley-Friedman Award to a graduating senior for the highest academic achievement in the study of sociology
• The Robert C. Davis Award for demonstrated commitment to sociological studies
• The Mark Lefton Award for excellence in sociological studies
• The James Dysart Magee Award for the senior year, to an outstanding student in social and behavioral sciences enrolled in the Integrated Graduate Studies Program
• The Schermerhorn Award for an outstanding student in sociology

THEATER ARTS
• The Dionysus Award for an outstanding contribution to theater or dance for a student not majoring in theater arts
• The Lily Dreyfuss Memorial Award for excellence in dance
• The Barclay Leathem/Nadine Miles Award for creativity and general excellence in theater

WOMEN’S AND GENDER STUDIES
• The George Sand Award in Women’s and Gender Studies to a graduating senior majoring or minoring in the field for excellence in academic performance
• The Sojourner Truth Award to an outstanding student who combines academic excellence in Women’s and Gender Studies with commitment to community service, advocacy of women’s and gender-related issues, and activism
• The Mary Wollstonecraft Award to a continuing undergraduate student for excellence in Women’s and Gender Studies courses

AWARDS FOR STUDY ABROAD
• The Brookes Friebolin Award to an outstanding student for study in France
• The Eva L. Pancoast Memorial Fellowship for graduating senior women in the College of Arts and Sciences or women students in the School of Graduate Studies enrolled in the Cooperative Education Student of the Year Program based on industry evaluations, written reports and student initiative
• The Case Alumni Association Prize for Achievement to the senior with the best academic record in the Case School of Engineering
• The Case Western Reserve University Women’s Club Award for exemplary intellectual contributions in First Seminar
• The Case Western Reserve University Women’s Club Prize for a student completing an outstanding Capstone Project
• The Edward J. “Ted” Corcoran Award to a senior for outstanding leadership, character and service
• The Rachelle L. Grier Award to a Case Western Reserve University staff member who is enrolled as a non-degree or as a degree-seeking undergraduate at the University
• The Russell A. Griffin Award to a senior in the College of Arts and Sciences who has made the most significant contribution to campus life
• The George T. Hunt Awards to a junior and a senior outstanding in leadership, scholarship, and service
• The Junior Award of the College of Arts and Sciences to juniors with the best academic records at the end of five semesters
• The Matthew Leskiewicz Award to a senior in the Weatherhead School of Management for outstanding leadership and service
• The Louis K. Levy Prize for an outstanding junior in the College of Arts and Sciences
• The P. G. “Jerry” Lind Award for a graduating senior in engineering or science who has made a significant contribution to campus life
• The Flora Stone Mather Alumnae Award for outstanding academic performance in the humanities
• The Outstanding Junior Awards of the College of Engineering to juniors with the best academic records at the end of five semesters in the Case School of Engineering
• The Outstanding Sophomore Awards of the Case School of Engineering to sophomores with the best academic record at the end of three semesters in the Case School of Engineering
• The Phi Beta Kappa Prize to sophomores with the best academic records in a liberal arts curriculum after three semesters
• The Harriet Levion Pullman Award to a senior outstanding in leadership, character and service
• The John Schoff Millis Award to the senior with the best academic record in the College of Arts and Sciences
UNDERGRADUATE STUDIES

- The Sylvia Green Rosenberg Award to a part-time or full-time non-traditional student
- The Robert and Joyce Shafer Prize to a student from the Case School of Engineering who has made a major contribution to campus publications
- The Robert L. Shurter Prize to a senior for leadership in extracurricular activities in the 2009-2010al Award to an outstanding pre-medical student for the senior year
- The Kent H. Smith Award was established in 1961 by Case Institute of Technology students and presented by the Case Student Senate to honor Kent H. Smith, Case School of Applied Sciences ’17, for his service as a member of the Board of Trustees and as acting president from 1958 to 1961. The award is presented to an outstanding senior displaying extraordinary leadership, character, and scholarship in the Case School of Engineering
- The Weatherhead School of Management Award to a senior, for outstanding achievement in the Weatherhead School of Management
- The Stanley E. Wertheim Prize for an outstanding junior in the Case School of Engineering who has demonstrated leadership skills through involvement in campus or coop activities
- The Peter Witt Scholarship to a deserving student who demonstrates a vital and active interest in the improvement of life in Cleveland

2009-2010 MAJORS AND MINORS FOR CASE UNDERGRADUATE DEGREES

**Major**
A program of ten or more courses (required)
Major* - available only as 2nd major for a B.A.; may be sole major for a B.A. student who also completes a B.S.

**Minor**
A program of 15-18 hours (optional)

</table>
The School of Graduate Studies (SGS) is the unit through which Case Western Reserve University offers graduate programs in the humanities and social sciences, biological and natural sciences, engineering, and selected disciplines related to professional fields. These programs lead to the degrees of Master of Arts, Master of Fine Arts (theater and dance), Master of Science, Master of Public Health, Master of Engineering and Management, Master of Engineering, Doctor of Musical Arts, and Doctor of Philosophy. Several programs offered jointly with the professional schools and local affiliated institutions lead to dual degrees such as M.A./J.D., M.A./Ph.D., M.A./M.D., M.A./M.S., M.S./M.D., M.S.S.A./Ph.D., Ph.D./M.P.H., J.D./M.P.H., M.S.N./M.P.H., M.B.A./M.P.H., M.D./M.P.H., M.P.H./M.A., and M.D./Ph.D. There are also two combined undergraduate and graduate programs, IGS (Integrated Graduate Studies) and, B.S./M.S., which allows undergraduate students to enter graduate study before they complete their undergraduate programs. The School of Graduate Studies, overseeing university-wide standards of quality in admission and performance, presently awards graduate degrees in seventy basic disciplines with Ph.D. programs and fifteen others in which the highest degree is the M.A., M.F.A., or M.S. Enrollment in the School of Graduate Studies for fall 2008, excluding non-degree registrants, totaled 1939, of which 52% were men, 48% were women, and 31% were international. During the academic year 2007-2008, the school awarded 334 master’s degrees and 204 doctorates.

The Office of Postdoctoral Affairs located within the School of Graduate Studies is responsible for the appointment of postdoctoral scholars and fellows, as well as the development, implementation and monitoring of all university policies applicable to these positions. The Office of Postdoctoral Affairs works closely with the Postdoctoral Researchers Association to provide a liaison between postdoctoral scholars and fellows and the administration and faculty of Case Western Reserve University. Handbooks for both post-doctoral scholars and fellows are available at the SGS and on the website: http://www.case.edu/provost/graduatesudies/postdoc.html/

APPLICATION TO GRADUATE STUDY

1. Completed application forms, part A and B, with the nonrefundable application fee.
2. Statement of Objectives
3. Official transcripts of all previous undergraduate and graduate courses taken for credit.
4. Graduate and/or undergraduate degree verification, which can be posted on the academic transcript or certified by the academic institution where the degree(s) has been awarded.
5. Three letters of recommendation from former professors or other persons familiar with the applicant’s ability and probable performance as a graduate student.
6. For departments and programs which require standardized tests, the results of the Graduate Record Examination, the Miller Analogies Test, Medical College Admissions Test, or the Graduate Management Admission Test. (Contact the department for the tests that are required for the degree programs in that department.)
7. Certain programs require submission of writing samples, portfolios, scheduling of auditions and personal interviews. (Refer to departmental materials for details.)
Admission of International Students

The admissions criteria for international students are the same as U.S. residents except for the following:

1. International students whose first language is not English must be able to speak, read, write and comprehend English. English proficiency must be demonstrated by taking the Test of English as a Foreign Language (TOEFL). A score of at least 550 (paper-based), 213 (computer-based), 79 (IBT—internet based TOEFL) or completion of ELS Language Center, Level 112 with a grade of B at Case Western Reserve University is a mandatory requirement for admission. The IELTS (International English Language Testing System) is also accepted. The required minimum score is 6.5. Scores must be on file before registration will be permitted. Some departments may require higher scores.

To register to take the TOEFL exam at testing centers world-wide go to website: http://www.toefl.org/.

Applicants are exempt from the TOEFL requirements if they (1) speak English as their native language; (2) have completed a bachelor’s degree or higher at a foreign university where the instruction was in English; (3) have completed six semester hours of sophomore level English literature in a U.S. college or university; or (4) have a earned a bachelor’s degree or higher in a U.S. college or university with instruction in the English language.

If a student does not have an acceptable TOEFL score, he or she must contact ELS Language Center at Case Western Reserve University. They are authorized to enroll foreign students. Admission to their courses is open to persons who can devote full time to an intensive language-learning program. Only persons who can give evidence of suitable academic background, adequate financial resources to cover living and school expenses, and seriousness of purpose will be approved for admission.

2. To obtain a student visa, international students must demonstrate financial sufficiency by submitting bank statements and other financial documents indicating sufficient funds to support the tuition and living expenses for one academic year.

3. For those students who are to receive financial aid from the department, the amount of funds required will depend on the amount of the aid award. In some cases it will be living expenses, and in others more funds will be required.

When a letter of acceptance for an international student has been issued, a copy is sent to the International Student’s Office where the I-20 is processed and sent to the student who must then obtain a student visa in order to begin study in the U.S. More detailed information can be obtained from the International Students’ Office and from the “Student Affairs” section of this Bulletin.

Admission Status

FULL STANDING

To be admitted to full standing the applicant must meet all the admissions criteria without conditions or academic provisions. Applicants must have a good academic record, e.g., a B average or rank in the upper third of his or her graduating class at an institution whose status and programs are readily assessed. The applicant will be expected to meet essentially all of the undergraduate prerequisites for the proposed field of graduate study. In addition to evidence of admissibility from transcripts, grade records, letters of recommendation and TOEFL test (English proficiency test for international students only), certain departments require that the applicant submit satisfactory scores on the Graduate Record Examination, the Miller Analogies Test, or the Graduate Management Admission Test.

Ordinarily a bachelor’s degree is required for unconditional admission to the graduate school. Under some circumstances, an admissions committee may recommend admission to the School of Graduate Studies on the basis of an equivalent experience. In this case, final approval for admission by the dean of graduate studies is required.

PROVISIONAL STANDING

Applicants who have academic deficiencies and do not qualify for admission with full standing are occasionally admitted provisionally. A student may give evidence of ability in his or her chosen field that is sufficiently convincing to warrant provisional admission, but the quantity or quality of the student’s preparation may be difficult to determine with sufficient certainty for admission in full standing. The provisions will be specified by the department to which the student is admitted, and stated in the official letter of admission from the dean of graduate studies. A provisional graduate student is expected to complete appropriate course work and to meet the performance standards of the School of Graduate Studies within the first academic year of study. Although the provisional student’s records will be reviewed each semester, the student’s status will be reconsidered by the department no later than at the end of two semesters of study. At that time, if the student has satisfied the provisions associated with his or her admission in the judgment of the department and the dean of graduate studies, the student will be given full standing; otherwise, he or she will be separated from further graduate study in that department.

CONDITIONAL STANDING

Applicants who have missing documentation in their admissions file (such as an official academic transcript with degree posted or official test score reports, may be admitted conditionally. The condition (s) specified in the letter of acceptance must be satisfied prior to matriculation in the School of Graduate Studies.

POSTPONEMENT OF MATRICULATION

Applicants are guaranteed admission only for the term specified in the letter of admission. An applicant who is unable to enroll in the semester for which he or she was initially admitted may request to postpone matriculation up to two regular academic semesters. In such cases, the department to which the applicant has applied may accept or reject the applicant’s request, and the terms of readmission may differ from the original offer. If a delay of more than two semesters is requested, the applicant’s file must be reviewed and reevaluated by the department. If more than two years elapse since acceptance, the applicant must reapply in the same manner as a new applicant. Because applicant files are only kept for a maximum of two years, all documentation will have to be resubmitted.

NON-DEGREE STUDENTS

Individuals with earned bachelor’s degrees who want to enroll in classes for personal enrichment or to satisfy prerequisite course requirements for later admission to graduate programs may enroll as non-degree students through the School of Graduate Studies. A student who wishes to register as a non-degree student should request the appropriate application form from the School of Graduate Studies and submit evidence that a bachelor’s degree has been earned. Students may enroll in undergraduate and graduate level courses. Continuation in non-degree status is at the discretion of the dean of graduate studies.
Graduate study presupposes a considerable maturity on the part of the student in planning and reaching his or her educational objectives. The effectiveness of the graduate program lies jointly with the individual student and the faculty advisor or advisory committee through early, substantive planning discussions. The formal requirements set forth in these regulations are intended to aid in the maintenance of uniform minimum standards of performance, to form a basis for planning programs of graduate study, and to provide for efficient management and coordination.

For each graduate student, an official planned program of study consisting of the courses and other requirements for the M.A., M.F.A., M.S., M.E., M.P.H., D.M.A., or Ph.D. degrees should be established in consultation with the major faculty advisor or advisory committee. After consultation with the major faculty advisor, the student should submit their Planned Program of Study via the Student Information System where it will be routed for appropriate approvals. Students must submit an approved program of study by the end of the second semester. A revised program of study must be submitted via the Student Information System when any change in the original plan occurs. For graduate engineering students, additional details regarding degree program requirements are given in the Engineering section of this Bulletin. The various departments and schools may make such additional regulations concerning programs of study as may be necessary to reach particular academic goals. These regulations must be in writing, with a copy filed in the School of Graduate Studies.

THE ACADEMIC ADVISOR

Each graduate student will have a faculty advisor or advisory committee assigned by the department or professional school to assist the student in planning the program of study best designed to enable the student to reach appropriate educational objectives.

ACADEMIC REQUIREMENTS FOR MASTER'S DEGREES

In recognition that the objectives of master’s degrees differ for various departments and for individual students, especially in the importance given to research, two general plans for master’s degrees may be followed:

Plan A

M.A. or M.S. with a thesis based on individual research and a final oral examination.

Plan B

M.A., M.F.A., M.P.H., or M.S. without a thesis but requiring a comprehensive examination and/or a major project to be administered by the academic unit.

The Master’s Thesis (Plan A)

The minimum requirements for the master’s degree under Plan A are 18 semester hours of course work plus a thesis equivalent to at least 9 semester hours of registration, or 21 semester hours of course work plus a thesis equivalent to at least 6 semester hours of registration. Once registered for thesis credit (Course 651), a student must continue 651 registration each succeeding regular semester until graduation.

However, if a student is registered for course work or research toward the doctorate in the semester in which the thesis examination is expected to occur, concurrent registration for 651 is not required. At least 18 semester hours of course work, in addition to thesis hours, must be at the 400-level or higher.

Each student must prepare an individual thesis. Joint theses are not permitted. The written thesis must conform to regulations concerning format, quality, and time of submission as established by the dean of graduate studies. Detailed instructions can be obtained from the School of Graduate Studies and can be found at the following website: http://www.case.edu/provost/gradstudies/index.htm

For completion of master’s degrees under Plan A, an oral examination (defense) of the master’s thesis is required. This examination is conducted by a committee of at least three members of the university faculty. The candidate’s thesis advisor customarily serves as the chair of the examining committee. The other members of the committee are appointed by the chair of the department or curricular program faculty supervising the candidate’s course of study. The examining committee must agree unanimously that the candidate has passed the thesis examination. Because theses are made public immediately upon acceptance, they should not contain proprietary or classified material. When the research relates to proprietary material, the student and advisor are responsible for making preliminary disclosures to the sponsor sufficiently in advance to permit timely release of the thesis, and these plans should be disclosed when the thesis is submitted to the School of Graduate Studies.

The Master’s Comprehensive (Plan B)

The minimum requirements for the master’s degree under Plan B are 27 semester hours of course work, a comprehensive examination, and in some fields, an approved project. At least 18 semester hours of course work must be at the 400 level or higher.

Each candidate for the master’s degree under Plan B must pass satisfactorily a comprehensive examination to be administered by the department or curricular program committee. The examination may be written or oral or both. A student must be registered during the semester in which any part of the comprehensive examination is taken. If not registered for other courses, the student will be required to register for one semester hour of EXAM 600,
Comprehensive Examination, before taking the examination.

Engineering students are required to complete 3 to 6 semester hours of Special Problems (Project) course work, which must consist of an engineering project approved by the chair of the department offering the degree program, and may be carried out at the student’s place of employment with nominal supervision by a faculty advisor or in the departmental laboratories under direct supervision. The project must culminate in a written report and examination by at least three professors including approval by the chair of the department.

Performance evaluation for course 601 (Independent study/Research) is limited to P/NP grading.

Theater students in the M.F.A. program are required to register for six semester hours of Thesis Production (creative project), followed by an oral and written defense.

**ACADEMIC REQUIREMENTS FOR DOCTORAL DEGREES**

The degree of Doctor of Philosophy is awarded in recognition of in-depth knowledge in a major field and comprehensive understanding of related subjects together with a demonstration of ability to perform independent investigation and to communicate the results of such investigation in an acceptable dissertation.

**Curricular Requirements**

Within the framework of these general regulations, it is expected that a relevant program of study will be planned for each candidate for the doctorate by the student and the faculty advisor or advisory committee. Such a program should include appropriate courses, together with work on the doctoral dissertation, and may also include, where relevant, such experiences as field work or practicum.

Although specific requirements vary among departments, students entering with a bachelor’s degree will satisfactorily complete a minimum of 36 semester hours of courses (which may include independent study/research, course 601), tutorials, and seminars. For students entering with an approved master’s degree, completion of at least 18 semester hours of course work is required. A minimum of 18 semester hours of dissertation research (Course 701) is required for all doctoral students.

**Examination Requirements**

In order to meet the requirements for the doctorate, a student must pass satisfactorily a general examination (or a series of examinations covering different fields) specified and administered by the student’s department or supervising committee. The examination generally precedes advancement to candidacy. A student must be registered during the semester in which any part of the general or qualifying examination is taken. If not registered for other courses, the student will be required to register for one semester hour of EXAM 700, General/Qualifying Examination, before taking the examination. A student who fails the examination on the first attempt may be permitted to take the examination a second time within one year at the discretion of the department. Except in unusual circumstances, a student who fails the examination a second time will be separated from further graduate study within the same department or program.

**Advancement to Candidacy**

The formal acceptance of a student as a candidate for the doctoral degree is the responsibility of the student’s department or the committee supervising the doctoral program in accordance with the written procedures of the academic unit. At its discretion the supervising unit may require a student to pass qualifying examinations before candidacy is granted. Generally, advancement to candidacy allows the student to enter the dissertation research phase of the degree program, and occurs after all course work and exam requirements are satisfied. Students are expected to make regular and continuous progress toward the degree. Advancement to candidacy in a Ph.D. program should occur within a maximum of 6 years post-matriculation with a bachelor’s degree (no later than at the completion of 36 semester hours of graduate study) and 4 years post-matriculation with a master’s degree (no later than at the completion of 18 semester hours of graduate study). Students may continue in pre-candidacy status beyond this time by means of a petition to the School of Graduate Studies by a program director, based on evidence of student progress toward the degree. Individual programs can require advancement to candidacy before the time limit set in this policy.

The dean of graduate studies must promptly be notified in writing of the decision concerning a student’s advancement to candidacy, and a copy of the notification must be sent to the student concerned. A student who is refused candidacy status may not undertake further study for credit toward the doctoral degree within the same department or supervising unit. With the approval of both the department concerned and the dean of graduate studies, such a student may:

1. Take additional courses, if required, in order to complete an approved master’s degree in that department.
2. Seek admission to the graduate program of another department.

**Course 701 Requirements**

**Pre- and Post-Candidacy Dissertation Research**

When a student has been advanced to candidacy, he or she may begin dissertation research by formally registering for course 701 credits.

In certain cases, students who have not advanced to candidacy may begin registering for up to 6 credit hours of course 701 per semester at the discretion of the department and upon written notification to the dean of graduate studies. Pre-Candidacy 701 hour(s) may be taken concurrently with course work. Once a student begins registration of 701 hours, he or she must register for at least one credit hour of 701 each semester until graduation. Once 701 registration begins doctoral students have five consecutive calendar years from the semester of the first credited 701 registration, including leaves of absence, to complete all requirements for the doctorate.

**Foreign Language Requirements**

Although there is no general foreign language requirement for the doctorate, each department or supervising committee may set such requirements as are appropriate to the student’s program of study. It is the student’s responsibility to ascertain the foreign language requirements approved by the supervising unit. Each department must notify the dean of graduate studies in writing of the specific language(s) required and the date of examination determining the student’s proficiency in the required language(s).

**Dissertation Requirements**
All candidates for the Ph.D. degree must electronically submit a dissertation as evidence of their ability to conduct independent research at an advanced level. The dissertation must represent a significant contribution to existing knowledge in the student’s field, and at least a portion of the content must be suitable for publication in a reputable professional journal or as a book or monograph. Students must prepare their own dissertations. Joint dissertations are not permitted. The dissertation must conform to regulations concerning format, quality, and time of submission as established by the dean of graduate studies. Detailed instructions can be obtained from the School of Graduate Studies and are posted on the following website: http://www.case.edu/provost/gradstudies/index.htm

Research work connected with a dissertation is to be carried out under the direct supervision of a member of the university faculty selected by the student in consultation with departmental faculty and approved by the chair of the department.

Two copies of each completed and accepted dissertation will be deposited in the university library by the School of Graduate Studies. In addition, the student must guarantee the reproduction of the dissertation through University Microfilms, Ann Arbor, Michigan, before certification for the doctorate. Because dissertations are made public immediately upon acceptance, they should not contain proprietary or classified material. When the research relates to proprietary material, the student and advisor are responsible for making preliminary disclosures to the sponsor in advance to permit timely release of the dissertation. These arrangements must be disclosed when the thesis is submitted to the School of Graduate Studies. (Most forms may be found at the following website: http://www.case.edu/provost/gradstudies/forms.htm.)

Dissertation Advisory Committee

Each doctoral student is responsible for becoming sufficiently familiar with the research interests of the department or program faculty to choose in a timely manner a faculty member who will serve as the student’s research advisor. The research advisor is expected to provide mentorship in research conception, methods, performance, and ethics, as well as focus on development of the student’s professional communication skills, building professional contacts in the field, and fostering the professional behavior standard of the field and research in general. The research advisor also assists with the selection of at least two other faculty to serve as members of the dissertation advisory committee.

The dissertation defense committee must consist of a minimum of four members of the university faculty, including at least one whose primary appointment is outside the student’s program, department or school. The committee is appointed by the dean of graduate studies upon recommendation of the Chair of the department, division, or curricular program committee.

The student’s dissertation advisor must be a member of the dissertation advisory committee and may serve as chair. The chair of the committee must be a Case Western Reserve University tenured or tenure-track faculty member in the student’s program. Any tenured or tenure-track Case Western Reserve faculty member, and any full time faculty member whose primary duties include research who is authorized to serve on a Ph.D. dissertation committee by the school or college through which they are affiliated with the university, may serve on a Ph.D. dissertation committee. Any appropriate outside researcher may serve on a Ph.D. committee upon approval by the dean of graduate studies of a request by the program or department. A petition with the rationale for the request must be presented to the dean along with the proposed member’s curriculum vitae. Under special conditions, a former faculty member whose time of leaving the university has not exceeded 18 months may be approved as a voting university member by the dean of graduate studies.

Throughout the development and completion of the dissertation, members of the dissertation defense committee are expected to provide constructive criticism and helpful ideas generated by the research problem from the viewpoint of their particular expertise. Each member will make an assessment of the originality of the dissertation, its value, the contribution it makes, and the clarity, with which concepts are communicated, especially to a person outside the field. The doctoral student is expected to arrange meetings and maintain periodic contact with each committee member. A meeting of the full committee for the purpose of assessing the student’s progress should occur at least once a year until the completion of the dissertation.

Final Oral Examination (Defense of Dissertation)

Each doctoral candidate is required to pass a final oral examination in defense of the dissertation. The examination may also include an inquiry into the candidate’s competence in the major and related fields.

The defense must be scheduled with the School of Graduate Studies no later than three weeks before the date of the examination. The chair of the examining committee should give approval to schedule the defense when the written dissertation is ready for public scrutiny. The candidate must provide to each member of the committee a copy of the completed dissertation at least ten days before the examination so that the committee members have an opportunity to read and discuss it in advance.

Scheduled defenses are made known through on-campus publication, and any member of the university may be present at that portion of the examination pre-designated as public by the chair of the dissertation defense committee. Others may be present at the formal defense only by invitation of that chair.

It is expected that all members of the dissertation defense committee be present at the defense. Exceptions to this rule: a) must be approved by petition to the dean of graduate studies and only under extraordinary circumstances, b) no more than one voting member can ever be absent, c) the absent member must participate through real-time video conferencing at the department’s expense; however, if such video conferencing is not available, the absent member may participate through telephone conferencing; and d) the student must always be physically present.

The dissertation defense committee is responsible for certifying that the quality and suitability of the material presented in the dissertation meet acceptable scholarly standards. A student will be certified as passing the final oral examination if no more than one of the voting members of the committee dissents.

Institutional Review Board (IRB)

The promotion of scholarship and the discovery of new knowledge through research are among the major functions of Case Western Reserve University. If this research is to be meaningful and beneficial to humanity, involvement of human subjects as experimental participants is necessary. It is imperative that investigators in all disciplines strive to protect human subjects. University policy and federal regulations demand compliance. Per federal
SCHOOL OF GRADUATE STUDIES regulations (45 CFR 46), all research involving human subjects requires submission of an IRB application prior to initiation of research to the Case Western Reserve IRB.

Each IRB application must have a faculty member noted as the Responsible Investigator. Applications that are not fully completed as instructed will not be accepted. See university policy on the involvement of human participants in research for guidelines under which investigations involving human subjects may be pursued.

COURSE DESIGNATIONS Courses numbered 100 to 399 are undergraduate-level courses. Courses numbered 400 and higher are graduate-level courses.

GRADING SYSTEM See the “University” section of this Bulletin for a list of valid grades for the School of Graduate Studies and their appropriate use in assigning to graduate students. The only grades that can be changed after they have been assigned by the instructor are Incompletes (I). All others will remain permanently on the student’s academic record. Additional work cannot be done to change an existing grade to a higher grade.

There are some grading schemes in the School of Graduate Studies that have important policy implications. They are:

INCOMPLETE (I) Grades of I should only be assigned for letter-graded and Pass/No Pass courses for extenuating circumstances, and only when a student fails to complete a small segment of the course. Students may not sit in the same course in a later term. When an I grade is assigned by the instructor, he or she must also submit to the School of Graduate Studies the completed “Arrangement to Resolve a Grade of Incomplete” form (website: http://www.cwru.edu/provost/gradstudies/index.htm) indicating the date that the I grade will be resolved. If the student cannot complete the work for the Incomplete by the specified deadline, he or she must petition for an extension which must be endorsed by the instructor, and explain the reasons why the work has not been completed, and include a new date for completion. Students will be allowed only one extension of no more than one additional semester to complete the work for an I grade.

PASS/NO PASS (P/NP) Some graduate courses are graded on a pass or no pass basis, and students need to be aware of the regulations governing letter graded and pass/no pass credits. Of the minimum credit hours required beyond the bachelor’s degree to complete course work requirements, at least 12 credits must be letter graded for the master’s degree, and at least 24 credits must be letter graded for the Ph.D. degree. For students with approved master’s degrees who are admitted to Ph.D. programs, at least 12 credits of the required minimum of 18 credits of course work must be letter graded. Letter graded courses should be the courses most central to the student’s plan of study. Additional credit hours of letter graded course work may be specified by departmental policy. Performance evaluation for course 601 (Independent study/Research) is limited to P/NP grading.

SATISFACTORY/UNSATISFACTORY (S/U) Grades of Satisfactory (S) and Unsatisfactory (U) are to be used exclusively for two courses: 651 thesis research and 701, dissertation research. “Satisfactory” indicates an acceptable level of progress towards completion of the research required for the degree, and Unsatisfactory indicates an unacceptable level of progress towards completion of the research for the degree. Any student who receives a grade of U will automatically be put on academic probation, and if a second U is received, the student will be separated from further study in his or her degree program.

ACADEMIC POLICIES Fellowship Tuition Policy for Graduate Students The purpose of this policy is to allow students pursuing graduate degrees to take courses beyond their degree requirements without additional financial burden to the student and little or no cost to the university. Such courses, referred to as “fellowship” courses, can broaden the educational experience of graduate students by allowing them to pursue studies according to their own intellectual needs. 1) a student pursuing a graduate degree shall be charged tuition at the standard hourly rate for all of the credit hours which are intended to count toward the degree. In any semester for which students are registered for a minimum number (as determined by the school) of credits that will be applied toward the degree, fellowship courses will not incur a tuition charge. 2) In order to enroll in a fellowship course, the student must be in good standing, meet course prerequisites, and obtain consent of instructor. In addition, the student must obtain permission from his/her advisor and the School of Graduate Studies. Up to eight fellowship courses may be permitted in aggregate. 3) Thesis research (651 and 701) and similar courses cannot be taken as fellowship courses and prior rules for 701 and 703 (dissertation fellowship) are not changed by this policy. 4) Fellowship courses can not be audited. The grade that a student receives in the course will count in the cumulative GPA, but will not count towards the degree program GPA. 5) Fellowship courses can not be used toward a degree program at Case Western Reserve University. 6) Notwithstanding any of the foregoing provisions and policies, the rules, regulations, and terms of tuition and credit enrollments for each school shall remain in full force and effect.

Guidelines for Multidisciplinary Graduate and Graduate Professional Studies I. Purposes Multidisciplinary studies have as their goal the education of individuals who can make contributions to academic disciplines or professional endeavors that would be less likely to be accomplished by individuals with a background in a single discipline. Departments or faculty members may design a joint degree program, which will generally result in two degrees, or a multidisciplinary degree, which will generally result in a single degree which has a broader perspective than similar existing degrees. Such programs should meet challenges of new interdisciplinary knowledge and/or developments requiring new combinations of talent. In addition, such programs or degrees
should enhance and not duplicate existing programs in the university. Individual students with specific multidisciplinary interests that desire to pursue them at Case Western Reserve University and faculty members who wish to run pilots for joint degree programs or multidisciplinary degrees are encouraged to do so, even if no official joint or multidisciplinary degree program currently exists by organizing an individual joint degree or an individual multidisciplinary degree. Such degrees require faculty and departmental support. Guidance for the design and approval of both such programs and such individual degrees can be found at this website: http://www.case.edu/provost/gradstudies/faculty.html

Graduate Student Rights and Responsibilities

It is the responsibility of the student to become familiar with the general rules and regulations of the university not just those of the School of Graduate Studies. A member of the University community who is accused of violating any of these rules and regulations is subject to university disciplinary action. Due process procedures of adequate notice of all charges and a fair hearing will apply. Case Western Reserve University has established a mechanism whereby students may express a grievance against the actions of other students or members of the faculty and staff. A statement of the policies and procedures to be followed in the case of academic infractions by graduate students may be obtained through the School of Graduate Studies. The policies and procedures governing all other infractions are detailed in the university's annual Student Services Guide and in the "Student Affairs" section of this Bulletin. The University Office of Student Affairs should be consulted for non-academic infractions.

It is also the responsibility of the student to become acquainted with the general regulations and administrative procedures governing graduate study, together with the departmental or school regulations which apply to the student's course of study, and, in consultation with the faculty advisor or advisory committee of the supervising unit, to plan the program and carry out the work in accordance with these regulations and procedures.

DEPARTMENTAL RESPONSIBILITY FOR REQUIREMENTS

Requirements for master's and doctoral degrees beyond those set forth in these regulations may be established by departments or curricular program committees with the approval of the dean of graduate studies. Individual students may be required to take courses beyond the published requirements in order to successfully complete their degree programs. In such instances the student must be notified in writing upon matriculation by the chair of the department or curricular program, with a copy to be filed in the School of Graduate Studies.

MAINTENANCE OF GOOD STANDING

A student maintains good standing in the School of Graduate Studies by registering each fall and spring semester unless on an official leave of absence which has been approved by the School of Graduate Studies. A student is in good standing who meets the standards set by the academic department and the School of Graduate Studies to ensure normal progress toward the fulfillment of the stated requirements at levels of quality without warning or probation or extension of the allowable time limit for degree completion. Students whose quality point averages fall below minimum standards (3.00 for doctoral students; 2.75 for master's) will automatically be placed on probation until the minimum standards are achieved. In addition, a student will be subject to separation from the university for any of the following reasons:

1. Failure to achieve a quality-point average of 2.50 or higher at the completion of 12 semester hours or 2 semesters of graduate study.
2. Failure to achieve a quality-point average of 2.75 or higher at the completion of 21 semester hours or 4 semesters of graduate study.
3. Failure to receive a grade of S in the thesis research 651 or dissertation research 701/703. A student who receives a grade of U in thesis (Course 651) or dissertation research (Courses 701/703) will be placed on probation and be subject to separation. The probationary status will be recorded on the student's transcript. The student must be removed from probation by the end of the semester immediately following receipt of the grade of U by repeating the course for the same number of credit hours, and achieving a grade of S. Although removal from probation restores the student's good standing, the grade of U received will not be canceled or substituted by the grade of S subsequently received. Separation will occur if the student placed on probation receives another grade of U in the following semester; or, if the dean of graduate studies, in consultation with the academic unit, determines that the student is unlikely to be successful in working independently and productively toward the completion of the thesis or dissertation research.
4. Failure of a conditionally or provisionally admitted student to satisfy the conditions or provisions stated in the letter of acceptance by the end of the first academic year (2 semesters) or after 18 credits of course work.
5. Failure to make progress towards degree completion. If the student is not making progress towards degree completion, and it has been judged that the student is unlikely to be successful in working independently and productively toward the completion of clinical requirements, thesis or dissertation research the department and/or the dean of graduate studies (in consultation with the department) can recommend academic separation.

6. In addition to disciplinary actions based on academic standards, on recommendation of the student's department or school, the dean of graduate studies can suspend or separate a student from the university for failure to maintain appropriate standards of conduct and integrity. Such a suspension or separation will be implemented only for serious breaches of conduct that threaten to compromise the standards of a department or create concern for the safety and welfare of others. In the event of such suspension or separation, the student will be entitled to an appeal through the grievance procedure of the Graduate School.

MAINTENANCE OF QUALITY-POINT AVERAGE

In calculating the quality-point average, courses taken as a student in the School of Graduate Studies at the 400 level or above, as well as any courses accepted toward fulfillment of degree requirements for which quality points are given, will be counted, including courses which may need to be repeated. Unless otherwise stated by the department a minimum cumulative quality-point average of 2.75 is required for the award of the master's degree, and a minimum cumulative quality-point average of 3.00 is required for award of the doctoral degree. Any department, school, or curricular program committee may choose to establish quality standards higher than those stated above if such additional requirements are made known in writing to the students upon matriculation, and are recorded with the
The doctoral residency requirement is intended to insure a period of intensive academic interaction with faculty and peers and of sustained independent research. Graduate students are considered to be in residence when they are fully engaged in academic work. As resident students they may teach at the university, take graduate courses, assist in course development, and engage in research or in other scholarly activities at the university. Regardless of the nature of the work, the student's regular presence at the university is expected during fulfillment of the residency requirement.

The formal fulfillment of residency requires continuous registration in at least six consecutive academic terms (fall, spring and/or summer) from matriculation to a period not exceeding five years after the first credited hour(s) of dissertation research (701). The period while students are on a leave of absence do not count towards fulfilling the residency requirement. Within the context of continuity of registration, departments may enact other restrictions. In such instances, the departmental requirements take precedence and must formally be disclosed to the student at matriculation. This is meant to be a reflection of the appropriate reality that departments and fields have different norms and traditions of graduate study. For example, to fulfill the residency requirement, some departments may require the doctoral student to be registered for 9 or more semester hours of graduate credit in each of two consecutive semesters. Fulfillment of residency by all engineering Ph.D. candidates will be certified by their research advisors and department chairs based on an assessment of active, concentrated involvement for a period of two consecutive semesters during their pursuit of the doctorate.

**TIME LIMITATION**

All the requirements for the master's degree must be completed within five consecutive calendar years after matriculation as a graduate student, including any leaves of absence. Doctoral students have five consecutive calendar years from the semester of the first credited 701 registration, including leaves of absence, to complete all requirements for the doctorate. Any graduate student who fails to complete the requirements within the five year limit for his or her degree program will be subject to separation from further study unless granted an extension by the dean of graduate studies with the recommendation of the faculty advisor or advisory committee and approval by the department chair. An extension may be granted if the student and his or her advisor work out a plan of action for degree completion within a specified time frame which must be endorsed by the department chair. Students will be expected to meet all the specified deadlines outlined in the plan of action. The minimum acceptable registration during this extended period for each semester until graduation is three credit hours of 651 or 701, or, for Plan B master's students, an appropriate course.

**LEAVE OF ABSENCE FROM GRADUATE STUDY**

Students undertaking graduate work are expected to pursue their studies according to a systematic plan each year whether registered for full or part-time study. Occasionally a student finds it necessary to interrupt his or her studies before completion of the graduate program. A leave of absence is not to be requested unless the circumstances are such that the student cannot continue graduate study. Under such circumstances the student must request in writing a leave of absence for a period not to exceed two consecutive regular academic semesters. Forms can be found at this website: http://www.case.edu/provost/grad-studies/index.htm. In exceptional circumstances, the leave can be extended for another two semesters. However, the maximum amount of leave permitted per graduate program is four semesters. The reason for the leave must be stated clearly, and the request must be submitted to the dean of graduate studies with the written endorsement of the student's academic department. During a leave of absence the student must not seek aid from faculty members or use of the facilities of the university. This means that students may not take exams or defend theses and dissertations while on a leave. A leave of absence does not extend the maximum time permitted for the completion of degree requirements, and a leave cannot be taken while students are on extension of the five-year limit. At the expiration of the leave the student must resume registration unless formally granted an extension of the leave. Retroactive leaves are not permitted. A student who fails to obtain a leave of absence, or who fails to register following an official leave, must petition the dean of graduate studies for reinstatement in order to resume work as a student in good standing at the university.

A student who is granted a maternity or paternity leave of absence related to infant care, as well as those who must fulfill military duty obligations can petition to extend the five-year time limit associated with completion of the degree. The length of the extension may not exceed two years. International students must check with the Office of International Student Services before petitioning for a leave of absence, as such a leave can affect their visa status.

**WITHDRAWAL, RESIGNATION AND REINSTATEMENT**

Students must maintain continuous registration throughout their degree programs unless granted an official leave of absence. Students who fail to register for any academic term will be automatically withdrawn from their programs. Students who are withdrawn from their programs must petition for reinstatement in order to continue graduate study. The petition must be approved by both the student's department and the dean of graduate studies before the student may register for further course work as a student in full standing. In each case of readmission with full standing, the official letter will state the terms of readmission, including future time limits for the degree program, and the past course work that will be credited toward the degree. If more than 24 months have elapsed since the last registration, students may have to resubmit file materials if requested by the School of Graduate Studies.

**TRANSFER OF CREDIT**

Transfer of credit from another university toward master's and doctoral degree requirements is awarded for appropriate course work (not applied to another degree program) taken prior to admission. Transfer of credit must be requested in the student's first academic year, and must be appropriate for the student's planned program of study. For master's candidates, transferred credit is limited to six semester hours of graduate-level courses, and no credit for master's thesis may be transferred from another university. No transfer of credit will be awarded towards the Ph.D. degree except by petition, and no credit for the doctoral dissertation may be transferred from another university.
Students who wish to receive credit for courses taken outside the university once they are enrolled must petition for approval. All transfer of credit requires approval from the student’s advisor, the departmental chair or graduate committee, and the dean of graduate studies. Such courses must have been taken within five years of first matriculation at Case Western Reserve University and passed with grades of B or better. Forms can be found at this website: http://www.case.edu/provost/gradstudies/index.htm/.

INTERNAL TRANSFER OF CREDIT
Students of exceptional ability in the undergraduate programs of Case Western Reserve University who have the approval of the dean of undergraduate studies and the dean of graduate studies may apply to receive credit for graduate courses completed in excess of the undergraduate degree requirements.

CHANGES IN REGISTRATION
To add or withdraw from courses or to change registration from credit to audit or the reverse, a student must obtain the appropriate official form to submit to the University Registrar in accordance with the dates published each academic term for such actions to be taken. Students must make appropriate changes to their schedules by the end of the first week of classes in order to avoid paying full tuition for courses withdrawn after the final drop/add date. Only complete withdrawal for the semester entitles a student to a percentage refund of the withdrawn courses after the first week of classes. (See the “Financial Information” section of this Bulletin under Refunds). Failure to attend class or merely giving notice to the instructor will not be regarded as official notice of withdrawal or change. When making changes in registration, the international student must be aware of maintaining full-time status. Full-time status requires registration for a minimum of 9 semester hours per semester. Students financed by federal loans must remain registered for at least 6 semester hours (defined as half-time) each semester to maintain continued eligibility for that funding or to initiate such a loan.

GRADUATION
A candidate for a degree awarded by the School of Graduate Studies must make application for the degree to the School of Graduate Studies by the deadline established for that semester, which is approximately twelve weeks before the commencement date for which the degree is expected to be awarded. Students are encouraged to contact the School of Graduate Studies at the beginning of the semester in which they intend to graduate to obtain a packet of graduation materials. The candidate must meet all the deadlines for completion of degree requirements set forth in the calendar. All candidates must be registered for credit and in good standing during the semester in which the degree is awarded. Payment of tuition, fees, and fines is a prerequisite to the award of a degree.

DELAYED GRADUATION
It is a requirement of the School of Graduate Studies that a student be registered for credit in the semester in which he or she completes all the requirements to graduate in accordance with established deadlines for that semester. For a student engaged in thesis or dissertation research the completion of all requirements to graduate is not easily predicted, making it difficult to adhere to scheduled deadlines. If a student will not be able to meet the degree requirements to graduate in one semester, but will finish before the next semester begins, he or she can petition for a waiver of the requirement to be registered in the semester of graduation. To be granted a waiver of registration students must be registered for the appropriate thesis or dissertation credit hours in the semester (or summer session) immediately preceding the semester of graduation, complete all degree requirements including a current application to graduate, and submit all required materials to the School of Graduate Studies by the last day scheduled for the Drop/Add period of the next semester.

A student who qualifies for the waiver will be awarded the degree at the next graduation without the need to be registered or to pay a special fee. If a student fails to meet the waiver deadline, he or she will be required to register for the appropriate thesis or dissertation credit hours in the next semester, and to reapply for graduation in that semester.

EXCEPTIONS TO REGULATIONS
Students have the right to petition for exceptions to these regulations. Such a petition should be addressed to the dean of graduate studies. In most cases the student’s department or program committee must endorse the petition.

GRADUATE STUDENT GRIEVANCE PROCEDURE
It is the responsibility of the School of Graduate studies to assure that all students enrolled

SCHOOL OF GRADUATE STUDIES

GRADUATE STUDENT GRIEVANCE PROCEDURE

1. Students with complaints should first discuss their grievances with the person against whom the complaint is directed.
2. In those instances in which this discussion does not resolve a grievance to the student’s satisfaction, a complaint should be presented in writing to the department chairperson.
3. In the event that a decision still appears unfair to the student, the student may bring the matter to the attention of the dean of graduate studies. The dean may ask the student to put the complaint in writing. The dean will then discuss the case with the student and the department chair to evaluate the particulars and to make a ruling on it. As the situation warrants, the dean may appoint a Grievance Committee to recommend what action should be taken. In this event the Committee will be composed of two faculty members selected from the Committee on Graduate Studies of the Faculty Senate and two graduate students selected either from the Executive Committee of the Graduate Student Senate or from the student members of the Committee on Graduate Studies.

The dean of graduate studies has the responsibility for the final decision, and the ruling from the Graduate Studies Office will be considered final and binding on the persons involved in the grievance. Additional information about the grievance procedure can be obtained from the School of Graduate Studies.

It should be understood that this grievance procedure relates solely to graduate student complaints concerning academic issues. The procedure for handling complaints about other matters is detailed in the Graduate Student Handbook.

PROCEDURES AND SANCTIONS FOR GRADUATE STUDENT ACADEMIC INFRACTIONS

Graduate students accused of violating the university’s standards of conduct, which are detailed in this Academic Integrity Policy. The policy can be found at this website:
http://www.case.edu/provost/gradstudies/current.htm/. are entitled to adequate notice of all charges and to a fair hearing and may subsequently be subject to disciplinary action. The process that is outlined in the Academic Integrity Policy will apply to academic infractions, e.g., cheating on examinations, plagiarism, and other forms of dishonesty in academic activities. Additional information is available from the School of Graduate Studies.
Engineering seeks to create new processes, products, methods, materials, or systems that impact and are beneficial to our society. To enable its graduates to lead the advancement of technology, the Case School of Engineering offers thirteen degree programs at the undergraduate level (twelve engineering degrees, plus the B.S. in computer science). At the post-graduate level, the School of Engineering offers Master of Science programs and the Doctor of Philosophy for advanced, research-based study in engineering. Case School of Engineering also offers two specialized degrees at the master’s level: a Master of Engineering specifically for practicing engineers, and an integrated Master of Science programs and the Doctor of Philosophy for advanced, research-based study in engineering. Case School of Engineering also offers a Master of Science and the Doctor of Philosophy for advanced, research-based study in engineering. Case School of Engineering also offers two specialized degree programs in engineering.

The Case School of Engineering combines advanced classroom study with a rigorous independent research experience leading to significant results appropriate for publication in archival journals and/or presentation at leading technical conferences. Scientific integrity, engineering ethics, and communication skills are emphasized throughout the program.

The undergraduate program aims to create lifelong learners by emphasizing engineering fundamentals based on mathematics, physical and natural sciences. Curricular programs are infused with engineering creativity, professionalism (including engineering ethics and the role of engineering in society), professional communications, and multi-disciplinary experiences to encourage and develop leadership skills. To encourage societal awareness, students are exposed to and have the opportunity for in-depth study in the humanities, social sciences, and business aspects of engineering. Undergraduate students are encouraged to develop as professionals. Opportunities include the Cooperative Education Program, on-campus research activities, and participation in the student chapters of professional societies. Graduates are prepared to enter the workforce and be strong contributors as practicing engineers, or continue for advanced study in engineering.

At the graduate level, the Case School of Engineering combines advanced classroom study with a rigorous independent research experience leading to significant results appropriate for publication in archival journals and/or presentation at leading technical conferences. Scientific integrity, engineering ethics, and communication skills are emphasized throughout the program.

The Case School of Engineering continues the tradition of rigorous programs based on fundamental principles of mathematics, science and engineering that have been the hallmark of its two predecessors, the Case School of Applied Science (1880) and the Case Institute of Technology (1947). The formation of the Case School of Engineering is a re-commitment to the obligations of the gift of Leonard Case Jr., to serve the citizens of Northern Ohio. The School of Engineering has been a leader in many educational programs, being the first engineering school to offer undergraduate programs in computer engineering, biomedical engineering, polymer engineering and systems and control engineering.

ADMINISTRATION

Norman Tien, Ph.D.
(University of California, San Diego)
Dean of the Case School of Engineering and Nord Professor of Engineering

Patrick E. Crago, Ph.D.
(Case Western Reserve University)
Associate Dean of Engineering

Ica Manas-Zloczower, D.Sc.
(Technion-Israel Institute of Technology)
Associate Dean of Faculty Development

Robert A. Knight, M.B.A.
(Case Western Reserve University)
Associate Dean of Finance and Administration

Deborah J. Fatica, M.A.
(Bowling Green State University)
Assistant Dean, Engineering Student Programs

Marc R. Buchner, Ph.D.
(Michigan State University)
Faculty Director of Program Evaluation & Assessment

Kenneth A. Loparo, Ph.D.
(Case Western Reserve University)
Faculty Director of Continuing Education

Joseph M. Prahl, Ph.D.
(Harvard University)
Faculty Director of Undergraduate Recruiting and Student Life

J.T. Garabrant, CFRE
(John Carroll University)
Associate Dean of External Affairs

ENGINEERING DEGREES GRANTED

1. Bachelor of Science in Engineering degree with major designations as follows:
   - Aerospace Engineering
   - Biomedical Engineering
   - Chemical Engineering
   - Civil Engineering
   - Computer Engineering
   - Electrical Engineering
   - Engineering Physics
   - Materials Science and Engineering
UNDERGRADUATE DEGREE PROGRAMS

In addition to the major department requirements, each engineering undergraduate degree program includes the Engineering Core, which provides a foundation in mathematics and sciences as well as aspects of engineering fundamentals for programs in engineering. The Engineering Core also is designed to develop communication skills and to provide a body of work in the humanities and social sciences. Requirements of the Engineering Core can be found in the Undergraduate Studies section of this bulletin.

Details of the specific curricular requirements for the undergraduate majors are described in the respective departmental descriptions.

UNDERGRADUATE CORE COURSES (ENGR)

ENGR 101. Freshman Engineering Service Project (2)
This course is intended to provide engineering freshmen with an initial exposure to engineering problem solving and engineering design in a given technical field or project-driven environment. Small groups of students will be attached to a particular service project, with the assignment of working out and implementing an engineering solution. Collaboration with the Case Engineering Service Group, as well as off-campus service organizations, will provide a source of real world problems, addressing needs within the greater community for students to work on. Final engineering reports/presentations, as well as actual prototype solutions (possibly either hardware or software), are expected of each group.

ENGR 131. Elementary Computer Programming (3)
Students will develop an understanding of, and an appreciation for, the use of algorithms to solve problems, as well as the ability to translate them into good computer programs. The problems dealt with in this course will be chosen to illustrate the fundamentals of computer programming. Java is the programming language used in this course, and students create and debug Java programs as an important part of learning the fundamentals of computer programming.

ENGR 145. Chemistry of Materials (4)
Application of fundamental chemistry principles to materials. Emphasis is on bonding and how this relates to the structure and properties in metals, ceramics, polymers and electronic materials. Application of chemistry principles to develop an understanding of how to synthesize materials. Prereq: CHEM 111 or equivalent.

ENGR 200. Statics and Strength of Materials (3)
An introduction to the analysis, behavior and design of mechanical/structural systems. Course topics include: concepts of equilibrium; geometric properties and distributed forces; stress, strain and mechanical properties of materials; and, linear elastic behavior of elements. Prereq: PHYS 121.

ENGR 210. Introduction to Circuits and Instrumentation (4)
Modeling and circuit analysis of analog and digital circuits. Fundamental concepts in circuit analysis: voltage and current sources; Kirchhoff’s Laws; Thevenin and Norton equivalent circuits, inductors, capacitors, and transformers; modeling sensors and amplifiers and measuring DC device characteristics; characterization and measurement of time dependent waveforms; transient behavior of circuits; frequency dependent behavior of devices and amplifiers; frequency measurements; AC power and power measurements; noise in real electronic systems; electronic devices as switches; digital logic circuits; introduction to computer interfaces; and analog/digital systems for measurement and control. Prereq: MATH 122. Prereq or Coreq: PHYS 122.

ENGR 225. Thermodynamics, Fluid Dynamics, Heat and Mass Transfer (4)

ENGR 398. Professional Communication for Engineers (1)

Students will attend lectures on global, economic, environmental, and societal issues in engineering, which will be the basis for class discussions, written assignments and oral presentations in ENGL 398. Recommended preparation: ENGL 150 or FSCC 100 or equivalent and concurrent enrollment in ENGL 398 (ENGL 398 and ENGR 398 together form an approved SAGES departmental seminar). SAGES Dept Seminar

ADVANCED DEGREE PROGRAMS

Graduate Course

ENGR 400C. Graduate Cooperative Education (0 - 3)
An academic opportunity designed for graduate students to enhance their classroom, laboratory, and research learning through participation and experience in various organizational/industrial environments where theory is applied to practice. Graduate Cooperative Education experiences may be integrated with the student’s thesis or research project areas, or be solely for the purpose of gaining professional experience related to the student’s major field of study. Registration in this course will serve to maintain full-time student status for the period of time that the student is on a co-op assignment.

Master of Engineering Program

The Master of Engineering Program is a graduate degree program that targets currently employed engineers. The objective of this program is to provide engineers in industry with technical as well as business, management, and teamwork skills. The program differs from a traditional Master of Science degree in engineering by combining core courses that focus on the engineering-business environment and technical elective courses that concentrate on contemporary industrial practice rather than research.

The Master of Engineering Program prepares students to enhance their role as corporate leaders and provides an environment in which practicing engineering professionals can address the increasingly wide range of technical, management, financial and interpersonal skills demanded by an ever-expanding and diverse global industry base.

The Master of Engineering Program requires 30 credit hours of course work that include 18 credit hours of core courses and 12 credit hours of technical electives that are chosen from focus areas (see below). It is possible to complete the Master of Engineering degree program within a two-year (six semester), part-time, program of study, although most students choose to complete the program over a seven-nine semester period. The core courses are aimed at equipping participants with
The Program
The program consists of a set of six core courses and a four course technical elective sequence (a total of 30 credit hours are required). The core courses provide a common base of study and experience with problems, issues, and challenges in the engineering business environment. The technical course sequence provides an opportunity to update disciplinary engineering skills and to broaden interdisciplinary skills. Up to six transfer credits may be approved for graduate-level courses taken at Case Western Reserve or another accredited university.

Core Courses
- Team Leadership, Presentation Skills and Professional Assessment and Development (EPOM 400 A, B & C)
- Introduction to Business for Engineers (EPOM 401)
- Product/Process Design and Implementation (EPOM 403)
- Applied Engineering Statistics (EPOM 405)
- Engineering Economics/Financial Analysis (EPOM 407)
- Master of Engineering Capstone Project (EPOM 409)

Technical Electives
Four courses are chosen from the technical concentration areas below. For detailed course offerings in these areas, please refer to the Master of Engineering program information at www.engineering.case.edu/meng/.

- Biomedical Engineering
- Chemical Engineering
- Computer Engineering
- Infrastructure Engineering
- Macromolecular Science and Engineering
- Materials Processing and Synthesis
- Mechanical Engineering
- Robotics and Control
- Software Engineering
- Signal Processing and Communications

Master of Engineering Program
Course Descriptions
EPOM 400A. Engineering Professionalism: Team Leadership in Effective Groups (1)
This course is designed as an experience-based process to increase understanding of teams and group processes especially as they relate to leadership and project management. Students will examine human behavior in groups for the purpose of developing competence in group process management. Groups will become the essential unit for teaching and learning with the instructor serving as the facilitator. Students will be encouraged to examine group process from the perspective of the member, leader, and change agent. In addition, they will develop skills to facilitate and intervene in group processes to assure the achievement of desired group goals and outcomes.

EPOM 400B. Engineering Professionalism: Presentation Skills for Effective Leaders (1)
This course uses a combination of lecture and workshop formats to prepare students to make convincing presentations and hold effective meetings in a business setting. It will address the following: organizing materials, building persuasive content, developing effective vocal and physical presentation skills that will engage the audience, and develop meeting facilitation skills. Criteria for good presentation and facilitation skills will be standardized in all Master of Engineering core courses. Based on these criteria, standardized feedback can be established and given to reinforce effective performance as well as needed areas of improvement.

EPOM 400C. Engineering Professionalism: Professional Development (1)
The goals of the course are to help students learn methods for assessing their knowledge, abilities, and values relevant to their engineering careers, and for acquiring new professional knowledge and skills throughout their career. Students will initially assess their own values, personality style, and organizational competencies. After learning about emotional intelligence at work, each student will solicit and receive feedback from people at different levels in their organization about their work effectiveness.

EPOM 401. Introduction to Business for Engineers (3)
This course provides an introduction to the business environment for practicing engineers. The course emphasizes the interaction between business and engineering in the context of the competitive marketplace (economics), how engineering proposals are evaluated (finance), the relationship between product and customer (marketing), making effective use of micro-disciplinary teams (organizational behavior), and the manufacturing and production process (operations).

EPOM 403. Product and Process Design and Implementation (3)
The course is taught through a series of lectures, class discussions, group projects and case studies. The course aim is to provide a solid understand-
one calendar year of additional study and may be entered following a student's Junior or Senior year. The program prepares engineers to work in different business environments. A rigorous curriculum prepares graduates to build synergy between the technical possibilities of engineering and the profit-loss responsibilities of management. This program evolved after years of research and interviews with over 110 professionals and twenty-eight corporations in the U.S.

The Program
The program includes 42 credit hours of graded course work. The ten-course core sequence makes up 30 of these hours. Students choose an area of concentration, either technology entrepreneurship or biomedical entrepreneurship, for the remaining 12 credits. The Program prepares participants to function as technical leaders with a unique blend of broadened engineering and management skills, which can have a strategic impact on the organization's bottom line. Graduates are uniquely positioned for rapid advancement in technology-based organizations.

TEN CORE COURSES
• Professional Development (IIME 400)
• Project Management (IIME 405)
• Accounting, Finance, and Engineering Economics (IIME 410)
• Materials and Manufacturing Processes (IIME 415)
• Product and Process Design, Development and Delivery I & II (IIME 430 A & B)
• Information Technology & Systems (IIME 420)
• Understanding People and Change in Organizations (IIME 425)
• Engineering Entrepreneurship I & II (IIME 450 A & B)

Technology Entrepreneurship Concentration
• Design for Manufacturing and Manufacturing Management I & II
• Engineering Statistics and Quality I & II
• Biomedical Entrepreneurship Concentration
• Engineering Statistics for Biomedical Applications
• Models for Health Care and Regulatory Affairs

Two courses from the following areas:
• Biomedical Imaging: EBME 410, EBME 431, EBME 400, EBME 461
• Biomaterials/Tissue Engineering: EBME 403, EBME 406, EBME 408, EBME 416
• Neuroprostheses: EBME 407, EBME 507, EBME 417
• Cardiac Bioelectricity: EBME 417, EBME 501, EBME 502
• Biomedical Instrumentation and Sensors: EBME 403, EBME 414, EBME 418

MASTER OF ENGINEERING AND MANAGEMENT PROGRAM

Course Descriptions
IIME 400. Professional Development (3)
The goal of the course is to help students learn methods for assessing their knowledge, abilities, and values relevant to engineering and management, and for the acquiring of new professional knowledge and skills throughout their career. Recommended preparation: Senior status in engineering.

IIME 405. Project Management (3)
Project Management is concerned with the management and control of a group of interrelated tasks required to be completed in an efficient and timely manner for the successful accomplishment of the objectives of the project. Since each project is usually unique in terms of task structure, risk characteristics and objectives, the management of projects is significantly different from the management of repetitive processes designed to produce a series of similar products or outputs. Large-scale projects are characterized by a significant commitment of organizational and economic resources coupled with a high degree of uncertainty. Thus, the objective of the course is to understand what are the main issues and problems in the management of projects and to have a thorough knowledge of the conceptual models and techniques available to deal with them. Recommended preparation: Senior status in engineering.

IIME 410. Accounting, Finance, and Engineering Economics (3)
This class uses a combination of class lecture and discussion, in combination with problem-type and case-type assignments, to introduce you to key concepts and tools of financial economics. You are expected to use the resources at your disposal, such as the textbook or the accounting dictionary, to help you understand any unfamiliar concepts. Normally, each class will be divided into two sections. The first part of each class session will be devoted to discussions of selected problems and cases, with focus on the specific topics being covered. The second part of each class will be devoted to prepare you for the following session class assignments. Recommended preparation: Senior status in engineering.

IIME 415. Materials and Manufacturing Processes (3)
A survey course on contemporary and modern materials and their processing, the course begins with a review of traditional materials, including metals, ceramics, plastics, and composites. The evolution of the materials will be traced from their beginnings as raw resources and precursors to finished products. Topics will emphasize modern manufacturing methods and materials. Traditional and modern tools for materials and process characterization will be an important part of the course. Special attention will be directed to examples of statistical methodology and information technology. Visits to local industries and presentations by participating companies will reinforce the information presented in the classroom. Recommended preparation: Senior status in engineering.

IIME 420. Information Technology and Systems (3)
This course is intended to provide students with a perspective of effective use and management of information technology. The primary thrust will be to explain the enabling role of information technology, and how this insight can provide a competitive advantage for industrial organizations in many application areas. In order to accomplish this, technologies such as telecommunications and networking, distributed systems, data management systems, software development, electronic commerce, and the use of multimedia, internet, and web-based systems will be investigated. The impact of these IT technologies for improved industrial productivity and competitiveness. Recommended preparation: accredited bachelor's degree in engineering.

IIME 425. People Issues and Change in Organizations (3)
This course is intended to help students assess events occurring in organizations from a behavioral and human resources perspective and to help them develop strategies for managing these events. The course applies knowledge from the fields of organizational behavior and human resource management to provide an understanding and the skills needed to be effective in organizations. The fields of Organizational Behavior and Human Resource Management are devoted to the study of how human beings act in organized settings and how organizations can affect human behavior through a variety of policies, practices, structures, and strategies. In today's environment, organizations are faced with high levels of international competition and an increasing pace of technological, market, and social changes. As an organizational member, you are expected to successfully operate within these increasingly complex demands as well as help create and guide change. The purpose of this course is to provide you with the framework and tools needed to analyze and operate in the changing organization. We will examine some of the features that characterize an emerging organizational form and contrast this to its traditional predecessor. The focus of the course will be on the skills you will need to operate in the "new" organization including skills for being a change agent working in entry level and early career managerial roles. Recommended preparation: accredited bachelor's degree in engineering plus summer job experience.

IIME 430A. Product and Process Design, Development, and Delivery I (3)
An integrated approach to the teaching of the complex relationship of customer to designer and to manufacturer, this course will be team taught by...
Faculty from Weatherhead School of Management and Case School of Engineering, with participation of corporate representatives sponsoring projects for the teams. The course will be built on a series of projects, each emphasizing different aspects of the product/process design experience, selected to provide exposure to a wide variety of entrepreneurial activities. The project activities are expected to promote the development of realistic activities of cross-functional teams. Recommended preparation: accredited bachelor’s degree in engineering plus summer job experience.

IIME 430B. Product and Process Design, Development, and Delivery (3)
An integrated approach to the teaching of the complex relationship of customer to designer and to manufacturer, this course will be team taught by faculty from Weatherhead School of Management and Case School of Engineering, with participation of corporate representatives sponsoring projects for the teams. The course will be built on a series of projects, each emphasizing different aspects of the product/process design experience, selected to provide exposure to a wide variety of entrepreneurial activities. The project activities are expected to promote the development of realistic activities of cross-functional teams. Recommended preparation: IIME 430A.

IIME 435. Design for Manufacturing and Manufacturing Management (3)
This course introduces concepts for helping make designs more manufacturable and for making the manufacturing process more successful through better planning and control. It is related to the product and process design course, in that it picks up where that course stops. We study how to plan and control the manufacturing process, given the design for manufacturing. The course will include quantitative analysis for cases that will be performed on microcomputer software.

IIME 440. Engineering Statistics and Quality (3)
This course provides an introduction to managing quality throughout the supply chain in both manufacturing and service organizations, utilizing the popular Six Sigma approach. The familiar DMAIC (define, measure, analyze, improve control) problem solving approach will be emphasized. Students will learn the basic tools of quality (such as cause-and-effect diagrams for brainstorming), quality processes (such as benchmarking), and quality management including quality planning, quality control, and quality improvement. The course will include the subject of statistical process control, an integral component of Six Sigma.

IIME 445. Engineering Statistics for Biosciences (3)
This course provides an introduction to biostatistics, emphasizing experimental design, analysis of data, and special emphasis on statistical and financial aspects of randomized clinical trials for biomedical applications. There will be a final project involving development of a clinical trial protocol including the experimental design, recruitment and retention strategy, analysis plan and budget. Offered as BIOS 448, HSMC 448, and IIME 445.

IIME 446. Models of Health Care Systems (1.5)
This course is for professionals who will pursue their careers in, or associated with, the health care industry; and therefore, need to understand the structure, operations and decision influences in the health care delivery system. The course is intended to develop competence and confidence in the participant’s ability to understand and operate in the industry, the largest and, perhaps, the most complex in the United States. It is applicable to the private and public, profit and not-for-profit sectors. In this course students are introduced to: the different systems of care delivery; their organization and operations; their markets and the nature of the demand for their services; and the dynamics of their interaction among themselves and with other entities in the industry (e.g., payors/insurers, regulators and accreditors, technology and pharmaceutical suppliers). Offered as HSMC 446 and IIME 446.

IIME 447. Regulatory Affairs for the Biosciences (1.5)
This mini-course introduces students to the Food and Drug Administration (FDA) and the laws and regulations it enforces. A scientific regulatory agency with far reaching enforcement authority, FDA is the most powerful consumer protection agency in the world. This course will familiarize students with FDA’s mission, philosophy and organizational structure, as well as policy and procedure it uses to ensure the safety and effectiveness of the food, drugs, biologics, cosmetics, medical devices and radiation-emitting products it regulates. Recommended preparation: Enrollment in the MEM Bio-medical Entrepreneurship Track. Offered as BIOS 447, HSMC 447, and IIME 447.

IIME 450A. Engineering Entrepreneurship I (3)
The nature and importance of entrepreneurship is an area of importance to business leaders, educators, politicians, and individual members of the society. It is a driver of economic development and wealth creation in organization units ranging in size from the individual company to entire nations. Technology-based entrepreneurship is particularly important to this economic development due to its impact on productivity and its potential for exponential growth. To create something new and of value to both the organization and the market requires a technical individual who is willing to assume the social, psychic, and financial risks involved and achieve the resulting rewards whether these be monetary, personal satisfaction, or independence. This can occur while starting an enterprise (i.e., entrepreneur) or while driving innovation in an existing organization (intrapreneurship). This course will also take students through a variety of issues related to enhancing innovation in the context of a technology-based organization. This is sometimes termed intrapreneurship and includes innovating new products and services within an organization. This is a very complex field and relatively young. Students will learn that there are not many “absolute truths,” but there are numerous best practices and benchmarks that can assist the intrapreneur. Recommended preparation: accredited bachelor’s degree in engineering plus summer job experience.

IIME 450B. Engineering Entrepreneurship II (3)
IIME 470. Independent Projects (3)
This course is designed for students wishing to expand experiential learning opportunities at the interface of engineering and management. Preferred focus areas in entrepreneurship and opportunity assessment, product design and development, and manufacturing planning and management. Project ideas along with milestone, deliverables, and potential corporate clients need to be arranged in advance.

MASTER OF SCIENCE DEGREE PROGRAMS

Recognizing the different needs and objectives of resident and non-resident graduate students pursuing the master’s degree, two different plans are offered. In both plans, transfer of credit from another university is limited to six hours of graduate-level courses, taken in excess of the requirements for an undergraduate degree, approved by the student’s advisor, the department chair, and the dean of graduate studies. All Master of Science degree programs require the submission of a Planned Program of Study which must be approved by the engineering department and the dean of graduate studies, and which must be submitted before registering for the last 9 course credits of the program.

Master’s Thesis Plan
Minimum requirements for the degree of Master of Science in a major field under this plan are:

1. Completion of 18 hours of graduate course work. The courses must be approved by the department offering the degree.
2. Completion of nine hours of thesis work culminating in a thesis examination given by at least three professors, plus approval by the chair of the department offering the degree. A student with research experience equivalent to a thesis may petition the Graduate Committee of the Case School of Engineering for substitution of nine hours of course work for the thesis requirement. In this case, the thesis examination above is replaced by a similar examination covering the submitted research work and publications.

At least 18 hours of total course work, including up to 9 hours of thesis research, must be at the 400 level or higher.
Master's Comprehensive Plan
Students may pursue either a project or non-project track under this option. Minimum requirements for the degree of Master of Science in a major field under this plan are

1. Project track: Completion of 27 hours of graduate course work including three to six hours of Special Problems. Special Problems course work must consist of an engineering project approved by the chair of the department offering the degree, and may be carried out at the student's place of employment with nominal supervision by a faculty advisor or in the division laboratories under direct supervision. The project must culminate in a written report and examination by at least three professors plus approval by the chair of the department offering the degree. The Special Problems course may be waived for students who have had industrial design or research experience and who submit sufficient evidence of this experience in the form of a publication or internal report. For these students, a minimum of 27 hours of course work and the final oral examination covering the submitted publications or reports as well as related course material will be required for the master's degree. At least 18 hours of course work including up to 6 hours of Special Problems must be at the 400 level or higher.

or

2. Non-project track: Students who register for 27 hours, not including Special Problems course work, must pass satisfactorily a comprehensive examination to be administered by the department or curricular program committee. The examination may be written or oral or both. A student must be registered during the semester in which any part of the comprehensive examination is taken. If not registered for other courses, the student will be required to register for one semester hour of EXAM 600, Comprehensive Examination, before taking the examination.

UNDESIGNATED MASTER OF SCIENCE DEGREE
A student working toward an undesignated Master of Science degree in engineering must select a department. The student is responsible for submitting a Planned Program of Study, which must have the approval of the engineering department and the dean of graduate studies, and which must contain a minimum of 9 semester hours of course work in the department approving the program. A minimum of 18 semester hours of course work for the degree must be at the 400 level or higher. The student must meet all the requirements of the designated Master of Science degree in engineering.

DOCTOR OF PHILOSOPHY DEGREE
The student's Ph.D. program should be designed to prepare him or her for a lifetime of creative activity in research and in professional engineering practice. This may be coupled with a teaching career. The mastery of a significant field of knowledge required to accomplish this purpose is demonstrated by an original contribution to knowledge embodied in a thesis and by satisfactory completion of a comprehensive course program which is intensive in a specific area of study and includes work in other areas related to, but not identical with, the major field. The necessity for breadth as well as depth in the student's education cannot be overemphasized. To this end, any engineering department may add additional requirements or constraints to ensure depth and breadth appropriate to its field.

No student may be admitted to candidacy for the Ph.D. degree before approval of his or her Planned Program of Study by the Advisory Committee and the engineering department. After this approval has been obtained, it is the responsibility of the student's department to notify the dean of graduate studies of his or her admission to candidacy after the student has fulfilled any additional department requirements. Minimal requirements in addition to the university requirements are

1. The minimum course requirement beyond the B.S. level is 36 credit hours of courses taken for credit, at least 18 hours of which must be taken at Case Western Reserve University. The following courses taken for credit will be acceptable for a Ph.D. program of study:
   a. All 400-, 500-, and 600-level courses,
   b. Those 300-level courses approved by the student's department up to a maximum of three beyond the B.S. or a maximum of one beyond the M.S., and
   c. Approved graduate-level courses taken at other institutions
2. A minimum depth in basic science equivalent to six semester hours (for credit) is required. This requirement is to be satisfied by courses that have been previously approved by the faculty of the department in which the student is enrolled.
3. The requirement for breadth is normally satisfied by a minimum of 12 semester hours of courses (for credit) outside the student's major area of concentration as defined by the student's department and does not include courses taken to fulfill the basic science requirement.
4. A minimum of three teaching experiences as defined by the student's department. All programs of study must include departmental 400T, 500T, and 600T courses to reflect this requirement. All students fulfilling teaching duties must complete UNIV 400.
5. The minimum requirement for research is satisfied by at least eighteen hours of thesis (701) credits.
6. A cumulative quality-point average of 3.0 or above in all courses taken for credit as a graduate student at Case Western Reserve University (excluding grades in thesis research and grades of R) is required for the award of the doctoral degree.

Qualifying Examination
The student must pass a qualifying examination relevant to his or her area of study as designated by the curricular department with which he or she is affiliated. For students who obtain the M.S. degree from Case Western Reserve University, the qualifying examination should be taken preferably before the end of the student's fourth semester of graduate study but no later than the end of the fifth semester at the university. For students entering with the master's degree the examination should be taken no later than the end of the third semester at the university.

Planned Program of Study
Each student is required to submit a Planned Program of Study, detailing his or her course work, thesis schedule, and qualifying examination schedule and indicating that all the minimum requirements of the university and the faculty of the Case School of Engineering are satisfied. This Planned Program of Study must be approved by the advisory committee and the engineering department before registering for the last 18 credits hours of the program.

If the student is pursuing the Ph.D. degree without acquiring the M.S. degree, a petition to waive the requirement of the M.S. degree should be approved by the departmental advi-
sor, the chair and submitted to the dean of graduate studies. All required courses taken at the university beyond the B.S. degree should be shown on the Planned Program of Study with the grade if completed. If the requirements are to be fulfilled in other than the standard ways described above, a memorandum requesting approval should be submitted to the dean of graduate studies.

The Planned Program of Study must be submitted within one semester after passing the qualifying examination.

INTERDISCIPLINARY RESEARCH CENTERS

Interdisciplinary research centers act as intensive incubators for students and faculty doing research and studying applications in specialized areas. Thirteen research centers and research programs at the Case School of Engineering have been organized to pursue cutting-edge research in collaboration with industrial and government partners. The transfer of technology to industry is emphasized in all the centers.

The educational programs of these centers encompass the training of graduate students in advanced methods and strategies, thus preparing them to become important contributors to industry after graduation; the involvement of undergraduates in research; the presentation of seminars that are open to interested members of the community; and outreach to public schools to keep teachers abreast of scientific advances and to kindle the interest of students in seeking careers in engineering.

Advanced Platform Technology (APT) Center
Louis Stokes Cleveland Veterans Affairs 10701 East Boulevard, Mail Stop 151 AW/APT Cleveland, Ohio 44106 www.aptcenter.research.va.gov Phone: 216-707-6421 Fax: 216-707-6420 Ronald J. Triolo, Executive Director e-mail: ronald.triolo@case.edu

The Advanced Platform Technology (APT) Center brings together top faculty and researchers from Case Western Reserve University and the Cleveland Veteran’s Affair Medical Center to capture the most recent developments in the fields of microelectronics and material science and focus them on the practical medical needs of individuals disabled by sensorimotor dysfunction or limb loss. The APT Center creates novel, cross-cutting technologies for the diagnosis, treatment or study of high priority clinical conditions within a structured framework that facilitates regulatory compliance, outsourcing by contract manufacturers, and dissemination within the rehabilitation community. Center projects to date have concentrated primarily on developing new materials and microsystems for interfacing with the nervous system, repairing orthopaedic trauma and accelerating wound healing, replacing or restoring natural limb, somatosensory and organ system function, and both monitoring and promoting neurological, genito-urinary and vascular health.

The APT Center was established as a VA R&D Center of Excellence in 2005 and is based at the Louis Stokes Cleveland VAMC (CVAMC). The Center is able to provide the following resources for developing, testing and implementing neural interfaces: 1) manufacture and supply of nerve- and muscle-based stimulating and recording electrodes 2) neural modeling and analysis of interface designs 3) polymer and bioactive material development 4) Microelectromechanical (MEMS) systems design and fabrication 5) rapid prototyping 6) pre-clinical in vitro and in vivo verification of electrode and neural interface performances 7) circuit and software design and 9) system validation and design control documentation.

Case Advanced Power Institute (CAPI)
124 A.W. Smith Building (7217) Phone: 216-368-2472 Fax: 216-368-0953 Thomas A. Zawodzinski, Director e-mail: taz5@case.edu

The Case Advanced Power Institute (CAPI) is a center for research, education, industry stimulation and outreach activities in energy efficient technologies. The current focus is on various fuel cell technologies. CAPI combines the strengths and legacy of fuel cell related research and development at Case Western Reserve University with new generation of leading scientists and engineers. Specifically CAPI R&D is focused on enabling the commercialization of fuel cells. CAPI activities range from studying the fundamentals of the phenomena taking place within the fuel cell to completing performance and system level studies and mathematical modeling. The CAPI Affiliates Program gives industry the opportunity to work directly with expert fuel cell researchers and state-of-the-art capabilities, at below standard rates. Affiliates are consulted on topic areas critical to CAPI research and have access to results from the research program.

Center for Cardiovascular Biomaterials (CCB)
202 Wickenden Building (7207) www.case.edu/affil/CCB/ccbhome.htm Phone: 216-368-3005 Fax: 216-368-4969 Roger E. Marchant, Director e-mail: rmx4@case.edu Anirban Sen Gupta, Associate Director Phone: 216-368-4564 Fax 216-368-4969 e-mail: anirban.sengupta@case.edu

The Center for Cardiovascular Biomaterials (CCB) carries out research and development projects to investigate new biomaterials, tissue engineered materials, and targeted drug delivery systems, for use in cardiovascular applications and implants. CCB also provides researchers access to shared use facilities, which includes high resolution microscopy such as AFM, molecular spectroscopies, surface analysis, and polymer and peptide synthesis capabilities. The chemical and mechanical interface between the biomaterial and the host tissue are the focus of major study, with the goals being to improve biologic function and biocompatibility in the response of the human body to implants. Current projects include investigation of thrombosis (blood clotting) and infection mechanisms due to cardiovascular prosthesis, biomimetic design of novel biomaterials for cardiovascular and neural implants; cardiovascular and neural tissue engineering based on biomimetic designs. Studies at the cell and molecular level assist our understanding of the underlying mechanisms, so that novel biomedical materials may be designed, prepared, and characterized.

Center for In Situ Cell and Tissue Imaging
Department of Biomedical Engineering Wickenden 307 http://bme.case.edu/mechbio/facilities.html Phone: 216-368-5884 Fax 216-368-4969 Melissa Knothe Tate, Director email: mkt4@case.edu

The Center for In Situ Cell and Tissue Imaging (CISCTI) is designed to offer state of the art and cutting edge imaging capabilities to the biomedical community at Case Western Reserve University. The center showcases a custom-configured instrument based on the Leica TCS SP2 AOBS Spectral confocal microscope system (Leica Microsystems, Mannheim, Germany). The tunable acousto-optical beam splitter (AOBS) provides selection and examination of any portion of the visible and near-IR emission wavelengths set.
for a given dye or chosen for unique research applications; it allows for spectroscopy at length scales from tissue to cellular to subcellular. The microscope is configured with software for fluorescence recovery after photobleaching (FRAP), which provide diffusion rates of fluorescence-marked macromolecules. The upright design of the microscope allows not only examination of slides and cell cultures, but also thicker, opaque objects. The removable stage allows use of large objects, with the confocal scanning feature still functional, because it is built into the motorized nosepiece and not into a motorized stage as in other confocal microscopes. For example, the system allows for live animal and/or cell imaging concomitant fluorescent spectroscopy, patch clamping, fluorescence recovery after photobleaching (FRAP), tracking of molecular transport (e.g. drug delivery), and digital video documentation. In order to assist in preparation of specimens for imaging, a state of the art histology core lab (part of CISCCTI) is set up to carry out fixation, embedding, and sectioning of soft and hard tissues. Through a Ohio Board of Regents BRTT grant (Clinical Tissue Engineering Center, CTEC), the CISCCTI has recently acquired a stereolithography rapid prototyping system (3D Systems Viper si2).

Center for Layered Polymeric Systems (CLiPS)
NSF Science and Technology Center 420 Kent Hale Smith Building 2100 Adelbert Road Cleveland, Ohio 44106-7202 http://clips.case.edu Phone: 216-368-4203 Fax: 216-368-6329 Eric Baer, Director email: exb6@case.edu Anne Hiltner, Co-Director email: pah6@case.edu

Exploration of multilayered polymeric systems at the micro- and nano-layer levels reveals unique properties and capabilities that are different, and often not predicted, from systems involving the same materials on a larger scale. Technology refined within CLiPS allows the production of films and membranes composed of hundreds or thousands of layers. These extremely thin layers promote interactions approaching the molecular level between the materials used in the process.

CLiPS research focus includes four major areas: the enabling technology which is the continuing refinement of and innovation in the multilayering process; exploration of membranes and transport phenomena for applications such as food and electronic packaging, drug delivery, and diagnostic devices; optoelectronic systems which involves applications in information, electronic and laser technologies; and science and technology initiatives which is directed toward innovation with multilayer technology to create new polymeric structures.

CLiPS was established in 2006 with funding by the National Science Foundation as a Science and Technology Center. It is the first NSF STC ever to be established at Case Western Reserve University. CLiPS is a national center involving close partnership with the University of Texas, Fisk University, the University of Southern Mississippi, and the Naval Research Laboratory, and an important educational partnership with the Cleveland Metropolitan School District.

CLiPS researchers and educators work together to accomplish the Center’s mission of advancing the nation’s science and technology agenda through development of new materials and materials systems and for educating a diverse American workforce through interdisciplinary education programs.

Center for Modeling Integrated Metabolic Systems (MIMS) 410 Wickenden (7207) www.csuohio.edu/mims/ Phone: 216-368-4066 Fax:216-368-4969 Gerald M. Saidel, Director e-mail: gms3@case.edu

The thrust of the MIMS Center is mathematical modeling and simulation of metabolic systems in response to stresses associated with hypoxia, exercise, diet, and drug inputs. A general integrative whole-body model relates cellular to tissue metabolism with special emphasis on skeletal muscle, and heart. Biomedical research projects incorporate one or more of the metabolic stresses in which the modeling can help quantify mechanisms and predict responses that cannot be directly measured. These projects involve modeling of cell-tissue integration within an organ as well as modeling the integrated, whole-body effects of the combined tissue-organ systems. Critical experimental studies with each of the tissue-organ systems are conducted for model validation. A quantitative understanding of the complexity of cellular metabolism integrated with tissue, organ, and whole-body processes requires sophisticated mathematical models, computer simulations, and validation with experimental data. Physiologically based models incorporate cellular metabolic reactions and transport processes of a large number of chemical species. Such models allow quantitative evaluation of metabolic pathways and regulatory mechanisms under normal and abnormal conditions and associated with disease states. Consequently, these models can provide a basis for simulating the integrated effects of altering enzyme contents/activities or substrate concentrations with pharmacological agents.

Cleveland Functional Electrical Stimulation Center 11000 Cedar Avenue, Suite 230 Cleveland, Ohio 44106-3052 www.FEScenter.org Phone :216-231-3257 Fax: 216-231-3258 P. Hunter Peckham, Director e-mail: info@FEScenter.org

Functional electrical stimulation (FES) is the application of electrical currents to either generate or suppress activity in the nervous system. FES can produce and control the movement of otherwise paralyzed limbs, for standing and hand grasp; activate visceral bodily functions, such as micturition; create perceptions such as skin sensibility; arrest undesired activity, such as pain or spasm; and facilitate natural recovery and accelerate motor relearning. FES is particularly powerful and clinically relevant, since many people with neurological disabilities retain the capacity for neural conduction, and are thus amenable to this intervention.

The Center focuses its activities in four major areas: Fundamental studies to discover new knowledge; Enabling technologies for clinical application or the discovery of knowledge; Clinical research that applies this knowledge and technology to individuals with neurological dysfunction; Transfer of knowledge and technology to the clinical community and to industry.

The FES Center was established as a VA RR&D Center of Excellence in 1991 and is based at the Louis Stokes Cleveland VAMC (CVAMC). The Center is a consortium with three institutional partners: CVAMC, Case Western Reserve University (CWRU), and the MetroHealth Medical Center (MHMC). The Center fulfills its mission by integrating and facilitating the efforts of scientists, engineers, and clinicians through common goals and directions in the major clinical areas, and by providing mechanisms to accomplish these goals across the institutional partners.
The Electronics Design Center (EDC) is a multi-disciplinary educational and research Center focusing on the applications of microfabrication processing to the advancement of chemical and biological micro-systems. The Center has complete thick film and thin film processing facilities, including screen printing, ink jet printing and sputtering equipments. Other facilities supporting the microfabrication processing are also readily available.

Microfabrication Laboratory (MFL)
112 Bingham Building (7200)
http://mems.case.edu/
Phone: 216-368-2934 Fax: 216-368-8738
Chung-Chiun Liu, Director
e-mail: cxl9@case.edu

MFL houses a state-of-the-art facility that provides the latest in microfabrication and micromachining processes. The Institute focuses on the applications of microfabrication and micromachining technology to a wide range of sensors, actuators and other microelectromechanical (MEMS) systems. Application thrusts include: (i) healthcare; (ii) industrial control, automation and fault detection; (iii) portable power generation; and (iv) functional materials and structures. In addition to silicon based technology, the Institute has a unique strength in silicon carbide micromachining that is particularly valuable for applications in harsh environments. Undergraduate students, graduate students, and post-doctoral assistants use the Institute’s facilities to carry out their research or special projects. Recent developments by researchers in MFL include Schottky diode based hydrogen sensor, high temperature oxygen sensor, nano-structure tin oxide sensor, inertial sensors, micro-size pressure sensors, wireless telemetric Microsystems, miniature displays, micromechanical light modulators, microvalves, and micropumps.

MFL facilities support a state-wide network, Ohio MEMSNet, for MEMS research and development.

National Center for Space Exploration Research (NCSER)
305 Olin Building
http://mae1.cwru.edu/mae/
Phone: 216-368-0748 Fax: 216-368-0718
J. Ivan D. Alexander, Director
e-mail: ida2@case.edu

The National Center for Space Exploration Research (NCSER) is a collaborative effort between the Universities Space Research Association (USRA), Case Western Reserve University (CWRU), and NASA Glenn Research Center (GRC) that provides GRC with specialized research and technology development capabilities essential to sustaining its leadership role in NASA missions. Expertise resident at NCSER includes reduced gravity fluid mechanics, reduced gravity combustion processes, heat transfer, two-phase flow, micro-fluidics, and phase change processes, computational multiphase fluid dynamics, heat and mass transfer, computational simulation of physico-chemical fluid processes and human physiological systems. This expertise has been applied to:

- Cryogenic fluid management
- On orbit repair of electronics
- Spacecraft fire safety
- Exploration life support
- Energy storage
- Dust management
- Thermal management and control
- Environmental monitoring/control
- ISS experiment development
- Integrated system health monitoring
- Astronaut health
- Planetary Surface Mobility
- In situ resource utilization
- Materials synthesis
- Bio-fluid mechanics
- Biosystems modeling

Neural Engineering Center
112 Wickenden (7207)
http://nec.case.edu/
Phone: 216-368-3974 Fax: 216-368-4872
Dominique Durand, Director
e-mail: dxd6@case.edu

The research mission of the center is to bring to bear combined tools in physics, mathematics, chemistry, engineering and neuroscience to analyze the mechanisms underlying neuronal function and to solve the clinical problems associated with neuronal dysfunction. Research areas include: Neuromodulation, Neuroprostheses, Quantitative Neurophysiology, Neural Dynamics, Neuro-Mechanical Systems, Neural Regeneration, Neural Interfacing, Neural Imaging and Molecular Sensing, Neuro-Magnetism, and Systems Neuroscience. The education mission of the center is to provide engineers and scientists with an integrated knowledge of engineering and neuroscience capable of solving problems in neuroscience ranging from the molecules to the clinic. The center is also an outlet for technology transfer of new ideas to be commercialized by industrial partners. The center’s goals are accomplished by fostering interdisciplinary research between clinicians, scientists, students and local industry, educational experiences including didactic material, laboratory experience and clinical exposure, and close ties to industrial partners.

ThinkTank for Multiscale Computational Modeling of biomedical and Bio-inspired Systems
Department of Mechanical & Aerospace Engineering
10900 Euclid Avenue
Glennan 418
http://bme.case.edu/mechbio/facilities.html
Phone: 216-368-5884 Fax: 216-368-4969
Melissa Knothe Tate, Director
e-mail: mkt4@case.edu
Christopher Hernandez, Vice Director
e-mail: cjh29@case.edu

Typically, computational modelers share common approaches to diverse research and development problems. By providing a common space and infrastructure (software licenses and hardware) for computational modelers to work, we hope to promote exchange of modeling experience and expertise and to promote cross-departmental as well as cross-institutional collaborations. The ThinkTank provides a home for several international computational collaborations as well.

BIOMEDICAL ENGINEERING

The mission statement of the Case Western Reserve University Department of Biomedical Engineering (BME) is:
To promote human health through education and research that bridges the gap between medicine and engineering. Our faculty and students play leading roles ranging from basic science discovery to the creation, clinical evolution, and commercialization of new technologies, devices and therapies. In short, we are “Engineering Better Health.”

Graduates in biomedical engineering are employed in industry, hospitals, research centers, government, and universities. Biomedical en-
Biomedical engineering was established in 1968 at Case Western Reserve University. As one of the pioneer programs in the world, it has become a strong and well-established program in research and education with many unique features. It was founded on the premise that engineering principles provide an important basis for innovative and unique solutions to biomedical problems. This philosophy has been the guide for the successful development of the program, which has been emulated by many other institutions. Quantitative engineering for biomedical applications remains the cornerstone of the program and distinguishes it from biomedical science programs. In addition to dealing with biomedical problems at the tissue and organ-system level, the department’s educational programs have a growing emphasis on cellular and subcellular mechanisms for understanding of fundamental processes as well as for systems approaches to solving clinical problems. Current programs lead to the B.S., M.S., combined B.S./M.S., Ph.D., and M.D./Ph.D. in biomedical engineering. In all of the BME programs at Case, the goal is to educate engineers who can apply engineering methods to problems involving living systems. The Case School of Engineering and the School of Medicine are in close proximity on the same campus. The Biomedical Engineering faculty members carry joint appointments in the two schools and participate in the teaching, research, and decision-making committees of both schools. The department is close to several major medical centers (University Hospitals, Cleveland Clinic, VA Medical Center, and MetroHealth Medical Center). As a result, there is an unusually free flow of academic exchange and collaboration in research and education among the schools and institutions. All of Case’s BME programs take full advantage of faculty cooperation among university departments, which adds significant strength to the programs.

FACULTY

Primary Appointments

Jeffrey L. Duerk, Ph.D.
(Case Western Reserve University)
Associate Professor, Biomedical Engineering
Rapid MR imaging and Image guided procedures. New methods for MR acquisition and reconstruction with particular emphasis in cancer and cancer therapeutics

Eben Alsbarg, Ph.D.
(University of Michigan)
Assistant Professor
Biomimetic tissue engineering: innovative biomaterials and drug delivery vehicles for functional tissue regeneration and cancer therapy; control of stem cell fate decision; precise temporal and spatial presentation of signals to regulate cell behavior; mechanotransduction and the influence of mechanics on cell behavior and tissue formation; cell-cell interactions

James P. Basilion, Ph.D.
(The University of Texas)
Associate Professor (joint with Radiology)
High resolution imaging of endogenous gene expression; definition of “molecular signatures” for imaging and treatment of cancer and other diseases; generating and utilizing genomic data to define informative targets; strategies for applying non-invasive imaging to drug development; novel molecular imaging probes and paradigms

Patrick E. Crago, Ph.D.
(Case Western Reserve University)
Professor and Associate Dean of Engineering
Control of neuroprostheses for restoration of motor function; neuromechanics; modeling of neuromusculoskeletal systems

Dominique Durand, Ph.D.
(University of Toronto, Canada)
Elmer L. Lindseth Professor, Neural Engineering Center
Neural Engineering, neural interfacing, neural prostheses, computational neuroscience, neurophysiology and control of epilepsy

Steven J. Eppell, Ph.D.
(Case Western Reserve University)
Associate Professor
Biomaterials, instrumentation, synthesis of nanophase bone substitute, nanoscale structure-function analysis of orthopaedic biomaterials; scanning probe microscopy and spectroscopy of skeletal tissues

Miklos Gratzl, Ph.D.
(Technical University of Budapest, Hungary)
Associate Professor
Biomedical sensing and diagnostics in vitro and in vivo; electrochemical and optical techniques; BioMEMS for cellular transport; cancer multidrug resistance at the single cell level; sliver sensor for multianalyte patient monitoring

Kenneth Gustafson, Ph.D.
(Arizona State University)
Assistant Professor
Neural engineering; neural prostheses; neurophysiology and neural control of genitourinary function; devices to restore genitourinary function; functional neuromuscular stimulation

J. Lawrence Katz, Ph.D.
(Polytechnic Institute of Brooklyn)
Professor Emeritus
Structure-property relationships in bone and teeth, osteophilic biomaterials, ultrasonic studies of tissue anisotropy, scanning acoustic microscopy

Robert F. Kirsch, Ph.D.
(Northwestern University)
Professor
Restoration of movement using neuroprostheses; neuroprosthesis control system design; natural control of human movements; biomechanics of movement; computer-based modeling; system identification

Melissa Knothe Tate, Ph.D.
(Swiss Federal Institute of Technology ETH, Zurich, Switzerland)
Associate Professor (joint with Mechanical and Aerospace Engineering)
Cell and protein interactions with biomaterials; liposome drug delivery; bacterial adhesion; surface modification of cardiovascular devices; targeted liposome drug delivery; bacterial adhesion; cell and protein interactions with biomaterials using atomic force microscopy

Roger Marchant, Ph.D.
(Case Western Reserve University)
Professor, Director, Center for Cardiovascular Biomaterials
Self-assembling biomimetic materials; vascular tissue engineering, novel biomaterials for surface modification of cardiovascular devices and hydrogels for tissue engineering; targeted liposome drug delivery; bacterial adhesion; cell and protein interactions with biomaterials using atomic force microscopy

J. Thomas Mortimer, Ph.D.
(Case Western Reserve University)
Professor Emeritus
Neural prostheses; electrical activation of the nervous system; bowel and bladder assist device; respiratory assist device; selective stimulation and electrode development; electrochemical aspects of electrical stimulation

P. Hunter Peckham, Ph.D.
Tissue engineered epithelia; pre-vascularized polymer scaffolds for tissue engineering; directed stem cell differentiation; novel stimuli responsive biomaterials for gene and drug delivery; systems biology approaches to the identification of angiogenic factors

David L. Wilson, Ph.D.
(Rice University)
Professor
Biomedical image processing; digital processing and quantitative image quality of X-ray fluoroscopy images; interventional MRI

Xin Yu, Sc.D.
(Harvard-MIT)
Associate Professor
Cardiovascular physiology; magnetic resonance imaging and spectroscopy; characterization of the structure-function and energy-function relationships in normal and diseased hearts; small animal imaging and spectroscopy

Research Appointments

Niloy Bhadra, M.D., Ph.D.
(Case Western Reserve University)
Research Assistant Professor
High-frequency nerve block, functional electrical stimulation, neurowhires

Ann-Marie Broome, Ph.D.
(Case Western Reserve University)
Research Assistant Professor
Molecular Imaging of complex signatures in cancer, in vivo/in vitro imaging of cellular mechanisms In differentiation, inflammation, and carcinogenesis: signaling of chemotactic peptides In epithelia

Zhilin Hu, Ph.D.
(The Chinese Academy of Sciences)
Research Assistant Professor
Biophotonics and biomedical optics; optical coherence tomography (OCT) for microscoppic biomedical imaging in vivo; development of OCT imaging technology and quantitative image analysis for medical diagnostics, screening and guided therapy and for biomedical science

Junnin Zhu, Ph.D.
(Peking University)
Research Assistant Professor
Design and synthesis of nanobiomaterials, bioactive hydrogels, and self-assembly materials; biomimetic scaffolds for vascular and cartilage tissue engineering; nanocarrier systems for biomedical diagnostics and cancer therapeutics; anti-biofouling surface modification of medical devices

Secondary Appointments

Jay Alberts, Ph.D.
(Arizona State University)
Assistant Professor of Biomedical Engineering
(Cleveland Clinic)
Neural basis of upper extremity motor function and deep brain stimulation in Parkinson’s disease

James M. Anderson, Ph.D.
(Oregon State University),
M.D. (Case Western Reserve University)
Professor, Pathology, University Hospitals-Case Medical Center
Biocompatibility of implants

Harilah Baskaran, Ph.D.
(Pennsylvania State University)
Assistant Professor, (joint with Chemical Engineering)
Tissue Engineering, Cell/cellular transport processes in inflammation, wound healing, and cancer metastasis

Arnold Caplan, Ph.D.
(Johns Hopkins University)
Professor, Biology
Tissue engineering

Ronald L. Cechner, Clinical Ph.D. (Anesthesiology)
(Case Western Reserve University)
Assistant Professor, Anesthesiology and Associate Professor, Biomedical Engineering and Pathology, Technical Director, Anesthesia Simulation Laboratory, University Hospitals-Case Medical Center
Simulation in medical education

John Chae, M.D.
(New Jersey Medical School)
Associate Professor, Physical Medicine and Rehabilitation, MetroHealth Medical Center
Application of neuroprostheses in hemiplegia

Hillel J. Chiel, Ph.D.
(Massachusetts Institute of Technology)
Professor, Biology
Biomechanical and neural basis of feeding behavior in the marine mollusk Aplysia californica; neumechanical system modeling; analysis of neural network dynamics

Guy Chisolm, Ph.D.
(University of Virginia)
Professor, Cell Biology, Cleveland Clinic
Vascular biology; lipoprotein-cell interactions

Janis J. Daly, Ph.D.
(University of Akron)
Margot Damaser, Ph.D.
(University of California)
Assistant Professor, Biomedical Engineering, Cleveland Clinic
Biomechanics and neural control of the female pelvic floor and lower urinary tract in normal and dysfunctional cases

Brian Davis, Ph.D.
(Pennsylvania State University)
Assistant Professor, Molecular Medicine (Biomedical Engineering, Cleveland Clinic)
Human locomotion and biomechanics

David Dean, Ph.D.
(City University of New York)
Associate Professor, Neurological Surgery, Anatomy, Orthodontics, University Hospitals-Case Medical Center
Bone tissue engineering, photodynamic therapy, radiosurgery treatment planning

Louis F. Dell’Osso, Ph.D.
(University of Wyoming)
Professor, Neurology, VA Medical Center
Neurophysiological and ocular motor control systems

James Dennis, Ph.D.
(Case Western Reserve University)
Assistant Professor, Orthopaedics, University Hospitals-Case Medical Center
Engineering cartilage for orthopaedic and trachea reconstruction applications; developing reagents, termed “cell paints,” that can be used to direct repair cells to specific organs and tissues

Kathleen Derwin, Ph.D.
(University of Michigan)
Assistant Professor, Molecular Medicine (Biomedical Engineering, Cleveland Clinic)
Tendon mechanobiology and tissue engineering

Isabelle Deschenes, Ph.D.
(Laval University)
Assistant Professor, Cardiology, MetroHealth Medical Center
Molecular mechanisms of cardiac arrhythmias, ion channels structure-function

Pedro J. Diaz, Ph.D.
(Case Western Reserve University)
Assistant Professor, Radiology Physics, MetroHealth Medical Center
Magnetic resonance imaging; image processing

Agata Exner, Ph.D.
(Case Western Reserve University)
Assistant Professor, Radiology, University Hospitals-Case Medical Center
Development and imaging characterization of drug delivery for cancer chemotherapy; interventional radiology

Baowei Fei, Ph.D.
(Shanghai Jiao Tong University, Shanghai)
Assistant Professor, Radiology, University Hospitals-Case Medical Center
Image registration, image-guided intervention, prostate cancer, photodynamic therapy (PDT), cellular and molecular imaging (PET and MRI)

Elizabeth Fisher, Ph.D.
(Rutgers University)
Assistant Professor, Molecular Medicine (Biomedical Engineering, Cleveland Clinic)
Quantitative image analysis for application to multiple sclerosis and neurodegenerative diseases

Christopher Flask, Ph.D.
(Case Western Reserve University)
Assistant Professor, Radiology, University Hospitals-Case Medical Center
Development of Quantitative and Molecular MRI Imaging Methods, MRI Physics

Linda M. Graham, M.D.
(University of Michigan)
Professor, Surgery (Vascular Surgery and Biomedical Engineering), Cleveland Clinic
Cell movement and vascular healing, vascular tissue engineering

Marc Griswold, Ph.D.
(University of Wuerzburg, Germany)
Associate Professor, Radiology, University Hospitals-Case Medical Center
Rapid magnetic resonance imaging, image reconstruction and processing and MRI hardware/instrumentation

Christopher J. Hernandez, Ph.D.
(Stanford University)
Assistant Professor, Mechanical and Aerospace Engineering, Director, Musculoskeletal Mechanics and Materials Laboratories
Orthopaedic Biomechanics, Imaging related to Orthopaedics

Alex Y. Huang, Ph.D.
(Johns Hopkins University)
Assistant Professor, Pediatrics, Pathology, University Hospitals-Case Medical Center / Rainbow Babies & Children’s Hospital
Dynamic high-resolution 2-photon microscopy of immune cellular migration and interaction in vivo

Michael W. Keith, M.D.
(Ohio State University)
Professor, Orthopaedic Surgery, MetroHealth Medical Center
Restoration of motor function in hands

Kandice Kottke-Marchant, Ph.D., M.D.
(Case Western Reserve University)
Professor, Molecular Medicine (Hematology, Cleveland Clinic Foundation)
Interaction of blood and materials

Kenneth R. Laurita, Ph.D.
(Case Western Reserve University)
Associate Professor, Heart & Vascular Research Center, MetroHealth Medical Center
Cellular mechanisms of cardiac arrhythmias, cellular therapy for sudden cardiac death, fluorescent imaging of transmembrane potential and intracellular calcium, calcium mediated arrhythmogenesis, instrumentation and software for imaging cardiac electrical activity

Zhenghong Lee, Ph.D.
(Case Western Reserve University)
Assistant Professor, Radiology, Nuclear Medicine, University Hospitals-Case Medical Center
Quantitative PET and SPECT imaging, multimodal image registration, 3D visualization, molecular imaging and small animal imaging systems

R. John Leigh, M.D.
(University of Newcastle-Upon-Tyne, U.K.)
Professor, Neurology, VA Medical Center
Normal and abnormal motor control of the eye

Cameron McIntyre, Ph.D.
(Case Western Reserve University)
Assistant Professor, Molecular Medicine (Biomedical Engineering, Cleveland Clinic)
Theoretical modeling of the interaction between electric fields and the nervous system; deep brain stimulation

George F. Muschler, M.D.
(Northwestern University School of Medicine, Chicago, IL)
Professor, Molecular Medicine (Orthopaedic Surgery and Biomedical Engineering, Cleveland Clinic)
Musculoskeletal oncology, adult reconstruc-
tive orthopaedic surgery, fracture non-union, research in bone healing and bone grafting materials

Raymond F. Muzic Jr., Ph.D.
(Case Western Reserve University)
Associate Professor, Radiology, Biomedical Engineering, Oncology, Division of General Medical Sciences, University Hospitals-Case Medical Center
Experiment design and analysis for positron emission tomography

Sherif Nour, M.D.
(University of Cairo, School of Medicine, Egypt)
Assistant Professor, Radiology, University Hospitals-Case Medical Center
Development of new interventional MRI techniques and percutaneous thermal ablation therapies for cancer treatment, sleep apnea, and other biomedical applications

Marc Penn, M.D., Ph.D.
(Case Western Reserve University)
Assistant Professor, Molecular Medicine (Cardiology and Cell Biology, Cleveland Clinic)
Myocardial ischemia, vascular biology, cardiac critical care

Clare Rimnac, Ph.D.
(Lehigh University)
Wilbert J. Austin Professor of Engineering and Chair, Department of Mechanical and Aerospace Engineering
Orthopaedic implant performance and design, mechanical behavior of hard tissues

David S. Rosenbaum, M.D.
(University of Illinois, Chicago)
Professor, Director, Heart & Vascular Center, MetroHealth Medical Center
Mechanisms of cardiac arrhythmias; cardiac electrophysiology; characterization of genetically engineered mice; prediction and prevention of sudden cardiac death

Mark S. Rzeszotarski, Ph.D.
(Case Western Reserve University)
Professor, Radiology, MetroHealth Medical Center
Radiological imaging: computed tomography, medical education

Jean A. Tkach, Ph.D.
(Case Western Reserve University)
Assistant Professor, Radiology, University Hospitals-Case Medical Center
Functional MR imaging

Ronald J. Triolo, Ph.D.
(Drexel University)
Associate Professor, Orthopaedics, University Hospitals-Case Medical Center, VA Medical Center, MetroHealth Medical Center
Neural prostheses, rehabilitation engineering and restoration of lower extremity function, biomechanics of human movement quantitative analysis and control of gait, standing balance and seated posture

Antonie J. van den Bogert, Ph.D.
(University of Utrecht)
Assistant Professor, Molecular Medicine (Biomedical Engineering, Cleveland Clinic)
Biomechanics of human movement

Albert L. Waldo, M.D.
(State University of New York, Downstate)
Professor, Medicine/Cardiology, University Hospitals-Case Medical Center
Cardiac electrophysiology and cardiac excitation mapping

Barry Wessels, Ph.D.
(University of Notre Dame)
Professor, Biomedical Engineering and Radiation Oncology, Director, Division of Medical Physics and Dosimetry, University Hospitals-Case Medical Center
Radiolabeled antibody therapy (Dosimetry and clinical trials), image-guided radiotherapy, intensity modulated radiation therapy, image fusion of CT, MR, SPECT and PET for adaptive radiation therapy treatment planning

Guang Hui Yue, Ph.D.
(University of Iowa)
Associate Professor, Molecular Medicine, Biomedical Engineering, Cleveland Clinic
Neural control of movement

Maciej Zborowski, Ph.D.
(Polish Academy of Science)
Associate Professor, Molecular Medicine (Biomedical Engineering, Cleveland Clinic)
Membrane separation of blood proteins

Assem G. Ziady, Ph.D.
(Case Western Reserve University)
Assistant Professor, Pediatrics, University Hospitals-Case Medical Center
Proteomics, DNA nanoparticles, mass spectrometry, cystic fibrosis, inflammation, and redox signaling

Nicholas P. Ziai, Ph.D.
(Case Western Reserve University)
Associate Professor, Pathology, University Hospitals-Case Medical Center
Vascular grafts; vascular cells; blood vessels

Adjunct Appointments

Ravi V. Bellamkonda, Ph.D.
(Brown University)
Adjunct Associate Professor, Department of Biomedical Engineering, Neurological Biomaterials and Therapeutics, Georgia Tech/Emory University
Neural tissue engineering

Richard C. Burgess, M.D., Ph.D.
(Case Western Reserve University)
Adjunct Professor of Biomedical Engineering (Neurological Computing, Cleveland Clinic)
Magnetoecephalography; Electrophysiological monitoring; EEG processing; medical informatics

Jeffrey R. Capadona, Ph.D.
(Georgia Institute of Technology)
Adjunct Assistant Professor, Research Health Scientist, Louis Stokes Department of VA Medical Center
Surface modification of neural electrodes; mechanically dynamic stimuli responsive biomaterials; and tissue engineering strategies for intervertebral disc regeneration

Peter R. Cavanagh, Ph.D., D.Sc.
(University of London at Royal Free Medical School, London, England)
Adjunct Professor, Department of Orthopaedics and Sports Medicine, University of Washington, Seattle, WA
Foot complications of diabetes, bone biomechanics

Yuanna Cheng, Ph.D.
(Oita Medical University, Japan)
Adjunct Associate Professor (Cardiovascular Medicine, Cleveland Clinic)
Cardiac fluorescent imaging, mechanisms of arrhythmias, implantable defibrillators, cardiac remodeling, antiarrhythmic therapy

Cheri Deng, Ph.D.
(Yale University)
Adjunct Assistant Professor (Department of Biomedical Engineering, University of Michigan)
Ultrasound mediated drug and gene delivery; ultrasound imaging; ultrasound tissue characterization; ultrasound contrast agents; high intensity focused ultrasound ablation

Elizabeth C. Hardin, Ph.D.
(University of Massachusetts)
Adjunct Assistant Professor of Biomedical Engineering, (VA Medical Center)
Neural prostheses and gait mechanics; improving gait performance with neural prostheses using strategies developed in conjunction with forward dynamics musculoskeletal models

GENERAL BULLETIN 2009-2011

CASE SCHOOL OF ENGINEERING

111
Vincent J. Hetherington, D.P.M.  
Adjunct Assistant Professor of Podiatric Medicine  
(Pennsylvania College of Podiatric Medicine)  
Some B.S. graduates are employed in industries, devices and therapies. In short, we envision technologies, devices and therapies. In short, we envision contributions of knowledge in the emerging field of the medical arena and advance to positions of greater responsibility.

To achieve these post-graduation objectives, we have defined the following program outcomes. These are skills that graduates of our program are expected to be proficient in at the time of graduation:

(a) An ability to apply knowledge of mathematics, science, and engineering appropriate to the biomedical engineering
(b) An ability to design and conduct experiments, as well as to analyze and interpret data
(c) An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
(d) An ability to function on multi-disciplinary teams

1. Our graduates will successfully enter and complete post baccalaureate advanced degree programs, including those in biomedical engineering

2. Our graduates will obtain jobs in the biomedical arena and advance to positions of greater responsibility.

The mission of the Biomedical Engineering department is:

To promote human health through education and research that bridges the gap between medicine and engineering. Our faculty and students play leading roles ranging from basic science discovery to the creation, clinical evolution, and commercialization of new technologies, devices and therapies. In short, we are "Engineering Better Health."

Some B.S. graduates are employed in industry and medical centers. Others continue studies in biomedical engineering and other fields. Students with engineering ability and an interest in medicine may consider the undergraduate biomedical engineering program as an exciting alternative to conventional pre-medical programs. The undergraduate program has three major components (1) Engineering Core, (2) BME Core, and (3) BME Specialty Sequence. The Engineering Core provides a foundational background in mathematics, sciences, and engineering. The BME Core integrates engineering with biomedical science to solve biomedical problems. Hands-on experience in BME is developed through undergraduate laboratory and project courses. In addition, by choosing a BME specialty sequence, the student can study a specific area in depth. This integrated program is designed to ensure that BME graduates are competent engineers. Students may select open electives for educational breadth or depth or to meet entrance requirements of medical school or other professional career choices. BME faculty serve as student advisors to guide students in choosing the program of study most appropriate for individual needs and interests.

At the undergraduate level, we direct our efforts toward two educational objectives that describe the performance of alumni 3-6 years after graduation:

The Case undergraduate program leading to the Bachelor of Science degree with a major in biomedical engineering was established in 1972. The degree of Bachelor of Science in Biomedical Engineering is accredited by the Engineering Accreditation Commission (EAC) of ABET, Inc. 111 Market Place, Suite 1050, Baltimore, MD 21202-4012, telephone: 410-347-7700.

The mission of the Biomedical Engineering department is:

To promote human health through education and research that bridges the gap between medicine and engineering. Our faculty and students play leading roles ranging from basic science discovery to the creation, clinical evolution, and commercialization of new technologies, devices and therapies. In short, we are "Engineering Better Health."

Some B.S. graduates are employed in industry and medical centers. Others continue studies in biomedical engineering and other fields. Students with engineering ability and an interest in medicine may consider the undergraduate biomedical engineering program as an exciting alternative to conventional pre-medical programs. The undergraduate program has three major components (1) Engineering Core, (2) BME Core, and (3) BME Specialty Sequence. The Engineering Core provides a foundational background in mathematics, sciences, and engineering. The BME Core integrates engineering with biomedical science to solve biomedical problems. Hands-on experience in BME is developed through undergraduate laboratory and project courses. In addition, by choosing a BME specialty sequence, the student can study a specific area in depth. This integrated program is designed to ensure that BME graduates are competent engineers. Students may select open electives for educational breadth or depth or to meet entrance requirements of medical school or other professional career choices. BME faculty serve as student advisors to guide students in choosing the program of study most appropriate for individual needs and interests.
BME SPECIALTY SEQUENCE CLASSES
To ensure depth in a particular area, students take one of the eight specialty sequences listed below. Students should consult the Web site of the Department of Biomedical Engineering to learn more about the educational program and to determine the best order for taking courses in a particular sequence.

Biomechanics
EMAE 181, ECIV 310, EMAE 250, EMAE 271, EBME 307, and EMAE 372; and technical electives from EMAE 172, EMAE 370, EMAE 350, EMAE 415, EBME 402, ECIV 420

Bioelectric Engineering
EECS 245, EECS 309, EBME 317, EBME 327; and technical electives from EECS 281, ECE 311, EECS 321, EECS 322, EECS 344, EECS 382, EBME 418, EACS 333, EACS 304, EACS 324, EECS 337, EECS 338, EECS 340, EECS 351, EECS 354, EECS 355, EECS 346, EBME 378, EBME 401, EBME 407, EBME 408, EBME 320, EBME 350

Biomaterials (polymeric)
EMAC 270, CHEM 223, CHEM 323, EMAE 351, and EBME 303; and technical electives from EBME 316, EBME 315, EBME 325, EBME 350, EBME 405, EACS 377, ECIV 360, ECIV 376, EBME 406, EBME 408, EBME 425, EBME 276, EMAC 370, and EMAC 352.

Biomaterials (orthopaedic)
EMSE 201, ECIV 310, EMSE 303, and EMAC 270; and technical electives from EBME 405, EMSE 316, EBME 416, EMSE 202, EMAE 172, EMSE 270, EMSE 313, EMSE 411, EMAE 372, EMAC 276, EMAE 350, EBME 303, EMSE 307, EBME 406, EMSE 415, EMSE 301, EMSE 307, and EMSE 201.

Biomedical Computing and Imaging
EECS 233, EECS 337, and EMAC 320; and technical electives from EECS 231, EACS 431, EACS 375, EACS 398M, EECS 340, EECS 313, MIDS 329, EBME 461, EECS 375, EECS 341, EECS 338, EECS 391, and MATH 304

Biomedical Instrumentation (devices)
EECS 245, EBME 281, and EECS 344; and technical electives from EECS 382, EBME 309, EBME 403, EBME 320, EBME 321, EACS 311, EBME 418, PHYS 326, EBME 322, EECS 344, ECIV 370, ECIV 380, and ECIV 381.

Biomedical Systems and Control
EECS 304, EECS 313, EECS 322, and EMAE 181; and technical electives EECS 306, MATH 201, MATH 338, OPRE 345, EBME 402, EBME 407, EBME 320, EBME 461, EMSE 307, and EECS 346.

Notes: This gives 129 credits. Varies from sequence to sequence.

Tissue Engineering
CHEM 223, CHEM 323, BIOL 326, EMAE 325, EMSE 270, and; and technical electives from EBME 315, EBME 316, EMAE 405, EBME 416, EBME 425, EMAE 351, EMAC 377, EBME 406, EBME 408, ECIV 364, ECIV 360, ECIV 474, EMSE 376, EBME 303, and ECIV 340.

GRADUATE PROGRAMS
The objective of the graduate program in biomedical engineering is to educate biomedical engineers for careers in industry, academia, health care, and government and to advance research in biomedical engineering. The department provides a learning environment that encourages students to apply biomedical engineering methods to advance basic scientific discovery; integrate knowledge across the spectrum from basic cellular and molecular biology through tissue, organ, and whole-body physiology and pathophysiology; and to exploit this knowledge to design diagnostic and therapeutic technologies that improve human health. The unique and rich medical, science, and engineering environment at Case enables research projects ranging from basic science through engineering design and clinical application.

Numerous fellowships and research assistantships are available to support graduate students in their studies.

M.S. PROGRAMS
The M.S. program in biomedical engineering provides breadth in biomedical engineering and biomedical sciences with depth in an engineering specialty. In addition, students are expected to develop the ability to work independently on a biomedical research or design project. The M.S. requires a minimum of 30 credit hours. With an M.S. research thesis (Plan A), a minimum of 21 credits are needed in regular course work and 9 hours of thesis research (EBME 651). With an M.S. project (Plan B), a minimum of 27 credits is needed in regular course work, and three hours of project research (EBME 601).

MASTER OF ENGINEERING AND MANAGEMENT - BIOMEDICAL ENTREPRENEURSHIP
Biomedical engineering students may apply for the Biomedical Entrepreneurship concentration in the Master of Engineering (MEM) program. The MEM is a degree offered by The
Institute for Management and Engineering (TiME), a joint program between the Case School of Engineering and the Weatherhead School of Management. The objective of this program is to provide biomedical engineers with the business and management context required to enable them to drive innovation within biomedical companies while serving in a technical capacity.

Students can enter the program as undergraduates. The program does not interfere with undergraduate degree requirements. The curriculum includes courses integrating engineering and management, as well as industrial internships. By making use of summers for both course work and internships, the M.E.M. degree is completed in one additional year beyond the B.S., i.e., for a total of five years for the B.S. and M.E.M. degrees. Students should apply through TiME.

M.D./M.S. PROGRAM

Medicine is undergoing a transformation based on the rapid advances in science and technology that are combining to produce more accurate diagnoses, more effective treatments with fewer side effects, and improved ability to prevent disease. The goal of the M.D./M.S. in Engineering is to prepare medical graduates to be leaders in the development and clinical deployment of this technology and to partner with others in technology based translational research teams. Current Case medical students in either the University Program (UP) or the Cleveland Clinic Lerner College of Medicine (CCLCM) may apply to the M.D./M.S. in Engineering program.

Students must complete the normal requirements in their particular M.D. program. Portions of the medical school curriculum earn graded credit toward the M.D./M.S. degree. Specifically, six credit hours of the medical school curriculum can be applied to the M.S. component of the joint degree.

The balance of 12 credit hours (4 courses) must be graduate level engineering concentration courses that provide rigor and depth in a field of engineering relevant to the area of research.

A required thesis serves a key integration role for the joint degree, with both medical and engineering components. The thesis also fulfills the research requirement of the UP or CCLCM programs.

Students should apply through the BME department admissions office.

PH.D. PROGRAM IN BIOMEDICAL ENGINEERING

For those students with primary interest in research, the Ph.D. in biomedical engineering provides additional depth and breadth in engineering and the biomedical sciences. Under faculty guidance, students are expected to undertake original research motivated by a biomedical problem. Research possibilities include the development of new theory, devices, or methods for diagnostic or therapeutic applications, as well as for measurement and evaluation of basic biological mechanisms.

The Ph.D. program requires a minimum of 12 courses beyond the B.S. degree. There are four required core courses (EBME 403, 409, 451, 452). The balance of the courses can be chosen with significant flexibility to meet the career goals of the student, and to satisfy requirements of depth and breadth. Programs of study must include three graduate level courses in biomedical sciences and two courses whose content is primarily mathematical. Two semesters of departmental seminar attendance (EBME 611, 612) and three semesters of teaching experience (EBME 400T, 500T, 600T) are also required. Ph.D. programs of study are reviewed and must be accepted by the Graduate Education Committee and the department chair. Eighteen hours of EBME 701 registration are required.

Ph.D. candidacy requires passing certain milestones. A student is advanced to Ph.D. candidacy after: (1) passing the Ph.D. Qualifying Exam; (2) obtaining an M.S. degree (or equivalent); and (3) obtaining approval of the Ph.D. short proposal. The Ph.D. is completed when the dissertation has been written and defended, and when at least two manuscripts have been submitted for publication and at least one of the two is accepted.

M.D./PH.D. PROGRAMS

Students with outstanding qualifications may apply to either of two M.D./Ph.D. programs. Students interested in obtaining a combined M.D./Ph.D., with an emphasis on basic research in biomedical engineering, are strongly encouraged to explore the Medical Scientist Training Program (MSTP), administered by the School of Medicine. Alternatively, the Physician Engineer Training Program (PETP) was established to train future physicians who also possess expertise in state-of-the-art engineering medical technologies, with a research focus on applied biomedical engineering. It is expected that graduates of the PETP will have a strong interest in the biomedical industrial sector, clinical medicine, or in academic positions in biomedical engineering, rather than the traditional M.D./Ph.D. career pathway in academic medicine.

Both M.D./Ph.D. programs require approximately 7-8 years of intensive study after the B.S. Interested students should apply for either program through the MSTP office in the Medical School.

RESEARCH AREAS

Several research thrusts are available to accommodate various student backgrounds and interests. Strong research collaborations with clinical and basic science departments of the university and collaborating medical centers bring a broad range of opportunities, expertise, and perspective to student research projects.

BIOMATERIALS/TISSUE ENGINEERING/DRUG AND GENE DELIVERY

Fabrication and analysis of materials for implantation, including neural, orthopaedic, and cardiovascular tissue engineering, biomimetic materials, liposomal and other structures for controlled, targeted drug delivery, and bio-compatible polymer surface modifications. Analysis of synthetic and biologic polymers by AFM, nanoscale structure-function relationships of biomaterials. Applications in the nervous system, the cardiovascular system, the musculoskeletal system, and cancer.

BIOMEDICAL IMAGING

MRI, PET, SPECT, CT, ultrasound, acoustic elastography, optical coherence tomography, cardiac electrical potential mapping, human visual perception, image-guided intervention, contrast agents. In vivo microscopic and molecular imaging, and small animal imaging.

BIOMEDICAL SENSING

Optical sensing, electrochemical and chemical fiber-optic sensors, chemical measurements in cells and tissues, endoscopy.

NEURAL ENGINEERING AND NEURAL PROSTHESSES

Neuronal mechanisms; neural interfacing for electric and magnetic stimulation and recording; neural dynamics, ion channels, second messengers; neural prostheses for control of limb movement, bladder, bowel, and respiratory function; computational modeling of neural structures

TRANSPORT AND METABOLIC

CASE WESTERN RESERVE UNIVERSITY
SYSTEMS ENGINEERING
Modeling and analysis of tissue responses to heating (e.g., tumor ablation) and of cellular metabolism related to organ and whole-body function in health (exercise) and disease (cardiac).

BIOMECHANICAL SYSTEMS
Computational musculoskeletal modeling, bone biomechanics, soft tissue mechanics, control of neuroprostheses for motor function, neuromuscular control systems, human locomotion, cardiac mechanics.

CARDIOVASCULAR SYSTEMS
Normal cardiac physiology, pathogenesis of cardiac diseases, therapeutic technologies; electrophysiological techniques, imaging technologies, mathematical modeling, gene regulation, molecular biology techniques; cardiac bioelectricity and cardiac biomechanics.

FACILITIES
The home of the Department of Biomedical Engineering is the Wickenden Building, with offices for all primary faculty and most of the non-clinical research laboratories and centers. Major interdisciplinary centers include the Center for Cardiovascular Biomaterials (CCB), the Center for Biomolecular and Nanoscale Engineering for Targeted Therapeutics (BioNETT), the Neural Engineering Center (NEC), the Center for Modeling Integrated Metabolic Systems (MIMS), and the In-situ Imaging Center. The CCB includes laboratories for biomaterials microscopy, bio-polymer and biomaterial interfaces, and molecular simulation. The BioNETT Center develops technologies for physical and chemical targeting of therapeutics, and imaging their distribution within the body. The NEC is a major facility for basic research and animal experimentation, with a focus on recording and controlling neural activity to increase our understanding of the nervous system and to develop neural prostheses. The MIMS Center combines mathematical modeling, computer simulation, and in vivo experimentation to quantify relationships between cellular metabolism and physiological responses of tissue-organ systems and the whole body. The Biomedical Imaging Laboratories, housed in the Case Center for Imaging Research and the Radiology department at University Hospitals, image structure and function from the molecular level to the tissue-organ level, using many modalities, including ultrasound, MRI, CT, PET, SPECT, bioluminescence, and light. Biomedical Sensing Laboratories include facilities for electrochemical sensing, chemical measurements in individual cells, and minimally invasive physiological monitoring.

Primary BME faculty also have laboratories and Centers in other locations. The Endoscopy Research Laboratory in University Hospitals is the center for work on optical coherence tomography and biophotonics. The FES (Functional Electrical Stimulation) Center, with laboratories in three medical centers, develops techniques for restoration of movement in paralysis, control of the nervous system, and implantable technology. Also, it promotes technology transfer and disseminates information about functional electrical stimulation, and evaluates clinical functionality of neuroprostheses. The APT (Advanced Platform Technology) Center develops advanced technologies that serve the clinical needs of veterans and others with motor and sensory deficits and limb loss.

The Coulter-Case Translation and Innovation Partnership (CCTIP) is a department-based collaboration with the Wallace H. Coulter Foundation. The partnership’s mission is to accelerate the introduction of new technologies into patient care through translational research and commercialization.

The department faculty and students have access to the facilities and major laboratories of the Case School of Engineering and of the Cleveland Clinic Foundation. Faculty have numerous collaborations at University Hospitals, MetroHealth Medical Center, VA Medical Center, and the Cleveland Clinic Foundation. These provide extensive research resources in a clinical environment for both undergraduate and graduate students.

BIOMEDICAL ENGINEERING (EBME)

Course Descriptions
EBME 105. Introduction to Biomedical Engineering (3)
This course is intended to introduce Freshmen to a wide variety of biomedical engineering fields including: biomaterials, tissue engineering, drug delivery systems, biomedical imaging and processing, cardiac measurement and analysis, neural engineering, neuromuscular control, and systems biology. Topics span research, development, and design for diagnostic and therapeutic applications. Prereq: Freshmen standing.

EBME 201. Physiology-Biophysics I (3)
This course (1) teaches cell physiology from an engineering perspective - basics covered include cell structures and functions, genes and protein synthesis, diffusion fundamentals, electrical properties of neural and muscle cells, sensory transduction, and integration of function on the micro and macro scale; (2) teaches how to use engineering tools to model different cell functions and predict, measure, and control cell behavior; (3) introduces mathematical and graphical analysis of specific physiological systems emphasizing applied modeling and simulation.

EBME 202. Physiology-Biophysics II (3)
This course is an extension of EBME 201 that will extend the application of system modeling and simulation to complex physiological systems in a clinical environment. The course will cover models of biochemical systems with pathology, muscle, the cardiovascular system, respiratory system, renal and hepatic systems with pathology and clinical applications. Prereq: EBME 201 or consent of instructor.

EBME 300. Dynamics of Biological Systems: A Quantitative Introduction to Biology (3)
This course will introduce students to dynamic biological phenomena, from the molecular to the population level, and models of these dynamical phenomena. It will describe a biological system, discuss how to model its dynamics, and experimentally evaluate the resulting models. Topics will include molecular dynamics of biological molecules, kinetics of cell metabolism and the cell cycle, biophysics of excitability, scaling laws for biological systems, biomechanics, and population dynamics. Mathematical tools for the analysis of dynamic biological processes will also be presented. Students will manipulate and analyze simulations of biological processes, and learn to formulate and analyze their own models. This course satisfies a laboratory requirement for the biology major. Offered as BIOL 300 and EBME 300.

EBME 303. Structure of Biological Materials (3)
Structure of proteins, nucleic acids, connective tissue and bone from molecular to microscopic levels. Principles and applications of instruments for imaging, identification, and measurement of biological materials. Recommended preparation: EBME 202. Offered as EBME 303 and EMAC 303.

EBME 306. Introduction to Biomedical Materials (3)
Biomaterials design and application in different tissue and organ systems. The relationship between the physical and chemical structure of biomaterials, functional properties, and biological response. Recommended preparation: EBME 201 and EBME 202.

EBME 307. Biomechanical Prosthetic Systems (3)
Introduction to the basic biomechanics of human movement and applications to the design and evaluation of artificial devices intended to restore or improve movement lost due to injury or disease. Measurement techniques in movement biomechanics, including motion analysis, electromyography, and gait analysis. Design and use of upper and lower limb prostheses. Principles of neuroprostheses with
applications to paralyzed upper and lower extremities. Recommended preparation: Consent of instructor and senior standing.

EBME 315. Applied Tissue Engineering (3) This course is designed to provide students with understanding and expertise of the basic tools in tissue engineering research. Through lectures the students will be introduced to the array of methods and materials available to tissue engineering researchers, learn how to rationally determine suitable choices for their applications, and receive instruction on how to implement those designs. Much of the course will be spent in the BME Tissue Engineering Laboratory getting hands-on experience (1) on the materials end with materials selection, characterization, and scaffold fabrication; (2) on the cell end with cell culture, tissue characterization and bioactor design. The class will be assessed by a weekly grading of the students’ lab notebooks, as well as a final exam based on the content learned throughout the semester.

EBME 317. Excitable Cells: Molecular Mechanisms (3) Ion channels are the molecular basis of membrane excitability in all cell types, including neural, heart, and muscle cells. This course presents the structure and the mechanism of function of ion channels at the molecular level. It introduces the basic principles and methods in the ion channel study including the ionic basis of membrane excitability, thermodynamic and kinetic analysis of channel function, voltage clamp and patch clamp techniques, and molecular and structural biology approaches. The course will cover structure of various potassium, calcium, sodium, and chloride channels and their physiological function in neural, cardiac, and muscle cells. Exemplary channels that have been best studied will be discussed to illustrate the current understanding of the molecular mechanisms of channel gating and permeation. Graduate students will present exemplary papers in the journal club style. Recommended preparation: EBME 201 or equivalent. Offered as EBME 317 and EBME 417.

EBME 318. Biomedical Engineering Laboratory I (1) Experiments for measurement, assisting, replacement, or control of various biomedical systems. Students choose a few lab experiences from a large number of offerings relevant to all BME sequences. Experiments are conducted primarily in faculty labs with 3-8 students participating. Recommended preparation: EBME 201, EBME 202, ENGR 210.

EBME 319. Biomedical Engineering Laboratory II (1) Experiments for measurement, assisting, replacement, or control of various biomedical systems. Students choose a few lab experiences from a large number of offerings relevant to all BME sequences. Experiments are conducted primarily in faculty labs with 3-8 students participating. Recommended preparation: EBME 201, EBME 202, and ENGR 210.

EBME 320. Medical Imaging Fundamentals (3) General principles, instrumentation, and biomedical applications of medical imaging. Topics include: x-ray, ultrasound, MRI, nuclear imaging, image reconstruction, and image quality. Recommended preparation: EBME 308, ENGR 210, and EBME 202 or equivalent.

EBME 322. Applications of Biomedical Imaging (3) This course will provide an introduction to biomedical imaging and its applications in measurements of physiological function, stem cell biology, and drug delivery. Students will learn about imaging technologies including basic principles of imaging (resolution and contrast), optical microscopy and in vivo imaging, and magnetic resonance imaging. Emerging techniques in cellular and molecular imaging, including targeted imaging agents and reporter gene imaging will be discussed. Biomedical applications will include such topics as tumor characterization in drug assessment, functional brain mapping, targeted drug delivery, functional cardiovascular measurements, and stem cell research will be demonstrated. Prereq: EBME 201, EBME 202, EBME 308, PHYS 121, PHYS 122.

EBME 325. Introduction to Tissue Engineering (3) The goal of this course is to present students with a firm understanding of the primary components, design principles, and engineering concepts central to the field of tissue engineering. First, the biological principles of tissue formation during morphogenesis and wound repair will be examined. The cellular processes underlying these events will be presented with an emphasis on microenvironmental regulation of cell behavior. Biomimetic approaches to controlling cell function and tissue formation via the development of biomaterial systems will then be investigated. Case studies of regeneration strategies for specific tissues will be presented in order to examine the different tissue-specific engineering strategies that may be employed. Special current topics in tissue engineering will also be covered. Recommended preparation: EBME 306, BIOL 362, and CHEM 223.

EBME 328. Biomedical Engineering R&D Training I (1) This course will provide research and development training in the laboratory of a mentoring faculty member. Varied R&D experiences will include activities in biomedical instrumentation, tissue engineering, imaging, drug delivery, and neural engineering. Each student must identify a faculty mentor, and together they will create description of the training experience prior to the first class. Prereq: EBME 201 and EBME 202.

EBME 329. Biomedical Engineering R&D Training II (1) This course will provide research and development training in the laboratory of a mentoring faculty member. Varied R&D experiences will include activities in biomedical instrumentation, tissue engineering, imaging, drug delivery, and neural engineering. Each student must identify a faculty mentor, and together they will create a description of the training experience prior to the first class. Recommended preparation: EBME 328. Prereq: EBME 201 and EBME 202.

EBME 350. Quantitative Molecular Bioengineering (3) The objective of this course is to equip the students with a “molecular toolbox”–a set of quantitative skills that permit rational designs for engineering tissues starting at the molecular level. The course will build on the physical and chemical principles in equilibrium, kinetics, and mass transport. Specific examples in bioengineering systems will be used throughout the course to illustrate the importance of understanding and application of these principles to tissue engineering. Recommended preparation: ENGR 225. Offered as EBME 350 and ECHE 355.

EBME 360. Biomedical Instrumentation Laboratory (1) A laboratory which focuses on the basic components of biomedical instrumentation and provides hands-on experience for students in EBME 310. Biomedical Instrumentation. The purpose of the course is to develop design skills and laboratory skills in analysis and circuit development. Coreq: EBME 310.
EBME 370. Principles of Biomedical Engineering Design (2)
The design process required to produce biomedical devices, research equipment, and clinical tools is developed. Topics include identification of need; requirements specification; project management; working in teams; solutions conceptualization, refinement, and selection; hazard and risk analysis and mitigation; verification; validation; regulatory requirements; and medical device pathways to the market. Through critical examination of contemporary medical research and clinical problems, students, working in teams, will identify a need to develop a specific problem statement, project plan, input requirements, solution concept and risk analysis. Students will provide periodic oral progress reports and a final oral presentation with a written design report. Recommended preparation: EBME 310.

EBME 380. Biomedical Engineering Design Experience (3)
This course is the culmination of the BME educational experience in which the student will apply acquired skills and knowledge to create a working device or product to meet a medical need. Students will learn how to apply engineering skills to solve problems and physically realize a project design. The course structure includes regular meetings with a faculty project advisor, regular reports of accomplished activity, hands on fabrication of devices, and several lectures from leading engineers from industry and academia that have first hand experience in applying the principles of design to Biomedical Engineering. Students will also provide periodic oral progress reports and a final oral presentation with a written design report. Prereq: EBME 370. SAGES Senior Cap

EBME 396. Special Topics in Undergraduate Biomedical Engineering I (1 - 18) (Credit as arranged.)

EBME 398. Senior Project Laboratory I (3)
Students learn and implement the design process to produce working prototypes of medical devices with potential commercial value to meet significant clinical needs. Critical examination of contemporary medical problems is used to develop a specific problem statement divided into teams of 3 to 4 students. Each team integrates their knowledge and skills to design a device to meet their clinical need. Project planning and management, including resource allocation, milestones, and documentation, are required to ensure successful completion of projects within the allotted time and budget. Formal design reviews by a panel of advisors and outside medical device experts are required every four weeks. Every student is required to give oral presentations at each formal review and complete design statements at each formal review and is responsible for writing the principles of design to Biomedical Engineering. Students will assess the educational plan to ensure that it provides the needs of the intended biological function will be presented. Clinical evaluation, including recent advances and current problems associated with different polymer implants. Recommended preparation: EBME 306 or equivalent. Offered as EBME 406 or EMAC 471. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 401. Bioelectric Phenomena (3)
The goal of this course is to provide working knowledge of the theoretical methods that are used in the fields of electrophysiology and bioelectricity for both neural and cardiac systems. These methods will be applied to describe, from a theoretical and quantitative perspective, the electrical behavior of excitable cells, the methods for recording their activity and the effect of applied electrical and magnetic fields on excitable issues. A team modeling project will be required. Recommended preparation: differential equations, circuits. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 402. Muscles, Biomechanics, and Control of Movement (4)
Quantitative and qualitative descriptions of the action of muscles in relation to human movement. Introduction to rigid body dynamics and dynamics of multi-link systems using Newtonian and Lagrangian approaches. Muscle models with application to control of multi-joint movement. Forward and inverse dynamics of multi-joint, muscle driven systems. Dissection, observation and recitation in the anatomy laboratory with supplemental lectures concentrating on kinesiology and muscle function. Recommended preparation: EMAE 181 or equivalent. Offered as EBME 402 and EMAE 402. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 403. Biomedical Instrumentation (3)
Quantitative and qualitative descriptions of the action of muscles in relation to human movement. Introduction to rigid body dynamics and dynamics of multi-link systems using Newtonian and Lagrangian approaches. Muscle models with application to control of multi-joint movement. Forward and inverse dynamics of multi-joint, muscle driven systems. Dissection, observation and recitation in the anatomy laboratory with supplemental lectures concentrating on kinesiology and muscle function. Recommended preparation: EMAE 181 or equivalent. Offered as EBME 402 and EMAE 402. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 404. Polymers in Medicine (3)
This course covers the important fundamentals and applications of polymers in medicine, and consists of three major components: (i) the blood and soft-tissue reactions to polymer implants; (ii) the structure, characterization and modification of biomedical polymers; and (iii) the application of polymers in a broad range of cardiovascular and extravascular devices. The chemical and physical characteristics of biomedical polymers and the properties required to meet the needs of the intended biological function will be presented. Clinical evaluation, including recent advances and current problems associated with different polymer implants. Recommended preparation: EBME 306 or equivalent. Offered as EBME 406 or EMAC 471. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 405. Materials for Prosthetics and Orthotics (3)

EBME 406. Polymers in Biomedical Engineering (3)
The goal of this course is to provide working knowledge of the theoretical methods that are used in the fields of electrophysiology and bioelectricity for both neural and cardiac systems. These methods will be applied to describe, from a theoretical and quantitative perspective, the electrical behavior of excitable cells, the methods for recording their activity and the effect of applied electrical and magnetic fields on excitable issues. A team modeling project will be required. Recommended preparation: differential equations, circuits. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 407. Neural Interfacing (3)
Neural interfacing refers to the principles, methods, and devices that bridge the boundary between engineered devices and the nervous system. It includes the methods and mechanisms to get information efficiently and effectively into and out of the nervous system to analyze and control its function. This course examines advanced engineering, neurobiology, neurophysiology, and the interaction between all of them to develop methods of connecting to the nervous system. The course builds on a sound background in Bioelectric Phenomenon to explore fundamental principles of recording and simulation, electrochemistry of electrodes in biological tissue, tissue damage generated by electrical stimulation, materials and material properties, and molecular functionalization of devices for interfacing with the nervous system. Several examples of the state-of-art neural interfaces will be analyzed and discussed. Recommended preparation: EBME 401. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 408. Learning from Nature's Paradigms (3)
This course aims to provide students with a foundation based on “nature’s” design and optimization criteria for engineering tissues and biomaterials. This will be achieved through focused review of the principles of development, wound healing, regeneration, and repair through remodeling, using nature as a paradigm. Principles of transport will be explored quantitatively and in relation to multi-organismal evolution. Cellular engineering principles will be explored, including current state of the art in stem cell physiology and therapeutic applications. Endogenous engineering approaches to surgical tissue reconstruction will be analyzed. An overview of contemporary approaches to tissue and cell engineering will be given, including tissue scaffold design, use of bioreactors in tissue engineering, and molecular surface modifications for integration of engineered tissues in situ. Fundamental engineering principles will be augmented through case studies involving specific applications. Ethical considerations related to clinical non-clinical application of tissue and cell engineering technology will be integrated into each lecture. Prereq: Graduate standing
or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 409. Systems and Signals in Biomedical Engineering (3)

EBME 410. Medical Imaging Fundamentals (3)
Physical principles of medical imaging. Imaging devices for x-ray, ultrasound, magnetic resonance, etc. Image quality descriptions. Patient risk. Recommended preparation: EBME 308 and EBME 310 or equivalent. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 417. Excitable Cells: Molecular Mechanisms (3)
Ion channels are the molecular basis of membrane excitability in all cell types, including neural, heart, and muscle cells. This course presents the structure and the mechanism of function of ion channels at the molecular level. It introduces the basic principles and methods in the ion channel study including the ionic basis of membrane excitability, thermodynamic and kinetic analysis of channel function, voltage clamp and patch clamp techniques, and molecular and structural biology approaches. The course will cover structure of various potassium, calcium, sodium, and chloride channels and their physiological function in neural, cardiac, and muscle cells. Exemplar channels that have been best studied will be discussed to illustrate the current understanding of the molecular mechanisms of channel gating and permeation. Graduate students will present exemplary papers in the journal club style. Recommended preparation: EBME 201 or equivalent. Offered as EBME 317 and EBME 417. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 418. Electronics for Biomedical Engineering (3)
Fundamental concepts of analog design with special emphasis on circuits for biomedical applications. Analysis and design of discrete and integrated circuit amplifiers; application, high CMRR biomedical amplifiers, implantable circuits, circuits for electrochemistry and circuits for optical recordings, circuits for recording neural activity, electrical safety and telemetry. A team project will be required for all students. Recommended preparation: EECS 343 or consent of instructor. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 419. Applied Probability and Stochastic Processes for Biology (3)
Applications of probability and stochastic processes to biological systems. Mathematical topics will include: introduction to discrete and continuous probability spaces (including numerical generation of pseudo random numbers from specified probability distributions), Markov processes in discrete and continuous time with discrete and continuous sample spaces, point processes including homogeneous and inhomogeneous Poisson processes and Markov chains on graphs, and diffusion processes including Brownian motion and the Ornstein-Uhlenbeck process. Biological topics will be determined by the interests of the students and the instructor. Likely topics include: stochastic ion channels, molecular motors and stochastic ratchets, actin and tubulin polymerization, random walk models for neural spike trains, bacterial chemotaxis, signaling and genetic regulatory networks, and stochastic predator-prey dynamics. The emphasis will be on practical simulation and analysis of stochastic phenomena in biological systems. Numerical methods will be developed using both MATLAB and the R statistical package. Student projects will comprise a major part of the course. Offered as BIOL 319, EECS 319, MATH 319, BIOL 419, EBME 419, and PHOL 419.

EBME 420. Biomedical Ultrasound Technologies (3)

EBME 425. Tissue Engineering and Regenerative Medicine (3)
This course will provide advanced coverage of tissue engineering with a focus on stem cell-based research and therapies. Course topics of note include stem cell biology and its role in development, modeling of stem cell function, controlling stem cell behavior by engineering materials and their microenvironment, stem cells’ trophic character, and state-of-the-art stem cell implementation in tissue engineering and other therapeutic strategies. Offered as EBME 425 and PATH 435. Prereq: EBME 325 or equivalent and graduate standing.

EBME 427. Movement Biomechanics and Rehabilitation (3)
Introduction to the basic biomechanics of human movement and applications to the design and evaluation of artificial devices intended to restore or improve movement lost due to injury or disease. Measurement techniques in movement biomechanics, including motion analysis, electromyography, and gait analysis. Design and use of upper and lower limb prostheses. Principles of neuroprostheses with applications to paralyzed upper and lower extremities. Term paper required. Recommended preparation: Consent of instructor and graduate standing. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 431. Physics of Imaging (3)
Description of physical principles underlying the spin behavior in MR and Fourier imaging in multidimensions. Introduction of conventional, fast, and chemical shift imaging techniques. Spin echo, gradient echo, and variable flip-angle methods. Projection reconstruction and sampling theorems. Bloch equations, T1 and T2 relaxation times, rf penetration, diffusion and perfusion. Flow imaging. MR angiography, and functional brain imaging. Sequence and coil design. Prerequisite may be waived with consent of instructor. Recommended preparation: PHYS 122 or PHYS 124 or EBME 410. Offered as EBME 431 and PHYS 431.

EBME 440. Translational Research for Biomedical Engineers (3)
Translation of laboratory developments to improve biomedical and clinical research and patient care. Interdisciplinary and team communication. Evaluation of technology and research planning with clinical and engineering perspectives. Discussing clinical situations, shadowing clinicians, attending Grand ROUNDS and Morbidity-Mortality conferences. Validation study design. Regulatory/oversight organization. Protocol design and informed consent for Institutional Review Board (IRB) approval. NIH requirements for human subject research. Special project reports to produce IRB protocol or NIH-style proposal. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 447. Rehabilitation for Scientists and Engineers (3)
Medical, psychological, and social issues influencing the rehabilitation of people with spinal cord injury, stroke, traumatic brain injury, and limb amputation. Epidemiology, anatomy, pathophysiology, and natural history of these disorders, and the consequences of these conditions with respect to impairment, disability, handicap and quality of life. Students will directly observe the care of patients in each of these diagnostic groups throughout the full continuum of care starting from the acute medical and surgical interventions to acute and subacute re habilitation, outpatient medical and rehabilitation management and finally to community re-entry.

EBME 451. Molecular and Cellular Physiology (3)
This course is the first in the pair of BME physiology core courses EBME 451 and 452. The emphasis of EBME 451 is on the molecular and cellular mechanisms underlying physiological processes. Structure-function relationship will be addressed throughout the course. The primary goal of the course is to develop understanding of the principles of the physiological processes at molecular and cellular level and to promote independent thinking and ability to solve unfamiliar problems. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 452. Tissue and Organ Systems Physiology (3)
Mechanisms of membrane and capillary-tissue transport, tissue mechanics, electrical propagation,
signaling, control and regulation processes. Cardiac vascular, renal, respiratory, gastro-intestinal, neural, sensory, motor, musculoskeletal, and skeletal systems. Basic engineering analysis for quantitative understanding of physiological concepts. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

**EBME 460. Advanced Topics in NMR Imaging (3)**
Frontier issues in understanding the practical aspects of NMR imaging. Theoretical descriptions are accompanied by specific examples of pulse sequences, and basic engineering considerations in MRI system design. Emphasis is placed on implications and trade-offs in MRI pulse sequence design from real-world versus theoretical perspectives. Recommended preparation: EBME 431 or PHYS 431. Offered as EBME 460 and PHYS 460. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

**EBME 461. Biomedical Image Processing and Analysis (3)**
Principles of image processing and analysis with applications to biomedical images from the nano-scale to 3D whole organ imaging. Topics include image filtering, enhancement, restoration, registration, morphological processing, and segmentation. Recommended preparation: EBME 409 or equivalent. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

**EBME 462. Cellular and Molecular Imaging (3)**
Frontier issues in biomedical imaging that address problems at the cellular and molecular levels. Topics include endogenous methods to assess molecular compositions, imaging agents, reporter genes and proteins, and drug delivery, which will be discussed in the context of applications in cancer, cardiology, central nervous system, ophthalmology, musculoskeletal diseases, pulmonary diseases, and metabolic diseases. Emphasis is placed on an interdisciplinary problem-based approach to investigate the application of biomedical imaging to biological and disease areas. Recommended preparation: EBME 410 and EBME 451 or consent of instructor. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

**EBME 474. Biotransport Processes (3)**
Biomedical mass transport and chemical reaction processes. Basic mechanisms and mathematical models based on thermodynamics, mass and momentum conservation. Analytical and numerical methods to simulate in vivo processes as well as to develop diagnostic and therapeutic methods. Applications include transport across membranes, transport in blood, tumor processes, bioreactors, cell differentiation, chemotaxis, drug delivery systems, tissue engineering processes. Recommended preparation: EBME 350 and EBME 409 or equivalent. Offered as EBME 474 and ECHE 474. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

**EBME 478. Computational Neuroscience (3)**
Computer simulations and mathematical analysis of neurons and neural circuits, and the computational properties of nervous systems. Students are taught a range of models for neurons and neural circuits, and are asked to implement and explore the computational and dynamic properties of these models. The course introduces students to dynamical systems theory for the analysis of neurons and neural learning, models of brain systems, and their relationship to artificial and neural networks. Term project required. Students enrolled in MATH 478 will make arrangements with the instructor to attend additional lectures and complete additional assignments addressing mathematical topics related to the course. Recommended preparation: MATH 223 and MATH 224 or BIOL 300 and BIOL 306. Offered as BIOL 378, COGS 378, MATH 378, BIOL 478, EBME 478, EECS 478, MATH 478 and NEUR 479.

**EBME 479. Seminar in Computational Neuroscience (3)**
Readings and discussion in the recent literature on computational neuroscience, adaptive behavior, and other current topics. Offered as BIOL 479, EBME 479, EECS 479, and NEUR 479.

**EBME 500T. Graduate Teaching II (0)**
This course will provide the Ph.D. candidate with experience in teaching graduate or undergraduate students. The experience is expected to consist of direct student contact, but will be based upon the specific departmental needs and teaching obligations. This teaching experience will be conducted under the supervision of the faculty member who is responsible for the course, but the academic advisor will assess the educational plan to ensure that it provides an educational opportunity for the students. Recommended preparation: EBME 400T, BME Ph.D. student.

**EBME 503. Biomolecular Forces (3)**
Advanced course on the theory, measurement, and analysis of the intermolecular physical forces that dominate cell and molecular interactions in dynamical systems. The aim of this course is to provide students involved in biomaterials engineering and studies on cell and molecular interactions with (i) a quantitative and fundamental understanding of the intermolecular forces (electrostatic, van der Walls, solvation forces) that direct cell and molecular adhesion, self-assembling systems (bilayers, cell membranes) and specific and non-specific receptor-ligand binding; (ii) the ability to develop mechanistic models for surface adhesion, self-assembly, cell surface binding and signal transduction; and (iii) skills for measurement and quantitative analysis of forces (nano- to pico-Newton levels) in the “near-surface” (1-10 nm) domain by atomic force microscopy and related force measurement techniques. Recommended preparation: EBME 405 or EBME 406, undergraduate electricity and magnetism, undergraduate physical chemistry, or consent of instructor.

**EBME 504. Transport Processes of Biomedical Systems (3)**
Mass and heat transport processes in dispersive, convective, and reactive systems. Applications include cell metabolism, drug delivery, tumor growth and ablation, cell migration and adhesion, ventilation inhomogeneity, tissue responses to heating, Critical analysis of journal articles. Simulation projects related to student research. Recommended preparation: EBME 409, Offered as EBME 504 and ECHE 504. Prereq: Graduate standing.

**EBME 507. Motor System Neuroprostheses (3)**
Fundamentals of neural stimulation and sensing, neurophysiology and pathophysiology of common neurological disorders, general implantation and clinical deployment issues. Specialist discussions in many application areas such as motor prostheses for spinal cord injury and stroke, cochlear implants, bladder control, simulation for pain management, deep brain stimulation, and brain computer interfacing. Prereq: Graduate standing.

**EBME 513. Biomedical Optical Diagnostics (3)**
Engineering design principles of optical instrumentation for medical diagnostics. Elastic and inelastic light scattering theory and biomedical applications. Confocal and multiphoton microscopy. Light propagation and optical tomographic imaging in biological tissues. Design of minimally invasive spectroscopic diagnostics. Recommended preparation: EBME 403 or PHYS 326 or consent. Prereq: Graduate standing.

**EBME 519. Parameter Estimation for Biomedical Systems (3)**

**EBME 523. Biomedical Sensing (3)**
Analysis and design of biosensors are discussed in the context of biomedical measurements. Base sensors using electrochemical, optical, piezoelectric, and other principles are introduced. Binding equilibria, enzyme kinetics, and mass transport modalities are then analyzed. Adding the “bio” element to base sensors results including mathematical aspects of data evaluation. Prereq: Graduate standing.

**EBME 600T. Graduate Teaching III (0)**
This course will provide the Ph.D. candidate with experience in teaching graduate or undergraduate students. The experience is expected to consist of direct student contact, but will be based upon the specific departmental needs and teaching obligations. This teaching experience will be conducted under the supervision of the faculty member who is responsible for the course, but the academic advisor will assess the educational plan to ensure that it provides an educational opportunity for the students. Recommended preparation: EBME 500T, BME Ph.D. student.

**EBME 601. Research Projects (1 - 18)**
EBME 602. Special Topics (1 - 18)

EBME 607. Neural Engineering Topics (1)
The goal of this class is to explore topics in Neural Engineering not covered in the curriculum. A single topic will be chosen per semester. Four speakers with expertise in the chosen area will be invited to the campus. Each speaker will give a seminar and participate in a 2-hour workshop/journal club on the specific topic. The students will be assigned one or two seminal papers written by the speaker prior to the visit. Students will take turns presenting these papers to the rest of the class. The paper and the topic will then be open for discussion. At the end of the semester, the students will collaborate to write a single review article in a publishable format on the topic of the semester.

EBME 611. BME Departmental Seminar I (0)
Required of all first-year graduate students in BME.

EBME 612. BME Departmental Seminar II (0)
Continuation of EBME Departmental Seminar 1. Required of all first-year graduate students in BME.

EBME 621. BME Research Rotation I (0)
Opportunity for trainees to participate in BME research under supervision of faculty.

EBME 651. Thesis M.S. (1 - 18)
Ph.D. candidates only. Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

EBME 701. Dissertation Ph.D. (1 - 18)
EBME 319, Biomedical Engineering Lab II (0-3-1)
ENGL 398, Professional Communication (2-0-2)
ENGR 210, Intro to Circuits & Instrumentation (3-0-3)
EBME Specialty Sequence (3-0-3)
Total (16-0-16)

Second Year

Fall
EBME 201, Physiology - Biophysics I (3-0-3)
MATH 223, Calculus for Science and Engineering III (3-0-3)
PHYS 122, General Physics II (4-0-4)
ME 303, Biomechanics (4-0-4)
USXX University Seminar (3-0-3)
Total (16-0-16)

Spring
EBME 202, Physiology - Biophysics II (3-0-3)
MATH 234, Intro to Dynamic Systems (3-0-3)
ENGR 210, Intro to Circuits & Instrumentation (3-0-3)
EBME Specialty Sequence (3-0-3)
Total (15-3-16)

Third Year Class-Lab-Credit Hours

Fall
EBME 306, Introduction to Biomaterials (3-0-3)
EBME 318, Biomedical Engineering Lab I (0-3-1)
ENGL 398, Professional Communication (2-0-2)
ENGR 398 Professional Communication for Engineers (2-0-1)
EBME 308, Biomedical Systems & Signals (3-3-4)
ENGR 398, Professional Communication I (2-0-1)
Total (16-0-16)

Fourth Year

Fall
EBME 309, Modeling of Biomedical Systems (3-0-3)
EBME 359, Biomedical Engineering Lab II (0-3-1)
EBME 380, Design in BME (1-6-3)
ME 303, Biomechanics (4-0-4)
EPHED 102, Physical Education (0-3-0)
Total (15-3-15)

a. This is a typical program. Specialty sequence is designed with courses in a desired order that might vary from the one here. Programs must be planned with a faculty advisor in the Department of Biomedical Engineering.

b. This optional course is limited to freshmen. This can be replaced by an open elective.
c. University Seminars (6 semester hours, minimum of 2 seminars selected from different thematic groups and different thematic group from that of FSCC 100).
d. Courses are chosen depending on the BME specialty sequence as listed below.
e. Students take at least one math or science course approved by BME department.
f. SAGES BME Departmental Seminar, ENGL 398 and ENGR 398 must be taken together.
g. STAT 312, STAT 333, or STAT 332 fulfill the statistics requirement. Check with sequence advisor to determine the most appropriate class.

DEPARTMENT OF CHEMICAL ENGINEERING
T16 A.W. Smith Building (7217)
Phone: 216-368-4182; Fax: 216-368-3016
Donald L. Feke, Interim Chair
e-mail: dlf4@case.edu
http://www.case.edu/cse/eche/

The profession of chemical engineering involves the analysis, design, operation and control of processes that convert matter and energy to more useful forms, encompassing processes at all scales from the molecular to the megascale. Traditionally, chemical engineers are responsible for the production of basic chemicals, plastics, and fibers. However, today’s chemical engineers are also involved in food and fertilizer production, synthesis of electronic materials, waste recycling, and power generation. Chemical engineers also develop new materials (ceramic composites and electronic chips, for example) as well as biochemicals and pharmaceuticals. The breadth of training in engineering and the sciences gives chemical engineers a particularly wide spectrum of career opportunities. Chemical engineers work in the chemical and materials-related industries, in government, and are readily accepted by graduate schools in engineering, chemistry, medicine, or law (mainly for patent law).

The department offers Bachelor of Science in Engineering, Master of Science, and Doctor of Philosophy degree programs that provide preparation for work in all areas of chemi-
cal engineering. Breadth elective sequences in biochemical engineering, biomedical engineering, computing, electrochemical engineering, electronic materials, environmental engineering, management/entrepreneurship, polymer science, systems and control, or advanced studies provide depth and specialization for undergraduates majoring in chemical engineering. A special biochemical engineering track is available, where students integrate biochemistry, biology, and bioengineering courses into the standard chemical engineering curriculum. In addition, for students with a strong interest in polymer science and engineering, a minor in macromolecular science can be integrated with the chemical engineering curriculum. Chemical engineering undergraduates are members of the student chapter of the American Institute of Chemical Engineers (AIChE). The AIChE chapter sponsors social events, field trips to local industry, technical presentations by outside speakers, and employment counseling. Information about the AIChE can be obtained through the department, the chapter president or the chapter advisor. There are eleven full-time faculty members, all of whom are pursuing active research programs. The research of the faculty is aimed at advanced and emerging areas of chemical engineering.

FACULTY
Donald L. Feke, Ph.D.
(Princeton University)
Professor, Interim Chair, and Vice Provost for Undergraduate Education
Colloidal and transport phenomena, dispersive mixing, particle science and processing

John C. Angus, Ph.D.
(University of Michigan)
Professor Emeritus
Chemical vapor deposition of diamond, electrochemistry of diamond gallium nitride synthesis

Harihara Baskaran, Ph.D.
(The Pennsylvania State University)
Associate Professor
Transport Phenomena in Biology and Medicine

Daniel Lacks, Ph.D.
(Harvard University)
C. Benson Branch Professor of Chemical Engineering
Molecular simulation, statistical mechanics

Uziel Landau, Ph.D.
(University of California, Berkeley)
Professor
Electrochemical engineering, modeling of electrochemical systems, electrodeposition, batteries and fuel cells

Chung-Chiun Liu, Ph.D.
(Case Institute of Technology)
Wallace R. Persons Professor of Technology and Control
Electrochemical sensors, electrochemical synthesis, electrochemistry related to electronic materials

J. Adin Mann Jr., Ph.D.
(Iowa State University)
Professor
Surface phenomena, interfacial dynamics, colloid science, light scattering, biometrics, molecular electronics

Heidi B. Martin, Ph.D.
(Case Western Reserve University)
Assistant Professor of Engineering
Conductive diamond films; electrochemical sensors; chemical modification of surfaces for electrochemical and biomedical applications; biomaterials; microfabrication of sensors and devices

Syed Qutubuddin, Ph.D.
(Carnegie Mellon University)
Professor
Surfactant and polymer solutions, separations, nanoparticles, novel polymeric materials, nanocomposites

R. Mohan Sankaran, Ph.D.
(California Institute of Technology)
George S. Mayer Assistant Professor of Engineering
Microplasmas, nanoparticle synthesis

Robert F. Savinell, Ph.D.
(University of Pittsburgh)
George S. Dively Professor
Electrochemical engineering, electrochemical reactor design and simulation, electrode processes, batteries and fuel cells

Thomas A Zawodzinski, Ph.D.
(State University of New York at Buffalo)
Ohio Eminent Scholar in Fuel Cells and F. Alex Nason Professor of Engineering
Fuel cells, transport and electrochemistry in energy conversion and storage devices, NMR spectroscopy and imaging, transport/structure property relationships in polymer electrolytes, self-assembly chemistry

UNDERGRADUATE PROGRAMS
Departmental Mission

The chemical engineering department seeks to provide the expertise, environment, facilities, and administrative structure that inspire learning and the pursuit of scholarly activities in chemical engineering and related science and engineering disciplines. The Department will provide an educational program and research environment that will permit our graduates to compete in the evolving workplace, to permit students and faculty to advance knowledge at the highest levels of the profession, and to address the technological and personnel needs of industry, governments, and society.

The Bachelor of Science degree is accredited by the Engineering Accreditation Commission (EAC) of ABET, Inc. 111 Market Place, Suite 1050, Baltimore, MD 21202-4012, telephone: 410-347-7700.

Program Objectives
The undergraduate program in Chemical Engineering seeks to produce graduates who will:

1. apply the knowledge and skills acquired through the chemical engineering curriculum to their professional careers
2. assume positions of responsibility and/or leadership in industry, government, and business
3. pursue professional careers across a broad range of industries
4. succeed in post-graduate and professional degree programs

Program Outcomes
As preparation for meeting the above program objectives, the Department of Chemical Engineering provides an undergraduate program designed that students attain:

1. an ability to apply knowledge of mathematics, science, and engineering
2. an ability to design and conduct experiments, as well as to analyze and interpret data
3. an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
4. an ability to function on multidisciplinary teams
5. an ability to identify, formulate, and solve engineering problems
6. an understanding of professional and ethical responsibility
7. an ability to communicate effectively
8. the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
9. a recognition of the need for, and an ability to engage in life-long learning
10. a knowledge of contemporary issues
11. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

Elective Sequences
A distinctive feature of the chemical engineering program is the three-course breadth elective sequence taken during the junior and senior years that permits a student to major in chemical engineering and, at the same time, pursue an interest in a related field. Ten elective sequences have standing departmental approval: biochemical engineering, biomedical engineering, computing, electrochemical engineering, electronic materials, environmental engineering, management/entrepreneurship, polymer science, undergraduate research and systems and control. There is also an advanced study sequence for students in the combined B.S./M.S. program.

Biochemical Engineering Concentration
Biochemical engineering can be defined as the field of application of chemical engineering principles to systems that utilize biomolecules or bioorganisms to bring forth biotransformation. Biochemical engineering applications are versatile, ranging from waste-water treatment to production of therapeutic proteins. For the Biochemical Engineering Concentration, students take the Biochemical Engineering Breadth Sequence, and replace the Science and Materials electives by BIOL 300 Dynamics of Biological Systems; BIOL 301 Biotechnology Lab; and two of the following: BIOL 334 Proteins and Enzymes, BIOL 382 Drugs, Brain & Behavior, BIOC 308 Genes & Genetic Engineering, EVHS 401B/402B Biochemical Toxicology. Note one additional course must be taken for the Biochemical Engineering Concentration.

Pre-Medical Concentration
The Pre-Medical Concentration provides a focused approach to medical school preparation for Chemical Engineering majors. By using the flexibility provided by science and technical electives in the curriculum, students are able to pursue courses that provide the background needed for medical school.

Students take the Pre-Medical Breadth Sequence, CHEM 224/324 and CHEM 336 as Science electives, and substitute CHEM 233 for CHEM 290.

Minor in Polymer Engineering
The department highly recommends two minor programs in the Department of Macromolecular Science as listed below.

POLYMER SYNTHESIS
- EMAC 270. Intro to Polymer Science
- EMAC 272. Polymer Analysis Laboratory
- EMAC 276. Polymer Properties and Design
- EMAC 378. Polymer Production and Technology
- EMAC 398. Polymer Science and Engineering Project (Choose synthesis project)

POLYMER PROCESSING
- EMAC 270. Intro to Polymer Science
- EMAC 372. Polymer Processing and Testing Laboratory
- EMAC 376. Polymer Engineering
- EMAC 377. Polymer Processing
- EMAC 378. Polymer Production and Technology

Minor Sequence in Chemical Engineering
The Department of Chemical Engineering offers a minor in chemical engineering for students majoring in other disciplines. In total, 15 credit hours in chemical engineering courses are required for the minor. To complete the minor, students should take ECHE 260 and ECHE 360, plus any two of the following courses: ECHE 361, 363, 364, 365, or 367.

Five-Year Combined B.S./M.S. Program
This program offers outstanding undergraduate students the opportunity to obtain an M.S. degree, with a thesis, in one additional year of study beyond the B.S. degree. (Normally, it takes two years beyond the B.S. to earn an M.S. degree.) In this program, an undergraduate student can take up to nine hours of graduate credit that simultaneously satisfies undergraduate degree requirements. Typically, students in this program start their research leading to the M.S. thesis in the fall semester of the senior year. The department supports such students through the following summer and academic year at the normal stipend for entering graduate students. The B.S. degree is awarded at the completion of the senior year.

Application for admission to the five-year B.S./M.S. program is made after completion of five semesters of coursework. Minimum requirements are a 3.2 grade point average and the recommendation of the department.

Five-and-a Half Year Cooperative B.S./M.S. Program
The cooperative bachelor’s/master’s program enables outstanding students who are enrolled in the cooperative education program to earn an M.S. in one semester beyond the B.S. degree. Students complete six credits of a graduate project (ECHE 660) during the second co-op period and follow an Advanced Study elective sequence. The courses ECHE 460, ECHE 461, and an agreed-upon mathematics course are used to satisfy both graduate and undergraduate requirements. At the end of the fifth year, the student receives the B.S. degree. Upon completion of an additional 12 credits of graduate work the following semester, the student receives the M.S. degree (non-thesis). Application for admission to the five-and-a-half-year co-op B.S./M.S. program is made during the second semester of the junior year (this semester is taken in the fall of the fourth year). Minimum requirements are a 3.2 grade point average, satisfactory performance in the previous co-op assignment, and the recommendation of the department.

GRADUATE PROGRAMS

Master of Science Program
Each M.S. candidate must complete a minimum of 27 hours of graduate-level credits. These credits can be distributed in one of two ways.

PLAN A.
Students electing Plan A take 19 hours of graduate-level course work (six courses plus ECHE 401 Chemical Engineering Communications) and complete at least 9 credit hours of M.S. thesis research.

PLAN B.
Part-time students, and those in the 5-1/2-year B.S./M.S. cooperative program, may opt for Plan B, which requires completion of 24 credit hours (eight courses) of approved graduate course work and a 3 credit hour project replacing the M.S. thesis. In special cases, a student may be permitted to complete a 6 credit project. In this case only seven courses will be required.

All M.S. students are required to take the
following courses:
ECHE 460, Thermodynamics of Chemical Systems (3); ECHE 461, Transport Phenomena (3); ECHE 462, Chemical Reaction Engineering (3); and ECHE 475, Chemical Engineering Analysis (3) or an equivalent graduate-level math course.

The other courses should be technical graduate-level courses selected after consultation with the advisor. In special circumstances, e.g., students have taken a similar or complementary course at another university, one of the required courses may be waived from the program of study. All full-time M.S. students are expected to do some teaching as part of their education. Also, at various points during their thesis research, students will be required to present seminars and reports on their progress.

Master of Engineering Program
The Department of Chemical Engineering also participates in the practice-oriented Master of Engineering program offered by the Case School of Engineering. In this program, students complete a core program. The Department of Chemical Engineering participates in the Chemical and Materials Processing and Synthesis sequence.

Doctor of Philosophy Program
The degree of Doctor of Philosophy is awarded in recognition of deep and detailed knowledge of chemical engineering and a comprehensive understanding of related subjects together with a demonstration of the ability to perform independent research, to suggest new areas for research, and to communicate results in an acceptable manner. A total of 12 courses (36 credit hours) is typical for the Ph.D. degree. The minimum course requirement is as follows:

CORE COURSES
All programs of study must include: ECHE 460, Thermodynamics (3); ECHE 461, Transport Phenomena (3); ECHE 462, Chemical Reaction Engineering (3); ECHE 475, Chemical Engineering Analysis (3); plus a minimum of two other electives (in chemical engineering or other departments). At least one of these electives must be in a Basic Science (i.e., Chemistry, Physics, Biology, Biochemistry, Mathematics, or Statistics).

Advanced Chemical Engineering Courses
A minimum of two ECHE courses at the 500-level must be taken.

BREADTH COURSES
A minimum of two breadth courses, subject to the following guidelines, must be taken. Up to two Special Topics courses may be taken. With department approval, a 300-level lecture course can be used to replace a special topics course.

PROFESSIONAL DEVELOPMENT COURSES
ECHE 401 and ECHE 402, Chemical Engineering Communications are required. In addition, six semesters of ECHE 470, Graduate Research Colloquium Is required. All Ph.D. students are required to assist in three teaching experiences as part of their degree requirements. Students enroll In ECHE 400T, 500T, and 600T for these teaching experiences.

Comments on Ph.D. Guidelines
The department anticipates that from time to time, special cases will arise which are exceptions to the above guidelines, e.g., a student may have taken a graduate-level thermodynamics course at another school. In these cases, the student must submit a statement with the Planned Program of Study justifying the departure from the guidelines. It should be noted that the above guidelines are a minimum requirement. All programs are chosen with the approval of the student’s faculty advisor.

OTHER REQUIREMENTS
FOR THE PH.D. DEGREE
Students who wish to enter the Ph.D. program must pass a First Proposition oral examination (with an accompanying written report) that tests a student’s ability to think creatively, grasp new research concepts, and discuss such concepts critically and comprehensively. The First Proposition serves as the qualifying examination for the Ph.D. degree. A Second Proposition focusing on the students own research topic is required by the end of the second year in the program. All Ph.D. students must satisfy the residency requirements of the university and the Case School of Engineering. In addition, at various points in the course of the dissertation research, students will be required to prepare reports and seminars on their work, and defend their dissertation. The Chemical Engineering Graduate Student Handbook contains a more detailed description of the department’s Ph.D. requirements and a time schedule for their completion.

Current Research Topics
Research in the department is sponsored by a variety of state and federal agencies, by private industry, and by foundations. Current active research topics include:

ENERGY CONVERSION AND STORAGE
• Fuel cells
• Batteries
• Supercapacitors
• Transport/structure properties of polymer electrolytes for fuel cell applications
• Electrocratalysis
• Photovoltaics

ELECTROCHEMICAL DEVICES
• Electrochemical sensors
• Implantable electrochemical devices
• Electrochemical reactor design
• Electrode processes
• Metallization of semiconductor devices by plating

BIOMEDICAL APPLICATIONS OF CHEMICAL ENGINEERING
• Cell/cellular transport processes in inflammation
• Tissue engineering
• Wound healing
• Neurosensing and neural stimulation
• Engineering of surfaces for sensing applications
• Implantable electrochemical devices
• BioMEMS and biosensors
• Dental implants
• Drug delivery

DIAMOND AND DIAMOND-LIKE MATERIALS
• Chemical vapor deposition of diamond
• Electrochemistry on diamond
• Conductive diamond films

DESIGN AND SYNTHESIS OF ADVANCED MATERIALS
• Growth of single-crystal Group III nitrides
• Plasma and plasma processing
• Nanoparticles, nanotubes, nanowires
• Molecular electronics
• Electrochemical synthesis of alloys and compounds
• Microvascular constructs
• Functional polymers and composites

PROCESSING AND CHARACTERIZATION OF NOVEL MATERIALS
• Nanomaterials and polymer nanocomposites
• Development of responsive additives for
CHEMICAL ENGINEERING (ECHE)

Course Descriptions
ECHE C100. Co-op Seminar I for Chemical Engineering (1)
Professional development activities for students returning from cooperative education assignments. Recommended preparation: COOP 001.

ECHE C200. Co-op Seminar II for Chemical Engineering (2)
Professional development activities for students returning from cooperative education assignments. Recommended preparation: COOP 002 and ECHE C100.

ECHE 151. Introduction to Chemical Engineering at Case (0)
Introduction to the Chemical Engineering Department and its activities: faculty and faculty research areas, breadth elective sequences, cooperative education, Summer Lab in Denmark, Junior Year in Edinburgh, industrial employment opportunities, non-traditional employment opportunities. Required of Chemical Engineering students before their junior year.

ECHE 250. Honors Research I (1 - 3)
A special program which affords a limited number of students the opportunity to conduct research under the guidance of one of the faculty. At the end of the first semester of the sophomore year, students who have a strong interest in research are encouraged to discuss research possibilities with the faculty. Assignments are made based on mutual interest. Subject to the availability of funds, the faculty employs students through the summers of their sophomore and junior years, as members of their research teams.

ECHE 251. Honors Research II (1 - 3)
(See ECHE 250.) Recommended preparation: ECHE 250.

ECHE 260. Introduction to Chemical Systems (3)
Material and energy balances. Conservation principles and the elementary laws of physical chemistry applied to chemical processes. Developing skills in quantitative formulation and solution of word problems.

ECHE 340. Biochemical Engineering (3)
Chemical engineering principles applied to biological and biochemical systems and related processes. Microbiology and biochemistry linked with transport phenomena, kinetics, reactor design and analysis, and separations. Specific examples of microbial and enzyme processes of industrial significance. Recommended preparation: BIOL 107, BIOL 108, BIOL 403 and ECHE 364, or permission of instructor.

ECHE 350. Undergraduate Research Project I (3)
This course affords a student the opportunity to conduct research under the guidance of one of the faculty, as part of the Chemical Engineering Research breadth elective sequence. Students who have a strong interest in research are encouraged to discuss research possibilities with the faculty. Assignments are made base on mutual interest.

ECHE 355. Quantitative Molecular Bioengineering (3)
The objective of this course is to equip the students with a "molecular toolbox"—a set of quantitative skills that permit rational designs for engineering tissues starting at the molecular level. The course will build on the physical and chemical principles in equilibrium, kinetics, and mass transport. Specific examples in bioengineering systems will be used throughout the course to illustrate the importance of understanding and application of these principles to tissue engineering. Recommended preparation: ENGR 225. Offered as EBME 350 and ECHE 355.

ECHE 360. Transport Phenomena for Chemical Systems (4)
Fundamentals of fluid flow, heat and mass transport from the microscopic and macroscopic perspectives. Applications to chemical systems, including steady and transient operations, convective and molecular (conduction and diffusion) effects, and interfacial transport. Design of unit operations (e.g., heat exchangers). Heat and mass transfer analogies. Vector/tensor analysis and dimensional analysis used throughout. Recommended preparation: MATH 223 and ENGR 225.

ECHE 361. Separation Processes (3)
Analysis and design of separation processes involving distillation, extraction, absorption, adsorption, and membrane processes. Design problems and the physical and chemical processes involved in separation. Equilibrium stage, degrees of freedom in design, graphical and analytical design techniques, efficiency and capacity of separation processes. Recommended preparation: ECHE 260 and ECHE 363.

ECHE 362. Chemical Engineering Laboratory (4)
Experiments in the operation of separation and reaction equipment, including design of experiments, technical analysis, and economic analysis. Experiments cover distillation, liquid-liquid extraction, heat transfer, fluidized beds, control, membrane separations, and chemical and electrochemical reactors. Recommended preparation: ECHE 360, ECHE 361, ECHE 363, and ECHE 364.

ECHE 362D. Chemical Engineering Laboratory in Denmark (4)
Chemical Engineering Laboratory in Denmark. A version of ECHE 362 taught during the summer at DTU in Lyngby.

ECHE 363. Thermodynamics of Chemical Systems (3)
First law, second law, phase equilibria, phase rule, chemical reaction equilibria, and applications to engineering problems. Thermodynamic properties of real substances, with emphasis on solutions. Thermodynamic analysis of processes including chemical reactions. Recommended preparation: ECHE 260 and ENGR 225 or consent of instructor and concurrent enrollment in MATH 224.

ECHE 364. Chemical Reaction Processes (3)

ECHE 365. Measurements Laboratory (3)
Laboratory introduction to the measurement process in engineering. Matching measurements to approximate and exact physical models is stressed. Extraction of physical parameters and estimation of the errors in the parameter estimates is an important part of the course. Example projects cover steady and unsteady state heat transfer, momentum transfer, and the first law of thermodynamics. Recommended preparation: ECHE 360.

ECHE 367. Process Control (4)
Theoretical and practical aspects of feedback control of chemical processes. The course involves extensive use of computer software with some exams taken using the computer. Short laboratories and Labview training are integrated into the course. Topics include: analysis of linear dynamical systems using Laplace transforms, derivation of unsteady state mathematical models of simple chemical processes, dynamic simulation of linear and nonlinear models, design of PID controllers by model inverse methods, tuning of controller to accommodate process model uncertainty, two degrees of freedom controllers, feed-forward and cascade control. The Labview training covers programming basics, interfacing to a data acquisition system, and incorporating control algorithms. Recommended preparation: MATH 224 and ECHE 260 or permission of instructor.

ECHE 370. Fluid Mechanics for Chemical Systems (3)
This course introduces the physical and mathematical concepts associated with the motion of material and the transfer of momentum. These concepts will be applied to the analysis of engineering systems to obtain both exact solutions and practical estimates. Both analytical and numerical solutions will be utilized.

ECHE 371. Heat and Mass Transfer for Chemical Systems (3)
This course introduces the physical and mathematical concepts associated with the transfer of heat and mass. These will be applied to the analysis of engineering situations to obtain both exact solutions and practical estimates. Analytical and numerical solutions will be utilized.

ECHE 380. Electrochemical Technology (3)

ECHE 381. Electrochemical Engineering (3)
Engineering aspects of electrochemical processes including current and potential distribution, mass transport and fluid mechanical effects. Examples from industrial processes including electroplating, industrial electrolysis, corrosion, and batteries. Recommended preparation: ECHE 260 or permission of instructor. Offered as ECHE 381 and ECHE 480.

ECHE 383. Chemical Engineering Applied to Microfabrication and Devices (3)
Silicon based microfabrication and micromachining require many chemical engineering technologies. Microfabricated devices such as sensors are also directly related to chemical engineering. The applications of chemical engineering principles to microfabrication and micromachining are introduced. Oxidation processing, chemical vapor deposition, etching and patterning techniques, electrophotating and other technologies are discussed. Graduate students will submit an additional final project on some technical aspect of microfabrication technology or devices. Recommended preparation: ECHE 363 and ECHE 371. Offered as ECHE 383 and ECHE 483.

ECHE 396. Research and Innovation (3)
This course is an opportunity for undergraduate students to experience research—how to approach a research problem, design experiments and analyze data. This will be accomplished through (a) hands-on laboratory experiences with important research techniques, (b) assignment of open-ended projects on research topics, and (c) discussion of specific interdisciplinary research being pursued at Case. It is meant to be a mechanism for students to become involved in a research project; the final assignment is to submit a proposal for this project. Example interdisciplinary research areas to be included are Fuel Cells and Batteries, Sensors, Biomaterials, and Micro and Nano-fabricated Devices.

ECHE 397. Special Topics in Chemical Engineering (3)
Special topics within an area of chemical engineering.

ECHE 398. Process Analysis and Design (3)

ECHE 399. Chemical Engineering Design Project (3)
This is a course that uses the small teams approach to solve chemical process design problems. Numerous exercises involving process design are used to integrate material taught in previous and concurrent courses. This includes application of computer based design tools, economics, scheduling, decision making with uncertainty, and proposal and report preparation. This work leads to one comprehensive process design project done by the class, which includes a written and oral report. Recommended preparation: ECHE 398. SAGES Senior Cap

ECHE 400T. Graduate Teaching I (0)
All Ph.D. students are required to take this course.

The experience includes elements from the following tasks: development of teaching or lecture materials, teaching recitation groups, providing laboratory assistance, tutoring, exam/quiz/homework preparation and grading, mentoring students. Recommended preparation: Entering Ph.D. student in Chemical Engineering.

ECHE 401. Chemical Engineering Communications I (3)
Introductory course in communication for Chemical Engineering graduate students: preparation of first proposal for thesis, preparation of technical reports and scientific papers, literature sources, reviewing proposals, and manuscripts for professional journals, and making effective technical presentations.

ECHE 402. Chemical Engineering Communications II (2)
This course is a continuation of ECHE 401 and is designed to develop skills in writing proposals for funding research projects. The federal requirements are reviewed for submitting proposals to the major granting agents including NSF, NIH and DoD. We will study strategies for developing fundable projects. Each student will submit a research proposal for a thesis project and do an oral presentation of the project.

ECHE 460. Thermodynamics of Chemical Systems (3)
Phase equilibria, phase rule, chemical reaction equilibria in homogeneous and heterogeneous systems, ideal and non-ideal behavior of fluids and solutions, thermodynamic analysis of closed and open chemical systems with applications. Recommended preparation: ECHE 363.

ECHE 461. Transport Phenomena (3)

ECHE 462. Chemical Reaction Engineering (3)

ECHE 464. Surfaces and Adsorption (3)
Thermodynamics of interfaces, nature of interactions across phase boundaries, capillary wetting properties of adsorbed films, friction and lubrication, fluctuation, detergency, the surface of solids, relation of bulk to surface properties of materials, non-catalytic surface reactions. Recommended preparation: CHEM 335 or equivalent.

ECHE 466. Colloid Science (3)
Stochastic processes and interparticle forces in colloidal dispersions. DLVO theory, stability criteria,

ECHE 469. Chemical Engineering Seminar (0) Distinguished outside speakers present current research in various topics of chemical engineering science. Graduate students also present technical papers based on thesis research.

ECHE 470. Graduate Research Colloquium (S) Outside speakers present lectures on their current research. Various topics in the areas of chemical engineering science, basic and applied chemistry, bioengineering, material science, and applied mathematics are covered in the lectures. Graduate students also present technical papers based on their own research. Students are graded on the submission of one-page summary reports on any two lectures.

ECHE 474. Biotransport Processes (3) Biomedical mass transport and chemical reaction processes. Basic mechanisms and mathematical models based on thermodynamics, mass and momentum conservation. Analytical and numerical methods to simulate in vivo processes as well as to develop diagnostic and therapeutic methods. Applications include transport across membranes, transport in blood, tumor processes, bioreactors, cell differentiation, chemotaxis, drug delivery systems, tissue engineering processes. Recommended preparation: EBME 350 and EBME 409 or equivalent. Offered as EBME 474 and ECHE 474.

ECHE 477. Data Acquisition and LabVIEW Bootcamp (1) This course will introduce and implement basic data acquisition concepts and LabVIEW virtual instrumentation programming, providing hands-on experience with hardware and software. It is intended to help those with little or no data acquisition experience to get started on setting up data acquisition for their application. No prior experience with LabVIEW is required. Consult with the instructor for additional details.

ECHE 480. Electrochemical Engineering (3) Engineering aspects of electrochemical processes including current and potential distribution, mass transport and fluid mechanical effects. Examples from industrial processes including electroplating, industrial electrolysis, corrosion, and batteries. Recommended preparation: ECHE 260 or permission of instructor. Offered as ECHE 381 and ECHE 480.

ECHE 483. Chemical Engineering Applied to Microfabrication and Devices (3) Silicon based microfabrication and micromachining require many chemical engineering technologies. Microfabricated devices such as sensors are also directly related to chemical engineering. The applications of chemical engineering principles to microfabrication and micromachining are introduced. Oxidation processing, chemical vapor deposition, etching and patterning techniques, electroplating and other technologies are discussed. Graduate students will submit an additional final project on some technical aspect of microfabrication technology or devices. Recommended preparation: ECHE 363 and ECHE 371. Offered as ECHE 383 and ECHE 483.

ECHE 500T. Graduate Teaching II (0) All Ph.D. students are required to take this course. The experience will include elements from the following tasks: development of teaching or lecture materials, teaching recitation groups, providing laboratory assistance, tutoring, exam/quiz/homework preparation and grading, mentoring students. Recommended preparation: Ph.D. student in Chemical Engineering.

ECHE 701. Dissertation Ph.D. (1 - 18) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

ECHE 383 Chemical Engineering Applied to Microfabrication and Devices (3) Fall, third year
EECS 309 Electromagnetic Fields I (3) Fall, fourth year
plus one additional course selected from:
EMSE 314 Electronic, Magnetic, and Optical Properties of Materials (3) Fall, fourth year
EECS 321 Semiconductor Electronic Devices (4) Spring, fourth year

Environmental Engineering (Advisor: Dr. Feke)
GEOL 303 Environmental Law (3) Fall, junior
ECIV 352/GEOL 352 Environmental Chemistry and Engineering (3) Spring, junior
ECIV 362 Solid and Hazardous Waste Management (3) or Spring, third year
BIOL 350 Introduction to Ecosystems Analysis and Environmental Science (3) Fall, fourth year

Management/Entrepreneurship (Advisor: Dr. Savinell)
ACCT 101 Introduction to Financial Accounting (3) Fall, third year
BAFI 353 Corporation Finance (3) Fall, fourth year
ENTP 311 New Venture Creation (3) or Spring, third year
ENTP 310 Entrepreneurial Financing (3) Fall, fourth year

Polymers Science\( ^i \) (Advisor: Dr. Mann)
EMAC 270 Introduction to Polymer Science (3) Fall, third year
plus any two courses selected from:
EMAC 276 Polymer Properties and Design (3) Fall, fourth year
EMAC 376 Polymer Engineering (3) Spring, third year
EMAC 377 Polymer Processing (4) Spring, fourth year
EMAC 378 Polymer Production and Technology (3) Spring, fourth year

Research (Advisor: Dr. Martin)
ECHE 396 Research and Innovation Spring, third year
ECHE 350 Undergraduate Research Project I (3) Fall, fourth year
ECHE 351 Undergraduate Research Project II (3) or Research elective Spring, fourth year

Systems and Control (Advisor: Dr. Lacks)
EECS 346 Engineering Optimization (3) Spring, third year
EECS 281 Logic Design and Computer Organization (4) Fall, fourth year
EECS 306 Control Engineering II (3) or ECHE 463 Model Based Control (3) Spring, fourth year

Advanced Study Sequence (Advisor:}
Dr. Qutubuddin
ECHE 460 Thermodynamics (3) or
ECHE 475 Chemical Engineering Analysis (3) Fall, fourth year
ECHE 651 Master’s Thesis (3) Fall, fourth year
ECHE 651 Master’s Thesis (3) Spring, fourth year

h. In these sequences, coordinate your choice of breadth electives with your choice for the Materials elective.
i. Students should take a 300-level undergraduate or introductory graduate course that would be relevant to their research project and is approved by the department.
j. This sequence is designed for students entering the five-year B.S./M.S. program. Students taking this sequence should rearrange scheduling of the breadth elective sequence and humanities/social science courses in the third and fourth years to accommodate these courses.

DEPARTMENT OF CIVIL ENGINEERING

Bingham Building (7201)
Phone: 216-368-2950; Fax: 216-368-5229
Xiangwu (David) Zeng, Ph.D., Professor and Chair
email: xzz16@case.edu
http://civil.case.edu

Programs in Environmental, Geotechnical, and Structural Engineering, Construction Engineering and Management, and Engineering Mechanics

Civil engineering is concerned with the environment and with the planning, design, and construction of facilities for meeting the needs of modern society. Examples of such facilities are transportation systems, schools and office buildings, bridges, dams, land reclamation projects, water treatment and distribution systems, commercial buildings, and industrial plants. Civil engineers can choose from a broad spectrum of opportunities in industry and consulting practice as well as research and development in firms in which civil engineers often participate as owners or partners. Employment can be found among a wide variety of industrial, governmental, construction, and private consulting organizations. There is a large demand for civil engineers nationally. The program at Case Western Reserve University is built around small classes, good faculty-student relationships and advising, and a program flexible enough to meet students’ personal career aims.

The Department of Civil Engineering of the Case School of Engineering offers an accredited Bachelor of Science degree in Civil Engineering with courses in almost all the traditional civil engineering subjects. The graduate program offers the Master of Science and Doctor of Philosophy degrees in structures, engineering mechanics, geotechnical and environmental engineering. A cooperative education program involving participating engineering firms is available for both undergraduate and graduate students.

An active research program gives the students opportunities to participate in projects related to design, analysis, and testing. Projects are in areas such as computational mechanics, probabilistic design, bridges, dynamics and wind engineering, response of concrete and steel structures, fracture mechanics, static and dynamic behavior of soils, earthquake engineering, subsurface and ex situ remediation, colloid behavior in environmental systems, and contaminated sediment dynamics.

MISSION STATEMENT AND OBJECTIVES

The Civil Engineering Department developed its own mission statement and educational objectives that are consistent with those of the Engineering School. This process involved the entire Civil Engineering faculty and the Civil Engineering Development Committee. It was conducted during regular faculty meetings and special meetings called for this purpose. It is an ongoing process. Mission Statement:

Our mission is to prepare students for leadership roles in civil and environmental engineering. The department will provide facilities and research expertise to advance the state of the civil engineering profession within the mission of the Case School of Engineering. Students will be taught to address problems building on solid technical foundations while taking advantage of advanced technologies. Our graduates will adhere to high technical and ethical standards, in service to the public. Graduates will be prepared for the pursuit of advanced learning in civil engineering and related fields, as well as for the practice of civil and environmental engineering at the highest professional levels.

Program Objectives

The ECIV program committed itself to the establishment of a new set of Program Educational Objectives. In consultation with our stakeholders, the following reconstituted set of Program Educational Objectives has been established:

- Graduates of the ECIV Program will enter the profession of Civil Engineering and advance to positions of greater responsibility and leadership, in line with ASCE Professional Grade Descriptions.
- Graduates of the ECIV Program will enter and successfully progress in, or complete, advanced degree programs within their fields of choice.
- Graduates of the ECIV Program will progress toward or complete professional registration and licensure.

FACULTY

Xiangwu (David) Zeng, Ph.D.
(Cambridge University)
Professor and Chair
Geotechnical earthquake engineering; centrifuge modeling; foundation vibration

Dario A. Gasparini, Ph.D.
(Massachusetts Institute of Technology)
Professor
Structures; wind and earthquake engineering; applied random processes; history of engineering

(University of California, Berkeley), P.E.
Professor
Structures; design and dynamics; earthquake engineering; bridge engineering

Aaron A. Jennings, Ph.D.
(University of Massachusetts), P.E.
Professor
Environmental and geoenvironmental engineering; groundwater contamination; hazardous waste management; uncertainty analysis for environmental models

Robert L. Mullen, Ph.D.
(Northwestern University), P.E.
Frank H. Neff Professor
Computational mechanics; finite elements; boundary elements.

Vassilis P. Panoskaltsis, Ph.D.
(University of California, Berkeley)
Associate Professor
Constitutive modeling of civil engineering materials; thermomechanics of solids; viscoelasticity, plasticity, damage mechanics; fatigue; computational mechanics

Adel S. Saada, Ph.D.
(Princeton University), P.E.
Professor
Mechanics of materials; static and dynamic mechanical behavior of soils; foundation engineering
Xiong (Bill) Yu, Ph.D.
(Purdue University), P.E
Assistant Professor
Geotechnical engineering; infrastructure; construction material testing; information technology

EMERITUS FACULTY
J. Ludwig Figueroa, Ph.D.
(University of Illinois)
Professor Emeritus

ADJUNCT FACULTY
Cynthia Collyard, Adjunct Instructor
Philip DeSantis, Adjunct Professor
Dan Ghiochel, Adjunct Professor
Samuel S. Jeyanayagam, Adjunct Professor
Kenneth L. Klika, Adjunct Professor
Winston Perera, Adjunct Professor
Mark D. Rokoff, Adjunct Assistant Professor
Randall H. Ruddeman, Adjunct Professor
John Stevenson, Adjunct Professor
Kirk C. Valanis, Adjunct Professor
Erwin V. Zaretsky, Adjunct Professor

UNDERGRADUATE PROGRAM
The faculty of the civil engineering department believe very strongly that undergraduate education should prepare students to be productive engineers upon receiving the degree. For this reason, particular emphasis in undergraduate teaching is placed on the application of engineering principles to the solution of problems. After completing a broad civil engineering core program undergraduate students must choose an elective sequence in one of the areas of civil engineering of particular interest, such as structural, geotechnical or environmental engineering; construction management or engineering mechanics.

In order to provide undergraduates with experience in industry, the department attempts to arrange summer jobs for the three summers between their semesters at Case Western Reserve University. By working for organizations in all areas of design and construction, students can gain an invaluable knowledge of the way the industry functions. This experience lets them gain more from their education and makes them more attractive to prospective employers upon graduation.

A cooperative education program is also available, which requires the student to spend two full semesters working full-time in an engineering capacity with a contractor, consulting engineer, architect, or materials supplier during the course of his or her education. The aim of the program is to enable students to make their education more meaningful by gaining familiarity with the industry they will work in after graduation and to help students finance their education.

The undergraduate program in civil engineering at Case Western Reserve University is accredited by the Engineering Accreditation Commission (EAC) of ABET, Inc. 111 Market Place, Suite 1050, Baltimore, MD 21202-4012, telephone: 410-347-7700.

The curriculum has been designed so that the student chooses a sequence of four (4) or more approved elective courses. The sequence is intended to give students the chance to pursue in some depth a particular area related to their careers as civil engineers. Samples of courses from which elective sequences could be chosen follow the civil engineering curriculum in this bulletin. In addition, the students are required to do a senior project in their area of interest.

Students enrolled in other majors may elect to pursue a minor in civil engineering or in environmental engineering. Department approval and a minimum of 15 credit hours are required.

Most classes at Case Western Reserve University are small, and the student has close contact with the faculty. Students have an opportunity to gain practical experience as well as earn a supplemental income by assisting faculty members on consulting work during vacation periods.

Cooperative Education is a formalized academic program which enables students to alternate classroom studies with career-based experiences in industry. Cooperative Education is an extension of the classroom. It is a learning experience designed to integrate classroom theory with practical experience and professional development.

EDUCATIONAL OBJECTIVES
- Graduates of the ECIV Program will enter the profession of Civil Engineering and advance to positions of greater responsibility and leadership, in line with ASCE Professional Grade Descriptions.
- Graduates of the ECIV Program will enter and successfully progress in, or complete, advanced degree programs within their fields of choice.
- Graduates of the ECIV Program will progress toward or complete professional registration and licensure.

Program Outcomes

As preparation for meeting the above program objectives, the Department of Civil Engineering provides an undergraduate program designed so that students attain:

a. an ability to apply knowledge of mathematics (including differential equations) science (including calculus-based physics and general chemistry and one additional area of science
b. an ability to design and conduct experiments, as well as to analyze and interpret data in more than one area of civil engineering
c. an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
d. an ability to function on multi-disciplinary teams
e. an ability to identify, formulate, and solve engineering problems
f. an understanding of professional and ethical responsibility and the role of civil engineers in providing for the safety and well-being of the general public
g. an ability to communicate effectively in written and oral form
h. the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
i. a recognition of the need for, and an ability to engage in lifelong learning
j. a knowledge of contemporary issues
k. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice and the design of functional civil engineering facilities
l. proficiency in probability and statistics, as applied to civil engineering design and planning issues
m. an understanding of professional practice issues, including the role of civil engineering design and management professionals in the construction process, public policy and leadership
n. an understanding of the importance of professional licensure and the ethical use of a professional license

ELECTIVE SEQUENCE

Structural Engineering
SELECT A MINIMUM OF 15 CREDIT HOURS FROM THE FOLLOWING LIST OF COURSES (APPROVAL OF THE DEPARTMENT IS REQUIRED):

**Environmental Engineering**
- ENGR 225, Thermodynamics, Fluid Mechanics, Heat & Mass Transfer (4)
- GEOL 321, Hydrogeology (3)
- ECIV 351, Engineering Hydraulics and Hydrology (3)
- ECIV 361, Water Resources Engineering (3)
- ECIV 362, Solid and Hazardous Waste Management (3)
- ECIV 368, Environmental Engineering (3)
- ECIV 460, Environmental Remediation (3)

Computer use is an integral part of the civil engineering curriculum. From required courses in computer programming and numerical analysis to subsequent use and development of civil engineering programs, the student fully utilizes the computer as a planning, analysis, design, and managerial tool.

All sequences are constructed to provide a balance of marketable skills and theoretical bases for further growth. With departmental approval other sequences can be developed to meet students’ needs.

**GRADUATE PROGRAM IN CIVIL ENGINEERING**

The graduate programs in structural engineering, geotechnical engineering, engineering mechanics and environmental engineering prepare students for careers in industry, professional practice, research and teaching. Experience has shown that job opportunities are excellent for students who receive advanced degrees in civil engineering at Case Western Reserve University. Recent advanced degree recipients have found positions in universities, consulting firms, petroleum companies, plant design firms, and aerospace firms, among others.

Each student’s program of course work and research is tailored to his or her interests, in close consultation with the faculty advisor. For students working toward the Master of Science degree there are two possible plans, A and B. In plan A, a research thesis is required. In plan B, a project and additional course work are substituted for the thesis. For students working toward the Doctor of Philosophy degree a research thesis is required.

**MINOR IN ENVIRONMENTAL ENGINEERING**

Students enrolled in other majors may elect to pursue a minor in Civil Engineering. A minimum of 15 credit hours is required, as follows:

**Required Course**
- ENGR 200, Statics and Strength of Materials (3)

Select a minimum of 12 credit hours from one of the following areas (approval of the department is required):

**Solid Mechanics**
- ECIV 310, Strength of Materials (3)
- ECIV 405, Solid Mechanics I (3)
- ECIV 406, Constitutive Modeling Theories (3)
- ECIV 411, Applied Elasticity (3)
- ECIV 420, Finite Element Analysis (3)
- ECIV 430, Foundation Engineering (3)
- GEOL 110, 119, Physical Geology (3), Lab (1)
- GEOL 330, Geophysical Field Methods (4)

**Structural & Geotechnical Engineering**
- ECIV 211, Civil Engineering Materials (3)
- ECIV 320, Structural Analysis I (3)
- ECIV 321, Structural Analysis II (3)
- ECIV 322, Structural Design I (3)
- ECIV 323, Structural Design II (3)
- ECIV 330, Soil Mechanics (4)
- ECIV 430, Foundation Engineering (3)
- ECIV 433, Soil Dynamics (3)

**Construction Engineering and Management**

Two of the courses must be
- ECIV 340, Construction Management (3)
- ECIV 341, Construction Scheduling and Estimating (3)

Two or more courses chosen from
- ACCT 303, Survey of Accounting (3)
- BAFI 355, Corporation Accounting (3)
- BLAW 329, Law & Management (3)
- ECIV 341, Construction Scheduling and Estimating (3)
- ECIV 430, Foundation Engineering (3)
- ECON 361, Managerial Economics (3)
- LHRP 251, Industrial Relations & Administrative Practices (3)
- LHRP 311, Labor Problems (3)

**MINOR IN CIVIL ENGINEERING**

Students enrolled in other majors may elect to pursue a minor in Civil Engineering. A minimum of 15 credit hours is required, as follows:

**Required Course**
- ENGR 200, Statics and Strength of Materials (3)

Select a minimum of 12 credit hours from one of the following areas (approval of the department is required):

**Solid Mechanics**
- ECIV 310, Strength of Materials (3)
- ECIV 405, Solid Mechanics I (3)
- ECIV 406, Constitutive Modeling Theories (3)
- ECIV 411, Applied Elasticity (3)
- ECIV 420, Finite Element Analysis (3)
- ECIV 430, Foundation Engineering (3)
- GEOL 110, 119, Physical Geology (3), Lab (1)
- GEOL 330, Geophysical Field Methods (4)

**Structural & Geotechnical Engineering**
- ECIV 211, Civil Engineering Materials (3)
- ECIV 320, Structural Analysis I (3)
- ECIV 321, Structural Analysis II (3)
- ECIV 322, Structural Design I (3)
- ECIV 323, Structural Design II (3)
- ECIV 330, Soil Mechanics (4)
- ECIV 430, Foundation Engineering (3)
- ECIV 433, Soil Dynamics (3)

**Construction Engineering and Management**

Two of the courses must be
- ECIV 340, Construction Management (3)
- ECIV 341, Construction Scheduling and Estimating (3)

Two or more courses chosen from
- ACCT 303, Survey of Accounting (3)
- BAFI 355, Corporation Accounting (3)
- BLAW 329, Law & Management (3)
- ECIV 341, Construction Scheduling and Estimating (3)
- ECIV 430, Foundation Engineering (3)
- ECON 361, Managerial Economics (3)
- LHRP 251, Industrial Relations & Administrative Practices (3)
- LHRP 311, Labor Problems (3)
ENGINEERING MECHANICS
The graduate program in engineering mechanics prepares the students for a career in research and analysis in solid and computational mechanics. Courses in mechanics of solids, applied plasticity, damage mechanics, viscoelasticity, viscoplasticity, stability, dynamics, finite elements and boundary integral methods, computational mechanics, constitutive methods, fracture mechanics, plates and shells give the student the necessary knowledge and skill to study the behavior of modern materials and structures as well as advance the state of the art. For more information contact the chair of the Department of Civil Engineering.

FACILITIES

Bingham Structures Laboratory
The major component of this laboratory is a 14-foot by 60-foot structural test slab, which is the top flange of a 12-foot deep reinforced concrete box girder. Load and tiedown points are provided by 3-inch diameter holes spaced at 2-foot centers. Loading is accomplished by hydraulic jacks. The laboratory also contains 200k, 50k, 25k universal testing machines, and two (2) 55k MTS hydraulic actuators with a controller and a separate hydraulic service manifold system.

Strength of Materials Laboratory
This laboratory is equipped with two (2) MTS servo-hydraulic materials test systems. Capabilities include: fracture toughness evaluation of various materials, crack growth kinetics under different loading histories, and micro-structural damage analysis and micromechanics studies. The second MTS unit is capable of applying simultaneous axial and torsional loads. An environmental chamber is available. There is equipment available for fracture surface characterization and image analysis and a grinding-polishing unit.

Bingham Concrete Laboratory
A concrete laboratory is available for undergraduate instruction. A 100 percent humidity room is available for curing concrete specimens. Other equipment includes a concrete mixer, screening equipment, an air entrainment meter, facilities for prestressing specimens, and a 400k axial compression machine.

Environmental Engineering Laboratory
This laboratory is one in a suite of new laboratories that support environmental engineering teaching and research. The facilities include a teaching laboratory, an advanced instrumentation laboratory, a remediation research laboratory and an electronic classroom/software laboratory. The Environmental Engineering laboratory is equipped for conventional Standard Methods analysis of water, wastewater, soil, solid waste and air samples (pH meters, furnaces, ovens, incubators, hoods, etc.) and for aerobic microbiology work. The lab also offers generous bench top space for student teams to explore laboratory procedures and provides direct access to research, instrumentation, and computational facilities.

Environmental Instrumentation Laboratory
This laboratory is equipped for state-of-the-art analysis of environmental contaminants. The room supports a computer controlled Dionex DX-500 IC/HPLC system, a computer controlled Varian SPECTRAA 200/SIPS 10 (flame & furnace) AA system, and a computer controlled Hewlett Packard 6890 GC/MS analysis system for organic and inorganic pollutant analysis. Where appropriate, machines have been equipped with autosamplers to improve productivity.

Remediation Research and Colloid Science Laboratory
This laboratory is designed to support physical research on the applied science and design of remediation engineering and the analysis of colloidal particles. The laboratory provides a modeling floor for the assembly of laboratory scale remediation schemes, and provides immediate access to instrumentation and computational facilities for data analysis.

Soil Mechanics Laboratory
This laboratory has a full array of both instructional and research units: notable are automated triaxial units for generalized extension and compression tests, units permitting simultaneous application of hydrostatic, axial, and torsional static and dynamic stresses, a cubical device for true triaxial testing, units by means of which one-dimensional consolidation in the triaxial cell can be automatically achieved, and various pore pressure force and deformation measuring devices. Tests are monitored and instantly evaluated by data acquisition-computer systems. Also available is a longitudinal and torsional resonant column device and a large size oedometer equipped with bender elements. The laboratory has a SP2000 high speed camera to study dynamic phenomena. A 20 g-tons fully automated centrifuge with a servo-hydraulic earthquake shaker is in operation. The laboratory has a full set of equipment for TDR tests.

Neff Civil Engineering Undergraduate Computer Laboratory
This laboratory provides Civil Engineering students with access to all the computer resources needed for both course work and research. The laboratory is supplemented by other facilities provided by the university. The Neff Laboratory has Pentium class computers running Windows/XP operating system. All of the computers in the Neff lab can act as independent workstations or provide access via a fiber optic link to other campus computers.

Computational Mechanics Laboratory
This laboratory includes workstations running UNIX, for graduate instructional and research use. The workstations are connected to the network via a fiber optic link.

RESEARCH
Research under way in civil engineering includes work in analytical, design and experimental areas and is sponsored by industry, state, and federal government sources. Major areas of research interest are:

- Structures
- Random vibration
- Engineering materials
- Behavior of reinforced and prestressed concrete
- Wind engineering
- Earthquake analysis and design of structures
- Finite element methods
- Boundary element method
- Nondestructive Testing of Structures
- Passive and active control of the vibration of structures
- Transient response of nonlinear structures
- Blast loading of structures
- Engineering Mechanics
- Adaptive finite element and boundary element methods
- Modeling of micro electromechanical systems
- Reliable Engineering Computation
- Biomechanics of the human mid face and mandible
- Finite element modeling of coupled systems
- Fracture mechanics of brittle matrix composites
CIVIL ENGINEERING (ECIV)

Course Descriptions

ECIV 160. Surveying and Computer Graphics (3)

Principles and practice of surveying; error analysis, topographic mapping, introduction to photogrammetry and GIS; principles of graphics; computer-aided-drafting. Laboratory.

ECIV 211. Civil Engineering Materials (3)

ECIV 300. Undergraduate Research (3)

Research conducted under the supervision of a sponsoring Civil Engineering faculty member. Research can be done on an independent topic or as part of an established on-going research activity. The student will prepare a written report on the results of the research. Course may fulfill one technical elective requirement.

ECIV 310. Strength of Materials (3)

ECIV 320. Structural Analysis I (3)

ECIV 321. Structural Analysis II (3)

ECIV 322. Structural Design I (3)

ECIV 323. Structural Design II (3)

ECIV 330. Soil Mechanics (4)

The physical, chemical, and mechanical properties of soils. Soil classification, capillarity, permeability, and flow nets. One dimensional consolidation, stress and settlement analysis. Shear strength, stability of cuts, and design of embankments, retaining walls and footings. Standard laboratory tests performed for the determination of the physical and mechanical properties of soils. Laboratory. Recommended preparation: ECIV 310.

ECIV 340. Construction Management (3)

Selected topics in construction management including specifications writing, contract documents, estimating, materials and labor, bidding procedures and scheduling techniques. The course is augmented by guest lecturers from local industries.

ECIV 341. Construction Scheduling and Estimating (3)

The focus is on scheduling, and estimating and bidding for public and private projects. This includes highways as well as industrial and building construction. The use of computers with the latest software in estimating materials, labor, equipment, overhead, and profit is emphasized. Recommended preparation: ECIV 340 and consent of instructor.

ECIV 351. Engineering Hydraulics and Hydrology (3)

Application of fluid statics and dynamics to Civil Engineering Design. Hydraulic machinery, pipe network analysis, thrust, hammer, open channel flow, sewer system design, culverts, flow gauging, retention/detention basin design. Applied hydrology; hydrograph analysis and hydraulic routing will also be introduced. Recommended preparation: Concurrent enrollment in ENGR 225.

ECIV 350. Civil Engineering Systems (3)

Decision-making methods in civil engineering. Engineering economics. Linear and nonlinear programming; planning, scheduling, and CPM methods. Probability and reliability analysis for decisions with risk and uncertainty.

ECIV 361. Water Resources Engineering (3)

Water doctrine, probabilistic analysis of hydrologic data, common and rare event analysis, flood forecasting and control, reservoir design, hydrologic routing, synthetic streamflow generation, hydroelectric power, water resource quality, water resources planning. Recommended preparation: ECIV 351.

ECIV 362. Solid and Hazardous Waste Management (3)

ECIV 368. Environmental Engineering (3)

Principle and practice of environmental engineering. Water and waste engineering unit operations and processes including related topics from industrial waste disposal, air pollution and environmental health.

ECIV 370. Unit Operations and Processes in Environmental Engineering (3)

Physical, chemical, and biological operations and processes for the treatment of water supplies and municipal, industrial, and hazardous waste streams. Emphasis will be given to theoretical understanding and analysis of the involved processes and the design of treatment operations. Laboratory. Recommended preparation: ECIV 368.
mended preparation: ECIV 368.

ECIV 396. Civil Engineering Special Topics I (1 - 3) Special topics in civil engineering in which a regular course is not available. Conferences and report.

ECIV 397. Civil Engineering Topics II (3) Special topics in civil engineering in which a regular course is not available. Conferences and report.

ECIV 398. Civil Engineering Senior Project (3) A project emphasizing research and/or design must be completed by all civil engineers. Requirements include periodic reporting of progress, plus a final oral presentation and written report. SAGES Senior Cap

ECIV 400T. Graduate Teaching I (0) This series of three courses will provide Ph.D. students with practical experience in teaching at the university level and will expose them to effective teaching methods. Each course assignment will be organized in coordination with the student’s dissertation advisor and the department chair. Assignments will successively require more contact with students, with duties approaching the teaching requirements of a faculty member in the Ph.D. student's area of study. Prereq: Ph.D. students in Civil Engineering.

ECIV 421. Advanced Reinforced Concrete Design (3) Properties of plain and reinforced concrete, ultimate strength of reinforced concrete structural elements, flexural and shear design of beams, bond and cracking, torsion, moment redistribution, limit analysis, yield line analysis of slabs, direct design and equivalent frame method, columns, fracture mechanics concepts. Recommended preparation: ECIV 322 and consent of instructor.

ECIV 422. Advanced Structural Steel Design (3) Selected topics in structural steel design including plastic design, torsion, lateral buckling, torsional-flexural buckling, frame stability, plate girders, and connections, including critical review of current design specifications relating to these topics. Recommended preparation: ECIV 322.

ECIV 423. Prestressed Concrete Design (3) Design of prestressed concrete structures, mechanical behavior of concrete suitable for prestressing and prestressed steels, load balancing, partial prestressing, prestressing losses, continuous beams, prestressed slab design, columns. Recommended preparation: ECIV 323 or ECIV 421 and consent of instructor.

ECIV 424. Structural Dynamics (3) Modeling of structures as single and multidegree of freedom dynamic systems. The eigenvalue problem, damping, and the behavior of dynamic systems. Deterministic models of dynamic loads such as wind and earthquakes. Analytical methods, including modal, response spectrum, time history, and frequency domain analyses. Recommended preparation: ECIV 321 and consent of instructor.

ECIV 425. Structural Design for Dynamic Loads (3) Structural design problems in which dynamic excitations are of importance. Earthquake, wind, blast, traffic, and machinery excitations. Human sensitivity to vibration, mechanical behavior of structural elements under dynamic excitation, earthquake response and earthquake-resistant design, wind loading, damping in structures, hysteretic energy dissipation, and ductility requirements. Recommended preparation: ECIV 424.

ECIV 432. Mechanical Behavior of Soils (3) Soil statics and stresses in a half space-tridimensional consolidation and sand drain theory; stress-strain relations and representations with rheological models. Critical state and various failure theories and their experimental justification for cohesive and noncohesive soils. Laboratory measurement of rheological properties, pore water pressures, and strength under combined stresses. Laboratory. Recommended preparation: ECIV 330.

ECIV 451. Infrastructure Engineering Practice (3) Case studies presenting significant accomplishments in infrastructure engineering presented by distinguished practicing engineers. Case studies will examine the historical development of our infrastructure, assessing cultural value of our built environment, alternate infrastructure models, public empowerment, sustainability, stewardship, financing, legal issues, and concepts for future development of infrastructure systems. Students will write environmental and cultural assessments of specific infrastructure projects.

ECIV 452. Infrastructure Aging and Assessment Technologies (4) Mechanical, thermal, and electrochemical processes that cause degradation of our built infrastructure. Reinforced concrete carbonation and freezing and
thawing; fatigue, brittle fracture, and corrosion of steel; weathering of masonry; degradation of asphalt pavements; deterioration of underground systems; aging of polymer-based construction products such as sealants and coatings. Assessment technologies, including non-destructive testing and mathematical modeling. Laboratory and field experiences.

ECIV 453. Infrastructure Rehabilitation Design (4) Rehabilitation materials and systems; mechan- cal, electrochemical, thermal, environmental, and aesthetic criteria for decision-making; design principles; specifications and control of construction processes; rehabilitation case studies. Application to structures, pipelines, pavements, and drainage systems.

ECIV 454. Modeling Infrastructure Systems (4) Examination of the properties that distinguish infra- structure performance models from more traditional engineering analysis models. Infrastructure software structure performance models from more traditional

ECIV 455. Infrastructure Engineering Decision Making (3) Aspects of decision theory applied to infrastructure systems. Review of probability and statistics, engineering economics, cost-benefit analysis, impact of social, historical, environmental and government policies on decisions. Emergency management and security considerations. Methods of project financing, asset management and asset optimization.

ECIV 456. Intelligent Infrastructure Systems (3) Topics on smart infrastructure systems; smart materials fabrication, embedded sensing technology for infrastructure condition monitoring, the system models for infrastructural condition diagnosing and adaptive controlling, and spatial-temporal integrat-ed infrastructure management system.

ECIV 460. Environmental Remediation (3) Evolution of proactive environmental engineering to recover contaminated air, water, and soil environments. Lake and river remediation, contaminated sediments, indoor air quality, chemical spills, underground storage tanks, contaminated soils, solid and hazardous waste sites, superfund remediation. Recommended preparation: ECIV 368 or consent of instructor.

ECIV 500T. Graduate Teaching II (0) This series of three courses will provide Ph.D. stu-dents with practical experience in teaching at the university level and will expose them to effective teaching methods. Each course assignment will be organized in coordination with the student’s dissertation advisor and the department chair. Assignments will successively require more contact with students, with duties approaching the teaching requirements of a faculty member in the Ph.D. student’s area of study. Prereq: Ph.D. student in Civil Engineering.

ECIV 505. Solid Mechanics II - Advanced Elas-ticity (3) Boundary value problems in linear and nonlinear elasticity using complex variables. Green’s functions, and integral transform techniques; thermoelasticity; wave propagation; micromechanics and the equivalent inclusion method; dislocations; composite materials; thin films; energy methods. Recommended preparation: ECIV 405 or consent of instructor.

ECIV 521. Stochastic Materials Behavior (3) Applications of random processes to characterization of material structure; elements of quantitative stereology; micromechanical stochastic modeling of stress-strain behavior and static strength; modeling of fatigue strength and crack growth; stochastic simulation of material structure and deformation processes. Recommended preparation: ECIV 405 or ECIV 410, ECIV 520 or consent of instructor.

ECIV 561. Groundwater Analysis (3) Principles of mass transport through porous me dia, formulation of saturated and unsaturated flow equations in alternative coordinate systems, analyti-cal and numerical solutions of flow equations, application of existing groundwater software, analysis of solute transport problems.

ECIV 587. Advanced Mechanics Seminar (3) Advanced topics in mechanics of solids. Thermodynamics with internal variables; thermoelasticity; plasticity; gradient theories; finite theories of plasticity; damage mechanics; endochronic plasticity; non-linear fracture mechanics; probabilistic me-chanics. Recommended preparation: ECIV 406, ECIV 420, ECIV 505 or consent of instructor.

ECIV 600T. Graduate Teaching III (0) This series of three courses will provide Ph.D. stu-dents with practical experience in teaching at the university level and will expose them to effective teaching methods. Each course assignment will be organized in coordination with student’s dissertation advisor and the department chair. Assignments will successively require more contact with students, with duties approaching the teaching requirements of a faculty member in the Ph.D. student’s area of study. Prereq: Ph.D. students in Civil Engineering.

ECIV 601. Independent Study (1 - 18) Plan B.

ECIV 611. Civil Engineering Graduate Seminar (0) Distinguished outside speakers present current research in various topics of Civil Engineering. Graduate students also present technical papers based on thesis research.

ECIV 650. Infrastructure Project (1 - 6) Project based experience in the application of infra-structure engineering principles to a complex infra-structure system.

ECIV 651. Thesis M.S. (1 - 18) Plan A.

ECIV 660. Special Topics (1 - 18) Topics of special interest to students and faculty. Topics can be those covered in a regular course when the student cannot wait for the course to be offered.

ECIV 701. Dissertation Ph.D. (1 - 18) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

BACHELOR OF SCIENCE IN ENGINEERING DEGREE

Major in Civil Engineering
First Year (Class-Lab-Credit Hours) Fall
Approved elective \(^3\) (3-0-3)
Approved elective \(^3\) (3-0-3)
Total (12-6-15)

**Spring**

Humanities or Social Science (3-0-3)
ECIV 360 Civil Engineering Systems (3-2-3)
PHYS 221 or approved Natural Sciences substitute (3-0-3)
Approved elective \(^3\) (3-0-3)
Open elective (3-0-3)
Total (15-2-15)

**Hours required for graduation:** 130
a. May substitute EECS 251.
b. Must be part of an approved sequence.

### DEPARTMENT OF ELECTRICAL ENGINEERING

#### AND COMPUTER SCIENCE

Glenman Building (7071)
Phone: 216-368-2800; Fax: 216-368-6888
Z. Meral Ozsoyoglu, Chair
Andrew R. Jennings Professor of Computing Sciences
e-mail: zmo@eecs.cwru.edu
http://www.eecs.cwru.edu

The Department of Electrical Engineering and Computer Science (EECS) spans a spectrum of degree programs and research areas that combine topics from (i) materials, devices, and circuits, (ii) applied physics, control, signals and systems, and (iii) software and computation to enhance connectivity, creativity, productivity, knowledge, information, education, training, perception, health, entertainment, reliability, safety, and memory, in our lives. EECS disciplines are, for example, responsible for developing microprocessors and personal computers, and the operating systems, computer software, and Internet applications that run on them. EECS disciplines are also responsible for the telecommunications advancements in our world, as well as many of the sensors that enhance our safety and convenience.

EECS is at the heart of a modern university, profoundly impacting medicine, arts, sciences, business, law, social behavior, etc. EECS drives intellectual property and wealth generation. Many other industries build on EECS. For example, healthcare builds on EECS technology at a pace that is consistently increasing (medical informatics, bioinformatics, system biology, data mining and visualization, micro/nano systems, electronics/instrumentation, imaging, robotics, etc.). EECS drives job creation, i.e. the Department of Labor Statistics estimate ~1.12M new jobs in EECS by 2010 versus ~0.2M new jobs in mechanical and civil engineering combined versus less than 0.1M new jobs in biomedical, macromolecular, and materials engineering combined.

EECS at Case supports four synergistic degree programs: computer science, computer engineering, systems and control engineering, and electrical engineering. Each degree program leads to the Bachelor of Science degree at the undergraduate level. The department also offers a Bachelor of Arts in computer science for those students who wish to combine a technical degree with a broad education in the liberal arts. At the graduate level, the department offers the Master of Science and Doctor of Philosophy degrees in electrical engineering, systems and control engineering, computer engineering, and computing and information sciences (i.e., computer science). For supplemental information to this bulletin as well as the latest updates, please visit the department Web site at http://www.eecs.case.edu.

### DEPARTMENT STRUCTURE

EECS at Case is organized internally into two informal divisions: (i) Computer Science; and (ii) Electrical and Computer Engineering, which includes Systems and Control Engineering. The acting associate chair of computer science (CS) is Professor Meral Ozsoyoglu. The associate chair of electrical and computer engineering is Professor Steven Garverick.

### EDUCATIONAL PHILOSOPHY

The EECS department is dedicated to developing high-quality graduates who will take positions of leadership in their careers. We recognize that the increasing role of technology in virtually every facet of our society, life, and culture makes it vital that our students have access to progressive and cutting-edge higher education programs. The program objectives for all of the degree programs in the department are:

- mastery of fundamentals
- creativity
- social awareness
- leadership skills
- professionalism

Stressing excellence in these core values helps to ensure that our graduates are valued and contributing members of our global society and that they will carry on the tradition of engineering leadership established by our alumni.

Our goal is to graduate students who have fundamental technical knowledge of their
profession and the requisite technical breadth and communications skills to become leaders in creating the new techniques and technologies which will advance their fields. To achieve this goal, the department offers a wide range of technical specialties consistent with the breadth of electrical engineering and computer science, including recent developments in the field. Because of the rapid pace of advancement in these fields, our degree programs emphasize a broad and foundational science and technology background that equips students for future developments. Our programs include a wide range of electives and our students are encouraged to develop individualized programs which can combine many aspects of electrical engineering and computer science.

FACULTY

Electrical and Computer Engineering Division

Swarup Bhunia, Ph.D.  
(Purdue University)  
Associate Professor  
Low power and robust nanoelectronics, adaptive nanocomputing, hardware security and protection, implantable electronics

Michael S. Branicky, Sc.D.  
(Massachusetts Institute of Technology)  
Professor  
Intelligent systems and control, hybrid systems, learning, real-time and distributed control over networks, applications to robotics, manufacturing, and biology

Marc Buchner, Ph.D.  
(Michigan State University)  
Associate Professor  
Computer gaming and simulation, virtual reality, software defined radio, wavelets, joint time frequency analysis

M. Cenk Cavusoglu, Ph.D.  
(University of California, Berkeley)  
Associate Professor  
Medical robotics, human-machine interfaces, haptics, teleoperation; computer graphics/virtual environments: surgical simulation, physical modeling; systems and control theory: intelligent control, modeling and simulation of biological systems

Vira Chankong, Ph.D.  
(Case Western Reserve University)  
Associate Professor  
Large-scale optimization; logic-based optimization; multi-objective optimization; optimization applications in radiation therapy treatment planning, medical imaging, manufacturing and production systems, and engineering design problems

Steven L. Garverick, Ph.D.  
(Massachusetts Institute of Technology)  
Associate Professor and Associate Chair of ECE  
Mixed-signal integrated circuit design, microelectromechanical system integration, sensor/actuator signal interfacing, data conversion, wireless communication, analog neural network circuits, medical instrumentation

Weilin (Wei) Lin, Ph.D.  
(Washington University)  
Professor  
Nonlinear control, dynamic systems and homogeneous systems theory, H-infinity and robust control, adaptive control, system parameter estimation and fault detection, nonlinear control applications to under-actuated mechanical systems, biologically-inspired systems and systems biology

Kenneth Loparo, Ph.D.  
(Case Western Reserve University)  
Nord Professor of Engineering  
Dynamic systems, nonlinear control, homogeneous systems theory, robust and adaptive control, control of nonholonomic or under-actuated mechanical systems, robotics and MEMS devices, nonlinear observers and identification, network congestion control, system biology and biologically inspired systems

Behnam Malakooti, Ph.D.  
(Purdue University)  
Professor  
Design and multi-objective optimization, manufacturing/production/operations systems, intelligent systems and networks, artificial neural networks, biological systems, intelligent decision making

Mehran Mehregany, Ph.D.  
(Massachusetts Institute of Technology)  
Goodrich Professor of Engineering Innovation  
Research and development at the intersections of micro/nano-electro-mechanical systems, semiconductor silicon carbide and integrated circuits

Frank Merat, Ph.D.  
(Case Western Reserve University)  
Associate Professor  
Computer and robot vision, digital image processing, sensors, artificial intelligence, RF communications, optical sensors and optical MEMS

Mihajlo D. Mesarovic, Ph.D.  
(University of Belgrade)  
Research Professor  
Complex systems theory, global issues and sustainable development, systems biology

Pedram Mohseni, Ph.D.  
(University of Michigan)  
Assistant Professor  
Biomedical microsystems, bioelectronics, wireless neural interfaces, CMOS interface circuits for MEMS, low-power wireless sensing/actuating microsystems

Wyatt Newman, Ph.D.  
(Massachusetts Institute of Technology)  
Professor  
Mechatronics, high-speed robot design, force and vision-based machine control, artificial reflexes for autonomous machines, rapid prototyping, agile manufacturing

C.A. Papachristou, Ph.D.  
(Johns Hopkins University)  
Professor  
VLSI design and CAD, computer architecture and parallel processing, design automation, embedded system design

Daniel Saab, Ph.D.  
(University of Illinois at Urbana-Champaign)  
Associate Professor  
Computer architecture, VLSI system design and test, CAD design automation

N. Sreenath, Ph.D.  
(University of Maryland)  
Associate Professor  
Systems Biology, large-scale and hierarchical systems, sustainable development, integrated assessment, global and environmental policy issues (water resources and global climate change), control theory applications, medical informatics

Norman Tien, Ph.D.  
(University of California, San Diego)  
Dean and Nord Professor of Engineering  
Ohio Eminent Scholar, Department of Physics  
MEMS for micro-optical applications in communications and biomedical systems, wireless integrated circuits, and environmental monitoring

Darrin Young, Ph.D.  
(University of California, Berkeley)  
Associate Professor  
Wireless sensing technology, micromachined sensors, micromachined RF high-Q passive devices, integrated low power and low noise analog circuits

Christian A. Zorman, Ph.D.  
(CASE WESTERN RESERVE UNIVERSITY)
Computer Science Division

Shudong Jin, Ph.D.
(Boston University)
Assistant Professor
Computer networks and protocols, multimedia networking, internet content delivery and performance evaluation

Mehmet Koyuturk, Ph.D.
(Purdue University)
Assistant Professor
Bioinformatics and computational biology, computational modeling and algorithm development for systems biology, integration, mining and analysis of biological data, algorithms for distributed systems

Michael Lewicki, Ph.D.
(California Institute of Technology)
Associate Professor
Computational perception and scene analysis, visual representation and processing, auditory representation and analysis

Jing Li, Ph.D.
(University of California, Riverside)
Assistant Professor
Computational biology and bioinformatics, statistical genomics and functional genomics, systems biology, algorithms

Vincenzo Liberatore, Ph.D.
(Rutgers University)
Associate Professor
Distributed Systems, Internet computing, randomized algorithms

Gultekin Ozsoyoglu, Ph.D.
(University of Alberta, Canada)
Professor
Graph databases and data mining problems in metabolic networks, metabolomics, and systems biology, bioinformatics, web data mining

Z. Meral Ozsoyoglu, Ph.D.
(University of Alberta, Canada)

Andrew R. Jennings Professor of Computing Sciences and Chair of EECS
Database systems, database query languages and optimization, data models, index structures, bioinformatics, medical informatics

Andy Podgurski, Ph.D.
(University of Massachusetts, Amherst)
Associate Professor
Software engineering methodology and tools, especially use of data mining, machine learning, and program analysis techniques in software testing, fault detection and localization, reliable engineering and software security

Michael Rabinovich, Ph.D.
(University of Washington)
Professor
Computer networks, Internet performance evaluation, databases, utility computing

Soumya Ray, Ph.D.
(University of Wisconsin, Madison)
Assistant Professor
Artificial intelligence, machine learning, reinforcement learning, automated planning, applications to interdisciplinary problems including medicine and bioinformatics

Jiong Yang, Ph.D.
(University of Illinois at Urbana-Champaign)
Assistant Professor
Data mining, bioinformatics

GQ (Guo-Qiang) Zhang, Ph.D.
(Cambridge University, England)
Professor
Programming languages, theory of computation, logic and topology in computer science, knowledge representation, information technology

Active Emeritus Faculty

George W. Ernst, Ph.D.
(Carnegie Institute of Technology)
Emeritus Professor
Learning problem solving strategies, artificial intelligence, expert systems, program verification

Dov Hazony, Ph.D.
(University of California, Los Angeles)
Emeritus Professor
Network syntheses, ultrasonics, communications

Wen H. Ko, Ph.D.
(Case Institute of Technology)
Emeritus Professor
Solid state electronics, Micro and nano sensors, biomedical instrumentation, implant telemetry

Lee J. White, Ph.D.
(University of Michigan)
Emeritus Professor
Software testing: regression testing, GUI testing, specification-based testing, testing of object-oriented software

Secondary Faculty Appointments

Alexis Abramson, Ph.D.
(University of California, Berkeley)
Assistant Professor, Mechanical and Aerospace Engineering

Robert V. Edwards, Ph.D.
(Johns Hopkins University)
Professor, Chemical Engineering

Joseph Koonce, Ph.D.
(University of Wisconsin, Madison)
Professor, Biology

Joseph Nadeau, Ph.D.
(Boston University)
James H. Jewel Professor of Genetics and Chair, Genetics

Tomas Radivoyevitch, Ph.D.
(Medical University of South Carolina)
Assistant Professor, Epidemiology and Biostatistics

Matthew J. Sobel, Ph.D.
(Stanford University)
Professor, Operations

Adjunct Faculty Appointments

Mark Allman
(Ohio University)
Adjunct Instructor

Randall Beer, Ph.D.
(Case Western Reserve University)
Adjunct Professor

Mark Dohring, Ph.D.
(Case Western Reserve University)
Adjunct Assistant Professor

Aaron Fleischman, Ph.D.
(Case Western Reserve University)
Adjunct Assistant Professor

Boris Igelnik, Ph.D.
(Academy of Sciences of the USSR)
Adjunct Associate Professor

Frank Li, Ph.D.
(Youngstown State University)
Adjunct Assistant Professor

Stephen Phillips, Ph.D.
(Arizona State University)
Adjunct Professor

CASE SCHOOL OF ENGINEERING
RESEARCH ACTIVITIES

The department’s over-arching research theme is exploring the intersections of “bio-micro/nano-info”. Within this theme, the research thrusts of the Electrical Engineering and Computer Science department include: (i) Micro/Nano systems; (ii) Electronics and Instrumentation; (iii) Embedded Systems; (iv) Robotics and Intelligent Systems; (v) Systems Biology; (vi) Bioinformatics and Computational Biology; (vii) Knowledge and Data Discovery; (viii) Information Networks and Distributed Software, and (ix) Medical Informatics.

FACILITIES

Computer Facilities

The department computer facilities incorporate both Unix (primarily Solaris) and Microsoft Windows-based operating systems on high end computing workstations for education and research. A number of file, printing, database, and authentication servers support these workstations, as well as the administrative functions of the department. Labs are primarily located in the Olin and Glennan buildings, but include Nord hall, and are networked via the Case network.

The Case network is a state-of-the-art, high-speed fiber optic campus-wide computer network that interconnects laboratories, faculty and student offices, classrooms, and student residence halls. It is one of the largest fiber-to-desktop networks anywhere in the world. Every desktop has a 1 Gbps (gigabit per second) connection to a fault-tolerant 10 Gbps backbone. To complement the wired network, over 1,200 wireless access points (WAPs) are also deployed allowing anyone with a laptop or wireless enabled PDA to access resources from practically anywhere on campus.

Off campus users, through the use of virtual private network (VPN) servers, can use their broadband connections to access many on campus resources, as well as software, as if they were physically connected to the Case network. The department and the university participate in the Internet2 and National Lambda Rail projects, which provides high-speed, inter-university network infrastructure allowing for enhanced collaboration between institutions. The Internet2 infrastructure allows students, faculty and staff alike the ability to enjoy extremely high performance connections to other Internet2 member institutions.

Aside from services provided through a commodity Internet connection, Case network users can take advantage of numerous online databases such as EUCLIDplus, the University Libraries’ circulation and public access catalog, as well as Lexus-Nexus™ and various CD-ROM based dictionaries, thesauri, encyclopedias, and research databases. Many regional and national institutional library catalogs are accessible over the network, as well.

EECS faculty are active users of the Microfabrication Laboratory and participants in the Advanced Platform Technology Center described under Interdisciplinary Research Centers.

ADDITIONAL DEPARTMENT FACILITIES

Sally & Larry Sears Undergraduate Design Laboratory

This laboratory supports all department courses in circuits and includes a state-of-the-art lecture hall, a modernistic glass-encased lab, and a student lounge and meeting area. Specialized lab space is available for senior projects and sponsored undergraduate programs. In addition, there is also a “sandbox” area where students can “play and tinker” with technology and foster their innovation and creativity. The laboratory supports this mission by providing students access to wireless and wired PCs, oscilloscopes, signal generators, logic analyzers, and specialized equipment such as spectrum analyzers and r.f. signal generators. In addition, the lab includes full-time staff dedicated to the education, guidance and mentoring of undergraduates in the “art and practice” of hands-on engineering.

This is the central educational resource for students taking analog, digital, and mixed-signal courses in electronics and has been supported by Hewlett-Packard, Agilent, and Keithley corporations in addition to alumnus Larry Sears, a successful engineer and entrepreneur. All instrumentation in the lab is computer-interfaced. Basic workstations consist of Windows-based computers equipped with LabView software, as well as Hewlett-Packard 546xx oscilloscopes, 33120A Waveform Generators, 34401A Digital Multimeters, and E3631A power supplies. Advanced workstations are similarly configured with have additional hardware such as a Hewlett-Packard 4155B semiconductor parameter, Hewlett-Packard 54616TC mixed-signal test stations, Hewlett Packard logic analyzers, and Hewlett-Packard high-frequency oscilloscopes.

Jennings Computer Center Lab

Supported by an endowment from the Jennings Foundation, this lab provides our students with the educational resources necessary for their coursework and exploration of the art of computing. This lab has both PCs and Sun Unix workstations, and includes two high-speed laser printers.

EECS Undergraduate Computer Lab
This recently renovated laboratory on the 8th floor of Olin building is accompanied by a suite of instructor/TA offices, and supports the freshman ENGR 131 Elementary Computer Programming class. Thirty student-Macintosh workstations with underlying UNIX operating systems are available for hands-on instruction, and support the study of introductory programming at the university.

Nord Computer Laboratory
This is a general-purpose computer facility that is open 24 hours a day, to all students. The lab contains 50 PCs running Windows and four Apple Macintosh computers. Facilities for color printing, faxing, copying and scanning are provided. Special software includes PRO/Engineer, ChemCAD and Visual Studio. Blank CDs, floppy disks, transparencies and other supplies are available for purchase. Visit http://www.scl.cwru.edu for more information.

Virtual Worlds (Gaming and Simulation) Laboratory
The Virtual Worlds Gaming and Simulation Lab forms the basis for experiential work in existing game related courses such as Artificial Intelligence, Graphics, and Simulation and for new gaming/simulation courses. Multi-disciplinary senior projects also use the lab facilities. In addition, a large number of significant cross-disciplinary immersive learning opportunities are available with the Cleveland Institute of Art, the Case Music department, and the Case School of Medicine.

The Virtual Worlds laboratory includes a PC room, a Console room, an Immersion room, an Audio room, a Medical Simulation room, and a Virtual Reality room containing:

- 24 networked high-performance Alienware gaming quality PCs
- Virtual reality components including three head mounted displays, three data gloves, a four sensor magnetic tracker, two inertial trackers, and three haptic interfaces
- Game consoles, e.g. PS2, Xbox, Gamecube, Nintendo DS, PSP
- Large screen 2-D and 3-D projection displays
- Audio and music synthesis and production equipment
- Database and Bioinformatics Research Laboratory

Primarily funded by equipment grants from the National Science Foundation and Microsoft Research, this laboratory provides PCs running Windows and Linux supporting research in database systems and bioinformatics.

Networks Laboratory
Supported through donations from both Cisco Systems and Microsoft Research, the networks lab has 15 stations complete with a PC, a Cisco switch and router, IP telephony equipment, as well as network patches back to a central rack where devices at one workstation may be routed to other equipment in the lab. A “library” of related equipment is also available.

Intelligent Networks & Systems Architecting (INSA) Research Laboratory
The Intelligent Networks & Systems Architecting (INSA) Research Laboratory is a state-of-the-art research facility dedicated to intelligent computer networks, systems engineering, design, and architecting. It includes optimization, simulation, artificial intelligent, visualization, and emulation. This lab has been partially supported by NASA’s Space Exploration programs for Human and Robotic Technology (H&RT). The INSA Lab is equipped with 10 high-performance workstations and 2 servers in a mixed Windows and Linux environment, with over 40 installed network interface cards providing connectivity to its wired and wireless research networks. It includes software packages such as GINO and LINDO, Arena simulation, ns2 and OPNET, as well as the STK satellite toolkit, artificial neural network, systems architecting and modeling, and statistical analysis and data management packages such as SPSS. The INSA Lab is also used for research in heterogeneous, sensor web, and mobile ad-hoc networks with space and battlefield applications.

VLSI Design Laboratory
This lab has been supported by the Semiconductor Research Corporation, NSF, NASA, Synopsys and Sun Microsystems. This laboratory has a number of advanced UNIX workstations that run commercial CAD software tools for VLSI design and is currently used to develop design and testing techniques for embedded system-on-chip.

Embedded Systems Laboratory
The Embedded Systems Laboratory is equipped with several Sun Blade Workstations running Solaris and Intel PCs running Linux. This lab has been recently equipped with advanced FPGA Virtex II prototype boards from Xilinx, including about 100 Xilinx Virtex II FPGAs and Xilinx CAD tools for development work. A grant-in-aid from Synopsys has provided the Synopsys commercial CAD tools for software development and simulation. This Lab is also equipped with NIOS FPGA boards from Altera, including software tools.

Mixed-Signal Integrated Circuit Laboratory
This research laboratory includes a cluster of Windows workstations and a UNIX server with integrated circuit design software (Cadence Custom IC Bundle), as well as a variety of equipment used in the characterization of mixed-signal (analog and digital) integrated circuits, which are typically fabricated using the MOSIS foundry service. Test equipment includes an IC probe station, surface-mount soldering equipment, logic and network/spectrum analyzers, an assortment of digital oscilloscopes with sample rates up to 1 GHz, and a variety of function generators, multi-meters, and power supplies.

Wireless Microsystem Lab
This research laboratory focuses on developing key technologies, such as micromachined sensors, actuators, and low-power and low-noise integrated sensing and communication circuits, to implement advanced high-performance wireless microsystems for biomedical, communication, and general industrial applications. The laboratory is equipped with PCs, various computer simulation software (Hspice, 3D Maxwell, and Intellisense), high temperature annealing furnace, laser Doppler vibrometer, and various electronic measurement equipment including high frequency spectrum analyzer, network analyzer, impedance analyzer, RF signal generator, multi-channel digital oscilloscopes, probe station with microwave capabilities.

Microelectromechanical Systems (MEMS) Research Laboratory
The MEMS Research Laboratory is equipped for microfabrication processes that do not require a clean room environment. These include chemical-mechanical polishing (two systems), bulk silicon etching, aqueous chemical release of free standing micromechanical components, and supercritical point drying. In addition to the fabrication capabilities, the lab is also well equipped for testing and evaluation of MEMS components as it houses wafer-scale
Advanced Metrology and Nano-Device Applications (AMANDA) Laboratory
http://www.eecs.case.edu/misc/AMANDA/Research/research.html
AMANDA is equipped with state-of-the-art atomic force microscopy (AFM) systems capable of imaging topography and electromagnetic properties of materials and devices at the nanometer-scale. These nano-metrology tools are unique and enable imaging embedded nanostructures with unprecedented resolution over a wide range of frequencies, covering up to 100 GHz. In support of these imaging systems, AMANDA has microwave engineering tools including automated network analyzers, sources and detectors and microwave design simulation capabilities. Optical measurements and spectroscopy, as well as a whole gamut of dc and ac characterization systems enable AMANDA group to measure device characteristics including photconductivity, S-parameters, magnetoresistivity, capacitance, conductance, and breakdown and leakage behavior as a function of temperature, field strength and frequency. Equipped with probe stations, and microscopes with online CCDs, AMANDA is capable of recording and imaging microfluidic, dielectrophoretic, osmotic processes and MEMS devices in real-time and under different operating conditions. AMANDA is also equipped with a CVD reactor to grow carbon nano-tubes and solid-electrolytes on semiconductors, dielectrics and metals. A metal deposition and sputtering facility, and simple processing stations enable rapid prototyping of large-scale devices followed by their characterization in a very efficient manner.

BioMicroSystems Laboratory
This research laboratory focuses on developing wireless integrated circuits and microsystems for a variety of applications in biomedical and neural engineering. The laboratory contains several PC computers, software packages for design, simulation, and layout of high-performance, low-noise, analog/mixed-signal/RF circuits and systems, and testing/measurement equipment such as dc power supply, arbitrary function generator, multichannel mixed-signal oscilloscope, data acquisition hardware, spectrum analyzer, potentiostat, and current source meter.

Emerging Materials Development and Evaluation Laboratory
The EMDE Laboratory is equipped with tools useful in characterizing materials for MEMS applications. The laboratory contains a PC-based apparatus for load-deformation and burst testing of micromachined membranes, a custom-built test chamber for evaluation and reliability testing of MEMS-based pressure transducers and other membrane-based devices, a probe station for electrical characterization of micro-devices, a fume hood configured for wet chemical etching of Si, polymers, and a wide variety of metals, tools for electroplating, an optical reflectometer, and a supercritical-point dryer for release of surface micromachined devices. The lab also has a PC with layout and finite element modeling software for device design, fabrication process design and analysis of testing data.

Process Control Laboratory
This laboratory contains process control pilot plants and computerized hardware for data acquisition and process control that is used for demonstrations, teaching and for research. This laboratory also has access to steam and compressed air for use in the pilot processes that include systems for flow and temperature control, level and temperature control, pH control, and pressure control plants.

Dynamics and Control Laboratory
This laboratory contains data acquisition and control devices, PLCs, electromechanical systems, and mechanical, pneumatic, and electrical laboratory experiments for demonstrations, teaching and research. Particular systems include: AC/DC servo systems, multi-degree of freedom robotic systems, rectilinear and torsional multi-degree of freedom vibration systems, inverted pendulum, magnetic levitation system, and PLC-controlled elevator system, distributed train layout for signaling and control, and model crane system.

UNDERGRADUATE PROGRAMS
The EECS department engineering offers accredited programs leading to B.S. degrees in
(a) Electrical Engineering;
(b) Systems and Control Engineering;
(c) Computer Engineering; and
(d) Computer Science.

These programs provide students with a strong background in the fundamentals of mathematics, science, and engineering. Students can use their technical and open electives to pursue concentrations in bioelectrical engineering, complex systems, automation and control, digital systems design, embedded systems, micro/nano systems, robotics and intelligent systems, signal processing and communications, and software engineering. In addition to an excellent technical education, all students in the department are exposed to societal issues, ethics, professionalism, and have the opportunity to develop leadership and creativity skills.

All Bachelor of Science engineering degree programs in the department are accredited by the Engineering Accreditation Commission (EAC) of ABET, Inc., 111 Market Place, Suite 1050, Baltimore, MD 21202-4012 – telephone: 410-347-7700. The Computer Science Bachelor of Science degree program is accredited by the Computing Accreditation Commission (CAC) of ABET, Inc.

ELECTRICAL ENGINEERING

The Bachelor of Science program in electrical engineering provides our students with a broad foundation in electrical engineering through combined classroom and laboratory work, and prepares our students for entering the profession of electrical engineering, as well as for further study at the graduate level.

The educational mission of the electrical engineering program is to graduate students who have fundamental technical knowledge of their profession and the requisite technical breadth and communications skills to become leaders in creating the new techniques and technologies that will advance the general field of electrical engineering.

Core courses provide our students with a strong background in signals and systems, computers, electronics (both analog and digital), and semiconductor devices. Students are required to develop depth in at least one of the following technical areas: electromagnetics, signals and systems, solid state, computer hardware, computer software, control, and circuits. Each electrical engineering student must complete the following requirements.

Breadth Requirements
• ENGR 131 Elementary Computer Programming
Depth Requirement

Each student must show a depth of competence in one technical area by taking at least three courses from one of the following seven areas. This depth requirement may be met using a combination of the above core courses and a selection of open and technical electives.

AREA I: SIGNALS & SYSTEMS
- EECS 246 Signals and Systems
- EECS 313 Signal Processing
- EECS 351 Communications and Signal Analysis
- EECS 354 Digital Communications
- EECS 381 Hybrid Systems

AREA II: COMPUTER SOFTWARE
- EECS 233 Data Structures
- EECS 337 Systems Programming
- EECS 338 Operating Systems
- EECS 393 Software Engineering

AREA III: SOLID STATE
- EECS 321 Semiconductor Electronic Devices
- EMSE 314 Electrical, Optical and Magnetic Properties of Matter
- EECS 322 Integrated Circuits and Electronic Devices
- EECS 415 Integrated Circuit Technology I

AREA IV: CONTROL
- EECS 304 Control Engineering I
- EECS 346 Engineering Optimization
- EECS 381 Hybrid Systems
- EECS 483 Data Acquisition and Control

AREA V: CIRCUITS
- EECS 245 Electronic Circuits
- EBME 310 Biomedical Instrumentation
- EECS 344 Electronic Circuit Design
- EBME 418 Biomedical Electronics
- EECS 426 MOS Integrated Circuit Design

AREA VI: COMPUTER HARDWARE
- EECS 281 Computer Organization
- EECS 301 Computer Design Lab
- EECS 314 Computer Architecture
- EECS 315 Digital Systems Design
- EECS 316 Computer Design
- EECS 318 VLSI/CAD

STATISTICS REQUIREMENT
- STAT 332 Statistics of Signal Processing (STAT 333 may be substituted for STAT 332 with approval of advisor)
- Applied Statistics elective (Class which uses statistics in some aspect of electrical engineering. Student may choose from EECS 313, EECS 351, EECS 354 or another class approved by advisor.)

DESIGN REQUIREMENT
- EECS 398 Engineering Projects I
- EECS 399 Engineering Projects II

In consultation with a faculty advisor, a student completes the program by selecting technical and open elective courses that provide in-depth training in one or more of a spectrum of specialties such as digital and microprocessor-based control, communications and electronics, solid state electronics, and integrated circuit design and fabrication. With the approval of the advisor a students may emphasize other specialties by selecting elective courses from other programs or departments.

Many courses have integral or associated laboratories in which students gain “hands-on” experience with electrical engineering principles and instrumentation. Students have ready access to the teaching laboratory facilities and are encouraged to use them during nonscheduled hours in addition to the regularly scheduled laboratory sessions. Opportunities also exist for undergraduate student participation in the wide spectrum of research projects being conducted in the department.

Minor in Electrical Engineering
Students enrolled in degree programs in other engineering departments can have a minor specialization by completing the following courses:

- EECS 245 Electronic Circuits I (4)
- EECS 246 Signals and Systems (4)
- EECS 281 Logic Design and Computer Organization (4)
- EECS 309 Electromagnetic Fields I (3)
- Approved technical elective (3)

Minor in Electronics

Cooperative Education Program

There are many excellent Cooperative Education (CO-OP) opportunities for electrical engineering majors. A CO-OP student does two CO-OP assignments in industry or government. The length of each assignment is a semester plus a summer which is enough time for a student to complete a significant engineering project. The CO-OP program takes five years to complete because the student is typically gone from campus for two semesters.

B.S./M.S. Program

The department encourages highly motivated and qualified students to apply for admission to the five-year B.S./M.S. Program in the junior year. This integrated program, which permits substitution of M.S. thesis work for the senior design project, provides a high level of fundamental training and in-depth advanced training in the student’s selected specialty. It also offers the opportunity to complete both the Bachelor of Science in Engineering and Master of Science degrees within five years.

SYSTEMS AND CONTROL ENGINEERING

The Bachelor of Science program in systems and control engineering provides our students with the basic concepts, analytical tools, and engineering methods which are needed in analyzing and designing complex technological and non-technological systems. Problems relating to modeling, decision-making, control, and optimization are studied. Some examples of systems problems which are studied
include: modeling and analysis of complex energy, environmental, and biological systems; computer control of industrial plants; developing world models for studying environmental policies; and optimal planning and management in large-scale systems. In each case, the relationship and interaction among the various components of a given system must be modeled. This information is used to determine the best way of coordinating and regulating these individual contributions to achieve the overall goal of the system.

The mission of the Systems and Control Engineering program is to provide internationally recognized excellence for graduate and undergraduate education and research in systems analysis, design, and control. These theoretical and applied areas require cross-disciplinary tools and methods for their solution. There are four elective sequences available within the B.S. program in systems and control engineering curriculum that represent the breadth of the discipline:

**AREA 1 DYNAMIC SYSTEMS, CONTROL AND SIGNAL PROCESSING**
- MATH 201 Linear Algebra
- EECS 351 Communication and Signal Analysis
- EECS 381 Hybrid Systems
- EECS 401 Digital Signal Processing
- EECS 408 Intro. to Linear Systems
- EECS 416 Convex Optimization in Engineering
- EECS 452 Random Signals
- EECS 483 Introduction to Digital Control
- EECS 489 Robotics I

**AREA 2 SYSTEMS BIOLOGY AND COMPLEX SYSTEMS ANALYSIS**
- MATH 201 Linear Algebra
- EECS 381 Hybrid Systems
- EECS 391 Artificial Intelligence
- EECS 396 Systems Biology
- EECS 408 Intro. to Linear Systems
- EECS 416 Convex Optimization in Engineering
- BIOL 325 Cell Biology

**AREA 3 MANUFACTURING, ROBOTICS AND OPERATIONAL SYSTEMS**
- EECS 350/450 Operations Systems Engineering
- EECS 360/460 Manufacturing and Automation Systems
- EECS 489 Robotics I
- OPMT 450 Project Management
- OPMT 420 Managing Quality with Six Sigma
- OPMT 476 Supply Management in the Supply Chain
- OPMT 477 Enterprise Resource Planning in the Supply Chain

**AREA 4 INFORMATION SYSTEMS**
- EECS 233 Data Structures
- EECS 325 Computer Networks I
- EECS 370/470 Intelligent Architecture and Networks
- EECS 381 Hybrid Systems
- EECS 391 Artificial Intelligence
- EECS 484 Computational Intelligence
- EECS 491 Intelligent Systems I
- MATH 413 Graph Theory

**MINOR PROGRAM IN SYSTEMS AND CONTROL ENGINEERING**
A total of five courses (15 credit hours) are required to obtain a minor in systems and control engineering. At least 9 credit hours must be selected from:
- EECS 246 Signals and Systems (4)
- EECS 304 Control Engineering I (3)
- EECS 346 Engineering Optimization (3)
- EECS 352 Engineering Economics and Decision Analysis (3)

The remaining credit hours can be chosen from EECS courses with the written approval of the faculty member (see the EECS Web page for the current responsible faculty member) in charge of the minor program in the Systems and Control Program. A list of suggested EECS courses to complete the minor is:
- EECS 324 Simulation Methods in Engineering
- EECS 313 Signal Processing
- EECS 350 Production and Operational Systems
- EECS 360 Manufacturing and Integrated Systems

**Cooperative Education Program**
There are many excellent Cooperative Education (CO-OP) opportunities for systems and control engineering majors. A CO-OP student does two CO-OP assignments in industry or government. The length of each assignment is a semester plus a summer which is enough time for the student to complete a significant engineering project. The CO-OP program takes five years to complete because the student is typically gone from campus for two semesters.

**B.S./M.S. Program**
The department encourages highly motivated and qualified students to apply for admission to the five-year B.S./M.S. Program in the junior year. This integrated program, which permits substitution of M.S. thesis work for the senior design project, provides a high level of fundamental training and in-depth advanced training in the student’s selected specialty. It also offers the opportunity to complete both the Bachelor of Science in Engineering and Master of Science degrees within five years.

**COMPUTER ENGINEERING**
The Bachelor of Science program in Computer Engineering is designed to give a student a strong background in the fundamentals of computer engineering through combined classroom and laboratory work. A graduate of this program will be able to use these fundamentals to analyze and evaluate computer systems, both hardware and software. A computer engineering graduate would also be able to design and implement a computer system for general purpose or embedded computing incorporating state-of-the-art solutions to a variety of computing problems. This includes systems which have both hardware and software component, whose design requires a well-defined interface between the two, and the evaluation of the associated trade-offs.

The educational mission of the computer engineering program is to graduate students who have fundamental technical knowledge of their profession along with requisite technical breadth and communications skills to become leaders in creating the new techniques and technologies which will advance the general field of computer engineering. Core courses provide our students with a strong background in digital systems design, computer organization, hardware architecture, and digital electronics.

**Major in Computer Engineering**
Following are the required courses for students with major in computer engineering.
- ENGR 131 Elementary Computer Programming
- ENGR 210 Circuits and Instrumentation
- EECS 233 Introduction to Data Structures
- EECS 281 Logic Design and Computer Organization
- EECS 301 Digital Laboratory
- EECS 302 Discrete Mathematics
The corresponding two-course software sequence is:

- EECS 314 Computer Architecture
- EECS 315 Digital Systems Design
- EECS 337 Systems Programming
- EECS 338 Introduction to Operating Systems or EECS 318 VLSI/CAD

**STATISTICS REQUIREMENT**

- One Statistics elective

(The elective may be chosen from MATH 380 Introduction to Probability, STAT 312 Basic Statistics for Engineering and Science, STAT 313 Statistics for Experimenter, STAT 332 Statistics for Signal Processing, STAT 333 Uncertainty in Engineering and Science.)

**DESIGN REQUIREMENT**

- EECS 398 Engineering Projects I

In consultation with a faculty advisor, a student completes the program by selecting technical and open elective courses that provide in-depth training in principles and practice of computer engineering. With the approval of the advisor a student may emphasize a specialty of his/her choice by selecting elective courses from other programs or departments.

Many courses have integral or associated laboratories in which students gain “hands-on” experience with computer engineering principles and instrumentation. Students have ready access to the teaching laboratory facilities and are encouraged to use them during nonscheduled hours in addition to the regularly scheduled laboratory sessions. Opportunities also exist for undergraduate student participation in the wide spectrum of research projects being conducted in the department.

**Minor in Computer Engineering**

The department also offers a minor in computer engineering. The minor has a required two course sequence followed by a two course sequence in either hardware or software aspects of computer engineering. The following two courses are required for any minor in computer engineering:

- EECS 281 Logic Design and Computer Organization
- EECS 233 Introduction to Data Structures
- EECS 314 Computer Architecture
- EECS 315 Digital Systems Design

The two-course hardware sequence is:

- EECS 338 Introduction to Operating Systems
- EECS 337 Systems Programming

In addition to these two standard sequences, a student may design his/her own depth area with the approval of the minor advisor. A student cannot have a major and a minor, or two minors, in both Computer Engineering and Computer Science because of the significant overlap between these subjects.

**Cooperative Education Program**

There are many excellent Cooperative Education (CO-OP) opportunities for computer engineering majors. A CO-OP student does two CO-OP assignments in industry or government. The length of each assignment is a semester plus a summer which is enough time for the student to complete a significant computing project. The CO-OP program takes five years to complete because the student is typically gone from campus for two semesters.

**B.S./M.S. Program**

Highly motivated and qualifier students are encouraged to apply to the B.S./M.S. Program which will allow them to get both degrees in five years. The B.S. can be in Computer Engineering or a related discipline, such as mathematics or electrical engineering. Integrating graduate study in computer engineering with the undergraduate program allows a student to satisfy all requirements for both degrees in five years.

**COMPUTER SCIENCE**

The Bachelor of Science program in Computer Science is designed to give a student a strong background in the fundamentals of mathematics, and computer science. A graduate of this program should be able to use these fundamentals to analyze and evaluate software systems and the underlying abstractions upon which they are based. A graduate should also be able to design and implement software systems which are state-of-the-art solutions to a variety of computing problems; this includes problems which are sufficiently complex to require the evaluation of design alternatives and engineering trade-offs. In addition to these program specific objectives, all students in the Case School of Engineering are exposed to societal issues, professionalism, and are provided opportunities to develop leadership skills.

Our mission is to graduate students who have fundamental technical knowledge of their profession and the requisite technical breadth and communications skills to become leaders in creating the new techniques and technologies which will advance the field of computer science.

The Bachelor of Arts program in Computer Science is a combination of a liberal arts program and a computing major. It is a professional program in the sense that graduates can be employed as computer professionals, but it is less technical than the Bachelor of Science program in Computer Science. This degree is particularly suitable for students with a wide range of interests. For example, students can major in another discipline in addition to computer science and routinely complete all of the requirements for the double major in a 4 year period. This is possible because over a third of the courses in the program are open electives. Furthermore, if a student is majoring in computer science and a second technical field such as mathematics or physics many of the technical electives will be accepted for both majors. Another example of the utility of this program is that it routinely allows students to major in computer science and take all of the pre-med courses in a four-year period.

**Minor in Computer Science (B.S. or B.S.E.)**

For students pursuing a B.S. or B.S.E. degree, the following three courses are required for a minor in computer science:

- EECS 233 Introduction to Data Structures
- EECS 338 Introduction to Operating Systems
- EECS 340 Algorithms and Data Structures

A student must take an additional 4 credit hours of computing courses with the exclusion of ENGR 131. EECS 302 (Discrete Mathematics) may be used in place of three of these credit hours since it is a prerequisite for EECS 340.

**Minor in Computer Science (B.A.)**

For students pursuing B.A. degrees, the following courses are required for a minor in computer science:

- ENGR 131 Elementary Computer Programming
- EECS 233 Introduction to Data Structures
- MATH 125 Mathematics I

Two additional computing courses are also required for this minor.

**Cooperative Education Program**
There are many excellent Cooperative Education (CO-OP) opportunities for computer science majors. A CO-OP student does two CO-OP assignments in industry or government. The length of each assignment is a semester plus a summer which is enough time for the student to complete a significant computing project. The CO-OP program takes five years to complete because the student is typically gone from campus for two semesters.

**B.S./M.S. Program**

Students with a grade point average of 3.2 or higher are encouraged to apply to the B.S./M.S. Program which will allow them to get both degrees in five years. The B.S. can be in Computer Science or a related discipline, such as mathematics or electrical engineering. Integrating graduate study in computer science with the undergraduate program allows a student to satisfy all requirements for both degrees in five years.

**GRADUATE PROGRAMS**

The EECS department offers graduate study leading to the Master of Science and Doctor of Philosophy degrees in (a) Electrical Engineering; (b) Systems and Control Engineering; (c) Computer Engineering; and (d) Computer Science. These graduate programs provide a balance of breadth and depth appropriate for each degree and support the department’s research thrust areas by emphasizing:

**Electrical Engineering**

Research in computational intelligence, robotic control, solid state devices, microelectromechanical systems (MEMS), micro/nano sensors, micro/nano scale imaging, wireless implantable biosensors, surgical robotics and simulation, and CMOS and mixed-signal integrated circuit design.

**Systems and Control Engineering**

Research in non-linear control, optimization, signal processing, global modeling, and systems biology.

**Computer Engineering**

Research in VLSI design, programmable logic, computer architectures, embedded systems, design for testability, and reconfigurable processors.

**Computer Science**

Research in bioinformatics, databases, software engineering, data mining and visualization, machine learning, pervasive networks, distributed systems, computational biology and medical Informatics.

Incoming students are encouraged to apply for departmental teaching assistantships. In addition, research funds are used to provide assistantships that support the thesis research of graduate students. A limited number of fellowships providing partial support may also be available for students enrolled in the B.S./M.S. program.

The department believes that the success of its graduates at all levels is due to emphasis on project and problem-oriented course material coupled with the broad-based curricular requirements.

M.S. Students may select either Plan A which requires a research thesis or Plan B which does not require a thesis. Doctoral dissertations in all programs must be original contributions to the existing body of knowledge in engineering and science.

Academic requirements for graduate degrees in engineering are as specified by the Case School of Engineering in this bulletin. A more detailed set of rules and regulations for each degree program contained here is available from the department, and may also be found on the department Web page.

**ELECTRICAL ENGINEERING AND COMPUTER SCIENCE (EECS)**

**Course Descriptions**

EECS 214. Signals, Systems, and Control Laboratory (1) A laboratory course based on the material in EECS 212. Analysis and simulation using MATLAB/ Simulink. Laboratory experiments involving signal processing and control. Recommended preparation: concurrent enrollment in EECS 212.

EECS 216. Fundamental System Concepts (3) Develops framework for addressing problems in science and engineering that require an integrated, interdisciplinary approach, including the effective management of complexity and uncertainty. Introduces fundamental system concepts in an integrated framework. Properties and behavior of phenomena regardless of the physical implementation through a focus on the structure and logic of information flow. Systematic problem solving methodology using systems concepts. Recommended preparation: MATH 224.

EECS 233. Introduction to Data Structures (4) The programming language Java; pointers, files, and recursion. Representation and manipulation of data: one way and circular linked lists, doubly linked lists; the available space list. Different representations of stacks and queues. Representation of binary trees, trees and graphs. Hashing; searching and sorting. Laboratory. Recommended preparation: ENGR 131.

EECS 251. Numerical Methods (3) Introduction to basic concepts and algorithms used in the numerical solution of common problems including solving non-linear equations, solving systems of linear equations, interpolation, fitting curves to data, integration and solving ordinary differential equations. Computational error and the efficiency of various numerical methods are discussed in some detail. Most homework requires the implementation of numerical methods on a computer. Recommended preparation: ENGR 131 and MATH 122.

EECS 281. Logic Design and Computer Organization (4) Fundamentals of digital systems in terms of both computer organization and logic level design. Organization of digital computers; information representation; boolean algebra; analysis and synthesis of combinational and sequential circuits; datapaths and register transfers; instruction sets and assembly language; input/output and communication; memory. Recommended preparation: ENGR 131.

EECS 290. Introduction to Computer Game Design and Implementation (5) This class begins with an examination of the history of video games and of game design. Games will be examined in a systems context to understand gam-
ing and game design fundamentals. Various topics relating directly to the implementation of computer games will be introduced including graphics, animation, artificial intelligence, user interfaces, the simulation of motion, sound generation, and networking. Extensive study of past and current computer games will be used to illustrate course concepts. Individual and group projects will be used throughout the semester to motivate, illustrate and demonstrate the course concepts and ideas. Group game development and implementation projects will culminate in classroom presentations and evaluation. Recommended preparation: ENGR 131.

EECS 295. Special Topics (1 - 3)
Limited to freshmen and sophomores. Recommended preparation: ENGR 131.

EECS 301. Digital Logic Laboratory (2)
This course is an introductory experimental laboratory for digital networks. The course introduces students to the process of design, analysis, synthesis and implementation of digital networks. The course covers the design of combinational circuits, sequential networks, registers, counters, synchronous/asynchronous Finite State Machines, register based design, and arithmetic computational blocks. Recommended preparation: EECS 281.

EECS 302. Discrete Mathematics (3)
A general introduction to basic mathematical terminology and the techniques of abstract mathematics in the context of discrete mathematics. Topics introduced are mathematical reasoning, Boolean connectives, deduction, mathematical induction, sets, functions, algorithms, graphs, combinatorial reasoning. Offered as EECS 302 and MATH 304. Prereq: MATH 122 or MATH 124 or MATH 126.

EECS 304. Control Engineering I with Laboratory (3)

EECS 305. Control Engineering I Laboratory (1)
A laboratory course based on the material in EECS 304. Modeling, simulation, and analysis using MATLAB. Physical experiments involving control of mechanical systems, process control systems, and design of PID controllers. Recommended preparation: EECS 212 or equivalent and EECS 304.

EECS 306. Control Engineering II with Laboratory (3)
Advanced techniques for control of dynamic systems. State-space modeling, analysis, and controller synthesis: introduction to nonlinear control systems: phase plane methods, bang-bang control, time-optimal control; describing functions analysis and design techniques; discrete time systems and controllers. Advanced control design methods implementation. Recommended preparation: EECS 304.

EECS 309. Electromagnetic Fields I (3)
Maxwell’s integral and differential equations, boundary conditions, constitutive relations, energy conservation and Pointing vector, wave equation, plane waves, propagating waves and transmission lines, characteristic impedance, reflection coefficient and standing wave ratio, in-depth analysis of coaxial and strip lines, electro- and magneto-quasistatics, simple boundary value problems, correspondence between fields and circuit concepts, energy and forces. Recommended preparation: MATH 223 and PHYS 122 and concurrent enrollment in MATH 224.

EECS 310. Electromechanical Energy Conversion (4)
Electromechanical dynamics, modeling and control. Forces in quasistatic magnetic systems. Energy conversion properties of rotating machines. Analysis and control of DC servomotors, AC servomotors, reluctance machines, inductance machines, and magnetic bearing. Analysis of electromagnetic sensors. Electronic communication, torque linearization through computer controls and flux-vector control. Electromechanical properties are measured in the lab and high-performance controls are constructed and tested. Recommended preparation: EECS 309.

EECS 311. Electromagnetic Fields II (3)
Boundary value problems, guided electromagnetic waves, rectangular and circular waveguides, strip lines, losses in waveguiding structures, scattering, wave optics and wave propagation in anisotropic media, ferrites and plasmas, resonant systems, cavities, microwave networks, multiplex networks, scattering matrix formulation, radiation and antennas, radiation from dipoles, apertures and simple arrays. Recommended preparation: EECS 309.

EECS 313. Signal Processing (3)

EECS 314. Computer Architecture (3)
This course provides students the opportunity to study and evaluate a modern computer architecture design. The course covers topics in fundamentals of computer design, performance, cost, instruction set design, processor implementation, control unit, pipelining, communication and network, memory hierarchy, computer arithmetic, input-output, and an introduction to RISC and super-scalar processors. Recommended preparation: EECS 281.

EECS 315. Digital Systems Design (4)
This course gives students the ability to design modern digital circuits. The course covers topics in logic level analysis and synthesis, digital electronics: transistors, CMOS logic gates, CMOS layout, design metrics space, power, delay. Programmable logic (partitioning, routing), state machine analysis and synthesis, register transfer level block design, datapath, controllers, ASM charts, microsequencers, emulation and rapid prototyping, and switch/logic-level simulation. Recommended preparation: EECS 281.

EECS 316. Computer Design (3)
Methodologies for systematic design of digital systems with emphasis on programmable logic implementations and prototyping. Laboratory which uses modern design techniques based on hardware description languages such as VHDL, CAD tools, and Field Programmable Gate Arrays (FPGAs). Recommended preparation: EECS 281; EECS 315 or consent of instructor.

EECS 317. Computer Design Laboratory (2)
Sequence of laboratory projects provide practical experience in computer-aided design techniques for computer and digital system design. Hardware system modeled and simulated at register transfer and switching transistor level.

EECS 318. VLSI/CAD (4)
With Very Large Scale Integration (VLSI) technology, there is an increased need for Computer-Aided Design (CAD) techniques and tools to help in the design of large digital systems that deliver both performance and functionality. Such high performance tools are of great importance in the VLSI design process, both to perform functional, logical, and behavioral modeling and verification to aid the testing process. This course discusses the fundamentals in behavioral languages, both VHDL and Verilog, with hands-on experience. Recommended preparation: EECS 281, EECS 315.

EECS 319. Applied Probability and Stochastic Processes for Biology (3)
Applications of probability and stochastic processes to biological systems. Mathematical topics will include: introduction to discrete and continuous probability spaces (including numerical generation of pseudo random samples from specified probability distributions). Markov processes in discrete and continuous time with discrete and continuous sample spaces, point processes including homogeneous and inhomogeneous Poison processes and Markov chains on graphs, and diffusion processes including Brownian motion and the Ornstein-Uhlenbeck process. Biological topics will be determined by the interests of the students and the instructor. Likely topics include: stochastic ion channels, molecular motors and stochastic ratchets, actin and tubulin polymerization, random walk models for neural spike trains, bacterial chemotaxis, signaling and genetic regulatory networks, and stochastic predator-prey dynamics. The emphasis will be on practical simulation and analysis of stochastic phenomena in biological systems. Numerical methods will be developed using both MATLAB and the R statistical package. Student projects will comprise a major part of the course. Offered as BIOL 319, EECS 319, MATH 319, BIOL 419, ECEM 419, and PHOL 419. Prereq: MATH 224 or MATH 223 and BIOL 300 or BIOL 306 and MATH 201 or MATH 307 or consent of instructor.
EECS 321. Semiconductor Electronic Devices (4)
Energy bands and charge carriers in semiconductors and their experimental verifications. Excess carriers in semiconductors. Principles of operation of semiconductor devices that rely on the electrical properties of semiconductor surfaces and junctions. Development of equivalent circuit models and performance limitations of these devices. Devices covered include: junctions, bipolar transistors, Schottky junctions, MOS capacitors, junction gate and MOS field effect transistors, optical devices such as photodetectors, light-emitting diodes, solar cells and lasers. Laboratory experiments to characterize some of the above devices. Recommended preparation: EECS 309.

EECS 322. Integrated Circuits and Electronic Devices (3)
Technology of monolithic integrated circuits and devices, including crystal growth and doping, photolithography, vacuum technology, metallization, wet etching, thin film basics, oxidation, diffusion, ion implantation, epitaxy, chemical vapor deposition, plasma processing, and micromachining. Basics of semiconductor devices including junction diodes, bipolar junction transistors, and field effect transistors. Recommended preparation: EECS 321.

EECS 324. Simulation Techniques in Engineering (3)
Discrete event systems and simulation concepts. Discrete event simulation with batch and interactive languages. Recommended preparation: Concurrent enrollment in ENGL 398.

EECS 325. Computer Networks I (3)

EECS 326. Instrumentation Electronics (3)
A second course in instrumentation in emphasis on sensor interface electronics. General concepts in measurement systems, including accuracy, precision, sensitivity, linearity, and resolution. The physics and modeling of resistive, reactive, self-generating, and direct-digital sensors. Signal conditioning for same, including bridge circuits, coherent detectors, and a variety of amplifier topologies: differential, instrumentation, charge, and transimpedance. Noise and drift in amplifiers and resistors. Practical issues of interference, including grounding, shielding, supply/return, and isolation amplifiers. Prereq: ENGR 210 and EECS 246 or EEMI 308 or EMAE 350.

EECS 337. Compiler Design (4)
Design and implementation of compilers and other language processors. Scanners and lexical analysis; regular expressions and finite automata; scanner generators; parsers and syntax analysis; context free grammars; parser generators; semantic analysis; intermediate code generation; runtime environments; code generation; machine independent optimization; data flow and dependence analysis. There will be a significant programming project involving the use of compiler tools and software development tools and techniques. Recommended preparation: EECS 233 and EECS 281.

EECS 338. Introduction to Operating Systems (4)
CPU scheduling, memory management, concurrent processes, semaphores, monitors, deadlocks, secondary storage management, file systems, protection, UNIX operating system, fork, exec, wait, UNIX System V IPCs, sockets, remote procedure calls, threads. Must be proficient in C programming language. Recommended preparation: EECS 337.

EECS 339. Web Data Mining (3)

EECS 340. Algorithms and Data Structures (3)
Efficient sorting algorithms, external sorting methods, internal and external searching, efficient string processing algorithms, geometric and graph algorithms. Recommended preparation: EECS 233 and MATH 304.

EECS 341. Introduction to Database Systems (3)
Relational model, ER model, relational algebra and calculus, SQL, OBE, security, views, files and physical database structures, query processing and query optimization, normalization theory, concurrency control, object relational systems, multimedia databases, Oracle SQL server, Microsoft SQL server. Recommended preparation: EECS 233. Prereq: EECS 302.

EECS 342. Introduction to Global Issues (3)
This systems course is based on the paradigm of the world as a complex system. Global issues such as population, world trade and financial markets, resources (energy, water, land), global climate change, and others are considered with particular emphasis put on their mutual interdependence. A reasoning support computer system which contains extensive data and a family of models is used for future assessment. Students are engaged in individual, custom-tailored, projects of creating conditions for a desirable or sustainable future based on data and scientific knowledge available. Students at CWRU will interact with students from fifteen universities that have been strategically selected in order to give global coverage to UNESCO’S Global-problem-attique Education Network Initiative (GENIe) in joint, participatory scenario analysis via the internet.

EECS 343. Theoretical Computer Science (3)
Introduction to mathematical logic, different classes of automata and their correspondence to different classes of formal languages, recursive functions and computability, assertions and program verification, denotational semantics. MATH/EECS 343 and MATH 410 cannot both be taken for credit. Offered as EECS 343 and MATH 343.

EECS 344. Electronic Analysis and Design (3)
The design and analysis of real-world circuits. Topics include: junction diodes, non-ideal op-amp models, characteristics and models for large and small signal operation of bipolar junction transistors (BJTs) and field effect transistors (FETs), selection of operating point and biasing for BJT and FET amplifiers. Hybrid-pi model and other advanced circuit models, cascaded amplifiers, negative feedback, differential amplifiers, oscillators, tuned circuits, and phase-locked loops. Computers will be extensively used to model circuits. Selected experiments and/or laboratory projects. Recommended preparation: EECS 245.

EECS 345. Programming Language Concepts (3)
This course studies important concepts underlying the design, definition, implementation and use of modern programming languages including syntax, semantics, names/scopes, types, expression, assignment, subprograms, data abstraction, and inheritance. Imperative, object-oriented, concurrent, functional, and logic programming paradigms are discussed. Illustrative examples are drawn from a variety of popular languages, such as C++, Java, Ada, Lisp, and Prolog. Recommended preparation: EECS 233, EECS 337.

EECS 346. Engineering Optimization (3)
Optimization techniques including linear programming and extensions; transportation and assignment problems; network flow optimization; quadratic, integer, and separable programming; geometric programming; and dynamic programming. Nonlinear optimization topics: optimality criteria, gradient and other practical unconstrained and constrained methods. Computer applications using engineering and business case studies. Recommended preparation: MATH 201.

EECS 347. Network Synthesis (3)
Design techniques for the construction of filters, delays, predictors, analog computer networks, and necessary and sufficient requirements for the realization of practical networks. Recommended preparation: EECS 246 or equivalent.

EECS 348. Communication Electronic Cir (4)

EECS 350. Operations and Systems Design (3)
Introduction to design, modeling, and optimization of operations and scheduling systems with applications to computer science and engineering problems. Topics include, forecasting and time series, strategic, tactical, and operational planning, life cycle analysis, learning curves, resources allocation, materials requirement and capacity planning, sequencing, scheduling, inventory control, project management and planning. Tools for analysis include: multi-objective optimization, queuing models, simulation, and artificial intelligence.

EECS 351. Communications and Signal Analysis (3)
Fourier transform analysis and sampling of signals.
AM, FM and SSB modulation and other modulation methods such as pulse code, delta, pulse position, PSK and FSK. Detection, multiplexing, performance evaluation in terms of signal-to-noise ratio and bandwidth requirements. Recommended preparation: EECS 246 or equivalent.

EECS 355. RF Communications (3) Coverage of modern communications circuits and systems with a particular emphasis upon mobile communications. Cellular communications, modulation methods, user access schemes. Individual system components: tuned small signal amplifiers and power amplifiers, mixers, detectors, and frequency synthesizers. Low-power design considerations. Recommended preparation: EECS 351.

EECS 356. Microwave Engineering (3) Transmission lines and circuit analysis, waveguides, modes of propagation, impedance matching techniques, scattering matrix, waveguide components, striplines, resonators, microwave theory, filters, microwave solid state devices. Recommended preparation: EECS 311.

EECS 359. Bioinformatics in Practice (3) This course covers basic computational methods of organizing and analyzing biological data, targeting senior undergraduate and graduate students from both mathematical/computational sciences and life sciences. The aim of the course is to provide the students with basic skills to be able to understand molecular biology data and associated abstractions (sequences, structure, gene expression, molecular network data), access to available resources (public databases, computational tools on the web). Implement basic computational methods for biological data analysis, and use understanding of these methods to solve other problems that arise in biological data analysis. Topics covered include DNA and protein sequence databases, pairwise sequence alignment and sequence search (dynamic programming, BLAST), multiple sequence alignment (HMMs, CLUSTAL-W), sequence clustering, motif finding, pattern matching, phylogenetic analysis (tree reconstruction, neighbor joining, maximum parsimony, maximum likelihood), gene finding, functional annotation, biological ontologies, analysis of gene expression data, and network biology (protein protein interactions, topology, modularity).

EECS 360. Manufacturing and Automated Systems (3) Formulation, modeling, planning, and control of manufacturing and automated systems with applications to computer science and engineering problems. Topics include, design of products and processes, location/spatial problems, transportation and assignment, product and process layout, group technology and clustering, cellular and network flow layouts, computer control systems, reliability and maintenance, and statistical quality control. Tools and analysis include: multi-objective optimization, artificial intelligence, and heuristics for combinatorial problems. Offered as EECS 360 and EECS 460.

EECS 365. Complex Systems Biology (3) Complex Systems Biology is an interdisciplinary course based on systems science, engineering, biology, and medicine. The objective is to provide students with an understanding of the current state of systems biology and major challenges ahead. The biological phenomena across the level of complexity will be considered from molecular to organisms and ecology to provide universality of the systems concepts for understanding the functions and behavior of biological systems. Case studies are used and a course project is required to be completed. Prereq: Junior Standing.

EECS 370. Intelligent Networks and Systems (3) This course covers the development of the next-generation intelligent networks. It involves an in-depth study of design, planning, optimization, and analysis for communications information networks. It will include design and optimization of telecommunication networks and protocols. The course provides applications of Artificial Intelligence methodologies including mathematical learning, neural networks, clustering, modeling and automating human decision making process, and mobile agents to the design of intelligent networks. There will be weekly homework/reading assignments, some presentations by students, and a large project. Offered as EECS 370 and EECS 470.

EECS 381. Hybrid Systems (3) Today, the most interesting computer code and microprocessor designs are “embedded” and hence interact with the physical world, producing a mixture of digital and analog domains. The class studies an array of tools for understanding and designing these “hybrid systems.” Topics include: basics of language and finite state automata theory, discrete-event dynamic systems, Petri nets, timed and hybrid automata, and hybrid dynamical systems. Simulation, verification, and control concepts and languages for these models. Recommended preparation: MATH 224 and either EECS 246 or MATH 304.

EECS 382. Microprocessor-Based Design (3) Microprocessor architectures, memory design, timing, polled and interrupt driven I/O, microprocessor support devices, microcontrollers, integrated hardware/software design considerations. Recommended preparation: ENGR 210 and EECS 281.

EECS 385. Engineering in Community Service IV (3) Project-oriented course; students work on “real” engineering projects of benefit to the community and in partnership with community “customers.” Project teams consists of a mix of sophomores, juniors, and seniors. Students perform engineering design, project specification, and technical research as appropriate to their technical background. Emphasis on project planning and organization, teamwork, project management, communication skills, customer awareness, and professional responsibility. Recommended preparation: Junior or Senior standing in EECS.

EECS 390. Advanced Game Development Project (3) This game development project course will bring together an interdisciplinary group of advanced undergraduate students in the fields of Electrical Engineering and Computer Science, Art, Music, and English to focus on the design and development of a complete, fully-functioning computer game (as an interdisciplinary team). The student teams are given complete liberty to design their own fully functional games from their original concept to a playable finished product, i.e., from the initial idea through to the wrapped box. The student teams will experience the entire game development cycle as they execute their projects. Responsibilities include creating a game idea, writing a story, developing the artwork, designing characters, implementing music and sound effects, programming and testing the game, and documenting the entire project. Recommended preparation: Junior or Senior standing and consent of instructor.

EECS 391. Introduction to Artificial Intelligence (3) Overview of artificial intelligence, knowledge representation, search, game-playing, logic rule-based systems, AI programming languages, learning, neural networks, evolutionary algorithms, natural lan-
guage understanding, planning, robotics. Recommended preparation: ENGR 131.

EECS 393. Software Engineering (3)  
Topics: Introduction to software engineering; software lifecycle models; development team organization and project management; requirements analysis and specification techniques; software design techniques; programming practices; software validation techniques; software maintenance practices; software engineering ethics. Undergraduates work in teams to complete a significant software development project. Graduate students are required to complete a research project. Recommended preparation for EECS 493; EECS 337. Offered as EECS 393 and EECS 493. Prereq: EECS 337. SAGES Senior Cap

EECS 395. Senior Project in Computer Science (4)  
Capstone course for computer science (BS major) seniors. Material from previous and concurrent courses used to solve computer programming problems and to develop software systems. Professional engineering topics such as project management, engineering design, communications, and professional ethics. Requirements include periodic reporting of progress, plus a final oral presentation and written report. Scheduled formal project presentations during last week of classes. Prereq: Senior Standing.

EECS 396. Special Topics in Computer Science (1 - 18)  
Special topics in areas of computer science.

EECS 397. Special Topics in Electrical, Computer and Systems Engineering (1 - 6)  
Special topics in electrical, computer, and systems and control engineering.

EECS 398. Engineering Projects I (4)  
Capstone course for electrical, computer and systems and control engineering seniors. Material from previous and concurrent courses used to solve engineering design problems. Professional engineering topics such as project management, engineering design, communications, and professional ethics. Requirements include periodic reporting of progress, plus a final oral presentation and written report. Scheduled formal project presentations during last week of classes. Recommended preparation: Senior standing. SAGES Senior Cap

EECS 399. Engineering Projects II (4)  
Continuation of EECS 398. Material from previous and concurrent courses applied to engineering design and research. Requirements include periodic reporting of progress, plus a final oral presentation and written report. Recommended preparation: EECS 398 or concurrent enrollment.

EECS 400T. Graduate Teaching I (0)  
This course will provide the Ph.D. candidate with experience in teaching undergraduate or graduate students. The experience is expected to involve direct student contact but will be based upon the specific departmental needs and teaching obligations. This teaching experience will be conducted under the supervision of the faculty member who is responsible for the course, but the academic advisor will assess the educational plan to ensure that it provides an educational experience for the student. Students in this course may be expected to perform one or more of the following teaching related activities: grading homeworks, quizzes, and exams; having office hours for students, tutoring students. Recommended preparation: Ph.D. student in EECS department.

EECS 401. Digital Signal Processing (3)  

EECS 405. Data Structures and File Management (5)  
Fundamental concepts: sequential allocation, linked allocation, lists, trees, graphs, internal sorting, external sorting, sequential, binary, interpolation search, hashing files, indexed files, multiple level index structures, trees, hashed files. Multiple attribute retrieval; inverted files, multi lists, multiple key hashing, b trees. Introduction to data bases. Data models. Recommended preparation: EECS 233 and MATH 304.

EECS 408. Introduction to Linear Systems (3)  

EECS 409. Discrete Event Systems (3)  
A broad range of system behavior can be described using a discrete event framework. These systems are playing an increasingly important role in modeling, analyzing, and designing manufacturing systems. Simulation, automata, and queuing theory have been the primary tools for studying the behavior of these logically complex systems; however, new methods and techniques as well as new modeling frameworks have been developed to represent and to explore discrete event system behavior. The class will begin by studying simulation, the theory of languages, and finite state automata, and queuing theory approaches and then progress to examining selected additional frameworks for modeling and analyzing these systems including Petri nets, perturbation analysis, and Min-Max algebras.

EECS 411. Introduction to Logic Programming (3)  

EECS 412. Electromagnetic Fields III (3)  
Maxwell’s equations, macroscopic versus microscopic fields, field interaction with materials in terms of polarization vectors P and M, Laplace’s and Poisson’s equations and solutions, scalar and vector potentials. Wave propagation in various types of media such as anisotropic and gyrotropic media. Phase and group velocities, signal velocity and dispersion. Boundary value problems associated with wave-guide and cavities. Wave solutions in cylindrical and spherical coordinates. Radiation and antennas.

EECS 413. Nonlinear Systems I (3)  
This course will provide an introduction to techniques used for the analysis of nonlinear dynamic systems. Topics will include existence and uniqueness of solutions, phase plane analysis of two dimensional systems including Poincare-Bendixon, describing functions for single-input single-output systems, averaging methods, bifurcation theory, stability, and an introduction to the study of complicated dynamics and chaos. Recommended preparation: Concurrent enrollment in EECS 408.

EECS 415. Integrated Circuit Technology I (3)  

EECS 416. Convex Optimization for Engineer- ing (3)  
This course will focus on the development of a working knowledge and skills to recognize, formulate, and solve convex optimization problems that are so prevalent in engineering. Applications in control systems; parameter and state estimation; signal processing; communications and networks; circuit design; data modeling and analysis; data mining including clustering and classification; and combinatorial and global optimization will be highlighted. New reliable and efficient methods, particular those based on interior-point methods and other special methods to solve convex optimization problems will be emphasized. Implementation issues will also be underscored. Recommended preparation: MATH 201 or equivalent.

EECS 417. Introduction to Stochastic Control (3)  
Analysis and design of controllers for discrete-time stochastic systems. Review of probability theory and stochastic processes, input-output analysis of linear stochastic systems, spectral factorization and Weiner filtering, minimum variance control, state-space models of stochastic systems, optimal control and dynamic programming, statistical estimation and filtering, the Kalman-Bucy theory, the linear
biological, optical, magnetic; 3) nanofabrication: quantum dots, nanoparticles, nanocomposites, structures: superlattices, nanowires, nanotubes, search. Lectures and class discussion on 1) nano-mended preparation: EECS 338.

EECS 421. Optimization of Dynamic Systems (3)

EECS 422. Solid State Electronics II (3)

EECS 423. Distributed Systems (3)
Introduction to distributed systems; system models; network architecture and protocols; interprocess communication; client-server model; group communication; TCP sockets; remote procedure calls; distributed objects and remote invocation; distributed file systems; file service architecture; name services; directory and discovery services; distributed synchronization and coordination; transactions and concurrency control; security; cryptography; replication; distributed multimedia systems. Recommended preparation: EECS 338.

EECS 424. Introduction to Nanotechnology (3)
An exploration of emerging nanotechnology research. Lectures and class discussion on 1) nanostructures: superlattices, nanowires, nanotubes, quantum dots, nanoparticles, nanocomposites, proteins, bacteria, DNA; 2) nanoscale physical phenomena: mechanical, electrical, chemical, thermal, biological, optical, magnetic; 3) nanofabrication: bottom up and top down methods; 4) characterization: microscopy, property measurement techniques; 5) devices/applications: electronics, sensors, actuators, biomedical, energy conversion. Topics will cover interdisciplinary aspects of the field. Offered as EECS 424 and EMSE 424.

EECS 425. Computer Networks I (3)

EECS 426. MOS Integrated Circuit Design (3)

EECS 427. MEMS for Sensing and Communication (3)
This course covers basic MEMS fabrication technologies and device operating principles of MEMS resonators and inertial sensors such as accelerometers and gyrosopes. Critical issues regarding sensing resolution and low noise interface electronics design will be discussed. MEMS applications such as low noise oscillators, filters, switches, etc. for wireless communications will also be covered.

EECS 428. Computer Communications Networks II (3)
Introduction to topics and methodology in computer networks and middleware research. Traffic characterization, stochastic models, and self-similarity. Congestion control ( Tahoe, Reno, Sack). Active Queue Management (RED, FQ) and explicit QoS. The Web: overview and components, HTTP, its interaction with TCP, caching, Overlay networks and CDN. Expected work includes a course-long project on network simulation, a final project, a paper presentation, midterm, and final test. Recommended preparation: EECS 425 or permission of instructor.

EECS 430. Object-Oriented Software Development (3)
Covers advanced methodology for the design of large software systems. Topics include: object-oriented analysis and design; encapsulation; inheritance; subtype and parametric polymorphism; object-oriented programming languages; design patterns; application frameworks; software architecture; user-interfaces; concurrent and distributed objects. Recommended preparation: EECS 337 or consent of instructor.

EECS 432. Compiler Construction (3)
Top-down and bottom-up recognizers for context-free grammars; LR(k) parsers, error recovery; semantic analysis, storage allocation for block structured languages, optimization, code generation. Homework involves writing a compiler for a block structured language. Recommended preparation: EECS 337.

EECS 433. Database Systems (3)

EECS 434. Microfabricated Silicon Electromechanical Systems (3)
Topics related to current research in microelectromechanical systems based upon silicon integrated circuit fabrication technology: fabrication, physics, devices, design, modeling, testing, and packaging. Bulk micromachining, surface micromachining, silicon to glass and silicon-silicon bonding, Principles of operation for microactuators and microcomponents. Testing and packaging issues. Recommended preparation: EECS 322 or EECS 415.

EECS 435. Data Mining (3)
Data Mining is the process of discovering interesting knowledge from large amounts of data stored either in databases, data warehouses, or other information repositories. Topics to be covered includes: Data Warehouse and OLAP technology for data mining, Data Preprocessing, Data Mining Primitives, Languages, and System Architectures, Mining Association Rules from Large Databases, Classification and Prediction, Cluster Analysis, Mining Complex Types of Data, and Applications and Trends in Data Mining. Recommended preparation: EECS 341 or equivalent.

EECS 436. Advances in Databases (3)
Advanced topics in databases will be covered in this course. Query optimization in object-oriented databases, temporal databases, issues in multimedia databases, databases and Web, graphical query interfaces. Basic knowledge in databases is required. Recommended preparation: EECS 433.

EECS 437. Advanced Topics in Data Mining and Bioinformatics (3)
This course will cover a large number of active data mining and bioinformatics research areas, which include but not limited to: text mining, sequence analysis, network/graph mining, microarray analysis, and mining mobile objects. Students are expected to understand various methods and approaches employed in these research areas and have critical thinking on the advantages and disadvantages of these approaches. In addition, students need to complete a course-long project which exhibits the independent research capability in these data mining and bioinformatics areas. Recommended preparation: EECS 434, EECS 435.

EECS 438. Biomedical Microdevices (3)
Recent advances in large scale molecular biology have created the technological need for miniaturized instrumentation that can interact with macro-molecules, cells, and tissue with high throughput and in many cases massively parallel formats. This course covers several applications of microfabrication.
cated devices to current problems in biology and medicine. The course material includes applications of miniaturization technologies for medical diagnostics and macromolecule assays, drug discovery, cellular activity monitoring and growth, and tissue engineering.

EECS 439. Web Data Mining (3)
Web crawling technology, web search and information extraction, unsupervised and semi-supervised learning techniques and their application to web data extraction, social network analysis, various pagerank algorithms, link analysis, web resource discovery, web, web description framework (RDF), XML, Web Ontology Language (OWL). Recommended preparation: EECS 338, EECS 341.

EECS 440. Machine Learning (3)
Machine learning is a subfield of Artificial Intelligence that is concerned with the design and analysis of algorithms that “learn” and improve with experience, while the broad aim behind research in this area is to build systems that can simulate or even improve on certain aspects of human intelligence, algorithms developed in this area have become very useful in analyzing and predicting the behavior of complex systems. Machine learning algorithms have been used to guide diagnostic systems in medicine, recommend interesting products to customers in e-commerce, play games at human championship levels, and solve many other very complex problems. This course is focused on algorithms for machine learning; their design, analysis and implementation.

We will study different learning settings, including supervised, semi-supervised and unsupervised learning. We will study different ways of representing the learning problem, using propositional, multiple-instance and relational representations. We will study the different algorithms that have been developed for these settings, such as decision trees, neural networks, support vector machines, k-means, harmonic functions and Bayesian methods. We will learn about the theoretical tradeoffs in the design of these algorithms, and how to evaluate their behavior in practice. At the end of the course, you should be able to:

* Recognize situations where machine learning algorithms are applicable
* Understand, represent and formulate the learning problem
* Apply the appropriate algorithm(s), or if necessary, design your own, with an understanding of the tradeoffs involved
* Correctly evaluate the behavior of the algorithm when solving the problem.

Coreq: EECS 391 or consent of instructor.

EECS 441. Internet Applications (3)
This course exposes students to research in building and scaling internet applications. Covered topics include Web services, scalable content delivery, applications of peer-to-peer networks, and performance analysis and measurements of Internet application platforms. The course is based on a collection of research papers and protocol specifications. Students are required to read the materials, present a paper in class, prepare short summaries of discussed papers, and do a course project (team projects are encouraged). Prereq: EECS 325 or EECS 425.

EECS 444. Computer Security (3)
General types of security attacks; approaches to prevention; secret key and public key cryptography; message authentication and hash functions; digital signatures and authentication protocols; information gathering; password cracking; spoofing; session hijacking; denial of service attacks; buffer overruns; viruses, worms, etc., principles of soft ware design, threat modeling; access control; least privilege; storing secrets; socket security; RPC security; security testing; secure software installation; operating system security; database security; web security; email security; firewalls; intrusions. Recommended preparation: EECS 337.

EECS 450. Operations and Systems Design (3)
Introduction to design, modeling, and optimization of operations and scheduling systems with applications to computer science and engineering problems. Topics include, forecasting and times series, strategic, tactical, and operational planning, life cycle analysis, learning curves, resources allocation, materials requirement and capacity planning, sequencing, scheduling, inventory control, project management and planning. Tools for analysis include: multi-objective optimization, queuing models, simulation, and artificial intelligence.

EECS 452. Random Signals (3)

EECS 454. Analysis of Algorithms (3)
This course presents and analyzes a number of efficient algorithms. Problems are selected from such problem domains as sorting, searching, set manipulation, graph algorithms, matrix operations, polynomial manipulation, and fast Fourier transforms. Through specific examples and general techniques, the course covers the design of efficient algorithms as well as the analysis of the efficiency of particular algorithms. Certain important problems for which no efficient algorithms are known (NP-complete problems) are discussed in order to illustrate the intrinsic difficulty which can sometimes preclude efficient algorithmic solutions. Recommended preparation for EECS 454: MATH 304 and (EECS 340 or EECS 405). Offered as EECS 454 and OPRE 454.

EECS 456. Microwave Engineering (3)

EECS 458. Introduction to Bioinformatics (3)

EECS 460. Manufacturing and Automated Systems (3)
Formulation, modeling, planning, and control of manufacturing and automated systems with applications to computer science and engineering problems. Topics include, design of products and processes, location/spatial problems, transportation and assignment, product and process layout, group technology and clustering, cellular and network flow layouts, computer control systems, reliability and maintenance, and statistical quality control. Tools and analysis include: multi-objective optimization, artificial intelligence, and heuristics for combinatorial problems. Offered as EECS 360 and EECS 460.

EECS 466. Computer Graphics (3)
Theory and practice of computer graphics: object and environment representation including coordinate transformations, image extraction including perspective, hidden surface, and shading algorithms; and interaction. Covers a wide range of graphic display devices and systems with emphasis in interactive shaded graphics. Laboratory. Recommended preparation: EECS 233.

EECS 470. Intelligent Networks and Systems (3)
This course covers the development of the next-generation intelligent networks. It involves an in-depth study of design, planning, optimization, and analysis for communications information networks. It will include design and optimization of telecommunication networks and protocols. The course provides applications of Artificial Intelligence methodologies including mathematical learning, neural networks, clustering, modeling and automating human decision making process, and mobile agents to the design of intelligent networks. There will be weekly homework/reading assignments, some presentations by students, and a large project. Offered as EECS 370 and EECS 470.

EECS 477. The Dynamics of Adaptive Behavior (3)
Introduction to embodied, situated, and dynamical approaches to the design and analysis of autonomous agents and animals. Topics include recurrent neural networks, coupled neural/body/environment systems, and evolution and analysis of neural circuits. Behavior studied include examples from motor control, perception, learning, and cognition. Recommended preparation: ENGR 131 and MATH 224. Offered as BIOL 477 and EECS 477.

EECS 478. Computational Neuroscience (3)
Computer simulations and mathematical analysis
of neurons and neural circuits, and the computational properties of nervous systems. Students are taught a range of models for neurons and neural circuits, and are asked to implement and explore the computational and dynamic properties of these models. The course introduces students to dynamical systems theory for the analysis of neurons and neural learning, models of brain systems, and their relationship to artificial and neural networks. Term project required. Students enrolled in MATH 478 will make arrangements with the instructor to attend additional lectures and complete additional assignments addressing mathematical topics related to the course. Recommended preparation: MATH 223 and MATH 224 or BIOL 300 and BIOL 306. Offered as BIOL 378, COGS 378, MATH 378, BIOL 478, EBM E 478, EEC S 478, MATH 478 and NEUR 478.

EECS 479. Seminar in Computational Neuroscience (3) Readings and discussion in the recent literature on computational neuroscience, adaptive behavior, and other current topics. Offered as BIOL 479, EBM E 479, EEC S 479, and NEUR 479.

EECS 483. Data Acquisition and Control (3) Data acquisition (theory and practice), digital control of sampled data systems, stability tests, system simulation digital filter structure, finite word length effects, limit cycles, state-variable feedback and state estimation. Laboratory includes control algorithm programming done in assembly language.

EECS 484. Computational Intelligence I: Basic Principles (3) This course is concerned with learning the fundamental aspects of a number of computational methodologies which are used in adaptive parallel distributed information processing. Such methodologies include neural net computing, evolutionary programming, genetic algorithms, fuzzy set theory, and “artificial life.” These computational paradigms complement and supplement the traditional practices of pattern recognition and artificial intelligence. Functionality covered include self-organization, learning a model or supervised learning, optimization, and memorization.

EECS 485. VLSI Systems (3) Basic MOSFET models, inverters, steering logic, the silicon gate, nMOS process, design rules, basic design structures (e.g., NAND and NOR gates, PLA, ROM, RAM), design methodology and tools (spice, N.mpc, Caesar, mkpla), VLSI technology and system architecture. Requires project and student presentation, laboratory.

EECS 486. Research in VLSI Design Automation (3) Research topics related to VLSI design automation such as hardware description languages, computer-aided design tools, algorithms and methodologies for VLSI design for a wide range of levels of design abstraction, design validation and test. Requires term project and class presentation.

EECS 488. Embedded Systems Design (3) Objective: to introduce and expose the student to methodologies for systematic design of embedded system. The topics include, but are not limited to, system specification, architecture modeling, component partitioning, estimation metrics, hardware software codesign, diagnostics.

EECS 490. Digital Image Processing (3) Digital images are introduced as two-dimensional sampled arrays of data. The course begins with one-to-one operations such as image addition and subtraction and image descriptors such as the histogram. Basic filters such as the gradient and Laplacian in the spatial domain are used to enhance images. The 2-D Fourier transform is introduced and frequency domain operations such as high and low-pass filtering are developed. It is shown how filtering techniques can be used to remove noise and other image degradation. The different methods of representing color images are described and fundamental concepts of color image transformations and color image processing are developed. One or more advanced topics such as wavelets, image compression, and pattern recognition will be covered as time permits. Programming assignments using software such as MATLAB will illustrate the application and implementation of digital image processing.

EECS 492. VLSI Digital Signal Processing Systems (3) Digital signal processing (DSP) can be found in numerous applications, such as wireless communication, audio/video compression, cable modems, multimedia, global positioning systems and biomedical signal processing. This course fills the gap between DSP algorithms and their efficient VLSI implementations. The design of a digital system is restricted by the requirements of applications, such as speed, area and power consumption. This course introduces methodologies and tools which can be used to design VLSI architectures with different speed-area tradeoffs for DSP algorithms. In addition, the design of efficient VLSI architectures for commonly used DSP blocks is presented in this class. Recommended preparation: EEC S 485.

EECS 493. Software Engineering (3) Topics: Introduction to software engineering; software lifecycle models; development team organization and project management; requirements analysis and specification techniques; software design techniques; programming practices; software validation techniques; software maintenance practices; software engineering ethics. Undergraduates work in teams to complete a significant software development project. Graduate students are required to complete a research project. Recommended preparation for EEC S 493: EEC S 377. Offered as EEE C S 393 and EEE C S 493.

EECS 495. Nanometer VLSI Design (3) Semiconductor industry has evolved rapidly over the past four decades to meet the increasing demand on computing power by continuous miniaturization of devices. Now we are in the nanometer technology regime with the device dimensions scaled below 100nm. VLSI design using nanometer technologies involves some major challenges. This course will explain all the major challenges associated with nanoscale VLSI design such as dynamic and leakage power, parameter variations, reliability and robustness. The course will present modeling and analysis techniques for timing, power and noise in nanometer era. Finally, the course will cover the circuit/architecture level design solutions for low power, high-performance, testable and robust VLSI system. The techniques will be applicable to design of microprocessor, digital signal processor (DSP) as well as application specific integrated circuits (ASIC). The course includes a project which requires the student to work on a nanometer design issue. Recommended preparation: EEC S 426 or EEC S 485.

EECS 500. EECS Colloquium (0) Seminars on current topics in Electrical Engineering and Computer Science.

EECS 500T. Graduate Teaching II (0) This course will provide the Ph.D. candidate with experience in teaching undergraduate or graduate students. The experience is expected to involve direct student contact but will be based upon the specific departmental needs and teaching obligations. This teaching experience will be conducted under the supervision of the faculty member who is responsible for the course, but the academic advisor will assess the educational plan to ensure that it provides an educational experience for the student. Students in this course may be expected to perform one or more of the following teaching related activities: grading homeworks, quizzes, and exams, having office hours for students, running recitation sessions, providing laboratory assistance. Recommended preparation: Ph.D. student in EEC S department.

EECS 516. Large Scale Optimization (3) Concepts and techniques for dealing with large optimization problems encountered in designing large engineering structure, control of interconnected systems, pattern recognition, and planning and operations of complex systems; partitioning, relaxation, restriction, decomposition, approximation, and other problem simplification devices; specific algorithms; potential use of parallel and symbolic computation; student seminars and projects. Recommended preparation: EEC S 416.

EECS 518. Nonlinear Systems: Analysis and Control (3) Mathematical preliminaries: differential equations...
and dynamical systems, differential geometry and manifolds. Dynamical systems and feedback sys-
tems, existence and uniqueness of solutions. Com-

EECS 519. Differential Geometric Nonlinear Control (3)
This advanced course focuses on the analysis and design of nonlinear control systems, with special emphasis on the differential geometric approach. Differential geometry has proved to be an extremely powerful tool for the analysis and design of nonlinear systems, similar to the role of the Laplace transformation and linear algebra in linear systems.

The objective of the course is to present the major methods and results of nonlinear systems and provide a mathematical foundation, which will enable students to follow the recent developments in the constantly expanding literature. This course will also benefit those students from Electrical, Mechanical, Chemical and Biomedical Engineering, who are doing research in the fields that involve nonlinear control problems. Recommended preparation: EECS 408 or equivalent.

EECS 520. Robust Control (3)
One of the most important problems in modern control theory is that of controlling the output of a system so as to achieve asymptotic tracking of prescribed signals and/or asymptotic rejection of undesired disturbances. The problem can be solved by the so-called regulator theory and H-infinity control theory. This course presents a self-contained introduction to these two important design methods.

The intention of this course is to present ideas and methods on such a level that the beginning graduate student will be able to follow current research. Both linear and nonlinear results will be covered. Recommended preparation: EECS 408.

EECS 523. Advanced Neural Microsystems (3)
This course will cover the latest advances in neuroengineering with specific attention to integrated microsystems targeting wired/wireless multichannel interfacing with the nervous system at the cellular level in biological hosts. The aim is to provide students familiar with microfabrication and integrated circuit design with an application-driven, system-level overview of sensors and microelectronics in microsystems format for neural engineering. Recommended preparation: EECS 426.

EECS 526. Integrated Mixed-Signal Systems (3)
Mixed-signal (analog/digital) integrated circuit design, D-to-A and A-to-D conversion, applications in mixed-signal VLSI, low-noise and low-power techniques, and communication sub-circuits. System simulation at the transistor and behavioral levels using SPICE. Class will design a mixed-signal CMOS IC for fabrication by MOSIS. Recommended preparation: EECS 426.

EECS 527. Advanced Sensors Theory and Techniques (3)
Sensor technology with a primary focus on semiconductor-based devices. Physical principles of energy conversion devices (sensors) with a review of relevant fundamentals: elasticity theory, fluid mechanics, silicon fabrication and micromachining technology, semiconductor device physics. Classification and terminology of sensors, defining and measuring sensor characteristics and performance, effects of the environment on sensors, predicting and controlling sensor error. Mechanical, acoustic, magnetic, thermal, radiation, chemical and biological sensors will be examined. Sensor packaging and sensor interface circuitry.

EECS 531. Computer Vision (3)
Geometric optics, ray matrices, calibration of monocular and stereo imaging systems. Adaptive camera thresholding and image segmentation, morphological and convolutional image processing. Selected topics including edge estimation and industrial inspection, optimal filtering, model matching, CAD-based vision and range image processing. Neural-net image processing. Model-based computer vision for scene interpretation and autonomous systems. Recommended preparation: EECS 490 or equivalent.

EECS 589. Robotics II (3)
Survey of research issues in robotics. Force control, visual servoing, robot autonomy, on-line planning, high-speed control, man/machine interfaces, robot learning, sensory processing for real-time control. Primarily a project-based lab course in which students design real-time software executing on multi-processors to control an industrial robot. Recommended preparation: EECS 489.

EECS 591. Advanced Artificial Intelligence (3)
An advanced course surveying topics in artificial intelligence, machine learning, and intelligent control. Topics will move toward state-of-research in areas including fuzzy logic, genetic algorithms, stochastic search, task-level learning, reinforcement learning, and approximate dynamic programming. Reading of primary literature. Project required.

EECS 600. Special Topics (1 - 18)
EECS 600F. Graduate Teaching III (0)
This course will provide Ph.D. candidate with experience in teaching undergraduate or graduate students. The experience is expected to involve direct student contact but will be based upon the specific departmental needs and teaching obligations. This teaching experience will be conducted under the supervision of the faculty member who is responsible for the course, but the academic advisor will assess the educational plan to ensure that it provides an educational experience for the student. Students in this course may be expected to perform one or more of the following teaching-related activities running recitation sessions, providing laboratory assistance, developing teaching or lecture materials presenting lectures. Recommended preparation: Ph.D. student in EECS department.

EECS 601. Independent Study (1 - 18)
EECS 602. Advanced Projects Laboratory (1 - 18)
EECS 620. Special Topics (1 - 18)
EECS 621. Special Projects (1 - 18)
EECS 649. Project M.S. (1 - 9)
EECS 651. Thesis M.S. (1 - 18)
EECS 701. Dissertation Ph.D. (1 - 18)
Prior requisites: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Approved technical elective 2 (3-0-3)
Total (12-8-16)

Hours Required for Graduation: 128
a. Although not required, students may elect to take ENGR 101 Freshman Engineering Service Project as their open elective in the freshman year.
b. Selected students may be invited to take PHYS 123 and 124 in place of PHYS 121 and PHYS 122.
c. Students may replace STAT 332 with STAT 333 Uncertainty in Engineering and Science if approved by their advisor.
d. Technical electives will be chosen to fulfill the depth requirement and otherwise increase the student's understanding of electrical engineering. Courses used to satisfy the depth requirement must come from the department's list of depth areas and related courses. Technical electives not used to satisfy the depth requirement are more generally defined as any course related to the principles and practice of electrical engineering. This includes all EECS courses at the 200 level and above, and can include courses from other programs. All non-EECS technical electives must be approved by the student's advisor.
e. This applied statistics requirement must utilize statistics in electrical engineering applications and is typically selected from EECS 351 Communications and Signal Analysis or EECS 313 Signal Processing. Other courses are possible with approval of advisor.
f. CO-OP students may obtain design credit for one semester of Engineering Projects if their co-op assignment included significant design responsibility; however, the student is still responsible for such course obligations as reports, presentations, and ethics assignments. Design credit and fulfillment of remaining course responsibilities are arranged through the course instructor.
g. B.S./M.S. students may also utilize EECS 651 M.S. Thesis to fulfill eight credits of EECS 398/399 provided their thesis has adequate design content to meet the requirements of EECS 398/399. B.S./M.S. students should see their M.S. thesis advisor for details.

- EECS 340 Algorithms and Data Structures (3-0-3)
- HM/SS elective (3-0-3)

**Total (15-2-16)**

**Spring**
- ENGL 398 Professional Communication (2-0-2)
- EECS 314 Computer Architecture (3-0-3)
- EECS 302 Intro to Operating Systems (3-0-3)
- EECS 341 Intro. to Database Systems (3-0-3)

**Total (15-2-16)**

**BACHELOR OF ARTS DEGREE**

**Computer Science**

**First Year Class-Lab-Credit Hours**

**Fall**
- SAGES First Year Seminar (4-0-4)
- MATH 125 Mathematics I (4-0-4)
- ENGR 131 Elementary Computer Programming (3-0-3)

**Total (15-0-15)**

**Spring**
- SAGES University Seminar (3-0-3)
- PHYS 121 Physics I: Mechanics (4-0-4)
- MATH 122 Calculus II (4-0-4)
- ENGR 154 Chemistry of Materials (4-0-4)
- PHED 102 Physical Education (0-3-0)

**Total (15-3-15)**

**Second Year**

**Fall**
- SAGES University Seminar (3-0-3)
- PHYS 122 Physics II Electricity & Magnetism (4-0-4)
- MATH 223 Calculus III (3-0-3)
- EECS 281 Comp. Organization Logic Design (3-2-4)

**Total (16-2-17)**

**Spring**
- MATH 224 Differential Equations (3-0-3)
- EECS 302 Discrete Mathematics (3-0-3)
- EECS 233 Intro Data Structures (3-2-4)

**Total (15-2-16)**

**Third Year Class-Lab-Credit Hours**

**Fall**
- EECS 337 Compiler Design (3-2-4)

**Total (15-2-16)**

**Spring**
- ENGL 398 Professional Communication (2-0-2)

**Total (15-0-15)**

**Hours Required for Graduation: 129**

**BACHELOR OF ARTS DEGREE**

**Computer Science**

**First Year Class-Lab-Credit Hours**

**Fall**
- SAGES First Year Seminar (4-0-4)
- MATH 125 Mathematics I (4-0-4)
- ENGR 131 Elementary Computer Programming (3-0-3)
- HM/SS elective (3-0-3)

**Total (15-0-15)**

**Spring**
- SAGES University Seminar (3-0-3)
- PHYS 121 Physics I: Mechanics (4-0-4)

**Total (15-3-15)**

**Hours Required for Graduation: 130**

**a.** Technical electives are more generally defined as any course related to the principles and practice of computer engineering. This includes all EECS courses at the 200 level and above, and can include courses from other programs. All non-EECS technical electives must be approved by the student’s advisor.
for careers in fields that address such problems, the Undesignated Engineering program allows students to acquire some engineering background, and combine it with a minor in such programs as management, history of technology and science, or economics. This is not an ABET, Inc. accredited program.

UNDERGRADUATE PROGRAM

A student electing an undesignated degree must submit a clear statement of career goals supported by a proposed course schedule with written justification for the selections. These documents are to be submitted to the office of the associate dean in the Case School of Engineering. The program must be approved by the dean in the Case School of Engineering or designate in consultation with representatives of the major and minor departments. A total of at least 129 semester credits are required for graduation.

Since each student’s program is unique, no typical curriculum can be shown. Every program must fulfill the requirements described below.

1. Engineering Core
2. A minimum of two engineering electives courses selected from two of the following four groups
   a. Thermodynamics or Physical Chemistry (EMAE 152, EMAC 351 and 352, CHEM 301 and 302, ECHE 363)
   b. Signals, systems or control (EECS 212, EECS 304, EBME 308, ECHE 367)
   c. Materials science (EMSE 201, EMAC 270, EMSE 314, EBME 306, or EECS 321)
   d. Economics, production systems or decision theory (EECS 350, EECS 352, OPRE 345)

Major

The major must contain a minimum of 24 semester credit hours of work in one of the following engineering fields

- Biomedical engineering
- Chemical engineering
- Civil engineering
- Computer engineering
- Electrical engineering
- Engineering Physics
- Materials science and engineering
- Polymer science and engineering
- Systems and control engineering

This work includes a senior projects laboratory (3 credits) and usually a course with a physical measurements laboratory.

Minor

The minor program requires a minimum of 15 semester credit hours. Minors are available with approval of the Office of Undergraduate Studies. Minors must be approved by the department offering the minor. Final approval of the minor resides with the Office of Undergraduate Studies. For more information, contact Patrick E Crago, associate dean at cseinfo@case.edu.

BACHELOR OF SCIENCE IN ENGINEERING DEGREE

Major in Engineering (Undesignated)

First Year Class-Lab-Credit Hours

Fall
- Open elective or Humanities/Social Science * (3-0-3)
- CHEM 111 Principles of Chemistry for Engineers (4-0-4)
- ENGR 131 Elementary Computer Programming (2-2-3)
- 0-3)
- Spring
- Open elective or Humanities/Social Science (3-0-3)

**ENGINEERING PHYSICS**

Rockefeller Building (7079)
Phone 216-368-4617; Fax 216-368-4671
Kenneth D. Singer
e-mail:kds4@po.cwru.edu

The Engineering Physics major allows students with strong interests in both physics and engineering to concentrate their studies in the common areas of these disciplines. The Engineering Physics major prepares students to pursue careers in industry, either directly after undergraduate studies, or following graduate study in engineering or physics. Many employers value the unique problem solving approach of physics, especially in industrial research and development.

Students majoring in engineering physics complete the Engineering Core as well as a rigorous course of study in physics. Students select a concentration area from an engineering discipline, and must complete a sequence of at least four courses in this discipline. In addition, a senior research project under the guidance of a faculty member is required. The project includes a written report and participation in the senior seminar and symposium.

**Mission and Program Objectives**

The mission of the Engineering Physics program is to prepare students for careers in engineering where physics principles can be applied to the advancement of technology. This education at the intersection of engineering and physics will enable students to seek employment in engineering upon graduation while providing a firm foundation for the pursuit of graduate studies in engineering or physics. The Engineering Physics program will develop sufficient depth in both engineering and physics skills to produce engineers who can relate fundamental physics to practical engineering problems, and will possess the versatility to address new problems in our rapidly changing technological base. The program will provide a curriculum and environment to develop interdisciplinary collaboration, ethical and professional outlooks, communication skills, and the tools and desire for lifelong learning. In order to realize this mission, the Engineering Physics Program will pursue the following objectives:

- **Program Objective 1:** Graduates of the Engineering Physics program will apply their strong problem solving skills as physicists along with an understanding of the approach, methods, and requirements of engineering and engineering design for a successful career in advancing technology.

- **Program Objective 2:** Graduates of the Engineering Physics program will use their strong skills in problem solving, research experience and knowledge in physics and engineering as successful graduate students and researchers in highly ranked graduate programs.

The Bachelor of Science degree program is accredited by the Engineering Accreditation Commission (EAC) of ABET, Inc., 111 Market Place, Suite 1050, Baltimore, MD, 21202-4012; telephone: 410-347-7700.

In addition, most biological systems are composed of macromolecules—proteins (e.g., silk, wool, tendon), carbohydrates (e.g., cellulose) and nucleic acids (RNA and DNA) are polymers and are studied by the same methods that are applied to synthetic polymers.

Production of polymers and their components is central to the chemical industry, and statistics show that over 75 percent of all chemists and chemical engineers in industry are involved with some aspect of polymers. Despite this, formal education in this area is offered by only a few universities in this country, resulting in a continued strong demand for our graduates upon completion of their B.S., M.S., or Ph.D. degrees.

FACULTY

Gary Wnek, Ph.D.
(University of Massachusetts, Amherst)
The Joseph F. Tout, Jr., Professor and Chair
Faculty Director, The Institute for Management and Engineering (TiME)

Polymers with unusual electrical or optical properties; biomaterials for tissue engineering and regenerative medicine; electric field-mediated processing (electrospinning of nano- and micro fibers and morphology modulation in polymer blends); polymer-based microfluidic platforms; polymer product design

Eric Baer, D. Eng.
(Johns Hopkins University)
Leonard Case Jr. Professor

Irreversible microdeformation mechanisms; pressure effects on morphology and mechanical properties; relationships between hierarchical structure and mechanical function; mechanical properties of soft connective tissue; polymer composites and blends; polymerization and crystallization on crystalline surfaces; viscoelastic properties of polymer melts; damage and fracture analysis of polymers and their composites. Structure-property relationships in biological systems

John Blackwell, Ph.D.
(University of Leeds, England)

Determination of the solid state structure and morphology of polymers. X-ray analysis of the structure of thermotropic copolymers; co-polymides, polyurethanes, polysaccharides; supramolecular assemblies, fluoropolymers; molecular modeling of semi-crystalline and liquid crystalline polymers; rheological properties of polysaccharides and glycoproteins

Elena Dormidontova, Ph.D.

CASE SCHOOL OF ENGINEERING

(Moscow State University)
Clima Associate Professor for the Case School of Engineering

Statistical physics of macromolecules, phase behavior (phase stability and thermodynamic ordering) and properties of complex polymer and biopolymer systems: biocompatible and water-soluble polymers (their properties and applications for biomimetics and drug delivery), hydrogen bonded and associating polymers (reversibly associated living polymers), polymer/surfactant systems, polymer micelles (at thermodynamic equilibrium and micellization kinetics), polyelectrolytes and block copolymers

Anne Hiltner, Ph.D.
(Oregon State University)
The Herbert Henry Dow Professor

Structure-property relationships; irreversible deformation, crack propagation and fracture of polymers, blends and composites; microlayer processing of polymers; structure-function relationships in collagenous tissues; biostability of biomaterials

Hatsuo Ishida, Ph.D.
(Case Western Reserve University)
Professor

Processing of polymers and composite materials; structural analysis of surfaces and interfaces; molecular spectroscopy of synthetic polymers

Alexander M. Jamieson, D. Phil.
(Oxford University, England)
Professor

Laser light scattering; rheology and transport of macromolecules in solution and bulk and biopolymers; positron annihilation lifetime studies of free volume in polymers; electrorheological fluids; drag reduction of polymer solutions; polymer-surfactant interactions

LaShanda T. Korley, Ph.D.
(Massachusetts Institute of Technology)
Assistant Professor

Structure-function relationships; toughening mechanisms in segmented copolymers; spatial confinement of self-assembled materials, including biomaterials; hierarchical microstructures

Ica Manas-Zloczower, D.Sc.
(Israel Institute of Technology)
Professor and Associate Dean of Faculty Development

Structure and micromechanics of fine particle clusters; interfacial engineering strategies for advanced materials processing; dispersive mixing mechanisms and modeling; design
and mixing optimization studies for polymer processing equipment through flow simulations

Stuart Rowan, Ph.D.
(University of Glasgow, UK)
Professor
Organic chemistry, synthesis, supramolecular chemistry, conducting polymers, interlocked macromolecules (polyyrotaxanes and polycatenanes), peptide nucleic acids, supramolecular polymerization, reversible ‘dynamic’ chemistry and combinatorial libraries

David Schiraldi, Ph.D.
(University of Oregon)
Associate Professor
Monomer and polymer synthesis, structure-property relationships, nanocomposites, polymerization catalysis, combinatorial synthesis and testing of polymers, synthetic fibers, barrier packaging materials

Christoph Weder, Ph.D.
(ETH Zurich, Switzerland)
F. Alex Nason Professor
Design, synthesis, structure-property relationship and application of novel functional polymer systems; advanced optical applications of polymers; anisotropic polymer systems; novel polymers for thin film and fiber applications

Emeriti Faculty
Jack L. Koenig, Ph.D.
(University of Nebraska, Lincoln)
The Donnell Institute Professor Emeritus
Polymer structure-property relationships using infrared, Raman, NMR spectroscopy and spectroscopic imaging techniques

Jerome B. Lando, Ph.D.
(Polytechnic Institute of Brooklyn)
Professor Emeritus
Solid state polymerization; X-ray crystallography of polymers; electrical properties of polymers; ultra-thin polymer films

Morton Litt, Ph.D.
(Polytechnic Institute of Brooklyn)
Professor Emeritus
Kinetics and mechanisms of free radical and ionic polymerization; mechanical properties of polymers; fluorocarbon chemistry; synthesis of novel monomers and polymers; polymer electrical properties; cross-linked liquid crystalline polymers

Charles E. Rogers, Ph.D.
(Syracuse University and State University of New York)
Professor Emeritus
Transport and mechanical properties of polymers; synthesis and properties of multicomponent systems; environmental effect on polymers; adhesion, adhesives, and coatings

Secondary Faculty
James M. Anderson, Ph.D.
(Oregon State University), M.D.
(Case Western Reserve University)
Professor of Macromolecular Science, Pathology, and Biomedical Engineering
Development of polymers for medical and dental applications

Donald Feke, Ph.D.
(Princeton University)
Professor of Chemical Engineering, and Macromolecular Science
Fine-particle processing; colloidal phenomena; dispersive mixing; acoustic separation methods

J. Adin Mann Jr., Ph.D.
(Iowa State University)
Professor of Chemical Engineering
Surface phenomena; interfacial dynamics; light scattering; stochastic processes of adsorption and molecular rearrangement at interfaces

Roger Marchant, Ph.D.
(Case Western Reserve University)
Professor of Biomedical Engineering
Biopolymers; polymer surface coatings; properties and characterization of polymer surfaces on implants and sensors

John Protasiewicz, Ph.D.
(Cornell University)
Professor of Chemistry
Inorganic, Organic, Main Group, Materials, Polymer, Catalysis, Organometallic Chemistry, and X-ray Crystallography

Syed Qutubuddin, Ph.D.
(Carnegie-Mellon University)
Professor of Chemical Engineering
Colloids; polymers and interfacial phenomena; laser light scattering; enhanced oil recovery

Charles Rosenblatt, Ph.D.
(Harvard University)
Professor of Physics
Experimental condensed matter physics; liquid crystal physics

Kenneth Singer, Ph.D.
(University of Pennsylvania)
Professor of Physics
Nonlinear optical properties of polymers; contributions of molecular order to the nonlinear optical response in polymers; optical probes of polymer relaxation; formation of and propagation of light in polymer waveguides

Philip Taylor, Ph.D.
(Cambridge University, England)
Perkins Professor of Physics
Phase transitions and equations of state for crystalline polymers; piezoelectricity and pyroelectricity

Horst von Recum, Ph.D.
(University of Utah, Salt Lake City)
Assistant Professor of Biomedical Engineering
Novel platforms for the delivery of molecules and cells and the use of novel stimuli-responsive polymers for use in gene and drug delivery

Thomas Zawadowski, Ph.D.
(SUNY, Buffalo)
F. Alex Nason Professor of Engineering
Fuel cells, transport and electrochemistry in energy conversion and storage devices, NMR spectroscopy and imaging, transport/structure property relationships in polymer electrolytes, and self-assembly chemistry

Adjunct Faculty
Patrick Mather, Ph.D.
(University of California, Santa Barbara)
Adjunct Professor
Synthesis, processing, and characterization of biomedically relevant polymers, nanocomposites, new functional polymers, mechanisms, and devices based on shape-memory effect, liquid crystalline materials for structural and optical applications, synthesis, processing, and characterization of polymers for PEM fuel cells, and high-performance thermosets

Scott E. Rickert, Ph.D.
(Case Western Reserve University)
Adjunct Professor
Conducting polymers; microdevices; polymer electrodes; polymer adsorption

Angel Romo-Urbe, Ph.D.
(University of Cambridge, UK)
Adjunct Faculty
Physical characterization and fundamental and applied research of soft condensed matter

Alan Riga, Ph.D.
(Case Western Reserve University)
Adjunct Faculty
Extensive industrial and forensic science experience in laboratory testing and characterization of materials, pharmaceuticals, excipients, proteins, metals, alloys, polymers, biopoly-
mbers, elastomers, organic chemicals, monomers, resins, thermosets, and thermoplastics

UNDERGRADUATE PROGRAM

In 1970, the department introduced a program leading to the Bachelor of Science in Engineering degree with a major in polymer science, which is designed to prepare the student both for employment in polymer-based industry and for graduate education in polymer science. The Bachelor of Science program is accredited by the Engineering Accreditation Commission (EAC) of ABET, Inc., 111 Market Place, Suite 1050, Baltimore, MD 21202-4012 – telephone: 410-347-7700.

The Case School of Engineering is proud that this was the first such undergraduate program in the country to receive accreditation from the Engineering Council for Professional Development. The curriculum combines courses dealing with all aspects of polymer science and engineering with basic courses in chemistry, physics, mathematics, and biology, depending on the needs and interests of the student. The student chooses a sequence of technical electives, in consultation with a faculty advisor, allowing a degree of specialization in one particular area of interest, e.g., biomaterials, chemical engineering, biochemistry, or physics. In addition to required formal laboratory courses, students are encouraged to participate in the research activities of the department, both through part-time employment as student laboratory technicians and through the senior project requirement-a one-or two-semester project that involves the planning and performance of a research project.

Polymer science undergraduates are also strongly encouraged to seek summer employment in industrial laboratories during at least one of their three years with the department. In addition to the general undergraduate curriculum in macromolecular science, the department offers three specialized programs which lead to the B.S. with a macromolecular science major. The cooperative program contains all the course work required for full-time resident students plus one or two six-month cooperative sessions in polymer-based industry. The company is selected by the student in consultation with his or her advisor, depending on the available opportunities. The dual-degree program allows students to work simultaneously on two baccalaureate level degrees within the university. It generally takes five years to complete the course requirements for each department for the degree. The B.S./M.S. program leads to the simultaneous completion of requirements for both the master's and bachelor's degrees. Students with a minimum G.P.A. of 3.0 may apply for admission to this program in their junior year.

Mission Statement

To educate students who will excel and lead in the development of polymeric materials and the application of structure-property relationships. The department seeks to prepare students for either professional employment or advanced education, particularly in this or related science or engineering disciplines, but also in professional schools of business, law or medicine. Undergraduate students are offered opportunities for significant research experience, capitalizing on the strength of our graduate program.

Specifically, the undergraduate program provides the following educational objectives:

Program Educational Objectives

Our program will produce graduates who:

1. Are competent, creative, and highly valued professionals in industry, academia, or government.
2. Are flexible and adaptable in the workplace, possess the capacity to embrace new opportunities of emerging technologies, and embrace leadership and teamwork opportunities, all affording sustainable engineering careers.
3. Continue their professional development by obtaining advanced degrees in Polymer Science and Engineering or other professional fields, as well as medicine, law, management, finance or public policy.
4. Act with global, ethical, societal, ecological, and commercial awareness expected of practicing engineering professionals.

Program Outcomes

Graduates receiving the Bachelor of Science degree in Engineering (major field: Polymer Science and Engineering) at Case Western Reserve University are expected to have attained:

(a) an ability to apply knowledge of mathematics, science, and engineering;
(b) an ability to design and conduct experiments, as well as to analyze and interpret data;
(c) an ability to design a system, component, or process to meet desired needs;
(d) an ability to function in multi-disciplinary teams;
(e) an ability to identify, formulate, and solve engineering problems;
(f) an understanding of professional and ethical responsibility;
(g) an ability to communicate effectively;
(h) the broad education necessary to understand the impact of engineering solutions in a global and societal context;
(i) a recognition of the need for, and an ability to engage in life-long learning;
(j) a knowledge of contemporary issues; and
(k) an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

GRADUATE PROGRAM

Courses leading to the Master of Science and Doctor of Philosophy degrees in macromolecular science are offered within the Case School of Engineering. They are designed to increase the student's knowledge of macromolecular science and of his own basic area of scientific interest, with application to specific polymer research problems. Research programs derive particular benefit from close cooperation with graduate programs in chemistry, physics, materials science, chemical engineering, biological sciences, and other engineering areas. The interdisciplinary academic structure allows the faculty to fit the individual program to the student's background and career plans. Basic and advanced courses are offered in polymer synthesis, physical chemistry, physics, biopolymers, and applied polymer science and engineering. A laboratory course in polymer characterization instructs students in the use of modern experimental techniques and equipment. Graduate students are also encouraged to take advanced course work in polymer solid state physics, physical chemistry, synthesis, rheology, and polymer processing. The department also offers, in conjunction with the School of Medicine, a six- to seven-year M.D./Ph.D. program for students interested in the application of polymers and plastics to medicine, as well as for students interested in a molecular structural basis of medicine, particularly related to connective tissues, biomechanics, aging, pharmaceuticals, and blood behavior. Initiated in 1977, it is the only program of its kind in the nation.

FACILITIES

The Kent Hale Smith Science and Engineering Building houses the Department of Macromolecular Science. The building was built in 1993, and specifically designed to meet the specific needs of polymer research. The facil-
ity consists of five floors, plus a basement. The laboratories for chemical synthesis are located principally on the top floor, the molecular and materials characterization laboratories on the middle floors, and the major engineering equipment on the ground floor, while the NMR instrumentation is located in the basement. Electronic classrooms are installed on the ground floor. Instrumentation available includes Small and Wide-Angle X-ray diffractometers; scanning electron microscopy; a complete range of molecular spectroscopic equipment including FTIR, laser Raman, and high resolution solution and solid-state NMR (including imaging), as well as Raman and FTIR microscopes; and dynamic light scattering equipment. There are also facilities for polymer characterization (molecular weight distribution), optical microscopy, solution and bulk rheology, scanning calorimetry, and for testing and evaluating the mechanical properties of materials. The C. Richard Newpher polymer processing laboratory includes a high temperature Rheometrics RMS-800 dynamic mechanical spectrometer, a Bomem DA-3 FTIR with FT-Raman capabilities, a compression molding machine, a Brabender plasticorder, a high speed Instron testing machine, and a vibrating sample magnetometer. The Charles E. Reed ’34 Laboratory is concerned with the mechanical analysis of polymeric materials. The major testing is done by Instron Universal testing instruments including an Instron model 1123 with numerous accessories such as an environmental chamber for high or low temperature experiments. There is also a Bruckner KARO IV biaxial stretching unit, which allows controlled biaxial stretching of polymer films. The laboratory also has an Atomic Force Microscope which probes the morphological and mechanical properties of materials at the nanoscale. The EPIC Molecular Modeling Center contains high-end and low-end Silicon Graphics Computers and various software packages for molecular modeling of polymers.

RESEARCH

The research activities of the department span the entire scope of macromolecular science and polymer technology.

Synthesis

New types of macromolecules are being made in the department’s synthesis laboratories. The emphasis is on creating polymers with novel functional properties such as photocconductivity, selective permeation, and biocompatibility.

Physical Characterization

This is the broad area of polymer analysis, which seeks to relate the structure of the polymer at the molecular level to the bulk properties that determine its actual or potential applications. This includes characterization of polymers by infrared, Raman, and NMR spectroscopy, thermal and rheological analysis, determination of structure and morphology by x-ray diffraction, electron microscopy, and atomic force microscopy, and investigation of molecular weights and conformations by light scattering.

Mechanical Behavior and Analysis

Polymeric materials are known for their unusual mechanical capabilities, usually exploited as components of structural systems. Analysis includes the study of viscoelastic behavior, yielding and fracture phenomena and a variety of novel irreversible deformation processes.

Processing

A major concern of industry is the efficient and large scale production of polymer materials for commercial applications. Research in this area is focusing on reactive processing, multi-layer processing and polymer mixing, i.e., compounding and blends.

Materials Development and Design

Often, newly conceived products require the development of polymeric materials with certain specific properties or design characteristics. Materials can be tailor-made by designing synthesis and processing conditions to yield the best performance under specified conditions. Examples might be the design of photoluminescent and semi-conducting polymers for use in optoelectronic devices, polymers that are stable at high temperatures for fire-retardant construction materials, high temperature polymer electrolytes for use in advanced fuel cells, low density thermal insulating polymer composite materials and biocompatible polymers for use in prosthetic implants and drug-delivery vehicles.

Biopolymers

Living systems are composed primarily of macromolecules, and research is in progress on several projects of medical relevance. The department has a long-standing interest in the hierarchical structure and properties of the components of connective tissues (e.g., skin, cartilage, and bone). The department is also engaged in the development of new biocompatible polymers for application as biomaterials.

MACROMOLECULAR SCIENCE AND ENGINEERING (EMAC)

Course Descriptions

EMAC C100. Co-op Seminar I for Macromolecular Science and Engineering (1)

Professional development activities for students returning from cooperative education assignments. Recommended preparation: COOP 001.

EMAC C200. Co-op Seminar II for Macromolecular Science and Engineering (2)

Professional development activities for students returning from cooperative education assignments. Recommended preparation: COOP 002 and EMAC C100.

EMAC 125. Freshman Research on Polymers (1)

Freshman research in polymer chemistry, engineering, and physics. Students will be placed in active research groups and will participate in real research projects under the supervision of graduate students and faculty mentors.

EMAC 270. Introduction to Polymer Science and Engineering (3)

EMAC 276. Polymer Properties and Design (3)

The course reviews chemical and physical structures of a wide range of applications for synthetic and natural polymers, and addresses “Which polymer do we choose for a specific application and why?” We examine the polymer properties, the way that these depend on the chemical and physical structures, and reviews how they are processed. We aim to understand the advantages and disadvantages of the different chemical options and why the actual polymers that are used commercially are the best available in terms of properties, processibility and cost. The course is taught in seminar format. The requirements include two written assignments and one oral presentation. Recommended preparation: ENGR 145. SAGES Dept Seminar

EMAC 303. Structure of Biological Materials (3)
Structure of proteins, nucleic acids, connective tissue and bone from molecular to microscopic levels. Principles and applications of instruments for imaging, identification, and measurement of biological materials. Recommended preparation: EBME 202. Offered as EBME 303 and EMAC 303.

EMAC 325. Undergraduate Research in Polymer Science (1-3)
Undergraduate laboratory research in polymer chemistry/physics/engineering. Students will undertake an independent research project, working under the mentoring of both a graduate student and a faculty member. A mid-term written progress report is required. A written report and oral presentation will be made at the end of the semester. Can be taken for 1-3 credits per semester, up to a total of 6 credit hours. Students are expected to spend approximately 5 hours/week in the laboratory per credit registered each semester. Recommended preparation: Sophomore/Junior standing and consent of instructor.

EMAC 351. Physical Chemistry for Engineering (3)
Principles of physical chemistry and their application to systems involving physical and chemical transformations. The nature of physical chemistry, properties of gases, overview of the laws of thermodynamics, thermochimistry, solutions, phases and chemical equilibria, kinetics of chemical reaction, solutions of electrolytes and introduction to quantum mechanics, atomic structure and molecular statistics. Recommended preparation: ENGR 225, PHYS 122.

EMAC 355. Polymer Analysis Laboratory (3)
Experimental techniques in polymer synthesis and characterization. Synthesis by a variety of polymerization mechanisms. Quantitative investigation of polymer structure by spectroscopy, diffraction and microscopy. Molecular weight determination. Physical properties. Recommended preparation: EMAC 270 or MATH 224 or MATH 234.

EMAC 370. Polymer Chemistry and Industry (3)
The nature of polymer chemistry ranging from the fundamentals of organic chemistry of polymer synthesis to the industrial chemistry of polymer production. Physical chemistry as it pertains to the characterization of polymers will also be discussed. Recommended preparation: EMAC 270, CHEM 223, CHEM 224.

EMAC 372. Polymer Processing and Testing Laboratory (3)
Basic techniques for the rheological characterization of thermoplastic and thermostet resins; “hands-on” experience with the equipment used in polymer processing methods such as extrusion, injection molding, compression molding; techniques for mechanical characterization and basic principles of statistical quality control. Recommended preparation: EMAC 377.

EMAC 375. Introduction to Rheology (3)
This course will involve study of rheology from several perspectives; rheological property measurements, phenomenological and molecular models, and applicability to polymer processing. Students will be introduced to experimental methods of rheology with quantitative descriptions of associated flows and data analyses. Application of models, both phenomenological and molecular, to prediction of rheological behavior and extraction of model parameters from real data sets will be examined. The relevance of rheological behavior of different systems to practical processing schemes will be discussed, particularly with respect to plastics manufacturing. Recommended preparation: ENGR 225. Offered as EMAC 375 and EMAC 475.

EMAC 376. Polymer Engineering (3)
Mechanical properties of polymer materials as related to polymer structure and composition. Visco-elastic behavior, yielding and fracture behavior including irreversible deformation processes. Recommended preparation: EMAC 276 and ENGR 200. Offered as EMAC 376 and EMAC 476.

EMAC 377. Polymer Processing (3)
Application of the principles of fluid mechanics, heat transfer and mass transfer to problems in polymer processing; elementary steps in polymer processing (handling of particulate solids, melting, pressurization and pumping, mixing); principles and procedures for extrusion, injection molding, reaction injection molding, secondary shaping. Recommended preparation: ENGR 225.

EMAC 378. Polymer Engineer Design Product (3)
Uses material taught in previous and concurrent courses in an integrated fashion to solve polymer product design problems. Practicality, external requirements, economics, thermal/mechanical properties, processing and fabrication issues, decision making with uncertainty, and proposal and report preparation are all stressed. Several small exercises and one comprehensive process design project will be carried out by class members. Offered as EMAC 378 and EMAC 478. SAGES Senior Cap

EMAC 396. Special Topics (1-18)
(Credit as arranged.)

EMAC 397. Special Topics (1-18)
(Credit as arranged.)

EMAC 398. Polymer Science and Engineering Project I (1-9)
(Senior project.) Research under the guidance of faculty. Requirements include periodic reporting of progress, plus a final oral presentation and written report. Repeatable up to 3 credit hours. When taken for 3 credits it may be spread over two successive semesters. Recommended preparation: Senior standing, SAGES Senior Cap

EMAC 399. Polymer Science and Engineering Project II (1-9)
(Senior project.) Research under the guidance of staff, culminating in thesis. Recommended preparation: Majors only and senior standing.

EMAC 400T. Graduate Teaching I (0)
This course will engage the Ph.D. students in teaching experiences that will include non-contact (such as preparation and grading of homework and tests) and direct contact (leading recitations and monitoring laboratory works, lectures and office hours) activities. The teaching experience will be conducted under the supervision of the faculty. All Ph.D. students will be expected to perform direct contact teaching during the course sequence. The proposed teaching experiences for EMAC Ph.D. students are outlined below in association with undergraduate classes. The individual assignments will depend on the specialization of the students. The activities include grading, recitation, lab supervision and guest lecturing. Recommended preparation: Ph.D. student in Macromolecular Science.

EMAC 401. Polymer Foundation Course I: Organic Chemistry (3)
The class is an introduction to the synthesis and organic chemistry of macromolecules. The course introduces the most important polymerization reactions, focusing on their reaction mechanisms and kinetic aspects. Topics include free radical and ionic chain polymerization, condensation (step-growth) polymerization, ring-opening, insertion and controlled addition polymerization. The lecture portion of this course (2 credit hours) is integrated with a laboratory or term paper component (1 credit hour). There is no limit on the number of students for the class as a whole. However, there is a limit of 12 students
on the laboratory component (other students will do term papers).

EMAC 402. Polymer Foundation Course II: Physical Chemistry (3)
This class is an introduction to the physical chemistry of polymers in solution. Topics include: polymer statistics (microstructure, chain conformation, and chain dimensions), thermodynamics and transport properties of polymers in solution, methods for molecular weight determination, physical chemistry of water-soluble polymers, and characterization of polymer microstructure (IR and NMR). The lecture portion of this course (2 credit hours) is integrated with a laboratory or term paper component (1 credit hour). There is no limit on the number of students for the class as a whole. However, there is a limit of 12 students on the laboratory component (other students will do term papers).

EMAC 403. Polymer Foundation Course III: Physics (3)
This class is an introduction to the physics of polymers in the bulk amorphous and crystalline states. Topics include: structural and morphological analysis using X-ray diffraction, electron microscopy and atomic force microscopy, characterization of thermal transitions, viscoelastic behavior and rubber elasticity, and dynamic mechanical analysis. The lecture portion of this course (2 credit hours) is integrated with a laboratory or term paper component (1 credit hour). There is no limit on the number of students for the class as a whole. However, there is a limit of 12 students on the laboratory component (other students will do term papers).

EMAC 404. Polymer Foundation Course IV: Engineering (3)
This class is an introduction to the engineering and technology of polymeric materials. Topics include: additives, blends and composites, natural polymers and fibers, thermoplastics, elastomers, and thermostets, polymer degradation and stability, polymers in the environment, polymer rheology and polymer processing, and polymers for advanced technologies (membrane science, biomedical engineering, applications in electronics, photonic polymers). The lecture portion of this course (2 credit hours) is integrated with a laboratory or term paper component (1 credit hour). There is no limit on the number of students for the class as a whole. However, there is a limit of 12 students on the laboratory component (other students will do term papers).

EMAC 410. Polymers Plus Self-Assembly and Nanomaterials (2)
The course focuses on the concepts of supramolecular chemistry and self-assembly specifically as it applies to nano-polymeric systems. After dealing with many of the fundamental aspects of supramolecular chemistry the focus of the class deals with how to access/utilize nano-scale features using such processes, namely the ‘bottom-up’ approach to nanomaterials/systems. Areas which will be addressed include block copolymers, DNA assemblies, nanotubes and dendrimers. Prereq: EMAC 401 or EMAC 370.

EMAC 412. Polymers Plus Inorganic/Coordination Chemistry (2)
The course focuses on the concepts of inorganic and coordination chemistry specifically as they apply to polymeric systems. The fundamental aspects of coordination chemistry, including coordinative saturation, kinetics and mechanism will be presented and used as a vehicle to describe coordination polymerizations and supramolecular coordination phenomena. The chemistry and physics of nanoscale inorganic modification of polymers by clays, silsesquioxanes, metal oxides and metal particles will also be discussed. Prereq: EMAC 401 or EMAC 370 or EMAC 470.

EMAC 420. Polymers Plus Advanced Physical Chemistry (2)
The course focuses on the principles of physical chemistry that are most relevant to macromolecular science. Prereq: EMAC 402, EMAC 403.

EMAC 421. Polymer Plus Hierarchical Structures and Properties (2)
Discuss the hierarchical solid state structure of synthetic and naturally occurring polymeric systems and relate these structures to their properties. Particular emphasis will be on natural systems containing collagen(s) and carbohydrate(s), and on synthetic crystalline, liquid crystalline, and reinforced composite polymeric materials. In order to prepare students for application of these concepts we will determine how mechanical, transport and optical (photonic) behavior can be controlled by structure manipulation. Prereq: EMAC 403 and EMAC 404 or EMAC 474 or EMAC 476.

EMAC 422. Polymers Plus X-ray and Microscopy (2)
This course focuses on the theory and application of X-ray and microscopy techniques to the analysis of the microstructure of polymeric materials. The X-ray section covers theoretical and experimental aspects for semicrystalline and amorphous polymers and includes small-angle scattering and neutron & electron diffraction. Techniques, such as atomic force microscopy, transmission and scanning electron microscopy, and optical microscopy, will also be discussed. Practical aspects of these techniques will be applied to a variety of systems, including block copolymers, nanocomposites, LC polymers, and multi-layered films. Prereq: EMAC 403 or EMAC 474.

EMAC 423. Polymers Plus Adhesives, Sealants and Coatings (2)

EMAC 444. Polymers Plus Optoelectronics (2)
The course focuses on the design, synthesis and structure-property relationship of polymers with unusual optic and electronic properties and the application of these advanced materials in emerging technologies. Topics include (1) introduction to the interaction of polymers with electromagnetic radiation, (2) Conjugated Polymers: Chemistry & Physics, (3) Intrinsically Conducting Polymers, (4) Ionically Conducting Polymers, (5) Light Emitting Polymers, (6) Polymer Field Effect Transistors and other Semiconductor Devices, (7) Optoelectronic Polymers in Sensors, (8) Nonlinear Optical Polymers, and (9) Latest Developments. Prereq: EMAC 401 or EMAC 370.

EMAC 450. The Business of Polymers (2)
This course will link polymer technology to business and management issues that need to be considered for successful technology commercialization. Topics include project management, finance, opportunity assessment, the voice of the customer, and protection of intellectual property. Case studies from both large and small companies will be used to illustrate key concepts. Recommended preparation: EMAC 270, EMAC 276.

EMAC 451. Polymer Product Design (2)
This course introduces the fundamentals of successful product design and development with specific attention to products based on polymeric materials. Topics covered include the voice of the customer, idea generation and screening, concept selection, prototyping, manufacturing, marketing, and launch. The importance of good design beyond simple
form and function will be stressed. Each student will complete a product design portfolio that considers all of these issues. Recommended preparation: EMAC 270, EMAC 276, EMAC 450.

**EMAC 471. Polymers in Medicine (3)**
This course covers the important fundamentals and applications of polymers in medicine, and consists of three major components: (i) the blood and soft-tissue reactions to polymer implants; (ii) the structure, characterization and modification of biomedical polymers; and (iii) the application of polymers in a broad range of cardiovascular and extravascular devices. The chemical and physical characteristics of biomedical polymers and the properties required to meet the needs of the intended biological function will be presented. Clinical evaluation, including recent advances and current problems associated with different polymer implants. Recommended preparation: EMAC 306 or equivalent. Offered as EBME 406 or EMAC 471.

**EMAC 475. Introduction to Rheology (3)**
This course will involve study of rheology from several perspectives: rheological property measurements, phenomenological and molecular models, and applicability to polymer processing. Students will be introduced to experimental methods of rheology with quantitative descriptions of associated flows and data analyses. Application of models, both phenomenological and molecular, to prediction of rheological behavior and extraction of model parameters from real data sets will be examined. The relevance of rheological behavior of different systems to practical processing schemes will be discussed, particularly with respect to plastics manufacturing. Recommended preparation: ENGR 225. Offered as EMAC 375 and EMAC 475.

**EMAC 477. Elementary Steps in Polymer Processing (2)**
This course is an application of principles of fluid mechanics and heat transfer to problems in polymer processing. In the first part of the course, basic principles of transport phenomena will be reviewed. In the second part, the elementary steps in polymer processing will be described and analyzed with application to a single screw extruder.

**EMAC 478. Polymer Engineer Design Product (3)**
Uses material taught in previous and concurrent courses in an integrated fashion to solve polymer product design problems. Practicality, external requirements, economics, thermal/mechanical properties, processing and fabrication issues, decision making with uncertainty, and proposal and report preparation are all stressed. Several small exercises and one comprehensive process design project will be carried out by class members. Offered as EMAC 378 and EMAC 478.

**EMAC 490. Polymers Plus Professional Development (1)**
This course focuses on graduate student professional development. The course involves weekly meetings and oral presentations with attention on the content and style of the presentation materials (PowerPoint, posters, etc.), oral presentation style and project management skills. This course can be taken for the total of 3 credits over three different semesters.

**EMAC 491. Polymers Plus Literature Review (1)**
This course involves weekly presentations of the current polymer literature. It involves at least one presentation by the enrolled student and participation in all literature reviews (at least 10/semester). The course will focus on presentation skills (both oral and written), scientific interpretation, and development of peer-review skills. This course can be taken for a total of 3 credits over three different semesters.

**EMAC 500T. Graduate Teaching II (0)**
This course will engage the Ph.D. students in teaching experiences that will include non-contact (such as preparation and grading of homework and tests) and direct contact (leading recitations and monitoring laboratory works, lectures and office hours) activities. The teaching experience will be conducted under the supervision of the faculty. All Ph.D. students will be expected to perform direct contact teaching during the course sequence. The proposed teaching experiences for EMAC Ph.D. students are outlined below in association with graduate classes. The individual assignments will depend on the specialization of the students. The activities include grading, recitation, lab supervision and guest lecturing. Recommended preparation: Ph.D. student in Macromolecular Science.

**EMAC 600T. Graduate Teaching III (0)**
This course will engage the Ph.D. students in teaching experiences that will include non-contact and direct contact activities. The teaching experience will be conducted under the supervision of the faculty. The proposed teaching experiences for EMAC Ph.D. student in this course involve instruction in the operation of major instrumentation and equipment used in the daily research activities. The individual assignments will depend on the specialization of the students. Recommended preparation: Ph.D. student in Macromolecular Science.

**EMAC 601. Independent Study (1 - 18)**
(Credit as arranged.)

**EMAC 651. Thesis M.S. (1 - 18)**
(Credit as arranged.)

**EMAC 673. Selected Topics in Polymer Engineering (2 - 3)**
Timely issues in polymer engineering are presented at the advanced graduate level. Content varies, but may include: mechanisms of irreversible deformation: failure, fatigue and fracture of polymers and their composites; processing structure-property relationships; and hierarchical design of polymeric systems. Recommended preparation: EMAC 376 or EMAC 476.

**EMAC 677. Colloquium in Macromolecular Science and Engineering (0 - 1)**
Lectures by invited speakers on subjects of current interest in polymer science and engineering. This course can be taken for 3 credits over three different semesters.

**EMAC 690. Special Topics in Macromolecular Science (1 - 18)**

**EMAC 701. Dissertation Ph.D. (1 - 18)**
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

**BACHELOR OF SCIENCE IN ENGINEERING DEGREE**

**Major in Polymer Science and Engineering (standard track)**

**Electives**

- Additional courses as needed to meet major and general education requirements.
- A minimum of 18 credits in upper-level electives in Polymer Science and Engineering.
- A total of 120 credits to complete the degree.

**Other Requirements**

- Completion of a senior design project.
- Completion of a capstone course in Polymer Science and Engineering.
- A minimum of 48 credits in the major.
- A minimum of 30 credits in the College of Engineering.
- A minimum of 40 credits in the College of Arts and Sciences.
- A minimum of 120 credits to complete the degree.

**Honors Program**

- Admittance to the Honors Program is by permission of the Chair, Department of Polymer Science and Engineering.
- A minimum of 12 credits in upper-level courses in Polymer Science and Engineering, with a grade of B or better.
- A minimum of 3.5 GPA in Polymer Science and Engineering courses.
- A minimum of 3.5 GPA in all courses.
- A total of 120 credits to complete the degree.

**Minor in Polymer Science and Engineering**

- A minimum of 18 credits in upper-level courses in Polymer Science and Engineering, with a grade of B or better.
- A minimum of 90 credits in the major.
- A minimum of 120 credits to complete the degree.

**Internship Program**

- A minimum of 3 credits in upper-level courses in Polymer Science and Engineering, with a grade of B or better.
- A minimum of 120 credits to complete the degree.

**Study Abroad Program**

- A minimum of 18 credits in upper-level courses in Polymer Science and Engineering, with a grade of B or better.
- A minimum of 120 credits to complete the degree.

- ENGL 398N Professional Communication 0 (3-0-3)
- Technical elective III 0 (3-0-3)
Total (15-0-15)

**Hours required for graduation: 129**

a. Engineering Core Courses.

b. Choice of USNA, USSO, or USSY course focused on thinking about the natural, social, or symbolic “world.”

c. Approved Natural Science electives: BIOL 214, Genes and Evolution (d); BIOL 215, Cells and Proteins (d); BIOC 307, General Biochemistry (d); BIOL 362, Developmental Biology.

d. Suggested for pre-med students.

e. Students are required to take either EMAC 355 or EMAC 372.
The three technical electives have to be taken from: EBME 315, Applied Tissue Engineering; EBME 316, Introduction to Drug Delivery; EBME 325, Introduction to Tissue Engineering; EBME 350, Quantitative Molecular Bioengineering; EBME 405, Materials for Prosthetics and Orthotics; EBME 408, Tissue and Cell Engineering; EBME 426, Gene and Drug Delivery; EMAC 471 / EBME 406, Polymers in Medicine; a three-credit research sequence of EMAC 125 and/or EMAC 325.

Preparation for the polymer science project should commence in the previous semester.

DEPARTMENT OF MATERIALS SCIENCE AND ENGINEERING
312 White Building (7204)
Phone: 216-368-4230; Fax: 216-368-3209
James D. McGuffin-Cawley, Chair
e-mail: cawley@case.edu
http://dmseg5.case.edu

Materials science and engineering is a discipline that extends from the basic science of materials structure and properties to the design and evaluation of materials in engineering systems. Most engineers—mechanical, civil, chemical, and electrical—work with materials on the job, and many become well acquainted with the properties of the materials they use most often. The role of a materials engineer is to understand why materials behave as they do under various conditions; to recognize the limits of performance that particular materials can attain; and to know what can be done during the manufacture of materials to meet the demands of a given application.

The Department of Materials Science and Engineering of the Case School of Engineering offers programs leading to the Bachelor of Science in Engineering, Master of Science, and Doctor of Philosophy degrees. The department conducts academic and research activities with metals, ceramics, composites, and electronic materials. Increasingly, the demands for new materials, and for improved materials in existing applications, transcend the traditional categories. The technological challenges that materials engineers face will continue to demand a breadth of knowledge across the spectrum of engineering materials.

While an engineering discipline, the field brings basic science tools to bear on the technological challenges related to materials products and their manufacture. Materials science draws on chemistry in its concern for bonding, synthesis, and composition of engineering materials and their chemical interactions with the environment. Physics provides a basis for understanding the mechanical, thermal, and electrical properties of materials, as well as the tools needed to ascertain the structure and properties of materials. Mathematics is used throughout materials manufacture and analysis.

FACULTY
James D. McGuffin-Cawley, Ph.D., Chair
(Case Western Reserve University)
Arthur S. Holden Professor of Engineering

Great Lakes Professor of Ceramic Processing

Powder processing of ceramics; aggregation phenomena; oxidation, diffusion, and solid state reactions; silicate and active metal brazing of ceramics; joining of materials; ceramic matrix composites

William A. "Bud" Baeslack III, Ph.D.
(Rensselaer Polytechnic Institute)
Provost & Executive Vice President

Welding, joining of materials, and titanium & aluminum metallurgy

Mark R. DeGuire, Ph.D.
(Massachusetts Institute of Technology)

Associate Professor

Low-temperature synthesis of ceramic thin films. Synthesis and properties of electrical ceramics in bulk and thin-film form, including dielectrics, fuel cell materials, semiconductors, and ferrites. High-temperature phase equilibria. Defect chemistry

Frank Ernst, Ph.D.
(University of Göttingen)

Leonard Case Jr. Professor of Engineering

Microstructure and microcharacterization of materials; defects in crystalline materials; interface and stress-related phenomena; semiconductor heterostructures, plated metallization layers; photovoltaic materials; surface hardening of alloys, quantitative methods of transmission electron microscopy

Arthur H. Heuer, Ph.D., D.Sc.
(University of Leeds, England)

University Professor, Kyocera Professor of Ceramics, and Director-Swagelok Center for Surface Analysis of Materials

Transformation toughening and plastic deformation of ceramics; phase transformations in ceramics; biological ceramics; interphase interfaces in advanced structural composites; high resolution and analytical electron microscopy; Materials Science of MEMS, thermal barrier coatings, solid oxide fuel cells.

CASE SCHOOL OF ENGINEERING

Surface Hardening of Metals

Harold Kahn
(Massachusetts Institute of Technology)
Research Associate Professor

Microelectromechanical systems involving design, fabrication, fatigue and fracture mechanics testing of surface-micromachined polysilicon and SiC devices and bulk-micromachined microfluidic devices using TiNi shape memory actuators

Peter Lagerlof, Ph.D.
(Case Western Reserve University)

Associate Professor

Electron microscopy; high temperature mechanical properties of single crystal and polycrystal oxide ceramics; oxygen diffusion in oxide ceramics; deformation twinning of metals and ceramics; oxide interfaces

John J. Lewandowski, Ph.D.
(Carnegie-Mellon University)

Leonard Case Jr. Professor of Engineering and Director - Center for Mechanical Characterization of Materials

Mechanical behavior of materials; fracture and fatigue; micromechanisms of deformation and fracture; composite materials; bulk metallic glasses and composites; refractory metals; toughening of brittle materials; high-pressure deformation and fracture studies; hydrostatic extrusion; deformation processing

David H. Matthiesen, Ph.D.
(Massachusetts Institute of Technology)

Associate Professor

Crystal growth; electronic materials; materials processing in microgravity; effect of growth conditions on the microstructures and electrical properties of semiconductors; fluid dynamics and heat, mass, and momentum transport

Gary M. Michal, Ph.D.
(Stanford University)

LTV Steel Professor of Metallurgy and Co-Director - Swagelok Center for Surface Analysis of Materials

Physical metallurgy; rapid solidification technology; application of rapid annealing to nonequilibrium precipitation reactions; transmission electron microscopy; surface science; composite materials; interfacial phenomena

Joe H. Payer, Ph.D.
(Ohio State University)

Professor

Electrochemistry and corrosion; reliability and life prediction; hydrogen storage, fuel cells, corrosion monitoring and sensors; poly-
CASE SCHOOL OF ENGINEERING

Gary Ruff, Adjunct Professor
Ruff Associates, Rochester Hills, Michigan

UNDERGRADUATE PROGRAMS

The undergraduate curriculum leading to the degree of Bachelor of Science in materials science and engineering consists of the “Engineering Core”—basic courses in mathematics, physics, chemistry, and engineering, with electives in social sciences and humanities—plus materials courses, technical electives, and open electives. A total of 129 credit hours is required. Please see the table for the recommended semester-by-semester listing of courses.

The Bachelor of Science program is accredited by the Engineering Accreditation Commission (EAC) of ABET, Inc., 111 Market Place, Suite 1050, Baltimore, MD 21202-4012—telephone: 410-347-7700.

The broad objectives of the undergraduate program at the Department of Materials Science and Engineering are to provide the students a strong background in mathematics, physics and chemistry, a link between the sciences and the practice of materials engineering through the departmental courses during the sophomore, junior, and senior years, and a comprehensive design experience in materials engineering through a combination of graded course work distributed throughout the curriculum in addition to the Senior Project.

The primary means of accomplishing this mission is our undergraduate curriculum and associated activities, through their emphasis on:

1. The interrelationships among the processing, structure, properties, and performance of engineering materials
2. The mutual reinforcement of education and professional development throughout one’s career.

To meet these broad objectives, the specific program objectives are as follows:

The undergraduate experience in Materials Science and Engineering at Case Western Reserve is marked by a high degree of hands-on experience and many opportunities for professional development before graduation. Lab courses, senior projects, and plant tours ensure that every student sees the field first-hand in current research and industrial settings.

The educational objectives of the undergraduate program are as follows:

1. Graduates will understand the interrelationships among processing, structure, and properties of a wide range of engineering materials, and how these factors together control the materials performance.
2. Graduates will be able to carry out laboratory experiments, analyze data, and interpret the significance of their results, especially with respect to the processing of engineering materials and characterization of their engineering properties.
3. Graduates will be proficient in the oral, written, and electronic communication of their ideas.
4. Graduates will be proficient in the use of computer technology and computer-based information systems.
5. Graduates will be able to function effectively in groups of peers and independently.
6. Graduates will be informed of the impact of engineering on society and of the professional, ethical, safety, and environmental responsibilities that that entails.
7. Graduates will regard professional development and education as processes that should continue hand-in-hand throughout their academic and professional careers.

In addition, many of our undergraduate students participate in co-operative education, summer jobs, and professional societies that expose them to the larger world of materials science beyond the classroom.

MINOR IN MATERIALS SCIENCE AND ENGINEERING

In addition to the Bachelor of Science degree program in materials science and engineering, the department also offers a minor in materials science and engineering. This sequence is intended primarily for a student majoring in science or engineering; but it is open to any student with a sound background in introductory calculus, chemistry, and physics. This program requires the completion of 5 courses with a minimum of 15 credit hours, of which a maximum of 6 hours can be counted toward the student’s major. All students will be required to take EMSE 201 (3) and four of the following courses:

EMSE 202, Phase Diagrams and Phase Transformations (3)
EMSE 203, Applied Thermodynamics (3)
EMSE 360, Transport Phenomena (3)
EMSE 301, Fundamentals of Materials Processing (3)
EMSE 303, Mechanical Behavior of Materials (3)
• EMSE 307, Foundry Metallurgy (3)
• EMSE 313, Engineering Applications of Materials (3)
• EMSE 314, Electrical, Magnetic, and Optical Properties (3)
• EMSE 316, Applications of Ceramics (3)
• EMSE 312, Diffraction Principles (3)

Prof. Mark DeGuire (506 White: x-4221) is the academic advisor for this program and will assist students with their course selection.

COOPERATIVE EDUCATION IN MATERIALS SCIENCE AND ENGINEERING

The Cooperative Education program at Case Western Reserve began in the Materials Science and Engineering Department and the department’s faculty continues to strongly support student participation. Over the past ten years approximately three-quarters of the department’s undergraduates have participated in completed at least one cooperative education. A wide range of opportunities exist for materials majors including heavy industry, mid-size and small firms, and government and corporate research centers. Many opportunities are local to Northern Ohio, but a wide range of possibilities around the country, and, occasionally, international opportunities arise.

The cooperative education experience is monitored to ensure that students progress in job responsibilities during the course of an assignment. It is common for students to assume positions of responsibility, including employee supervision or decision-making on behalf of the company.

FIVE-YEAR COMBINED B.S. /M.S. PROGRAM

This program offers outstanding undergraduate students the opportunity to obtain an M.S. degree, with a thesis, in one additional year of study beyond the B.S. degree. (Normally, it takes 2 years beyond the B.S. to earn an M.S. degree.) In this program, an undergraduate student can take up to 9 credit hours that simultaneously satisfy undergraduate and graduate requirements. Typically, students in this program start their research leading to the M.S. thesis in the fall semester of the senior year. The department endeavors to support such students through the following summer and academic year at the normal stipend for entering graduate students. The B.S. degree is awarded at the completion of the senior year.

Application for admission to the five year B.S. /M.S. program is made after completion of five semesters of course work. Minimum requirements are a 3.2 grade point average and the recommendation of a faculty member of the department. Interested students should contact Professor Peter Lagerlof.

GRADUATE PROGRAMS

The department offers programs leading to the Master of Science and Doctor of Philosophy degrees. The theory, properties, and engineering behavior of metals, ceramics, electronic materials, and composite materials is encompassed in the academic courses and research within the department. The primary areas of specialization are in materials processing, mechanical properties, surface and microstructural characterization, environmental effects, and electronic materials.

M.S. Degree Requirements

The M.S. degree in materials science and engineering is awarded through either Plan A (master’s thesis) or Plan B (master’s comprehensive). Plan A involves a thesis based on individual research and a final oral thesis defense; this plan is appropriate for full-time graduate students. Plan B involves a major project and a comprehensive oral exam; it is typically pursued by part-time graduate students.

Plan A requires successful completion of 6 courses (18 credit hours) and at least 9 credit hours of M.S. research project (EMSE 651). Plan B requires the successful completion of eight courses (24 credit hours) as well as 3 credit hours of a Special Projects course (EMSE 649). The six courses for Plan A and the 8 courses for Plan B may include a maximum of 2 courses from an engineering or science curriculum outside the department. No more than 2 courses at the 3xx level can be included; all other courses must be at a higher level. Transfer of credit from another university is limited to 6 credit hours of graduate level courses (with grade B or better) taken in excess of B.S. degree requirements at the other university. A Planned Program of Study must be submitted by the end of the first semester for Plan A students, and by the end of 2 courses for Plan B students. A cumulative G.P.A. of 2.75 or higher is required.

Plan A students must prepare a written thesis and successfully defend the thesis in a final oral exam. Plan B students must prepare a written report on his/her special project and satisfactorily pass a comprehensive oral exam. The thesis exam for Plan A and the oral exam for Plan B must be conducted by an examining committee consisting of 3 faculty members of the department.

Ph.D. Degree Requirements

Students entering the graduate program for a Ph.D. will need to submit the Planned Program of Study within the first semester.

Candidates for a Ph.D. degree in materials science and engineering must meet the following requirements to prove their competency for doctoral study and to be accepted into the doctoral program:

1. Submit an approved Planned Program of Study form and a Supplementary Information form specifying the Breadth and Basic Science requirements.

2. Pass a comprehensive written General Exam within 6 months following their being awarded an M.S. degree (12 months for students with an M.S. degree from a different science or engineering discipline).

3. Pass a Thesis Proposal Exam (written and oral) during the semester immediately following the successful completion of the written General Exam. These requirements are explained in detail below. At the completion of these requirements, the student must fill out the second part of the Ph.D. Student Permanent Record” form.

Upon successful completion of all requirements and research, the Ph.D. candidate must submit a written dissertation as evidence for his/her ability to conduct independent research at an advanced level. The Ph.D. candidate must pass a final oral exam in defense of the dissertation. The Dissertation Committee must consist of at least three faculty members of the department and one non-departmental member. The candidate must provide each committee member with a copy of the completed dissertation at least 10 days before the exam, so that the committee members may have an opportunity to read and discuss it in advance.

The student must provide two (2) unbound copies of the final approved version of the thesis for the university, and two (2) bound copies of the thesis, one for the department and one for the student’s faculty advisor.

1. Ph.D. Program of STUDY
(Course Requirements)
A Ph.D. student must take a minimum of 18 credit hours of EMSE 701 and must continue registration each succeeding regular semester (fall and spring) until the dissertation is complete, unless granted a leave of absence. The time limit for the Ph.D. program is 5 years, starting with the first semester of EMSE 701 registration.

The minimum course requirement for a Ph.D. degree is 12 courses (36 credit hours) beyond the B.S. level, out of which at least six courses (18 credit hours), must be taken at Case Western Reserve University. Of these 12 courses, six courses must satisfy the Breadth Requirement and 2 courses must satisfy the Basic Science Requirement for the department as outlined below. In the case of a student entering with an M.S. degree from another discipline, additional courses may be required as decided by the Graduate Studies Committee of the department. A G.P.A. of 3.0 is required for Graduate Assistants.

BREADTH REQUIREMENTS
A broad knowledge of the field of materials science and engineering includes a minimum level of understanding of the following six areas:
- Mechanical Behavior
- Structure
- Physical Properties
- Processing
- Thermodynamics and Kinetics
- Phase Transformations

The Breadth Requirement for the Ph.D. can be fulfilled by taking a total of 6 courses (18 credit hours); these 6 courses must include at least one course from each area a, b, c, and d and 2 courses from areas e and f combined. The department maintains a list of approved courses for each of these areas.

BASIC SCIENCE REQUIREMENTS
A minimum depth in basic science of two courses (6 credit hours) is required for a Ph.D. degree. This requirement can be fulfilled by taking 2 courses selected from physics, chemistry, mathematics and/or statistics, and/or certain engineering curricula. The department maintains a current list of approved courses for the Basic Science Requirements.

The Planned Program of Study, a list of the courses the student will take to fulfill the Ph.D. requirements, will be discussed and approved at the time of the Thesis Proposal Exam. This form and the associated Supplementary Information form must be approved by the student’s Dissertation Committee (excluding the non-departmental member) and the chair of the department and submitted to the dean of graduate studies within one semester of passing the General Exam.

(2) Ph.D. General Exam
The written General Exam is offered twice a year, typically in January and in June, provided at least three students are registered to take the exam. The Exam is comprehensive and consists of two parts:

1. Thermodynamics and Kinetics; Materials Processing: covering such topics as phase equilibria, phase transformations, diffusion, defect chemistry, synthesis, fabrication, microstructural development, and thermomechanical processing.
2. Structure; Properties, Performance, and Reliability: covering crystallography and symmetry, analytical techniques (diffraction, imaging, and spectroscopy), line defects, surfaces and interfaces, microstructural analysis, mechanical, thermal, chemical (environmental), and electrical, optical, and magnetic properties, individually and in combination.

The emphasis in both parts of this General Exam will be on inorganic materials: metals, ceramics, semiconductors, and composites.

Each part of the exam will last for three hours; the morning session is devoted to part 1 and the afternoon session covers part 2. Each part of the Exam is divided into two sections:
- Part 1 (morning)
  - Section 1 Thermodynamics and Kinetics
  - Section 2 Processing
- Part 2 (afternoon)
  - Section 3 Structure
  - Section 4 Properties, Performance, and Reliability

The exam is closed book. Each section of the exam will contain a minimum of 4 questions. Students must answer 5 questions from part 1 and 5 questions from part 2, with at least 2 questions being answered from each section.

In order to pass the written General Exam, the criteria are as follows—6 out of ten questions in the exam require a 70% passing grade as well as a 75% average for the whole exam. Students who fail the exam (or the Thesis Proposal Exam described below) may elect to take the exam a second time.

(3) Thesis Proposal Exam
The Thesis Proposal Exam tests the more specific knowledge of the Ph.D. candidate concerning the science underlying the proposed research and to his or her intellectual maturity. It is composed of a written and an oral part, both dealing with the candidate’s proposed research project. The written document should be given to each member of the student’s Dissertation Advisory Committee (excluding the non-departmental member) during the semester immediately following the successful completion of the General Exam. It should include a literature search, analysis of the research problem, suggested research procedures, and the general results to be expected. The document should be written by the student and not his/her thesis advisor, and will be examined by the student’s Dissertation Advisory Committee for this purpose.

The oral part of the Thesis Proposal Exam should last approximately two hours and must be given before the student’s Dissertation Advisory Committee within one week of submitting the above written document to the Committee. Both parts of the Thesis Proposal Exam will be graded Pass/Fail.

At the time of this Exam, the student will also have his/her Planned Program of Study examined and approved by the Dissertation Advisory Committee.

RESEARCH AREAS

Deformation and Fracture
Determination of the relationships between structure and mechanical behavior of traditional and advanced materials—metals, ceramics, intermetallics, composites, and biological materials. State-of-the-art facilities are available for testing over a range of strain rates, test temperatures, stress states, and size scales for both monotonic and cyclic conditions.

Materials Processing
Ceramic and metal powder synthesis and processing, manufacturing of laminated materials, metals casting, crystal growth, thin film deposition, deformation processing of metals.

Environmental Effects

Surfaces and Interfaces
Free surfaces, grain boundaries, metal/ceramic, polymer/metal composite interfaces. Major facilities for transmission electron microscopy, scanning electron microscopy, and surface spectroscopies.

Electronic, Magnetic and Optical Materials
Electronic materials—silicon, germanium, gallium arsenide, silicon carbide; gallium nitride; thin film dielectric, optical, and magnetic ceramics; synthesis and characterization of multi-component electromagnetic filters, transparent semiconductors, ceramics, such as materials for sensors, catalysts, and fuel cells.

FACILITIES
Materials Processing
The department's processing laboratories include facilities which permit materials processing from the liquid state (casting) as well as in the solid state (powder processing). The department has its own foundry that houses mold making capabilities (green and bonded sand, permanent mold, and investment casting), induction melting furnaces of various capabilities for air melting of up to 1500 pounds of steel, electrical resistance furnaces for melting and casting up to 800 pounds of aluminum, and 500 pounds of magnesium under protective atmosphere, a dual chamber vacuum induction melting unit with a capacity of up to 30 pounds of superalloys, a 350 ton squeeze casting press, and state-of-the-art thermal fatigue testing and characterization equipment. The Crystal Growth Laboratory has facilities for production of high purity electronic single crystals using a variety of furnaces with the additional capability of solidifying under large magnetic fields. In addition, a CVD and MOCVD reactor has been set up to do research on the growth of SiC and GaN on Si, sapphire, and other substrates. Secondary processing and working can be accomplished using a high-speed hot and cold rolling mill, swaging units, and a state-of-the-art hydrostatic extrusion press. The department has heat treatment capabilities including numerous box, tube, and vacuum furnaces. For the processing of powder metals or ceramics the department possesses a 300,000 pound press, a vacuum hot press (with capabilities of up to 7 ksi and 2300 C), a hot isostatic press (2000 C and 30 ksi), a 60 ksi wet base isostatic press, and glove boxes. Sintering can be performed in a variety of controlled atmospheres while a microcomputer-controlled precision dilometer is available for sintering studies. Several ball mills, shaker mills, and a laboratory model attritor are also available for powder processing. In addition, facilities are available for sol-gel processing, glass melting, diamond machining; a spray dryer is available for powder granulation.

A Deformation Processing Laboratory has recently been commissioned that contains two dual hydraulic MTS presses. The first press is designed to evaluate the stretching and drawing properties of materials in sheet form. Its maximum punch and hold down forces are 150,000 each. Its maximum punch velocity is 11.8 inch/sec. The second press is designed to evaluate the plastic flow behavior of materials in an environment that simulates modern manufacturing processing. The press can deliver up to five consecutive impacts to a material in less than five seconds with a punch velocity as high as 110 inch/sec. The maximum punch force is 110,000 pounds.

Mechanical Testing Facility
The Center for Mechanical Characterization of Materials Mechanical Testing Facility permits the determination of mechanical behavior of materials over loading rates ranging from static to impact, with the capability of testing under a variety of stress states under either monotonic or cyclic conditions. A variety of furnaces and environmental chambers are available to enable testing at temperatures ranging from -196 C to 1800 C. The facility is operated under the direction of a faculty member and under the guidance of a full-time engineer. The facility contains one of the few laboratories in the world for high-pressure deformation and processing, enabling experimentation under a variety of stress states and temperatures. The equipment in this state-of-the-art facility includes:

High Pressure Deformation Apparatus: These units enable tension or compression testing to be conducted under conditions of high hydrostatic pressure. Each apparatus consists of a pressure vessel and diagnostics for measurement of load and strain on deforming specimens, as well as instantaneous pressure in the vessel. Pressures up to 1.0 GPa loads up to 10kN, and displacements of up to 25 mm are possible. The oil based apparatus is operated at temperatures up to 300 C room temperature while a gas (i.e. Ar) based apparatus is used at room temperature.

Hydrostatic Extrusion Apparatus: Hydrostatic extrusion (e.g. pressure-to-air, pressure-to-pressure) can be conducted at temperatures up to 300 C on manually operated equipment interfaced with a computer data acquisition package. Pressures up to 2.0 GPa are possible, with reduction ratios up to 6 to 1, while various diagnostics provide real time monitoring of extrusion pressure and ram displacement.

Advanced Forging Simulation Rig: A multi-actuator; MTS machine based on a 330 kip, four post frame, enables sub-scale forging simulations over industrially relevant strain rates. A 110 kip forging actuator is powered by five nitrogen accumulators enabling loading rates up to 120 inches/sec on large specimens. A 220 kip indexing actuator provides precise deformation sequences for either single, or multiple, deformation sequences. Date acquisition at rates sufficient for analysis is available. Testing with heated dies is possible.

Advanced Metal Forming Rig: A four post frame with separate control of punch actuator speed and blank hold down pressure enables determination of forming limit diagrams. Dynamic control of blank hold down pressure is possible, with maximum punch actuator speeds of 11.8 inches/sec. A variety of die sets are available.

The remainder of the equipment in the Mechanical Testing Facility is summarized below:

Servo-hydraulic Machines: Four MTS Model 810 computer-controlled machines with load capacities of 3 kip, 20 kip, 50 kip, and 50 kip, permit tension, compression, and fatigue studies to be conducted under load-, strain-, or stroke control. Fatigue crack growth may be monitored via a dc potential drop technique as well as via KRAK gages applied to the specimen surfaces. Fatigue studies may be conducted at frequencies up to 30 Hz. In addition, an Instron Model 1331 20 kip Servo-hydraulic machine are available for both quasi-state and cyclic testing.

Universal Testing Machines: Three INSTRON screw-driven machines, including two INSTRON Model 1125 units permit tension, compression and torsion testing.

Electromechanical Testing Machine: A computer-controlled INSTRON Model 1361 can be operated under load-, strain-, or stroke control. Stroke rates as slow as 1 micrometer/hour are possible.

Fatigue Testing Machines: Three Sonntag fatigue machines and two R. R. Moore rotating-bending fatigue machines are available for
producing fatigue-life (S-N) data. The Sonntag machines may be operated at frequencies up to 60 Hz.

Creep Testing Machines: Three constant load frames with temperature capabilities up to 800 °C permit creep testing, while recently modified creep frames permit thermal cycling up to 800 °C. Permits creep testing, while recently modified creep frames permit thermal cycling as well as slow cyclic creep experiments.

Impact Testing Machines: Two Charpy impact machines with capacities ranging from 20 ft-lbs to 240 ft-lbs are available. Accessories include a Dynatup instrumentation package interfaced with an IBM PC, which enables recording of load vs. time traces on bend specimens as well as on tension specimens tested under impact conditions.

Instrumented Microhardness Tester: A Nikon Model QM High-Temperature Microhardness Tester permits indentation studies on specimens tested at temperatures ranging from -196 °C to 1600 °C under vacuum and inert gas atmospheres. This unit is complemented by a Zwick Model 3212 Microhardness Tester as well as a variety of Rockwell Hardness and Brinell Hardness Testing Machines.

Environmental Stress Laboratories
These facilities include equipment for corrosion, oxidation, and adhesion and wear studies. A wide range of environments can be simulated and controlled a) Aqueous corrosion: atmospheric, immersion and high pressure/high temperature in autoclaves and b) Oxidation: single and mixed gases over a range of temperatures and pressures. Special items include: electrochemical test equipment, environmental cracking test equipment, vacuum equipment for permeation studies, high sensitivity Cahn electro balances for thermogrammetric studies and polymer/metal adhesion test fixtures.

The Swagelok Center for Surface Analysis of Materials (SCSAM)
Operated by the Department of Materials Science and Engineering (DMSE), the Swagelok Center for Surface Analysis of Materials (SCSAM) is a multi-user analytical facility providing instrumentation for microstructural characterization of materials as well as surface and near-surface chemical analysis. The facilities in SCSAM are available to all users on campus at a federally approved use charge. The equipment described here is maintained by four full-time engineers, administered through DMSE. The following is a list of SCSAM’s present instruments and their main applications:

5. A Dual-Beam (Focused Ion / Scanning Electron Beam) System FEI XT Nova Nanolab 200.
6. An Environmental Dual-Beam System FEI Quanta 200 3D (to be installed in 2009).
7. A Variable-Temperature UHV Scanning Probe Microscope RHK UHV 7500 VT.
12. Tandem Pelletron Ion Accelerator NEC 5SDH.

Transmission Electron Microscope Laboratory
Two transmission electron microscopes are available that provide virtually all conventional and advanced microscopy techniques required for state-of-the-art materials research and involve an installed capacity worth $3,000,000. The microscopes available are (i) an FEI Tecnai F30 300kV field-emission gun energy-filtering high-resolution analytical scanning transmission electron microscope with an information resolution limit better than 0.14nm, equipped with an EDAX system with a high-energy resolution Si-Li detector for X-ray energy-dispersive spectrometry (XEDS), a Gatan GIF2002 imaging energy filter including a 2k by 2k slow-scan CCD camera, and a high-angle annular dark-field detector for scanning transmission electron microscopy (STEM), and (ii) a Philips CM20 200kV analytical transmission electron microscope equipped with a Tracor Northern high-purity Ge X-ray energy-dispersive spectroscopy detector, a Gatan parallel electron energy-loss spectrometer (PEELS), and a STEM unit.

Conventional TEM techniques, such as bright-field and dark-field imaging, electron diffraction, or weak-beam dark-field imaging (WBDIF) are used routinely to analyze line defects (dislocations) and planar defects (interfaces, grain boundaries, stacking faults) in crystalline materials. Advanced TEM techniques include (i) high-resolution TEM, which enables assessing the atomic structure of crystal defects such as heterophase interfaces, grain boundaries, or dislocations, (ii) convergent-beam electron diffraction, which can be used, for example, to obtain crystallographic information (space group) and to determine orientation relationships between small (even nanoscopic) crystallites, and (iii) energy-filtering TEM, which includes zero-loss filtering for improved image contrast and resolution in conventional imaging and diffraction as well as electron spectroscopic imaging (ESI), a technique that enables rapid elemental mapping with high spatial resolution based on element-characteristic energy losses of the primary electrons in the specimen. Specimen preparation facilities for transmission electron microscopy consist of two dimple-grinders, two electropolishing units, three ultra-microtomes, and two conventional ion-beam mills, and two state-of-the-art precision ion polishing systems (PIPS, by Gatan).

Scanning Electron Microscopy Laboratory
Scanning electron microscopy (SEM) and spectrochemical analysis provide valuable specimen investigation with great depth of field and realistic three-dimensional imaging at resolutions up to 500,000X. Determination of the topography of nearly any solid surface is possible. Spectrochemical studies are possible with the use of energy dispersive systems capable of detecting elements from boron to uranium. The laboratory houses two instruments. The first is an Hitachi S-4500, a field emission electron microscope with two secondary electron detectors, a backscattered electron detector, and an infrared chamber scope. In addition, it has a Noran energy dispersive x-ray detection system. The microscope is capable of operating at a spatial resolution of less than 1.5 nm at 15 kV. It also performs well at reduced beam energies (1 kV), facilitating the observation of highly insulating materials. The second instrument is a Philips XL-30 ESEM with a large chamber that can
be used as a conventional SEM, or in the environmental mode, can be used to examine wet, oily, gassy or non-conducting samples. It has a camera for crystallographic orientation imaging, a deformation stage capable of 1000 lbs force, hot stages capable of temperatures up to 1500 C, and a cooling stage that goes down to -20 C. An attached Noran X-ray system permits qualitative and quantitative EDX spectroscopy, X-ray mapping and line scans.

Surface Science Laboratories
The Center for Surface Analysis of Materials (CSAM) enjoys state-of-the-art characterization of metal, alloy, ceramic, and polymer surfaces. These tools include a PHI 680 Scanning Auger Microprobe (SAM) for elemental analysis of surfaces and mapping, and PHI 3600 Secondary Ion Mass Spectrometry (SIMS), which provides surface sensitivities for species in the part per billion range. A PHI model 5600 instrument provides X-ray Photoelectron Spectroscopy (XPS or ESCA) capability, which produces information concerning chemical states. The latter two instruments are particularly useful for ceramic and polymer surfaces. With specimen heating, cooling, and depth profiling capabilities directly incorporated in these devices, subsurface regions and interfaces in composite structures, as well as thin film substrate interfacial regions, can be examined and fully characterized. The ion beam facility for the analysis of materials consists of a NEC 5SDH 1.7 MV tandem peltretron accelerator for the production of 3.4 MeV protons, 5.1 MeV alpha particles, and N ions with energies in excess of 7.0 MeV. Sample analysis takes place in a molecular pumped high vacuum chamber. The chamber is equipped with a computer-controlled 5 axis manipulator and provisions for maintaining sample temperatures from 77 K to 1000 K. A Si surface barrier detector, NaI(Tl) scintillator, and a liquid nitrogen-cooled Si(Li) detector are used to detect scattered ions, characteristic gamma rays and characteristic X-rays, respectively. This instrumentation can non-destructively provide composition and structure information in the near-surface region of materials using techniques such as Rutherford backscattering spectroscopy (RBS), ion channeling, particle-induced X-ray analysis (PIXE), and nuclear reaction analysis (NRA). As with other analytic techniques, sensitivity, sampling depth, and depth resolution are sample dependent. However, sensitivities of 1 atomic percent, accuracies of 5%, and a depth resolution of 20 nm are usually easily achieved.

The typical specimen is a solid, vacuum-compatible material with lateral dimensions between 0.5 cm x 0.5 cm and 5 cm x 5 cm. However, PIXE and NRA can also be performed on non-vacuum compatible specimens such as liquids and irrepealable artifacts of interest to museum curators and archaeologists.

A recently acquired FEI Nova Focused Ion Beam (FIB) system used to machine thin foils suitable for TEM directly out of the surface of a specimen is available. The Nova FIB includes an SEM, a computer interface enabling entirely automated milling and an internal “lift out” system for transferring thin films onto support grids. To investigate the character of surfaces at the nanometer scale the laboratory has a Digital Instruments Dimension 3000 Scanning Probe Microscope which operates as an AFM and contains a Hysitron Nanoindenter.

Electronic Properties Laboratory
CRystal Growth and Analysis Laboratory
The Crystal Growth and Analysis Laboratory is equipped for research studies and characterization of bulk semiconductor and photonic materials. The growth facilities include a high pressure Czochralski system, low pressure Czochralski system, and a Vertical Bridgman system with magnetic field stabilization. The characterization facilities include capabilities for sample preparation, a Hall effect system, Infra-red microscope, and an Inductively Coupled Plasma-Mass Spectrometer (ICP-MS).

X-ray Laboratory
The X-ray laboratory contains diffraction equipment for study of the structures of ceramics, metals, polymers, minerals, and single crystals of organic and inorganic compounds. A new Scintag diffractometer system includes a theta/theta wide angle goniometer, a 4.0 kW x-ray generator with copper tube, a third axis stress attachment, a thermoelctrcally cooled Peltier germanium detector, a thin film analysis system, a dedicated PC for data acquisition, and a turbomolecular-pumped furnace attachment permitting sample temperatures up to 2000 degrees C.

Fuel Cell Testing Laboratory
The department houses a lab for testing of solid oxide fuel cells (SOFC). Facilities include:

- 2 test stands for 4” cells and small stacks (Fuel Cell Technologies): test temperatures to 1000°C; professional turnkey LabView interface for system control and data acquisition
- 2 test stands for 1” cells; test temperatures to 1000°C; LabView interface for complete system control and data acquisition; Omega mass flow controllers; Keithley and Amrel electronics; AutoLab Electrochemical Analyzer for I-V, galvanostatic or amperometric testing and AC impedance spectroscopy
- All test stands contained in dedicated 20’ x 8’ enclosure rated for use with hydrogen, hydrogen sulfide, and carbon monoxide with ventilation system, leak detection, tank pressure monitors, alarm system
- Dedicated furnaces and ovens for preparing cells for testing

MATERIALS SCIENCE AND ENGINEERING (ESME)

Course Descriptions
EMSE 102. Materials Seminar (1)
Topical lectures by faculty on current areas of materials research serving to complement the concepts introduced in EMSE 201. General discussion of overall curriculum and educational objectives. Recommended preparation: EMSE 201 or concurrent enrollment.

EMSE 103. Materials in Sports (3)
The relationships between optimizing sports activities and the performance requirements of sports equipment are developed. The inherent properties of materials are shown to be the controlling factors in the design of almost all types of sports equipment. Properties of the major classes of materials used to manufacture sports equipment are examined. Materials discussed include advanced composites, foams, metals, ceramics, and natural composites, e.g. wood and leather. The absorption, storage, and release of energy by equipment during sports activities are shown to relate to the basic structure of the materials from which it is made. Demonstration experiments are conducted periodically throughout the course.

EMSE 201. Introduction to Materials Science and Engineering (3)
Introductory treatment of crystallography, phase equilibria, and materials kinetics. Application of these principles to examples in metals, ceramics, semiconductors, and polymers, illustrating the control of structure through processing to obtain desired mechanical and physical properties. Design content includes examples and problems in materials selection and design of materials for particular performance requirements. Recommended preparation: ENGR 145 and PHYS 121 and MATH 121.

EMSE 202. Phase Diagrams and Transformations (3)
Diffusion processes, equilibrium diagrams of al-

GENERAL BULLETIN 2009-2011 171

EMSE 270. Materials Laboratory I (2)
Introduction to processing, microstructure and property relationships of metal alloys, ceramics and glass. Solidification of a binary alloy and metallurgy by optical and scanning electron microscopy. Synthesis of ceramics powders, thermal analysis using TGA and DTA, powder consolidation, sintering and grain growth kinetics. Processing and coloring of glass and glass-ceramics.

EMSE 280. Materials Laboratory II (2)
Synthesis and processing. Experiments designed to demonstrate and evaluate different ways to process different types of materials. Solidification of melts. Crystallization kinetics, processing using electrochemistry, oxidation and oxidized microstructures. Laboratory teams are selected for all experiments.

EMSE 290. Materials Laboratory III (2)
Experiments designed to characterize and evaluate different microstructural designs produced by variations in processing. Fracture of brittle materials, fractography, thermal shock resistance, hardenability of steels, TTT and CT diagrams, composites, solidification of metals, solution annealing of alloys. Recommended preparation: EMSE 201.

EMSE 301. Fundamentals of Materials Processing (3)
Introduction to materials processing technology with an emphasis on the relation of basic concepts to the processes by which materials are made into engineering components. Includes casting, welding, forging, cold-forming, powder processing of metals and ceramics, and polymer and composite processing. Recommended preparation: EMSE 201 and EMSE 202 and EMSE 203.

EMSE 302. Fundamentals of Materials Processing Laboratory (1)
Demonstration of basic processes of materials fabrication. Includes visits to commercial materials processing plants for tours and demonstrations. Graded pass/fail.

EMSE 303. Mechanical Behavior of Materials (3)

EMSE 307. Foundry Metallurgy (3)
Introduction to solid-liquid phase transformations and their application to foundry and metal casting processes. Includes application of nucleation and growth to microstructural development, application of thermodynamics to molten metal reactions, application of the principles of fluid flow and heat transfer to gating and risering techniques, and introduction to basic foundry and metal casting technology. Recommended preparation: EMSE 202 and EMSE 203 and ENGR 225.

EMSE 310. Applications of Diffraction Principles (1)
A lab sequence in conjunction with EMSE 312. Diffraction Principles, involving experiments on crystallography, optical diffraction, Laue backscattering on single crystals, powder diffraction of unknown compounds, electron diffraction and imaging, and chemical analysis using energy dispersive x-ray spectroscopy. Recommended preparation: EMSE 312 or consent of instructor.

EMSE 312. Diffraction Principles (3)

EMSE 313. Engineering Applications of Materials (3)
Optimum use of materials taking into account not only the basic engineering characteristics and properties of the materials, but also necessary constraints of component design, manufacturing (including machining), abuse allowance (safety factors), and cost. Interrelations among parameters based on total system design concepts. Case history studies. Systems of failure analysis. Recommended preparation: EMSE 202 and ENGR 200.

EMSE 314. Electrical, Magnetic, and Optical Properties of Materials (3)

EMSE 316. Applications of Ceramic Materials (3)

EMSE 360. Transport Phenomena in Materials Science (3)
Review of momentum, mass, and heat transport from a unified point of view. Application of these principles to various phenomena in materials science and engineering with an emphasis on materials processing. Both analytical and numerical methodologies applied in the solution of problems. Recommended preparation: ENGR 225 and MATH 224 or equivalent.

EMSE 396. Special Project or Thesis (1 - 18)
Special research projects or undergraduate thesis in selected material areas.

EMSE 398. Senior Project in Materials I (1)
Independent Research project. Projects selected from those suggested by faculty; usually entail original research. The EMSE 398 and 399 sequence form an approved SAGES capstone. SAGES Senior Cap.

EMSE 399. Senior Project in Materials II (2)
Independent Research project. Projects selected from those suggested by faculty; usually entail original research. Requirements include periodic reporting of progress, plus a final oral presentation and written report. Recommended preparation: EMSE 398 or concurrent enrollment. SAGES Senior Cap.

EMSE 400T. Graduate Teaching I (0)
To provide teaching experience for all Ph.D.-bound graduate students. This will include preparing exams/quizses, homework, leading recitation sessions, tutoring, providing laboratory assistance, and developing teaching aids that include both web-based and classroom materials. Graduate students will meet with supervising faculty member throughout the semester. Grading is pass/fail. Students must receive three passing grades and up to two assignments may be taken concurrently. Recommended preparation: Ph.D. student in Materials Science and Engineering.

EMSE 401. Transformations in Materials (3)

EMSE 403. Modern Ceramic Processing (3)
Fundamental science and technology of modern ceramic powder processing and fabrication techniques. Powder synthesis techniques. Physical chemistry of aqueous and nonaqueous colloidal suspensions of solids. Shape forming techniques: extrusion; injec-
tion molding; slip and tape casting; dry, isostatic, and hot isostatic pressing. Recommended preparation: EMSE 316 or concurrent enrollment.

EMSE 404. Diffusion Processes in Solids and Melts (3)

EMSE 405. Dielectric, Optical and Magnetic Properties of Materials (3)
Electrical properties of nonmetallic: ionic conductors, dielectrics, ferroelectrics, and piezo-electrics. Magnetic phenomena and properties of metals and oxides, including superconductors. Mechanisms of optical absorption in dielectrics. Optoelectronics. Applications in devices such as oxygen sensors, properties by techniques involving structure properties of materials as affected by structure; control of and ceramics; mechanical and chemical properties. Thermodynamic relations in multi-component systems; kinks and dislocation motion; jogs and dislocation interactions, dislocation dissociation and stacking faults; dislocation multiplication, applications to yield phenomena, work hardening and other mechanical properties.

EMSE 407. Solidification (3)
Fundamental science of solid-liquid phase transformations and the application of these basic to the solidification processing of materials. Recommended preparation: EMSE 303.

EMSE 409. Deformation Processing (3)
Flow stress as a function of material and processing parameters; yielding criteria; stress states in elastic-plastic deformation; forming methods: forging, rolling, extrusion, drawing, stretch forming, composite forming. Recommended preparation: EMSE 303.

EMSE 411. Environmental Effects on Materials Behavior (3)
Aquatic corrosion: principles and fundamental concepts; recognition of modes; monitoring and testing: methods to control and prediction. Applications of engineering problems: design, and economics. Mixed potential theory, principles of protection, hydrogen effects, and behavior in metal systems.

EMSE 412. Materials Science and Engineering Seminar (0)

EMSE 413. Fundamentals of Materials Engineering and Science (3)
Provides a background in materials for graduate students with undergraduate majors in other branches of engineering and science; reviews basic bonding relations, structure, and defects in crystals. Lattice dynamics; thermodynamic relations in multi-component systems; microstructural control in metals and ceramics; mechanical and chemical properties of materials as affected by structure; control of properties by techniques involving structure property relations; basic electrical, magnetic and optical properties.

EMSE 417. Properties of Materials at High Temperatures (3)

Fracture mechanisms. Refractory metals, superalloys, intermetallic compounds, carbon, ceramic materials. Protective coatings.

EMSE 418. Oxidation of Materials (3)
Experimental techniques; thermodynamics of oxidation reactions; defects and diffusion in oxides; oxidation rate laws. Effects of alloying, surface treatment and stress on oxidation. High-temperature corrosion.

EMSE 419. Phase Equilibria and Microstructures of Materials (3)
The multi-component nature of most material systems require understanding of phase equilibria and descriptions of microstructure. Attention will be given to phase equilibria in multi-component (ternary and higher) systems, and the stereological description of the microstructure of multiphase systems.

EMSE 421. Fracture of Materials (3)

EMSE 426. Semiconductor Thin Film Science and Technology (3)

EMSE 427. Dislocations in Solids (3)
Elasticity and dislocation theory; dislocation slip systems; kinks and dislocation motion; jogs and dislocation interactions, dislocation dissociation and stacking faults; dislocation multiplication, applications to yield phenomena, work hardening and other mechanical properties.

EMSE 429. Crystallography and Crystal Chemistry (3)
Crystal symmetries, point groups, translation symmetries, space lattices, crystal classes, space groups, crystal chemistry, crystal structures and physical properties.

EMSE 500T. Graduate Teaching II (0)
To provide teaching experience for all Ph.D.-bound graduate students. This will include preparing exams/quizzes/homework, leading recitation sessions, tutoring, providing laboratory assistance, and developing teaching aids that include both web-based and classroom materials. Graduate students will meet with supervising faculty member throughout the semester. Grading is pass/fail. Students must receive three passing grades and up to two assignments may be taken concurrently. Recommended preparation: Ph.D. student in Materials Science and Engineering.

EMSE 502. Mechanical Properties of Metals and Composites (3)
Microstructural effects on strength and toughness of advanced metals and composites. Review of dispersion hardening and composite strengthening mechanisms. Toughening of brittle materials via composite approaches such as fiber reinforcement, ductile phases, and combinations of approaches. Recommended preparation: ENGR 200 and EMSE 303 or EMSE 421; or consent.

EMSE 504. Thermodynamics of Solids (3)

EMSE 509. Conventional Transmission Electron Microscopy (3)
Introduction to transmission electron microscopy-theoretical background and practical work. Lectures and laboratory experiments cover the technical construction and operation of transmission electron microscopes, specimen preparation, electron diffraction by crystals, electron diffraction techniques of STEM, conventional TEM imaging, and scanning TEM. Examples from various fields of materials research illustrate the application and significance of these techniques. Recommended preparation: Consent of instructor.

EMSE 511. Failure Analysis (3)
Methods and procedures for determining the basic causes of failures in structures and components. Recognition of fractures and excessive deformations in terms of their nature and origin. Development and full characterization of fractures. Legal, ethical, and professional aspects of failures from service. Recommended preparation: EMSE 201 and EMSE 303 and ENGR 200; or consent.

EMSE 512. Advanced Techniques of Transmission Electron Microscopy (3)
Theory and laboratory experiments to learn advanced techniques of transmission electron microscopy, including high-resolution transmission electron microscopy (HRTEM), convergent-beam electron diffraction (CBED), microanalysis using X-ray energy-dispersive spectroscopy (XEDS) and electron energy-loss spectroscopy (EELS), and electron-spectroscopic imaging (ESI) for elemental mapping. Recommended preparation: EMSE 509.

EMSE 514. Defects in Semiconductors (3)
Presentation of the main crystallographic defects in semiconductors; point defects (e.g., vacancies, interstitials, substitutional and interstitial impurities), line defects (e.g., dislocations), planar defects (e.g., grain boundaries). Structural, electrical and optical properties of various defects. Interpretation of the properties from the perspective of semiconductor physics and materials science and correlation of these defects to physical properties of the material. Experimental techniques including TEM, EBIC, CL, DLTS, etc. Recommended preparation: EMSE 426.

EMSE 515. Analytical Methods in Materials Science (3)
Microcharacterization techniques of materials science and engineering: SPM (scanning probe mi-
EMSE 516. Analytical Methods in Materials Science (3)
A laboratory course designed to achieve proficiency in TEM, SEM, SIMS, SAM and ESCA.

EMSE 600T. Graduate Teaching III (0)
To provide teaching experience for all Ph.D.-bound graduate students. This will include preparing exam/ quizzes/homework, leading recitation sessions, tutoring, providing laboratory assistance, and developing teaching aids that include both web-based and classroom materials. Graduate students will meet with supervising faculty member throughout the semester. Grading is pass/fail. Students must receive three passing grades and up to two assignments may be taken concurrently. Recommended preparation: Ph.D. student in Materials Science and Engineering.

EMSE 601. Independent Study (1 - 18)

EMSE 633. Special Topics (1 - 18)

EMSE 649. Special Projects (1 - 18)

EMSE 651. Thesis M.S. (1 - 18)
Required for Ph.D. degree. A research problem in metallurgy, ceramics, electronic materials, biomaterials or archeological and art historical materials, culminating in the writing of a thesis.

EMSE 701. Dissertation Ph.D. (1 - 18)
Required for Ph.D. degree. A research problem in metallurgy, ceramics, electronic materials, biomaterials or archeological and art historical materials, culminating in the writing of a thesis. Prereq: Pre-doctoral research consent or advanced to Ph.D. candidacy milestone.

BACHELOR OF SCIENCE IN ENGINEERING DEGREE

Major in Materials Science and Engineering (pending approval by CSE USC)

First Year Class/Lab/Credit Hours

Fall
CHEM 111 Principles of Chemistry for Engineers (4-0-4)
ENGR 131 Elementary Computer Programming (3-0-3)
SAGES First year Seminar (4-0-4)
MATH 121 Calculus for Science and Engineering I (4-0-4)
PHED 1xx Physical Education Activities (0-3-0)
Open elective or Humanities/Social Science Elective (3-0-3)
Total (18-3-18)

Spring
ENGR 145 Chemistry of Materials (4-0-4)
MATH 122 Calculus for Science and Engineering II (4-0-4)
PHYS 121 General Physics I - Mechanics 1 (3-1-4)
PHED 1xx Physical Education Activities (0-3-0)
SAGES University Seminar 2 (3-0-3)
Total (14-4-15)

Second Year

Fall
CHEM 301 Introduction to Physical Chemistry 4 (3-0-3)
EMSE 102 Materials Science Seminar (1-0-1)
EMSE 201 Introduction to Materials Science & Engng. (3-0-3)
MATH 223 Calculus for Science and Engineering III (3-0-3)
PHYS 122 General Physics II - Electricity & Magnetism (3-1-4)

EMSE 399 Senior Project in EMSE II (Capstone) (0-4-2)

Technical elective (3-0-3)
Open elective (3-0-3)
Open elective (3-0-3)
Total (12-4-14)

Hours required for graduation: 129
1. Selected students may be invited to take PHYS 123-124; General Physics I-II Honors, in place of PHYS 121-122.
2. The two SAGES University Seminars must be chosen from a different thematic group of USNA (Natural World), USSO (Social World) or USSY (Symbolic World).
3. One of these must be in the humanities or social sciences.
4. Satisfies the Math, Natural Sciences, or Statistics requirement of the Engineering Core.
5. Or PHYS 250.
6. Or MATH 234.
7. Designated as SAGES Departmental Seminar.

APPROVED TECHNICAL ELECTIVES

The following courses are approved technical electives in Materials Science and Engineering. A student is encouraged to discuss with their class advisor a sequence of technical elective courses, which takes into account the biannual nature of some offerings. Students may request approval of other elective courses by submitting a written petition justifying their choices to the department’s Undergraduate Studies Committee.

CASE SCHOOL OF ENGINEERING

DEPARTMENT OF MECHANICAL AND AEROSPACE ENGINEERING

418 Glennan Building (7222)
Phone: 216-368-6442; Fax: 216-368-6445
Clare M. Rimnac, Wilbert J. Austin Professor of Engineering and Chair
e-mail: clare.rimnac@case.edu
http://www.mae.case.edu/

The Department of Mechanical and Aerospace Engineering of the Case School of Engineering offers programs leading to Bachelor’s, master’s, and doctoral degrees. The department administers the programs leading to the degrees of Bachelor of Science in Mechanical Engineering with a major in aerospace engineering and Bachelor of Science in Engineering with a major in mechanical engineering. Both curricula are based on four-year programs of preparation for productive engineering careers or further academic training. The department of Mechanical Engineering and the degree of Bachelor of Science in Aerospace Engineering at Case Western Reserve University are accredited by the Engineering Accreditation Commission (EAC) of ABET, Inc. 111 Market Place, Suite 1050, Baltimore, MD 21202-4012, telephone: 410-347-7700.

Objective 1 - Graduates of the Aerospace Engineering Program will enter and successfully engage in careers in aerospace engineering and other professions enabled by their knowledge and skills in aerospace engineering.

Objective 2 - Graduates of the Mechanical Engineering Program will advance in responsibility and leadership in their chosen professions.

Objective 3 - Graduates of the Mechanical Engineering Program will engage in continued learning through post-baccalaureate education and/or professional development in engineering or other professional fields.

The program objectives for the program in Aerospace Engineering reflect the missions of the Case School of Engineering and the Department of Mechanical and Aerospace Engineering. The following statements also reflect the emphases of the Department on successful professional practice in their field, the assumption of leadership roles, and a commitment to life-long learning by our graduates.

Objective 1 - Graduates of the Aerospace Engineering Program will enter and successfully engage in careers in aerospace engineering and the Department of Mechanical and Aerospace Engineering. The following statements also reflect the emphases of the Department on preparing our graduates for successful professional practice in their field, the assumption of leadership roles, and a commitment to life-long learning.

Objective 2 - Graduates of the Aerospace Engineering Program will advance in responsibility and leadership in their chosen professions.

Objective 3 - Graduates of the Aerospace Engineering Program will engage in continued learning through post-baccalaureate education and/or professional development in engineering or other professional fields.

Departmental Mission

The mission of the Mechanical and Aerospace Engineering Department is to educate and prepare students at both the undergraduate and graduate levels for leadership roles in the fields of Mechanical Engineering and Aerospace Engineering and to conduct research for the benefit of society.

Program Educational Objectives

Consistent with the mission of the Department and the mission of Case Western Reserve University, the stated objectives of the Case School of Engineering are summarized in terms of graduates with five attributes: (a) mastery of fundamentals, (b) creativity, (c) social awareness, (d) leadership skills, and (e) professionalism as described below.

The program objectives for the program in Mechanical Engineering reflect the missions of the Case School of Engineering and the Department of Mechanical and Aerospace Engineering. The following statements also reflect the emphases of the Department on successful professional practice in their field, the assumption of leadership roles, and a commitment to life-long learning by our graduates.

Objective 3 - Graduates of the Mechanical Engineering Program will engage in continued learning through post-baccalaureate education and/or professional development in engineering or other professional fields.
neering or other professional fields.

The undergraduate program emphasizes fundamental engineering science, analysis and experiments to insure that graduates will be strong contributors in their work environment, be prepared for advanced study at top graduate schools and be proficient lifelong learners. The graduate programs emphasize advanced methods of analysis, mathematical modeling, computational and experimental techniques applied to a variety of mechanical and aerospace engineering specialties including, applied mechanics, dynamic systems, robotics, biomechanics, fluid mechanics, heat transfer, propulsion and combustion. Leadership skills are developed by infusing the program with current engineering practice, design, and professionalism (including engineering ethics and the role of engineering in society) lead by concerned educators and researchers.

The academic and research activities of the department center on the roles of mechanics, thermodynamics, heat and mass transfer, and engineering design in a wide variety of applications such as aeronautics, astronautics, biomechanics and orthopedic engineering, biomimetics and biological inspired robotics, energy, environment, machinery dynamics, mechanics of advanced materials, nanotechnology and tribology. Many of these activities involve strong collaborations with the Departments of Biology, Electrical Engineering and Computer Science, Materials Science and Engineering and Orthopaedics of the School of Medicine.

The significant constituencies of the Mechanical and Aerospace Engineering Department are the faculty, the students, the alumni and the external advisory boards. The educational program objectives are established and reviewed on an ongoing basis based on the feedback from the various constituencies as well as archival information about the program graduates. The faculty engages in continuing discussions of the academic programs in the regularly scheduled faculty meetings throughout the academic year. Periodic surveys of alumni provide data regarding the preparedness and success of the graduates as well as guidance in program development. Archival data include the placement information for graduating seniors, which provides direct information regarding the success of the graduates in finding employment or being admitted to graduate programs. Additional sources of feedback are listed in section 3 below under assessment.

Mastery of Fundamentals
- A strong background in the fundamentals of chemistry, physics and mathematics.
- Methods of mechanical engineering analysis, both numerical and mathematical, applied to mechanics, dynamic systems and control, thermodynamics, fluid mechanics and heat transfer.
- Methods of modern experimental engineering analysis and data acquisition.

Creativity
- Ability to identify, model, and solve mechanical and aerospace engineering design problems.
- Ability to design experiments to resolve mechanical and aerospace engineering issues.
- Ability to perform an individual senior project that demonstrates original research and/or design content.

Societal Awareness
- Issues of environmental impact, efficient use of energy and resources, benefits of recycling.
- An awareness of the multi-disciplinary nature of mechanical and aerospace engineering.
- Impact of economic, product liability and other legal issues on mechanical and aerospace engineering manufacturing and design.

Leadership Skills
- An ability to work in teams.
- Ethical considerations in engineering decisions.
- Proficiency in oral and written communications.
- Professionalism
- Students are encouraged to develop as professionals through participation in the student chapters of the American Society of Mechanical Engineers (ASME) and the American Institute of Aeronautics and Astronautics (AIAA).
- Students are encouraged to augment their classroom experiences with the cooperative education program and the strong graduate research program of the department.
- Students are encouraged to take the Fundamentals of Engineering Examination as the first step in the process of becoming a registered professional engineer.
- The bachelor's candidate must complete an independent design project with an oral and written final report.
- The master's candidate must demonstrate independent research resulting in a thesis or project suitable for publication and/or presentation in peer reviewed journals and/or conferences.
- The doctoral candidate must complete a rigorous independent thesis containing original research results appropriate for publication in archival journals and presentation at leading technical conferences.

FACULTY
Clare M. Rimnac, Ph.D.  
(Lehigh University)  
Professor and Chair  
Biomechanics; fatigue and fracture mechanics

Jaikrishnan R. Kadambi, Ph.D.  
(University of Pittsburgh)  
Professor and Associate Chair  
Experimental fluid mechanics; multiphase flows; laser diagnostics; bio-fluid mechanics; turbomachinery

Alexis R. Abramson, Ph.D.  
(UC Berkeley)  
Assistant Professor  
Micro/nanoscale heat transfer and energy transport, nanotechnology, biomimetics, nanoscale biomedical applications

Maurice L. Adams, Ph.D.  
(University of Pittsburgh)  
Professor  
Dynamics of rotating machinery; nonlinear dynamics; vibration; tribology; turbomachinery

J. Iwan D. Alexander, Ph.D.  
(Washington State University)  
Professor and Director of the National Center for Space Exploration Research  
Fluid dynamics; heat and mass transfer, low gravity fluid dynamics, interfacial transport capillary surface equilibria and dynamics, two-phase flow in porous media, vibrational convection

Christopher Hernandez, Ph.D.  
(Stanford University)  
Assistant Professor  
Musculoskeletal biomechanics, solid mechanics and medical device design

Yasuhiro Kamotani, Ph.D.  
(Case Western Reserve University)  
Professor  
Experimental fluid dynamics; heat transfer; microgravity fluid mechanics

Kiju Lee, Ph. D.
Combustion; propulsion, and fire research
Leonard Case Jr. Professor of Engineering
Princeton University

James S. Tien, Ph.D.
(Princeton University)

Associate Professor
Biomechanics; applied mechanics

Joseph M. Mansour, Ph.D.
(Rensselaer Polytechnic Institute)

Professor

Joseph M. Prahl, Ph.D.
(Harvard University), P.E.

Professor

Fluid dynamics; heat transfer; tribology

Vikas Prakash, Ph.D.
Brown University

Professor

Experimental and computational solid mechanics; dynamic deformation and failure; time resolved high-speed friction; ultra-high speed manufacturing processes; ballistic penetration of super alloys; engine fan-blade containment, nanomechanics

Roger D. Quinn, Ph.D.
Virginia Polytechnic Institute & State University

Arthur P. Armington Professor of Engineering

Biologically inspired robotics; agile manufacturing systems; structural dynamics, vibration and control

Chih-Jen Sung, Ph.D.
Princeton University

Professor

Combustion, propulsion, laser diagnostics

Melissa L. Knothe Tate, Ph.D.
Swiss Federal Institute of Technology, Zurich, CH

Associate Professor

Etiology and innovative treatment modalities for osteoporosis, fracture healing, osteolysis and osteonecrosis

James S. Tien, Ph.D.
Princeton University

Leonard Case Jr. Professor of Engineering

Combustion; propulsion, and fire research

Emeritus Faculty

Dwight T. Day, Ph.D.
University of Iowa, P.E.

Professor Emeritus

Musculo-skeletal biomechanics; applied mechanics

Isaac Greber, Ph.D.
Massachusetts Institute of Technology

Professor Emeritus

Fluid dynamics; molecular dynamics and kinetic theory; biological fluid mechanics; acoustics

Thomas P. Kicher, Ph.D.
Case Institute of Technology

Arthur P. Armington Professor Emeritus of Engineering

Elastic stability; plates and shells; composite materials; dynamics; design; failure analysis

Simon Ostrach, Ph.D.
Brown University, P.E.

Wilbert J. Austin Distinguished Professor
Emeritus of Engineering

Fluid mechanics; heat transfer; micro-gravity phenomena; materials processing; physico-chemical hydrodynamics

Eli Reshotko, Ph.D.
California Institute of Technology

Kent H. Smith Emeritus Professor of Engineering

Fluid Dynamics; heat transfer, propulsion; power generation

S. Stanford Manson, M.S.
University of Michigan

Emeritus Professor

Metal Fatigue, Creep Rupture, Thermal Stress, Plasticity, Fracture Mechanics

Research Faculty

R. Balasubramaniam, Ph.D.
Case Western Reserve University

Research Associate Professor

National Center for Space Exploration Research; Microgravity Fluid Mechanics

Uday Hegde, Ph.D.
Georgia Institute of Technology

Research Associate Professor

National Center for Space Exploration Research Combustion, turbulence and acoustics

Mohammad Kassemi, Ph.D.
University of Akron

Research Professor

National Center for Space Exploration Research Computational Fluid Mechanics

Julie Klienhenz, Ph.D.
Case Western Reserve University

Assistant Research Professor

National Center for Space Exploration Research Fire research, space exploration

Vedha Nayagam, Ph.D.
University of Kentucky

Research Associate Professor

National Center for Space Exploration Research Low gravity combustion and fluid physics

Fumiaki Takahashi, Ph.D.
Keio University

Research Associate Professor

National Center for Space Exploration Research Combustion, fire research, laser diagnostics

Associated Faculty

John Adamczyk, Ph.D.
University of Connecticut

Adjunct Professor

NASA Glenn Research Center Turbomachinery

Michael Adams, Ph.D.
Case Western Reserve University

Adjunct Instructor

Machinery Vibrations Institute

Christos C. Chamis, Ph.D.
Case Western Reserve University

Adjunct Professor

NASA Glenn Research Center Structural analysis; composite materials; probabilistic structural analysis; testing methods

Malcolm N. Cooke, Ph.D.
Case Western Reserve University

Adjunct Assistant Professor

University of Texas at San Antonio Advanced manufacturing systems; computer integrated manufacturing

James Drake, B.S.E
Case Western Reserve University

Adjunct Instructor

Mechanical and Aerospace Engineering Department

Robert V. Edwards, Ph.D.
The Johns Hopkins University

Professor of Chemical Engineering

Laser anemometry; mathematical modeling; data acquisition

Christophe Geuzaine
University of Liege, Belgium

Adjunct Professor of Mathematics

Numerical Analysis, Scientific Computing, Computational Electromagnetism

Mohammad Kassemi, Ph.D.
University of Akron

Adjunct Professor

National Center for Space Exploration Research Computational Fluid Mechanics

Kenneth Loparo, Ph.D.
Case Western Reserve University
resources and machines. The mechanical engineer’s function is to apply science and technology to the design, analysis, development, manufacture, and use of machines that convert and transmit energy, and to apply energy to the completion of useful operations. The top ten choices of the millennium committee of the National Academy of Engineering, asked to select the 20 top engineering accomplishments of the 20th century, was abundant with mechanical engineering accomplishments, electrification (large scale power generation and distribution), automobiles, air travel (development of aircraft and propulsion), mechanized agriculture, and refrigeration and air conditioning.

FIVE-YEAR PROGRAMS OF STUDY

The department curriculum offers a five-year cooperative (co-op) education program and five-year combined bachelor’s-master’s programs. Co-op weaves two 7-month industrial internships into the normal four-year program by combining a summer with either a fall or spring semester to form the 7-month industrial experiences. Students apply in the middle of the sophomore year and nominally begin the internship in the spring semester of the junior year. After completing the second internship, students return to campus in the spring or fall to complete their final year of study.

The 5-year combined bachelor’s-master’s program allows a student to double count 9 credit hours of graduate course work towards the Bachelor of Science degree in any one of the department’s two degree programs. By completing the remaining graduate credit hours and a thesis a student may earn a Master of Science degree in mechanical or aerospace engineering by the end of the fifth year. Application to this program is initiated in the spring of the junior year with the department’s graduate student programs office. A minimum grade point of 3.2 is required for consideration for this accelerated program.

Another option is the 5 year TimE Program taught in conjunction with the Weatherhead School of Management in which a student completes a B.S. in Aerospace or Mechanical Engineering and earns a Master of Engineering Management.

GRADUATE PROGRAMS

Master of Science Program

(Research or Project oriented)

For a research-oriented M.S., each candidate must complete a minimum of 27 hours of graduate-level credits, including at least 18 hours of graduate-level courses and 9 credit hours of M.S. thesis research.

For the project-oriented option students must complete 27 credit hours distributed in either of three ways: 21, 24, or 27 credit hours (7, 8, or 9 courses) of approved graduate course work and 0, 3, or 6 credit hours of project replacing the M.S. thesis.

(Course oriented)

Each M.S. candidate must complete 30 hours of graduate-level credits. The candidate has to pass a comprehensive examination upon completion of the course work.

Master of Engineering Program

The Department of Mechanical and Aerospace Engineering participates in the practice-oriented Master of Engineering Program offered by the Case School of Engineering. In this program, students complete a core program consisting of five courses, and select a four-course sequence in an area of interest.

Doctor of Philosophy Program

Students wishing to pursue the doctoral degree in mechanical and aerospace engineering must successfully pass the doctoral qualifying examination consisting of both written and oral components. Qualifying exams are offered on applied mechanics, dynamics and design or fluid and thermal engineering sciences. Students can choose to take it at the beginning of the fall or spring semesters. The minimum course requirements for the Ph.D. degree are as follows:

Depth Courses

All programs of study must include 6 graduate level mechanical courses in mechanical engineering or aerospace engineering. Usually these courses follow a logical development of a branch of mechanics, dynamics and design or fluid and thermal engineering science determined in conjunction with the student’s dissertation advisor to meet the objectives of the dissertation research topic.

Breadth and Basic Science Courses

A minimum of six graduate courses are required to fulfill the breadth and basic science courses. The basic science requirement is satisfied by taking two courses in one of the area of science and mathematics. Four additional courses are needed to provide the breadth outside the student’s area of research.
**Dissertation Research**

All doctoral programs must include a minimum of 18 credit hours of thesis research, EMAE 701.

**Residence and Teaching Requirements**

All doctoral programs must meet the residency requirements of the dean of graduate studies and the teaching requirements of the Case School of Engineering.

**FACILITIES**

The education and research philosophy of the Department of Mechanical and Aerospace Engineering for both the undergraduate and graduate programs is based on a balanced operation of analytical, experimental, and computational activities. All three of these tools are used in a fundamental approach to the professional activities of research, development, and design. Among the major assets of the department are the experimental facilities maintained and available for the faculty, students, and staff.

The introductory undergraduate courses are taught through the Robert M. Ward '41 Laboratory, the Bingham Student Workshop, the Reinberger Product and Process Development Laboratory, and the Reinberger Design Studio. The Ward Laboratory is modular in concept and available to the student at regularly scheduled class periods to conduct a variety of prepared experimental assignments. The lab is equipped with a variety of instruments ranging from classic analog devices to modern digital computer devices for the collection of data and the control of processes. Advanced facilities are available for more specialized experimental tasks in the various laboratories dedicated to each specific discipline. Most of these laboratories also house the research activities of the department, so students are exposed to the latest technology in their prospective professional practice. Finally, every undergraduate and graduate degree program involves a requirement, i.e., Project, Thesis or Dissertation, in which the student is exposed to a variety of facilities of the department.

The following is a listing of the major laboratory facilities used for the advanced courses and research of the department.

**Biorobotics Laboratory Facilities**

The Biorobotics Laboratory (http://birobots.cwru.edu/) consists of approximately 1080 square feet of laboratory and 460 square feet of office space. The lab includes two CNC machines for fabrication of smaller robot components. The lab’s relationship with CAISR (Center for Automation and Intelligent Systems Research) provides access to a fully equipped machine shop where larger components are fabricated. The laboratory hardware features several biologically inspired hexapod robots including two cockroach-like robots, Robot III and Robot IV. Both are based on the Blaberus cockroach and have 24 actuated revolute joints. They are 17 times larger than the insect (30 inches long). Robot IV is actuated with pneumatic artificial muscles. A compressed air facility has been installed to operate the robots. In addition, the lab contains structural dynamic testing equipment (sensors, DAQ boards, shakers) and an automated treadmill (5 feet by 6 feet) for developing walking robots. The Biorobotics Laboratory contains 20 PCs, and a dedicated LAN connected to the campus. Algor Finite Element Analysis software, Mechanical Desktop, and Pro/Engineer are installed for mechanical design and structural analysis. Also, the lab has developed dynamic simulation software for analyzing walking animals and designing walking robots.

**Case Low Speed Research Wind Tunnel**

The Case Low Speed Research Wind Tunnel provides very low free stream turbulence levels. The tunnel is completely modular, allowing a variety of different experimental configurations to be realized, greatly extending the tunnel’s functionality.

The tunnel, originally constructed in the late 1940’s, has undergone a rebuilding effort with the construction of a new test section, the replacement of the entire upstream half of the wind tunnel, the rebuild of the drive section, and installation of a new drive motor and motor controller. The new upstream portion provides the incoming flow treatment necessary to produce a low free stream turbulence level. The improved drive section and motor increase the tunnel’s maximum speed while reducing noise and vibration levels. With these improvements, the tunnel now supports research of the highest quality as well as graduate and undergraduate student experiments.

**Combustion Diagnostics Laboratory**

The combustion diagnostics laboratory is directed towards the experimental and computational investigation of combustion and propulsion phenomena to gain insights into efficient and environmentally-friendly combustion.

Research activities are conducted via state-of-the-art non-intrusive laser-based diagnostic techniques, computation with detailed chemistry and transport, and mathematical analysis of flame structure and dynamics, with strong coupling between the individual components. The laboratory is equipped to conduct laser diagnostics measurements, including Sustained Laser Induced Fluorescence, Planar Laser Induced Fluorescence, Raleigh Scattering, Coherent Anti-Stoke Raman Spectroscopy, and Particle Imaging Velocimetry.

Current projects include laser diagnostics of reacting and non-reacting flows, aerodynamics and chemical structure of flames, ignition and flame stabilization in supersonic flows, development of detailed and reduced chemistry, catalytic combustion, high-pressure and unsteady flame phenomena, soot and NOx formation, microgravity combustion, emission reduction in internal combustion engines, and advanced propulsion systems.

**Distributed Intelligence and Robotics Laboratory**

The Distributed Intelligence and Robotics Laboratory (DIRL) is a new laboratory in the Department of Mechanical and Aerospace Engineering that facilitates research activities on robotics and mechatronics. The primary research focuses on distributed intelligence, multi-agent systems, biologically-inspired robotics and medical applications. The laboratory is currently being constructed to house self-sufficient facilities and equipment for designing, testing and preliminary manufacturing. The DIRL also conduct theoretical research related to design methodology and control algorithms based on information theory, complexity analysis and group theory.

**Laser Flow Diagnostics Laboratory**

A laser diagnostics laboratory is directed toward investigation of complex two-phase flow fields involved in energy-related areas, bio-fluid mechanics of cardiovascular systems, slurry flow in pumps and thermacoustic power and refrigeration systems. The laboratory is equipped with state-of-the-art Particle Image Velocimetry (PIV) equipment, phase Doppler and laser Doppler anemometers and modern data acquisition and analysis equipment including PCs. The laboratory houses a clear centrifugal slurry flow pump loop and heart pump loop. Current research projects include...
investigation of flow through heart pumps, CSF flow in ventricles, investigation of solid-slurry flow in centrifugal pumps using ultrasound technique and PIV, thermo-acoustic refrigeration for space application.

Mechanics of Materials Experimental Facility
The major instructional as well as research facility for experimental methods in mechanics of materials is the Daniel K. Wright Jr. Laboratory. Presently, the facility houses a single-stage gas-gun along with tension/compression split Hopkinson bar and torsional Kolsky bar apparatus for carrying out fundamental studies in dynamic deformation and failure of advanced material systems. Hewlett Packard and Tektronix high speed, wide bandwidth digitizing oscilloscopes along with strain-gage conditioners and amplifiers are available for data recording and processing. The facility houses state-of-the-art laser interferometry equipment for making spatial and temporal measurements of deformation. High speed Hg-Cd-Te detector arrays are available for making time resolved multi-point non-contact temperature measurements.

A Schenck Pegasus digital servo-controlled hydraulic testing system with a 20Kip Universal testing load frame equipped with hydraulic grips and instrumentation is available for quasi-static mechanical testing under load or displacement control. A newly developed moiré microscope is available for studying large-scale inelastic deformation processes on micron size scales. CCD camera along with the appropriate hardware/software for image-acquisition, processing and analyzing of full field experimental data from optical interferometers such as moiré microscope, photo-elasticity, and other laser based spatial interferometers are available.

Rotating Machinery Dynamics and Tribology Laboratory
This laboratory focuses on rotating machinery monitoring and diagnostic methods relating chaos content of dynamic non-linearity and model-based observers’ statistical measures to wear and impending failure modes. A double-spool-shaft rotor dynamics test rig provides independent control over spin speed and frequency of an adjustable magnitude circular rotor vibration orbit for bearing and seal rotor-dynamic characterizations.

Simultaneous radial and axial time-varying loads on any type of bearing can be applied on a second test rig. Real time control of rotormass unbalance at two locations on the rotor while it is spinning up to 10,000 rpm, simultaneous with rotor rubbing and shaft crack propagation, can be tested on a third rig. Self-excited instability rotor vibrations can be investigated on a fourth test rig.

Musculoskeletal Mechanics and Materials Laboratories
These laboratories are a collaborative effort between the Mechanical and Aerospace Engineering Department of the Case School of Engineering and the Department of Orthopaedics of the School of Medicine that has been ongoing for more than 40 years. Research activities have ranged from basic studies of mechanics of skeletal tissues and skeletal structures, experimental investigation of prosthetic joints and implants, measurement of musculoskeletal motion and forces, and theoretical modeling of mechanics of musculoskeletal systems. Many studies are collaborative, combining the forces of engineering, biology, biochemistry, and surgery. The Biomechanics Test labs include Instron mechanical test machines with simultaneous axial and torsional loading capabilities, a non-contacting video extensometer for evaluation of biological materials and engineering polymers used in joint replacements, acoustic emission hardware and software, and specialized test apparatus for analysis of joint kinematics. The Bio-imaging Laboratory includes microscopes and three-dimensional imaging equipment for evaluating tissue microstructure and workstations for three-dimensional visualization, measurement and finite element modeling. An Orthopaedic Implant Retrieval Analysis lab has resources for characterization and analysis of hard tissues and engineering polymers, as well as resources to maintain a growing collection of retrieved total hip and total knee replacements that are available for the study of implant design. The Soft Tissue Biomechanics lab includes several standard and special test machines. Instrumentation and a Histology facilities support the activities within the Musculoskeletal Mechanics and Materials Laboratories.

National Center for Space Exploration Research
The National Center for Space Exploration Research (NCSER) is a collaborative effort between the Universities Space Research Association (USRA), Case Western Reserve University (CWRU), and NASA Glenn Research Center (GRC) that provides GRC with specialized research and technology development capabilities essential to sustaining its leadership role in NASA missions. Expertise resident at NCSER includes reduced gravity fluid mechanics, reduced gravity combustion processes; heat transfer, two-phase flow, micro-fluidics, and phase change processes; computational multiphase fluid dynamics, heat and mass transfer, computational simulation of physico-chemical fluid processes and human physiological systems. This expertise has been applied to:

- Cryogenic fluid management
- On orbit repair of electronics
- Spacecraft fire safety
- Exploration life support
- Energy storage
- Dust management
- Thermal management and control
- Environmental monitoring/control
- ISS experiment development
- Integrated system health monitoring
- Astronaut health
- Planetary Surface Mobility
- In situ resource utilization
- Materials synthesis
- Bio- fluid mechanics
- Biosystems modeling

nanoEngineering Laboratory
The nanoEngineering Laboratory focuses on research related to various nanotechnology applications with particular emphasis on energy conversion, generation and storage in nanostructured and bio-inspired materials. Synthesis of polymer-based nanocomposites, nanofluids and individual nanostructures is accomplished with tools available in the laboratory. Furthermore, the laboratory houses various pieces of equipment for thermal and electrical characterization of these materials. Research projects include investigation of nanocomposites for thermoelectric devices, molecular simulation of thermal transport across interfacial regions, characterization of nanomaterials for thermal management as well as thermal insulation applications, and biomimetic research on a protein-based shark gel.

Other Experimental Facilities
The department facilities also include several specialized laboratories.

The GM Engines Laboratory is a modern facility for measuring the dynamic performance of internal combustion engines while moni-
toring behavioral parameters such as pressures, temperatures and exhaust emissions. The test cells can be operated completely by remote control with all data collected by digital computers.

Engineering Services Fabrication Center offers complete support to assist projects from design inception to completion of fabrication. Knowledgeable staff is available to assist Faculty, Staff, Students, Researchers, and personnel associated with Case Western Reserve University.

The Harry A. Metcalf Computational Laboratory offers 28 Dell Pentium IV computers ranging from 2.5 to 3.4GHz, running Windows XP Professional attached to 3 Dell dual processor servers, running Windows NT 4.0 Server or Windows Server 2003, via local area network running at 1Gb/s. The computer lab also offers 29 UTP connections for Laptops running at 10/100 Mbps.

The Harry A. Metcalf Computational Laboratory provides access to a number of software packages. Some of these include SolidWorks 2008 SP4.0; Abaqus CAE 6.8 for FEA; Microsoft Visual C++; MatLab 2008A; Microsoft Office 2007 Professional; Mathematica 6.0.1; MathType 6.0; and LabView 8.5. All of the laboratory’s computers are directly linked to the campus network giving students access to a large variety of software on different libraries across campus. The lab is open for student use 24 hours a day 7 days a week via card access.

The Bingham Student Workshop, BSW, is a 2380 sq.ft. facility complete with machining, welding, metal fabrication, and woodworking equipment. This facility is available for the Case undergrads in Mechanical Engineering. Before gaining access to the shop all ME students are required to take the EMAE 172, Mechanical Manufacturing course. This course gives the student a foundation in basic machining, welding, sheet metal fabrication, and safety. Manual drafting, design, and computer-aided drafting is also included in the course. After completion the student can use the shop for other Mechanical Engineering courses requiring prototypes. The BSW, is also, used for senior projects and student organizations, such as, the SAE Baja and Formula Pittsburgh Supercomputing Center. Computing-intensive research projects can obtain an account on those supercomputers through their advisors. Research projects carried on in cooperation with the NASA Glenn Research Center can have access to NASA computing facilities. Sophisticated, extensive, and updated general and graphics software are available for applications in research and classroom assignments.

High Performance computing: For high performance computing the department uses the CWRU high performance computing cluster (HPCC). The HPCC consists of 112 compute nodes with Intel Pentium 4 Xeon EM64T processors. All nodes are interconnected with Gigabit Ethernet for MPI message passing and all nodes are interconnected by a separate Ethernet for the purpose of out-of-band cluster management. The MAE Department also has a direct access to all the Ohio Supercomputing Center and all NSF supercomputing centers, primarily to the Pittsburgh Supercomputing Center. Computing-intensive research projects can obtain an account on those supercomputers through their advisors. Research projects carried on in cooperation with the NASA Glenn Research Center can have access to NASA computing facilities. Sophisticated, extensive, and updated general and graphics software are available for applications in research and classroom assignments.

RESEARCH
The research in the department encompasses many areas of modern technology. Among them:

Aerospace Technology and Space Exploration
Flow in turbomachinery, molecular dynamics simulation of rarefied gas flow, two phase flow, supersonic combustion and propulsion, thermoacoustic refrigeration, in-situ resource utilization from space. Gravitational effects on transport phenomena, fluids and thermal processes in advance life support systems for long duration space travel, interfacial processes, g-jitter effects on microgravity flows, two phase flow in zero and reduced gravity.

Combustion and Energy
Synthetic and alternative fuels, chemical kinetic models and pollutant formation, hydrogen ignition and safety, catalytic combustion, coal combustion, Flame spread, fire research and protection, combustion in micro- and partial gravity, microgravity combustion.

Dynamics of Rotating Machinery
Forced and instability vibration of rotor/bearing/ seals systems, nonlinear rotor dynamics, torsional rotor vibration, rotor dynamic characteristics of bearings and seals (computational and experimental approach), control of rotor system dynamics, rub-impact studies on bearings and compressor/turbine blading systems. Advanced rotating machinery monitoring and diagnostics.

Engineering Design
Optimization and computer-aided design, feasibility studies of kinematic mechanisms, kinematics of rolling element-bearing geometries, mechanical control systems, experimental stress analysis, failure analysis, development of biologically inspired methodologies.

Manufacturing
Agile manufacturing work cells developed to facilitate quick change over from assembly of one object to assembly of other objects contains multiple robots, a conveyor system and flexible parts feeders.

Materials
Development of novel experimental techniques to investigate material response at elevated temperatures and high rates of deformation. Constitutive modeling of damage
evolution, shear localization and failure of advanced engineering materials. Fabrication of mechanical properties of composite materials; creep, rupture, and fatigue properties of engineering materials at elevated temperatures.

Microgravity Research
Combustion phenomena in microgravity, spacecraft fire safety.

Multiphase Flow Research

Nanotechnology
Research related to various nanotechnology applications with particular emphasis on energy conversion, generation and storage in nanostructured materials including the synthesis of polymer-based nanocomposites. Current research projects include investigation of nanocomposites for thermoelectric devices, molecular simulation of thermal transport across interfacial regions, and biomimetic research on protein-based shark gel.

Orthopaedic Engineering
Kinematics and mechanical joint dynamics of the knee, hip, ankle, and spine; dynamic stability of the human spine; mechanics of injuries; gait analysis; design and failure analysis of medical prostheses and material selection; biomechanical measurements, tools and instrumentation; mechanical properties of, and transport processes in, bone and soft tissue.

Robotics
Biologically inspired and biologically based design and control of legged robots. Dynamics, control and simulation of animals and robots.

Tribology and Seals
Time-resolved friction on nano- and micro-second time scale with applications to high speed machining and mechanics of armor penetration. Study of gas lubricated foil bearing systems with application to oil-free turbomachinery. Evaluation of advanced seal concepts and configurations for high temperature applications in gas turbine engines.

Turbomachinery
Vibration characteristics of seals and bearings and measurement of chaotic motion. Rub impact studies of blade tip/casing interactions, particle-blade/casing interactions in centrifugal pumps.

MECHANICAL AND AEROSPACE ENGINEERING (EMAE)

Course Descriptions

EMAE C100. Co-Op Seminar I for Mechanical Engineering (1)
Professional development activities for students returning from cooperative education assignments. Recommended preparation: COOP 001.

EMAE C200. Co-Op Seminar II for Mechanical Engineering (2)
Professional development activities for students returning from cooperative education assignments. Recommended preparation: COOP 002 and EMAE C100.

EMAE 172. Mechanical Manufacturing (4)
The course is taught in two sections (Graphics and Manufacturing Processes) through a series of lectures, laboratory sessions and weekly engineering workshop classes. The course aim is to provide a solid manufacturing engineering foundation. The course includes: manual and computer-aided drafting and design (CAD), primary and secondary engineering processes, engineering materials and a field trip to a local company. Laboratory sessions will provide hands-on experience using Pro/ENGINEER CAD software.

EMAE 181. Dynamics (3)
Elements of classical dynamics: particle kinematics and dynamics, including concepts of force, mass, acceleration, work, energy, impulse, momentum. Kinetics of systems of particles and of rigid bodies, including concepts of mass center, momentum, mass moment of inertia, dynamics equilibrium. Elementary vibrations. Recommended preparation: MATH 122 and PHYS 121 and ENGR 200.

EMAE 250. Computers in Mechanical Engineering (3)

EMAE 271. Kinematic Analysis and Synthesis (3)
Graphical, analytical, and computer techniques for analyzing displacements, velocities, and accelerations in mechanisms. Analysis and synthesis of linkages, cams, and gears. Laboratory projects include analysis, design, construction, and evaluation of students’ mechanisms. Recommended preparation: EMAE 181.

EMAE 282. Mechanical Engineering Laboratory I (2)
Techniques and devices used for experimental work in mechanical engineering and fluid and thermal science. Lectures on topics in the theory of experimentation. Laboratory includes typical experiments, measurements, analysis, and report writing. Recommended preparation: EMAE 181 and ENGR 225.

EMAE 283. Mechanical Engineering Laboratory II (2)
Application of techniques developed in EMAE 282 to solution of individual semester-long experimental projects, including complete report on results. Recommended preparation: EMAE 282.

EMAE 290. Computer-Aided Manufacturing (3)
A manufacturing engineering course covering a wide range of topics associated with the application of computers to the product design and manufacturing process. Topics include: Computer-aided design (CAD) using Pro/ENGINEER software, design methodology, the design/manufacturing interface, introduction to computer numerical control (CNC), manual part-programming for CNC milling and CNC turning machine tools. Significant time will be spent in both CAD and CNC laboratories. Recommended preparation: EMAE 172.

EMAE 325. Fluid and Thermal Engineering II (4)
The continuation of the development of the fundamental fluid and thermal engineering principles introduced in ENGR 225, Introduction to Fluid and Thermal Engineering. Applications to heat engines and refrigeration, chemical equilibrium, mass transport across semi-permeable membranes, mixtures and air conditioning, developing external and internal flows, boundary layer theory, hydrodynamic lubrication, the role of diffusion and convection in heat and mass transfer, radiative heat transfer and heat exchangers. Recommended preparation: ENGR 225.

EMAE 350. Mechanical Engineering Analysis (3)

EMAE 352. Thermodynamics in Energy Processes (3)
Thermodynamic properties of liquids, vapors and real gases, thermodynamic relations, non-reactive mixtures, psychometrics, combustion, thermodynamic cycles, compressible flow. Prereq: ENGR 225.

EMAE 355. Design of Fluid and Thermal Elements (3)

EMAE 356. Aerospace Design (3)
Interactive and interdisciplinary activities in areas of fluid mechanics, heat transfer, solid mechanics, thermodynamics, and systems analysis approach in design of aerospace vehicles. Projects involve devel-
oping (or improving) design of aerospace vehicles of current interest (e.g., hypersonic aircraft) starting from mission requirements to researching developments in relevant areas and using them to obtain conceptual design. Senior standing required.

EMAE 359. Aero/Gas Dynamics (3)
Review of conservation equations. Potential flow. Subsonic airfoil. Finite wing. Isentropic one-dimen-

EMAE 360. Engineering Design (3)
This is a capstone senior course focused on mechan-
ical engineering design, comprised of the following two major components, (a) advanced mechanical design analysis methods and tools, (b) a design-and-build semester team project. The advanced design analysis portion covers an introduction to elasticity theory with application to finite-element analyses, friction and wear design analysis methods, bearing and seal undertaken by teams of five persons, each team building and demonstrating its design. Prereq: ECV 310 and Senior standing required. SAGES Senior Cap

EMAE 370. Design of Mechanical Elements (3)

EMAE 372. Relation of Materials to Design (4)
The design of mechanical and structural elements considering static failure, elastic stability, residual stresses, stress concentration, impact, fatigue, creep and environmental conditions on the mechanical behavior of engineering materials. Rational approaches to materials selection for new and existing designs of structures. Laboratory experiments coordinated with the classroom lectures. Prereq: ECV 310.

EMAE 376. Aerostuctures (3)

EMAE 377. Biorobotics Team Research (3)
Many exciting research opportunities cross discipli-
mary lines. To participate in such projects, research-
ers must operate in multi-disciplinary teams. The Biorobotics Team Research course offers a unique capstone opportunity for undergraduate students to utilize skills they developed during their undergraduate experience while acquiring new teaming skills. A group of eight students form a research team under the direction of two faculty leaders. Team members are chosen from appropriate majors through interviews with the faculty. They will research a biological mechanism or principle and develop a robotic device that captures the actions of that mechanism. Although each student will cooperate on the team, they each have a specific role, and must develop a final paper that describes the research generated on their aspect of the project. Students meet once per week and two 2-hour lab periods. Initially students brainstorm ideas and identify the project to be pursued. They then acquire biological data and generate robotic designs. Both are further developed during team meetings and reports. Final oral reports and a demonstration of the robotic design occur in week 15. Offered as BIOL 377, EMAE 377, BIOL 477, and EMAE 477. SAGES Senior Cap

EMAE 378. Mechanics of Machinery I (3)
Comprehensive treatment of design analysis meth-
ods and computational tools for machine compo-
ents. Emphasis is on bearings, seals, gears, hy-
draulic drives and actuators, with applications to machine tools. Recommended preparation: EMAE 370. Offered as EMAE 378 and EMAE 478.

EMAE 379. Mechanics of Machinery II (3)
The focus of this course is Rotating Machinery Vi-
bilation, and it is comprised of four major compo-
ents: 1) modeling, 2) analyses, 3) measurement techniques, and 4) physical insights into rotor vibra-

EMAE 381. Flight and Orbital Mechanics (3)
Aircraft performance: take-off and landing, unaccel-

EMAE 382. Propulsion (3)
Energy sources of propulsion. Performance criteria. Review of one-dimensional gas dynamics. Introduc-

EMAE 387. Vibration Problems in Engineering (4)
Free and forced vibration problems in single and multi-degree of freedom damped and undamped linear systems. Vibration isolation and absorbers. Modal analysis and approximate solutions. Intro-
duction to vibration of continuous media. Noise problems. Laboratory projects to illustrate theo-
retical concepts and applications. Recommended preparation: MATH 224 and EMAE 181.

EMAE 390. Computer-Integrated Manufacturing (3)
The course is taught through a series of lectures, class discussions, student teams, and laboratory sessions. The course aim is to provide a solid understanding of the many aspects of the engineering processes and systems associated with the integration of product design through to manufacture. Laboratory sessions will provide hands-on experience using a number of Pro/ENGINEER modules to become aware of the integration of manufacturing issues. Recommended preparation: EMAE 290.

EMAE 396. Special Topics in Mechanical and Aerospace Engineering (1 - 18)
(Credit as arranged.)

EMAE 397. Independent Laboratory Research (1 - 3)
Independent research in a laboratory.

EMAE 398. Senior Project (3)
Individual or team design or experimental project under faculty supervisor. Requirements include periodic reporting of progress, plus a final oral presenta-
tion and written report. Recommended prepara-
tion: Senior standing, EMAE 360, and consent of instructor. SAGES Senior Cap

EMAE 399. Advanced Independent Laboratory Research/Design (1 - 3)
Students perform advanced independent research or an extended design project under the direct mentorship of the instructor. Typically performed as an extension to EMAE 397 or EMAE 398. Prereq: EMAE 397.

EMAE 400T. Graduate Teaching I (0)
This course will engage the Ph.D. candidate in a variety of teaching experiences that will include di-
rect contact (for example, teaching recitations and laboratories, guest lectures, office hours) as well non-contact preparation (exams, quizzes, demon-
strations) and grading activities. The teaching ex-
periences will be conducted under the supervision of the faculty member(s) responsible for coordinat-
ing student teaching activities. All Ph.D. candidates enrolled in this course sequence will be expected to perform direct contact teaching at some point in the sequence. Recommended preparation: Ph.D. student in Mechanical Engineering.

EMAE 401. Mechanics of Continuous Media (3)
Vector and tensor calculus. Stress and strain, fi-
nite strain and deformation tensors. Kinematics of continuous media, general conservation and balance laws. Material symmetry groups and observer transformation. Constitutive relations with applica-
tions to solid and fluid mechanics problems.

EMAE 402. Muscles, Biomechanics, and Control of Movement (4)
Quantitative and qualitative descriptions of the ac-
tion of muscles in relation to human movement. Introduction to rigid body dynamics and dynamics of multi-link systems using Newtonian and Lagran-
gian approaches. Muscle models with application to control of multi-joint movement. Forward and inverse dynamics of multi-joint, muscle driven systems. Dissection, observation and recitation in the anatomy laboratory with supplemental lectures concentrating on kinesiology and muscle function. Recommended preparation: EMAE 181 or equiv-

EMAE 403. Aerophysics (3)
The course introduces the physical and chemical...
EMAE 415. Introduction to Musculo-skeletal Biomechanics (3)

EMAE 424. Introduction to Nanotechnology (3)
An exploration of emerging nanotechnology research. Lectures and class discussion on 1) nanostructures: superlattices, nanowires, nanotubes, quantum dots, nanoparticles, nanocomposites, proteins, bacteria, DNA; 2) nanoscale physical phenomena: mechanical, electrical, chemical, thermal, biological, optical, magnetic; 3) nanofabrication: bottom up and top down methods; 4) characterization: microscopy, property measurement techniques; 5) devices/applications: electronics, sensors, actuators, biomedical, energy conversion. Topics will cover interdisciplinary aspects of the field. Offered as ECNS 424 and EMAE 424.

EMAE 453. Advanced Fluid Dynamics I (3)
Derivation and discussion of the general equations for conservation of mass, momentum, and energy using tensors. Several exact solutions of the incompressible Navier-Stokes equations. Kinematics and dynamics of inviscid, incompressible flow including free streamline theory developed using vector, complex variable, and numerical techniques.

EMAE 454. Advanced Fluid Dynamics II (3)

EMAE 457. Combustion (3)
Chemical kinetics and thermodynamics: governing conservation equations for chemically reacting flows; laminar premixed and diffusion flames; turbulent flames; ignition; extinction and flame stabilization; detonation; liquid droplet and solid particle combustion; flame spread, combustion-generated air pollution; applications of combustion processes to engines, rockets, and fire research.

EMAE 458. Propulsion (3)
Energy sources of propulsion. Momentum theorems and performance criteria. Air breathing systems and their components: chemical rockets—liquid and solid propellant; nuclear rockets—solid core, liquid core and gaseous core; rocket heat transfer and heat protection; electric propulsion—electrothermal, electrostatic and plasma thrusters; thermonuclear propulsion. Recommended preparation: Consent of instructor.

EMAE 459. Advanced Heat Transfer (3)
Analysis of engineering heat transfer from first principles including conduction, convection, radiation, and combined heat and mass transfer. Examples of significance and role of analytic solutions, approximate methods (including integral methods) and numerical methods in the solution of heat transfer problems. Recommended preparation: EMAE 453.

EMAE 460. Theory and Design of Fluid Power Machinery (3)
Fluid mechanic and thermodynamic aspects of the design of fluid power machinery such as axial and radial flow turbomachinery, positive displacement devices and their component characteristics. Recommended preparation: Consent of instructor.

EMAE 471. Design Methods (3)
An advanced course on design methodologies. Conceptualization, preliminary design, detail design, and manufacturing. Failure analysis, materials selection, methods of design optimization, and current approaches in computer-aided design. Recommended preparation: EMAE 360.

EMAE 477. Biorobotics Team Research (3)
Many exciting research opportunities cross disciplinary lines. To participate in such projects, researchers must operate in multi-disciplinary teams. The Biorobotics Team Research course offers a unique capstone opportunity for undergraduate students to utilize skills they developed during their undergraduate experience while acquiring new teaming skills. A group of eight students form a research team under the direction of two faculty leaders. Team members are chosen from appropriate majors through interviews with the faculty. They will research a biological mechanism or principle and develop a robotic device that captures the actions of that mechanism. Although each student will cooperate on the team, they each have a specific role, and must develop a final paper that describes the research generated on their aspect of the project. Students meet for one class period per week and two 2-hour lab periods. Initially students brainstorm ideas and identify the project to be pursued. They then acquire biological data and generate robotic designs. Both are further developed during team meetings and reports. Final oral reports and a demonstration of the robotic device occur in week 15. Offered as BIOL 377, EMAE 377, BIOL 477, and EMAE 477. SAGES Senior Cap

EMAE 478. Mechanics of Machinery I (3)
Comprehensive treatment of design analysis methods and computational tools for machine components. Emphasis is on bearings, seals, gears, hydraulic drives and actuators, with applications to machine tools. Recommended preparation: EMAE 370. Offered as EMAE 378 and EMAE 478.

EMAE 479. Mechanics of Machinery II (3)
The focus of this course is Rotating Machinery Vibration, and it is comprised of four major components: 1) modeling, 2) analyses, 3) measurement techniques, and 4) physical insights into rotor vibration phenomena. Recommended preparation: EMAE 181. Offered as EMAE 379 and EMAE 479.

EMAE 480. Fatigue of Materials (3)

EMAE 481. Advanced Dynamics I (3)

EMAE 486. Stress Waves in Solids (3)

EMAE 487. Vibration Problems in Engineering (3)

EMAE 489. Robotics I (3)

EMAE 500T. Graduate Teaching II (0)
This course will engage the Ph.D. candidate in a variety of teaching experiences that will include direct contact (for example, teaching, recitations and laboratories, guest lectures, office hours) as well as non-contact preparation (exams, quizzes, demonstration) and grading activities. The teaching experience will be conducted under the supervision of the faculty member(s) responsible for coordinating student teaching activities. All Ph.D. candidates enrolled in this course sequence will be expected to perform direct contact teaching at some point in the sequence. Recommended preparation: Ph.D. student in Mechanical Engineering.
EMAE 540. Advanced Dynamics II (3)

EMAE 552. Viscous Flow Theory (3)
Compressible boundary layer theory. Blowing and suction effects. Three-dimensional flows; unsteady flows. Introduction to real gas effects. Recommended preparation: EMAE 454.

EMAE 554. Turbulent Fluid Motion (3)

EMAE 557. Convection Heat Transfer (3)
Energy equation of viscous fluids. Dimensional analysis. Forced convection; heat transfer from non-isothermal and unsteady boundaries, free convection and combined free and forced convection; stability of free convection flow; thermal instabilities. Real gas effects, combined heat and mass transfer; ablation, condensation, boiling. Recommended preparation: EMAE 453 and EMAE 454.

EMAE 558. Conduction and Radiation (3)
Fundamental law, initial and boundary conditions, basic equations for isotropic and anisotropic media, related physical problems, steady and transient temperature distributions in solid structures. Analytical, graphical, numerical, and experimental methods for constant and variable material properties. Recommended preparation: Consent of instructor.

EMAE 570. Computational Fluid Dynamics (3)

EMAE 587. Experimental Stress Analysis (3)

EMAE 600T. Graduate Teaching III (0)
This course will engage the Ph.D. candidate in a variety of teaching experiences that will include direct (for example, teaching recitations and laboratories, guest lectures, office hours) as well non-contact preparation (exams, quizzes, demonstrations) and grading activities. The teaching experience will be conducted under the supervision of the faculty member(s) responsible for coordinating student teaching activities. All Ph.D. candidates enrolled in this course sequence will be expected to perform direct contact teaching at some point in the sequence. Recommended preparation: Ph.D. student in Mechanical Engineering.

EMAE 601. Independent Study (1 - 18)
EMAE 651. Thesis M.S. (1 - 18)
EMAE 657. Experimental Techniques in Fluid and Thermal Engineering Sciences (3-0-4)
Exposure to experimental problems and techniques provided by the planning, design, execution, and evaluation of an original project. Lectures: review of the measuring techniques for flow, pressure, temperature, etc.; statistical analysis of data: information theory concepts of instrumentation; electrical measurements and sensing devices; and the use of digital computer for data acquisition and reduction. Graduate standing or consent of instructor required.

EMAE 689. Special Topics (1 - 18)
EMAE 701. Dissertation Ph.D. (1 - 18)
Prepr: Pre-doctoral research consent or advanced to Ph.D. candidacy milestone.

The College of Arts and Sciences combines a history of educational excellence with a commitment to innovation and discovery. Building on a 173-year-old tradition, the College traces its origins to several predecessor institutions, including Adelbert College, Flora Stone Mather College, Cleveland College, Western Reserve College, and the Case Institute of Technology.

Today, the College offers educational and research programs in the arts, humanities, mathematics and natural sciences, and social sciences. It comprises 22 academic departments and 34 interdisciplinary programs and centers.

**BRIEF HISTORY**

Western Reserve College, the earliest of our predecessor institutions, was founded in 1826 in Hudson, Ohio, about 26 miles southwest of Cleveland. In 1882 the college moved to Cleveland, where it formed the basis for Western Reserve University. The institution expanded to include several professional and graduate schools in addition to its liberal arts programs. It also served as a magnet for other artistic, cultural, educational, medical, and scientific organizations, now its neighbors in the extraordinary setting known as University Circle.

Central to the heritage of the college are the traditions of the programs that preceded it: Adelbert College, as the men's undergraduate unit of Western Reserve University was known after the move to Cleveland; Flora Stone Mather College, initially founded in 1888 as the Cleveland College for Women; and Cleveland College, founded in 1925 in downtown Cleveland to serve part-time and adult students. These three units, each with a distinguished history of scholarship and achievement, were brought together in 1972 under the revived name of “Western Reserve College.” The College took its present form in 1992, when undergraduate and graduate programs and research in the arts, humanities, and social sciences were united with those in the physical sciences to form the College of Arts and Sciences.

Today, the college continues to benefit from its participation in several of the most important developments in higher education since the early 19th century. Examples include: *Engagement in issues of social justice.* Western Reserve College’s early years in Hudson saw debates between two groups, each opposing slavery. Colonizationists believed that liberated slaves should be resettled in Africa; abolitionists did not favor such a policy. After long and bitter conflict, supporters of the abolitionist movement carried the day.

*Emergence of science.* The college in Hudson was home to early and distinguished programs in astronomy and mathematics. Later, in 1887, Professor Edward Morley collaborated with Professor Albert Michelson of the Case School of Applied Science in a series of experiments that remain among the most significant in the field of physics.

*Education of women.* In the 1850s, the college’s Cleveland-based Department of Medicine awarded six of the first seven medical degrees granted to women in this country. The founding of the College for Women in 1888 was only the second instance of a separate “coordinate” college for women at a major university.

*Demographic and technological change.* Following World War II, enrollment in Cleveland College swelled with returning veterans. During this period, the introduction of new technologies and fields of study drove increasing demand for advanced education and research in a wide range of disciplines.

UNDERGRADUATE PROGRAMS

Undergraduates in the college can choose a major or minor from almost 60 programs, design their own courses of study, or enroll in integrated bachelor's/master's degree programs. The university offers great flexibility to students wishing to pursue double majors in disparate fields, such as physics and studio art. In addition, students from all fields are eligible to participate in the college’s vibrant performing arts programs, including music and dance ensembles.

Beyond their course work, students are encouraged to conduct independent research within the college, in other units of the university, or in the scientific and cultural institutions of University Circle. They also have opportunities to engage in service learning projects and internships in research institutions, businesses, cultural institutions, and governmental agencies. With funding from the college’s Experiential Learning Fellowship programs, undergraduates may design and carry out ambitious research projects in Cleveland or across the globe.

GRADUATE PROGRAMS

The college’s graduate offerings include doctoral programs in 19 fields. Through a partnership with The Cleveland Play House, the Department of Theater and Dance has created one of the nation’s preeminent master’s programs in acting. The Science and Technology Entrepreneurship Program (STEP) offers a three- or four-semester sequence of courses leading to a Master of Science degree in biotechnology, chemistry, mathematics, statistics, or physics.

ALUMNI/SENIOR AUDIT

712 Crawford Hall
www.case.edu/artsci/audit
Phone: 216-368-4413
Molly W. Berger, Associate Dean
E-mail: audit@case.edu

The Alumni/Senior Audit is a program sponsored by the College of Arts and Sciences that enables Case Western Reserve University alumni of all ages and members of the community age 65 and older to audit College of Arts and Sciences courses for 10 percent of regular tuition. Audit enrollment is limited to five percent of Case Western Reserve student enrollment and is subject to approval by the faculty member teaching a given course. Auditors do not receive a grade or credit. Courses taken through the audit do not appear on existing transcripts, nor do they generate transcripts for students new to the university. Complete information is available on the Alumni/Senior Audit Web site. Registration materials must be submitted to the Arts and Sciences Office of the Dean one week before classes begin. The Alumni/Senior Audit is limited to courses taught in the College of Arts and Sciences.

AMERICAN STUDIES PROGRAM

202 Mather House
www.case.edu/artsci/hsty/amst
Phone: 216-368-5413
Renée M. Sentilles, Director
E-mail: renee.sentilles@case.edu

The American Studies program is designed to give students the flexibility to cross traditional intellectual boundaries in order to develop perspectives on American life that are more expansive and critical than those normally found within the limits of a single discipline. The interdisciplinary approach makes available a wide variety of materials, methods, theories, and themes to use as tools to investigate the complexities of the American past and present. The process of investigation is as important as the outcome, for it teaches students to analyze with breadth as well as depth, to think creatively as well as critically.

American Studies will enrich any primary major and offers interdepartmental concentrations to students with interests in areas such as Women’s Studies. Students will take required core courses and work with the director to select elective courses and create their own approach to the major.

What can you do with a degree in American Studies? Just about anything. The interdisciplinary nature of American Studies encourages initiative and creative thinking, giving our majors an advantage in later life. American Studies provides excellent preparation for careers in a variety of fields, including but not limited to law, journalism, social work, museum studies, teaching, and communications.

PROGRAM FACULTY

Renée M. Sentilles, Ph.D.
Associate Professor of History

Henry Adams, Ph.D.
Professor of Art History and Art

Mary E. Davis, Ph.D.
Associate Professor of Music

Robert Spadoni, Ph.D.
Associate Professor of English

John Grabowski, Ph.D.
Krieger-Mueller Associate Professor in Applied History

Daniel Cohen, Ph.D.
Associate Professor of History

Daniel Goldmark, Ph.D.
Associate Professor of Music
UNDERGRADUATE PROGRAMS

Major
(30 credit hours)

Required courses (9 hours):
AMST 117, HSTY 112, and AMST 390
Elective Courses (21 hours):

Students are to choose seven electives, in two areas of concentration. An area of concentration consists of either 1) courses in a single department, or 2) courses from more than one department focusing on a theme or issue such as technology and culture, urban studies, literature and society, etc.

Please note that any course in the College’s curriculum that focuses on the United States and its cultures is eligible to be counted towards the American Studies major, if approved by the program director.

PROGRAM HONORS

The faculty nominate majors with a cumulative average of 3.85 in American Studies courses for program honors. Candidates present to the faculty a term paper or project of outstanding quality as the basis for the award of honors.

Minor

A minor consists of five courses: the introductory class and four electives that focus on a significant period, problem area, or aspect of American civilization. The rationale for selecting such a minor program, and its relation to the student’s career or intellectual interests, must be discussed with and approved by the minor advisor.

COURSE DESCRIPTIONS

AMST 117. Introduction to American Studies (3)

This course is designed to introduce students to the interdisciplinary field of American Studies while also empowering them to use the tools and perspectives of several disciplines, such as history, literature, art history, and anthropology. This course aims to introduce students to the various disciplines that constitute American Studies while paying special attention to the ways in which these disciplines can work together to illuminate the study of American cultures, past and present. Students will combine different methodologies in the process of completing assignments designed to make use of a variety of University Circle institutions.

For the purposes of this course, biography is treated as a constructed genre that comes in a variety of forms, including autobiography, biographical novels, oral histories, and film. The class will discuss how certain biographies have created archetypal American identities, and how gender/race/class/historical context, etc., have affected the writing and reading of biography and restructured notions of identity. Offered as AMST 117 and HSTY 117.

AMST 270. American Art and Culture Before 1900 (3)

Survey of the development of American art from colonial times to the present which explores how art has expressed both American values and American anxieties. Painting is emphasized, but the course also considers architecture, the decorative arts, film, literature, and music. Offered as AMST 270 and ARTH 270.

AMST 271. American Art and Culture: The Twentieth Century (3)

Survey of the development of American art from 1900 to the present (and the future) which will explore how art has expressed both American values and American anxieties. Painting will be emphasized, but the course will also consider architecture, the decorative arts, film, literature, and music. Offered as AMST 271 and ARTH 271.

AMST 327. American Theater and Playwrights (3)

Designed to provide students an overview of the development of theater in the United States and to familiarize them with the work and themes of selected American playwrights. Offered as AMST 327 and THTR 327.

AMST 390. Independent Study (1–3)

AMST 431. (3)

DEPARTMENT OF ANTHROPOLOGY

238 Mather Memorial Building
www.case.edu/artsci/anth
Phone: 216-368-2264; Fax: 216-368-5334
Lawrence Greksa, Chair
E-mail: lawrence.greksa@case.edu

Anthropology, with its broad comparative approach, is in a strategic position to contribute to the identification and resolution of many of the problems, both local and global, that challenge society today. The Department of Anthropology offers programs leading to both undergraduate (Bachelor of Arts) and graduate (Master of Arts, Doctor of Philosophy) degrees. In addition, the department offers joint graduate degree programs with Case Western Reserve University School of Medicine (M.A. or Ph.D./M.P.H. and M.D./M.A. or Ph.D.) and with the Frances Payne Bolton School of Nursing (M.S.N./M.A.). Students graduating with a B.A. in anthropology normally must continue for the M.A. or Ph.D. degree if they are interested in working as anthropologists.

DEPARTMENT FACULTY

Lawrence P Greksa, Ph.D.
(Pennsylvania State University)
Professor and Chair

Physical anthropology; human biology; growth and development; nutrition; modernization; Polynesia; Andes; Old Order Amish

Eileen Anderson-Fye, Ed.D.
(Princeton University)
Assistant Professor; Associate Director, Schubert Center for Child Studies

Psychological and medical anthropology; culture, gender, and human development; anthropology of adolescence; globalization; immigration; mental health; eating and body image disorders; child abuse and trauma; adolescent psychiatric medication usage; person-centered ethnography; mixed methods; Belize; Belizian immigrants in the United States

Cynthia Beall, Ph.D.
(Pennsylvania State University)
Sarah Idell Pyle Professor; Co-Director, Center for Research on Tibet; Director, Evolutionary Biology Program

Psychological and medical anthropology; adaptation to high-altitude hypoxia on the Andean, Tibetan, and East African plateaus

Atwood D. Gaines, Ph.D., M.P.H.
(University of California, Berkeley; University of California, Berkeley, School of Public Health)
Professor

Medical and psychiatric anthropology; bioethics; aging; cultural studies of science; social identity; United States; the Mediterranean

Melvyn C. Goldstein, Ph.D.
(Pennsylvania State University)
Professor and Chair

Physical anthropology; human biology; growth and development; nutrition; modernization; Polynesia; Andes; Old Order Amish

Lee D. Hoffer, Ph.D., M.P.E.
(University of Colorado, Denver; Washington University School of Medicine)
Assistant Professor

Cultural and medical anthropology; drug addiction; psychiatric epidemiology; ethnographic research methods; complex systems; computational modeling; economic anthropology; United States
Adjunct Assistant Professor
(New School University)
Sharon Dean, Ph.D.
Cultural and social anthropology; art and aesthetics in cross-cultural perspective; Amazonian ethnology; Latin American studies

Adjunct Assistant Professor
(Federal University of Rio Janeiro)
Katia Almeida, Ph.D.
Cognitive archaeology; prehistory of eastern North America; prehistoric social organization; Shawnee ethnohistory

Adjunct Faculty
Marc Abramiuk, Ph.D.
(University College London)
Adjunct Assistant Professor
Cognitive archaeology; Maya

Katia Almeida, Ph.D.
(Federal University of Rio Janeiro)
Adjunct Assistant Professor
Cultural and social anthropology; art and aesthetics in cross-cultural perspective; Amazonian ethnology; Latin American studies

Sharon Dean, Ph.D.
(New School University)
Adjunct Assistant Professor
Photography and anthropology; Great Basin and California basketry; West Africa

N’omi Greber, Ph.D.
(Case Western Reserve University)
Adjunct Associate Professor; Curator of Archaeology, Cleveland Museum of Natural History
Computer and remote sensing applications; early/middle Woodland; eastern U.S. archaeology; prehistory of eastern North America; prehistoric social organization; Shawnee ethnohistory

Yohannes Haile-Selassie, Ph.D.
(University of California, Berkeley)
Adjunct Assistant Professor; Curator and Head of Physical Anthropology, Cleveland Museum of Natural History
Human evolution

Joseph Hannibal, Ph.D.
(Kent State University)
Adjunct Assistant Professor; Curator of Invertebrate Paleontology, Cleveland Museum of Natural History
Cultural geology

Bruce Latimer, Ph.D.
(Kent State University)
Adjunct Associate Professor; Associate Professor of Anatomy, School of Medicine
Biological anthropology; Plio-Pleistocene hominin evolution; comparative primate anatomy; biomechanics of locomotor system

Ellen S. Lazarus, Ph.D.
(Case Western Reserve University)
Adjunct Assistant Professor; MetroHealth Medical Center
Sociocultural and medical anthropology; maternal and child health; gender, ethnicity and social class; medical ethics and education; urban anthropology; longitudinal reproductive patterns of childbirth including birth outcomes; family planning and patient assessment of perinatal health care

Brian Redmond, Ph.D.
(Indiana University)
Adjunct Associate Professor; Museum Director of Science and Curator and Head of Archaeology, Cleveland Museum of Natural History
North American prehistory; Eastern Woodland settlement patterns; ceramic analysis; museum archaeology

Scott Simpson, Ph.D.
(Kent State University)
Adjunct Associate Professor; Associate Professor of Anatomy, School of Medicine
Biological anthropology; Plio-Pleistocene hominin evolution

Medical Anthropologists in Other Departments
Patricia A. Marshall, Ph.D.
(University of Kentucky)
Adjunct Associate Professor; Associate Professor of Bioethics, School of Medicine
HIV and AIDS; bioethics and research; cross-cultural issues

Isabel Parraga, Ph.D.
(Case Western Reserve University)
Adjunct Associate Professor; Associate Professor of Nutrition, School of Medicine
Nutritional anthropology; international nutrition; nutrition and growth; maternal and child nutrition; schistosomiasis and growth and nutrition; public health nutrition

UNDERGRADUATE PROGRAMS

Majors
The undergraduate major requires a minimum of 30 semester hours in anthropology. The undergraduate program provides a cross-cultural perspective on human behavior, culture, and biology. Students study other cultures as well as their own. Students may choose from four major concentrations, or may consult with the department to tailor the major to their individual interests and goals.

(1) The General Anthropology Concentration
The General Anthropology Concentration provides training in three subdisciplines of anthropology. The first, sociocultural anthropology, emphasizes relationships among socioeconomic institutions, cultural ecology, health and medicine, religion and symbolism, individual psychological variables, and language. The second, physical anthropology, emphasizes human ecology and adaptability, human growth and development, nutritional adaptation, epidemiology, and human and nonhuman primate evolution. The third, archaeology, deals with the long sequences of independent sociocultural, technological, and ecological evolution that have taken place under diverse conditions.

(2) The Health Science-Oriented Anthropology Concentration
The Health Science-Oriented Anthropology Concentration builds upon the department’s expertise in medical anthropology. Students learn about the three subdisciplines discussed above, but with a focus on their relationship to physical and mental health, illness, disease, and medicine.

(3) The Physical Anthropology Concentration
The Physical Anthropology Concentration deals with the biological nature of humans past and present. Physical anthropologists look beyond purely biological phenomena to
understand how biology, behavior, and environment interact. Most course work is in the subdiscipline of human biology, which seeks to understand those interactions by studying physiology, genetics, nutrition, and epidemiology in modern human populations throughout the world. But the concentration also provides training in paleoanthropology, which documents the biological history of humans and, in conjunction with archaeology, analyzes those interactions for past humans.

(4) The Archaeology Concentration focuses on the customs and daily life of people who lived in the past. Anthropologists excavate and analyze the material remains of the sites of human occupation. At the same time, archaeological research seeks to understand the evolution of culture and society by determining how and why changes in human society have occurred in the past.

**GENERAL ANTHROPOLOGY CONCENTRATION**
- ANTH 102 and 103
- ANTH 319
- One course dealing with a geographic area (e.g., ANTH 331, 341, 352, 353, or 357)
- Approved anthropology electives: 18 semester hours

**HEALTH SCIENCE-ORIENTED ANTHROPOLOGY CONCENTRATION**
- ANTH 102, 103, and 215
- ANTH 319
- One course dealing with a geographic area (e.g., ANTH 331, 341, 352, 353, or 357)
- At least three courses dealing with health/illness-related topics (e.g., ANTH 301, 302, 304, 306, 309, 313, 317, 318, 323, 326, 335, 337, 351, 359, 365, 369, 371, 376, 393, or 397)
- Approved anthropology electives: 6 semester hours

**PHYSICAL ANTHROPOLOGY CONCENTRATION**
- ANTH 102 and 103
- ANTH 319
- One course dealing with a geographic area (e.g., ANTH 331, 341, 352, 353, or 357)
- At least three courses dealing with physical anthropology (e.g., 301, 302, 323, 367, 369, 366D, 375, 377, 378, 383, 393, 394, 396, 397)
- Approved anthropology electives: 9 semester hours

**ARCHAEOLOGY CONCENTRATION**
- ANTH 102, 103, and 107
- ANTH 319
- One course dealing with a geographic area (e.g., ANTH 202, 331, 341, 352, 353, or 357)
- Three approved archaeology courses (e.g., ANTH 202, 321, 324, 330, 331, 333, 399, summer fieldwork)
- Two approved anthropology electives: 6 semester hours

**Departmental Honors**
This program is open to qualified majors in anthropology who have completed 15 hours of anthropology with a 3.25 GPA and who have an overall 3.0 GPA. Students should apply for the program in the fall semester of their junior year and, if approved, register for ANTH 391 and 392, Honors Tutorial, in the spring of their junior year and fall of their senior year.

Honors students are required to undertake a research project under the supervision of one or more faculty members and to present an acceptable research paper in the fall semester of their senior year. Students interested in the program should contact the department’s undergraduate advisor.

**Integrated Graduate Studies**
The Department of Anthropology participates in the Integrated Graduate Studies program. Interested students should note the general requirements and the admission procedures for the Integrated Graduate Studies program in the Undergraduate Studies section of this bulletin and may consult the department for further information.

**Minors**
The department offers four minor emphases in anthropology: a general anthropology emphasis, an archaeology emphasis, and a physical anthropology emphasis. All require a minimum of 15 semester hours in anthropology.

**GENERAL ANTHROPOLOGY MINOR**
- ANTH 102 and 103
- One course dealing with a geographic area (e.g., ANTH 331, 341, 352, 353, or 357)
- Two approved electives: 6 semester hours

**PHYSICAL ANTHROPOLOGY MINOR**
- ANTH 102 and 103
- One course dealing with a geographic area (e.g., ANTH 331, 341, 352, 353, or 357)
- Two approved electives: 6 semester hours

**ARCHAEOLOGY MINOR**
- ANTH 102, 103, and 107
- One course dealing with a geographical area (e.g., ANTH 331, 341, 352, 353, or 357)
- One approved archaeology elective: ANTH 202, 321, 330, 331, 333, 399, summer fieldwork

**GRADUATE PROGRAMS**
The Department of Anthropology offers graduate programs leading to the Master of Arts and Doctor of Philosophy degrees in anthropology with specializations in medical anthropology, cross-cultural aging, physical anthropology/human biology, international health, urban health, psychological anthropology, and other areas.

The department also offers three combined degrees:
- M.A. or Ph.D./M.P.H. (with the School of Medicine)
- M.D./M.A. or Ph.D. (with the School of Medicine)
- M.S.N./M.A. (with the Frances Payne Bolton School of Nursing)

**Master of Arts**
The main purpose of the Master of Arts degree program is to prepare students to begin teaching, research, or service careers with a solid background in anthropology. Undergraduate course work in anthropology, while helpful, is not a prerequisite for admission. However, students with no previous training in anthropology are expected to remedy deficiencies prior to taking the M.A. examination.

Requirements for the master’s degree include credit hour requirements, core course requirements, and a six-hour comprehensive written Master of Arts examination. A candidate for the master’s degree is required to complete 27
hours of class work, including an approved statistics course (3 hours) in which the student has earned a grade of C or better. Not more than 6 credit hours of electives may be taken in 300-level courses (advanced undergraduate courses). All master’s degree candidates are required to attain a minimum cumulative grade point average of 3.0 in the core courses (described below) in order to qualify for the degree. Any student may retake an examination in a required course the next time it is given. The second grade will be the one considered for the student's overall average.

All master’s degree candidates are required to take a six-hour comprehensive written examination in their field set by the department examination committee. This examination must be taken before the completion of 27 semester hours of graduate work. Written master’s degree examinations can receive one of three grades: High Pass, Pass, or Fail. “High Pass” signifies performance sufficient for both the Master of Arts degree and advancement to the Doctor of Philosophy program, provided other requirements have also been satisfied. “Pass” signifies performance adequate for the master’s degree but insufficient to enter the doctoral program. “Fail” means a performance inadequate for the master’s degree. In the case of grades of Pass and Fail, the written examination may be retaken once.

Doctor of Philosophy
The Doctor of Philosophy degree program includes specializations in medical anthropology, international health, psychological anthropology, cross-cultural aging, human biology/physical anthropology, and sociocultural anthropology. It requires a minimum of 36 credit hours.

After completing course requirements, a student must take the written Doctor of Philosophy candidacy examination. Within one semester of successfully completing this examination, the student is required to defend a dissertation prospectus with the cooperation of his or her advisor and committee. Before a candidate is permitted to defend the dissertation, he or she must demonstrate a reading knowledge in a foreign language in which there is a scholarly literature relevant to his or her program of studies. A foreign-born student may substitute his or her native language (if it is not English) if it meets the above conditions.

Program Concentrations

Medical Anthropology Program
The objective of the Medical Anthropology program is to train medical anthropologists, physicians, nurses, and other health professionals (1) to recognize and deal with, on both theoretical and practical levels, the complex relations between the biological, social, cultural, psychological, economic, and technoenvironmental determinants and concomitants of sickness and health; and (2) to analyze and evaluate how health services are organized and delivered.

Within the Medical Anthropology program, students may choose to specialize in medical anthropology, cross-cultural aging, international health, urban health, or psychological anthropology.

M.A. Requirements
The curriculum covers the range of medical anthropology interests: ethnomedicine, international health, urban health, psychiatric anthropology, human adaptation and disease, nutrition, social demography, and so on. All Master of Arts degree students in medical anthropology must complete 27 hours, including the following core courses: ANTH 462, 480, 481, and 504 as well as an approved statistics course. The remaining 12 credit hours are taken as electives in anthropology or in other departments with the advisor’s approval.

Ph.D. Requirements
All Ph.D. students in medical anthropology are required to complete the Ph.D. requirements. Students develop a specific plan of study, requiring a minimum of 36 credit hours, in consultation with their advisor.

• Students must take an approved statistics course (3 credits) and earn a grade of C or better if this requirement has not been fulfilled at the M.A. level.
• Students must complete two approved seminars (500 level).
• Students must take 9 credit hours in electives, as approved by their advisory committee. For those students completing the statistics requirement at the M.A. level, 12 hours of electives are required. Students may not take more than six total credit hours of either ANTH 599 or ANTH 601.
• Students must take 18 credit hours in dissertation (ANTH 701).

After completing course requirements, a student must take the written Doctor of Philosophy candidacy examination. Within one semester of successfully completing this examination, the student is required to defend a dissertation prospectus with the cooperation of his or her advisor and committee. Before a candidate is permitted to defend the dissertation, he or she must demonstrate a reading knowledge in a foreign language in which there is a scholarly literature relevant to his or her program of studies. A foreign-born student may substitute his or her native language (if it is not English) if it meets the above conditions.

Specializations in Medical Anthropology

International Health
The international health specialization within the graduate program in medical anthropology offers students training in international health research as well as in evaluation of international health projects. The curriculum includes course work in medical anthropology, epidemiology, and special topics in international health, including child survival, fertility and family planning, and nutritional intervention. Students are qualified to work in international health research, in academic positions, or in administrative positions in governmental or private agencies.

All M.A. students in international health must complete 27 credit hours including the following core courses: ANTH 459, 462, 480, 481, 497, and 504, as well as an approved statistics course. The remaining 6 credit hours are taken as electives in anthropology or other departments with the advisor’s approval. At the Ph.D. level, students specializing in international health must develop a program with their advisor to meet all Ph.D. requirements.

Urban Health
The urban health specialization within the graduate program in medical anthropology prepares students for careers in anthropology, public health, or allied fields, with a special focus on racial and ethnic disparities in health and on underserved populations in urban areas around the world. Under the guidance of faculty with research experience both domestically and internationally, students will learn anthropological theory and methods focusing on health and illness among urban populations.

All M.A. students in urban health must complete 27 credit hours including the following
core courses: ANTH 462, 480, 481, and 504, as well as an approved statistics course, plus the urban health core courses: ANTH 461 and EPBI 490. The remaining 3 credit hours are taken as electives in anthropology or other departments with the advisor's approval. At the Ph.D. level, students specializing in urban health anthropology must develop a program with their advisor to meet all Ph.D. requirements.

Psychological Anthropology
The psychological anthropology specialization within the graduate program in medical anthropology prepares students for positions in teaching and research institutions. It is also relevant for mental health professionals concerned with research and theoretical issues related to multiethnic patient populations.

All M.A. students in the psychological anthropology specialization must complete ANTH 462, 471, 480, 481, and 504 as well as an approved statistics course. The remaining 9 credit hours are taken as electives in anthropology or other departments with the advisor's approval. At the Ph.D. level, students specializing in psychological anthropology must develop a program with their advisor to meet all Ph.D. requirements.

Cross-Cultural Aging
The cross-cultural aging specialization within the graduate program in Medical Anthropology focuses on the processes of aging and the circumstances of older people throughout the world. Particular attention is given to the impact of social, cultural, economic, political, and demographic variables on the experience of aging.

All M.A. students in the cross-cultural aging specialization must complete 27 credit hours, including the medical anthropology core courses, an approved statistics course, and 12 credit hours of electives approved by the advisor. At the Ph.D. level, students specializing in cross-cultural aging must develop a program with their advisor to meet all Ph.D. requirements.

CROSS-CULTURAL AGING PROGRAM
In addition to the cross-cultural aging specialization in the Medical Anthropology program, the department offers a distinct Cross-Cultural Aging program. Degree candidates are required to demonstrate mastery of the literature, theories, and methods appropriate to Western and non-Western gerontology, and are encouraged to gain research experience in both Western and non-Western settings. The program emphasizes the integration of qualitative and quantitative methodologies.

M.A. Requirements
Graduates of the master's program are qualified to work in research or administrative positions in governmental and private agencies, and to teach at the college and university levels. All M.A. students in cross-cultural aging must complete 27 credit hours including the following core courses: ANTH 401, 404, 462, and 504. In addition to the four core courses, students must take an approved statistics course. Twelve credit hours are taken as electives in anthropology or in other departments with the advisor's approval.

Ph.D. Requirements
All Ph.D. students in cross-cultural aging are required to develop a specific plan of study, with a minimum of 36 credit hours, in consultation with their advisor.

- Students must take 18 credit hours in electives as approved by their advisory committee. (For those students who have not completed the M.A. statistics requirement, an approved 3-credit course in statistics is required.)
- Students must take 18 credit hours in dissertation (ANTH 701).

After completing course requirements, a student must take the written Doctor of Philosophy candidacy examination. Within one semester of successfully completing this examination, the student is required to defend a dissertation prospectus with the cooperation of his or her advisor and committee. Before a candidate is permitted to defend the dissertation, he or she must demonstrate a reading knowledge in a foreign language in which there is a scholarly literature relevant to his or her program of studies. A foreign-born student may substitute his or her native language (if it is not English) if it meets the above conditions.

M.A. or Ph.D./M.P.H. Program with the School of Medicine
The joint M.A. or Ph.D. program provides students with the opportunity to receive an anthropology graduate degree and a public health degree simultaneously. A combined public health/anthropology degree will be especially valuable to students interested in working in urban health or international health, or within health policy programs. The joint M.A./M.P.H. requires 54 credit hours (21 in anthropology and 33 in public health). The joint Ph.D./M.P.H. requires an additional 18 credit hours in anthropology beyond the M.A. level and 18 hours of ANTH 701 (Dissertation Research), for a total of 90 credit hours. All joint-degree students will develop a program of study with their advisors in both anthropology and public health.

M.D./M.A. or Ph.D. Program with the School of Medicine
The objectives of the joint M.D./M.A. or Ph.D. program are to train unusually qualified students:

- to conduct research on a broad range of bio-cultural problems, with emphasis on the relationship between medicine, ecology, subsistence variables, population dynamics, and disease epidemiology; and
- to identify and analyze sociocultural impediments to the successful introduction of effective functioning and evaluation of health care programs in diverse contexts.

M.S.N./M.A. Program with the Frances Payne Bolton School of Nursing
The joint M.S.N./M.A. program affords students a unique opportunity to combine the cross-cultural expertise of medical anthropology with clinical expertise in nursing. This combination of skills and knowledge will be of particular value in preparing students for careers in international health and in our multicultural society. Students must complete a minimum of 19 credits in nursing core courses, 12 to 22 credits in clinical major courses, and a minimum of 18 credits in anthropology courses. The actual number of credits depends upon the nursing major selected. The total M.S.N./M.A. degree requirement is a minimum of 55 hours. Applicants should make separate application for admission to the School of Medicine and the Department of Anthropology (through the School of Graduate Studies). Applications to the Department of Anthropology must include MCAT scores, in addition to other information indicated on the graduate school forms.

Application to the School of Medicine is initiated through the American Medical College
adaptations, the origin of food production, and the Pleistocene up to the coming of Europeans. Course material will focus on the archaeology of human societies through time.

ecological and cultural relationships affecting humans. Th e range of cultural phenomena include the genetic basis of micro- and macro- evolutionary adaptations, the origin of food production, and the development of ranked societies.

ANTH 225. Evolution (3)
Multidisciplinary study of the course and processes of organic evolution provides a broad understanding of the evolution of structural and functional diversity, the relationships among organisms and their environments, and the phylogenetic relationships among major groups of organisms. Topics include the genetic basis of micro- and macro-evolutionary change, the concept of adaptation, natural selection, population dynamics, theories of species formation, principles of phylogenetic inference, biogeography, evolutionary rates, evolutionary convergence, homology, Darwinian medicine, and conceptual and philosophic issues in evolutionary theory. Offered as ANTH 225, BIOL 225, GEOL 225, HSTY 225, and PHIL 225.

ANTH 233. Introduction to Jewish Folklore (3)
Exploration of a variety of genres, research methods and interpretations of Jewish folklore, from antiquity to the present. Emphasis on how Jewish folk traditions and culture give us access to the spirit and mentality of the many different generations of the Jewish ethnic group, illuminating its past and informing the direction of its future development. Offered as ANTH 233 and JDST 233.

ANTH 295. Comparative Primate Behavior (3)
The behavior of non-human primates (prosimians, monkeys, and apes) and the relevance of these studies for understanding the evolution of human behavior. Biological and ecological influences on behavior. The social aspects of primate life, both human and nonhuman. Recommended preparation: ANTH 102 or ANTH 103 or consent of department.

ANTH 301. Biological Aging in Humans (3)
Biological aging phenomena, evidence that various sociocultural and environmental influences may slow or accelerate the aging process, and theories explaining the evolution of the aging process. Recommended preparation: ANTH 103 or consent of department. Offered as ANTH 301 and ANTH 401.

ANTH 302. Darwinian Medicine (3)
Darwinian medicine deals with evolutionary aspects of modern human disease. It applies the concepts and methods of evolutionary biology to the question of why we are vulnerable to disease. Darwinian (or evolutionary) medicine proposes several general hypotheses about disease causation including disease as evolutionary legacy and design compromise, the result of a novel environment, a consequence of genetic adaptation, the result of infectious organisms’ evolutionary adaptations, and disease symptoms as manifestation of defense mechanisms. It proposes that evolutionary ideas can explain, help to prevent and perhaps help to treat some diseases. This course presents the basic logic of Darwinian medicine and evaluates hypotheses about specific diseases that illustrate each of the hypotheses about disease causation. Recommended preparation: ANTH 103 or consent of department. Offered as ANTH 302 and ANTH 402.

ANTH 304. Introduction to the Anthropology of Aging (3)
Reviews historical and methodological approaches to the study of aging. Examines theoretical assumptions about aging by comparing studies from Western and non-Western societies that illustrate the differential importance of culture in the experience of aging. Recommended preparation: ANTH 102 or consent of department.

Other Specializations
Students interested in graduate degrees in social-cultural or physical anthropology should contact the department about requirements.

COURSE DESCRIPTIONS

ANTH 102. Being Human: An Introduction to Social and Cultural Anthropology (3)
The nature of culture and humans as culture-bearing animals. The range of cultural phenomena including language, social organization, religion, and culture change, and the relevance of anthropology for contemporary social, economic, and ecological problems.

ANTH 103. Introduction to Human Evolution (3)
Physical, cultural, and technological evolution of humans. The systematic interrelationships between humans, culture, and environment.

ANTH 107. Archaeology: An Introduction (3)
Basic archaeological concepts are discussed followed by a review of human cultural and biological evolution from the earliest times through development of state organized societies. Geographical scope is worldwide with special attention given to ecological and cultural relationships affecting human societies through time.

ANTH 202. Archaeology of Eastern North America (3)
This course is an introduction to the archaeology and prehistory of the eastern woodlands of North America. Course material will focus on the archaeological record of native societies living east of the Mississippi River from the first arrivals at the end of the Pleistocene up to the coming of Europeans. Specific topics for discussion include late Pleistocene settlement, hunter-gatherer environmental adaptations, the origin of food production, and the development of ranked societies.
ANTH 305. Child Policy (3)  
This course introduces students to issues in child policy. Local, state and federal child policy will be considered, and topics will include, for example, policies related to child poverty, schooling, child welfare, and children's physical and mental health. Students will learn how policy is developed, how research informs policy and vice versa. Recommended preparation: One social sciences course or consent. Offered as ANTH 305 and CHST 301.

ANTH 306. The Anthropology of Childhood and the Family  
Child-rearing patterns and the family as an institution, using evidence from Western and non-Western cultures. Human universals and cultural variation, the experience of childhood and recent changes in the American family. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 306 and ANTH 406.

ANTH 307. Experiential Learning in Child Policy (3–6)  
Focus on state and federal legislation impacting children, youth, and families. Course includes an experiential learning component at the state or federal level and a travel experience to either Columbus, OH or Washington, D.C. to learn firsthand how policy is formed. Students may take this course twice for credit. Offered as ANTH 307 and CHST 302.

ANTH 308. Child Policy Externship (3)  
This course provides students with externships in child policy. These externships give students an opportunity to work directly with professionals who design and implement policies that impact the lives of children and their families. Agencies involved are active in areas such as childcare, education, juvenile justice, and physical and mental health. Students apply for the externship. Selected students are placed in a local child policy agency. An individualized learning plan is developed in consultation with the Childhood Studies Program faculty, the supervisor in the agency, and the student. This course is a 3 credit-hour course and may be taken twice for a total of 6 credit hours. Offered as ANTH 308 and CHST 398.

ANTH 309. Family Violence and Child Abuse (3)  
The prevalence and causes of intrafamilial violence. Spouse abuse, child abuse, adolescent abuse, sexual abuse, parent abuse, and sibling violence. Major theoretical positions on the occurrence of these behaviors in light of information from both Western and non-Western cultures. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 309 and ANTH 409.

ANTH 310. Introduction to Linguistic Anthropology (3)  
This is an introduction to the core concepts, theories and methodologies that form the study of language from an anthropological point of view. The course provides exposure to current issues in linguistic anthropological research and reviews some of the foundational topics of research past, highlighting the contributions of linguistics to anthropology and social science. Topics to be explored include: 1) an overview of the study of language (language structure and patterns, the effects of linguistic categories on thought and behavior, meaning and linguistic relativity, cross-language comparison, and non-verbal communication); 2) doing linguistic anthropology “on the ground” (an intro to the laboratory and field techniques of linguistic anthropology); 3) the study of language as function and social action (language and social structure speech acts and events, verbal art, language and emotion); and 4) the study of language/ discourse and power (language in politics, medicine, and law). Offered as ANTH 310 and ANTH 410.

ANTH 312. “Where Does it Hurt”: Doctor-Patient Talk (3)  
Taking medical interactions as our focus, this course explores the problems of doctor-patient (mis)communication from the view of language and culture. By examining a wide range of texts on patients’ illness experiences and healthcare encounters, we will identify underlying variations in communication styles and bodily comportment, which can and do affect the successful outcome of both intra- and cross-cultural medical interactions. Specific topics to be covered are: the relationship of clinical questioning and answering to the power to speak and to issues of legitimacy, authority, and the negotiation of treatment; the distinctions between ‘interview’ and ‘conversation’ and how these particular ways of speaking encourage or discourage different anthropological interactions; how cultural understandings of what it means to be a patient reflect socio-cultural assumptions about the nature of wellness, illness, and care; and how differences in sex, ethnicity, and the presence (or absence) of interpreters in cross-cultural care complicate doctor-patient talk. Offered as ANTH 312 or ANTH 412.

ANTH 313. The Anthropology of Adolescence (3)  
This course investigates the anthropology of adolescence. What are the conditions under which adolescence has appeared around the world as a life stage? What are the roles of adolescence cross-culturally? What are the varieties of adolescent experience? Through classic and contemporary texts, the course will address these questions as well as special topics particularly important to adolescence such as globalization, mental health, and sexuality. Offered as ANTH 313 and ANTH 413.

ANTH 314. Cultures of the United States  
This course considers the rich ethnic diversity of the U.S. from the perspective of social/cultural anthropology. Conquest, immigration, problems of conflicts and accommodation, and the character of the diverse regional and ethnic cultures are considered as are forms of racism, discrimination, and their consequences. Groups of interest include various Latino/o and Native peoples, African-American groups, and specific ethnic groups of Pacific, Mediterranean, European, Asian, and Caribbean origin. Offered as ANTH 314, ETHS 314, and ANTH 414.

ANTH 317. Asian Medical Systems  
Examines the philosophical assumptions and therapies of the traditional and contemporary medical systems of India, Tibet, China, and Japan. Particular attention will be given to the folk, popular, and institutional sectors of medical practice as well as to the contemporary relationship between traditional medicine and Western medicine in each of these societies. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 317 and ANTH 417.

ANTH 318. Death and Dying (3)  
Examines cultural context of death and dying. Topics include social and psychological consequences of changing patterns of mortality, attitudes towards the taking of life, preparation for death, mortuary rituals, grief and mourning, and nature of relationship between living and dead. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 318 or ANTH 418.

ANTH 319. Introduction to Statistical Analysis in the Social Sciences (3)  
Statistical description (central tendency, variation, etc.) and statistical evaluation (two sample comparisons, regression, analysis of variance, non-parametric statistics). Developing an understanding of statistical inference, particularly on proper usage of statistical methods. Examples from the social sciences. Cannot be used to meet the A&S Humanities and Social Sciences requirement. Not available for credit to students who have completed STAT 201 or PSCL 282.

ANTH 320. Doing Ethnography in Cleveland (3)  
Anthropologists use ethnography to understand the complexity and diversity of cultures by studying people in their daily lives. Through hands-on participation in ethnographic fieldwork, students will prepare an ethnography on an aspect of life in the city of Cleveland. Class activities will focus on issues of conducting, analyzing, and interpreting ethnographic research. Prereq: ANTH 102.

ANTH 321. Methods in Archaeology (3)  
This course reviews the basic methods and techniques used in modern archaeological archaeology. Topics to be discussed include the nature of the archaeological record, research design, tech-
niques of field archaeology, methods of laboratory analysis, museum archaeology, ethnoarchaeology, and cultural interpretation.

Prerequisite: ANTH 107.

**ANTH 322. Living Africa (3)**
This course is an introduction to the peoples and cultures of Africa. Rather than a traditional, survey approach, this course takes a thematic approach to issues regarding core aspects of African societies such as history, political organization, family and kinship, art and literature, religion, gender, international relations, and economy. Taking a multi-disciplinary perspective, the course will draw on diverse sources, from classical ethnographic writings to popular cultural criticism, literature, films, poetry, and news media.

Offered as ANTH 322 and ANTH 422.
Global & Cultural Diversity

**ANTH 323. AIDS: Epidemiology, Biology, and Culture (3)**
This course will examine the biological and cultural impact of AIDS in different societies around the world. Topics include: the origin and evolution of the virus, the evolutionary implications of the epidemic, routes of transmission, a historical comparison of AIDS to other epidemics in human history, current worldwide prevalences of AIDS, and cultural responses to the epidemic. Special emphasis will be placed on the long-term biological and social consequences of the epidemic. Recommended preparation: ANTH 102 or ANTH 103 or ANTH 105 or consent of department.

Offered as ANTH 323 and ANTH 423.

**ANTH 324. Field Methods in Archaeology (3–6)**
This field course is designed to give the student a comprehensive introduction to archaeological field work. All participants will be introduced to the methods of archaeological survey, techniques of hand excavation, artifact identification, and the preparation of field notes and documentation. In large measure this is a “learning through doing” course which is supplemented by formal and informal lectures and discussions about archaeological methods and regional prehistory. The Fields School is held as two, three-week sessions of instruction in the field. All participants are required to attend an orientation meeting that is held at the Museum on the first day of each session. The remainder of each session will take place from Monday through Friday at an archaeological site in northeast Ohio. Students are responsible for their own transportation to and from the field site and must bring a sack lunch. All participants will receive a held manual which will provide detailed information on the course and techniques of field work.

**ANTH 326. Power, Illness, and Inequality: The Political Economy of Health (3)**
This course explores the relationship between social inequality and the distribution of health and illness across class, race, gender, sexual orientation, and national boundaries. Class readings drawn from critical anthropological approaches to the study of health emphasize the fundamental importance of power relations and economic constraints in explaining patterns of disease. The course critically examines the nature of Western biomedicine and inequality in the delivery of health services. Special consideration is given to political economic analysis of health issues in the developing world such as AIDS, hunger, reproductive health, and primary health care provision. Recommended preparation: ANTH 102 or ANTH 215 or consent of department.

Offered as ANTH 326 and ANTH 426.

**ANTH 327. Ancient Cultures of the Ohio Region (3)**
This course surveys the archaeology of Native American cultures in the Great Lakes region from ca. 10,000 B.C. to A.D. 1700. The geographic scope of this course is the upper Midwest, southern Ontario, and the St. Lawrence Valley with a focus on the Ohio region. Recommended preparation: ANTH 107 or consent of the department.

Offered as ANTH 327 and ANTH 427.

**ANTH 330. Special Topics in Prehistory (3)**
Special topics of geographical areas of archaeological significance (e.g., the origins of food production, the archaeology of the Mediterranean, the archaeology of North America). Recommended preparation: ANTH 102 or ANTH 107 or consent of department.

**ANTH 331. Ancient Civilizations of the Near East (3)**
The social, economic, and ecological factors involved in the formation of the earliest Asian civilizations. The developmental role of cities, warfare, trade, and irrigation considered with respect to “state” formation in Mesopotamia, Iran, and the Indus Valley. Recommended preparation: ANTH 102 or ANTH 107 or consent of department.

**ANTH 333. Roots of Ancient India: Archaeology of South Asia (3)**
Examination of the archaeological record of cultural development from earliest times through the Iron Age in India, Pakistan, Sri Lanka, and Bangladesh. Particular attention devoted to how these ancient cultural developments laid the foundations for the early historic civilizations of this region. Recommended preparation: ANTH 102 or ANTH 107 or consent of department.

Offered as ANTH 333 and ANTH 433.

**ANTH 334. Urban Anthropology (3)**
This urban anthropology course will focus on contemporary understandings of the institutions of urban, national and transnational life. We will explore the complex ways that urban worlds and social problems are shaped by globalizing capitalism, national, and transnational processes. As well, we will examine how and why various identities, nations, and transnational institutions are expressed in and by people living in current global urban hierarchies. In particular, we will look at how the urban, national, and transnational dynamically produce and are produced by the everyday cultural practices of people living and struggling in North American urban spaces. Recommended preparation: ANTH 102 or consent of department.

Offered as ANTH 334 and ANTH 434.

**ANTH 337. Comparative Medical Systems (3)**
This course considers the world’s major medical systems. Foci include professional and folk medical systems of Asia and South Asia, North and South America, Europe and the Mediterranean, including the Christian and Islamic medical traditions. Attention is paid to medical origins and the relationship of popular to professional medicines. The examination of each medical tradition includes consideration of its psychological medicine and system of medical ethics. Recommended preparation: ANTH 215.

Offered as ANTH 337 and ANTH 437.

**ANTH 340. Culture and Emotion (3)**
The cross-cultural consideration of the relationship of culture and emotion. The cultural construction of the experience and expression of emotion. Key substantive issues include: ethnopsychological variations in indigenous conceptualizations and displays of emotion; the socialization of affect; the self and emotion; contextual variations in emotional expression with respect to gender, power relations, patterns of subsistence, and the individual; and the relationship between emotion and illness processes. Recommended preparation: ANTH 102 or consent of department.

Offered as ANTH 340 and ANTH 440.

**ANTH 341. Cultural Area Studies in Anthropology (3)**
Recommended preparation: ANTH 102.

Offered as ANTH 341 and ANTH 441.

**ANTH 343. Psychoanalytic Anthropology (3)**
Psychoanalytic theory and its application to cross-cultural materials. The cultural context of analytic theory’s development and its applications in social/cultural and medical anthropology; application of cultural criticism to psychoanalytic conceptions and its constructions of the following: social evolution; religious ideology, praxis, patterns and dynamics; altered states of consciousness; individual personality and psychopathology; individual and cultural defense mechanisms; socialization; cognition; emotion; symbolism; and gender. Also considers bases for a culturally relative analytic theory. Recommended preparation: ANTH 102 or consent of department.

Offered as ANTH 343 and ANTH 443.

**ANTH 345. Ethnicity, Gender, and Mental Health (3)**
An overview of mental health status and ethnicity. Analysis of ethnicity in relation to culture, social class, gender, sociopolitical conflict and the world refugee crisis. Consideration of populations at special risk for the development of specific mental disorders (e.g., schizophrenia, affective disorders,
ANTH 348. Sexuality and Gender (3)
This course examines the relationships among gender, sexuality, race, nation, and the body. In particular, it focuses on contemporary ideas and theories in the study of the complex historical and cultural relationships between sexuality and gender. In addition, we examine sexuality and social movements, identity politics, and the so-called "culture wars." In short, this class will not be a voyeuristic narration of exotic sexual or gender practices; and where we use the "other" it will be solely for the purpose of exploring our own practices and ideologies. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 348 and ANTH 448.

ANTH 351. Topics in International Health (3)
Special topics of interest in International Health. Recommended preparation: ANTH 102 or ANTH 215 or consent of department. Offered as ANTH 351 and ANTH 451.

ANTH 352. Japanese Culture and Society (3)
Focuses on contemporary Japanese cultural and social institutions. Topics include child-rearing, personality, values, education, gender roles, the dual economy, and popular culture. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 352 and ANTH 452. Global & Cultural Diversity

ANTH 353. Chinese Culture and Society (3)
Focuses on Chinese cultural and social institutions during the Maoist and post-Maoist eras. Topics include ideology, economics, politics, religion, family life, and popular culture. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 353 and ANTH 453. Global & Cultural Diversity

ANTH 356. Mediterranean Culture and Society (3)
Ethnography of the Mediterranean culture area. Topics include geography, topography, climate, rural and urban life styles, economy, social identity (encompassing gender, ethnic, national, provincial, tribal and religious identity), religion, ritual relations, concepts of self, health and healing, politics, worldview and values, family and kinship, aging, death and dying. Past and present methods and problems of anthropological research in the region and the theoretical frameworks that have guided researchers. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 356 and ANTH 456. Global & Cultural Diversity

ANTH 357. Native American Cultures (3)
Intensive examination of the cultures of selected Native American peoples, including historical, political, religious, social organizational, linguistic, and medical/psychiatric aspects of American Indian life. Not available for credit to students who have completed USSO 219. Recommended preparation: ANTH 102. Offered as ANTH 357 and ANTH 457. SAGES Dept Seminar Global & Cultural Diversity

ANTH 358. Women’s Mental Health (3)
This anthropological course is an examination of the cultural psychology of women in the following domains: (1) women’s social status cross-culturally; (2) specific psychiatric syndromes, such as psychoses, mood and personality disorders as they affect women; and (3) power and resilience. Issues of the cultural validity of psychological theories for women across diverse settings is the subject of critique throughout the seminar. Recommended preparation: ANTH 102 or ANTH 215. Offered as: ANTH 358, ANTH 458.

ANTH 359. Introduction to International Health (3)
Critical health problems and needs in developing countries. Prevalence of infectious disease, malnutrition, chronic disease, injury control. Examines strategies for improvement of health in less developed countries. Recommended preparation: ANTH 102. Offered as ANTH 359 and ANTH 459.

ANTH 361. Urban Health (3)
This course provides an anthropological perspective on the most important health problems facing urban population around the world. Special attention will be given to an examination of disparities in health among urban residents based on poverty, race/ethnicity, gender, and nationality. Offered as ANTH 361 and ANTH 461.

ANTH 362. Contemporary Theory in Anthropology (3)
A critical examination of anthropological thought in England, France and the United States during the second half of the twentieth century. Emphasis will be on the ways authors formulate questions that motivate anthropological discourse, on the way central concepts are formulated and applied and on the controversies and debates that result. Readings are drawn from influential texts by prominent contemporary anthropologists. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 362 and ANTH 462.

ANTH 363. Anthropology and Bioethics (3)
The course will review theoretical work on anthropometry and values, the discipline of bioethics, its philosophical roots, the body of anthropological work in bioethics, and critically examine a number of current bioethical issues in the United States and internationally. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 363 and ANTH 463.

ANTH 365. Gender and Sex Differences: Cross-cultural Perspective (3)
Gender roles and sex differences throughout the life cycle considered from a cross-cultural perspective. Major approaches to explaining sex roles discussed in light of information from both Western and non-Western cultures. Offered as ANTH 365 and ANTH 465 and WGST 365. Prereq: ANTH 102 or consent of department.

ANTH 367. Topics in Evolutionary Biology (3)
The focus for this course on a special topic of interest in evolutionary biology will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution. ANAT/ANTH/GEOL/PHIL 467/BIOL 468 will require a longer, more sophisticated term paper, and additional class presentation. Offered as ANTH 367, BIOL 368, GEOL 367, PHIL 367, ANAT 467, ANTH 467, BIOL 468, GEOL 467, and PHIL 467. Prereq: ANTH 225 or equivalent.

ANTH 368. Evolutionary Biology Capstone (3)
This course focuses on a special topic of interest in evolutionary biology that will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution. Students will participate in discussions and lead class seminars on evolutionary topics and in collaboration with an advisor or advisors, select a topic for a research paper or project. Each student will write a major research report or complete a major project and will make a public presentation of her/his findings. Offered as ANTH 368, BIOL 369, PHIL 368. Prereq: ANTH 225, BIOL 225, GEOL 225, HSTY 225, PHIL 225 or its equivalent or permission of instructor. SAGES Senior Cap

ANTH 369. The Anthropology of Nutrition (3)
Examines human nutrition and physical performance within the framework of human adaptability theory. The emphasis is on the measurement of energetic intake and expenditure in human populations; the assessment, health consequences, and bio-cultural correlates of malnutrition and obesity; and the uses of energetic data in assessing human population adaptation. Recommended preparation: ANTH 103 or consent of department. Offered as ANTH 369 and ANTH 469.

ANTH 369D. The Anthropology of Nutrition (3)
Examines human nutrition and physical performance within the framework of human adaptability theory. The emphasis is on the measurement of energetic intake and expenditure in human populations; the assessment, health consequences, and bio-cultural correlates of malnutrition and obesity; and the uses of energetic data in assessing human population adaptation. Recommended preparation: ANTH 103 or consent of department. Offered as ANTH 369 and ANTH 469.
focus on various social, ecological, and genetic factors which influence human nutritional patterns and the causes and consequences of protein-energy malnutrition. The course will be taught in a seminar format and is designed to enhance your skills in critically reading the anthropological literature and in improving your written and oral communication skills. A student may not receive credit for both ANTH 369 and ANTH 369D. Recommended preparation: ANTH 102, ANTH 103.

SAGES Dept Seminar

ANTH 371. Culture, Behavior, and Person: Psychological Anthropology (3)
Cross-cultural perspectives on personality, human development, individual variability, cognition, deviant behavior, and the role of the individual in his/her society. Classic and contemporary anthropological writings on Western and non-Western societies. Recommended preparation: ANTH 102 or consent of department.
Offered as ANTH 371 and ANTH 471.

ANTH 372. Anthropological Approaches to Religion (3)
The development of, and current approaches to, comparative religion from an anthropological perspective. Topics include witchcraft, ritual, myth, healing, religious language and symbolism, religion and gender, religious experience, the nature of the sacred, religion and social change, altered states of consciousness, and evil. Using material from a wide range of world cultures, critical assessment is made of conventional distinctions such as those between rational/irrational, natural/supernatural, magic/religion, and primitive/civilized. Recommended preparation: ANTH 102.
Offered as ANTH 372, RLGN 372 and ANTH 472.

ANTH 375. Human Evolution: The Fossil Evidence (3)
This course will survey the biological and behavioral changes that occurred in the hominid lineage during the past five million years. In addition to a thorough review of the fossil evidence for human evolution, students will develop the theoretical framework in evolutionary biology. Recommended preparation: ANTH 377, BIOL 225.
Offered as ANTH 375, ANTH 475, and ANTH 475.
Prereq: ANTH 103.

ANTH 376. Topics in the Anthropology of Health and Medicine (3)
Special topics of interest, such as the biology of human adaptability; the ecology of the human life cycle; health delivery systems; transcultural psychiatry; nutrition, health, and disease; paleoepidemiology; and population anthropology. Recommended preparation: ANTH 102 or ANTH 103. Offered as ANTH 376 and ANTH 476. SAGES Dept Seminar

ANTH 377. Human Osteology (4)
This course for upper division undergraduates and graduate students will review the following topics: human skeletal development and identification; and forensic identification (skeletal aging, sex identification and population affiliation). Offered as ANAT 377, ANTH 377, ANAT 477 and ANTH 477.

ANTH 378. Reproductive Health: An Evolutionary Perspective (3)
This course provides students with an evolutionary perspective on the factors influencing human reproductive health, including reproductive biology, ecology, and various aspects of natural human fertility. Our focus will be on variation in human reproduction in mostly non-Western populations. Recommended preparation: ANTH 103.
Offered as ANTH 378 and ANTH 478. SAGES Dept Seminar

ANTH 379. Topics in Cultural and Social Anthropology (3)
Special topics of interest across the range of social and cultural anthropology. Recommended preparation: ANTH 102.
Offered as ANTH 379 and ANTH 479.

ANTH 380. Independent Study in Laboratory Anthropology I (1–3)
This course provides an introduction to the basic methods and techniques of artifact curation and laboratory analysis in archaeology. Under the supervision of the instructor, each student will develop and execute a focused project of material analysis and interpretation using the archaeology collections of the Cleveland Museum of Natural History. Each student is required to spend a minimum of two hours per week in the Archaeology Laboratory for each credit hour taken. By the end of the course, the student will prepare a short report describing the results of their particular project. Recommended preparation: ANTH 107 and permission of department, and prior permission of Department of Archaeology at the Cleveland Museum of Natural History.

ANTH 381. Independent Study in Laboratory Anthropology II (1–3)
This course provides an introduction to the basic methods and techniques of artifact curation and laboratory analysis in archaeology. Under the supervision of the instructor, each student will develop and carry out a focused project of material analysis and interpretation using the archaeology collections of the Cleveland Museum of Natural History. Each student is required to spend a minimum of two hours per week in the Archaeology Laboratory for each credit hour taken. By the end of the course, the student will prepare a short report describing the results of their particular project. Recommended preparation: ANTH 107 and permission of department, and prior permission of Department of Archaeology at the Cleveland Museum of Natural History.

ANTH 388. Globalization, Development and Underdevelopment: Anthropological Perspectives (3)
This course examines both theoretical and practical perspectives on globalization and economic development in the “Third World.” From “Dependency,” “Modernization,” and “World System” theory to post-structuralist critiques of development discourse, the class seeks to provide a framework for understanding current debates on development and globalization. The “neoliberal monologue” that dominates the contemporary development enterprise is critically examined in the context of growing global inequality. Special consideration is given to the roles of international agencies such as the World Bank, International Monetary Fund, United Nations, and non-governmental organizations (NGOs) in the “development industry.” The course follows the contribution of anthropologists to development theory and practice with emphasis on the impact of development on the health of the poor and survival of indigenous cultures. Opportunities for professional anthropologists in the development field are reviewed. Offered as ANTH 388 and ANTH 488. Global & Cultural Diversity

ANTH 389. Crossroads: Transformation of Rural Blues into Urban Rock (3)
A multimedia approach to the development and transformation of an American musical form, the blues. Foci include the social and cultural history of rural and urban blues, rhythm and blues, rock ‘n’ roll, and the later forms of rock, the social context and life histories of modern music’s creators and innovators, the development of vocal and instrumental styles, blues and rock, visual and performance iconography, milestones in the development of musical genres and the major roles of racism and discrimination in the development of these forms of popular music. Recommended preparation: ANTH 102.
Offered as ANTH 389 and ANTH 489.

ANTH 391. Honors Tutorial (3)
Prereq: Acceptance into Honors Program.

ANTH 392. Honors Tutorial (3)
Prereq: Acceptance into Honors Program.

ANTH 393. Human Ecology: The Biology of Human Adaptability (3)
The place of human populations in the ecosystem. The importance of biological and behavioral responses of populations ranging from hunters and gatherers to contemporary and industrial societies. The effect of various natural and manmade stresses on man’s adaptation to the environment. Recommended preparation: ANTH 103 or consent of department.
Offered as ANTH 393 and ANTH 493.

ANTH 394. Seminar in Evolutionary Biology (3)
This seminar investigates 20th-century evolutionary theory, especially the Modern Evolutionary synthesis and subsequent expansions of and challenges to that synthesis. The course encompasses
the multidisciplinary nature of the science of evolution, demonstrating how disciplinary background influences practitioners’ conceptualizations of pattern and process. This course emphasizes practical writing and research skills, including formulation of testable theses, grant proposal techniques, and the implementation of original research using the facilities on campus and at the Cleveland Museum of Natural History.

Offered as ANTH 394, BIOL 394, GEOL 394, HSTY 394, PHIL 394, ANTH 494, BIOL 494, GEOL 494, HSTY 494, and PHIL 494.

ANTH 396. Undergraduate Research in Evolutionary Biology (3)

Students propose and conduct guided research on an aspect of evolutionary biology. The research will be sponsored and supervised by a member of the CASE faculty or other qualified professional. A written report must be submitted to the Evolutionary Biology Steering Committee before credit is granted.

Offered as ANTH 396, BIOL 396, GEOL 396, and PHIL 396.

Prereq: ANTH 225 or equivalent.

ANTH 397. Epidemiology and the Evolution of Human Diseases (3)

Basic concepts of infectious and degenerative diseases. Description and analysis of the changing distribution and determinants of disease in prehistoric, historic, and contemporary human populations. Recommended preparation: ANTH 103 or consent of department.

Offered as ANTH 397 and ANTH 497.

ANTH 398. Anthropology SAGES Capstone (3)

Supervised original research on a topic in anthropology, culminating in a written report and a public presentation. The research project may be in the form of an independent research project, a literature review, or some other original project with anthropological significance. The project must be approved and supervised by faculty. Group research projects are acceptable, but a plan which clearly identifies the distinct and substantial role of each participant must be approved by the supervising faculty.

Prereq: Major in Anthropology.

SAGES Senior Cap

ANTH 398C. Child Policy Externship and Capstone (3)

This course provides students with externships in child policy. These externships give students an opportunity to work directly with professionals who design and implement policies that impact the lives of children and their families. Agencies involved are active in areas such as childcare, education, juvenile justice, and physical and mental health. Students apply for the externship. Selected students are placed in a local child policy agency. An individualized learning plan is developed in consultation with the Childhood Studies Program faculty, the supervisor in the agency, and the student.

Offered as ANTH 398C. CHST 398C, PSDL 398C.

SAGES Senior Cap

ANTH 399. Independent Study (1–6)

Students may propose topics for independent reading and research.

ANTH 401. Biological Aging in Humans (3)

Biological aging phenomena, evidence that various sociocultural and environmental influences may slow or accelerate the aging process, and theories explaining the evolution of the aging process. Recommended preparation: ANTH 103 or consent of department.

Offered as ANTH 301 and ANTH 401.

ANTH 402. Darwinian Medicine (3)

Darwinian medicine deals with evolutionary aspects of modern human disease. It applies the concepts and methods of evolutionary biology to the question of why we are vulnerable to disease. Darwinian (or evolutionary) medicine proposes several general hypotheses about disease causation, including disease as evolutionary legacy and design compromise, the result of a novel environment, a consequence of genetic adaptation, the result of infectious organisms’ evolutionary adaptions, and disease symptoms as manifestation of defense mechanisms. It proposes that evolutionary ideas can explain, help to prevent and perhaps help to treat some diseases. This course presents the basic logic of Darwinian medicine and evaluates hypotheses about specific diseases that illustrate each of the hypotheses about disease causation. Recommended preparation: ANTH 103 or consent of department.

Offered as ANTH 302 and ANTH 402.

ANTH 404. Introduction to the Anthropology of Aging (3)

Reviews historical and methodological approaches to the study of aging. Examines theoretical assumptions about aging by comparing studies from Western and non-Western societies that illustrate the differential importance of culture in the experience of aging. Recommended preparation: ANTH 102 or consent of department.

Offered as ANTH 304 and ANTH 404.

ANTH 406. The Anthropology of Childhood and the Family (3)

Child-rearing patterns and the family as an institution, using evidence from Western and non-Western cultures. Human universals and cultural variation, the experience of childhood and recent changes in the American family. Recommended preparation: ANTH 102 or consent of department.

Offered as ANTH 306 and ANTH 406.

ANTH 409. Family Violence and Child Abuse (3)

The prevalence and causes of intrafamilial violence. Spouse abuse, child abuse, adolescent abuse, sexual abuse, parent abuse, and sibling violence. Major theoretical positions on the occurrence of these behaviors in light of information from both Western and non-Western cultures. Recommended preparation: ANTH 102 or consent of department.

Offered as ANTH 309 and ANTH 409.

ANTH 410. Introduction to Linguistic Anthropology (3)

This is an introduction to the core concepts, theories, and methodologies that form the study of language from an anthropological point of view. The course provides exposure to current issues in linguistic anthropological research and reviews some of the foundational topics of research past, highlighting the contributions of linguistics to anthropology and social science. Topics to be explored include: 1) an overview of the study of language (language structure and patterns, the effects of linguistic categories on thought and behavior, meaning and linguistic relativity, cross-language comparison, and non-verbal communication); 2) doing linguistic anthropology “on the ground” (an intro to the laboratory and field techniques of linguistic anthropology); 3) the study of language as function and social action (language and social structure speech acts and events, verbal art, language and emotion); and 4) the study of language/discourse and power (language in politics, medicine, and law).

Offered as ANTH 310 and ANTH 410.

ANTH 412. “Where Does it Hurt”: Doctor-Patient Talk (3)

Taking medical interactions as our focus, this course explores the problems of doctor-patient (mis)communication from the view of language and culture. By examining a wide range of texts on patients’ illness experiences and healthcare encounters, we will identify underlying variations in communication styles and bodily comportment, which can and do affect the successful outcome of both intra- and cross-cultural medical interactions. Specific topics to be covered are: the relationship of clinical questioning and answering to the power to speak and to issues of legitimacy, authority, and the negotiation of treatment; the distinctions between ‘interview’ and ‘conversation’ and how these particular ways of speaking encourage or discourage different doctor-patient interactions; how cultural understandings of what it means to be a patient reflect socio-cultural assumptions about the nature of wellness, illness, and care; and how differences in sex, ethnicity, and the presence (or absence) of interpreters in cross-cultural care complicate doctor-patient talk.

Offered as ANTH 312 or ANTH 412.

ANTH 413. The Anthropology of Adolescence (3)

This course investigates the anthropology of adolescence. What are the conditions under which adolescence has appeared around the world as a life stage? What are the roles of adolescence cross-culturally? What are the varieties of adolescent experience? Through classic and contemporary texts, the course will address these questions as well as special topics particularly important to adoles-
cidence such as globalization, mental health, and sexuality. Offered as ANTH 313 and ANTH 413.

ANTH 414. Cultures of the United States (3)
This course considers the rich ethnic diversity of the U.S. from the perspective of social/cultural anthropology. Conquest, immigration, problems of conflicts and accommodation, and the character of the diverse regional and ethnic cultures are considered as are forms of racism, discrimination, and their consequences. Groups of interest include various Latin/o and Native peoples, African-American groups, and specific ethnic groups of Pacific, Mediterranean, European, Asian, and Caribbean origin. Offered as ANTH 314, ETHS 314, and ANTH 414.

ANTH 417. Asian Medical Systems (3)
Examines the philosophical assumptions and therapies of the traditional and contemporary medical systems of India, Tibet, China, and Japan. Particular attention will be given to the folk, popular, and institutional sectors of medical practice as well as to the contemporary relationship between traditional medicine and Western medicine in each of these societies. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 317 and ANTH 417.

ANTH 418. Death and Dying (3)
Examines cultural contexts of death and dying. Topics include social and psychological consequences of changing patterns of mortality, attitudes towards the taking of life, preparation for death, mortuary rituals, grief and mourning, and nature of relationship between living and dead. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 318 or ANTH 418.

ANTH 422. Living Africa (3)
This course is an introduction to the peoples and cultures of Africa. Rather than a traditional, survey approach, this course takes a thematic approach to issues regarding core aspects of African societies such as history, political organization, family and kinship, art and literature, religion, gender, international relations, and economy. Taking a multi-disciplinary perspective, the course will draw on diverse sources, from classical ethnographic writings to popular cultural criticism, literature, films, poetry, and news media. Offered as ANTH 322 and ANTH 422.

ANTH 423. AIDS: Epidemiology, Biology, and Culture
This course will examine the biological and cultural impact of AIDS in different societies around the world. Topics include: the origin and evolution of the virus, the evolutionary implications of the epidemic, routes of transmission, a historical comparison of AIDS to other epidemics in human history, current worldwide prevalences of AIDS, and cultural responses to the epidemic. Special emphasis will be placed on the long-term biological and social consequences of the epidemic. Recommended preparation: ANTH 102 or ANTH 103 or ANTH 105 or consent of department. Offered as ANTH 323 and ANTH 423.

ANTH 426. Power, Illness, and Inequality: The Political Economy of Health (3)
This course explores the relationship between social inequality and the distribution of health and illness across class, race, gender, sexual orientation, and national boundaries. Class readings drawn from critical anthropological approaches to the study of health emphasize the fundamental importance of power relations and economic constraints in explaining patterns of disease. The course critically examines the nature of Western biomedicine and inequality in the delivery of health services. Special consideration is given to political economic analysis of health issues in the developing world such as AIDS, hunger, reproductive health, and primary health care provision. Recommended preparation: ANTH 102 or ANTH 215 or consent of department. Offered as ANTH 326 and ANTH 426.

ANTH 427. Ancient Cultures of the Ohio Region (3)
This course surveys the archaeology of Native American cultures in the Great Lakes region from ca. 10,000 B.C. to A.D. 1700. The geographic scope of this course is the upper Midwest, southern Ontario, and the St. Lawrence Valley with a focus on the Ohio region. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 327 and ANTH 427.

ANTH 433. Roots of Ancient India: Archaeology of South Asia (3)
Examines the archaeological record of cultural development from earliest times through the Iron Age in India, Pakistan, Sri Lanka, and Bangladesh. Particular attention devoted to how these ancient cultural developments laid the foundations for the early historic civilizations of this region. Recommended preparation: ANTH 102 or ANTH 107 or consent of department. Offered as ANTH 333 and ANTH 433.

ANTH 434. Urban Anthropology (3)
This urban anthropology course will focus on contemporary understandings of the institutions of urban, national, and transnational life. We will explore the complex ways that urban worlds and social problems are shaped by globalizing capitalism, national, and transnational processes. As well, we will examine how and why various identities, nations, and transnational institutions are expressed in and by people living in current global urban hierarchies. In particular, we will look at how the urban, national, and transnational dynamically produce and are produced by the everyday cultural practices of people living and struggling in North American urban spaces. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 334 and ANTH 434.

ANTH 437. Comparative Medical Systems (3)
This course considers the world’s major medical systems. Foci include professional and folk medical systems of Asia and South Asia, North and South America, Africa, Europe, and the Mediterranean, including the Christian and Islamic medical traditions. Attention is paid to medical origins and the relationship of popular to professional medicines. The examination of each medical tradition includes consideration of its psychological medicine and system of medical ethics. Recommended preparation: ANTH 215. Offered as ANTH 337 and ANTH 437.

ANTH 440. Culture and Emotion (3)
The cross-cultural consideration of the relationship of culture and emotion. The cultural construction of the experience and expression of emotion. Key substantive issues include: ethnopsychological variations in indigenous conceptualizations and displays of emotion; the socialization of affect; the self and emotion; contextual variations in emotional expression with respect to gender, power relations, patterns of subsistence, and the individual; and the relationship between emotion and illness processes. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 340 and ANTH 440.

ANTH 441. Cultural Area Studies in Anthropology (3)
Recommended preparation: ANTH 102. Offered as ANTH 341 and ANTH 441.

ANTH 443. Psychoanalytic Anthropology (3)
Psychoanalytic theory and its application to cross-cultural materials. The cultural context of analytic theory’s development and its applications in social/cultural and medical anthropology; application of cultural criticism to psychoanalytic conceptions and its constructions of the following: social evolution; religious ideology, praxis, patterns and dynamics; altered states of consciousness; individual personality and psychopathology; individual and cultural defense mechanisms; socialization; cognition; emotion; symbolism; and gender. Also considers bases for a culturally relative analytic theory. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 343 and ANTH 443.

ANTH 445. Ethnicity, Gender, and Mental Health (3)
An overview of mental health status and ethnicity. Analysis of ethnicity in relation to culture, social class, gender, sociopolitical conflict and the world refugee crisis. Consideration of populations at special risk for the development of specific mental disorders (e.g., schizophrenia, affective disorders, adjustment and stress disorders). Contemporary ethnographic survey of ethnic groups at risk both at home and abroad. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 345 and ANTH 445.
ANTH 448. Sexuality and Gender (3)
This course examines the relationships among gender, sexuality, race, nation, and the body. In particular, it focuses on contemporary ideas and theories in the study of the complex historical and cultural relationships between sexuality and gender. In addition, we examine sexuality and social movements, identity politics, and the so-called “culture wars.” In short, this class will not be a voyeuristic narration of exotic sexual or gender practices; and where we use the “other” it will be solely for the purpose of exploring our own practices and ideologies. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 348 and ANTH 448.

ANTH 451. Topics in International Health (3)
Special topics of interest in International Health. Recommended preparation: ANTH 102 or ANTH 215 or consent of department. Offered as ANTH 351 and ANTH 451.

ANTH 452. Japanese Culture and Society (3)
Focuses on contemporary Japanese cultural and social institutions. Topics include child-rearing, personality, values, education, gender roles, the dual economy, and popular culture. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 352 and ANTH 452.

ANTH 453. Chinese Culture and Society (3)
Focuses on Chinese cultural and social institutions during the Maoist and post-Maoist eras. Topics include ideology, economics, politics, religion, family life, and popular culture. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 353 and ANTH 453.

ANTH 456. Mediterranean Culture and Society (3)
Ethnography of the Mediterranean culture area. Topics include geography, topography, climate, rural and urban life styles, economy, social identity (encompassing gender, ethnic, national, provincial, tribal and religious identity), religion, ritual relations, concepts of self, health and healing, politics, worldview and values, family and kinship, aging, death and dying. Past and present methods and problems of anthropological research in the region and the theoretical frameworks that have guided researchers. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 356 and ANTH 456.

ANTH 457. Native American Cultures (3)
Intensive examination of the cultures of selected Native American peoples, including historical, political, religious, social organizational, linguistic, and medical/psychiatric aspects of American Indian life. Not available for credit to students who have completed USSO 219. Recommended preparation: ANTH 102. Offered as ANTH 357 and ANTH 457.

ANTH 458. Women’s Mental Health (3)
This anthropological course is an examination of the cultural psychology of women in the following domains: (1) women’s social status cross-culturally; (2) specific psychiatric syndromes, such as psychoses, mood and personality disorders as they affect women; and (3) power and resilience. Issues of the cultural validity of psychological theories for women across diverse settings is the subject of critique throughout the seminar. Recommended preparation: ANTH 102 or ANTH 215. Offered as: ANTH 358, ANTH 458.

ANTH 459. Introduction to International Health (3)
Critical health problems and needs in developing countries. Prevalence of infectious disease, malnutrition, chronic disease, injury control. Examines strategies for improvement of health in less developed countries. Recommended preparation: ANTH 102. Offered as ANTH 359 and ANTH 459.

ANTH 461. Urban Health (3)
This course provides an anthropological perspective on the most important health problems facing urban population around the world. Special attention will be given to an examination of disparities in health among urban residents based on poverty, race/ethnicity, gender, and nationality. Offered as ANTH 361 and ANTH 461.

ANTH 462. Contemporary Theory in Anthropology (3)
A critical examination of anthropological thought in England, France and the United States during the second half of the twentieth century. Emphasis will be on the way authors formulate questions that motivate anthropological discourse, on the way central concepts are formulated and applied and on the controversies and debates that result. Readings are drawn from influential texts by prominent contemporary anthropologists. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 362 and ANTH 462.

ANTH 463. Anthropology and Bioethics (3)
The course will review theoretical work on anthropological thought and values, the discipline of bioethics, its philosophical roots, the body of anthropological work in bioethics, and critically examine a number of current biomedical issues in the United States and internationally. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 363 and ANTH 463.

ANTH 465. Gender and Sex Differences: Cross-cultural Perspective (3)
Gender roles and sex differences throughout the life cycle considered from a cross-cultural perspective. Major approaches to explaining sex roles discussed in light of information from both Western and non-Western cultures. Offered as ANTH 365 and ANTH 465 and WGST 365.

ANTH 466. Topics in Evolutionary Biology (3)
The focus for this course on a special topic of interest in evolutionary biology will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution. ANAT/ANTH/GEOL/PHIL 467/BIOL 468 will require a longer, more sophisticated term paper, and additional class presentation. Offered as ANTH 367, BIOL 368, GEOL 367, PHIL 367, ANAT 467, ANTH 467, BIOL 468, GEOL 467, and PHIL 467.

ANTH 469. The Anthropology of Nutrition (3)
Examines human nutrition and physical performance within the framework of human adaptability theory. The emphasis is on the measurement of energetic intake and expenditure in human populations; the assessment, health consequences, and bio-cultural correlates of malnutrition and obesity; and the uses of energetic data in assessing human population adaptation. Recommended preparation: ANTH 103 or consent of department. Offered as ANTH 369 and ANTH 469.

ANTH 470. Tutorial in Physical Anthropology (3)
Guided readings in physical anthropology. Recommended preparation: Graduate standing and consent of department.

ANTH 471. Culture, Behavior, and Person: Psychological Anthropology (3)
Cross-cultural perspectives on personality, human development, individual variability, cognition, deviant behavior, and the role of the individual in his/her society. Classic and contemporary anthropological writings on Western and non-Western societies. Recommended preparation: ANTH 102 or consent of department. Offered as ANTH 371 and ANTH 471.

ANTH 472. Anthropological Approaches to Religion (3)
The development of, and current approaches to, comparative religion from an anthropological perspective. Topics include witchcraft, ritual, myth, healing, religious language and symbolism, religion and gender, religious experience, the nature of the sacred, religion and social change, altered states of consciousness, and evil. Using material from a wide range of world cultures, critical assessment is made of conventional distinctions such as those between rational/irrational, natural/supernatural, magic/religion, and primitive/civilized. Recommended preparation: ANTH 102. Offered as ANTH 372, RLGN 372 and ANTH 472.

ANTH 475. Human Evolution: The Fossil Evidence (3)
This course will survey the biological and behavioral changes that occurred in the hominid lineage
ANTH 476. Topics in the Anthropology of Health and Medicine (3)
Special topics of interest, such as the biology of human adaptability; the ecology of the human life cycle health delivery systems; transcultural psychiatry; nutrition, health, and disease; paleoepidemiology; and population anthropology. Recommended preparation: ANTH 102 or ANTH 103. Offered as ANTH 376 and ANTH 476.

ANTH 477. Human Osteology (3)
This course for upper division undergraduates and graduate students will review the following topics: human skeletal development and identification; forensic identification (skeletal aging, sex identification and population affiliation). Offered as ANAT 377, ANTH 377, ANAT 477 and ANTH 477.

ANTH 478. Reproductive Health: An Evolutionary Perspective (3)
This course provides students with an evolutionary perspective on the factors influencing human reproductive health, including reproductive biology, ecology, and various aspects of natural human fertility. Our focus will be on variation in human reproduction in mostly non-western populations. Recommended preparation: ANTH 103. Offered as ANTH 378 and ANTH 478. Prereq: ANTH 103.

ANTH 479. Topics in Cultural and Social Anthropology (3)
Special topics of interest across the range of social and cultural anthropology. Recommended preparation: ANTH 102. Offered as ANTH 379 and ANTH 479.

ANTH 480. The Anthropology of Health and Illness I (3)
Part one of the graduate core course in medical anthropology includes sections giving an overview of topics such as the history and conceptual development of medical anthropology, anthropological epidemiology, psychiatric anthropology, social networks/support systems, and health care systems. Recommended preparation: Graduate standing.

ANTH 481. The Anthropology of Health and Illness II (3)
Part two of the graduate core course in medical anthropology includes sections giving an overview of topics such as human adaptability theory, nutritional anthropology, demography, the anthropology of biomedicine, cross-cultural aging, clinical anthropology, and international health. Recommended preparation: ANTH 480.

ANTH 488. Globalization, Development and Underdevelopment: Anthropological Persp (3)
This course examines both theoretical and practical perspectives on globalization and economic development in the “Third World.” From “Dependancy,” “Modernization,” and “World System” theory to post-structuralist critiques of development discourse, the class seeks to provide a framework for understanding current debates on development and globalization. The “neoliberal monologue” that dominates the contemporary development enterprise is critically examined in the context of growing global inequality. Special consideration is given to the roles of international agencies such as the World Bank, International Monetary Fund, United Nations, and non-governmental organizations (NGOs) in the “development industry.” The course also focuses on the contribution of anthropologists to development theory and practice with emphasis on the impact of development on the health of the poor and survival of indigenous cultures. Opportunities for professional anthropologists in the development field are reviewed. Offered as ANTH 388 and ANTH 488.

ANTH 489. Crossroads: Transformation of Rural Blues into Urban Rock (3)
A multimedia approach to the development and transformation of an American musical form, the blues. The authors include the social and cultural history of rural and urban blues, rhythm and blues, rock ‘n’ roll, and the later forms of rock, the social context and life histories of modern music’s creators and innovators, the development of vocal and instrumental styles, blues and rock, visual and performance iconography, milestones in the development of musical genres and the major roles of racism and discrimination in the development of these forms of popular music. Recommended preparation: ANTH 102. Offered as ANTH 389 and ANTH 489.

ANTH 493. Human Ecology: The Biology of Human Adaptability (3)
The place of human populations in the ecosystem. The importance of biological and behavioral responses of populations ranging from hunters and gatherers to contemporary and industrial societies. The effect of various natural and manmade stresses on man’s adaptation to the environment. Recommended preparation: ANTH 103 or consent of department. Offered as ANTH 393 and ANTH 493.

ANTH 494. Seminar in Evolutionary Biology (3)
This seminar investigates 20th-century evolutionary theory, especially the Modern Evolutionary synthesis and subsequent expansions of and challenges to that synthesis. The course encompasses the multidisciplinary nature of the science of evolution, demonstrating how disciplinary background influences practitioners’ conceptualizations of pattern and process. This course emphasizes practical writing and research skills, including formulation of testable theses, grant proposal techniques, and the implementation of original research using the facilities on campus and at the Cleveland Museum of Natural History. Offered as ANTH 394, BIOL 394, GEOL 394, HSTY 394, PHIL 394, ANTH 494, BIOL 494, GEOL 494, HSTY 494, and PHIL 494.

ANTH 497. Epidemiology and the Evolution of Human Diseases (3)
Basic concepts of infectious and degenerative diseases. Description and analysis of the changing distribution and determinants of disease in prehistoric, historic, and contemporary human populations. Recommended preparation: ANTH 103 or consent of department. Offered as ANTH 397 and ANTH 497.

ANTH 498. Public Policy and Aging (3)
Overview of aging and the aged. Concepts in the study of public policy. Policies on aging and conditions that they address. The politics of policies on aging. Emergent trends and issues. Offered as ANTH 498, BETH 496, EPBI 408, GERO 496, HSTY 480, MPH 408, NURS 479, NURS 579, POSC 480, and SOCI 496.

ANTH 502. Research Practicum in Med Anthropology and Cross-cultural Gerontology (3)
Provides M.A. students with firsthand experience in applying anthropology to health and aging problems. Prereq: Graduate standing.

ANTH 503. Seminar in Social Cultural Anthropology (3)

ANTH 504. Anthropological Research Design (3)
Practical and theoretical issues in the selection of questions for health and aging research in societal settings. Illustration of frameworks and designs for research. Discussion of the problems of collection, analysis, and interpretation of data along with the nonscientific influences on the research process and the use of results. Prereq: Graduate standing.

ANTH 506. Seminar in Comparative Health Systems (3)
Prereq: ANTH 480.

ANTH 507. Seminar in Controversial Issues in Anthropology (3)
The goals of this course are to provide students with opportunities to: (1) Familiarize themselves with the (alleged) facts of various controversial issues that have characterized the field of anthropology over the past 50 years; (2) enhance their skills in analyzing and assessing the nature and quality of the arguments and empirical data employed by parties to the controversies; (3) develop an appreciation of the role of historical and political contexts in shaping the emergence and evolution of the controversies; and (4) consider the ethics involved in the practice and public representation of...
anthropology.
Prereq: ANTH 480 and ANTH 481.

ANTH 508. Seminar in Policy and Program Planning and Evaluation
Prereq: ANTH 504.

ANTH 509. Seminar in the Ethnopsychology of Emotion (3)
In this seminar we will be concerned with the relationship of culture and emotion. The study of emotion, traditionally the domain of philosophy, psychology, and physiology, has increasingly attracted the attention of psychological and medical anthropologists. Contemporary anthropological approaches to the problem have documented the substantial role that culture plays in mediating both the experience and the expression of emotion. These issues will be examined through review of cross-cultural, ethnographic materials.
Prereq: ANTH 480.

ANTH 510. Seminar in International Health (3)
This seminar will survey the major areas of research in the field of international health, including anthropology and public health research in international health. Emphasis will be on critical evaluation of current international health theory and methods and review of relevant literature, in regard to the health of the world’s population.
Prereq: ANTH 480 and ANTH 481.

ANTH 511. Topics Seminar in Anthropology and Global Health (3)
Various topics will be offered for graduate students in medical anthropology, such as “Global Mental Health,” “Global Child Health,” and “Global Disease Patterns.”
Prereq: ANTH 480 or ANTH 481.

ANTH 513. Seminar in Ethnopsychiatry (3)
Theory and practice of psychotherapeutic forms. Diagnostic and therapeutic forms from Europe, the United States, Japan, India, and other major cultural traditions and those of local areas such as West Africa, Native America, and Latin America. The cultural theories of mental disorders, related conceptions of self and person, and the relationships of local psychological theory to clinical practice and outcome.

ANTH 519. Seminar in Human Ecology and Adaptability (3)

ANTH 530. Seminar in Medical Anthropology: Topics (3)
Various topics will be offered for graduate students in medical anthropology, such as “Anthropological Perspectives on Women’s Health and Reproduction” and “Bicultural Anthropology.”
Prereq: ANTH 480.

ANTH 542. Human Body: Discourse and Experience (3)
Interdisciplinary approach to embodiment as a starting point for rethinking the concepts of culture and existence. Methodological distinction between phenomenological and semiotic approaches. Topics include cultural uses of the body, the body as representation and expression, the body as an object of domination, the body of health and illness, sexuality and gendered body, religion and the sacred body, and technology and the body.
Prereq: Graduate standing.

ANTH 591. Seminar in Physical Anthropology (3)

ANTH 599. Tutorial: Advanced Studies in Anthropology (1–18)
(Credit as arranged.) Advanced studies in anthropology.

ANTH 601. Independent Research (1–18)
(Credit as arranged.)

ANTH 651. Thesis M.A. (1–18)
Prereq: Graduate standing.

ANTH 700. Dissertation Fieldwork (0)
Students conducting dissertation fieldwork off-campus may choose to register for this course with the permission of their dissertation advisor. Students may register for a maximum of one academic year. Under extraordinary circumstances (e.g., civil war) students may petition for additional time.
Prereq: Ph.D. candidate with an approved dissertation prospectus.

ANTH 701. Dissertation Ph.D. (1–18)
(Credit as arranged.)
Prereq: Doctoral research consent or advanced to Ph.D. candidacy milestone.

DEPARTMENT OF ART HISTORY AND ART

Mather House

E-mail: tim.shuckerow@case.edu

The Department of Art History and Art offers opportunities to study art history, both in Europe and in the Americas, in a wide range of studio offerings, and to pursue state teacher licensure in art education, and to study in pre-professional museum training. The Bachelor of Arts degree is granted in Art History and in Pre-Architecture (second major only), and the Bachelor of Science degree in Art Education. In addition, the department offers graduate programs leading to the degrees of Master of Arts in Art History, in Art History and Museum Studies, and in Art Education, and to the Doctor of Philosophy in Art History and in Art History and Museum Studies. All art programs are considerably enhanced by close cooperation with and access to the facilities of cultural institutions located in University Circle, in particular the Cleveland Museum of Art, the Cleveland Institute of Art, and the Museum of Contemporary Art (MOCA).

The undergraduate and graduate programs in art history are offered as part of the Program in Art History of Case Western Reserve University and the Cleveland Museum of Art. Many classes are taught at the museum, and courses are occasionally offered or co-taught by museum curators who hold adjunct appointments in the department. Students taking advanced-level courses use the museum’s extensive research library, and all students have an opportunity to study original works of art in the museum’s superb collections.

Students majoring in art history have a wide variety of career opportunities. Graduates with a strong background in art are employed as teachers; as museum professionals (both curatorial and administrative); as art librarians and archivists; as journalists or as sales representatives in commercial art galleries, auction houses, and bookstores; as art conservationists; and as art specialists in the diplomatic service and at all levels of government; and in industry, film, and television. Some of these specialties require additional study and professional preparation beyond the bachelor’s degree.

ART EDUCATION

The Art Education program’s mission is “to prepare proactive, scholar-practitioner art educators who will develop into leaders, teachers, and talented artists in the field of art education.”

The undergraduate and graduate degree programs in art education are given jointly with the Cleveland Institute of Art. Art Education majors have the advantage of pursuing their academic studies in a university environment and their studio studies at a professional art school that educates artists and designers. Students participate in educational field experiences conducted in many of Greater Cleveland’s urban, suburban, and rural school systems, its hospitals, museums, and cultural institutions. Graduates of the Art Education program have pursued careers as teachers, supervisors, and consultants in public and
private schools, colleges, art schools, and museums; as administrators of galleries and art organizations; as designers of educational programs for industry; and as practicing artists. The program is especially proud of its record in recruiting and graduating students from diverse backgrounds.

The program offers Pre-Architecture as a second major and as a minor sequence for students who expect to continue architectural studies at the graduate level or who simply wish to pursue an area of interest. For students seeking to develop and nurture their artistic and creative talents, the program offers a variety of introductory and intermediate art studio courses, taught by experienced artists/teachers in a newly renovated building.

Qualified undergraduates majoring in art history or art education may also participate in the Integrated Graduate Studies program (see below).

DEPARTMENT FACULTY

Edward J. Olszewski, Ph.D.  
(University of Minnesota)  
Professor and Chair  
Italian Renaissance and Baroque art

Henry Adams, Ph.D.  
(Yale University)  
Professor  
American art

David Carrier, Ph.D.  
(Columbia University)  
Champney Family Professor  
Contemporary art and art criticism

Anne Helmreich, Ph.D.  
(Northwestern University)  
Associate Professor  
18th- and 19th-century European art

Ellen G. Landau, Ph.D.  
(University of Delaware)  
Andrew W. Mellon Professor of the Humanities  
20th-century American and European art; critical theory and gender studies

Jenifer Neils, Ph.D.  
(Princeton University)  
Ruth Coulter Heede Professor  
Ancient art and classical archaeology

Catherine B. Scallen, Ph.D.  
(Princeton University)  
Associate Professor  
Northern Renaissance and Baroque art and historiography

Secondary Faculty

Charles Burroughs, Ph.D.  
(The Warburg Institute)

Elise B. Smith  
Professor of Liberal Arts;  
Professor of Classics

Miriam R. Levin, Ph.D.  
(University of Massachusetts)  
Professor

Adjunct Faculty

CURATORS OF THE CLEVELAND MUSEUM OF ART

Michael Bennett, Ph.D.  
(Harvard University)  
Ancient art

Susan Bergh, Ph.D.  
(Columbia University)  
Art of the Ancient Americas

Jane Glaubinger, Ph.D.  
(Case Western Reserve University)  
Prints and drawings

Tom Hinson, M.A.  
(Case Western Reserve University)  
Contemporary art and photography

Heather Lemonedes, Ph.D.  
(The Graduate School and University Center, City University of New York)  
Prints and drawings; 19th-century artists

Constantine Petridis, Ph.D.  
(Ghent University)  
African art

William Robinson, Ph.D.  
(Case Western Reserve University)  
Modern European art

Marjorie Williams, M.A.  
(University of Michigan)  
Asian art

Art Education

Tim Shuckerow, M.A.  
(Case Western Reserve University)  
Director, Art Education and Art Studio

Judy Flamik, B.A.  
(Lake Erie College)  
University Supervisor, Secondary Student Teaching

Sandra Noble, M.A.  
(Cleveland State University)

UNDERGRADUATE PROGRAMS

The art history curriculum is designed to give students a broad grounding in painting, sculpture, architecture, and the decorative arts, with a strong emphasis on understanding the cultural context in which they were produced. Students also develop a technical and critical vocabulary as well as sound writing skills to analyze works of art.

Majors

BACHELOR OF ARTS IN ART HISTORY

This major requires 36 hours of course work in art history, including ARTH 101, 102, and 396. At least 6 credit hours must be taken at the 200 level, and at least 15 credit hours must be taken at the 300 level. One approved art studio course is also required. Foreign language study (French, German, or Italian) is highly recommended.
DEPARTMENTAL HONORS
Majors who wish to earn the Bachelor of Arts degree with Honors in Art History must make written application to the department chair no later than the fall semester of their senior year. Departmental honors are awarded upon fulfillment of the following requirements: a grade point average of at least 3.5 in the major and an honors thesis (ARTH 399) that receives a grade of A.

BACHELOR OF ARTS IN PRE-ARCHITECTURE
The Pre-Architecture program introduces the student to the forms, history, and functions of architecture as well as to the studio skills relevant to its practice. The program is designed to provide a background for undergraduate students who plan to continue architectural studies at the graduate level, as well as for those interested in the study of architecture as part of a liberal or technical education.

Pre-architecture may be chosen only as a second major. The double major is required so that the perspectives provided by this interdisciplinary program may be complemented by a concentrated disciplinary experience. For a student who completes a Bachelor of Science degree (B.S., B.S.E., or B.S.N.), pre-architecture may serve as the sole major for a B.A. degree.

To declare a pre-architecture major, students should have declared a first major and have sophomore or junior standing. Up to 6 credits in general education requirements and elective courses taken by students for their first major may be applied to their pre-architecture major.

The major consists of a minimum of 30 credit hours, 15 of which are in required courses and the remainder of which are approved elective courses. Detailed information about approved electives is available in the departmental office.

The required courses are:
ARTS 302, 303 Architecture and City Design I, II (3, 3)
ARTH 101 (3)
ARTH 102 (3)
ARTS 106 Creative Drawing I (3)

Fifteen hours of electives must be selected from the following groups:
1. 6 hours from selected art history courses
2. 6 hours from
   ARTS 101, 201 Design and Color I, II (3, 3)
   ARTS 206 Creative Drawing II (3)
   ARTS 220 Photography Studio I (3)
   THTR 223, 224 Stagecraft I, II (3, 3)

3. For students whose interests lie in aesthetics and the history of architecture, 3 hours in sociology, American studies, anthropology, history of science and technology, civil engineering, or geology. Students are encouraged to include as many of the courses listed below as possible in their schedules:
   MATH 125, 126 Mathematics I, II (4, 4)
   PHYS 115, 116 Introduction to Physics (4, 4) and Laboratory (4, 4)
   PHYS 121 General Physics-Mechanics (4)
   PHYS 122 General Physics II-Electricity and Magnetism (4) and Laboratory

BACHELOR OF SCIENCE IN ART EDUCATION
The B.S. in art education requires a total of 124 credits and is designed to educate professional teachers of art for the public and private schools who are also competent, creative artists. The program meets all requirements of the Ohio Board of Education to qualify its university-recommended students for Pre-K-12 Art Specialist Licensure to teach art in the public schools of Ohio and more than 40 reciprocating states.

This program is conducted jointly by Case Western Reserve University and the Cleveland Institute of Art. Admission requires application to Case Western Reserve and submission of an art portfolio to the Cleveland Institute of Art. Credentials must be acceptable to both institutions. Academic work is taken at Case Western Reserve University, and the majority of studio courses at the Cleveland Institute of Art, as follows:

ACADEMIC COURSES AT CASE WESTERN RESERVE UNIVERSITY
SAGES First Seminar (4)
SAGES University Seminar. Two selected from:
USNA Thinking About Natural and Technological World (3)
USSO Thinking about the Social World (3)
USSY Thinking about the Symbolic World (3)
Natural Sciences (3)
Quantitative Reasoning (MATH or STAT) (3)
Global & Cultural Diversity (3)
ARTH 101 and 102 (6)
ARTH electives (one must be at 300 level) (6)
PHED Physical Education (2 semesters) (0)
Professional Education/Art Education (39 total credit hours)
ARTS 295, 300, 385, 386, 387, 393, 395, 366a, 366b, 465
EDUC 301, PSCL 101, and EDUC 304
EDUC 225 (or EDJC 255)

ART STUDIO COURSES AT THE CLEVELAND INSTITUTE OF ART
Total of 51 hours of studio possible:
Digital Art and Design (6)
Design 2D and 3D (6)
Drawing I, II, III (9)
Painting Arts 216 and CIA Color (6)
2D Visualization (3)
Studio Project (3)
Sculpture (3)
5 Studio Electives (15)

Retention and Advanced Standing (Undergraduate Level)
The Bachelor of Science program in art education is designed to educate professional teachers of art. There are four decision points in the program, and for each of these decision points, there are three possible outcomes: unconditional admission; conditional admission with a prescribed remedial plan which when successfully completed will result in unconditional admission; or denial of admission. Denial of admission at any decision point means the student is no longer able to pursue an Art Education degree at Case Western Reserve.

DECISION POINT 1: APPLICATION FOR ADMISSION TO THE PROGRAM
Official admission to the Art Education program generally occurs at the end of the fall semester of the sophomore year. Admission to
the program requires: (1) being accepted to the university; (2) being accepted as an art major through a portfolio review before matriculation; (3) successful completion of ARTS 295, including evaluation of an initial Teaching ePortfolio; (4) cumulative Case GPA of 2.5 or better; (5) submission of a signed Statement of Assurance of Good Moral Character, and (6) a satisfactory interview with Art Education faculty, documented on the Teacher Licensure Admission Assessment Form.

**DECISION POINT 2: APPLICATION FOR ADVANCED STANDING**

The Application for Advanced Standing should be submitted by the junior year and the fall semester after Decision Point 1. Application for Advanced Standing requires: (1) a successful review of the updated Teaching ePortfolio; (2) submission of a current DPR form documenting the following: a cumulative GPA of 2.5 or better, an art course GPA of 2.5 or better, and an education GPA of 3.0 or better; and (3) a passing score on the Candidate Disposition Assessment Inventory completed by the Art Education faculty.

**DECISION POINT 3: APPLICATION FOR STUDENT TEACHING**

The Application for Student Teaching should be completed by week 8 of the semester prior to student teaching. The application requires: (1) a successful review of the updated Teaching ePortfolio; (2) submission of a current DPR form documenting the following: a cumulative GPA of 2.5 or better, an art course GPA of 2.5 or better, and an education GPA of 3.0 or better; (3) a passing score on the Candidate Disposition Assessment Inventory completed by the Art Education faculty; (4) passing a TB test; (5) presenting documentation of Hepatitis B vaccination; and (6) passing an official criminal background check.

**DECISION POINT 4: APPLICATION FOR INITIAL LICENSURE**

Application for Initial Licensure occurs after successful completion of all degree requirements. The application requires: (1) a successful review of the updated Teaching ePortfolio; (2) submission of a current DPR form documenting the following: a cumulative GPA of 2.5 or better, an art course GPA of 2.5 or better, and an education GPA of 3.0 or better; (3) a passing score on the Candidate Disposition Assessment Inventory completed by the Art Education faculty; (4) achievement of state-mandated scores on the two Praxis II national teacher exams; (5) completion of the Case Student Teaching Final Assessment by the cooperating teacher and university supervisor with a grade of B or better; and (6) completion of the Case Teacher Licensure Exit Interview and Survey.

After successfully completing all requirements at the four decision points, the student is recommended by the university’s director of teacher education for the Ohio Provisional Art (Pre-K-12) License. Completion of the B.S. in Art Education degree is separate from the assurance that the State of Ohio’s Provisional Art Teacher License will be awarded. Teacher Licensure is also obtainable through the Art Education Graduate Program of Study.

Additional information on this program is available in the office of the director of art education.

**Integrated Graduate Studies**

Qualified undergraduates majoring in art history or art education may also participate in the Integrated Graduate Studies program. Interested students should note the general requirements and the admission procedures in this bulletin and may consult the department for further information.

**Minors**

Four minors are available in art: one in art history, and three through the Art Studio program.

**ART HISTORY**

Requires 18 hours of art history, including:

- ARTH 101 (3)
- ARTH 102 (3)

At least three credit hours must be taken at the 200 level.

**ART STUDIO**

Requires 18 hours in Art Studio courses, including:

- ARTS 101 Design and Color (3)
- ARTS 106 Creative Drawing (3)

Four additional studio courses, two of which must be in the same area (i.e., drawing, painting, design, textiles, photography, ceramics and enameling).

**PHOTOGRAPHY**

Requires 18 hours, including:

- ARTS 220 Photography Studio I (3)
- ARTS 320 Photography Studio II (3)
- ARTS 322 Photography: Color Studio (3)
- ARTS 325 Creative Photography (3) or ARTS 365D, Black & White Photography Studio (3)
- ARTS 365E Color Studio (3) or ARTS 365K, Creative Photography (3)

An elective, either ARTS 399, Independent Study in Art Studio (3), ARTH 102, Art History II (3), or ARTS 350, Multimedia I

**PRE-ARCHITECTURE**

Requires 18 hours, including:

- ARTH 101 (3)
- ARTH 102 (3)
- ARTS 106 Creative Drawing (3)
- ARTS 302, 303 Architecture and City Design I, II (3, 3)

One approved elective. Recommended: ARTS 304, Architecture and City Design III, or ARTS 350, Multimedia I

**GRADUATE PROGRAMS**

**Master of Arts in Art History**

The master’s program in art history is designed to provide the student with a broad knowledge of the major art historical periods, the scholarly and bibliographical resources, and the methodologies of art history. It also offers an opportunity to investigate art historical problems in some depth. In addition to the regular graduate school application form, applicants to the graduate program in art history are required to submit GRE scores and copies of two term papers that they consider to represent their best work. Applicants for the M.A. should have a B.A. major or minor concentration in art history or a related humanities field and a minimum GPA of 3.0.

The master’s degree in art history is conducted exclusively under Plan B as described under the School of Graduate Studies in this bulletin. All other requirements of the M.A. program must be fulfilled:

- Eight graduate courses, including one each from four of the following five areas, three of which must be seminars at the 500 level (24):
- Non-Western
• Ancient
• Medieval
• Renaissance/Baroque
• Modern and American
• A reading knowledge of one foreign language (French, German, Italian or Spanish)
• Successful performance on the M.A. comprehensive examination
• 3 credit hours of qualifying paper (ARTH 489)

Total: 30 hours

Master of Arts in Art History and Museum Studies

The master’s program in Art History and Museum Studies includes the same broad requirements and objectives of the master’s program in art history, with additional study of art museum procedures and two supervised museum internships.

The requirements include:

• ARTH 495, Methodology of Art History (3)
• ARTH 490, Visual Arts and Museums (3)
• ARTH 491A&B, Visual Arts and Museums: Internship (1/3)
• Seven graduate courses, including one each from four of the following five areas, three of which must be graduate seminars at the 500 level (21):
  • Non-Western
  • Ancient
  • Medieval
  • Renaissance/Baroque
  • Modern and American

Total: 31 hours

Master of Arts in Art Education

The Master of Arts in Art Education is offered in two plans: Plan I for those who already hold teacher licenses and who desire advanced studio- and art-related studies; Plan II for those holding the Bachelor of Fine Arts or equivalent degree who desire teaching licensure multiple as visual art specialists. Both programs are offered jointly by Case Western Reserve University and the Cleveland Institute of Art, and both require 36 semester hours.

The admission procedure includes a formal application, three letters of recommendation, and a college transcript, which are to be submitted to the Art Education Office. The Cleveland Institute of Art admission procedure requires a portfolio of artwork. Approval by both the University and the Cleveland Institute of Art is required for admission. Information and application forms are available online through the Office of Graduate Admission at Case Western Reserve University.

**PLAN I**

18 hours in studio to be taken at the Cleveland Institute of Art at the 300 level or above; and 18 hours in academic courses to be taken at Case Western Reserve University at the 400 level or above, to be selected in consultation with the director of art education; or

• 30 semester hours of course credit: 18 hours in studio to be taken at the Cleveland Institute of Art at the 300 level or above; and 12 hours in academic courses to be taken at Case Western Reserve University at the 400 level or above, to be selected in consultation with the director of art education; AND a thesis based on individual research (not less than 6 semester hours of registration).

**PLAN II**

EDUC 401 Introduction to Education (3)
EDUC 404 Educational Psychology (3)
ARTS 385 Clinical Field-Based Experience I (1)
ARTS 386 Clinical Field-Based Experience II (1)
ARTS 387 Clinical Field-Based Experience III (1)
ARTS 400 Current Issues in Art Education (3)
ARTS 493 Art Content, Pedagogy, Methodology, and Assessment (3)
ARTS 466 A&B Student Teaching in Art for Pre-K-6th Grade and 7th-12th Grade (4 each)
ARTS 465 Seminar for Art Teachers (4)
ARTS 602 Study in Art Education (3)
ARTS 495 Introduction to Multimedia Technology (3)
ARTS 497 Summer Workshop in Art Education (3)

The Master’s Plan II Program in Art Education is designed to educate professional teachers of art. There are four decision points in the Art Education program. For each of the decision points, there are three possible outcomes: unconditional admission; conditional admission with a prescribed remedial plan which when successfully completed will result in unconditional admission; or denial of admission. Denial of admission at any decision point means the student is no longer able to pursue an Art Education degree at Case Western Reserve University.

**DECISION POINT 1: APPLICATION FOR ADMISSION TO THE PROGRAM**

Application for admission to the program requires: (1) being accepted to the university; (2) being accepted as an art major through a portfolio review; (3) submission of a signed Statement of Assurance of Good Moral Character, and (4) a satisfactory interview with Art Education faculty, documented on the Teacher Licensure Admission Assessment Form.

**DECISION POINT 2: APPLICATION FOR ADVANCED STANDING**

Application for Advanced Standing requires: (1) a successful review of the updated Teaching ePortfolio; (2) submission of a current transcript documenting the following: a cumulative GPA of 3.0 or better, an art course GPA of 3.0 or better, and an education GPA of 3.0 or better; and (3) a passing score on the Candidate Disposition Assessment Inventory, completed by the Art Education faculty at the end of the first semester.

**DECISION POINT 3: APPLICATION FOR STUDENT TEACHING**

Application for Student Teaching requires: (1) a successful review of the updated Teaching ePortfolio; (2) submission of a current transcript documenting the following: a cumulative GPA of 3.0 or better, an art course GPA of 3.0 or better, and an education GPA of 3.0 or better; (3) a passing score on the Candidate Disposition Assessment Inventory, completed by the Art Education faculty; (4) passing a TB test; (5) presenting documentation of Hepatitis B vaccination; and (6) passing an official criminal background check.

**DECISION POINT 4: APPLICATION FOR INITIAL LICENSURE**

Application for Initial Licensure occurs after successful completion of all degree requirements. The application requires: (1) a successful review of the updated Teaching ePortfolio; (2) submission of a current final transcript documenting the following: a cumulative GPA of 3.0 or better, an art course GPA of
Ph.D. students are required to pass a written examination during the first semester of doctoral study. The department lists a foreign language that must be completed by the time of admission or for the dissertation. A Ph.D. qualifying examination or the equivalent is required for admission, as well as GRE scores and a reading knowledge of one foreign language. A Ph.D. qualifying examination or the equivalent is also required for admission to the doctoral level.

The doctoral program in art history is designed to allow advanced graduate students the opportunity to specialize in designated areas. Admission to the program requires an M.A. in art history or its equivalent, including a reading knowledge of one approved foreign language (French, German, Italian or Spanish). A qualifying examination or the equivalent is also required for admission at the doctoral level.

Applicants are required to submit GRE scores and two papers written during their matriculation for a master’s degree, or a thesis if completed by the time of application.

University requirements for the Ph.D. include a minimum of 36 hours of course credits, but the department may require additional course work as preparation for the general examination or for the dissertation. The minimum credits are to be distributed as follows: ARTH 495, Methodologies of Art History (3); two graduate seminars at the 500 level or above (6); three additional courses at the 400 level or above (9); and a minimum of 18 hours of ARTH 701, Ph.D. Dissertation.

Doctoral students must demonstrate an ability to read two approved languages (other than English) useful in art historical research. German is normally required as one of the two languages for students concentrating in Western art. Both languages must be approved by the department at the time of admission or during the first semester of doctoral study.

Ph.D. students are required to pass a written and oral general examination before being advanced to candidacy. Within two weeks after the examination, the faculty examining committee will administer the oral examination. A final evaluation will be based on the student’s performance in both the written and oral sections of the general examination.

**Doctor of Philosophy in Art History and Museum Studies**

The Ph.D. program in Art History and Museum Studies is offered to a limited number of candidates. The program combines the academic requirements of a Ph.D. with practical museum training, and is designed to provide experience in connoisseurship, conservation, and art education, as well as a planned program of academic course work and independent research. Admission to the program is made on the basis of academic record, experience, recommendations, and personal interviews. A master’s degree in art history or its equivalent is required for admission, as well as GRE scores and a reading knowledge of one foreign language. A Ph.D. qualifying examination or the equivalent is also required for admission.

Students in the museum studies program are required to take a minimum of 38 hours of graduate study as follows: ARTH 610, Cleveland Museum of Art Internship (2); two graduate seminars at the 500 level or above (6); four elective courses at the 400 level or above (12); and a minimum of 18 hours of ARTH 701, Ph.D. Dissertation.

During the two-semester internship, the student will be assigned to one or more departments in the Cleveland Museum of Art for supervised study and practice that will be evaluated by a member of the faculty in art history. The dissertation subject may be related to some aspect of art museum research; it may take the form of a special collection or exhibition catalogue, but it must satisfy the scholarly standards of the department and the university. Any student who has not taken ARTH 495, Methodologies of Art History, or the equivalent will be required to do so as part of the 12 hours of elective courses. Students also must satisfy all other requirements for the Ph.D. degree in art history.

**COURSE DESCRIPTIONS**

**ARTH 101. Art History I: Pyramids to Pago- das (3)**

The first half of a two-semester survey of world art highlighting the major monuments of the ancient Mediterranean, medieval Europe, MesoAmerica, Africa, and Asia. Special emphasis on visual analysis, and socio-cultural contexts, and objects in the Cleveland Museum of Art.

**ARTH 102. Art History II: Michelangelo to Maya Lin (3)**

The second half of a two-semester survey of world art highlighting the major monuments of Renaissance and Baroque Europe, America, and Asia. Special emphasis on visual analysis, historical and sociocultural contexts, and objects in the Cleveland Museum of Art. (ARTH 101 and 102 may be combined, or either can be taken in conjunction with any other 100 or 200 level Art History class to complete a sequence in the Arts portion of the Humanities section of the General Education Requirements in the College of Arts and Sciences or can be used as part of a three course Humanities sequence in the Engineering Core curriculum.)

**ARTH 203. The Arts of Asia (3)**

A survey of Japanese and Chinese art from the Bronze Age to the 18th century, with particular emphasis on objects in the Cleveland Museum of Art. The relationship of art works to Buddhism and Hinduism is explored along with cultural rituals, ceremonies, and traditions. Global & Cultural Diversity

**ARTH 211. Building on Antiquity (3)**

This course will provide orientation in the architectural orders and in most periods of European and Euro-American architectural history as well as, to an extent, criticism. Students will learn how to research buildings from different historical epochs, how to work with relevant databases and a range on on-line resources, and with the print resources available. Students will gain some familiarity with the conventions of architectural representation as these became established over centuries. There will be an important writing component, and a considerable amount of group work involving oral presentation and classroom discussion. The issue of the meaning(s) of architecture will be central; we will consider the blatant political uses of architecture and of imagery associated with architecture, more elusive and/or ambiguous cases, and the phenomenon of meanings changing from one era to another or according to audience. We will consider the relationship of the relatively formal “language” of classical architecture (the orders, especially as endowed with gender associations in the Vitruvian tradition) and the more subtle, ad hoc ways that buildings project meaning or mood. Offered as ARTH 211 and CLSC 211.

**ARTH 220. Jewish Traditional Art and Architecture (3)**
Tradition and transformation in Jewish artistic expression over time and across space. Course will begin with the biblical period and continue down to the present day in Israel and America. Examination of how concepts such as “Jewish” and “art” undergo change within the Jewish community over this period. Offered as ARTH 220 and JDST 220.

Global & Cultural Diversity

ARTH 226. Introduction to Greek and Roman Art (3)
Classical art from the 8th century B.C. to the fourth century A.D.; the major developments in the architecture, sculpture, and painting of ancient Greece, Etruria, and Rome; their political and religious institutions and the relationship to contemporary art forms. Offered as ARTH 226 and CLSC 226.

ARTH 227. Ancient Cities and Sanctuaries
A selection of cities and sanctuaries from the ancient Near East, Egypt, the Aegean, Greece, Etruria, and Rome; their political and religious institutions and the relationship to contemporary art forms. Offered as ARTH 227 and CLSC 227.

ARTH 228. Ancient Greek Athletics (3)
Exploration of the role of athletics in the ancient, primarily Greek world, and their reflection in the art of the period. Offered as ARTH 228 and CLSC 228.

ARTH 240. Architecture: Ancient to 1850 (3)
Western traditions of architecture and urban design from antiquity to the early nineteenth century, with emphasis on pre-industrial cities and landscapes. Interactions between western theory and practice and certain non-western cultures, especially the Arab/Turkish world and China.

Global & Cultural Diversity

ARTH 250. Art in the Age of Discovery (3)
A survey of developments in Renaissance art and architecture in northern Europe and Italy during a new age of science, discovery and exploration, 1400-1600.

ARTH 260. Art in the Age of Grandeur (3)
A survey of European art in the seventeenth and eighteenth centuries, an era of rising nationalism, political aggendizegment, religious expansion and extravagant art patronage.

ARTH 270. American Art and Culture Before 1900 (3)
Survey of the development of American art from colonial times to the present which explores how art has expressed both American values and American anxieties. Painting is emphasized, but the course also considers architecture, the decorative arts, film, literature, and music.

Offered as AMST 270 and ARTH 270.

ARTH 271. American Art and Culture: The Twentieth Century (3)
Survey of the development of American art from 1900 to the present (and the future) which will explore how art has expressed both American values and American anxieties. Painting will be emphasized, but the course will also consider architecture, the decorative arts, film, literature, and music.

Offered as AMST 271 and ARTH 271.

ARTH 280. Modern Art and Modern Science (3)
An examination of the development of painting, sculpture, and architecture from the 19th to the mid 20th century. Special attention is given to the emergence of “modernism” and the influence of science on such movements as Impressionism and Cubism.

ARTH 284. History of Photography (3)
A survey of the history of photography from its inception in 1839 to the present. Emphasis is on the complex relationship between technological innovations and picture-making: the artistic, documentary, and personal uses of photography; and the relationship of photography to other art forms.

ARTH 290. Introduction to the Art of Sub-Saharan Africa (3)
Exploration of the diverse forms and multiple contexts of the visual arts of sub-Saharan Africa. Attention focused on the sculpture of different peoples of West and Central Africa. Ancient arts in terracotta and bronze of Nigeria, Mali, and Chad and rock art of Saharan, Southern, and Eastern Africa will also be explored. Topics such as the styles, aesthetics, meanings, and functions of African art and the training, techniques, and status of the African artist will be discussed.

Global & Cultural Diversity

ARTH 293. A World Art History (3)
Traditionally European (and American) art historians focused on the art tradition of their own culture. But recently there has been interest in a world art history. Specialists look at the history of other visual cultures. And so then the great intellectual challenge is to write a narrative including art from everywhere. This project is very important politically. Our world has so many dangerous conflicts, and so sympathetic study of art from other cultures is an important way to promote international understanding. In the first part of the class we look at the history of European art history. We discuss Vasari’s great pioneering history, and the development of his concerns by Hegel; and, in the mid-twentieth century by Ernst Gombrich and Clement Greenberg. This monocultural tradition focuses on the history of European art. In the second part we consider the art of three great cultures outside Europe: China, India, and Islam. We read a little about their art history, focusing on the ways in which it is very different from the history of European art. The aim is not to do a systematic analysis, which would be a very large task, but to introduce some suggestive themes. We will discuss the role of the medium in Chinese scroll painting and Islamic concepts of decoration. We will look at the representations of carpets within European paintings. They are an important example of what happens when diverse cultures connect.

Global & Cultural Diversity

ARTH 302. Buddhist Art in Asia (3)
The development of Buddhist art from its origins in India along the silk route to China and along the maritime routes to Japan and southeast Asia. Offered as ARTH 302 and ARTH 402.

Global & Cultural Diversity

ARTH 303. History of Far Eastern Art (3)
A survey of traditional arts of Asia east of the Indus river, designed to emphasize the creative contributions of the artist with particular attention to the international relations of: the Bronze Age, Buddhist art, Hindu art, and the later arts of China, Korea, and Japan. National and regional contributions to the developed styles of South Asia and the Far East will be stressed. Offered as ARTH 303 and ARTH 403.

ARTH 304. Art of West Africa (3)
This course will survey artistic traditions of the past, and traditions that continue to flourish to this day in culture regions in West Africa called the Western Sudan and the Guinea Coast. An area of immense geographical and human diversity, the Western Sudan is the homeland of some of Africa’s most renowned medieval empires. An ancient culture known as Jenne (8th – 17th century) has produced a wide variety of refined ceramic artifacts. The Guinea Coast is densely populated by hundreds of different ethnic groups and harbors a diversity of artistic traditions. An active trade with Europeans was established in the region as early as the 15th century. Gender-restricted and ritually powerful organizations still serve as the major patrons of the arts in the region. Contrary to the elongated so-called “pole style” typical of the Western Sudan, the arts of the Guinea Coast are characterized by organic and elegant forms and smooth surfaces in a variety of media. Offered as ARTH 304 and ARTH 404.

ARTH 305. The Art of India (3)
A survey of Indian art from the Indus valley civilization to the Islamic conquest of India. Stylistic developments of the three-dimensional arts examined through cave sites and other extant materials. Offered as ARTH 305 and ARTH 405.

ARTH 306. History of Indian Sculpture (3)
The stylistic development of both Buddhist and Hindu schools of Indian sculpture from the prehistoric period to the 12th century. Sculptural images are studied in terms of Indian mythology and literature. Offered as ARTH 306 and ARTH 406.

ARTH 311. Rome: City and Image (3)
This course studies the architectural and urban history of Rome from the republican era of the ancient city up to the eighteenth century using the city itself as the major “text.” The emphasis will be placed on the extraordinary transformations...
wrought in the city, or at least in key districts, by powerful rulers and/or elites, especially in the ancient empire and in the Renaissance and baroque eras. In a larger perspective, the great construction projects exerted a far-reaching effect within and beyond Europe, but we will study them in relation to their topographical situation, their functions, and their place in a long history of variations on prestigious themes since many of the artworks and the urban settings featured in the course carry the mark of the Long history of the city itself. Recommended preparation: At least one 200-level course in ARTH, ARTH, CLSC, ENGL, HSTY, or RLGN.

Offered as ARTH311/411 and CLSC 311.

ARTH 328. Greek Sculpture (3)
Greek sculpture from the Archaic period through the Hellenistic; style, the development of specific types, and the uses of architectural sculpture.

Offered as ARTH 328, CLSC 328, and ARTH 428.

ARTH 332. Art and Archaeology of Ancient Italy (3)
The arts of the Italian peninsula from the 8th century B.C. to the 4th century A.D., with emphasis on recent archaeological discoveries. Lectures deal with architecture, sculpture, painting, and the decorative arts; supplemented by gallery tours at the Cleveland Museum of Art.

Offered as ARTH 332, CLSC 332, and ARTH 432.

ARTH 333. Greek and Roman Painting (3)
Greek vase painting, Etruscan tomb painting and Roman wall painting. The development of monumental painting in antiquity.

Offered as ARTH 333, CLSC 333, and ARTH 433.

ARTH 334. Art and Archaeology of Greece (3)
A survey of the art and architecture of Greece from the beginning of the Bronze Age (3000 B.C.) to the Roman conquest (100 B.C.) with emphasis on recent archaeological discoveries. Lectures deal with architecture, sculpture, painting, and the decorative arts, supplemented by gallery tours at the Cleveland Museum of Art.

Offered as ARTH 334, CLSC 334, and ARTH 434.

ARTH 335. Issues in Ancient Art (3)
Various topics in Ancient art. Lectures, discussions and reports.

Offered as ARTH 335 and ARTH 435.

ARTH 340. Issues in the Art of China (3)
This is a topics course. Each offering will focus on a specific topic within the area of Chinese art. Sample topics may include: Women painters in Beijing, Modern Artists in China-1980-Present, Shang Dynasty Tombs, Yuan Dynasty Buddhist Art. Lectures, discussions, and reports.

Offered as ARTH 340 and ARTH 440.

Global & Cultural Diversity

ARTH 341. Issues in the Art of Japan (3)
This is a topics course. Each offering will focus on a specific topic within the area of Japanese art. Sample topics may include: Muromachi Hanging Scrolls, Ryoan-ji Temple Garden Architecture, Rimpua School Panel Screens, Buddhist Painting in the Edo Period. Lectures, discussions, and reports.

Offered as ARTH 341 and ARTH 441.

ARTH 342. Issues in the Art of India (3)
This is a topics course. Each offering will focus on a specific topic within the area of Indian art. Sample topics may include: Northern Temple Architecture, Mughal Painting, Gupta Period Sculpture, Great Stupa sculptural articulation. Lectures, discussions, and reports.

Offered as ARTH 342 and ARTH 442.

ARTH 343. Issues in the Art of Southeast Asia (3)
This is a topics course. Each offering will focus on a specific topic within the area of Southeast Asian art. Sample topics may include: Buddhist Art, Introduction to Southeast Asian Art, Temple Architecture in Thailand, Cambodian Stone Carvings, Lectures, discussions, and reports.

Offered as ARTH 343 and ARTH 443.

ARTH 344. Issues in the Art of Africa (3)
This is a topics course. Each offering will focus on a specific topic within the area of African art. Sample topics may include: Ritual Masks, Sub-Saharan Religious Architecture, Carvings of Twins in Fertility Rites, Benin Bronze Warrior Reliefs. Lectures, discussions, and reports.

Offered as ARTH 344 and ARTH 444.

ARTH 345. Issues in Pre-Columbian Art (3)
This is a topics course. Each offering will focus on a specific topic within the area of Pre-Columbian art. Sample topics may include: Ancient Mesoamerica, Mayan Temple/Palace Complexes, Royal Peruvian Settlements, Inca Decorative Arts. Lectures, discussions, and reports.

Offered as ARTH 345 and ARTH 445.

ARTH 346. Issues in the Art of Native Peoples (3)
This is a topics course. Each offering will focus on a specific topic within the area of native peoples. Sample topics may include: North American Indian Art, Mound Building Cultures in the Central United States, Introduction to Maori Polychrome Painting, Decorative American Indian Bead Work. Lectures, discussions, and reports.

Offered as ARTH 346 and ARTH 446.

ARTH 347. Issues in Islamic Art (3)
This is a topics course. Each offering will focus on a specific topic within the area of Islamic art. Sample topics may include: Mosque Architecture in Spain, Islamic Decorative Arts, Mughal Figurative Art, Introduction to the Art of Islam. Lectures, discussions, and reports.

Offered as ARTH 347 and ARTH 447.

ARTH 350. Issues in Medieval Art (3)
Various topics in Medieval Art. Lectures, discussions, and reports.

Offered as ARTH 350 and ARTH 450.

ARTH 351. Late Gothic Art in Italy (3)
Sculpture of the Pisani; early trends in Pisa, Siena, and Florence; Cimabue and Giotto; Duccio; Simone Martini, and the Lorenzetti; painting in Florence and Siena after the Black Death.

Offered as ARTH 351 and ARTH 451.

ARTH 352. Italian Art of the 15th Century (3)
The early 15th century in Florence, civic humanism, the sculpture of Ghiberti and Donatello, the painting of Masaccio; the International Style in painting, the art of Uccello, Piero della Francesca, Mantegna, and Botticelli; Carpaccio and the Bellini in Venice.

Offered as ARTH 352 and ARTH 452.

ARTH 353. Sixteenth Century Italian Art (3)
The development of the High Renaissance and Mannerist styles in Italy and late 16th century trends: painting and sculpture.

Offered as ARTH 353 and ARTH 453.

ARTH 356. Italian Renaissance and Baroque Sculpture (3)
Italian sculpture from the early 12th century to the later 18th century. The Pisani, Ghiberti, Donatello, Michelangelo, the Mannerists and Bernini.

Offered as ARTH 356 and ARTH 456.

ARTH 360. Renaissance Art in Northern Europe (3)
Painting, sculpture and the graphic arts in the Netherlands, Germany, and France, 1400-1580, highlighting artists such as Jan van Eyck, Albrecht Dürer and Pieter Bruegel. The rise of secular subjects and bourgeois patronage is explored.

Offered as ARTH 360 and ARTH 460.

ARTH 361. Dutch and Flemish 17th Century Painting (3)
The golden age of Dutch and Flemish art with study of major masters (Rubens, Hals, Rembrandt, and Vermeer) and developments in subject matter: landscape, still-life, and genre themes.

Offered as ARTH 361 and ARTH 461.

ARTH 362. Issues in Renaissance Art (3)
Various topics in Renaissance art. Lectures, discussions and reports.

Offered as ARTH 362 and ARTH 462.

ARTH 365. Issues in Baroque Art (3)
Various topics in baroque art. Lectures, discussions and reports.

Offered as ARTH 365 and ARTH 465.
lished a new and lasting form of government, but
subsistence farmers and most of their products,

Th e 20th/21st Century (3)
and new developments in literature, philosophy,
painting and sculpture with utopian goals. Focus
European Art (3)
Offered as ARTH 381 and ARTH 481.
ARTH 374. Impressionism to Symbolism (3)
Major developments in European painting and
sculpture during the latter half of the nineteenth
century. Post-impressionism, synthetism, symbol-
ism, and the arts and crafts movement considered
in their socio-cultural contexts. Works of Degas,
Manet, Monet, Klimt, Bocklin, Gauguin, etc.
Offered as ARTH 374 and ARTH 474.
ARTH 379. Issues in 19th Century Art (3)
Various topics in 19th century art, with class lec-
tures, discussions and reports. Consult department
for current topic.
Offered as ARTH 379 and ARTH 479.
ARTH 380. Abstract Expressionism and Its
Aftermath (3)
An examination of the development and influences of
Abstractionism, including the impact on the Beat Generation and Pop Art.
Offered as ARTH 380 and ARTH 480.
ARTH 381. Neoclassicism to Realism (3)
The main developments of European art, chiefly
painting and sculpture from post-impressionism to
the present; the nature of abstract art and the inter-
relation between art and the visual arts.
Offered as ARTH 381 and ARTH 481.
ARTH 382. Visions of Utopia: 20th Century
European Art (3)
Major movements in early 20th century European
painting and sculpture with utopian goals. Focus on
the interrelationships between the visual arts and new
developments in literature, philosophy, and science.
Offered as ARTH 382 and ARTH 482.
ARTH 383. Gender Issues in Feminist Art:
The 20th/21st Century (3)
An in-depth thematic approach to issues affecting
works of art by and about women. Focus on the
late 20th century. Emphasis on a specifically mod-
ern use of feminine myths, subjects and modes of
production, and feminist criticism.
Offered as ARTH 383, WGST 383 and ARTH 483.
ARTH 384. American Art and Architecture
in the Age of Washington and Jefferson (3)
In the 18th century, Americans created not only a
political revolution but an artistic and creative one
as well. In the 17th century, most Americans were
subsistence farmers and most of their products,
manufactures, and buildings were relatively crude.
In the 18th century, Americans not only estab-
lished a new and lasting form of government, but
for the first time produced paintings, buildings,
furniture and silver that rivaled the finest produc-
tions of Europe. Notably, many of the leaders of
the American Revolution, such as Paul Revere,
George Washington, and Thomas Jefferson, also
made significant contributions to the arts.
Offered as ARTH 384 and ARTH 484.
ARTH 385. American Avant-Garde: 1900 -
1925 (3)
An examination of the development of avant-garde
styles in New York during the early twentieth cen-
tury. In-depth discussion of the Photo-secession,
Stieglitz’s “291” gallery, the Armory Show, Marcel
Duchamp's move to America, and the formation
and demise of the New York Dada movement.
Offered as ARTH 385 and ARTH 485.
ARTH 392. Issues in 20th/21st Century Art
(3)
Various topics in 20th/21st century art, with class
lectures, discussions, and reports.
Offered as ARTH 392 and ARTH 492.
ARTH 393. Contemporary Art: Critical
Directions (3)
An examination of the directions taken by avant-
garde American art and criticism in the aftermath
of Abstract Expressionism. Includes the rise
and fall of modernism in the 1960s and ’70s, as well as an
investigation of Post-modern trends and theo-
ries.
Offered as ARTH 393 and ARTH 493.
ARTH 394. Departmental Seminar (3)
The Department of History of Art and Art depart-
mental seminar. A topical course, emphasizing
disciplinary writing and modes of investigation
and analysis. It is recommended for Art History
majors before the majors seminar/capstone course,
typically taken in the junior or senior years. The
course advances the goals of SAGES within the
disciplinary context of art history by focusing on
close readings of art history texts (with an empha-
sis upon methodological approaches), examination
of original works of art when possible, analytical
writing, and intensive seminar-style discussion.
Prereq: ARTH 101 or ARTH 102 and at least one
200-level ARTH course.
SAGES Dept Seminar
ARTH 395. Internship (3)
This course is designed for students seeking
professional experience in art history. It focuses
on the museum experience (registration, exhibi-
tion, interpretation, and administration) although
students may also elect to conduct internships in
museum-related environments such as art conser-
vation. Students are encouraged to have gained
significant experience in art history course work
before embarking on an internship. Students must
identify an internship and supervisor as well as a
campus internship supervisor the semester before
enrolling in the internship. Recommended prepa-
ration: ARTH 101, ARTH 102, or ARTH 104,
and consent.
ARTH 396. Majors Seminar (3)
Capstone course required of all undergraduate
Art History majors, typically taken in senior year.
Requires professional-level research with peer and
faculty oversight culminating in formal written
and oral presentations. Limited to Art History
majors.
ARTH 397. History of Prints and Printmak-
ing (3)
Development of techniques and style and the so-
cial function of prints. The great masters: Dürer,
Rembrandt, Goya, and others. Based on the exten-
sive collections of the Cleveland Museum of Art.
Offered as ARTH 397 and ARTH 497.
ARTH 398. Independent Study in Art His-
tory (1–3)
Individual research and reports on special topics.
ARTH 399. Honors Thesis (3)
Intensive study of a topic or problem leading to the
preparation of an honors thesis.
ARTH 402. Buddhist Art in Asia (3)
The development of Buddhist art from its origins
in India along the silk route to China and along
the maritime routes to Japan and southeast Asia.
Offered as ARTH 302 and ARTH 402.
ARTH 403. History of Far Eastern Art (3)
A survey of traditional arts of Asia east of the Indus
river, designed to emphasize the creative contribu-
tions of the artist with particular attention to the
international relations of: the Bronze Age, Bud-
dhist art, Hindu art and the later arts of China,
Korea, and Japan. National and regional contribu-
tions to the developed styles of South Asia and the
Far East will be stressed.
Offered as ARTH 303 and ARTH 403.
ARTH 404. Art of West Africa (3)
This course will survey artistic traditions of the
past, and traditions that continue to flourish to
this day in culture regions in West Africa called
the Western Sudan and the Guinea Coast. An area
of immense geographical and human diversity, the
Western Sudan is the homeland of some of Afri-
ca's most renowned medieval empires. An ancient
culture known as Jenne (8th - 17th century) has
produced a wide variety of refined ceramic arti-
facts. The Guinea Coast is densely populated by
hundreds of different ethnic groups and harbors a
diversity of artistic traditions. An active trade with
Europeans was established in the region as early as
the 15th century. Gender-restricted and ritu-
ally powerful organizations still serve as the ma-
jor patrons of the arts in the region. Contrary to
the elongated so-called “pole style” typical of the
Western Sudan, the arts of the Guinea Coast are
characterized by organic and elegant forms and
smooth surfaces in a variety of media.
Offered as ARTH 304 and ARTH 404.
ARTH 405. The Art of India (3)
A survey of Indian art from the Indus valley civilization to the Islamic conquest of India. Stylistic developments of the three-dimensional arts examined through cave sites and other extant materials. Offered as ARTH 305 and ARTH 405.

ARTH 406. History of Indian Sculpture (3)
The stylistic development of both Buddhist and Hindu schools of Indian sculpture from the prehistoric period to the 12th century. Sculptural images are studied in terms of Indian mythology and literature. Offered as ARTH 306 and ARTH 406.

ARTH 411. Rome: City and Image (3)
This course studies the architectural and urban history of Rome from the republican era of the ancient city up to the eighteenth century using the city itself as the major “text.” The emphasis will be placed on the extraordinary transformations wrought in the city, or at least in key districts, by powerful rulers and/or elites, especially in the ancient empire and in the Renaissance and baroque eras. In a larger perspective, the great construction projects exerted a far-reaching effect within and beyond Europe, but we will study them in relation to their topographical situation, their functions, and their place in a long history of variations on prestigious themes since many of the artworks and the urban settings featured in the course carry the mark of the Long history of the city itself. Recommended preparation: At least one 200-level course in ANTH, ARTH, CLSC, ENGL, HSTY, or RLGN. Offered as ARTH 311/411 and CLSC 311.

ARTH 428. Greek Sculpture (3)
Greek sculpture from the Archaic period through the Hellenistic; style, the development of specific types, and the uses of architectural sculpture. Offered as ARTH 328, CLSC 328, and ARTH 428.

ARTH 432. Art and Archaeology of Ancient Italy (3)
The arts of the Italian peninsula from the 8th century B.C. to the 4th century A.D., with emphasis on recent archaeological discoveries. Lectures deal with architecture, sculpture, painting, and the decorative arts; supplemented by gallery tours at the Cleveland Museum of Art. Offered as ARTH 332, CLSC 332, and ARTH 432.

ARTH 433. Greek and Roman Painting (3)
Greek vase painting, Etruscan tomb painting and Roman wall painting. The development of monumental painting in antiquity. Offered as ARTH 333, CLSC 333, and ARTH 433.

ARTH 434. Art and Archaeology of Greece (3)
A survey of the art and architecture of Greece from the beginning of the Bronze Age (3000 B.C.) to the Roman conquest (100 B.C.) with emphasis on recent archaeological discoveries. Lectures deal with architecture, sculpture, painting, and the decorative arts; supplemented by gallery tours at the Cleveland Museum of Art. Offered as ARTH 334, CLSC 334, and ARTH 434.

ARTH 435. Issues in Ancient Art (3)
Various topics in Ancient art. Lectures, discussions, and reports. Offered as ARTH 335 and ARTH 435.

ARTH 436. Issues in the Art of Native Peoples (3)
This is a topics course. Each offering will focus on a specific topic within the area of art of native peoples. Sample topics may include: North American Indian Art, Mound Building Cultures in the Central United States, Introduction to Maori Polychrome Painting, Decorative American Indian Bead Work. Lectures, discussions, and reports. Offered as ARTH 346 and ARTH 446.

ARTH 441. Issues in the Art of Japan (3)
This is a topics course. Each offering will focus on a specific topic within the area of Japanese art. Sample topics may include: Muromachi Hanging Scrolls, Ryoan-ji Temple Garden Architecture, Rimpa School Panel Screens, Buddhist Painting in the Edo Period. Lectures, discussions, and reports. Offered as ARTH 341 and ARTH 441.

ARTH 442. Issues in the Art of India (3)
This is a topics course. Each offering will focus on a specific topic within the area of Indian art. Sample topics may include: Northern Temple Architecture, Mughal Painting, Gupta Period Sculpture, Great Stupa sculptural articulation. Lectures, discussions, and reports. Offered as ARTH 342 and ARTH 442.

ARTH 443. Issues in the Art of Southeast Asia (3)
This is a topics course. Each offering will focus on a specific topic within the area of Southeast Asian art. Sample topics may include: Northern Temple Architecture, Mughal Painting, Gupta Period Sculpture, Great Stupa sculptural articulation. Lectures, discussions, and reports. Offered as ARTH 343 and ARTH 443.

ARTH 444. Issues in the Art of Africa (3)
This is a topics course. Each offering will focus on a specific topic within the area of African art. Sample topics may include: Ritual Masks, Sub-Saharan Religious Architecture, Carvings of Twins in Fertility Rites, Benin Bronze Warrior Reliefs. Lectures, discussions, and reports. Offered as ARTH 344 and ARTH 444.

ARTH 445. Issues in Pre-Columbian Art (3)
This is a topics course. Each offering will focus on a specific topic within the area of Pre-Columbian art. Sample topics may include: Ancient Meso-America, Mayan Temple/Palace Complexes, Royal Peruvian Settlements, Inca Decorative Arts. Lectures, discussions, and reports. Offered as ARTH 345 and ARTH 445.

ARTH 446. Issues in the Art of Native Peoples (3)
This is a topics course. Each offering will focus on a specific topic within the area of art of native peoples. Sample topics may include: North American Indian Art, Mound Building Cultures in the Central United States, Introduction to Maori Polychrome Painting, Decorative American Indian Bead Work. Lectures, discussions, and reports. Offered as ARTH 346 and ARTH 446.

ARTH 447. Issues in Islamic Art (3)
This is a topics course. Each offering will focus on a specific topic within the area of Islamic art. Sample topics may include: Mosque Architecture in Spain, Islamic Decorative Arts, Mughal Figurative Art, Introduction to the Art of Islam. Lectures, discussions, and reports. Offered as ARTH 347 and ARTH 447.

ARTH 450. Issues in Medieval Art (3)
Various topics in Medieval Art. Lectures, discussions, and reports. Offered as ARTH 350 and ARTH 450.

ARTH 451. Late Gothic Art in Italy (3)
Sculture of the Pisan; early trends in Pisa, Siena, and Florence; Cimabue and Giotto; Duccio, Simone Martini, and the Lorenzetti; painting in Florence and Siena after the Black Death. Offered as ARTH 351 and ARTH 451.

ARTH 452. Italian Art of the 15th Century (3)
The early 15th century in Florence, civic humanism, the sculpture of Ghiberti and Donatello, the painting of Masaccio; the International Style in painting, the art of Uccello, Piero della Francesca, Mantegna, and Botticelli; Carpaccio and the Bellini in Venice. Offered as ARTH 352 and ARTH 452.

ARTH 453. Sixteenth Century Italian Art (3)
The development of the High Renaissance and Mannerist styles in Italy and late 16th century trends; painting and sculpture. Offered as ARTH 353 and ARTH 453.

ARTH 456. Italian Renaissance and Baroque Sculpture (3)
Italian sculpture from the early 12th century to the later 18th century. The Pisani, Ghiberti, Donatello, Michelangelo, the Mannerists and Bernini. Offered as ARTH 356 and ARTH 456.

ARTH 460. Renaissance Art in Northern Europe (3)
Painting, sculpture and the graphic arts in the Netherlands, Germany, and France, 1400-1580, highlighting artists such as Jan van Eyck, Albrecht Durer and Pieter Bruegel. The rise of secular subjects and bourgeois patronage is explored. Offered as ARTH 360 and ARTH 460.
ARTH 461. Dutch and Flemish 17th Century Painting (3)
The golden age of Dutch and Flemish art with study of major masters (Rubens, Hals, Rembrandt, and Vermeer) and developments in subject matter: landscape, still-life, and genre themes. Offered as ARTH 361 and ARTH 461.

ARTH 462. Issues in Renaissance Art (3)
Various topics in Renaissance art. Lectures, discussions and reports. Offered as ARTH 362 and ARTH 462.

ARTH 465. Issues in Baroque Art (3)
Various topics in baroque art. Lectures, discussions and reports. Offered as ARTH 365 and ARTH 465.

ARTH 466. 17th and 18th Century French Art (3)
A survey of the arts of painting, sculpture and architecture in France from 1600-1780. Attention will be given to stylistic developments and to social and political contexts, patronage and art theory. Offered as ARTH 367 and ARTH 467.

ARTH 474. Impressionism to Symbolism (3)
Major developments in European painting and sculpture during the latter half of the nineteenth century. Post impressionism, synthetism, symbolism, and the arts and crafts movement considered in their socio-cultural contexts. Works of Degas, Manet, Monet, Klimt, Bocklin, Gauguin, etc. Offered as ARTH 374 and ARTH 474.

ARTH 479. Issues in 19th Century Art (3)
Various topics in 19th century art, with class lectures, discussions and reports. Consult department for current topic. Offered as ARTH 379 and ARTH 479.

ARTH 480. Abstract Expressionism and Its Aftermath (3)
An examination of the development and influences of Abstract Expressionism, including the impact on the Beat Generation and Pop Art. Offered as ARTH 380 and ARTH 480.

ARTH 481. Neoclassicism to Realism (3)
The main developments of European art chiefly painting and sculpture from post-impressionism to the present; the nature of abstract art and the interrelationships between the visual arts and new developments in literature, philosophy, and science. Offered as ARTH 381 and ARTH 481.

ARTH 482. Visions of Utopia: 20th Century European Art (3)
Major movements in early 20th century European painting and sculpture with utopian goals. Focus on the interrelationships between the visual arts and new developments in literature, philosophy, and science. Offered as ARTH 382 and ARTH 482.

ARTH 483. Gender Issues in Feminist Art:
The 20th/21st Century (3)
An in-depth thematic approach to issues affecting works of art by and about women. Focus on the late 20th century. Emphasis on a specifically modern use of feminine myths, subjects and modes of production, and feminist criticism. Offered as ARTH 383, WGST 383 and ARTH 483.

ARTH 484. American Art and Architecture in the Age of Washington and Jefferson (3)
In the 18th century, Americans created not only a political revolution but an artistic and creative one as well. In the 17th century, most Americans were subsistence farmers and most of their products, manufactures, and buildings were relatively crude. In the 18th century, Americans not only established a new and lasting form of government, but for the first time produced paintings, buildings, furniture and silver that rivaled the finest productions of Europe. Notably, many of the leaders of the American Revolution, such as Paul Revere, George Washington, and Thomas Jefferson, also made significant contributions to the arts. Offered as ARTH 384 and ARTH 484.

ARTH 485. American Avant-Garde: 1900-1925 (3)
An examination of the development of avant-garde styles in New York during the early twentieth century. In-depth discussion of the Photo-secession, Stieglitz’s “291” gallery, the Armory Show. Marcel Duchamp’s move to America, and the formation and demise of the New York Dada movement. Offered as ARTH 385 and ARTH 485.

ARTH 489. M.A. Qualifying Paper (3)
Individual research and intensive study of a specific topic in art history which culminates in a written M.A. Qualifying Paper. Recommended preparation: 27 credit hours of Art History.

ARTH 490. Visual Arts and Museums (3)
Students who successfully complete this course may be considered for admission into ARTH 491A, a supervised internship in an art museum or gallery situation.

ARTH 491A. Visual Arts and Museums: Internship (1)
Recommended preparation: ARTH 490.

ARTH 491B. Visual Arts and Museums: Internship (3)
Second semester of Internship; includes final project devised in consultation with the director of museum studies. Recommended preparation: ARTH 490 and ARTH 491A.

ARTH 492. Issues in 20th/21st Century Art (3)
Various topics in 20th/21st century art, with class lectures, discussions, and reports. Offered as ARTH 392 and ARTH 492.

ARTH 493. Contemporary Art: Critical Directions (3)
An examination of the directions taken by avant-garde American art and criticism in the aftermath of Abstract Expressionism. Includes the rise and fall of modernism in the 1960s and ’70s, as well as an investigation of Post-modern trends and theories. Offered as ARTH 393 and ARTH 493.

ARTH 494A. Directed Readings in Non-Western Art (1-3)
Directed reading.

ARTH 494B. Ancient Art (1-3)

ARTH 494C. Medieval Art (1-3)

ARTH 494D. Renaissance and Baroque Art (1-3)

ARTH 494E. American Art (1-3)

ARTH 494F. Modern Art (1-3)

ARTH 495. Methodologies of Art History (3)
The study of art history as a discipline in its practical and theoretical aspects. Consideration given to research methods, style and historical context, and a critical examination of selected major art historical texts with a view to understanding traditional as well as recent approaches. Special attention is given to art historical writing, employing selected original works in the Cleveland Museum of Art. Required of first-year graduate students in the Ph.D. and Master’s programs.

ARTH 497. History of Prints and Printmaking (3)
Development of techniques and style and the social function of prints. The great masters: Dürer, Rembrandt, Goya, and others. Based on the extensive collections of the Cleveland Museum of Art. Offered as ARTH 397 and ARTH 497.

ARTH 512. Seminar in Ancient Art (3)

ARTH 518B. Seminar in Asian Art (3)

ARTH 540. Seminar in Non-Western Art (3)
Topics may include: African Art and The West, Africa: Symbolism and Ritual, The Classic Period in Mesoamerica, Andean Textiles.

ARTH 545B. Seminar in Medieval Art (3)

ARTH 550. Seminar: Issues in Western European Art (3)

ARTH 551. Seminar in Renaissance Art (3)

ARTH 552. Seminar in Baroque Art (3)

ARTH 565. Seminar in American Art (3)
ARTS 106. Creative Drawing I (3)

Organizational and structural projects as a basis to Ph.D. candidacy milestone.

Prereq: ARTS 106.

ARTS 101. Design and Color I (3)

General history and theories of art education. Development of personal philosophy as basis for teaching art. Topics in professional standards, creativity, aesthetic theory, and art criticism. (Clinical/field experience required.)

ARTS 210. Enameling and Jewelry I (3)

Techniques in the application of vitreous enamel on copper and of constructed metal jewelry. Technical skill and suitability of design as applied to the medium.

ARTS 212. Weaving, Fibers, and Textiles I (3)

Learn basic concepts and methods for designing textile surfaces: fabric painting and dyeing. Construct textiles using off-loom weaving and interlacing techniques. Emphasis on development of technical skill and suitability of design as applied to the medium.

ARTS 214. Ceramics I (3)

The techniques of hand building in pinch, coil and slab methods. Development of sensitivity to design and form. Basic work in stoneware, earthenware, and glazing.

ARTS 216. Painting I (3)

The creative, conceptual, visual, and technical aspects of painting. Style ranging from naturalism to abstraction. Work in acrylic and mixed media.

ARTS 220. Photography Studio I (3)

Camera, film, and darkroom techniques. Development of basic black and white perceptual and photographic skills. Darkroom and photographic field and lab work. 35mm camera required.

ARTS 295. Introduction to Art Education (3)

General history and theories of art education. Development of personal philosophy as basis for teaching art. Topics in professional standards, creativity, aesthetic theory, and art criticism. (Clinical/field experience required.)

Prereq: ARTS 210.

ARTS 300. Current Issues in Art Education (3)

Contemporary issues in Art Education: understanding art goals and standards of National Art Education Association and the Ohio State Department of Education for teachers, students and administrators. Special topics: art and technology, multiculturalism, special populations and classroom management.

Offered as ARTS 390 and ARTS 400.

Prereq: ARTS 295.

ARTS 302. Architecture and City Design I (3)

The social, spatial, and aesthetic elements in architecture; the components of the building: the window, door, roof, enclosing walls, and character of interior and exterior space. Projects related to small, intimate scale and residential structures. Lectures, field trips, studio experiences. Recommended ARTS 101 or ARTS 106 courses prior to enrollment.

Offered as ARTS 302 or ARTS 402.

Prereq: ARTS 310. Elaboration of personal painting style.

ARTS 310. Enameling and Jewelry II (3)

Continuation of ARTS 210. Advanced enameling and jewelry techniques applied to copper or silver, cloisonné, champlevé, basse taille, plique-à-jour. Creative use of design principles and jewelry techniques.

Prereq: ARTS 210.

ARTS 312. Weaving, Fibers, and Textiles II (3)

Continuation of ARTS 212. Exploration of a selected area of textiles in surface design or constructed textiles. Development of a personal aesthetic through design and execution of a series of projects.

Prereq: ARTS 212.

ARTS 314. Ceramics II (3)

Continuation of ARTS 214. Problematic approach to technical aspects of ceramics; experience in wheel throwing and option of hand-building. Experimentation with glaze and clay body formulation available.

Prereq: ARTS 214.

ARTS 316. Painting II (3)

The creative, conceptual, visual and technical aspects of painting. Styles ranging from expressionism, cubism, surrealism and abstraction. Work in acrylic and mixed media leading to the development of personal painting style.

Prereq: ARTS 216.

ARTS 320. Photography Studio II (3)

Continuation of ARTS 220. Advanced theory and black and white techniques. Development of personal aesthetic encouraged. Field work. 35mm camera required.

Prereq: ARTS 220.

ARTS 322. Photography: Color Studio (3)

Personal expression through use of color photography. Introduction to color printing and processing techniques. History of the medium. Field and lab
Teaching art for early childhood, elementary, and middle school students in a school setting. Includes art curriculum development, implementation, and assessment. Professional standards and practices. Offered as ARTS 366A and ARTS 466A.

**ARTS 366B. Student Teaching in Art: 6th Grade (4)**

Teaching adolescents and young adults art in a school setting. Includes art curriculum development, implementation, assessment and classroom management. Professional standards and practices. Offered as ARTS 366B and ARTS 466B.

**ARTS 385. Clinical/Field Based Experience I (1)**

Art education students observe and assist art teachers in classes in a variety of public and private educational environments such as local schools, Cleveland Museum of Art, and Cleveland Children’s Museum. Students study, identify, and analyze differences in art curriculum taught at the various art programs that they observe. Written reports using departmental observation guidelines are required.

Prereq: ARTS 295.

**ARTS 386. Clinical/Field Based Experience II (1)**

Art education students become sensitized to serving needs of “special” populations. Observation of educational strategies for teaching learning disabled and/or physically disabled students. Written reports using departmental observation guidelines are required.

Prereq: ARTS 295.

**ARTS 387. Clinical/Field Based Experience III (1)**

Art education students observe and assist in art programs for artistically gifted students working in specialized art areas (drawing, painting, sculpture, printmaking, art history). Written reports using departmental observation guidelines are required.

Prereq: ARTS 295.

**ARTS 391. Art Content, Pedagogy, Methodology, and Assessment (3)**

Growth and development of image making from Pre-K through young adult. Principles and practices of art instruction in grades Pre-K through 12th grade. Issues in art education. Curriculum construction, implementation and assessment of art lessons that address content areas of art production, art history, art appreciation, and art criticism. Clinical field experiences required.

Offered as ARTS 393 and ARTS 493. Prereq: ARTS 295.
nization and management of the art program that incorporates writing sequential art curriculum that integrates art production, art history, appreciation, and criticism. Planning, development, and evaluation of teaching materials, lessons, and units. The seminar includes discussion of professional issues, ethics, art advocacy, and classroom management. Prereq: ARTS 295 or ARTS 602, and ARTS 393 or ARTS 493. Coreq: ARTS 366A and ARTS 366B or ARTS 466A and ARTS 466B.

ARTS 466A. Student Teaching in Art: Pre-K - 6th Grade (4)
Teaching art for early childhood, elementary, and middle school students in a school setting. Includes art curriculum development, implementation, and assessment. Professional standards and practices. Offered as ARTS 366A and ARTS 466A. Prereq: ARTS 385, ARTS 386, ARTS 387, ARTS 400, ARTS 493, and ARTS 602. Coreq: ARTS 465 and ARTS 466B.

ARTS 466B. Student Teaching in Art: 7th - 12th Grade (4)
Teaching adolescents and young adults art in a school setting. Includes art curriculum development, implementation, assessment and classroom management. Professional standards and practices. Offered as ARTS 366B and ARTS 466B. Prereq: ARTS 385, ARTS 386, ARTS 387, ARTS 400, ARTS 493, and ARTS 602. Coreq: ARTS 465 and ARTS 466A.

ARTS 493. Art Content, Pedagogy, Methodology, and Assessment (3)
Growth and development of image making from Pre-K through young adult. Principles and practices of art instruction in grades Pre-K through 12th grade. Issues in art education. Curriculum construction, implementation and assessment of art lessons that address content areas of art production, art history, art appreciation, and art criticism. Clinical field experiences required. Offered as ARTS 393 and ARTS 493. Prereq: ARTS 602.

ARTS 494. Teaching Art (3)
Research contrasting theories of art education in relationship to a variety of educational settings in elementary and secondary schools. Developing innovative, interdisciplinary, comprehensive curriculum models for a specific organization. For licensed art teachers only or consent of instructor.

ARTS 495. Introduction to Multimedia Technology (3)
Fundamental concepts and skills for using technology in art, electronic portfolio development, and teaching and learning. This project-oriented class will develop knowledge and competencies related to digital imaging and video, multimedia production and presentation, the Internet, information processing, computer systems and management as they relate to art education. Offered as ARTS 395 and ARTS 495.

ARTS 497. Summer Workshop in Art Education (3)
A current art education issue is covered in depth.

ARTS 602. Study in Art Education (3)
General history and theories of art education. Development of personal philosophy as basis for teaching art. Topics in professional standards, creativity, aesthetic theory, and art criticism. Students produce an art education research paper. Clinical/Field experiences are required.

ARTS 605. Final Creative Thesis (1–3)
Students receive individual guidance for an approved self-designed creative project from program faculty members. A public exhibition or presentation is required. By permit only.

ASIAN STUDIES PROGRAM
207 Mather Memorial www.case.edu/artsci/asia
Phone: 216-368-5331 Charlotte Ikels, Director
E-mail: charlotte.ikels@case.edu

Asian Studies has become an increasingly important area of study in North American colleges and universities. This is due in part to a growing acknowledgment that Asian cultures are of significance both regionally and globally. The Asian Studies program offers students the opportunity to explore these cultures from a multidisciplinary perspective so that they are able to understand the social, cultural, political, and other forces that shape and have shaped these nations.

The Asian Studies program is interdisciplinary, drawing faculty and courses from such departments as Anthropology, Art History and Art, Economics, Modern Languages and Literatures, History, Philosophy, Political Science, and Religious Studies. A current list of approved courses is available from a program advisor. Several Asian Studies courses contribute to the completion of the SAGES General Education Requirements.

The undergraduate program in Asian Studies offers a major and a minor. Students are encouraged to take courses in different disciplines in order to obtain broad exposure to the languages, literature, art, culture, religious traditions, and political, economic, and social institutions of Asian countries. Asian Studies also offers an honors program to qualified majors.

In addition to course offerings, the Asian Studies program sponsors extracurricular activities that enhance the formal study of Asia and give students additional opportunities to explore and understand Asia’s importance in the global community. The program sponsors lectures and films and administers a Web site devoted to Asia. It also encourages students to participate in study abroad programs in Asian countries and to utilize Asian resources at the Cleveland Museum of Art and other local institutions.

PROGRAM ADVISORY COMMITTEE
Charlotte Ikels, Ph.D. Professor of Anthropology, Director, Asian Studies Program
David Clingingsmith, Ph.D. Assistant Professor of Economics, Weatherhead School of Management
William E. Deal, Ph.D. Severance Professor of the History of Religion, Department of Religious Studies
Mylvyn C. Goldstein, Ph.D. John Reynolds Harkness Professor of Anthropology; Co-Director, Center for Research on Tibet
Kelly M. McMann, Ph.D. Assistant Professor of Political Science
Deepak Sarma, Ph.D. Associate Professor of Religious Studies
Paul Schroeder, Ph.D. Visiting Faculty in Political Science

UNDERGRADUATE PROGRAMS
Major
Students majoring in Asian Studies choose one of two tracks. Track 1 requires a minimum of 37 credit hours and includes an Asian language requirement. Track 2, which can only be pursued as a second major, does not require study of an Asian language. Both tracks require ASIA 133 and ASIA 134, and additional hours chosen from the list of approved courses. Students prepare a program of study, indicating specific course selections to meet the requirements for their chosen track. An Asian Studies advisor must approve each student’s program.

TRACK 1 (FIRST MAJOR) - 37 SEMESTER HOURS
- ASIA 133 and ASIA 134 (cross-listed as HSTY 133 and HSTY 134)
- At least 16 hours in an Asian language
- 3 hours in Anthropology (Asia-related)
- 3 hours in Political Science or Economics (Asia-related)
- 3 hours in Religious Studies (Asia-related)
6 additional hours (Asia-related), selected in consultation with a program advisor

**TRACK 2 (CAN ONLY BE TAKEN AS A SECOND MAJOR) - 36 SEMESTER HOURS**

- ASIA 133 and ASIA 134 (cross-listed as HSTY 133 and HSTY 134)
- 6 hours in Anthropology (Asia-related)
- 6 hours in Religious Studies (Asia-related)
- 3 hours in Comparative Literature (Asia-related)
- 3 hours in Political Science or Economics (Asia-related)
- 12 additional hours (Asia-related), selected in consultation with a program advisor

**PROGRAM HONORS**

Asian Studies Honors is a semester-long program for Asian Studies majors, normally taken during the senior year, which involves researching and writing an Honors Thesis. Honors program requirements include the completion of ASIA 133 and ASIA 134, at least two semesters of study of an Asian language, two further content courses in Asian Studies, and maintenance of a GPA of at least 3.0 overall and 3.2 in Asian Studies courses.

A participating student enrolls in ASIA 398 and writes a thesis under the direction of an Asian Studies faculty member. The student also receives guidance from a second reader, who must be a member of the Asian Studies program. A third reader, who need not be a member of the Asian Studies program, is optional. Each student must maintain regular contact with the supervising faculty member in the various stages of researching and writing the thesis. Detailed guidelines and deadlines for the course are available from the program director.

**Minor**

The minor in Asian Studies consists of 18 semester hours of courses, including ASIA 133 or ASIA 134. The remaining 15 credit hours are selected in consultation with a program advisor. Only one year (8 credits) of language study (Japanese or Chinese) counts toward the minor.

**COURSE DESCRIPTIONS**

**ASIA 133. Introduction to Chinese History and Civilization (3)**

This course explains the continuities and discontinuities in the history of China by stressing the development and distinctive adaptations of cultural, religious, and political patterns from the origins of the Chinese civilization to the present. By focusing on major cultural, socio-economic, and political issues such as Confucianism, Buddhism, trade relations, imperialism, and intellectual discourse in the overall Asian context (with particular reference to Korea and Japan), we discuss the historical development of China and its situation on entering the 21st century. Taking into account the key historical events in the last century, we examine the emergence of China as a modern nation-state and the fundamental transformation of Chinese society in the post-war period. Offered as ASIA 133 and HSTY 133.

**Global & Cultural Diversity**

**ASIA 134. Introduction to Japanese History and Civilization (3)**

This course provides an introduction to various aspects of Japanese civilization, from its origins to the present. By focusing on major cultural, socio-economic, and political issues such as the adaptation and transformation of Confucianism, Buddhism, Shintoism, social structures, material culture, foreign relations, militarism, nationalism, and intellectual discourse in the overall Asian context (with particular reference to Korea and China), we discuss the historical development of Japan and the country’s position on entering the 21st century. We examine the emergence of Japan as a modern nation-state and the fundamental transformation of its society in the post-war period. Offered as ASIA 134 and HSTY 134.

**Global & Cultural Diversity**

**ASIA 235. Asian Cinema and Drama (3)**

Introduction to major Asian film directors and major traditional theatrical schools of India, Java and Bali, China, and Japan. Focus on the influence of traditional dramatic forms on contemporary film directors. Development of skills in cross-cultural analysis and comparative aesthetics. Offered as ASIA 235 and WLIT 235.

**Global & Cultural Diversity**

**ASIA 236. Daily Life in Imperial China (3)**

This course is an interdisciplinary study of Chinese society using methodological approaches from the fields of social, cultural, economic, and art history. In order to explore the fabric of society in Imperial China (from the beginning to the early 20th century) in a creative, interactive way—including folk customs, life at the court, in city and countryside, religious activities, gender roles, material culture, consumption, entertainment, and social hierarchies—we use the excellent Chinese collection in the Cleveland Museum of Art and various visual aids such as slides and CD-ROMs in the classroom. Offered as ASIA 284 and HSTY 284.

**Global & Cultural Diversity**

**ASIA 238. Daily Life in Imperial China (3)**

This course is an interdisciplinary study of Chinese society using methodological approaches from the fields of social, cultural, economic, and art history. In order to explore the fabric of society in Imperial China (from the beginning to the early 20th century) in a creative, interactive way—including folk customs, life at the court, in city and countryside, religious activities, gender roles, material culture, consumption, entertainment, and social hierarchies—we use the excellent Chinese collection in the Cleveland Museum of Art and various visual aids such as slides and CD-ROMs in the classroom. Offered as ASIA 284 and HSTY 284.

**Global & Cultural Diversity**

**ASIA 284. Daily Life in Imperial China (3)**

This course is an interdisciplinary study of Chinese society using methodological approaches from the fields of social, cultural, economic, and art history. In order to explore the fabric of society in Imperial China (from the beginning to the early 20th century) in a creative, interactive way—including folk customs, life at the court, in city and countryside, religious activities, gender roles, material culture, consumption, entertainment, and social hierarchies—we use the excellent Chinese collection in the Cleveland Museum of Art and various visual aids such as slides and CD-ROMs in the classroom. Offered as ASIA 284 and HSTY 284.

**Global & Cultural Diversity**

**ASIA 286. Daily Life in Imperial China (3)**

This course is an interdisciplinary study of Chinese society using methodological approaches from the fields of social, cultural, economic, and art history. In order to explore the fabric of society in Imperial China (from the beginning to the early 20th century) in a creative, interactive way—including folk customs, life at the court, in city and countryside, religious activities, gender roles, material culture, consumption, entertainment, and social hierarchies—we use the excellent Chinese collection in the Cleveland Museum of Art and various visual aids such as slides and CD-ROMs in the classroom. Offered as ASIA 284 and HSTY 284.

**Global & Cultural Diversity**

**ASIA 398. Honors Thesis (1–4)**

Intensive study of a topic or problem under the direction of a faculty member, resulting in the preparation of an honors thesis.

**Global & Cultural Diversity**

**ASIA 399. Independent Study (1–3)**

Tutorial in Asian studies.
of the Milky Way and nearby galaxies; dark matter

Idit Zehavi, Ph.D.
(Racah Institute of Physics, Hebrew University of Jerusalem)
Assistant Professor
Cosmology and the large-scale structure of the universe; galaxy biasing; galaxy formation and evolution; structure formation; clustering of galaxies; cosmic flows.

Secondary Faculty
John Ruhl, Ph.D.
(Princeton University)
Professor of Physics
Experimental astrophysics and cosmology

Glenn D. Starkman, Ph.D.
(Stanford University)
Professor of Physics
Theoretical cosmology; particle physics; astrophysics

Adjunct Faculty
Jeffrey R. Kriessler, Ph.D.
(Michigan State University)
Adjunct Assistant Professor
Substructure in galaxy clusters

UNDERGRADUATE PROGRAMS

Majors

BACHELOR OF SCIENCE

The Bachelor of Science degree in astronomy requires 122 credit hours, including 20 hours in astronomy, 43 hours in physics, 14 hours in math, and 12 hours in technical electives.

Technical electives are additional courses in astronomy, chemistry, mathematics, statistics, physics, or geological sciences that satisfy interests of the student and fall within the science/mathematics objectives of the major. For the B.S. degree, the approved technical electives include GEOL 345 (Planetary Materials), MATH 201 (Introduction to Linear Algebra), MATH 345 Introduction to Applied Mathematics), PHYS 316 (Introduction to Nuclear and Particle Physics), PHYS 349 (Methods of Mathematical Physics I), and PHYS 350 (Methods of Mathematical Physics II). For a complete list, please consult a department advisor.

Six hours of Mathematics and Natural Science (Physics) are double counted towards SAGES breadth requirement, and one required math course is double counted towards the SAGES Quantitative Reasoning requirement. The following is a recommended course sequence for the B.S. in astronomy:

Class-Lab-Credit Hours

First Year
Fall
MATH 121 Calculus for Science & Engineering I (4-0-4)
PHYS 121 General Physics I – Mechanics (4-0-4)
PHED 101 Physical Education Activities (0-3-0)
SAGES First Seminar (4-0-4)
Social Science I (3-0-3)
Total 15-3-15

Spring
MATH 122 Calculus for Science & Engineering II (4-0-4)
PHYS 122 General Physics II: Electricity & Magnetism (4-0-4)
PHED 102 Physical Education Activities (0-3-0)
ENGR 131 Elementary Computer Programming (3-0-3)
ASTR 151 Doing Astronomy* (1-0-1)
Arts & Humanities I (3-0-3)
Total 15-0-15

Sophomore Year
Fall
ASTR 221 Stars and Planets (3-0-3)
MATH 223 Calculus for Science & Engineering III or MATH 227 Calculus II (3-0-3)
PHYS 221 General Physics III: Modern Physics* (3-0-3)
PHYS 203 Laboratory Physics (2-4-4)
SAGES University Seminar (3-0-3)
Total 14-4-19

Spring
ASTR 222 Galaxies and Cosmology (3-0-3)
MATH 224 Elementary

Differential Equations (3-0-3)
PHYS 204 Advanced Instrumentation Lab (1-4-4)
PHYS 250 Mathematical Physics & Computing (3-0-3)
PHYS 310 Classical Mechanics (3-0-3)
SAGES University Seminar (3-0-3)
Total 16-4-19

Junior Year
Fall
ASTR 311 Stellar Physics* (3-0-3)
PHYS 313 Thermodynamics & Statistical Mechanics (3-0-3)
Technical Elective (3-0-3)
Arts & Humanities II (3-0-3)
Social Science I (3-0-3)
Total 15-0-15

Spring
ASTR 328 Cosmology and the Structure of the Universe* (3-0-3)
PHYS 324 Electricity & Magnetism I (3-0-3)
PHYS 326 Physical Optics (3-0-3)
Quantitative Reasoning (3-0-3)
Technical Elective (3-0-3)
Total 15-0-15

Senior Year
Fall
ASTR 306 Astronomical Techniques (3-0-3)
ASTR 309 Senior Seminar I (1-0-1)
PHYS 325 Electricity & Magnetism II (3-0-3)
PHYS 331 Quantum Mechanics I (3-0-3)
ASTR 351 SAGES Astronomy Capstone* (1-0-1)
Technical Elective (3-0-3)
Global and Cultural Diversity (3-0-3)
Total 17-0-17

Spring
ASTR 310 Senior Seminar II (1-0-1)
COLLEGE OF ARTS & SCIENCES

GENERAL BULLETIN 2009-2011

ASTR 323 The Local Universe\(^\text{c}\) \( (3-0-3) \)

PHYS 332 Quantum Mechanics II \( (3-0-3) \)

ASTR 351 SAGES Astronomy Capstone\(^\text{c}\) \( (3-0-3) \)

Social Science II \( (3-0-3) \)

Technical Elective \( (3-0-3) \)

Total 16-0-16

Selected students may be invited to take PHYS 123, 124, 221 in place of 121, 122, 221.

ASTR 306, 311, 323, and 328 are taught every other year only.

A SAGES Capstone Experience is required of all students. The B.S. does not require the astronomy capstone but only that a capstone be taken. The number of hours shown assumes the astronomy capstone with 1 hour in the senior fall semester and 3 hours in the senior spring semester. If another capstone is taken, the number of hours may be different.

BACHELOR OF ARTS

The Bachelor of Arts in astronomy requires 120 credit hours, including 17 hours in astronomy, 29 hours in physics, 14 hours in math, and 6 hours in technical electives.

The approved technical electives for the B.A. in astronomy include CHEM 107 (Properties and Structure of Matter I), CHEM 108 (Properties and Structure of Matter II), PHYS 204 (Advanced Instrumentation Lab), PHYS 316 (Introduction to Nuclear and Particle Physics), PHYS 325 (Electricity and Magnetism II), and PHYS 332 (Quantum Mechanics II). For a complete list, please consult a departmental advisor.

Six hours of Mathematics and Natural Science (Physics) are double counted towards SAGES breadth requirement, and one required math course is double counted towards SAGES Quantitative Reasoning requirement.

Minor

For all students except physics majors, the requirements for the minor in astronomy are as follows:

- PHYS 115 or equivalent \( (3) \)
- PHYS 116 or equivalent \( (3) \)
- ASTR 221 \( (3) \)
- ASTR 222 \( (3) \)
- One of ASTR 306, 311, 323, 328 \( (3) \)

Because university rules do not allow hours within the major department to count towards a minor, physics majors wishing to pursue a
minor in astronomy must complete a different set of course requirements:

- ASTR 221 (3)
- ASTR 222 (3)
- One of ASTR 306, 311, 323, 328 (3)
- Two more astronomy courses, chosen from ASTR 151, 306, 309, 310, 311, 323, 328, 351, 369 (6)

GRADUATE PROGRAM

The Ph.D. degree in astronomy is granted to those students who have shown an extensive knowledge of advanced astronomy and the ability to do original research. The student is required to pass a general qualifying examination in astronomy, usually taken at the end of the student’s second year. The student must then prepare a dissertation based on the results of independent research. A Ph.D. candidate must also satisfy the general requirements of the School of Graduate Studies.

Full-time graduate students who maintain satisfactory academic performance while pursuing the Ph.D. degree in astronomy normally receive a stipend for teaching and/or research, which includes full tuition and a monthly amount sufficient to cover living expenses.

FACILITIES

The Department of Astronomy operates the Kitt Peak Station of the Warner and Swasey Observatory near Tucson, Arizona, home of the Burrell Schmidt telescope. This telescope is used for surveys and ultra-deep imaging with a large format CCD. The department is also a member of the Sloan Digital Sky Survey, which operates a 2.5m telescope with multi-object spectrographs and wide field imager at Apache Point, New Mexico. The third incarnation of this survey includes a Baryon Oscillation survey of the large-scale structure of the universe and a spectroscopic survey of the Milky Way galaxy. A 9.5-inch refractor permanently mounted on the roof of the A. W. Smith Building is available for use by students. The department also houses a research and instruction computer laboratory, including the Astronomy high-performance computing cluster.

COURSE DESCRIPTIONS

ASTR 151. Doing Astronomy (1)
This course is intended to introduce students to how astronomy is done. The course will focus on the astronomical research process, the scientific community, and on career paths in astronomy. Course activities will include readings and class discussions focusing on various topics in modern astronomy, including ongoing research activity in the department.

ASTR 201. The Sun and its Planets (3)
An overview of the solar system: the planets and other objects that orbit about the Sun and the Sun itself as the dominant mass and the most important source of energy in the solar system. Concepts and the development of our knowledge will be emphasized. Not available for credit to astronomy majors.

ASTR 202. Stars, Galaxies, and the Universe (3)
Stellar structure, energy sources, and evolution, including red giants, white dwarfs, supernovae, pulsars, and black holes. Stellar populations in the Milky Way and external galaxies. The universe and its evolution. Not available for credit to astronomy majors.

ASTR 203. Archaeoastronomy: Calendars, Barrows, and Megaliths (3)
To acquaint the student with the regular cycles of the Sun, Moon, planets, and stars. To show how ancient civilizations (and some not so ancient) have used those cycles to formulate calendars which are evidenced primarily by artifacts and ruins scattered over the entire Earth.

ASTR 204. Einstein’s Universe (3)
This course is intended to introduce the non-scientist to the concepts of modern cosmology—the structure and evolution of the universe. No mathematical background beyond simple algebra is needed.

ASTR 221. Stars and Planets (3)

ASTR 222. Galaxies and Cosmology (3)

ASTR 231. Stellar Physics (3)
Stellar interiors, nuclear processes, and energy generation. The proton-proton chain and the observable properties of stars. Stellar interiors, nuclear processes, and energy generation. Conceptual understanding of the observable properties of stars. Students pursue a project based on experimental, theoretical or teaching research under the supervision of an astronomy faculty member. A departmental capstone project committee must approve all project proposals (by the end of the Fall Semester) and this same committee will receive regular oral and written progress reports. Final results are presented at the end of the semester as a paper in a style suitable for publication in a professional journal as well as an oral report in a public symposium. Prereq: ASTR 222, SAGES Senior Cap

ASTR 311. Stellar Physics (3)
Radiative transfer, atomic and molecular opacities, and the observable properties of stars. Stellar interiors, nuclear processes, and energy generation.

ASTR 310. Astrophysics Seminar II
Selected topics in astronomy not covered ordinarily in courses. Presentation of talks by students.

ASTR 311. Stellar Physics (3)
Radiative transfer, atomic and molecular opacities, and the observable properties of stars. Stellar interiors, nuclear processes, and energy generation. The evolution of stars of varying mass and production of the elements within supernovae explosions. Offered as ASTR 311 and ASTR 411. Prereq: ASTR 222.

ASTR 323. The Local Universe (3)

ASTR 328. Cosmology and the Structure of the Universe (3)

ASTR 351. Astronomy Capstone Project (1–3)
A two semester course (1 hour in the Fall Semester and either 2 or 3 hours in the Spring Semester) for students desiring a Capstone Experience in astronomy. Students pursue a project based on experimental, theoretical or teaching research under the supervision of an astronomy faculty member. A departmental capstone project committee must approve all project proposals (by the end of the Fall Semester) and this same committee will receive regular oral and written progress reports. Final results are presented at the end of the semester as a paper in a style suitable for publication in a professional journal as well as an oral report in a public symposium. Prereq: ASTR 222, SAGES Senior Cap

ASTR 369. Undergraduate Research (1–3)
Supervised research on topics of interest. Can be used as a thesis course if desired. Students may register more than once for a maximum of 9 credits overall (1-3 credits each semester).

ASTR 396. Special Topics in Astronomy (1–3)
Open to astronomy majors only.

ASTR 411. Stellar Physics (3)
Radiative transfer, atomic and molecular opacities, and the observable properties of stars. Stellar interiors, nuclear processes, and energy generation.
The department offers courses leading to the degrees of Bachelor of Science, Bachelor of Science in Systems Biology, Bachelor of Arts, Master of Science, and Doctor of Philosophy. Cooperative programs between the Department of Biology and the Case Western Reserve University School of Medicine, the Cleveland Museum of Natural History, the Cleveland Botanical Garden, the Cleveland Metroparks Zoo, the Holden Arboretum, the Cleveland Institute of Art, and other departments in Case Western Reserve University significantly extend the range of resources available to biology students. Undergraduate students are encouraged to conduct individual supervised research projects with Biology faculty and with faculty in cooperating departments. A supervised research project is required of all students in the B.S. Biology program.

The undergraduate programs in biology provide excellent preparation for graduate or professional schools, including medical, dental, and veterinary schools and the many specialized graduate programs in the biological sciences. A biology degree also prepares students for careers in industry and government. For students interested in biotechnology—a field with growing career opportunities—the department offers elective sequences within the B.A. and B.S. degrees.

BIOCHEMISTRY

The College of Arts and Sciences awards the Bachelor of Arts and Bachelor of Science degrees in biochemistry. The required courses for the majors and minor are offered by the Department of Biochemistry in the School of Medicine. For details about the department’s undergraduate programs, please consult the School of Medicine section of this bulletin.

DEPARTMENT OF BIOLOGY

203 DeGrace Hall

Phone: 216-368-3557; Fax: 216-368-4672
Joseph F. Koonce, Chair
E-mail: joseph.koonce@case.edu

The mission of the Department of Biology at Case Western Reserve University is to promote research programs of national and international prominence and to provide strong undergraduate and graduate educational programs that emphasize integrative approaches to biological problems. In doing so, our programs support preparation and professional development for careers related to the biological and health sciences.

The department offers courses leading to the degrees of Bachelor of Science, Bachelor of Science in Systems Biology, Bachelor of Arts, Master of Science, and Doctor of Philosophy. Cooperative programs between the Department of Biology and the Case Western Reserve University School of Medicine, the Cleveland Museum of Natural History, the Cleveland Botanical Garden, the Cleveland Metroparks Zoo, the Holden Arboretum, the Cleveland Institute of Art, and other departments in Case Western Reserve University significantly extend the range of resources available to biology students. Undergraduate students are encouraged to conduct individual supervised research projects with Biology faculty and with faculty in cooperating departments. A supervised research project is required of all students in the B.S. Biology program.

The undergraduate programs in biology provide excellent preparation for graduate or professional schools, including medical, dental, and veterinary schools and the many specialized graduate programs in the biological sciences. A biology degree also prepares students for careers in industry and government. For students interested in biotechnology—a field with growing career opportunities—the department offers elective sequences within the B.A. and B.S. degrees.

DEPARTMENT FACULTY

Joseph F. Koonce, Ph.D. (University of Wisconsin, Madison)
Professor and Chair
Aquatic ecology; systems ecology

Radhika Atit, Ph.D. (University of Cincinnati)
The Warren E. Rupp Distinguished Assistant Professor
Developmental biology and genetics; origin and patterning of skin

Michael F. Benard, Ph.D. (University of California, Davis)
Assistant Professor
Ecology; evolutionary biology

Arnold I. Caplan, Ph.D. (Johns Hopkins University)
Professor; Director, Skeletal Research Center
Developmental biology and biochemistry; molecular and cellular aspects of muscle, cartilage, and bone development

Hillel J. Chiel, Ph.D. (Massachusetts Institute of Technology)
Professor
Neurobiology and animal behavior; cellular dynamics of neuronal computation

Christopher A. Cullis, Ph.D. (University of East Anglia, United Kingdom)
Francis Hobart Herrick Professor of Biology
Plant molecular biology and genetics; modifications of the information content of plant cells

Nancy DiIulio, Ph.D. (The Pennsylvania State University College of Medicine)
Instructor
Cell biology; biochemistry

Richard F. Drushel, Ph.D. (Case Western Reserve University)
Instructor and Executive Officer
Vertebrate anatomy and physiology, kinematic modeling and neural control; autonomous robotics

Stephen E. Haynesworth, Ph.D. (Case Western Reserve University)
Associate Professor; Associate Dean, College of Arts and Sciences
Developmental and aging biology

Valerie Haywood, Ph.D. (University of California, Davis)
Instructor
Plant developmental biology

Emmitt R. Jolly, Ph.D. (University of California, San Francisco)
Assistant Professor
Molecular biology and genetics; developmental biology; parasitology; schistosomiasis

Barbara A. Kuemerle, Ph.D. (Case Western Reserve University)
Instructor
Molecular biology and genetics; developmental neuroscience

Claudia M. Mizutani, Ph.D. (Federal University of Rio de Janeiro, Brazil)
Assistant Professor
Developmental biology and genetics; embryonic body-axis formation

Ronald G. Oldfield, Ph.D. (University of Michigan)
Instructor
Evolutionary ecology of cichlid fishes; ichthyology

Roy E. Ritzmann, Ph.D. (University of Virginia)
Professor
Neurobiology and behavior; physiology

Charles E. Rozeck, Ph.D. (Wayne State University)
Associate Professor; Dean of Graduate Studies

COLLEGE OF ARTS & SCIENCES
Molecular genetics; developmental biology
Robin Snyder, Ph.D.
(University of California, Santa Barbara)
Assistant Professor
Theoretical ecology and epidemiology
Rui S. de Sousa-Neves, Ph.D.
(Federal University of Rio de Janeiro, Brazil)
Instructor
Developmental biology; molecular genetics
Mark A. Willis, Ph.D.
(University of California, Riverside)
Associate Professor
Neurobiology and behavior; sensorimotor control of insect flight; animal behavior
Debra E. Wood, Ph.D.
(Georgia State University)
Assistant Professor
Neurobiology; neural and mechanical correlates of motor pattern generation; animal behavior
James E. Zull, Ph.D.
(University of Wisconsin, Madison)
Professor
Human learning; brain function in education

Secondary Faculty
Darin Croft, Ph.D.
(The University of Chicago)
Assistant Professor of Anatomy
Brian M. McDermott, Ph.D.
(Columbia University)
Assistant Professor, Department of Otolaryngology, University Hospitals of Cleveland
Peter Thomas, Ph.D.
(The University of Chicago)
Assistant Professor of Mathematics

Adjunct Faculty
David J. Burke, Ph.D.
(Rutgers University)
Holden Adjunct Assistant Professor (Holden Arboretum)
Rhizosphere ecology; plant-microbe interactions; molecular microbial ecology; plant ecology
Pam Dennis, Ph.D., D.V.M.
(The Ohio State University; College of Veterinary Medicine, North Carolina State University)
Adjunct Assistant Professor; Clinical Assistant Professor, Cleveland Metroparks Zoo
Veterinary wildlife epidemiology in zoo and free-ranging animal populations
Joe B. Keiper, Ph.D.
(Kent State University)
Adjunct Assistant Professor; Director of Science and Curator of Invertebrate Zoology, Cleveland Museum of Natural History
Biodiversity and population ecology of aquatic insects; forensic entomology; wetlands ecology and conservation
Ana B. Loecci, Ph.D.
(Case Western Reserve University)
Adjunct Assistant Professor
Aquatic ecology and population biology
Kristen E. Lukas, Ph.D.
(Georgia Institute of Technology)
Adjunct Assistant Professor; Curator, Conservation and Science, Cleveland Metroparks Zoo
Effect of designed environment on gorilla and chimpanzee behavior
Nga Nguyen, Ph.D.
(Princeton University)
Adjunct Assistant Professor; Director, Wildlife Endocrinology Lab, and Associate Research Curator, Conservation and Science, Cleveland Metroparks Zoo
Primate behavioral endocrinology and ecology
Kurt Smemo, Ph.D.
(Cornell University)
Holden Adjunct Assistant Professor (Holden Arboretum)
Soil biogeochemistry
Mary Topa, Ph.D.
(Duke University)
Holden Adjunct Professor; Director of Science and Research, Holden Arboretum
Forest ecosystem function
Peter A. Zimmerman, Ph.D.
(Case Western Reserve University)
Associate Professor, Center for Global Health and Diseases, School of Medicine

Lecturers
James Bader, M.S.
(Case Western Reserve University)
Lecturer; Director, Center for Science and Mathematics Education
Aquatic ecology
Deborah L. Harris, M.S.
(Wright State University)
Adjunct Lecturer; Coordinator, Biology Teaching Laboratories
Mycology
Dmitri A. Kourennyi, Ph.D.
(Moscow Institute of Physics and Technology)
Theoretical ecology and epidemiology

Part-time Lecturer
Biophysics; synaptic transmission and networking in the retina

Emeritus Faculty
Morris Burke, Ph.D.
(University of New South Wales, Australia)
Professor Emeritus
Muscle physiology; protein chemistry
Darhl L. Foreman, Ph.D.
(University of Chicago)
Professor Emerita
Reproductive physiology
Martin J. Rosenberg, Ph.D.
(State University of New York, Stony Brook)
Senior Instructor Emeritus
Herpetology; vertebrate biology; human anatomy and physiology
Norman B. Rushforth, Ph.D.
(Cornell University)
Professor Emeritus
Epidemiology; animal behavior; population biology
Joanne Westin, Ph.D.
(Cornell University)
Senior Instructor Emerita
Neurobiology and behavior; physiology

UNDERGRADUATE PROGRAMS

Majors
Major programs share a core of foundation courses and provide options for specialization in a variety of areas, including biotechnology and genetic engineering, molecular and cellular biology, genetics, immunology, chemical biology, physiology and biophysics, neurobiology and animal behavior, developmental biology, population biology, ecology, and environmental science. Theoretical, mathematical, and computational approaches to these fields are emphasized in the Systems Biology B.S. program. Individual research projects form a significant part of the curriculum for many undergraduates in all programs, and are specifically required for students in the Biology B.S. program. Advanced biology majors may register, with permission, for graduate-level courses in the department and in the School of Medicine.

The department offers programs leading to the B.A and B.S degrees. Thirty hours of biology are required for the Biology B.A., 39 hours for the Biology B.S., and 30 hours for the Systems Biology B.S. All students must complete the SAGES seminar and General Education
Requirements (GER) of the College of Arts and Sciences. They may begin their biology program in the freshman year. While some BIOL courses serve as SAGES Departmental Seminars or SAGES Capstones, none of these are required courses for biology degree candidates, with the specific exception of BIOL 388S for the Biology B.S. degree. A Biology B.A. student, for example, is free to take a non-BIOL SAGES Departmental Seminar or SAGES Capstone course, assuming that prerequisites are met (or waived by the instructor).

B.A. PROGRAM IN BIOLOGY

The B.A. degree in biology features a three-semester core of lecture courses, beginning with BIOL 214 (Genes and Evolution) and continuing with BIOL 215 (Cells and Proteins) and BIOL 216 (Organisms and Ecosystems); each of these courses has an associated laboratory (BIOL 214L, 215L, and 216L). The remaining hours include both laboratory and elective courses. The laboratory requirement consists of two additional laboratory courses (excluding BIOL 388, 388S, and 390). The elective requirement must include one elective from two of the following major areas: cell and molecular biology, organismal biology, or population biology/ecology. At least 15 hours of the selected electives and laboratories must be at the 300 level or higher. Students are required to complete one year of calculus (MATH 125, 126), one year of inorganic chemistry with laboratory (CHEM 105, 106, 113), one year of organic chemistry with laboratory (CHEM 223, 224, 233), and one year of physics (PHYS 115, 116).

TEACHER LICENSURE OPTION

Students may become eligible for teacher licensure in the field of Life Sciences (Adolescents and Young Adults) by completing content area requirements as well as 35 semester hours in education courses (including student teaching) offered through Case Western Reserve and John Carroll University. For more details, please see the program description for Teacher Licensure elsewhere in this bulletin. Students interested in pursuing this option should consult Dr. Richard F. Drushel, the department’s executive officer.

Subject Area Requirements (56–61 credit hours):

- BIOL 214, 214L, 215, 215L, 216, 216L; one of BIOL 301, 313, 344; one of BIOL 223, 305, 336; one of BIOL 308, 326, 343; one of BIOL 358, 373, 374, 382; CHEM 105, 106, 113, 223, 224, 233; MATH 125, 126; PHYS 115, 116; one of GEOL 101, 110, 115, 117.

B.S. PROGRAM IN BIOLOGY

The Biology B.S. program also includes the three-semester core lecture courses, beginning with BIOL 214 (Genes and Evolution) and continuing with BIOL 215 (Cells and Proteins) and BIOL 216 (Organisms and Ecosystems), plus their associated laboratories (BIOL 214L, 215L, and 216L). The elective requirement must include one elective from two of the following major areas: cell and molecular biology, organismal biology, and population biology/ecology. In addition, students must complete a course in genetics (BIOL 301 or 326); a quantitative biology laboratory (BIOL 300 or 315); one additional laboratory course; and one upper-level advanced lecture course (300- or 400-level).

Biology B.S. students must undertake an undergraduate research project, completing BIOL 388S (Undergraduate Research, SAGES Capstone) and BIOL 390 (Advanced Undergraduate Research, which continues the BIOL 388S project). At least 11 hours of the selected electives and lab must be at the 300 level or higher.

Additional requirements for the Biology B.S. degree consist of the following:

- Mathematics: one year of calculus (MATH 121 and 122, or 125 and 126); one semester of advanced mathematics or statistics (selected from MATH 201, 225, 304; or STAT 207, 312, 313; or BIOL 431)
- Computer Science: computer programming (ENGR 131 or other approved computer programming course)
- Chemistry: one year of inorganic chemistry with laboratory (CHEM 105, 106, 113); one year of organic chemistry with laboratory (CHEM 223 or 323, 224 or 324, and 233); physical chemistry (CHEM 301)
- Physics: one year of physics (PHYS 115, 116)

B.S. Program in Systems Biology

The Systems Biology B.S. program uses a separate, four-semester core curriculum: BIOL 250 (Introduction to Cell and Molecular Biology Systems), BIOL 251 (Introduction to Organismal and Population Systems), BIOL 300 (Dynamics of Biological Systems I), and BIOL 306 (Dynamics of Biological Systems II).

Additional core requirements are as follows:

- Mathematics: two years of calculus and differential equations (MATH 121, 122, 223, 224)
- Statistics: engineering statistics (STAT 312)
- Chemistry: one year of inorganic chemistry with laboratory (CHEM 105, 106, 113)
- Computer Science: computer programming, data structures, and databases (ENGR 131; EECS 233, 341)
- Physics: one year of physics (PHYS 121, 122)

Students must also complete 12 hours of 300-level biology electives, 6 hours of biology sub specialty electives from one of four tracks (Neuroscience, Genetics, Evolutionary Biology, or Cellular and Molecular Biology), and 6 hours of systems electives (selected from EECS 216, 324, 313, 340; or MATH 201, 234, 304; or BIOL/MATH 319, 378; or OPRE 411A).

Total hours of BIOL courses required: 30
Total credit hours required: 120

All biology majors are required to meet with their departmental advisor at least once each semester to discuss their academic program, receive clearance for electronic course registration, and approve any drops, adds, or withdrawals.

In addition to formal courses for credit, the department offers weekly seminars presenting recent advances in biology. These seminars are held every Thursday afternoon at 4:15 p.m. and are open to the university community.

**Concentrations in Areas of the**
Biological Sciences

Students are encouraged to utilize their elective courses in the biology major to take advantage of concentrations in various specialized areas. These concentrations have been developed between the Biology Department, the basic science departments of the School of Medicine, and other departments. Currently, concentrations have been developed in the following areas: biotechnology and genetic engineering; computational biology; developmental biology; genetics; cell and molecular biology; neurobiology and animal behavior; population biology, ecology and environmental science. Note: these concentrations are informal; they are not declared, and will not appear on the student's diploma at graduation.

DEPARTMENTAL HONORS

To receive a bachelor's degree with honors in biology (formally noted as such on the student's diploma at graduation), the student must meet the following criteria:

1. Maintain a 3.4 overall grade point average, with a 3.6 in biology courses (i.e., listed as BIOL)
2. Carry out a year of research at Case Western Reserve University
3. Write a senior honors thesis with the approval of the faculty supervisor
4. Submit the thesis for review by an ad hoc honors committee
5. Successfully defend the thesis at an oral examination

Minors

Two tracks are available for the minor, each requiring a total of 16 hours of biology courses. One track consists of any two of the three core lectures with their associated laboratory courses (BIOL 214 and 214L, 215 and 215L, 216 and 216L) plus electives. An alternative track consists of BIOL 250 and BIOL 251 plus electives. Suitable minor courses are available for students majoring in the humanities and arts, social and behavioral sciences, health sciences, mathematics, chemistry, physics, astronomy, and geological sciences.

Co-op Program in Biology

The Co-op (Cooperative Education) program offers full-time undergraduate students in good academic standing the opportunity to engage in full-time, paid employment consistent with their major fields of study. Typically students participate in the co-op program for one or two seven-month periods, such as summer-fall and/or spring-summer, beginning after their sophomore or junior year. Although participation in this program extends the time required to achieve a bachelor's degree, students often benefit from higher starting salaries and greater future earnings that can result from the experience acquired in co-op assignments. Co-op employment opportunities may exist at local companies engaged in biotechnology research, pharmaceuticals, or other areas involving the life sciences. Students interested in this program should contact the department office.

GRADUATE PROGRAMS

Master of Science

The Department of Biology offers both thesis and non-thesis Master of Science degree programs. Both programs require a minimum of 30 semester hours of courses at the 300 level or higher. A minimum of 18 semester hours of formal course work is required for the thesis degree, and a minimum of 24 semester hours of formal course work is required for the non-thesis degree. The remaining credits may be research credits (BIOL 601 and 651). Further information is available in the department office.

Doctor of Philosophy

The Doctor of Philosophy degree in biology is granted upon the completion of original research under the guidance of a faculty member in the Department of Biology. Students who are planning to enter the doctoral program should obtain information from the department office.

COURSE DESCRIPTIONS

BIOL 114. Principles of Biology (3)
A basic biology course designed for the non-major. Topics include: molecules of life, cell structure, respiration and photosynthesis, molecular genetics and gene technology, heredity and human genetics, population genetics and evolution, diversity of life, and function of ecosystems. Course includes some applications of biological principles to agricultural, medical, and environmental concerns. BIOL 114 is not open to students with credit for BIOL 214. This course does not count toward the biology major.

BIOL 116. Introduction to Human Anatomy and Physiology I (3)
This course is the first course in a two-semester sequence that covers most systems of the human body. BIOL 116 covers homeostasis, membrane structure and function, membrane transport, tissue types, the integumentary system, neurons and nerves, the central nervous system, the peripheral nervous system, special senses (vision, hearing and equilibrium, taste, smell), and the cardiovascular system. This course is not open to students who have completed either BIOL 216 or BIOL 340 or BIOL 346. Prereq: or Coreq: BIOL 114.

BIOL 117. Introduction to Human Anatomy and Physiology II (3)
This course is the second course in a two-semester sequence that covers most systems of the human body. BIOL 117 covers respiratory system, endocrine system, digestive system, lymphatic system, immune system, urinary system, acid-base regulation, and reproductive systems. This course is not open to students who have completed either BIOL 216 or BIOL 340 or BIOL 346. Prereq: BIOL 114 and BIOL 116.

BIOL 119. Concepts for a Molecular View of Biology I (3)
Introduction to the principles of inorganic and organic chemistry essential to the study of biochemistry, molecular biology, and pharmacology. Topics include: atomic theory, the periodic table, chemical bonds, molecular geometry, ideal gas laws, equilibrium and reaction rates, acids and bases, nuclear chemistry, and nomenclature and reactions of organic compounds (including alkyl, aryl, alcohol, carboxyl, and amino compounds). Problems involving numeric computation are emphasized. This course is not open to students with credit for CHEM 105.

BIOL 121. Concepts for a Molecular View of Biology II (3)
The second semester of a two-course sequence in elementary inorganic, organic, and biochemistry. Topics include: carbohydrates, lipids, proteins, enzymes, enzyme kinetics, metabolic pathways and bioenergetics, DNA and RNA, methods of molecular biology, and nutrition. Applications to human physiology and medicine emphasized. BIOL 121 is not open to students with credit for CHEM 223. Prereq: BIOL 119.

BIOL 214. Genes and Evolution
First in a series of three courses required of the Biology major. Topics include: biological molecules (with a focus on DNA and RNA); basics of cell structure (with a focus on the nucleus and chromosome); cell cycle, mitosis and meiosis; molecular genetics, viruses and gene technology; classical and microbial genetics; population genetics and evolution, diversity resulting from evolution. Prereq: CHEM 105 or CHEM 111.

BIOL 214L. Genes and Evolution Laboratory (1)
First in a series of three laboratory courses required of the Biology major. Topics include: biological molecules (with a focus on DNA and RNA); basics of cell structure (with a focus on the nucleus and chromosome); cell cycle, mitosis and meiosis; molecular genetics, biotechnology; population gen-
BIOL 215. Cells and Proteins (3) Second in a series of three courses required of the Biology major. Topics to include: protein structure-function, enzymes kinetics; cell structure; cellular energetics, respiration and photosynthesis. In addition, membrane structure and transport will be covered. Laboratory and discussion sessions offered in alternate weeks. Prereq or Coreq: BIOL 214 or consent; or CHEM 105 and CHEM 106; or CHEM 111.

BIOL 215L. Cells and Proteins Laboratory (1) Second in a series of three laboratory courses required of the Biology major. Topics to include: protein structure-function, enzymes kinetics; cell structure; cellular energetics, respiration and photosynthesis. In addition, membrane structure and transport will be covered. Laboratory and discussion sessions offered in alternate weeks. This course is not available for students who have taken BIOL 215 as a 4-credit course. Prereq: CHEM 105 and CHEM 106 and BIOL 214. Prereq or Coreq: BIOL 215.

BIOL 216. Organisms and Ecosystems (3) Third in a series of three courses required of the Biology major. Topics include: homeostasis, including endocrine and autonomic controls; function of neurons and nervous systems; function of organ systems involved in circulation, excretion, osmoregulation, gas exchange, feeding, digestion, and temperature regulation; reproduction and development; behavior, population dynamics, community ecology, and function of ecosystems. Prereq: BIOL 214 and either CHEM 105 or CHEM 111.

BIOL 216L. Organisms and Ecosystems Laboratory (1) Third in a series of three laboratory courses required of the Biology major. Students will conduct laboratory experiments designed to provide students with hands-on empirical laboratory experience in order to better understand the complex interactions governing the basic physiology and development of organisms, as well as the functioning of ecosystems. Laboratories and discussion sessions offered in alternate weeks. Prereq or Coreq: BIOL 216.

BIOL 223. Vertebrate Biology (3) A survey of vertebrates from jawless fishes to mammals. Functional morphology, physiology, behavior and ecology as they relate to the groups’ relationships with their environment. Evolution of organ systems. Two lectures and one laboratory per week. The laboratory will involve a study of the detailed anatomy of the shark and catfish as representative vertebrates. Students are expected to spend at least three hours of unscheduled laboratory each week. This course fulfills a laboratory requirement for the biology major. Recommended preparation: BIOL 214.

BIOL 225. Evolution (3) Multidisciplinary study of the course and processes of organic evolution provides a broad understanding of the evolution of structural and functional diversity, the relationships among organisms and their environments, and the phylogenetic relationships among major groups of organisms. Topics include the genetic basis of micro- and macroevolutionary change, the concept of adaptation, natural selection, population dynamics, theories of species formation, principles of phylogenetic inference, biogeography, evolutionary rates, evolutionary convergence, homology, Darwinian medicine, and conceptual and philosophic issues in evolutionary theory. Offered as ANTH 225, BIOL 225, GEOG 225, HSTY 225, and PHIL 225.

BIOL 250. Introduction to Cell and Molecular Biology Systems (3) This course will emphasize an understanding of living organisms at the cellular level from a molecular view point. Topics to be covered will include: unity and diversity of living things, evolutionary relatedness, cells, tissues and organelles, life as a biochemical process, molecular building blocks of life, gene structure and function, use of model organisms and molecular experimental methods. The topics to be covered are relevant to current practices in biotechnology, medicine and agriculture and these connections will be highlighted. This course is not open to students who have received credit for BIOL 214 and/or BIOL 215.

BIOL 251. Introduction to Organismal and Population Systems (3) This course will emphasize an understanding of the regulation of the structure and function of organismal and population systems. Adopting an evolutionary perspective, the course will provide students with a comparative analysis of plant and animal solutions to the problem of multicellularity. Detailed exploration of animals will focus on the development of tissue and organ systems and how these connections will be highlighted. This course will be extended to regulation of ecosystems and abundance of organisms in populations.

BIOL 300. Dynamics of Biological Systems: A Quantitative Introduction to Biology (3) This course will introduce students to dynamic biological phenomena, from the molecular to the population level, and models of these dynamical phenomena. It will describe a biological system, discuss how to model its dynamics, and experimentally evaluate the resulting models. Topics will include molecular dynamics of biological molecules, kinetics of cell metabolism and the cell cycle, physics of excitability, scaling laws for biological systems, biomechanics, and population dynamics. Mathematical tools for the analysis of dynamic biological processes will also be presented. Students will manipulate and analyze simulations of biological processes, and learn to formulate and analyze their own models. This course satisfies a laboratory requirement for the biology major. Offered as BIOL 300 and EBME 300.

BIOL 301. Biotechnology Laboratory: Genes and Genetic Engineering (3) Laboratory training in recombinant DNA techniques. Basic microbiology, growth, and manipulation of bacteriophage, bacteria and yeast. Students isolate and characterize DNA, construct recombinant DNA molecules, and reintroduce them into eukaryotic cells (yeast, plant, animal) to assess their viability and function. Two laboratories per week. Offered as BIOL 301 and BIOL 401. Prereq: BIOL 215.

BIOL 302. Human Learning and the Brain (3) This course focuses on the question, “How does the human brain learn?” Through assigned readings, extensive class discussions, and a major paper, each student will explore personal perspectives on learning. Specific topics include, but are not limited to: the brain’s cycle of learning; neocortex structure and function; emotion and limbic brain; synapse dynamics and changes in learning; images in cognition; symbolic brain (language, mathematics, music); memory formation; and creative thought and brain mechanisms. The major paper will be added to each student’s SAGES writing portfolio. In addition, near the end of the semester, each student will make an oral presentation on a chosen topic. Prereq: BIOL 114 or BIOL 214 or PSCL 101. SAGES Dept Seminar

BIOL 303. Principles of Chemical Biology (4) This is a computer-assisted course and offers a detailed introduction into biological macromolecular structure and function with particular emphasis on proteins. Computer-assisted learning will follow each lecture and will involve either searching the Web for appropriate sources of information covered in the lecture or using spreadsheets and graphics to examine data extracted from the chemical biology and biomedical literature. For example, the protein database (PDB) and Ras-mol software will be used to visualize and measure biological macromolecules and extracted data from the biomedical literature will be analyzed by standard graphical procedures employing the computer. This new format will offer the student the ability to learn to use the information resources on the Web together with the computing ability of the computer to explore the concepts presented in the course. This course satisfies a laboratory requirement for the biology major. Prereq: CHEM 105 and CHEM 106 or CHEM 111 and ENGR 145.

BIOL 305. Herpetology (4) Structure, function, and identification of amphibians and reptiles; emphasis on North American herpetofauna. Evolution, anatomy, zoogeography,
and systematics of the major families of amphibians and reptiles. Physiological ecology, behavior, reproductive and population biology, field survey techniques, and behavioral observations of live animals. Three lectures and one session on special topics per week. Several weekend field trips. The course is offered in the spring semester of odd-numbered years. Prerequisite: BIOL 214.

BIOL 306. Dynamics of Biological Systems II: Tools for Mathematical Biology (3)

Building on the material in Biology 300, this course focuses on the mathematical tools used to construct and analyze biological models, with examples drawn largely from ecology but also from epidemiology, developmental biology, and other areas. Analytic “paper and pencil” techniques are emphasized, but we will also use computers to help develop intuition. By the end of the course, students should be able to recognize basic building blocks in biological models, be able to perform simple analysis, and be more fluent in translating between verbal and mathematical descriptions. Prerequisite: BIOL 300.

BIOL 307. Evolutionary Biology of the Invertebrates (3)

Important events in the evolution of invertebrate life, as well as structure, function, and phylogeny of major invertebrate groups.

BIOL 308. Molecular Biology: Genes and Genetic Engineering (4)

An examination of the flow of genetic information from DNA to RNA to protein. Topics include: nucleic acid structure; mechanisms and control of DNA, RNA, and protein biosynthesis; recombinant DNA; and mRNA processing and modification. Where possible, eukaryotic and prokaryotic systems are compared. Special topics include yeast as a model organism, molecular biology of cancer, and molecular biology of the cell cycle. Current literature is discussed briefly as an introduction to techniques of genetic engineering. Recommended preparation for BIOC 408 and BIOL 408: BIOC 307 or BIOL 214. Offered as BIOC 308, BIOL 308, BIOC 408, and BIOL 408. Prerequisite: BIOL 215 or BIOC 307.

BIOL 309. Introduction to Research in Mathematical Biology (1)

The purpose of this seminar is to introduce students to some of the research being done at Case Western Reserve that explores questions at the intersection of mathematics and biology. Students will explore roughly five research collaborations, spending two weeks with each research group. In the first three classes of each two-week block, students will read and discuss relevant papers, guided by members of that research group, and the two-week period will culminate in a talk in which a member of the research group will present a potential undergraduate project in that area. After the final group’s talk, students will divide themselves into groups of two to four people and choose one project for further exploration. Together, they will write up this project as a research proposal, introducing the problem, explaining how it connects to broader scientific questions, and outlining the proposed work. It is expected that students will use the associated research group as a resource, but the proposal should be their own work. Students will submit a first draft, receive feedback, and then submit a revised draft. Offered as BIOC 309 and MATH 342.

BIOL 312. Environmental Sculpture (3)

This course explores sculptural/architectural possibilities within three environmental realms: the natural, urban, and social/communal. The definition and application of “Sculpture” and “Architecture” may vary dramatically from project to project, where the boundary between sculpture and architecture may be blurred. Throughout, an emphasis on ecological awareness will be maintained, as it relates to environmental impact of structures in the landscape, as well as the materials and pathway of construction. This course satisfies a laboratory requirement for the biology major. SAGES Senior Cap

BIOL 313. Genetics Laboratory (2)

This laboratory exposes students to the methods used to study the genetics of a wide range of organisms. Some of the topics covered are: gene mapping in diploids, tetrad analysis, mutation, complementation, and mitotic recombination. Emphasis is placed on the relationship between the genotype and the biochemical events which determine the phenotype. One laboratory per week. Prerequisite or Corequisite: BIOL 326.

BIOL 314. Animal Cognition and Consciousness (4)

This course examines the notions of intelligence, cognition, reasoning, consciousness, and mental content as they appear in the philosophical views and empirical studies of animals in individual and social contexts. We will review scientific findings that suggest striking likenesses and intriguing differences in the (apparent) thought processes of humans and animals, and ask whether the research techniques that brought us these results are fully adequate to measuring such unobservable entities as conscious experience and thought. Techniques of measurement range from naturalistic observation, to the processing of vocalizations, to memory and problem solving tasks, and the imaging of brain processes through fMRI scans, etc. Students will face the challenges and rewards of practicing these techniques and reworking philosophical theories in the service component of the course. Students will participate in veterinary or shelter work to provide needed animal care while studying animal behavior using cognitive ethological methods. We will compare methods for measuring consciousness and intelligence in animals to those used for human beings, and ask questions about the possibility of machine consciousness and the emergent property of group consciousness. Offered as BIOL 314, COGS 314, PHIL 314 and PHIL 414.

BIOL 315. Quantitative Biology Laboratory (3)

Application of personal computers to biological research. Emphasis on the use of structured programming and flowcharted, use of statistical techniques, analysis of experimental design, modeling strategies. The use of diverse software packages such as spreadsheets, word processing, statistical packages. Continuous interaction with the WWW. Weekly lectures and problem sets posted in the WWW home page. One lecture and one lab per week. During the last 6 weeks of the course, graduate students will have a final project that consists of data analysis and interpretation. Report required for the final project for graduate students. Offered as BIOL 315 and BIOL 415. Prerequisite: BIOL 216.

BIOL 316. Fundamental Immunology (4)

Introductory immunology providing an overview of the immune system, including activation, effector mechanisms, and regulation. Topics include antigen-antibody reactions, immunologically important cell surface receptors, cell-cell interactions, cell-mediated immunity, innate versus adaptive immunity, cytokines, and basic molecular biology and signal transduction in B and T lymphocytes, and immunopathology. Three weekly lectures emphasize experimental findings leading to the concepts of modern immunology. An additional recitation hour is required to integrate the core material with experimental data and known immune mediated diseases. Five mandatory 90 minute group problem sets per semester will be administered outside of lecture and recitation meeting times. Graduate students will be graded separately from undergraduates, and 22 percent of the grade will be based on a critical analysis of a recently published, landmark scientific article. Offered as BIOL 316, BIOL 416, CLBY 416, and PATH 416. Prerequisite: BIOL 215.

BIOL 318. Introductory Entomology (4)

The goal of this course is to discover that, for the most part, insects are not aliens from another planet. Class meetings will alternate; with some structured as lectures, while others are laboratory exercises. Sometimes we will meet at the Cleveland Museum of Natural History, or in the field to collect and observe insects. The 50 minute discussion meeting once a week will serve to address questions from both lectures and lab exercises. The students will be required to make a small but comprehensive insect collection. Early in the semester we will focus on collecting the insects, and later, when insects are gone for the winter, we will work to identify the specimens collected earlier. Students will be graded based on exams, class participation and their insect collections. Offered as BIOL 318 and BIOL 418. Prerequisite: BIOL 214, and BIOL 215, and BIOL 216.

BIOL 319. Applied Probability and Stochastic Processes for Biology (4)

Applications of probability and stochastic processes to biological systems. Mathematical topics
will include: introduction to discrete and continuous probability spaces (including numerical generation of pseudo random samples from specified probability distributions), Markov processes in discrete and continuous time with discrete and continuous sample spaces, point processes including homogeneous and inhomogeneous Poisson processes and Markov chains on graphs, and diffusion processes including Brownian motion and the Ornstein-Uhlenbeck process. Biological topics will be determined by the interests of the students and the instructor. Likely topics include: stochastic ion channels, molecular motors and stochastic ratchets, actin and tubulin polymerization, random walk models for neural spike trains, bacterial chemotaxis, signaling and genetic regulatory networks, and stochastic predator-prey dynamics. The emphasis will be on practical simulation and analysis of stochastic phenomena in biological systems. Numerical methods will be developed using both MATLAB and the R statistical package. Student projects will comprise a major part of the course. Offered as BIOL 319, EECS 319, MATH 319, BIOL 419, EBME 419, and PHOL 419.

**BIOL 325. Cell Biology (3)**
This course will emphasize an understanding of the structure and function of eukaryotic cells from a molecular viewpoint. We will explore cell activities by answering the questions what do cells do and how do they do it. The answers to these questions will be developed using experimental evidence from the literature and explanations from the text. An important part of this course will be appreciation of the experimental evidence which supports our current understanding of cell function. To achieve this aim, students will read papers from the primary literature to supplement the text. Topics will include cell structure, protein structure and function, internal organization of the eukaryotic cell, membrane structure and function, protein sorting, organelle biogenesis, and cytoskeleton structure and function. The course will also cover the life cycles of cells, their interactions and finally use the immune response as a model of cell behavior. Prereq: BIOL 214 and BIOL 215.

**BIOL 326. Genetics (3)**
Transmission genetics, nature of mutation, microbial genetics, somatic cell genetics, recombinant DNA techniques and their application to genetics, human genome mapping, plant breeding, transgenic plants and animals, uniparental inheritance, evolution, and quantitative genetics. Offered as BIOL 326 and BIOL 426. Prereq: BIOL 214.

**BIOL 328. Plant Genomics and Proteomics (3)**
The development of molecular tools has impacted agriculture as much as human health. The application of new techniques to improve food crops, including the development of genetically modified crops, has also become controversial. This course covers the nature of the plant genome and the role of sequenced-based methods in the identification of the genes. The application of the whole suite of modern molecular tools to understand plant growth and development, with specific examples related agronomically important responses to biotic and abiotic stresses, is included. The content of the enormous amounts of data generated by these methods and their storage and analysis (bioinformatics) is also considered. Finally, the impact on both the developed and developing world of the generation and release of genetically modified food crops will be covered. Recommended preparation: BIOL 326. Offered as BIOL 328 and BIOL 428.

**BIOL 334. Structural Biology (3)**
Introduces basic chemical properties of proteins and discusses the physical forces that determine protein structure. Topics include: the elucidation of protein structure by NMR and by X-ray crystallographic methods; the acquisition of protein structures from data bases; and simple modeling experiments based on protein structures. Offered as BIOC 334, BIOL 344, BIOC 443, and BIOL 434.

**BIOL 336. Aquatic Biology (3)**
Physical, chemical, and biological dynamics of lake ecosystems. Factors governing the distribution, abundance, and diversity of freshwater organisms. Prereq: BIOL 216.

**BIOL 338. Ichthyology (3)**
Biology of fishes. Students will first develop fundamental understanding of the evolutionary history and systematics of fishes to provide a context within which they can address diverse aspects of biology including anatomy, physiology (e.g., in species that change sex; osmoregulation in freshwater vs. saltwater), and behavior (e.g., visual, auditory, chemical, electric communication; social structures). Finally, this knowledge will be used to explore the biodiversity of fishes around the world, with emphasis on Ohio species, by examining preserved specimens in class and making two local field trips to (1) observe captive living specimens, and (2) observe, capture, and identify wild fishes in their natural habitats. The course will conclude with an analysis of the current global fisheries crisis that has resulted from human activities. Fishes will be used to address broad topics in ecology and evolutionary biology that transcend the pure study of ichthyology. Recommended preparation for BIOL 338: BIOL 216. Offered as BIOL 338 and BIOL 438. Prereq: BIOL 216.

**BIOL 339. Aquatic Biology Laboratory (2)**
The physical, chemical, and biological limnology of freshwater ecosystems will be investigated. Emphasis will be on identification of the organisms inhabiting these systems and their ecological interactions with each other. This course will combine both field and laboratory analysis to characterize and compare the major components of these ponds. Students will have the opportunity to design and conduct individual projects. Prereq or Coreq: BIOL 336.

**BIOL 340. Human Physiology (3)**
This course will provide functional correlates to the students’ previous knowledge of human anatomy. Building upon the basic principles covered in BIOL 216 and 346, the physiology of organs and organ systems of humans, including the musculoskeletal, nervous, cardiovascular, lymphatic, immune, respiratory, digestive, excretory, reproductive, and endocrine systems, will be studied at an advanced level. The contribution of each system to homeostasis will be emphasized. Prereq: BIOL 216 and BIOL 346.

**BIOL 343. Microbiology (3)**
An introduction to the physiology, genetics, biochemistry, and diversity of microorganisms. The subject will be approached both as a basic biological science that studies the molecular and biochemical processes of cells and viruses, and as an applied science that examines the involvement of microorganisms in human disease as well as in workings of ecosystems, plant symbioses, and industrial processes. The course is divided into four major areas: bacteria, viruses, medical microbiology, and environmental and applied microbiology. Prereq: BIOL 215.

**BIOL 344. Laboratory for Microbiology (3)**
Practical microbiology, with an emphasis on bacteria as encountered in a variety of situations. Sterile techniques, principles of identification, staining and microscopy, growth and nutritional characteristics, genetics, enumeration methods, epidemiology, immunological techniques (including ELISA and T cell identification), antibiotics and antibiotic resistance, chemical diagnostic tests, sampling the human environment, and commercial applications. One lab per week. Prereq or Coreq: BIOL 343.

**BIOL 346. Human Anatomy (3)**
Gross anatomy of the human body. Two lectures and one laboratory demonstration per week. Prereq: BIOL 214.

**BIOL 348. Human Anatomy and Physiology (4–5)**
The anatomy and physiology of the human body. Enrollment is restricted to students majoring in nutrition. Four lectures and one laboratory per week. Offered as BIOL 348 and BIOL 448.

**BIOL 351. Principles of Ecology (3)**
This lecture course explores spatial and temporal relationships involving organisms and the environment at individual, population, and community levels. An underlying theme of the course will be neo-Darwinian evolution through natural selection with an emphasis on organismal adaptations to abiotic and biotic environments. Studies and models will illustrate ecological principles, and there will be some emphasis on the applicability of these principles to ecosystem conservation. Students taking the graduate level course will prepare a grant proposal in which hypotheses will be based...
on some aspect of ecological theory. Recommended preparation: BIOL 216. Offered as BIOL 351 and BIOL 451.

**BIOL 351L. Principles of Ecology Laboratory (2)** Students in this laboratory course will conduct a variety of ecological investigations that are designed to examine relationships involving organisms and the environment at individual, population, and community levels. Descriptive and hypothesis-driven investigations will take place at Case Western Reserve University’s Squire Valleyvue Farm, in both field and greenhouse settings. The course is designed to explore as well as test a variety of ecological paradigms. Students taking the graduate level course will prepare a grant proposal in which hypotheses will be based on a select number of lab investigations. This course satisfies a laboratory requirement for biology majors. Recommended preparation or concurrent enrollment in BIOL 351 or BIOL 451. Offered as BIOL 351L and BIOL 451L.

**BIOL 352. Introduction to Ecology and Field Biology (3)** This course will be an introduction to the field-based study of the interactions that determine the abundance and distribution of organisms. There will be a heavy emphasis on experimentation and data collection in the field as we investigate a diversity of terrestrial and aquatic habitats on the Squire Valleyvue Farm property. Students will have the opportunity to practice important ecological sampling techniques as they study the relationships between individuals, populations, and communities and the environments they live in. This course satisfies a laboratory requirement for the biology major. Offered summer semester only. Prereq: BIOL 216.

**BIOL 353. Ecophysiology of Global Change (3)** Climate changes and natural selection, prior to human activities, have pre-equipped autotrophic organisms with a suite of adaptations to natural abiotic stress. Whether these adaptations are capable of dealing with current and future levels of stress (magnitude, speed) of non-natural abiotic change is of great interest. This course will examine, in detail, the tight physiological interactions between plants and their variable environment. Emphasizing major aspects of indirect (UV-B, global warming, altered precipitation) and direct (CO2, O3, SOx, NOx) anthropogenic pollution, relevant plant cellular processes, and responses of plants to abiotic stress, will be examined. With this foundation, class discussions will explore scaled collective consequences of global change to plant-dominated terrestrial and aquatic ecosystems. Offered as BIOL 353 and BIOL 453. Prereq: BIOL 216.

**BIOL 358. Animal Behavior (4)** Ultimately the success or failure (i.e. life or death) of any individual animal is determined by its behavior. The ability to locate and capture food, avoid being food, acquiring and defending territory, and successfully passing your genes to the next generation, are all dependent on complex interactions between an animal’s design, environment, and behavior. This course will be an integrative approach emphasizing experimental studies of animal behavior. You will be introduced to state-of-the-art approaches to the study of animal behavior, including neural and hormonal mechanisms, genetic and developmental mechanisms and ecological and evolutionary approaches. We will learn to critique examples of current scientific papers, and learn how to conduct observations and experiments with real animals. We will feature guest appearances by the Curator of Research from the Cleveland Metroparks Zoo and visits to working animal behavior research labs here at Case Western Reserve. Group discussions and writing will be emphasized. This course satisfies a laboratory requirement for biology majors. Offered as BIOL 358 and BIOL 458. Prereq: BIOL 114 or BIOL 214.

**BIOL 361. Building an Educational Website: Zebrafish in the Classroom (3)** Students with backgrounds in computer science and biology will work together to build a “Zebrafish in the Classroom” website. The zebrafish model system has many characteristics that make it an excellent tool for teaching: embryos are easy to obtain in large numbers, development can be observed in vivo using simple dissecting microscopes, and mutants can be used to demonstrate principles of development and genetics. Although scientists around the world are using zebrafish in their courses, there is no centralized place for educators and students to share ideas and materials. During this course, students will create content for and build a website that will disseminate ideas for using zebrafish as a teaching tool. In its mature form, the website will contain protocols for using zebrafish in laboratory courses for students at all stages of their education, tours, movies, discussion and question boards, and an on-line journal where students can publish their work. Students enrolling in this course should have background in web design or developmental biology. Prereq: BIOL 362. SAGES Dept Seminar

**BIOL 363. Experimental Developmental Biology (3)** Laboratory will teach concepts and techniques in developmental biology using wildtype, mutant, and transgenic fluorescent zebrafish. Emphasis will be on the mechanisms that pattern the embryo during development and how these mechanisms are explored using molecular, cellular, and genetic approaches. Term research paper required. Students taking the graduate level course will prepare a grant proposal. One laboratory per week. Limit: 10 students. Offered as BIOL 363 and BIOL 463. Prereq: BIOL 216 and BIOL 362.

**BIOL 365. Evo-Devo: Evolution of Body Plans (3)** This discussion-based course offers a detailed introduction to Evolutionary Developmental Biology. The field seeks to explain evolutionary events through the mechanisms of Developmental Biology and Genetics. The course is structured into different modules. First we will look at the developmental genetic mechanisms that can cause variation. Then we focus on how alterations of these mechanisms can generate novel structural changes. We will then examine a few areas of active debate, where Evo-Devo is attempting to solve major problems in evolutionary biology. We will conclude with two writing assignments. Students will be required to present, read, and discuss primary literature in each module. Offered as BIOL 365 and BIOL 465. Prereq: BIOL 225 or BIOL 362. SAGES Dept Seminar

**BIOL 366. Genes, Embryos and Fossils (3)** This multidisciplinary seminar course is designed to help students understand fundamental concepts of development and evolution of biological systems. Because scientists communicate their ideas through journal articles, seminars, and in grant proposals, the course will focus upon reading and synthesizing primary literature. In this discussion-based course, students will also learn to effectively present and write on three topics that are at the exciting intersection of genetics, developmental biology, and evolution. Finally, students will be provided with the technical and intellectual skills which are needed to write a grant proposal and a literature review. Prereq: BIOL 225 or BIOL 362 or BIOL 365. SAGES Dept Seminar

**BIOL 368. Topics in Evolutionary Biology (3)** The focus for this course on a special topic of interest in evolutionary biology will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution. ANAT/ANTH/GEOL/PHIL 467/BIO 468 will require a longer, more sophisticated term paper, and additional class presentation. Offered as ANTH 367, BIOL 368, GEOL 367, PHIL 367, ANAT 467, ANTH 467, BIOL 468, GEOL 467, and PHIL 467.

**BIOL 369. Evolutionary Biology Capstone (3)** This course focuses on a special topic of interest in evolutionary biology that will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution. Students will participate in
discussions and lead class seminars on evolution-ary topics and in collaboration with an advisor or advisors, select a topic for a research paper or proj-ect. Each student will write a major research report or complete a major project and will make a public presentation of her/his findings.
Offered as ANTH 368, BIOL 369, PHIL 368.
SAGES Senior Cap

BIOL 373. Introduction to Neurobiology (3)
How nervous systems control behavior. Biophysical, biochemical, and molecular biological properties of nerve cells, their organization into circuitry, and their function within networks. Emphasis on quantitative methods for modeling neurons and networks, and on critical analysis of the contempo-rary technical literature in the neurosciences. Term paper required for graduate students.
Offered as BIOL 373, BIOL 473, and NEUR 473.
Prereq: BIOL 216.

BIOL 374. Neurobiology of Behavior (3)
In this course, students will examine how neuro-biologists interested in animal behavior study the linkage between neural circuitry and complex behavior. Various vertebrate and invertebrate sys-tems will be considered. Several exercises will be used in this endeavor. Although some lectures will provide background and context on specific neural systems, the emphasis of the course will be on classroom discussion of specific journal articles.
In addition, students will each complete a project in which they will observe some animal behavior and generate both behavioral and neurobiological hypotheses related to it. In lieu of examinations, students will complete three written assignments, including a theoretical grant proposal, a one-page Specific Aims paper related to the project, and a final project paper. These assignments are designed to give each student experience in writing biologically-relevant documents. Classroom discussions will help students understand the content and format of each type document. They will also present their projects orally to the entire class. Recommended preparation: BIOL 216.
Offered as BIOL 374, BIOL 474, and NEUR 474.
SAGES Dept Seminar

BIOL 376. Neurobiology Laboratory (3)
Introduction to the basic laboratory techniques of neurobiology. Intracellular and extracellular recording techniques, forms of synaptic plasticity, patch clamping, immunohistochemistry and confocal microscopy. During the latter weeks of the course students will be given the opportunity to conduct an independent project. One labora-tory and one discussion session per week. Recommended preparation for BIOL 476 and NEUR 476: BIOL 216.
Offered as BIOL 376, BIOL 476 and NEUR 476.
Prereq: BIOL 216.

BIOL 377. Biorobotics Team Research (3)
Many exciting research opportunities cross dis-ciplinary lines. To participate in such projects, researchers must operate in multi-disciplinary teams. The Biorobotics Team Research course offers a unique capstone opportunity for under-graduate students to utilize skills they developed during their undergraduate experience while ac-quiring new teaming skills. A group of eight stu-dents form a research team under the direction of two faculty leaders. Team members are chosen from appropriate majors through interviews with the faculty. They will research a biological mecha-nism or principle and develop a robotic device that captures the actions of that mechanism. Although each student will cooperate on the team, they each have a specific role, and must develop a final pa-per that describes the research generated on their aspect of the project. Students meet for one class period per week and two 2-hour lab periods. Ini-tially students brainstorm ideas and identify the project to be pursued. They then acquire biological data and generate robotic designs. Both are further developed during team meetings and reports. Fi-nal oral reports and a demonstration of the robotic device occur in week 15.
Offered as BIOL 377, EMAE 377, BIOL 477, and EMAE 477.
SAGES Senior Cap

BIOL 378. Computational Neuroscience (3)
Computer simulations and mathematical analysis of neurons and neural circuits, and the computa-tional properties of nervous systems. Students are taught a range of models for neurons and neural circuits, and are asked to implement and explore the computational and dynamic properties of these models. The course introduces students to dynamical systems theory for the analysis of neurons and neural learning, models of brain systems, and their relationship to artificial and neural networks. Term project required. Students enrolled in MATH 478 will make arrangements with the instructor to at-tend additional lectures and complete additional assignments addressing mathematical topics re-related to the course. Recommended preparation: MATH 223 and MATH 224 or BIOL 300 and BIOL 306.
Offered as BIOL 378, COGS 378, MATH 378, BIOL 478, EBME 478, EEC 478, MATH 478 and NEUR 478.

BIOL 379. Neuroscience of Communication and Communication Disorders (3)
The course focus is neuroanatomy and neurophysi-ology related to motor control and cognition, par-ticularly aspects of cognition involved in language functions. Topics to be addressed include: princi-ples of neurophysiology and neurochemistry; func-tional neuroanatomy of the central and peripheral nervous systems; neurological and neuropsycholog-ical assessment of communication; neurodiag-nostic methods. In part, the course material will be presented in a problem-based learning format. That is, normal aspects of human neurosence will be discussed in the context of neurological dis-or-ders affecting communication.
Offered as BIOL 379 and COSI 305.

BIOL 382. Drugs, Brain, and Behavior (3)
This course is concerned with the mechanisms un-derlying neurochemical signaling and the impact of drugs on those mechanisms. The first half of the course emphasizes the fundamental mechanisms underlying intra- and extracellar communication of neurons and the basic principles of how drugs interact with the nervous system. The second half of the course emphasizes understanding the neural substrates of disorders of the nervous system, and the mechanisms underlying the therapeutic effects of drugs at the cellular and behavioral levels. This course will consist of lectures designed to give the student necessary background for understanding these basic principles and class discussion. The class discussion will include viewing video exam-ples of behavioral effects of disorders of the ner-vous system, and analysis of research papers. The goal of the class discussions is to enhance the criti-cal thinking skills of the student and expose the student to contemporary research techniques.
Offered as BIOL 382, BIOL 482, and NEUR 482.
Prereq: BIOL 215 and BIOL 216.

BIOL 384. Reading and Writing Like an Ecologist (3)
Students usually learn from textbooks, but scient-ists communicate with each other through journal articles. The purpose of this class is to help you learn to read and write like an ecologist. We will spend our time reading and discussing journal articles about three or four issues in ecology, in-cluding papers from both empirical and theoreti-cal perspectives. In addition to the science, we'll talk about strategies for how to keep reading when you encounter something you don't understand and what makes a paper well or poorly written. At the end of each section, you will synthesize your ideas into a review article. Your initial paper will be submitted to me as hypothetical journal editor. I will send your paper out for review to two fellow classmates, and I'll send their comments back to you along with brief comments of my own. As all scientists know, it is virtually unheard of for a journal to accept a paper for publication without revisions. After this peer review, you will revise your papers and resubmit them to me. Your grade will be based on your participation in class discus-sions, your papers (both drafts) and your work as a reviewer for other students. Recommended prepara-tion: BIOL 216.
SAGES Dept Seminar

BIOL 385. Seminar on Biological Processes in Learning and Cognition (3)
Students will read and discuss research papers on a range of topics relevant to the biological pro cesses that lead to cognition and learning in hu-mans. Sample topics are: cellular and molecular mechanisms of memory; visual sensory detection of images, movement, and color; role of slow neu rotransmitters in synaptic plasticity; cortical dis tribution of cognitive functions such as working memory, decision making, and image analysis; functions of emotion-structures and their role in cognition; brain structures and mechanisms in- volved in language creation; others. Some papers will be assigned and others will be selected by stu-dents. Discussions will focus on the methods used,
the experimental results, and the interpretations of significance. Students will work in groups on a semester project to be presented near the end of the semester.

Prereq: BIOL 302.
SAGES Senior Cap

BIOL 387. Seminar in Population Biology (1–3)
Discussion of major themes in population biology, evolution, and ecology, based on critiquing scientific papers. One discussion per week.

BIOL 388. Undergraduate Research (1–3)
Guided laboratory research under the sponsorship of a biology faculty member. May be carried out within the biology department or in associated departments. May be taken only one semester during the student’s academic career. Appropriate forms must be secured in the biology department office. A written report must be approved by the biology sponsor and submitted to the chair of the biology department before credit is granted.

BIOL 388S. Undergraduate Research - SAGES Capstone (3)
Guided laboratory research under the sponsorship of a biology faculty member. May be carried out within the biology department or in associated departments. May be taken only one semester during the student’s academic career. Appropriate forms must be secured in the biology department office. A written report must be approved by the biology sponsor and submitted to the chair of the biology department before credit is granted. A public presentation is required.
SAGES Senior Cap

BIOL 389. Selected Topics (1–3)
Individual library research projects under the guidance of a biology sponsor. A major paper must be submitted and approved before credit is awarded.

BIOL 389S. Selected Topics in Biology--SAGES Capstone (3)
Individual library research projects under the guidance of a biology sponsor. A major paper must be submitted and approved before credit is awarded. A public presentation is required.
SAGES Senior Cap

BIOL 390. Advanced Undergraduate Research (1–3)
Offered on a credit only basis. Students may carry out research in biology or related departments, but a biology sponsor is required. Does not count toward the 30 hours required for a major in biology, but may be counted toward the total number of hours required for graduation. A written report must be submitted to the chair’s office and approved before credit is granted.

BIOL 394. Seminar in Evolutionary Biology (3)
This seminar investigates 20th-century evolutionary theory, especially the Modern Evolutionary synthesis and subsequent expansions of and challenges to that synthesis. The course encompasses the multidisciplinary nature of the science of evolution, demonstrating how disciplinary background influences practitioners’ conceptualizations of pattern and process. This course emphasizes practical writing and research skills, including formulation of testable theses, grant proposal techniques, and the implementation of original research using the facilities on campus and at the Cleveland Museum of Natural History.
Offered as ANTH 394, BIOL 394, GEOL 394, HSTY 394, PHIL 394, ANTH 494, BIOL 494, GEOL 494, HSTY 494, and PHIL 494.

BIOL 395. Research Discussions (1)
This is a seminar course which provides a forum within which students performing undergraduate research, or who have done so previously, can present and discuss their projects. Discussions will cover all aspects of the students’ research projects: background material, experimental design and methods, results and their analysis and conclusions. At the beginning of the semester, each student will briefly outline his or her project and distribute a few key papers to provide background reading for all participants. After this introductory phase, each student will make a presentation of his/her own research. Graded as pass/fail, based upon attendance and participation.
Prereq: BIOL 388. Prereq or coreq: BIOL 390.

BIOL 396. Undergraduate Research in Evolutionary Biology (3)
Students propose and conduct guided research on an aspect of evolutionary biology. The research will be supervised and supervised by a member of the CASE faculty or other qualified professional. A written report must be submitted to the Evolutionary Biology Steering Committee before credit is granted.
Offered as ANTH 396, BIOL 396, GEOL 396, and PHIL 396.

BIOL 401. Biotechnology Laboratory: Genes and Genetic Engineering (3)
Laboratory training in recombinant DNA techniques. Basic microbiology, growth, and manipulation of bacterial, phage and yeast. Students isolate and characterize DNA, construct recombinant DNA molecules, and reintroduce them into eukaryotic cells (yeast, plant, animal) to assess their viability and function. Two laboratories per week.
Offered as BIOL 301 and BIOL 401.

BIOL 402. Principles of Neural Science (3)
Lecture/discussion course covering concepts in cell and molecular neuroscience, principles of systems neuroscience as demonstrated in the somatosensory system, and fundamentals of the development of the nervous system. This course will prepare students for upper level Neuroscience courses and is also suitable for students in other programs who desire an understanding of neurosciences. Recommended preparation: CBIO 453. Offered as BIOL 402 and NEUR 402.
will be on a critical analysis of a recently published, landmark scientific article. Offered as BIOL 316, BIOL 416, CLBY 416, and PATH 416. Prereq: Graduate standing.

BIOL 417. Cytokines: Function, Structure, and Signaling (3)
Regulation of immune responses and differentiation of leukocytes is modulated by proteins (cytokines) secreted and/or expressed by both immune and non-immune cells. Course examines the function, expression, gene organization, structure, receptors, and intracellular signaling of cytokines. Topic include regulatory and inflammatory cytokines, colony stimulating factors, chemokines, cytokine and cytokine receptor families, intracellular signaling through STAT proteins and tyrosine phosphorylation, clinical potential, and genetic defects. Lecture format using texts, scientific reviews and research articles. Recommended preparation: PATH 416 or equivalent. Offered as BIOL 417, CLBY 417, and PATH 417.

BIOL 418. Introductory Entomology (4)
The goal of this course is to discover that, for the most part, insects are not aliens from another planet. Class meetings will alternate; with some structured as lectures, while others are laboratory exercises. Sometimes we will meet at the Cleveland Museum of Natural History, or in the field to collect and observe insects. The 50 minute discussion meeting once a week will serve to address questions from both lectures and lab exercises. The students will be required to make a small but comprehensive insect collection. Early in the semester we will focus on collecting the insects, and later, when insects are gone for the winter, we will work to identify the specimens collected earlier. Students will be graded based on exams, class participation and their insect collections. Offered as BIOL 318 and BIOL 418. Prereq: BIOL 214, and BIOL 215, and BIOL 216.

BIOL 419. Applied Probability and Stochastic Processes for Biology (3)
Applications of probability and stochastic processes to biological systems. Mathematical topics will include: introduction to discrete and continuous probability spaces (including numerical generation of pseudo random samples from specified probability distributions), Markov processes in discrete and continuous time with discrete and continuous sample spaces, point processes including homogeneous and inhomogeneous Poisson processes and Markov chains on graphs, and diffusion processes including Brownian motion and the Ornstein-Uhlenbeck process. Biological topics will be determined by the interests of the students and the instructor. Likely topics include: stochastic ion channels, molecular motors and stochastic ratchets, actin and tubulin polymerization, random walk models for neural spike trains, bacterial chemotaxis, signaling and genetic regulatory networks, and stochastic predator-prey dynamics. The emphasis will be on practical simulation and analysis of stochastic phenomena in biological systems. Numerical methods will be developed using both MATLAB and the R statistical package. Student projects will comprise a major part of the course. Offered as BIOL 319, EECS 319, MATH 319, BIOL 419, EBME 419, and PHOL 419.

BIOL 426. Genetics (3)
Transmission genetics, nature of mutation, microbial genetics, somatic cell genetics, recombinant DNA techniques and their application to genetics, human genome mapping, plant breeding, transgenic plants and animals, uniparental inheritance, evolution, and quantitative genetics. Offered as BIOL 326 and BIOL 426.

BIOL 427. Neural Development (3)
Topics include cell commitment, regulation of proliferation and differentiation, cell death and trophic factors, pathfinding by the outgrowing nerve fiber, synapse formation, relationships between center and periphery in development and the role of activity. Offered as BIOL 427 and NEUR 427.

BIOL 428. Plant Genomics and Proteomics (3)
The development of molecular tools has impacted agriculture as much as human health. The application of new techniques to improve food crops, including the development of genetically modified crops, has already become controversial. This course covers the nature of the plant genome and the role of sequenced-based methods in the identification of the genes. The application of the whole suite of modern molecular tools to understand plant growth and development, with specific examples related agronomically important responses to biotic and abiotic stresses, is included. The impact of the enormous amounts of data generated by these methods and their storage and analysis (bioinformatics) is also considered. Finally, the impact on both the developed and developing world of the generation and release of genetically modified food crops will be covered. Recommended preparation: BIOL 326. Offered as BIOL 328 and BIOL 428.

BIOL 431. Statistical Methods I (3)
Application of statistical techniques with particular emphasis on problems in the biomedical sciences. Basic probability theory, random variables, and distribution functions, Point and interval estimation, regression, and correlation. Problems whose solution involves using packaged statistical programs. First part of year-long sequence. Offered as ANAT 431, BIOL 431, EPBI 431, and MPH 431.

BIOL 432. Statistical Methods II (3)
Methods of analysis of variance, regression and analysis of quantitative data. Emphasis on computer solution of problems drawn from the biomedical sciences. Design of experiments, power of tests, and adequacy of models. Offered as BIOL 432, EPBI 432, and MPH 432. Prereq: EPBI 431 or equivalent.

BIOL 434. Structural Biology (3)
Introduces basic chemical properties of proteins and discusses the physical forces that determine protein structure. Topics include: the elucidation of protein structure by NMR and X-ray crystallographic methods; the acquisition of protein structures from data bases; and simple modeling experiments based on protein structures. Offered as BIOL 434, BIOL 438, and BIOL 443.

BIOL 436. Advanced Aquatic Biology (3)
Physical, chemical, and biological dynamics of lakes and ecosystems. Factors governing the distribution, abundance, and diversity of freshwater organisms.

BIOL 438. Ichthyology (3)
Biology of fishes. Students will first develop fundamental understanding of the evolutionary history and systematics of fishes to provide a context within which they can address diverse aspects of biology including anatomy, physiology (e.g., in species that change sex; osmoregulation in freshwater vs. saltwater), and behavior (e.g., visual, auditory, chemical, electric communication; social structure). Finally, this knowledge will be used to explore the biodiversity of fishes around the world, with emphasis on Ohio species, by examining preserved specimens in class and making two local field trips to (1) observe captive living specimens, and (2) observe, capture, and identify wild fishes in their natural habitats. The course will conclude with an analysis of the current global fisheries crisis that has resulted from human activities. Fishes will be used to address broad topics in ecology and evolutionary biology that transcend the pure study of ichthyology. Recommended preparation for BIOL 438: BIOL 216. Offered as BIOL 338 and BIOL 438.

BIOL 443. Advanced Microbiology (3)
The physiology, genetics, biochemistry, and diversity of microorganisms. The subject will be approached both as a basic biological science that studies the molecular and biochemical processes of cells and viruses, and as an applied science that examines the involvement of microorganisms in human disease as well as in the workings of ecosystems, plant symbioses, and industrial processes. The course is divided into four major areas: bacteria, viruses, medical microbiology, and environmental and applied microbiology. Recommended preparation: BIOL 215 or consent of instructor.

BIOL 448. Human Anatomy and Physiology (4–5)
The anatomy and physiology of the human body. Enrollment is restricted to students majoring in nutrition. Four lectures and one laboratory per week. Offered as BIOL 438 and BIOL 448.

BIOL 451. Principles of Ecology (3)
This course explores spatial and temporal relationships involving organisms and the environment at individual, population, and community
levels. An underlying theme of the course will be neo-Darwinian evolution through natural selection with an emphasis on organismal adaptations to abiotic and biotic environments. Studies and models will illustrate ecological principles, and there will be some emphasis on the applicability of these principles to ecosystem conservation. Students taking the graduate level course will prepare a grant proposal in which hypotheses will be based on some aspect of ecological theory. Recommended preparation: BIOL 216.

Offered as BIOL 351 and BIOL 451.

BIOL 451L. Principles of Ecology Laboratory (2)
Students in this laboratory course will conduct a variety of ecological investigations that are designed to examine relationships involving organisms and the environment at individual, population, and community levels. Descriptive and hypothesis-driven investigations will take place at Case Western Reserve University’s Squire Valley Farm, in both field and greenhouse settings. The course is designed to explore as well as test a variety of ecological paradigms. Students taking the graduate level course will prepare a grant proposal in which hypotheses will be based on a selected number of lab investigations. This course satisfies a laboratory requirement for biology majors. Recommended preparation or concurrent enrollment in BIOL 351 or BIOL 451.

Offered as BIOL 351L and BIOL 451L.

BIOL 453. Ecophysiology of Global Change (3)
Climate changes and natural selection, prior to human activities, have pre-prepared autotrophic organisms with a suite of adaptations to natural abiotic stress. Whether these adaptations are capable of dealing with current and future levels (magnitude, speed) of non-natural abiotic change is of great interest. This course will examine, in detail, the tight physiological interactions between plants and their variable environment. Emphasizing major aspects of indirect (UV-B, global warming, altered precipitation) and direct (CO2, O3, SOx, NOx) anthropogenic pollution, relevant plant cellular processes, and responses of plants to abiotic stress, will be examined. With this foundation, class discussions will explore scaled collective consequences of global change to plant-dominated terrestrial and aquatic ecosystems.

Offered as BIOL 353 and BIOL 453.

BIOL 455. Coexistence in a Variable Environment (3)
The question of what maintains biodiversity is a central question of ecology. Over the last decade or so, researchers have come to realize that spatial and temporal environmental variability can play a key role in maintaining species coexistence, but the literature in this area is often confusing and can be difficult to synthesize into a unified understanding. Much of the research in this area has mathematical underpinnings, and so the difficulty is compounded when students are uncomfortable reading mathematically-based papers. This class will help students come to terms with an important and growing segment of the ecological literature and will help them learn how to read mathematically-based papers even if they do not use mathematical modeling in their own research.

BIOL 457. Proteins and Nucleic Acids (3)
The goal of this course is to provide a basic working knowledge of protein structure/function and molecular biology. The course begins with a discussion of protein structure and enzyme catalysis followed by protein purification and characterization. The course then addresses concepts relating to the application of modern molecular biology techniques. Students are taught how to clone genes and use these clones in animal and cell-based studies.

The overall goal is to provide students with an understanding of proteins and genetic approaches that can be used in experimental work and to facilitate comprehension of the scientific literature.

Offered as BIOL 457 and PHOL 456.

BIOL 458. Animal Behavior (4)
Ultimately the success or failure (i.e., life or death) of any individual animal is determined by its behavior. The ability to locate and capture food, avoid being food, acquiring and defending territory, and successfully passing your genes to the next generation, are all dependent on complex interactions between an animal’s design, environment, and behavior. This course will be an integrative approach emphasizing experimental studies of animal behavior. You will be introduced to state-of-the-art approaches to the study of animal behavior, including neural and hormonal mechanisms, genetic and developmental mechanisms, and ecological and evolutionary approaches. We will learn to critique examples of current scientific papers, and learn how to conduct observations and experiments with real animals. We will feature guest appearances by the Curator of Research from the Cleveland Metroparks Zoo and visits to working animal behavior research labs here at Case Western Reserve. Group discussions and writing will be emphasized. This course satisfies a laboratory requirement for biology majors.

Offered as BIOL 358 and BIOL 458.

BIOL 462. Advanced Principles of Developmental Biology (3)
Same as BIOL 362 except the required term paper is an NIH format research proposal. Recommended preparation: BIOL 216.

Offered as ANAT 462 and BIOL 462.

BIOL 463. Experimental Developmental Biology (3)
Laboratory will teach concepts and techniques in developmental biology using wildtype, mutant, and transgenic fluorescent zebrafish. Emphasis will be on the mechanisms that pattern the embryo during development and how these mechanisms are explored using molecular, cellular, and genetic approaches. Term research paper required. Students taking the graduate level course will prepare a grant proposal. One laboratory per week. Limit: 10 students.

BIOL 465. Evo-Devo: Evolution of Body Plans (3)
This discussion-based course offers a detailed introduction to Evolutionary Developmental Biology. The field seeks to explain evolutionary events through the mechanisms of Developmental Biology and Genetics. The course is structured into different modules. First we will look at the developmental genetic mechanisms that can cause variation. Then we focus on how alterations of these mechanisms can generate novel structural changes. We will then examine a few areas of active debate, where Evo-Devo is attempting to solve major problems in evolutionary biology. We will conclude with two writing assignments. Students will be required to present, read, and discuss primary literature in each module.

Offered as BIOL 365 and BIOL 465.

BIOL 467. Biorobotics Team Research (3)
Many exciting research opportunities cross disciplinary lines. To participate in such projects, researchers must operate in multi-disciplinary teams. The Biorobotics Team Research course offers a unique capstone opportunity for undergraduate students to utilize skills they developed during their undergraduate experience while acquiring new teaming skills. A group of eight students form a research team under the direction of two faculty leaders. Team members are chosen from appropriate majors through interviews with the faculty. They will research a biological mechanism or principle and develop a robotic device that captures the actions of that mechanism. Although each student will cooperate on the team, they each have a specific role, and must develop a final paper that describes the research generated on their aspect of the project. Students meet for one class period per week and two 2-hour lab periods. Initially students brainstorm ideas and identify the project to be pursued. They then acquire biological data and generate robotic designs. Both are further developed during team meetings and reports. Final oral reports and a demonstration of the robotic device occur in week 15.

Offered as BIOL 377, EMAE 377, BIOL 477, and EMAE 477.

BIOL 468. Topics in Evolutionary Biology (3)
The focus for this course on a special topic of interest in evolutionary biology will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution, ANAT/ANTH/GEOL/PHIL 467/BIOL 468 will require a longer, more sophisticated term paper, and additional class presentation.

Offered as ANTH 367, BIOL 368, GEOL 367, PHIL 367, ANAT 467, ANTH 467, BIOL 468, GEOL 467, and PHIL 467.

BIOL 473. Introduction to Neurobiology (3)
How nervous systems control behavior. Biophysical, biochemical, and molecular biological proper-
ties of nerve cells, their organization into circuitry, and their function within networks. Emphasis on quantitative methods for modeling neurons and networks, and on critical analysis of the contemporary technical literature in the neurosciences. Term paper required for graduate students. Offered as BIOL 373, BIOL 473, and NEUR 473.

BIOL 474. Neurobiology of Behavior (3)
In this course, students will examine how neurobiologists interested in animal behavior study the linkage between neural circuitry and complex behavior. Various vertebrate and invertebrate systems will be considered. Several exercises will be used in this endeavor. Although some lectures will provide background and context on specific neural systems, the emphasis of the course will be on classroom discussion of specific journal articles. In addition, students will each complete a project in which they will observe animal behavior and generate both behavioral and neurobiological hypotheses related to it. In lieu of examinations, students will complete three written assignments, including a theoretical grant proposal, a one-page Specific Aims paper related to the project, and a final project paper. These assignments are designed to give each student experience in writing biologically-relevant documents. Classroom discussions will help students understand the content and format of each type document. They will also present their projects orally to the entire class. Recommended preparation: BIOL 216. Offered as BIOL 374, BIOL 474, and NEUR 474.

BIOL 476. Neurobiology Laboratory (3)
Introduction to the basic laboratory techniques of neurobiology. Intracellular and extracellular recording techniques, forms of synaptic plasticity, patch clamping, immunohistochemistry and confocal microscopy. During the latter weeks of the course students will be given the opportunity to conduct an independent project. One laboratory and one discussion session per week. Recommended preparation for BIOL 476 and NEUR 476: BIOL 216. Offered as BIOL 376, BIOL 476 and NEUR 476.

BIOL 477. The Dynamics of Adaptive Behavior (3)
Introduction to embodied, situated, and dynamical approaches to the design and analysis of autonomous agents and animals. Topics include recurrent neural networks, coupled neural/body/environment systems, and evolution and analysis of neural circuits. Behavior studied include examples from motor control, perception, learning, and cognition. Recommended preparation: ENGR 131 and MATH 224. Offered as BIOL 477 and EEC 477.

BIOL 478. Computational Neuroscience (3)
Computer simulations and mathematical analysis of neurons and neural circuits, and the computational properties of nervous systems. Students are taught a range of models for neurons and neural circuits, and are asked to implement and explore the computational and dynamic properties of these models. The course introduces students to dynamical systems theory for the analysis of neurons and neural learning, models of brain systems, and their relationship to artificial and neural networks. Term project required. Students enrolled in MATH 478 will make arrangements with the instructor to attend additional lectures and complete additional assignments addressing mathematical topics related to the course. Recommended preparation: MATH 223 and MATH 224 or BIOL 300 and BIOL 306. Offered as BIOL 378, COGS 378, MATH 378, BIOL 478, EBME 478, EEC 478, MATH 478 and NEUR 478.

BIOL 479. Seminar in Computational Neuroscience (3)
Readings and discussion in the recent literature on computational neuroscience, adaptive behavior, and other current topics. Offered as BIOL 479, EBME 479, EEC 479, and NEUR 479.

BIOL 480. Physiology of Organ Systems (3)
This course presents an advanced introduction to the fundamental physiological principles governing the major organ systems in mammals. The function of the nervous, endocrine, digestive, muscular, circulatory, respiratory, and urinary systems are discussed. At the conclusion of the semester, integrative aspects of the major organ systems will be illustrated through consideration of exercise and high altitude physiology. Offered as BIOL 480 and PH 480.

BIOL 482. Drugs, Brain, and Behavior (3)
This course is concerned with the mechanisms underlying neurochemical signaling and the impact of drugs on those mechanisms. The first half of the course emphasizes understanding the neural substrates of disorders of the nervous system, and the mechanisms underlying the therapeutic effects of drugs at the cellular and behavioral levels. This course will consist of lectures designed to give the student necessary background for understanding these basic principles and class discussion. The class discussion will include viewing video examples of behavioral effects of disorders of the nervous system, and analysis of research papers. The goal of the class discussions is to enhance the critical thinking skills of the student and expose the student to contemporary research techniques. Offered as BIOL 382, BIOL 482, and NEUR 482.

BIOL 491. Contemporary Biology and Biotechnology for Innovation I (3)
The first half of a two-semester sequence providing an understanding of biology as a basis for successfully launching new high-tech ventures. The course will examine physical limitations to present technologies and the use of biology to identify potential opportunities for new venture creation. The course will provide experience in using biology in both identification of incremental improvements and as the basis for alternative technologies. Case studies will be used to illustrate recent commercially successful (and unsuccessful) biotechnology-based venture creation and will illustrate characteristics for success.

BIOL 492. Contemporary Biology and Biotechnology for Innovation II (3)
Continuation of BIOL 491 with an emphasis on current and prospective opportunities for Biotechnology Entrepreneurship. Longer term opportunities for Biotechnology Entrepreneurship in emerging areas including (but not limited to) applications of DNA sequence information in medicine and agriculture; energy and the environment; biologically-inspired robots. Recommended preparation: BIOL 491 or consent of department.

BIOL 493. Feasibility and Technology Analysis (3)
This course provides the tools scientists need to determine whether a technology is ready for commercialization. These tools include (but are not limited to) financial analysis, market analysis, industry analysis, technology analysis, intellectual property protection, the entrepreneurial process and culture, an introduction to entrepreneurial strategy and new venture financing. Deliverables will include a technology feasibility analysis on a possible application in the student’s scientific area. Offered as BIOL 493, CHEM 493, and PHYS 493.

BIOL 494. Seminar in Evolutionary Biology (3)
This seminar investigates 20th-century evolutionary theory, especially the Modern Evolutionary synthesis and subsequent expansions of and challenges to that synthesis. The course encompasses the multidisciplinary nature of the science of evolution, demonstrating how disciplinary background influences practitioners’ conceptualizations of pattern and process. This course emphasizes practical writing and research skills, including formulation of testable theses, grant proposal techniques, and the implementation of original research using the facilities on campus and at the Cleveland Museum of Natural History. Offered as ANTH 394, BIOL 394, GEOL 394, HSTY 394, PHIL 394, BIOL 494, GEOL 494, HSTY 494, and PHIL 494.

BIOL 530. Seminar in the Rhizosphere (1–2)
The rhizosphere is the dynamic zone of soil that surrounds plant roots. Chemical and physical processes in the rhizosphere are controlled by the interaction between plants and a diverse soil microbiota. This graduate-level seminar course will explore these processes and interactions as they affect nutrient cycling and the fertility of natural systems. Each week one student will present and lead the discussion on a seminal or current key scientific article dealing with one of the following general topics: Rhizosphere biogeochemistry, diversity and function of the rhizosphere biota, in-
teraction of organisms inhabiting the rhizosphere, influence of rhizospheric processes in plant fitness and ecosystem function.

**BIOL 531. Seminar in Experimental Ecology (1–3)**

**BIOL 536. Seminar in Great Lakes Issues (1–3)**

BIOL 536. Seminar in Great Lakes Issues (1–3)

Selected topics related to Great Lakes basin studies: research problems, scientific processes, classic research papers, current events, policy issues, and legislative initiatives. Course content will vary depending on interests of students and faculty. Offered as BIOL 536 and GEOL 536.

**BIOL 541. Topics in Integrative Biology (1–3)**

The goal of this course is to encourage graduate students to think about any question in biology from a broad-based perspective, focusing on the integration of three major themes: 1) evolution and its effects, 2) the cellular basis of life, and 3) systems level control. Each semester, the course may focus on a different topic, but it will be examined from the perspectives of these three focus areas. One faculty instructor with strength in each of these areas will present a few introductory lectures to provide the class with a basic understanding of the topic as it is studied in their area. Then, each student will research a subject covered that semester and develop and present this subject to the class with an explicit evolutionary, cellular or systems level approach. Students will be graded on the quality of their presentations and the overall level of their participation in class.

**BIOL 550C. Seminar: Experimental Biology (1–3)**

**BIOL 552. Seminar in Developmental Biology (1–3)**

Topics pertaining to the field of development, such as regeneration and induction, which address both vertebrate and invertebrate forms.

**BIOL 561. Statistical Methods for Scientific Research (3)**

This course will introduce students to traditional and novel statistical methods useful for experimental scientists. The emphasis will be on understanding theory and techniques that are used in research. We shall consider problems from astronomy, biology and particle-astro physics. The course will also cover topics of interest to engineers. Current collaborative research problems of the instructor will motivate some of the advanced statistical techniques. Topics to be covered include: Measuring uncertainty and probability distributions (low and high dimensional); point and interval estimation; curve fitting; likelihood and score type tests required for an experiment; posterior probabilities; dealing with small samples (which arise in search experiments); over- and under-coverage using confidence belts; and Monte Carlo simulation methods for planning experiments and evaluating the statistical significance of the results. “GGobi” and “R” open source software will be used for visualization (via dynamic and interactive graphics) and exploring high-dimensional data. Offered as BIOL 561 and PHYS 561.

**BIOL 569. Advanced Seminar in Developmental Biology (1–3)**

Participants prepare and present seminars on subjects of contemporary interest and importance in developmental biology.

**BIOL 599. Advanced Independent Study for Graduate Students (1–3)**

Independent study of advanced topics in biology under the supervision of a biology faculty member. Registration requires submission of a proposal for a project or study and approval of the department.

**BIOL 601. Research (1–9)**

**BIOL 651. Thesis M.S. (1–9)**

**BIOL 701. Dissertation Ph.D. (1–9)**

**BIOL 801. Biotechnology Workshop (2)**

The course will cover the topics of DNA structure and isolation, restriction enzyme digests, the fractionation of DNA by gel electrophoresis, Southern blotting, hybridization and the nature of restriction fragment length polymorphisms, the cloning of DNA in various vectors and the identification of recombinant molecules, the use of the polymerase chain reaction to amplify DNA and its use in DNA fingerprinting. The ethical issues arising from the implementation of recombinant DNA technology and the advances in the human genome project will also form part of the course. The laboratory exercises include DNA extraction from pea seeds, digestion with restriction enzymes and gel electrophoresis followed by Southern blotting and hybridization. A fragment of bacteriophage lambda will be cloned in a plasmid vector and recombinant molecules isolated. A fingerprint of the participants’ own DNA will be developed using the polymerase chain reaction.

**BIOL 802. Terrestrial and Aquatic Ecology for High School Teachers (2)**

A 2-week summer ecology course to take place at the Case Western Reserve Farm in Hunting Valley, OH. It is designed for teachers of grades 6-12 in both public and private schools who have an interest in current ecological problems. Participants will learn field sampling techniques and identification of a diversity of living organisms, both plant and animal. They will study the distribution and abundance of terrestrial and aquatic organisms. Field work in the varied habitats of Case Western Reserve University Farm will be an integral part of the program. Data will be analyzed and interpreted using personal computers. Participants will receive supplies, field guides, and detailed laboratory exercises that are designed specifically for the classroom. The course will be offered during the last two weeks of June and is limited to 12 participants.

**BIOL 803. Autonomous Robotics for High School Science Teachers (2)**

A 2-week, 10-day summer course in designing, building, and programming computer-controlled robots which are able to function autonomously in complex, real-world environments. LEGO Technology components are used for sensory integration and behavioral control. Participants work in groups of two per workstation. Detailed written documentation and laboratory exercises will be provided. Topics include: mechanical design with LEGO, sensors and feedback control, C programming, multi-tasking control strategies, and an end-of-course robot competition. Eligibility: high school (grades 9-12) science teachers; those in the biological sciences preferred. Limit 10.

**DEPARTMENT OF CHEMISTRY**

212 Clapp Hall
www.case.edu/artssci/chem
Phone: 216-368-3620; Fax: 216-368-3006
Mary D. Barkley, Chair
E-mail: mary.barkley@case.edu

The Department of Chemistry is the largest department representing the chemical sciences at Case Western Reserve University. It consists of 21 faculty members, 11 associated faculty, 10 postdoctoral associates, about 80 graduate students, and over 100 undergraduate students majoring in chemistry. The department offers undergraduate and graduate degree programs leading to the Bachelor of Arts, Bachelor of Science, Master of Science, and Doctor of Philosophy.

The general focus of chemistry is on (1) understanding the basic properties of matter, and (2) employing this knowledge in the design, synthesis, and characterization of materials with novel and useful properties. The various degree programs strive to develop all aspects of the student’s chemical knowledge through a broad range of lecture and laboratory courses.

Chemical research is an integral part of the department’s activities; over $3 million of federal, state, and private research support flows into the department each year. State-of-the-art research facilities are available to both graduate and undergraduate students. Undergraduates are encouraged to participate in research projects with individual faculty members in order to expand their hands-on training, problem-solving skills, and understanding of the scientific method as applied.
in chemical research. These research projects typically involve interchange and collaboration across all levels of experience and may also involve scientists from other departments and institutions.

Chemistry is often referred to as "the central science" because of its key role in interdisciplinary studies. Correspondingly, a degree in chemistry affords a broad range of employment opportunities. Chemists can direct their talents to specialized problems of applied research, or they can choose to delve into fundamental investigations. A degree in chemistry can cover the spectrum of chemical specialties, from biochemistry to interstellar chemistry. The degree also provides valuable preparation for other professions, such as medicine, dentistry, and law.

The American Chemical Society, with more than 160,000 members, is the major professional society in the United States for practicing chemists. Both undergraduate and graduate students may join the society.

DEPARTMENT FACULTY

Mary D. Barkley, Ph.D.
(University of California, San Diego)
M. Roger Clapp University Professor of Arts & Sciences and Chair
Biophysical chemistry; fluorescence spectroscopy; tryptophan fluorescence; HIV reverse transcriptase

Alfred B. Anderson, Ph.D.
(Johns Hopkins University)
Professor
Pure and applied theoretical chemistry: surface science, catalysis, electrocatalysis and properties of doped diamond

Clemens Burda, Ph.D.
(University of Basel, Switzerland)
Associate Professor
Physical chemistry of nanostructures; molecular electronics; femtosecond laser spectroscopy

James D. Burgess, Ph.D.
(Virginia Commonwealth University)
Associate Professor
Physical chemistry of platinum-based anticancer drugs; electrode-supported bilayer membranes; electron transfer enzymes

Carlos E. Crespo Hernández, Ph.D.
(University of Puerto Rico)
Assistant Professor
Ultrafast spectroscopy; organic photochemistry and photophysics; environmental chemistry; computational chemistry

Robert C. Dunbar, Ph.D.
(Stanford University)
Professor
Gas phase ions and ion-neutral interactions: ion-molecular reaction kinetics, computational chemistry

Thomas G. Gray, Ph.D.
(Harvard University)
Frank Hovorka Assistant Professor of Chemistry
Inorganic and organometallic chemistry; metalloclusters as nanorods; biomineralization scaffolds; luminescence imaging agents

Malcolm E. Kenney, Ph.D.
(Cornell University)
Hurlbut Professor of Chemistry
Photodynamic therapy; porphyrin-like compounds; organosilicon compounds; flue gas desulfurization

Michael J. Kenney, Ph.D.
(Iowa State University)
Senior Instructor and John Teagle Professorial Fellow in Chemistry
Chemical education

Irene Lee, Ph.D.
(Pennsylvania State University)
Associate Professor
Biochemistry; enzymology

Anthony J. Pearson, Ph.D.
(University of Aston, Birmingham, England)
Rudolph and Susan Rense Professor of Chemistry
Natural products; organometallics; organic synthesis

John D. Protasiewicz, Ph.D.
(Cornell University)
Professor and Associate Chair
Inorganic chemistry; organometallic reaction mechanisms; catalyzed oxidations

Robert G. Salomon, Ph.D.
(University of Wisconsin, Madison)
Professor
Chemical biology; lipid oxidation and disease; organic synthesis and reaction mechanisms

Genevieve Sauve, Ph.D.
(California Institute of Technology)
Assistant Professor
Organic electronics; alternative energy; synthesis of polymers and inorganic complexes; transistor and solar cell devices

Lawrence M. Sayre, Ph.D.
(University of California, Berkeley)
Frank Hovorka Professor of Chemistry
Bioorganic and bioinorganic chemistry; redox enzyme mechanisms; protein oxidation/ modification; lipid oxidation; neurotoxicology

Daniel A. Scherson, Ph.D.
(University of California, Davis)
Charles Frederic Mabery Professor of Research in Chemistry
Electrochemistry; electrode kinetics; electrocatalysis; in-situ spectroscopic methods in electrochemistry

John E. Stuehr, Ph.D.
(Case Western Reserve University)
Professor
Physical chemistry, chemical education

Gregory P. Tochtrop, Ph.D.
(Washington University Medical School)
Assistant Professor
Chemical biology: microarrays; biosynthesis and biomimetic synthesis; total synthesis of natural products

Michael G. Zagorski, Ph.D.
(Case Western Reserve University)
Professor
Organic chemistry; nuclear magnetic resonance; structure of peptides

Secondary Faculty

Paul Carey, Ph.D.
(University of Sussex, UK)
Professor of Biochemistry, School of Medicine
Raman spectroscopy; proteins and protein-ligand interactions

John W. Crabb, Ph.D.
(University of Kansas Medical Center)
Professor of Molecular Medicine
Clinic Lerner College of Medicine, Case Western Reserve University
Proteomics of the visual cycle and age-related ocular diseases

Thomas Gerken, Ph.D.
(Case Western Reserve University)
Professor of Pediatrics, School of Medicine
Biochemistry of glycoproteins; NMR

Thomas Kelley, Ph.D.
(University of Notre Dame)
Associate Professor of Pediatrics, School of Medicine
Biochemistry; cell signaling and cholesterol processing in cystic fibrosis

238 CASE WESTERN RESERVE UNIVERSITY
John J. Mieyal, Ph.D.
(Case Western Reserve University)
Professor of Pharmacology, School of Medicine
Reactive oxygen species and sulfur biochemistry; enzymatic reaction mechanisms of intracellular sulfhydryl homeostasis and redox signal transduction

Stuart J. Rowan, Ph.D.
(University of Glasgow, UK)
Professor of Macromolecular Science and Engineering, Case School of Engineering
Synthetic chemistry; supramolecular polymerization; reversible “dynamic” chemistry; chemical sensors; biomaterials; nanotechnology

Witold K. Szurewicz, Ph.D.
(University of Lodz, Poland)
Professor of Physiology and Biophysics, School of Medicine
Protein aggregation and the pathogenesis of aging-related diseases; prion protein; protein folding and protein-membrane interaction

Yannning Wang, Ph.D.
(ETH Zürich, Switzerland)
Associate Professor of Radiology; Director of Radiopharmaceutical Division, Case Center for Imaging Research, School of Medicine
Organic synthesis; molecular probes for in vivo imaging

Christoph Weder, Dr. sc. nat.
(ETH Zürich, Switzerland)
F. Alex Nason Professor of Macromolecular Science and Engineering, Case School of Engineering
Design, synthesis, structure-property relationships, and application of novel functional polymers; polymers for advanced optic and electronic applications; stimuli-responsive polymers; supramolecular chemistry

Adjunct Faculty
M. Cather Simpson, Ph.D.
(University of New Mexico)
Senior Lecturer in Chemistry and Physics; Associate Director, Dan Wallis Centre for Pure and Applied Optics, University of Auckland, New Zealand
Biophysical chemistry; spectroscopic studies of biologically significant processes

FACILITIES
The department’s facilities for experimental and theoretical research are modern and extensive. They include diverse major instruments for use by faculty and students, as well as specialized equipment serving individual research groups. Shared instrumentation includes 400- and 600-MHz NMR spectrometers, ultrahast laser systems in the Center for Chemical Dynamics, and a cyber-enabled x-ray crystallographic facility.

Other departmental instrumentation includes equipment for laser Raman spectroscopy, GC-MS and LC-MS/MS mass spectrometers, stopped-flow kinetics instrumentation, a circular dichroism spectrometer, an analytical ultracentrifuge, and equipment for electrochemical measurements. Access to very high-field NMR instrumentation is available on campus at the Cleveland Center for Structural Biology (CCSB), which is equipped with numerous 500- to 900-MHz NMR spectrometers for solution and solid-state measurements. The chemistry department’s computers are part of the campus-wide fiber optic communications network operated by Information Technology Services, and the entire University Circle area offers wireless access. In addition to the full complement of software, Internet, and library database services offered by the university, connections to off-site databases, such as SciFinder and Ohio Supercomputer Center, are available to departmental users.

The department uses some of the foremost equipment available in high-resolution nuclear magnetic resonance spectroscopy and in tunable laser spectroscopy. Work on various aspects of chemistry as studied by these techniques is recognized throughout the world.

UNDERGRADUATE PROGRAMS

Majors
The Department of Chemistry offers two curricula for undergraduate chemistry majors, leading to a Bachelor of Science (B.S.) or Bachelor of Arts (B.A.) degree.

BACHELOR OF SCIENCE PROGRAM
The B.S. program is designed for students who seek professional careers in the chemical sciences and is certified by the American Chemical Society. The B.S. curriculum provides a rigorous background in chemistry, yet offers considerable flexibility in the senior year in the choice of electives, allowing B.S. majors to pursue areas of chemistry of particular interest to them in greater depth. At least three credit hours of research (CHEM 397/398) are required and up to nine hours of research may be credited toward the degree. B.S. majors who plan to go on to graduate study may elect to take advanced courses in inorganic chemistry (CHEM 412, 413), organic chemistry (CHEM 421, 422, 435), physical chemistry (CHEM 406, 407, 446), or other graduate offerings. Interdisciplinary strengths can be achieved by selecting technical electives in biochemistry, biomedical engineering, chemical engineering, macromolecular science, and materials science as well as in biology, geological sciences, mathematics, physics, and statistics.

BACHELOR OF ARTS PROGRAM
The B.A. program is intended for pre-professional students who plan careers in medicine, dentistry, veterinary medicine, and pharmacy or in other fields for which a baccalaureate degree in chemistry provides appropriate training. B.A. majors may supplement their required courses with additional chemistry courses or may utilize the curriculum’s flexibility to develop an interdisciplinary program of their choice. Many B.A. majors participate in undergraduate research within the Department of Chemistry (CHEM 397/398) or in other science departments, including those in the medical school.

Departmental Honors
Chemistry majors who have excellent academic records may participate in the Honors in Chemistry program. To graduate with honors in chemistry, a student must satisfy the following requirements:

1. A combined grade point average of 3.50 in chemistry, physics, and mathematics and an overall grade point average of 3.20
2. A minimum of six credit hours of CHEM 397, or chemical research done under another course number with departmental approval
3. A thesis approved by the department’s undergraduate affairs committee based on the level of research, quality of the manuscript, and chemical content

Teacher Licensure in Physical Science (Chemistry and Physics)
An option is available within the B.A. program for students to become eligible for licensure as teachers of physical science (chemistry and physics) in secondary schools (grades 9–12). Students interested in this option should contact Professor Michael Kenney. A total of 57 credit hours in the subject area are required for teacher licensure, as well as a 35-hour sequence in professional education (including...
student teaching) taken here and at John Carroll University. For more information, see the program description for Teacher Licensure elsewhere in this bulletin.

Subject area requirements for students majoring in chemistry:
ASTR 201 or BIOL 101 or GEOL 110; PHYS 121, 122, 196, 221; CHEM 105, 106, 113, 223, 224 (or 323, 324); PHYS 331; ENGR 131; MATH 125, 126; CHEM 301, 302, 304, 305, PHYS 310, 324; PHYS 315 or 316.

Course requirements for students majoring in physics and seeking physical science teacher licensure are listed under the Department of Physics.

Minor
Students may complete a minor in chemistry, defined as one year of freshman chemistry (including laboratory); two additional three-hour lecture courses; and two additional laboratory or approved courses. A recommended sequence would include CHEM 105, 106, and 113; CHEM 223, 224 or 323, 324; and CHEM 233, 234. Other sequences may be followed after consultation with the Department of Chemistry.

GRADUATE PROGRAMS

Master of Science Programs
The M.S. degree in chemistry may be obtained by completing (1) a program that includes the preparation of a master’s thesis, or (2) a program involving only course work. Both programs require a minimum of 27 credit hours, of which up to six credit hours may be for the master’s thesis. Course work for the master’s degree may be taken on a part-time basis, but thesis research can be undertaken only by full-time graduate students. Thus, only the master’s degree without thesis can be earned entirely on a part-time basis.

The Science and Technology Entrepreneurship Program (STEP) is a three- or four-semester professional M.S. degree offered in chemistry as well as in biotechnology, mathematics, statistics, and physics. Students enter the Chemistry Entrepreneurship program with a bachelor’s, master’s, or Ph.D. degree in a chemistry-related field. The program consists of advanced courses in chemistry, business, and technology innovation and an entrepreneurial project with technical content in an existing company or new venture.

Doctor of Philosophy Program
The Ph.D. degree in chemistry is granted to those students who have shown an extensive knowledge of advanced chemistry and the ability to do original research. The program usually requires four years of full-time study after the bachelor’s degree. Besides advanced courses, the program consists of cumulative and oral examinations, seminars and colloquia, and an original research project. At least twelve months must be spent in residence on campus while fulfilling the Ph.D. thesis research requirement.

Full-time graduate students who maintain satisfactory academic performance while pursuing the Ph.D. degree in chemistry normally receive a stipend for teaching and/or research, which includes full tuition and a monthly amount sufficient to cover living expenses.

RESEARCH
The Department of Chemistry is noted for research programs in chemical biology and energy. These range from synthetic studies of important bioactive substances, including antibiotics and DNA-binding substances, to a detailed examination of the surface properties of materials used in batteries and electrolytic cells. Studies are being performed with molecules as simple as oxygen and as complicated as those which describe the active centers of enzymes or the protein core of insoluble aggregates which deposit in neurodegenerative disease. Efforts are being made to understand the basic chemical properties leading to reactive mediators generated from physiological lipids. Other research is aimed at developing new drugs for photodynamic therapy and at understanding the mechanism of action of drugs for antiretroviral therapy. The influence of metal ions in modifying reactivity is a common interest of several members of the faculty, as is the development of organometallic compounds for materials and catalysis. Chemical surfaces are being studied, as are various applications of nanoparticles, from cells to the environment. Studies designed to characterize electrode-electrolyte interfaces, the electrochemical properties of new semiconductors, and single-cell microelectrodes are also ongoing. These efforts are complemented by theoretical studies on the interfacial structure and bonding of composite materials.

Case Western Reserve University ranks among the leading universities internationally in its strengths in electrochemistry and has brought these strengths together in the Yeager Center for Electrochemical Studies (YCES). The interdisciplinary nature of electrochemistry involves the interaction of electrochemists in the chemistry and chemical engineering departments with metallurgists, surface physicists, inorganic and organic chemists, polymer membrane chemists, and electrical engineers. Such interactions, lacking on most campuses, are promoted at Case Western Reserve University through YCES. Graduate students in the chemistry department have the opportunity to specialize in the area of electrochemistry with one of the most extensive course and research programs in the United States.

COLLOQUIA AND SEMINARS
The department sponsors a rich program of colloquia and seminars on recent advances in chemical research. Most notable among these is the Frontiers in Chemistry Lecture Series, in which scientists of international distinction lecture on major discoveries and developments in chemistry. In addition, a weekly colloquium series provides lectures by invited speakers in a variety of fields of chemical investigation. Both of these programs are addressed to an audience of faculty, graduate students, and other chemical scientists in the university and the Cleveland area, and are a vital means to broaden current knowledge. Numerous other seminars and meetings are held on a more specialized and informal level. Most individual research groups conduct weekly discussions to evaluate their progress.

COURSE DESCRIPTIONS

CHEM 105. Principles of Chemistry I (3)
Atomic structure; thermochemistry; periodicity; bonding and molecular structure; intermolecular forces; properties of solids; liquids, gases and solutions. Recommended preparation: One year of high school chemistry.

CHEM 106. Principles of Chemistry II (3)
Thermodynamics; chemical equilibrium; acid/base chemistry; oxidation and reduction; kinetics; spectroscopy; introduction to nuclear, organic, inorganic, and polymer chemistry. Prereq: CHEM 105 or equivalent.

CHEM 111. Principles of Chemistry for Engineers (4)
A first course in University Chemistry emphasizing chemistry of materials for engineering students. Atomic theory and quantitative relationships; gas laws and kinetic theory; solutions, acid-base properties and pH; thermodynamics and equilibrium; kinetics, catalysis, and mechanisms; molecular structure and bonding. Recommended preparation: One year of high school chemistry or permis-
CHEM 113. Principles of Chemistry Laboratory (2)
A one semester laboratory based on quantitative chemical measurements. Experiments include analysis, synthesis and characterization, thermochromy and chemical kinetics. Computer analysis of data is a key part of all experiments. Prerequisite or Corequisite: CHEM 105 or CHEM 106 or CHEM 111 or ENGR 145.

CHEM 114. Chemistry Frontiers Laboratory (2)
An introduction to laboratory techniques and computer-based methods for chemical research for the chemistry major. Scientific information databases, structural chemistry, experimental design and data handling, chemical synthesis and characterization. Prerequisite: CHEM 105 or CHEM 111, and CHEM 113. Corequisite: CHEM 106.

CHEM 223. Introductory Organic Chemistry I (3)
Introductory course for science majors and engineering students. Develops themes of structure and bonding along with elementary reaction mechanisms. Includes treatment of hydrocarbons, alkyl halides, alcohols, and ethers as well as an introduction to spectroscopy. Prerequisite: CHEM 106 or CHEM 111.

CHEM 224. Introductory Organic Chemistry II (3)
Continues and extends themes of structure and bonding from CHEM 223 and continues spectroscopy and more complex reaction mechanisms. Includes treatment of aromatic rings, carbonyl compounds, amines, and selected special topics. Prerequisite: CHEM 223 or CHEM 323.

CHEM 233. Introductory Organic Chemistry Laboratory I (2)
An introductory organic laboratory course emphasizing microscale operations. Synthesis and purification of organic compounds, isolation of natural products, and systematic identification of organic compounds by physical and chemical methods. Prerequisite: CHEM 106 or CHEM 111 and CHEM 113 or equivalent. Corequisite: CHEM 223 or CHEM 323.

CHEM 234. Introductory Organic Chemistry Laboratory II (2)
A continuation of CHEM 233, involving multistep organic synthesis, peptide synthesis, product purification and analysis using sophisticated analytical techniques such as chromatography and magnetic resonance spectroscopy. Prerequisite: CHEM 233. Corequisite: CHEM 224.

CHEM 290. Chemical Laboratory Methods for Engineers (3)
Techniques of chemical synthesis, analysis, and characterization. Uses students’ backgrounds in general and organic chemistry, but requires no background in chemical laboratory operations. Prerequisite or Corequisite: CHEM 223 or CHEM 323.

CHEM 301. Introductory Physical Chemistry Laboratory I (3)
First of a two-semester sequence covering principles and applications of physical chemistry, intended for chemistry and engineering majors and other students having primary interests in biochemical, biological or life-sciences areas. States and properties of matter. Thermodynamics and its application to chemical and biochemical systems. Chemical equilibrium. Electrochemistry. Recommended preparation: a year each of physics and calculus, preferably including partial derivatives. Prerequisite: CHEM 106 or equivalent.

CHEM 302. Introductory Physical Chemistry II (3)
Continuation of CHEM 301. Chemical kinetics and catalysis. Introductory quantum chemistry. Spectroscopy. Statistical thermodynamics. Prerequisite: CHEM 301 or CHEM 335.

CHEM 304. Quantitative Analytical Chemistry (4)
A one-semester laboratory course involving quantitative chemical measurements, error analysis and advanced concepts in ionic equilibria. Electrogravimetric and volumetric analysis; separation techniques, metal complexation. Basic chemical instrumentation. Prerequisite: CHEM 106 and CHEM 113.

CHEM 305. Introductory Physical Chemistry Laboratory (3)
A one-semester laboratory course focusing on the principles and quantitative characterization of chemical and biochemical systems. Experiments include, chemical equilibrium kinetics, spectroscopy, and the use of computers for the statistical analysis of experimental data. Seminar discussions and disciplinary writing of results. Prerequisite: CHEM 301 and CHEM 304 or CHEM 335. Or Prerequisite or Corequisite: CHEM 302 or CHEM 336. SAGES Dept Seminar.

CHEM 310. Instrumental Analytical Chemistry (3)
Principles and applications of analytical instrumentation including optical spectroscopy (UV-vis, IR, Raman), photoelectron and ion bombardment spectrometry, NMR and magnetic resonance imaging. Recommended preparation for CHEM 410: Two semesters of undergraduate physical chemistry. Offered as CHEM 310 and CHEM 410. Prerequisite: CHEM 301 and CHEM 302 or CHEM 335 and CHEM 336.

CHEM 311. Inorganic Chemistry I (3)
Fundamentals of inorganic chemistry. Topics include molecular structure, molecular shape and symmetry, structure of solids, d-metal complexes, oxidation and reduction, and acids and bases. Prerequisite or Corequisite: CHEM 301 or CHEM 335.

CHEM 312. Inorganic Chemistry II (3)
Continuation of CHEM 311. Fundamentals of inorganic chemistry. Topics include electronic spectra of complexes, structures and properties of solids, organometallic compounds, and descriptive chemistry of representative elements. Prerequisite: CHEM 311.

CHEM 322. Laboratory Methods in Organic Chemistry (3)
Experimental approach to the synthesis, purification and characterization of organic compounds. Nuclear magnetic resonance (NMR) and infrared (IR) spectroscopies; chromatographic techniques. Prerequisite: CHEM 304 and CHEM 223 or CHEM 323. Prerequisite or Corequisite: CHEM 224 or CHEM 324.

CHEM 323. Organic Chemistry I (3)
Relationships between molecular structure and chemical reactivity and development of sophisticated problem-solving skills in the context of organic reaction mechanisms and multi-step synthesis. Homolytic and heterolytic substitution, elimination, oxidation and reduction reactions; topics in stereochemistry and spectroscopy. Recommended for chemistry, biochemistry, and related majors. Prerequisite: CHEM 106 or equivalent.

CHEM 324. Organic Chemistry II (3)
Continuation of CHEM 323. Introduces the chemistry of carbylons, aromatic and amino functional groups, and develops the concepts of conjugation and resonance, molecular orbital theory and pericyclic reactions. Prerequisite: CHEM 223 or CHEM 323.

CHEM 325. Physical Methods for Determining Organic Structure (3)
Structure determination of organic compounds using mass spectrometry and modern instrumental techniques such as infrared, ultraviolet, visible, and nuclear magnetic resonance spectroscopy. Recommended preparation: Two semesters of organic chemistry. Offered as CHEM 325 and CHEM 425.

CHEM 328. Introductory Biochemistry (3)
A survey of biochemistry with a strong emphasis on the chemical logic underlying metabolic pathways and the evolution of biomolecules. Cellular architecture. Amino acids and protein structure, purification, analysis, and synthesis. DNA, RNA, the flow of genetic information, and molecular biological technology. Enzyme kinetics, catalysis, and regulatory strategies. Sugars, complex carbohydrates, and glycoproteins. Lipids and cell membranes. Glycolysis, gluconeogenesis, carbon fixation through the “dark reactions” of photosynthesis, aerobic catabolism through the citric acid cycle, and glycogen metabolism. Biosynthesis and degradation of fatty acids, amino acids, and pro-
and states of molecules. Perturbation theory, spectroscopy.

CHEM 337. Quantum Mechanics I (3)

CHEM 395. Chemistry Colloquium Series (1)
Course content provided by Thursday chemistry Department colloquia (or Frontiers in Chemistry lectures). Discussion sessions review previous lectures and lay foundation for forthcoming lectures.

CHEM 397. Undergraduate Research (1–6)
Independent research project within a research group in the chemistry department or, by petition, within a research group in another Case Western Reserve department. Arrangements should be made with the faculty member selected and the Senior Capstone Committee of the chemistry department. Open to all chemistry majors and other qualified students; required for Honors in Chemistry. A written report is required each semester.

CHEM 398. Undergraduate Research/Senior Capstone Project (3–6)
Independent research project within a research group in the chemistry department or, by petition, within a research group in another Case Western Reserve department. Arrangements should be made with the faculty member selected and the Senior Capstone Committee of the chemistry department. Open to all chemistry majors and other qualified students. Satisfies the research requirement for Honors in Chemistry. A written report and public oral presentations are required.

CHEM 406. Chemical Kinetics (3)
Theory and characterization of chemical rate processes. Recommended preparation: Two semesters of undergraduate physical chemistry.

CHEM 407. Chemical Thermodynamics (3)
Thermodynamics and statistical thermodynamics and their application to chemical problems. Recommended preparation: Two semesters of undergraduate physical chemistry.

CHEM 408. Advanced Physical Chemistry (3)
Topics in physical chemistry, intended for entering graduate students, giving background tools appropriate for graduate research in areas of chemistry other than physical chemistry. Illustrations from the contemporary chemical research literature will be emphasized. Thermodynamics and statistical mechanics, quantum chemistry and computation, spectroscopy, and chemical kinetics and dynamics. Recommended preparation: One year of undergraduate physical chemistry.

CHEM 410. Instrumental Analytical Chemistry (3)
Principles and applications of analytical instrumentation including optical spectroscopy (UV-vis, IR, Raman), photoelectron and ion bombardment spectrometry. NMR and magnetic resonance imaging. Recommended preparation for CHEM 410: Two semesters of undergraduate physical chemistry.

CHEM 411. Advanced Physical Chemistry I (3)
Chemistry of inorganic systems. Spectroscopy, magnetism, and stereochemistry of transition metal compounds. Recommended preparation: One semester of undergraduate inorganic chemistry and two semesters of physical chemistry.

CHEM 412. Advanced Inorganic Chemistry II (3)
Topics in mechanisms of inorganic reactions including ligand substitution, electron transfer, stereochemical interconversions, and catalytic pathways: supramolecular inorganic complexes and molecular devices. Prereq: CHEM 412 or equivalent.

CHEM 414. Organometallic Reactions and Structures (3)
Bonding, structure, and mechanistic aspects of organometallic chemistry and the relevance of organometallic species to chemical catalysis. Recommended preparation: One semester of undergraduate inorganic chemistry.

CHEM 415. Chemical Applications of Group Theory (3)
Treatment of structure, bonding and spectroscopy in chemical systems based on a presentation of relationships and the theory of point and space groups. Prereq: CHEM 412.

CHEM 421. Advanced Organic Chemistry I (3)

CHEM 422. Advanced Organic Chemistry II (3)

Structure determination of organic compounds using mass spectrometry and modern instrumental techniques such as infrared, ultraviolet, visible, and nuclear magnetic resonance spectroscopy. Recommended preparation: Two semesters of organic chemistry. Offered as CHEM 325 and CHEM 425.

CHEM 428. Introductory Biochemistry (3)

CHEM 332. Laboratory Methods in Physical Chemistry (3)
Modern techniques of physicochemical measurement, including, kinetics, spectroscopy, and electrochemistry and the use of statistical methods for the analysis of experimental data. Seminar discussions and disciplinary writing of results. Prereq: CHEM 304. Prereq or Coreq: CHEM 336. SAGES Dept Seminar

CHEM 335. Physical Chemistry I (3)

CHEM 336. Physical Chemistry II (3)

CHEM 337. Quantum Mechanics I (3)
A survey of biochemistry with a strong emphasis on the chemical logic underlying metabolic pathways and the evolution of biomolecules. Cellular architecture. Amino acids and protein structure, purification, analysis, and synthesis. DNA, RNA, the flow of genetic information, and molecular biological technology. Enzyme kinetics, catalytic, and regulatory strategies. Sugars, complex carbohydrates, and glycoproteins. Lipids and cell membranes. Glycolysis, gluconeogenesis, carbon fixation through the "dark reactions" of photosynthesis, aerobic catabolism through the citric acid cycle, and glycogen metabolism. Biosynthesis and degradation of fatty acids, amino acids, and proteins. Recommended preparation: Two semesters of organic chemistry. One semester of physical chemistry recommended. Offered as CHEM 328 and CHEM 428.

CHEM 429. Chemical Aspects of Living Systems (3)

CHEM 446. Quantum Mechanics I (3)

CHEM 447. Quantum Mechanics II (3)
Continuation of CHEM 446. Ab initio and semi-empirical methods, configuration interactions, time dependent phenomena, and introduction to band theory of solids. Prereq: CHEM 446.

CHEM 450. Molecular Spectroscopy (3)
Translation, rotation, vibration, and electronic transitions of molecules. Prereq: CHEM 446.

CHEM 455. Protein Biophysics (3)
This course focuses on in-depth understanding of the molecular biophysics of proteins. Structural, thermodynamic and kinetic aspects of protein function and structure-function relationships will be considered at the advanced conceptual level. The application of these theoretical frameworks will be illustrated with examples from the literature and integration of biophysical knowledge with description at the cellular and systems level. The format consists of lectures, problem sets, and student presentations. A special emphasis will be placed on discussion of original publications. Offered as BIOC 455, CHEM 455, PHOL 475, PHRM 475, and NEUR 475.

CHEM 491. Modern Chemistry for Innovation I (3)
The first half of a two-semester sequence providing an understanding of chemistry as a basis for successfully launching new high-tech ventures. The course will examine physical limitations to present technologies and the use of chemistry to identify potential opportunities for new venture creation. The course will provide experience in using chemistry for both identification of incremental improvements and as the basis for alternative technologies. Case studies will be used to illustrate recent commercially successful (and unsuccessful) venture creation and will illustrate characteristics for success. Admission to this course requires consent of the department.

CHEM 492. Modern Chemistry for Innovation II (3)
Continuation of CHEM 491, with an emphasis on current and prospective opportunities for Chemistry Entrepreneurship. Longer term opportunities for Chemistry Entrepreneurship in emerging areas, including (but not be limited to) biomaterials, pharmacogenomics, biocatalysis, and drug discovery. Prereq: CHEM 491.

CHEM 493. Feasibility and Technology Analysis (3)
This course provides the tools scientists need to determine whether a technology is ready for commercialization. These tools include (but are not limited to): financial analysis, market analysis, industry analysis, technology analysis, intellectual property protection, the entrepreneurial process and culture, an introduction to entrepreneurial strategy and new venture financing. Deliverables will include a technology feasibility analysis on a possible application in the student's scientific area. Offered as BIOL 493, CHEM 493, and PHYS 493.

CHEM 501. Special Topics in Inorganic Chemistry (1–6)
(Credit as arranged.) Lectures on advanced topics in inorganic chemistry presented by staff or visiting lecturers. Course title, content, and credit change from year to year.

CHEM 502. Special Topics in Inorganic Chemistry (1–6)
(Credit as arranged.) Lectures on advanced topics in inorganic chemistry presented by staff or visiting lecturers. Course title, content, and credit change from year to year.

CHEM 503. Special Topics in Organic Chemistry (1–6)
(Credit as arranged.) Lectures on advanced topics in organic chemistry presented by staff or visiting lecturers. Course title, content, and credit change from year to year.

CHEM 504. Special Topics in Organic Chemistry (1–6)
(Credit as arranged.) Lectures on advanced topics in organic chemistry presented by staff or visiting lecturers. Course title, content, and credit change from year to year.

CHEM 505. Special Topics in Physical Chemistry (1–6)
(Credit as arranged.) Lectures on advanced topics in physical chemistry presented by staff or visiting lecturers. Course title, content, and credit change from year to year.

CHEM 506. Special Topics in Physical Chemistry (1–6)
(Credit as arranged.) Lectures on advanced topics
COLLEGE OF ARTS & SCIENCES
in physical chemistry presented by staff or visiting lecturers. Course title, content, and credit change from year to year.

CHEM 507. Special Readings in Chemistry (1–6)
Detailed study of a special topic in chemistry under the guidance of a faculty member.

CHEM 508. Special Readings in Chemistry (1–6)
Detailed study of a special topic in chemistry under the guidance of a faculty member.

CHEM 509. Special Topics in Analytical Chemistry (1–6)

CHEM 511. Electrochemistry II (3)
Selected topics from electrocatalysis, semiconductor electrochemistry and photoelectrochemistry, and electrochemical impedance methods, as well as battery and fuel cell systems. Prereq: CHEM 445.

CHEM 601. Research (1–18)
(Credit as arranged.) Special research in an area of chemistry under the guidance of a faculty member.

CHEM 605. Chemistry Colloquium Series (1)
Course content provided by Thursday chemistry department colloquia (or Frontiers in Chemistry lectures). Discussion sessions review previous lectures and lay foundation for forthcoming lectures.

CHEM 651. Thesis M.S. (1–18)
(Credit as arranged.)

CHEM 701. Dissertation Ph.D. (1–18)
(Credit as arranged.) Prereq: Predoctoral research consent or advanced Ph.D. candidacy milestone.

CHILDHOOD STUDIES PROGRAM
614A Crawfard Hall
www.case.edu/artsci/childstudies
Phone: 216-368-0540
Jill E. Korbin and Elizabeth J. Short, Directors
E-mail: jill.korbin@case.edu; elizabeth.shor@case.edu

The Childhood Studies program is an educational opportunity for undergraduate students interested in a wide array of issues concerning children and the experience of childhood. This interdisciplinary minor focuses on the life stages of infancy through adolescence and provides opportunities for student involvement in research, education, and policy, including externships with local nonprofits.

PROGRAM ADVISORY COMMITTEE
Jill E. Korbin, Ph.D., Professor of Anthropology; Co-Director, Childhood Studies Program; Director, Schubert Center for Child Studies
Elizabeth J. Short, Ph.D., Professor of Psychology; Co-Director, Childhood Studies Program; Associate Director, Schubert Center for Child Studies
Eileen Anderson-Fye, Ed.D., Assistant Professor of Anthropology; Associate Director, Schubert Center for Child Studies
Molly Irwin, M.P.H., Adjunct Lecturer in Anthropology; Director, Child Policy Initiative, Schubert Center for Child Studies

UNDERGRADUATE PROGRAMS
Minor
The undergraduate minor in childhood studies is built on a foundation in the social sciences. It is also suited, however, to students interested in exploring childhood from the perspectives of the natural sciences, the humanities, or the arts.

The minor requires a minimum of 15 hours of course work; the courses must be taken in at least two different departments. Students may count up to six of these hours toward a major in another field. If they are pursuing more than one major, they may count up to six hours toward each one.

COURSE DESCRIPTIONS

CHST 301. Child Policy (3)
This course introduces students to issues in child policy. Local, state and federal child policy will be considered, and topics will include, for example, policies related to child poverty, schooling, child welfare, and children’s physical and mental health. Students will learn how policy is developed, how research informs policy and vice versa. Recommended preparation: One social sciences course or consent. Offered as ANTH 305 and CHST 301.

CHST 302. Experiential Learning in Child Policy (3–6)
Focus on state and federal legislation impacting children, youth, and families. Course includes an experiential learning component at the state or federal level and a travel experience to either Columbus, OH or Washington, D.C. to learn firsthand how policy is formed. Students may take this course twice for credit. Offered as ANTH 307 and CHST 302. Prereq: CHST 301.

CHST 398. Child Policy Externship (3)
This course provides students with externships in child policy. These externships give students an opportunity to work directly with professionals who design and implement policies that impact the lives of children and their families. Agencies involved are active in areas such as childcare, education, juvenile justice, and physical and mental health. Students apply for the externship. Selected students are placed in a local child policy agency. An individualized learning plan is developed in consultation with the Childhood Studies Program faculty, the supervisor in the agency, and the student. This course is a 3 credit-hour course and may be taken twice for a total of 6 credit hours. Offered as ANTH 308 and CHST 398. Prereq: CHST 301.

CHST 398C. Child Policy Externship and Capstone (3)
This course provides students with externships in child policy. These externships give students an opportunity to work directly with professionals who design and implement policies that impact the lives of children and their families. Agencies involved are active in areas such as childcare, education, juvenile justice, and physical and mental health. Students apply for the externship. Selected students are placed in a local child policy agency. An individualized learning plan is developed in consultation with the Childhood Studies Program faculty, the supervisor in the agency, and the student. Offered as ANTH 398C, CHST 398C, PSCL 398C, SAGES Senior Cap

CHST 399. Independent Study (1–6)
Students propose topics for independent reading and research.

DEPARTMENT OF CLASSICS
464 Mather House
www.case.edu/artsci/cics
Phone: 216-368-2348; Fax: 216-368-4681
Martin Helzle, Chair
E-mail: martin.helzle@case.edu

The Department of Classics introduces stu-
students to the culture, life, and legacy of ancient Greece and Rome through courses in the Greek and Latin languages and literatures, in ancient history and archaeology, and in the visual and material cultures of the ancient Mediterranean world. The department also offers courses in the classical tradition in Europe and beyond. The department faculty represents a range of academic disciplines and is committed, where appropriate, to an interdisciplinary approach in teaching and research.

The core purpose of the department is to offer the opportunity for study of the ancient classical languages, as a crucial point of entry into the conceptual worlds of Greece and Rome. Students are also exposed to the various facets of antiquity that made the ancient Mediterranean world the progenitor of the modern West, not least in its mingling of cultures and belief systems. Further, we study major moments of the revival of antiquity, and the various lenses through which subsequent eras understood or appropriated the past.

Knowledge of classical antiquity constitutes the backbone of a liberal education. It also provides an excellent basis for further professional training in whatever field a student may ultimately earn a livelihood. Such knowledge is also a valuable source of enrichment for the student’s leisure. A major in classics, or even a minor, may be (as it often has been) profitably combined with programs aimed toward law, medicine, management, diplomatic service, banking, journalism, library science, or politics; religious, philosophic, literary, or historical studies; careers in the fine arts (visual or performing); or museum or archival work.

DEPARTMENT FACULTY

Martin Helze, Ph.D.  
(Cambridge University)  
Professor and Chair  
Latin language and literature; Augustan and Silver poetry: paleography; textual criticism

Florin Berindeanu, Ph.D.  
(University of Georgia)  
Instructor  
European literature; literary and semiotic theory; mysticism

Charles Burroughs, Ph.D.  
(Warburg Institute, University of London)  
Elise B. Smith Professor of Liberal Arts  
Art and architecture in the classical tradition; Italian Renaissance; early modern urbanism; landscapes in Europe and the Americas

Paul A. Iversen, Ph.D.  
(Ohio State University)  
Assistant Professor  
Greek and Roman New Comedy; Greek and Latin epigraphy; Hellenistic culture and society

Rachel Hall Sternberg, Ph.D.  
(Bryn Mawr College)  
Associate Professor  
Greek language and literature; Greek social history; history of emotion; reception of the classical tradition in the age of Jefferson

Secondary Faculty

Jenifer Neils, Ph.D.  
(Princeton University)  
Ruth Coulter Heede Professor of Art History  
Ancient art and classical archaeology

Visiting Faculty

Andrea U. De Giorgi, Ph.D.  
(Bryn Mawr College)  
Visiting Assistant Professor  
Roman and Late Antique social history; landscape archaeology; literature of the Greek East

Timothy Wutrich, Ph.D.  
(Tufts University)  
Visiting Assistant Professor  
Greek and Roman drama; classical tradition in literature and art; philosophical approaches to literature and art; Roman civilization

UNDERGRADUATE PROGRAMS

Major

The core of the classics major is the study of the languages and literatures of ancient Greece and Rome and the societies that spoke Greek and Latin until the end of the ancient world (usually taken as the 5th century of the common era). The major uniquely offers exposure to a range of approaches: literary, philological, historical, archaeological, art historical, philosophical, and anthropological. Further, the scope of the department has expanded to embrace the classical tradition in and beyond Europe, with courses on literature and art and architecture up to the 20th century.

The classics major leading to the Bachelor of Arts degree requires 36 hours of departmental offerings. In addition, each student completing the classics major is strongly advised to choose a related minor selected in consultation with and approved by the departmental advisor. In the major, the courses from the Department of Classics (36 hours) must include: Eight courses (24 hours) in either Greek or Latin or a combination of both, provided that at least three courses are at the 300 level; four classics courses (12 hours), with at least two at the 300 level. The department strongly recommends four to six additional courses outside the Department of Classics (12 to 18 hours): these should be in a closely related field such as anthropology, art history, philosophy, comparative literature, history, theater, or English. A second major or a minor in one of these fields will normally satisfy this recommendation.

Departmental Honors

Departmental honors are given to students who earn the grade of “A” for their senior dissertation in GREK 382 or LATN 382.

Teacher Licensure in Latin

The Department of Classics offers a teacher licensure program for students who wish to teach Latin in Ohio or in any state that accepts Ohio licensure. Students earn a Bachelor of Arts degree in classics while completing 35 hours in psychology and education course work at Case Western Reserve and at John Carroll University. (For details about course requirements in education, see the program description for Teacher Licensure elsewhere in this bulletin.)

SUBJECT AREA REQUIREMENTS:

1. Required courses (18 hours):

   LATN 101 and 102  
   Elementary Latin I and II  
   (may be waived if appropriate)

   LATN 305  
   Literature of the Republic

   LATN 306  
   Survey of Latin Literature

   LATN 380  
   Advanced Topics in Latin: Prose Composition

   CLSC 304  
   Ancient Rome: Republic & Empire

2. Elective LATN courses (15 hours):

   Choose five courses from the following:

   LATN 201, 202, 307 or 352, 308, 309, 351, 353, 354, 356, 381, 395

3. Elective CLSC courses (9 hours):

   Choose three courses, one of which must be at the 300 level

Minor

A minor in classics is designed to acquaint the student with aspects of the ancient civilizations of Greece and Rome by means of 15 hours of course work. These 15 hours may be

GENERAL BULLETIN 2009-2011
CLSC 111. Greek Civilization (3)
This course constitutes the first half of a year-long sequence on classical civilization. It examines the enduring significance of the Greeks studied through their history, literature, art, and philosophy. Lectures and discussion. (For the second course in the sequence, see CLSC 112.)
Offered as CLSC 111 and HSTY 111.

CLSC 112. Roman Civilization (3)
The enduring significance of the Romans studied through their history, literature, art, and philosophy. Lectures and discussion.
Offered as CLSC 112 and HSTY 110.

CLSC 201. The Ancient World (3)
Ancient Western history from the origins of civilization in Mesopotamia to the dissolution of the Roman Empire in the West.
Offered as CLSC 201 and HSTY 200.

CLSC 202. Classical Mythology (3)
The myths of Classical Greece and Rome, their interpretation and influence.

CLSC 203. Gods and Heroes in Greek Literature (3)
This course examines major works of Greek literature and sets them in their historical and cultural context. Constant themes are war, wandering, tyranny, freedom, community, family, and the role of men and women within the household and the ancient city-state. Parallels with modern life and politics will be explored. Lectures and discussions.
Offered as CLSC 203 and WLIT 203.

CLSC 204. Heroes and Hustlers in Latin Literature (3)
This course constitutes the second half of a sequence on Classical literature. Its main themes are heroism vs. self-promotion, love vs. lust, and the struggle between democracy and tyranny. These topics are traced in a variety of literary genres from the period of the Roman republic well into the empire. Parallels with modern life and politics will be drawn.
Offered as CLSC 204 and WLIT 204.

CLSC 210. Byzantine World 300-1453 (3)
Development of the Byzantine empire from the emperor Constantine's conversion to Christianity and founding of the eastern capital at Constantinople to the fall of Constantinople to Turkish forces in 1453.
Offered as CLSC 210 and HSTY 210.

CLSC 211. Building on Antiquity (3)
This course will provide orientation in the architectural orders and in most periods of European and Euro-American architectural history as well as, to an extent, criticism. Students will learn how to research buildings from different historical epochs, how to work with relevant databases and a range on on-line resources, and with the print resources available. Students will gain some familiarity with the conventions of architectural representation as these become established over centuries. There will be an important writing component, and a considerable amount of group work involving oral presentation and classroom discussion. The issue of the meaning(s) of architecture will be central; we will consider the blatant political uses of architecture and of imagery associated with architecture, more elusive and/or ambiguous cases, and the phenomenon of meanings changing from one era to another or according to audience. We will consider the relationship of the relatively formal “language” of classical architecture (the orders, especially as endowed with gender associations in the Vitruvian tradition) and the more subtle, ad hoc ways that buildings project meaning or mood.
Offered as ARTH 211 and CLSC 211.

CLSC 226. Introduction to Greek and Roman Art (3)
Classical art from the 6th century B.C. to the fourth century A.D.; the major developments in the architecture, sculpture, and painting of ancient Greece, Etruria, and Rome.
Offered as ARTH 226 and CLSC 226.

CLSC 227. Ancient Cities and Sanctuaries (3)
A selection of cities and sanctuaries from the ancient Near East, Egypt, the Aegean, Greece, Etruria, and Rome; their political and religious institutions and the relationship to contemporary art forms.
Offered as ARTH 227 and CLSC 227.

CLSC 228. Ancient Greek Athletics (3)
Exploration of the role of athletics in the ancient, primarily Greek world, and their reflection in the art of the period.
Offered as ARTH 228 and CLSC 228.

CLSC 295A. Greek and Latin Elements in English: The Basic Course (1.5)
A self-paced, computer-assisted course in the classical foundations of modern English in which the student learns the basic principles on which roots, prefixes, and suffixes combine to give precise meanings to composite words.

CLSC 295B. Greek and Latin Elements in English: Biomedical Terminology (1.5)
(See CLSC 295A.) Advanced section that is oriented especially toward scientific and medical terminology.
Prereq or Coreq: CLSC 295A.

CLSC 301. Ancient Philosophy (3)
Western philosophy from the early Greeks to the Skeptics. Emphasis on the pre-Socratics, Plato and Aristotle. Recommended preparation: PHIL 101 and consent of department.
Offered as CLSC 301 and PHIL 301.

CLSC 302. Ancient Greece: Archaic, Classical, and Hellenistic Periods (3)
The rise of Hellenic thought and institutions from the eighth to the third centuries B.C., the rise of the polis, the evolution of democracy at Athens, the crises of the Persian and Peloponnesian Wars, fifth century historiography, the growth of individualism, and the revival of monarchy in the Hellenistic period.
Offered as CLSC 302 and HSTY 302.

CLSC 304. Ancient Rome: Republic and Empire (3)
Growth and development of the Roman state from the unification of Italy in the early third century B.C. to the establishment of the oriental despotism under Diocletian and Constantine. The growth of empire in the Punic Wars, the uncertain steps toward an eastern hegemony, the crisis in the Republic from the Gracchi to Caesar, the new regime of Augustus, the transformation of the leadership class in the early Empire, and the increasing dominance of the military over the civil structure.
Offered as CLSC 304 and HSTY 304.

CLSC 305. Sanskrit Religious Texts (3)
Introduction to the Sanskrit language and culture through the reading of selected texts taken from the ancient religions of South Asia.
Offered as CLSC 305 and RLGN 305.

CLSC 309. Advanced Sanskrit Religious Texts (3)
This class is a continuation of RLGN 305/CLSC 305, the introduction to the Sanskrit language and culture. In RLGN 309/CLSC 309 students will learn advanced Sanskrit grammar and syntax. Previous knowledge of Sanskrit is required. We will finish the lessons from Devavanipravesika that we began in the introductory course. We will then translate sections for the Bhagavad Gita.
Offered as CLSC 309 and RLGN 309.

CLSC 311. Rome: City and Image (3)
This course studies the architectural and urban history of Rome from the republican era of the ancient city up to the eighteenth century using the city itself as the major “text.” The emphasis will be placed on the extraordinary transformations wrought in the city, or at least in key districts, by powerful rulers and/or elites, especially in the ancient empire and in the Renaissance and baroque eras. In a larger perspective, the great construction projects exerted a far-reaching effect within and beyond Europe, but we will study them in relation to their topographical situation, their functions, and their place in a long history of variations on prestigious themes since many of the artworks and the urban settings featured in the course carry the mark of the Long history of the city itself. Recommended preparation: At least one 200-level course.
in ANTH, ARTH, CLSC, ENGL, HSTY, or RLGN.
Offered as ARTH311/411 and CLSC 311.

CLSC 312. Women in the Ancient World (3)
The course offers a chronological survey of women’s lives in Greece, Hellenistic Egypt, and Rome. It focuses on primary sources as well as scholarly interpretations of the ancient record with a view to defining the construction of gender and sexuality according to the Greco-Roman model. Additionally, the course aims to demonstrate how various methodological approaches have yielded significant insights into our own perception of sex and gender. Specific topics include matriarchy and patriarchy; the antagonism between male and female in myth; the legal, social, economic, and political status of women; the ancient family; women’s roles in religion and cult; ancient theories of medicine regarding women; paederasty and homosexuality. Offered as CLSC 312 and WGST 312.

CLSC 314. Love Poetry from Sappho to Shakespeare (3)
Introduction to the love poetry of ancient Greece and Rome and its impact on the later European tradition in such poets as Petrarch, Chaucer, and Shakespeare. Readings will focus especially on questions of generic convention, audience expectation, and the social setting of love poetry in the different ages under consideration. No knowledge of the original languages required.
Offered as CLSC 314 and WLIT 324.

CLSC 316. Greek Tragedy (3)
This course provides students the opportunity to read a significant number of ancient Greek tragedies in modern English translations. We shall read, study, and discuss selected works by Aeschylus, Sophocles, and Euripides, and attempt to understand the plays as literature composed for performance. We shall study literary elements within the plays and theatrical possibilities inherent in the texts. As we read the plays, we shall pay close attention to the historical context and look for what each play can tell us about myth, religion, and society in ancient Athens. Finally, we shall give occasional attention to the way these tragic dramas and the theater in which they were performed have continued to inspire literature and theater for thousands of years. Lectures will provide historical background on the playwrights, the plays, the mythic and historical background, and possible interpretation of the texts as literature and as performance pieces. Students will discuss in class the plays that they read. The course has three examinations and a final project that includes a short essay and a group presentation. Offered as CLSC 316, WLIT 316, WLIT 416.

CLSC 328. Greek Sculpture (3)
Greek sculpture from the Archaic period through the Hellenistic; style, the development of specific types, and the uses of architectural sculpture. Offered as ARTH 328, CLSC 328, and ARTH 428.

CLSC 332. Art and Archaeology of Ancient Italy (3)
The arts of the Italian peninsula from the 8th century B.C. to the 4th century A.D., with emphasis on recent archaeological discoveries. Lectures deal with architecture, sculpture, painting, and the decorative arts; supplemented by gallery tours at the Cleveland Museum of Art.
Offered as ARTH 332, CLSC 332, and ARTH 432.

CLSC 333. Greek and Roman Painting (3)
Greek vase painting, Etruscan tomb painting and Roman wall painting. The development of monumental painting in antiquity. Offered as ARTH 333, CLSC 333, and ARTH 433.

CLSC 334. Art and Archaeology of Greece (3)
A survey of the art and architecture of Greece from the beginning of the Bronze Age (3000 B.C.) to the Roman conquest (100 B.C.) with emphasis on recent archaeological discoveries. Lectures deal with architecture, sculpture, painting, and the decorative arts, supplemented by gallery tours at the Cleveland Museum of Art.
Offered as ARTH 334, CLSC 334, and ARTH 434.

CLSC 395. Directed Readings (1–3)
Readings in English on a topic of interest to the student and acceptable to the instructor. Designed and completed under the supervision of the instructor with whom the student wishes to work.

CLSC 416. Greek Tragedy (3)
This course provides the opportunity to read a significant number of ancient Greek tragedies in modern English translations. We shall read, study, and discuss selected works by Aeschylus, Sophocles, and Euripides, and attempt to understand the plays as literature composed for performance. We shall study literary elements within the plays and theatrical possibilities inherent in the texts. As we read the plays, we shall pay close attention to the historical context and look for what each play can tell us about myth, religion, and society in ancient Athens. Finally, we shall give occasional attention to the way these tragic dramas and the theater in which they were performed have continued to inspire literature and theater for thousands of years. Lectures will provide historical background on the playwrights, the plays, the mythic and historical background, and possible interpretation of the texts as literature and as performance pieces. Students will discuss in class the plays that they read. The course has three examinations and a final project that includes a short essay and a group presentation. Offered as CLSC 316, WLIT 316, WLIT 416.

CLSC 481. Special Studies (1–6)
Subject matter varies according to need.

Grek 101. Elementary Greek I (3)
Beginning course in Greek language, covering grammar (forms and syntax) and the reading of elementary selections from ancient sources. Makes a start toward reading Greek authors. (Both GREK 101 and 102 must be completed to obtain credit.)

Grek 102. Elementary Greek II (3)
Beginning course in Greek language, covering grammar (forms and syntax) and the reading of elementary selections from ancient sources. Makes a start toward reading Greek authors. (Both GREK 101 and 102 must be completed to obtain credit.) Prereq: GREK 101 or equivalent.

Grek 201. Greek Prose Authors (3)
Readings from authors such as Plato, Lyssias, Xenophon, and Herodotus. Prereq: GREK 102 or equivalent.

Grek 202. Introduction to Greek Poetry (3)
Primarily readings from Homer, Hesiod, and theocritus. Selections from Greek lyric may be introduced at the instructor’s discretion. Prereq: GREK 201 or equivalent.

Grek 305. Readings in Ancient Philosophy: Plato (3)
Reading and interpretation of selected dialogues by Plato or other philosophical works. Prereq: GREK 202 or equivalent.

Grek 306. Tragedy (3)
Reading and interpretation of selected plays of Aeschylus, Euripides, and Sophocles. Prereq: GREK 202 or equivalent.

Grek 307. History (3)
Extensive reading in Thucydides’ History of the Peloponnesian War, especially Books VI and VII, the expedition against Syracuse. Prereq: GREK 202 or equivalent.

Grek 308. Comedy (3)
Origin, ambition, and development of Greek Old Comedy and persisting characteristics of the genre. Translation of selected plays from Greek into English. Prereq: GREK 202 or equivalent.

Grek 311. Homer (3)
Reading and translation of extensive selections from the Odyssey. Introduction to epic meter, to Homeric Greek, and to the poet’s style. Consideration of evidences of oral composition and discussion of the heroic tradition. Prereq: GREK 202 or equivalent.

Grek 320. Departmental Seminar: Alexander the Great (3)
This writing-intensive seminar offers Classics students a firm grounding in the discipline with an emphasis on the diverse materials, methods, and approaches that can be brought to bear on the study of Greco-Roman antiquity. Students will read and discuss contemporary scholarship on Alexander the Great drawn from various sub-fields of classics including history, archaeology, art his-
COLLEGE OF ARTS & SCIENCES

tory, gender studies, inscriptions and reception criticism. Considerable class time will be devoted to writing instruction, sometimes via workshops in which students respond to and critique professional writings as well as one another’s work. The two intertwining strands of the seminar—research and writing—should enable each student to produce a strong junior thesis on a chosen topic that need not have anything to do with Alexander. This seminar will lay the groundwork for the senior thesis. Throughout, students will be encouraged to approach English with the same rigor and precision they use in translating Greek and Latin. Offered as GREK 320 and LATN 320. SAGES Dept Seminar

GREK 370. Greek Prose Composition (3)

This course introduces students to the principles and practice of composing continuous passages of Greek prose. It is designed to review and to strengthen students’ command of Attic forms while becoming more aware of the ways Greek syntax was employed to express thought. Via practice at writing Greek prose, the ultimate goal is for the students to become more proficient and sensitive readers of ancient Greek. Prereq: GREK 202.

GREK 380. Advanced Topics in Greek Literature (3)

Study and discussion of important authors, works, and topics not covered regularly. Content will reflect particular interests of students and faculty and timeliness of the topics. Prereq: GREK 202 or equivalent.

GREK 381. Senior Seminar (3)

The purpose of this course is to introduce graduating seniors to ancillary disciplines for the study of Greek and Latin literature and history. These include, but are not limited to paleography, epigraphy, numismatics and textual criticism. A major component of this course will inevitably be unseen translation since ancient sources do not only have to be deciphered but also understood. The course can be offered or taken as either a Greek or Latin course, depending on student or instructor preference. Offered as GREK 381 and LATN 381. SAGES Senior Cap

GREK 382. Senior Dissertation (3)

A course of independent study and research culminating in the preparation of a thesis on a topic approved by the supervising faculty member. Enrollment in this course must be approved by the Chair of the Department. Offered as GREK 382 and LATN 382. Prereq: GREK 381 or LATN 381.

GREK 395. Directed Readings (1–3)

Readings in Greek of authors selected to serve the individual interests and needs of undergraduate students. Each program planned and completed under the supervision of the instructor with whom the student wishes to work.

LATN 101. Elementary Latin I (3)

An introduction to the elements of Latin; pronunciation, forms, syntax, vocabulary, and reading. (Both LATN 101 and 102 must be completed to obtain credit.)

LATN 102. Elementary Latin II (3)

An introduction to the elements of Latin; pronunciation, forms, syntax, vocabulary, and reading. (Both LATN 101 and 102 must be completed to obtain credit.) Prereq: LATN 101 or equivalent.

LATN 201. Latin Prose Authors (3)

Reading and discussion of such prose authors as Cicero, Caesar, Livy or Pliny. Prereq: LATN 102 or equivalent.

LATN 202. Vergil (3)

Primarily readings from The Aeneid; selections from Vergil’s other work may be introduced at instructor’s discretion. Recommended preparation: LATN 201 or equivalent.

LATN 305. Literature of the Republic (3)

A reading course in prose and poetry of the Roman Republic. Extensive selections from Cicero and Catullus, and one comedy of Terence. Prereq: LATN 202 or equivalent.

LATN 306. Survey of Latin Literature (3)

Reading and discussion of selections from the various genres of Latin literature of the Roman Republic and Empire such as historical narrative, lyric and elegiac poetry, comic drama, forensic rhetoric, philosophical dialogue, didactic literature, letters, and epigrams. Prereq: LATN 202 or equivalent.

LATN 307. Livy (3)

Readings in Books I and XXI, with other selections from this major Augustan historian. Prereq: LATN 202 or equivalent.

LATN 308. Horace: Odes and Epodes (3)

Readings and discussion of extensive selections from the poetry of Horace; consideration of Horace as exemplifying the spirit of the Augustan Age. Prereq: LATN 202 or equivalent.

LATN 309. Medieval Latin (3)

Reading and interpretation of Latin texts from the Middle Ages. Material selected according to the needs and interests of students. Prereq: LATN 202 or equivalent.

LATN 320. Departmental Seminar: Alexander the Great (3)

This writing-intensive seminar offers Classics students a firm grounding in the discipline with an emphasis on the diverse materials, methods, and approaches that can be brought to bear on the study of Greco-Roman antiquity. Students will read and discuss contemporary scholarship on Alexander the Great drawn from various sub-fields of classics including history, archaeology, art history, gender studies, inscriptions and reception criticism. Considerable class time will be devoted to writing instruction, sometimes via workshops in which students respond to and critique professional writings as well as one another’s work. The two intertwining strands of the seminar—research and writing—should enable each student to produce a strong junior thesis on a chosen topic that need not have anything to do with Alexander. This seminar will lay the groundwork for the senior thesis. Throughout, students will be encouraged to approach English with the same rigor and precision they use in translating Greek and Latin. Offered as GREK 320 and LATN 320. SAGES Dept Seminar

LATN 351. Latin Didactic Literature (3)

Readings from didactic poetry such as Lucretius and Seneca’s Epistles. Parodies like Ovid’s Ars Amatoria or prose treatises may also be introduced. Prereq: LATN 202 or equivalent.

LATN 352. History (3)

Works of the Roman historian Cornelius Tacitus: his Annals I-VI dealing with his portrait of Emperor Tiberius and the Empire after the death of Augustus. Prereq: LATN 202 or equivalent.

LATN 353. Epic (3)

Extensive readings in Latin epic poetry, including Catullus, Vergil’s Aeneid, Lucan, Statius or other “silver” epics. Particular attention to the artistic and literary qualities of the works and to the development of Latin epic tradition. Prereq: LATN 202 or equivalent.

LATN 354. Drama (3)

Reading of at least one play each by Plautus and Terence. Attention to the history of Latin and Greek New Comedy, and the contrasting styles of the two authors. Prereq: LATN 202 or equivalent.

LATN 356. Elegiac Poetry (3)

Translation and interpretation of selected elegies by Catullus, Tibullus, Propertius, and Ovid. Prereq: LATN 202 or equivalent.

LATN 370. Latin Prose Composition (3)

This course is designed to strengthen students’ active command of Latin grammar and idiomatic prose style. At a basic level, students are trained to pay attention to details and thus write grammatically correct. Going beyond this, the course teaches Latin Idioms. Finally, it aims to develop students’ intuitive feeling for the Latin language. The ultimate goal is to write in a Ciceronian prose style. Prereq: LATN 202.

LATN 380. Advanced Topics in Latin Literature (3)

Study and discussion of important authors, works, and topics not covered regularly. Content will re-
reflect particular interests of students and faculty and timeliness of topics.
Prereq: LATN 202 or equivalent.

LATN 381. Senior Seminar (3)
The purpose of this course is to introduce graduating seniors to ancillary disciplines for the study of Greek and Latin literature and history. These include, but are not limited to paleography, epigraphy, numismatics and textual criticism. A major component of this course will inevitably be unseen translation since ancient sources do not only have to be deciphered but also understood. The course can be offered or taken as either a Greek or Latin course, depending on student or instructor preference.
Offered as GREK 381 and LATN 381.
Prereq: Any 300-level GREK or LATN course.
SAGES Senior Cap

LATN 382. Senior Dissertation (3)
A course of independent study and research culminating in the preparation of a thesis on a topic approved by the supervising faculty member. Enrollment in this course must be approved by the Chair of the Department.
Offered as GREK 382 and LATN 382.

LATN 395. Directed Readings (1–3)
Directed readings in Latin of authors selected to serve the individual interests and needs of undergraduate students. Each program planned and completed under the supervision of the instructor with whom the student wishes to work.

DEPARTMENT OF COGNITIVE SCIENCE
605 Crawford Hall
www.case.edu/artsci/cogs
Phone: 216-368-4753; Fax: 216-368-3821
Todd Oakley, Chair
E-mail: todd.oakley@case.edu

Cognitive science is the scientific study of the mind in a transdisciplinary framework. The Department of Cognitive Science at Case Western Reserve University is specifically dedicated to the study of human higher cognition, including language, gesture, advanced social cognition, mathematical invention, scientific discovery, art, religion, music, literature, advanced tool use and advanced technology, theater and dance, fashions of dress, sign systems, creativity, and culture. The department draws on methods of research in the biological sciences, the social sciences, and the humanities. Its educational mission is to provide students with the best possible opportunity to integrate a wide variety of approaches and apply them to the study of human higher cognition.

The department provides basic training in core disciplines, as well as a range of philosophical, evolutionary, linguistic, and computational issues bearing on cognitive science. It seeks to place cognitive science in a wider, more ecologically valid context than traditional programs in this field have typically allowed, so as to broaden our theories of those high-end cognitive capacities that mark human beings as distinctive.

The department offers an undergraduate major and minor in cognitive science and a master’s degree in cognitive linguistics. By developing wide-ranging expertise in at least two or three relevant disciplines, our students can prepare for a variety of career options. Training in several disciplines will also provide increased choices for postgraduate study.

DEPARTMENT FACULTY
Faculty research interests are listed on the department’s Web site.

Todd Oakley, Ph.D.  
(University of Maryland)  
Associate Professor and Chair

Per Aage Brandt, Docteur d’Etat (Sorbonne I)  
Professor; Emile B. de Saxeé Professor of Modern Languages and Literatures

Anthony Jack, Ph.D.  
(University College London)  
Assistant Professor

Fey Parrill, Ph.D.  
(University of Chicago)  
Assistant Professor; Robson Junior Professor

Yanna Popova, D. Phil (Oxford University)  
Assistant Professor; Clineo Junior Professor

Mark Turner, Ph.D.  
(University of California, Berkeley)  
Institute Professor

Lecturer
Vera Tobin, Ph.D.  
(University of Maryland)

Secondary Faculty
James C. Alexander, Ph.D.  
(Johns Hopkins University)  
Professor of Mathematics

Richard J. Boland, Jr., Ph.D.  
(Case Western Reserve University)  
Professor of Information Systems, Weatherhead School of Management

Patrizia Bonaventura, Ph.D.

(Ohio State University)  
Assistant Professor of Communication Sciences

Richard E. Boyatzis, Ph.D.  
(Harvard University)  
Professor of Organizational Behavior, Weatherhead School of Management

Charles Burroughs, Ph.D.  
(The Warburg Institute)  
Elsie B. Smith Professor of Liberal Arts; Professor of Classics

Daniela Calvetti, Ph.D.  
(University of North Carolina, Chapel Hill)  
Professor of Mathematics

Angela Ciccia, Ph.D.  
(Case Western Reserve University)  
Assistant Professor of Communication Sciences

Fred Collopy, Ph.D.  
(Wharton School of the University of Pennsylvania)  
Professor of Information Systems, Weatherhead School of Management

William E. Deal, Ph.D.  
(Harvard University)  
Severance Professor of the History of Religion  
Professor of Religious Studies

Heath A. Demaree, Ph.D.  
(Virginia Institute of Technology)  
Associate Professor of Psychology

Robert L. Greene, Ph.D.  
(Yale University)  
Professor of Psychology

Sandra Russ, Ph.D.  
(University of Pittsburgh)  
Professor of Psychology

Peter Thomas, Ph.D.  
(University of Chicago)  
Assistant Professor of Mathematics

Peter J. Whitehouse, M.D., Ph.D.  
(Johns Hopkins University)  
Professor of Neurology

James Zull, Ph.D.  
(University of Wisconsin)  
Professor of Biology

Adjunct Faculty
Merlin W. Donald, Ph.D.  
(McGill University)

Yohannes Haile-Selassie, Ph.D.  
(University of California, Berkeley)  
Curator and Head of Physical Anthropology, Cleveland Museum of Natural History
the purpose of pursuing the M.A., or for a degree program in cognitive linguistics, with a major in Cognitive Science—Gilles Fauconnier, “The Phenomenology of Cognitive Linguistics.” What has been applied to wide ranges of nonlinguistic approaches that come from anthropology, archaeology, and literary theory. In this course, you’ll get a basic introduction to some of the topics that are central to human cognition, such as intelligence, categorization, language, and creativity. We’ll ask what can be gained by taking an integrated, cognitive scientific approach to these topics.

COGS 101. Human Cognition in Evolution and Development (3)
This course introduces students to the field of cognitive science. Cognitive scientists are interested in the nature of the human mind—basically, we ask how humans think. This is a huge question, and has been addressed in one way or another by pretty much every academic field. Cognitive science tries to unite work from many different fields, including computer science, neuroscience, psychology, linguistics, philosophy, music, art, and literary theory. In this course, you’ll get a basic introduction to some of the topics that are central to human cognition, such as intelligence, categorization, language, and creativity. We’ll ask what can be gained by taking an integrated, cognitive scientific approach to these topics.

COGS 201. Human Cognition in Evolution and Development (3)
This course covers mind unfolding in time, including the fundamental methods, findings, and theories that attempt to understand the human mind from a neuroscientific standpoint. The course provides the student with background knowledge of brain processes underlying such psychological phenomena as consciousness, sensation, perception, thought, language, and voluntary action. Since many fields of neuroscience have contributed to cognitive neuroscience, the approach of this course is cross-disciplinary. It introduces theories and data from clinical and experimental neuropsychology, brain imaging, neuromodulatory and neuromagnetic brain activity, the neuroscience of language, and behavioral neuroscience, among other fields.

COGS 202. Human Cognition Viewed from a Cultural Perspective (3)
This course studies the human mind in its natural environment: culture. It covers the fundamental methods, findings, and theories that attempt to understand the growth and evolution of cognition from either a social science or humanistic standpoint. It provides the student with background knowledge of theories of human cultural evolution and change, of the relationship between the cognizing individual and larger social-cognitive structures, and of such phenomena as distributed networks, cooperative mental work, and the phenomenology of human experience. Many disciplines have contributed to this knowledge; hence the approach of this course is cross-disciplinary, including ideas from cultural anthropology, literary studies, art and art history, musicology, philosophy, and the history of technology, among others.

COGS 204. Cognition and Computation (3)
This course explores possible uses of computational technology in the study of cognition. (1) The human or animal mind-supporting brain is not in any technical sense “just” a computer, but it is relevant to stimulate various cognitive phenomena by computation in order to model their formal properties. From perception to conception, images schemas, categories, and meanings found in linguistic semantics and syntax, and from bodily motion to the processes of abstraction, intentional orientation, and spatial navigation, computational modeling can help us understand mental architecture, the interrelations between iconicity and symbolization in mental representations, and the constraints and indeterminacies at work in social cognitive networks (distributed cognition). (2) It also is relevant in this course to analyze the cognitive roles of actual computation as a social and communication technology, mirroring certain of our mental routines on the screens we interact with and with which we program to manifest symbolic and iconic behaviors in ever-changing patterns of “Interface” communication, while the underlying systems control our social and technical environment. (3) Recent developments in Cognitive Robotics finally invite for an integration of semantic stimulation and the elaboration and implementation of language-based and motion-based competencies in mobile robots. Computation serves, in this perspective, the construction of a dynamic model of meaning linked to interaction (human-machine, machine-machine, and human to human).

COGS 205. Cognition and Design (3)
Urbanism is design; architecture is design; of course, the aesthetic shaping of artifacts (such as computers, cars, and coffee machines) is design. Configuring surfaces, volumes, and portions of space in special ways, creating and changing formats for things and places that allow cultural practices to unfold while delimiting them, are essential “designing” endeavors of human civilization and are, necessarily, activities based on the cognitive capacities and constraints of our species. We “cognize” the human world in terms and frames of ‘designed’ surroundings. Design is a basic expressive activity, by which we interact with our artificial and natural surroundings and create ‘interfaces’ between mind and reality, thus upholding and
interpretable world. Landscapes and cityscapes, work spaces of all sorts, buildings and parks, exteriors and interiors of homes, factories, institutions, and temples; furniture, artifacts such as machines, tools, weapons, symbolic objects, even the configuration (‘building’) of our own bodies, are design. An inquiry into cultural cognition, aiming to understand how humans as socio-cultural beings think and feel, therefore needs to explore this dimension of spatial expressivity and to acknowledge it as a constitutive fact of human meaning production; it needs to study the aesthetic and pragmatic, political and historical, philosophical and religious, and simply everyday practical, semiotic aspects of this basic form of human creativity. This course will focus on spatial expressivity—design—in several primary keys and scales, including design for learning; design for verbal and technical communication, interaction, and commerce; design for expressions of authority and deliberation; and design for emotional display.

COGS 206. Introduction to Cognitive Linguistics (3)
This course is both an exposure to the technical field of cognitive linguistics—suitable in itself as part of a liberal education—and a gateway to advanced study of cognitive linguistics, leading to special topics and capstone experiences inside the cognitive science major. This course focuses on the methods that have been developed in cognitive linguistics in the last ten to twenty years for the study of grammar, semantics, and their relations to cognition.

COGS 272. Morality and Mind (3)
Recent research in cognitive science challenges ethical perspectives founded on the assumption that rationality is key to moral knowledge or that morality is the product of divine revelation. Bedrock moral concepts like free will, rights, and moral agency also have been questioned. In light of this critique, how can we best understand moral philosophy and religious ethics? Is ethics primarily informed by nature or by culture? Or is ethics informed by both? This course examines 1) ways in which cognitive science—and related fields such as evolutionary biology—impact traditional moral perspectives, and 2) how the study of moral philosophy and comparative ethics forces reconsideration of broad cognitive science theories about the nature of ethics. The course examines the concept of free will as a case study in applying these interpretive viewpoints. Interdisciplinary readings include literature from moral philosophy, religious ethics, cognitive science, and evolutionary biology. Offered as COGS 272, RLGN 272.

COGS 301. Special Topics in Cognitive Science (3)
This course offers instructors the opportunity to cover a more advanced and specialized topic in the field of cognitive science for third and fourth year students. Topics will vary from year to year.

COGS 302. SAGES Departmental Seminar: Methods and Theories in Cognitive Science (3)
This course takes a look at the discipline of cognitive science by exploring the methods that cognitive scientists use in their research. We’ll discuss how different methods reflect different approaches and traditions of thought and how they provide different answers to particular questions. We’ll also discuss the process of translating research into writing and talk about how different kinds of writing reflect the many different methods used in cognitive science. Recommended preparation: COGS 101, COGS 102, COGS 201, COGS 202.

SAGES Dept Seminar

COGS 303. SAGES Departmental Seminar: Current Controversies in Cognitive Science (3)
This course takes a look at the discipline of cognitive science by exploring the current controversies that impact cognitive scientists in their research. We’ll discuss how different controversies affect different approaches and traditions of thought and how they elicit different answers to particular questions. We’ll also discuss the process of translating research into writing and talk about how different kinds of writing reflect the many different controversial issues presented in cognitive science. Recommended preparation: COGS 101, COGS 102, COGS 201, and COGS 202.

SAGES Dept Seminar

COGS 304. Conceptual Integration (3)
Conceptual Integration, otherwise known as “blending,” is a defining feature of higher-order human cognition, indispensable for all behaviors typically taken as distinctive to human beings. This course presents the cognitive mechanisms of conceptual integration, the constraints on its operation, and its deployment and expression in a range of human behaviors such as learning, invention, mathematical and scientific discovery, language, art, music, gesture, social understanding, institutional performance, reasoning, decision, judgment, choice, design, and engineering. A student in the class will work on an individual research project in any of a variety of fields, including engineering (e.g. designing with blends), computer science, the arts, the humanities, the social sciences, cognitive neuroscience, and linguistics. Only one of COGS 304 and COGS 404 can be taken for credit within any degree program.

Offered as COGS 304 and COGS 404.

COGS 315. Mental Space Theory (3)
This course will study the ways in which the presence of mental space relates to cognition and the semiotics of language, in which cognition is characterized by the same imagining and imaginary properties as artistic literature. It is an attempt to identify and analyze procedures as aesthetically interesting and generally relevant forms of human thinking, feeling, imagining, fantasizing, and conceptualizing. The course introduces current theories of literature in relation to language and mind, and it presents and discusses practical applications in critical reading and text analysis, using examples from modern literature in the main genres. A student may earn credit for either COGS 315 or COGS 415, but not both.

Offered as COGS 315 and COGS 415.

COGS 325. Cognitive Approaches to Literature (3)
This course approaches literature as a window into language, in which cognition is characterized by the same imagining and imaginary properties as artistic literature. It is an attempt to identify and analyze procedures as aesthetically interesting and generally relevant forms of human thinking, feeling, imagining, fantasizing, and conceptualizing. The course introduces current theories of literature in relation to language and mind, and it presents and discusses practical applications in critical reading and text analysis, using examples from modern literature in the main genres. A student may earn credit for either COGS 325 or COGS 425 but not both.

Offered as COGS 325 and COGS 425.

COGS 326. Cognitive Approaches to Music (3)
This course will study the ways in which the presence of music relates to cognitively observable semiotics of inter-subjective communication at large—the emergence of language, gesture, and symbolization of time. Topics of interests include: the ways that
specific works of musical art invite semantic interpretation; how intelligible musical structure relates to meaning; how musical activities correspond to brain activity; and how music relates to and/or induces emotion. Recommended preparation: COGS 101, COGS 202. Offered as COGS 326 and COGS 426.

COGS 327. Gesture in Cognition and Communication (3)
Most people never notice that when they are talking, they’re also gesturing. Why do we produce gestures? Why do we produce gestures while speaking? What can we learn from gestures? What is the relationship between gestures and speech? This course surveys scientific research on gesture, exploring topics such as the role of gesture in communication, cross-cultural differences in gesture, and the relationship between gesture and signed languages. The course will focus on gestures produced with speech, but will cover symbolic and ritualized gesture in the visual arts and in dance. Offered as COGS 327 and COGS 427 and MLIT 327.

COGS 328. Cognition and Visual Aesthetic Experience (3)
This course is offered as a reciprocal exchange between new research on the mind/brain and existing theories of visual aesthetics. It would appeal to students from diverse majors, ranging from art, language or philosophy, to psychology, computer science or pre-med. The material covered links a traditional approach to philosophical aesthetics with a most-up-to-date research on visual perception and brain functioning. Recommended preparation: COGS 101, COGS 202.

COGS 329. Performance and the Embodied Mind (3)
In the past twenty years, cognitive scientists working in neuroscience, psychology, linguistics, philosophy, and related fields have made great progress in understanding perception, empathy, the human mind’s sense of space and movement, emotions, meaning-making, and many other cognitive areas that are crucial to producing, enacting, and responding to performances on stage. This course will look at ways of incorporating many of the insights of cognitive science into the existing work of theatre and performance scholarship. The course will thus link a more traditional approach to the body in theatre and dance studies, where it has commonly been considered one of the main means of communication, to a most-up-to-date research on embodied cognition. Observation of live and pre-recorded dance and theatre performances will be used to supplement the theoretical discussion. Recommended preparation: COGS 101, COGS 202.

COGS 352. Language, Cognition, and Religion (3)
This course utilizes theoretical approaches found in cognitive semantics—a branch of cognitive linguistics—to study the conceptual structures and meanings of religious language. Cognitive semantics, guided by the notion that conceptual structures are embodied, examines the relationship between conceptual systems and the construction of meaning. We consider such ideas as conceptual metaphor theory, conceptual blending, image schemas, cross-domain mappings, metonymy, mental spaces, and idealized cognitive models. We apply these ideas to selected Christian, Buddhist, and Chinese religious texts in order to understand ways in which religious language categorizes and conceptualizes the world. We examine both the universality of cognitive linguistic processes and the culturally specific metaphors, conceptual blends, image schemas, and other cognitive operations that particular texts and traditions utilize. Course Offered as RLGN 352/RLGN 452 and COGS 352/452.

COGS 363. Philosophy and Social Neuroscience (3)
A philosophical examination of recent research in human cognition and emotion at the intersection of the social sciences and neurological sciences. The course provides the student with background knowledge of brain processes underlying such social and cultural phenomena as bonding, aggression, imitation, mind-attribution, language, sexual behavior, moral action, and creativity. The approach of this course is at once scientific (comparing methods, findings and questions as they arise in clinical and experimental neuropsychology, brain imaging, neurolinguistics, and behavioral neuroscience) and humanistic, asking critical questions about the nature and methods of a science of cognition, and surveying moral responses from a neurologic and philosophic perspective. Recommended preparation: PHIL 101 or COGS 201. Offered as COGS 363 and PHIL 363.

COGS 365. Advanced Topics in Cognitive Neuroscience (3)
This course focuses on specific areas of research in cognitive neuroscience in some depth. The first half of the semester covers basics and fundamental research areas (e.g., perception, attention) and examines the (sometimes controversial) theoretical issue of what cognitive neuroscience techniques tell us about the mind. The second half of the semester is dedicated to examining selected research topics of interest to students. Students research and write ‘grant proposals’ for cognitive neuroscience experiments. The class culminates with students and invited faculty simulating a funding panel, and deciding which grants to ‘fund’ from a limited budget. Prereq. COGS 102.

COGS 366. Functional Magnetic Resonance Imaging (3)
fMRI is the workhorse of cognitive neuroscience research. This course will take an in-depth look at this methodology, including hands on experience analyzing imaging data. The course will address the following issues: How do MRI and fMRI work? What does fMRI actually measure and how does that relate to cognition? What are the standard steps involved in processing and analyzing fMRI data to help answer specific questions? The course culminates in the production of a report of a novel analysis of imagining data that the students have performed (in small groups), including a brief description of what that analysis reveals about the neural basis of cognition. Prereq. COGS 102 and COGS 365.

COGS 373. Intelligence and Cognition (3)
This course will focus on the notion and meaning of intelligence. What is intelligence? How is it measured, and are these measures adequate to the task? Is there more than one kind of intelligence? What is the relationship between individuals, genetic factors, biological factors, and socio-cultural-economic factors in the development of intelligence? How are language and thought related to intelligence? What is the difference between intelligence and talent? Intelligence seems to be necessary for culture, art, religious belief, the creation of theories and the quest for knowledge, truth and morality; thus intelligence is a necessary condition for the study of itself. To attempt to understand intelligence is an undertaking in which we will ask questions about the self and the common nature of humanity, while simultaneously examining the abilities of animals and machines. What is the mark of intelligence? Recommended preparation: PHIL 101 or COGS 201. Offered as COGS 373 and PHIL 373.

COGS 381. Philosophy and Cognitive Neuroscience (3)
This course will focus on the various methodologies used in the cognitive neurosciences, and explore their strengths and weaknesses from scientific and philosophical standpoints. We will begin by examining baseline measures (including IQ tests, tasks of cognitive flexibility, verbal and visual memory, causal/sequential thinking and narrative tasks) and their experimental design. Lesion methods will follow, with an eye toward understanding the strength of inferences that can be drawn from such data. The course will also focus on imaging techniques (CAT, PET, SPECT, fMRI, TMS, etc.) as well as means of electrical activity such as EEG and single-cell recordings. Students will become familiar with many fundamental assumptions necessary for the implementation of each method, and philosophical questions associated with these endeavors and their potential impact on our knowledge and society. Recommended preparation: PHIL 101 or COGS 201. Offered as COGS 381 and PHIL 381.

COGS 383L. Vocalization and Cognition Lab (1)
This is a laboratory section intended to provide hands-on training and experience with sound processing and analysis of animal vocalizations in the context of cognitive science, philosophy, and biology. Students will ask and answer questions surrounding language, meaning, mind, mental states, animal and human cognition. How does a science of content and language actually proceed? How do we measure behavior for use as an indicator of cognition? What pragmatic constraints are
research project, a literature review, or some other. The research may be in the form of an independent supervised original research on a topic in cognitive science, culminating in a public presentation. The research may be in the form of an independent research project, a literature review, or some other form of cognitive semiotics. COGS 390. Workshop in Cognitive Linguistics II (3)

The second course in a two-course sequence (408 & 409) designed to provide experience in research methods in cognitive linguistics at the MA level. A workshop in which students read examples of cognitive linguistics research, develop their own topics (theoretical or empirical), and work on them to produce a final paper.

Prereq: COGS 408 or consent of instructor.

COGS 413. Special Topics in Cognitive Linguistics (3)

This course covers special topics in the field of cognitive linguistics. Topics will vary from semester to semester.

Offered as COGS 313 and COGS 413.

COGS 415. Mental Space Theory (3)

This course covers theory of mental spaces and methodology of mental space analysis, with special emphasis on the use of mental space theory to analyze human performance in various areas of cognition, including reasoning, judgment, decision, counterfactual thought, inference, planning, communication and language, gesture, social cognition, cognitive design and engineering, representation, learning, humor, symbol systems, and invention. It includes a consideration of experimental methods that have arisen under the influence of mental space theory. A student may earn credit for either COGS 315 or COGS 415, but not both.

Offered as COGS 315 and COGS 415.

COGS 425. Cognitive Approaches to Literature (3)

This course approaches literature as a window into language, in which cognition is characterized by the same imaging and imaginary properties as artistic literature. It is an attempt to identify and analyze procedures as aesthetically interesting and generally relevant forms of human thinking, feeling, imagining, fantasizing, and conceptualizing.

The course introduces current theories of literature in relation to language and mind, and it presents and discusses practical applications in critical reading and text analysis, using examples from modern literature in the main genres. A student may earn credit for either COGS 325 or COGS 425 but not both. Recommended preparation: COGS 101, COGS 202.

Offered as COGS 325 and COGS 425.

COGS 426. Cognitive Approaches to Music (3)

This course will study the ways in which the presence of music relates to cognition and the semiotics of inter-subjective communication at large—the emergence of language, gesture, and symbolization of time. Topics of interests include: the ways that specific works of musical art invite semantic interpretation; how intelligible musical structure relates to meaning; how musical activities correspond to brain activity; and how music relates to and/or induces emotion. Recommended preparation: COGS 101, COGS 202.
COGS 427. Gesture in Cognition and Communication (3)
Most people never notice that when they are talking, they’re also gesturing. Why do we produce these gestures? What can studying them tell us about the human mind? This course surveys scientific research on gesture, exploring topics such as the role of gesture in communication, cross-cultural differences in gesture, and the relationship between gesture and signed languages. The course will focus on gestures produced with speech, but will cover symbolic and ritualized gesture in the visual arts and in dance.
Offered as COGS 327 and COGS 427 and MLIT 327.

COGS 452. Language, Cognition, and Religion (3)
This course utilizes theoretical approaches found in cognitive semantics—a branch of cognitive linguistics—to study the conceptual structures and meanings of religious language. Cognitive semantics, guided by the notion that conceptual structures are embodied, examines the relationship between conceptual systems and the construction of meaning. We consider such ideas as conceptual metaphor theory, conceptual blending, image schemas, cross-domain mappings, metonymy, mental spaces, and idealized cognitive models. We apply these ideas to selected Christian, Buddhist, and Chinese religious texts in order to understand ways in which religious language categorizes and conceptualizes the world. We examine both the universality of cognitive linguistic processes and the culturally specific metaphors, conceptual blends, image schemas, and other cognitive operations that particular texts and traditions utilize.
Course Offered as RLGN 352/RLGN 452 and COGS 352/452.

COGS 499. Independent Studies (1–3)
This course is a face-to-face seminar between students and instructor, aiming at letting and helping the students independently develop original research on well-defined topics in the field of cognitive linguistics. Themes can vary within the wide area of cognition and culture.

DEPARTMENT FACULTY
Stephen E. Haynesworth, Ph.D.
(Case Western Reserve University)
Interim Chair; Associate Professor of Biology
Patrizia Bonaventura, Ph.D.
(The Ohio State University)
Assistant Professor
Simulation of speech production and biomechanical modeling of the vocal tract; motor control mechanisms in normal and disordered speech production; speech technology applications

Angela Hein Ciccia, Ph.D.
(Case Western Reserve University)
Assistant Professor
Neuroscience of communication and communication disorders in adolescents/adults, with focus on traumatic brain injury

Barbara Lewis, Ph.D.
(Case Western Reserve University)
Associate Professor
Familial and genetic bases of speech/language

Kathryn (Kyra) Rothenberg, Ph.D.
(Bowling Green State University)
Instructor
Health communication

Lecturers
Patricia O. Carothers, M.S., CCC-A
(Ithaca College)
Fluency disorders
Kathryn (Kay) McNeal, M.S., CCC-SLP
(Purdue University)
Clinical Program Director
Speech-language pathology
Tonia Kates Stewart, Ph.D.
(Kent State University)
Health communication

Adjunct Faculty
Laura Brady, M.A., CCC-A
(Kent State University)
Adjunct Instructor; Cleveland Hearing and Speech Center
Audiology
Michelle Burnett, M.A., CCC-SLP
(Michigan State University)
Adjunct Instructor; Cleveland Hearing and Speech Center
Speech-language pathology
Margaret Duff, M.A., CCC-SLP
(Kent State University)
Adjunct Instructor; Cleveland Hearing and Speech Center
Speech-language pathology

Bernard P. Henri, Ph.D.
(Northwestern University)
Adjunct Associate Professor; Cleveland Hearing and Speech Center
Fluency disorders; professional issues in speech-language pathology; health care management

Douglas Hicks, Ph.D.
(Vanderbilt University)
Adjunct Professor; Cleveland Clinic Foundation
Voice disorders

Karen Kantzes, Au.D., CCC-A
(A. T. Still University)
Adjunct Instructor; Cleveland Hearing and Speech Center
Audiology

Darlene Moenter, Ph.D.
(Ohio State University)
Adjunct Assistant Professor; Louis Stokes VA
Cleveland Medical Center
Auditory potentials

Jean Nisenboum, M.A.
UNDERGRADUATE PROGRAMS

Major
The major in communication sciences leads to the Bachelor of Arts degree. For many students, a B.A. in communication sciences is a pre-professional degree in preparation for graduate study in speech-language pathology or audiology. The undergraduate course work emphasizes the basic processes and acquisition of normal communication in children and adults. Graduate study then focuses on the study of disordered communication. (Please see the description of the Integrated Graduate Studies program below.)

Students pursuing the B.A. are required to take 45 credit hours of course work which includes study in communication sciences and disorders, psychology, and English/linguistics, as well as in statistics and research design. A recommended course sequence is shown below. Please note, however, that an individual student’s sequence may differ from this one. For example, undergraduate students may elect to take 400- or 500-level graduate courses with departmental/instructor permission.

SUGGESTED SEQUENCE OF REQUIRED COURSES FOR THE BACHELOR OF ARTS DEGREE (45 CREDITS)

<table>
<thead>
<tr>
<th>Year</th>
<th>Fall</th>
<th>Spring</th>
</tr>
</thead>
<tbody>
<tr>
<td>Freshman</td>
<td>PSCL 101 General Psychology (3)</td>
<td>COSI 109 Introduction to Communication Disorders (3)*</td>
</tr>
<tr>
<td>Senior</td>
<td>COSI 352 Introduction to Clinical Practice in Speech-Language Pathology (3)</td>
<td>COSI 345 Communication and Aging (3)</td>
</tr>
</tbody>
</table>

*COSI 109 is offered in the fall and spring semesters. All other COSI courses are offered only one semester per year, as indicated above.

**ENGL 301 is offered in alternate years (spring semester) and thus may be taken in either the sophomore or junior year.

Departmental Honors
Juniors with a 3.0 overall grade point average and a 3.25 average in communication sciences are encouraged to apply to the honors program. The honors program consists of one three-credit course, COSI 395, in which the student carries out an independent project in an area of interest, under the direction of a COSI faculty member. Satisfactory completion of the project qualifies the student to receive the Bachelor of Arts degree with Departmental Honors noted on the transcript. Admission to the Honors Program is by faculty approval. STAT 201 or PSCL 282 and PSCL 375 are prerequisites to COSI 395. Additional information is available from the academic advisor.

Integrated Graduate Studies
The Integrated Graduate Studies program is intended for undergraduate students who are interested in obtaining a graduate degree in communication disorders (speech-language pathology). Qualified students may be accepted for admission to the School of Graduate Studies after completing 90 hours of undergraduate course work.

Typically, a master’s degree requires two additional years of study beyond the bachelor’s degree. Through the IGS program, however, a student can complete an undergraduate degree in communication disorders and a master’s degree in communication disorders in five years. The recommended undergraduate sequence for students interested in the IGS program is somewhat different from the recommended sequence presented above. Students should consult their academic advisor for additional information concerning IGS requirements.

Minors

MINOR IN COMMUNICATION SCIENCES
The minor in communication sciences requires a minimum of 15 credit hours. It focuses on normal processes of speech, language, and hearing, as well as on the speech, language, and hearing disorders that result from breakdowns in these processes. Interested students should meet with an advisor for specific course requirements.

MINOR IN HEALTH COMMUNICATION
The minor in health communication offers introductory and advance study in theoretical and practical application of communication within a health context. It includes a variety of additional courses that students can choose according to their specific areas of interest. The course work is designed to appeal to students in such fields as premed, nursing, prelaw, public policy, public health, communication disorders, gerontological studies, nutrition, health management, and social work.

The minor requires 15 credit hours of course work, of which 9 credit hours come from required courses: COSI 101, COSI 109, and COSI 340. The remaining 6 credit hours are chosen from a list of elective courses: COSI 200, COSI 260, COSI 280, COSI 332, COSI
GRADUATE PROGRAMS

Master of Arts

The principal goal of the Master of Arts program is to develop clinical scientists who are skilled in the management of individuals with speech and language disorders. The master’s program is accredited by the Council on Academic Accreditation of the American Speech-Language-Hearing Association (ASHA). Upon successful completion of the Master of Arts degree, students will also meet the academic and clinical practicum requirements for certification by ASHA and licensure in the State of Ohio. Students may also elect to obtain Ohio Teacher Licensure in speech-language pathology.

Degree requirements include completion of 36 credit hours of course work and a clinical practicum in communication disorders. In addition, students must satisfactorily complete written and oral comprehensive exams or write a master’s thesis. Specific course requirements are determined according to the student’s undergraduate background and academic and career goals. The following courses are required for all students: COSI 497 (Methods of Research) and four semesters of COSI 452 (Graduate Clinical Practicum).

CLINICAL OPPORTUNITIES IN SPEECH, LANGUAGE, AND HEARING DISORDERS

The department is affiliated with, and located in, the Cleveland Hearing and Speech Center (CHSC), a nonprofit agency that serves children and adults with communication disorders. The CHSC is an ASHA-accredited professional service program and serves as the primary training site for graduate students enrolled in the speech-language pathology curriculum. The personnel and facilities of the CHSC provide exceptional clinical experiences for students seeking clinical certification in speech-language pathology.

The department also draws upon clinical resources in University Circle and the Greater Cleveland area. In addition to clinical practicum experiences at the CHSC, graduate students complete at least two externships at sites including University Hospitals of Cleveland, Rainbow Babies and Children’s Hospital, MetroHealth Medical Center, Cuyahoga County Board of Mental Retardation and Developmental Disabilities, Cleveland Clinic Center for Autism, Legacy Health Services, and Western Reserve Speech and Language Partners.

DOCTOR OF PHILOSOPHY

The Doctor of Philosophy is awarded in recognition of (1) mastery, at an advanced level, of a body of knowledge in the disciplines of communication sciences and speech-language pathology, and (2) a demonstrated ability to perform independent research and communicate the results of that research. With the major advisor, the student designs an individual plan of study based on his/her professional goals and previous experience. Doctoral students choose a content area (such as communication and aging, medically based speech disorders, or child language development and disorders) as their primary focus of study. However, they are also encouraged to enhance their scholarly preparation by completing course work outside of their primary content area.

In addition to course work within the department, doctoral students may choose courses from graduate programs in other departments of the College of Arts and Sciences, as well as from several professional schools at the University, including the School of Medicine (e.g., neuroscience, genetics), the Case School of Engineering (e.g., biomedical engineering), the School of Dental Medicine, the Weatherhead School of Management, and the Mandel School of Applied Social Sciences. Additional information about graduate studies and research opportunities is available at the department’s Web site.

Requirements for the doctoral program include course work, research rotations, a supervised classroom teaching experience, written and oral comprehensive examinations, and a dissertation.

- A minimum of 36 credit hours of course work is required, including 9 credit hours in statistics and research design and 3 credit hours of directed study and research. Fifteen credit hours in the primary content area are required.
- Two research rotations are required. One rotation is completed in the primary content area with the major advisor. The second rotation is completed with a faculty member other than the major advisor. The dissertation research is not included in either of the two research rotations.
- A supervised classroom teaching experience (COSI 690) is completed under the guidance of a faculty member in the department.
- Written and oral examinations are taken after all course work and research rotations are completed.
- A dissertation prospectus is prepared under the guidance of a committee consisting of the dissertation advisor and two additional faculty members. A defense of the dissertation prospectus is required prior to commencing the dissertation study.
- An oral defense of the dissertation takes place at the end of the doctoral program.

COURSE DESCRIPTIONS

COSI 101. Introduction to Health Communication (3)

An introductory examination of the influences associated with the functions of human life, communication processes, and research related to health and the health care industry from interpersonal, cultural, and organizational communication perspectives. The course will include a review of the history and development of health communication and the understanding and application of communication theories.

COSI 109. Introduction to Communication Disorders (3)

Forty-two million Americans have some type of communication disorder. How does a person with a communication disorder cope with the challenges of daily living? This course will examine the characteristics of communication disorders via first hand and fictionalized accounts in books, films, and simulated communication disorders experiences. Topics will include disorders of speech, language, and hearing in children and adults. Effects of communication disorders on families.

COSI 200. Interpersonal Communication (3)

Communication is a primary means of initiating, maintaining, and dissolving relationships. Managing interpersonal relationships is a human concern across several contexts. Interpersonal communication is a highly interactive course whereby participants investigate the foundations, processes, and issues associated with communication in relationships. The student will become sensitized to theories and processes via traditional lectures and textbook readings. The student is also expected to participate in group discussions. The result is a continuous dialogue with others about communication processes, and outcomes. The goal of this course is to provide a forum for both investigation and increased competence.

COSI 211. Phonetics and Phonology (3)

Theoretical and applied study of the speech sounds of language. The use of the international phonetic alphabet as a tool for characterizing normal and deviant sound patterns. The linguistic structure and function of speech sound systems of both the adult and developing child.
COSI 220. Introduction to American Sign Language I (3)
This course offers basic vocabulary training and conversational interaction skills in American Sign Language. Syntactic and semantic aspects of American Sign Language will be addressed.

COSI 221. Introduction to American Sign Language II (3)
This class is taught without voice, using functional, whole language approaches and in situ experiences, emphasizing communicative competency. It emphasizes sentence structure development, classifiers, and conversational regulating behaviors. It also covers inflection, role shifting, adversarial nonmanual behaviors, temporal aspects, sequencing, and includes a brief introduction to ASL, English diglossia and biolinguistic aspects. There will be opportunities for discussion of deaf culture. Prereq: COSI 220.

COSI 260. Multicultural Aspects of Human Communication (3)
Introduces intercultural/interracial communication by discussing specific communication principles and by putting theory into practice by exploring differences in perception, and verbal and nonverbal communication messages. Course emphasizes relationship between communication, race, culture; nature of race and culture; and how they influence the communication process. Various theories and approaches to study of intercultural/interracial communication will be discussed, along with significant concepts, processes and considerations. Practical outcomes of intercultural/interracial encounters also will be discussed. Global & Cultural Diversity

COSI 280. Organizational Communication (3)
This course includes a review of the development of organizational communication theories and how application of theories enhances our understanding of various types of organizations. COSI 280 addresses the communication challenges faced by contemporary organizational leaders and members. Knowledge of the theories and development of analytical skills should improve students' chances for successful interactions in diverse organizational situations and cultures.

COSI 300. Theories of Human Communication (3)
An introduction to theories and scholarship of communication. Addresses development and evaluation of theories. The focus is on explaining communication phenomena from a variety of perspectives and philosophies. Communication theories are presented via text, seminal articles, lectures, and discussion. Through discussion and case studies students discover new dimensions in their communicative lives, both personal and professional. Recommended preparation: COSI 100.

COSI 305. Neuroscience of Communication and Communication Disorders (3)
The course focus is neuroanatomy and neurophysiology related to motor control and cognition, particularly aspects of cognition involved in language functions. Topics to be addressed include: principles of neurophysiology and neurochemistry; functional neuroanatomy of the central and peripheral nervous systems; neurological and neuropsychological assessment of communication; neurodiagnostic methods. In part, the course material will be presented in a problem-based learning format. That is, normal aspects of human neuroscience will be discussed in the context of neurological disorders affecting communication.
Off ered as BIOL 379 and COSI 305.

COSI 310. Nonverbal Communication (3)
Most people are familiar with the idea of "body language," but fewer realize the intricacy and potential of nonverbal messages. Nonverbal communication is rule governed, culturally determined, and dependent on encoding and decoding ability. Studying nonverbal communication sensitizes the student to a channel of communication vital to accomplishing shared meaning. Because nonverbal communication is closely related to emotional processes, this course also addresses basic ideas surrounding communication and emotion. Students will read seminal and current literature, make naturalistic observation, and report their findings throughout the semester. Students who take COSI 310 may not receive credit for USSO 204. Students who take USSO 204 may not receive credit for COSI 310. Offered as COSI 310 and USSO 204.

COSI 313. Language Development (3)
Language acquisition theory and stages of development of syntax, semantics, pragmatics, and phonology in children. Contributions of biological, social, cognitive and environmental factors to process of language development. Information on language variation in multicultural populations. Open to majors and non-majors. Recommended prerequisite: Child Psychology. Offered as COSI 313 and COSI 413.

COSI 320. Speech and Hearing Science (3)
The course will focus on the aspects of normal speech production and perception and hearing perception. The purpose of this course is to provide a foundation in normal aspects of oral communication that will prepare students for advanced study in the assessment and management of disorders of speech and hearing perception. Topics to be covered include motor speech control, aeromechanics, basic acoustics, phonatory acoustics, speech and hearing acoustics, psychoacoustics, and speech and hearing perception. Recommended preparation: COSI 325.
Offered as COSI 321 and COSI 421.

COSI 325. Anatomy and Physiology of Speech and Hearing Mechanism (3)
The course will focus on normal anatomy and physiology of the body systems involved in the processes of speech, language, hearing, and swallowing including the following: the auditory, spiroatory, phonatory, articulatory, resonatory, and nervous systems. In part, the course material will be presented in a problem-based learning format. That is, normal aspects of human anatomy and physiology will be discussed in the context of the disorders that affect the processes of human communication and swallowing.

COSI 326. Anatomy and Physiology of Singing Voice (1)
For music students with interest in the use of the vocal mechanism in singing. The systems and processes that contribute to a normal voice for speaking and singing. Focus on normal respiration and phonation, with consideration of disorders resulting from vocal abuse.

COSI 332. Persuasion (3)
This survey course explores the history, theories, and dynamics of persuasion. There is an extensive focus on theoretical models of attitude change. Persuasion also plays a strong role in everyday aspects of our culture. Along these lines, we will investigate persuasion activities in everyday life from compliance gaining to media campaigns. Learning is conveyed through lecture, activities, and observation of the student's everyday life. At the end of the semester, the astute student will be literate in a variety of persuasion strategies and dynamics.

COSI 340. Health Communication (3)
Various communication processes assume a central role in the acquisition and enactment of health care. This course examines communication activity across a broad range of health care contexts. Attention will be given to provider-client communication, communication, and ethical concerns, persuasive health promotion efforts, media impact on health, and basics in health communication methodology and research. Students will consider source, message, and receiver aspects of health communication as well as cultural and illness-specific issues. Prerequisite of COSI 101 for 300 - level only. Offered as COSI 340 and COSI 440. Prereq: COSI 101.

COSI 345. Communication and Aging (3)
The normal and abnormal psychobiological changes that occur during aging and their effects on communication are addressed, as are communicative interaction styles, disordered communication, and rehabilitation practices. Graduate students are given an opportunity to incorporate information from their own disciplines in a special project, where appropriate. Offered as COSI 345 and COSI 445. SAGES Dept Seminar

COSI 352. Introduction to Clinical Practice in Speech-Language Pathology (3)
Clinical assessment and teaching procedures as well as the role of research/theory in clinical practice. Procedures to observe, measure, analyze communication skills. Practical application through case studies. Students complete 25 hours of observation
Various communication processes assume a central role in the acquisition and enactment of health care. This course examines communication activity across a broad range of health care contexts. Attention will be given to provider-client communication, communication, and ethical concerns, persuasive health promotion efforts, media impact on health, and basics in health communication methodology and research. Students will consider source, message, and receiver aspects of health communication as well as cultural and illness-specific issues. Prerequisite of COSI 101 for 300-level only. Offered as COSI 340 and COSI 440.

**COSI 445. Communication and Aging (3)**
The normal and abnormal psychobiological changes that occur during aging and their effects on communication are addressed, as are communication interaction styles, disordered communication, and rehabilitation practices. Graduate students are given an opportunity to incorporate information from their own disciplines in a special project, where appropriate. Offered as COSI 345 and COSI 445.

**COSI 452A. Graduate Clinical Practicum I: Case Management (1)**
Addresses professional issues in speech-language pathology including case management, clinical effectiveness, counseling and working with families from diverse backgrounds. Four to ten hours of clinic contact per week at the Cleveland Hearing and Speech Center. (Maximum of 2 credits.) Recommended preparation: COSI 352 and COSI 413.

**COSI 452B. Graduate Clinical Practicum II: Professional Issues (1)**
Addresses professional issues in speech-language pathology including case management, managed health care, ethics and interviewing. Four to ten hours of clinic contact per week at the Cleveland Hearing and Speech Center. (Maximum of 2 credits.) Recommended preparation: COSI 352, COSI 413, COSI 452A, and COSI 453.

**COSI 452C. Graduate Clinical Practicum III: Special Populations (1)**
Addresses professional issues in speech-language pathology including case management, special clinical populations, collaborating with other professionals, teaming, leadership, and use of technology. Fifteen to thirty hours of clinic contact per week at area skilled nursing facilities, hospitals. (Maximum of 2 credits.) Recommended preparation: COSI 352, COSI 452A, COSI 452B, COSI 452C, COSI 453, and COSI 456.

**COSI 453. Articulation and Phonology Disorders (3)**
Overview of normal speech sound development and characterization of children with speech sound disorders. Distinctions between phonology and articulation are drawn. Theoretical as well as assessment and treatment issues are addressed.

**COSI 455. Fluency Disorders (3)**
Stuttering and related disorders of rhythm and prosody in terms of the symptomatology, etiology, measurement, and treatment of nonfluent speaking behavior.

**COSI 456. Child Language Disorders (3)**

**COSI 463. Language and Literacy Across Content Areas (3)**
This course focuses on research-based theories of reading, cognition, language, and learning. The student will use the content of their area (art, music, or speech-language pathology) as the target for organizing explicit instruction and strategies for word skills, reading comprehension, oral expression, vocabulary, and written language development as they apply to the culturally and linguistically diverse populations present in today’s schools. Curriculum planning and assessment strategies for instructional purposes are addressed. Federal legislation pertaining to the education of children with disabilities is included.

**COSI 464. Case Studies in Communication Disorders: Diagnosis and Treatment (3)**
Diagnosis as a clinical skill involving scientific hypothesis testing with clinical problem solving. The course includes academic learning combined with diagnostic clinic experiences. Overview of psychometric principles, survey of psychological communication tests, and measurements. Section on non-biased assessment. Instruction and practice in effective family interviewing techniques. Prerequisite: COSI 453 and COSI 456.

**COSI 470. Introduction to Audiology (3)**
Disorders of hearing, assessment of hearing; including behavioral and objective measures; intervention strategies; and identification programs. Offered as COSI 370 and COSI 470. Prerequisite: COSI 325.

**COSI 497. Methods of Research (3)**
and apraxia will be discussed. The speech production system, diseases and acquired and congenital neuropsychological conditions that affect motor processes and resulting speech disorders of phonation, articulation, resonance and prosody will be reviewed. Also covered will be the speech, language and hearing disorders stemming from craniofacial anomalies; cleft lip and palate. Principles and methods of assessment and treatment within an interdisciplinary rehabilitation framework will be reviewed for both types of disorders.

Prereq: COSI 405 or equivalent.

COSI 560. Medical Aspects of Speech Pathology I: Voice Disorders (3)

Aspects of normal and abnormal voice production, evaluation and management of various voice and resonance disorders.

COSI 561. Med Aspects of Speech Pathology II: Neuromotor and Craniofacial Anomalies (3)

Speech disorders resulting from conditions acting on motor speech production including dysarthria and apraxia will be discussed. The speech production system, diseases and acquired and congenital neuropsychological conditions that affect motor process and resulting speech disorders of phonation, articulation, resonance and prosody will be reviewed. Also covered will be the speech, language and hearing disorders stemming from craniofacial anomalies; cleft lip and palate. Principles and methods of assessment and treatment within an interdisciplinary rehabilitation framework will be reviewed for both types of disorders.

Prereq: COSI 405 or equivalent.

COSI 562. Medical Aspects of Speech Pathology III: Dysphagia (2)

Survey of clinical problems involving dysphagia in medical speech pathology. Normal swallowing, pediatric dysphagia, adult dysphagia, the clinical swallowing assessment, the modified barium swallow study, and therapeutic intervention for dysphagia for both adults and children will be addressed.

COSI 580. Aural Rehabilitation (3)

The effects of hearing impairment, especially related to speech perception and language processing. Remediation and intervention strategies for hearing impaired children and adults, including speech reading, auditory training, and the use of hearing aids.

COSI 600. Special Problems and Topics (1–3)

Topics and instructors by arrangement of the department chair.

COSI 601. Directed Study and Research (1–6)

Individual study and research under the direction of a faculty member.

COSI 651. Thesis M.A. (1–6)

COSI 690. Supervised Classroom Teaching (3)

Required of all doctoral students. Teaching of an undergraduate course planned in conjunction with a supervising faculty member. Follows the doctoral student’s earlier experience of observing and assisting a faculty member in classroom teaching.

COSI 701. Dissertation Ph.D. (1–18)

Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

COMPUTER SCIENCE

The College of Arts and Sciences awards the Bachelor of Arts degree in computer science. The required courses for the major and minor are offered by the Department of Electrical Engineering and Computer Science in the Case School of Engineering.

For details about the department’s undergraduate programs, please consult the Case School of Engineering section of this bulletin.

DEPARTMENT OF ECONOMICS

The College of Arts and Sciences awards the Bachelor of Arts degree in economics. The required courses for the major and minor are offered by the Department of Economics in the Weatherhead School of Management.

For details about the department’s undergraduate programs, please consult the Weatherhead School of Management section of this bulletin.

DEPARTMENT OF ENGLISH

106 Guilford House
www.case.edu/artsci/engl
Phone: 216-368-2364; Fax: 216-368-4367
William R. Siebenschu, Chair
E-mail: william.siebenschu@case.edu

The Department of English offers courses of study leading to the Bachelor of Arts, Master of Arts, and Doctor of Philosophy degrees. Included among the department’s offerings are literary and cultural studies, linguistics, film, journalism, creative writing, rhetoric and professional writing.

Combining the intellectual resources of a major research university with a scale and a set of values more typical of a liberal arts college, the department puts great stress on class discussion, individual conferences or tutorials, and other opportunities for students and faculty to work closely together. Likewise, the curriculum is deliberately flexible enough to respond to student needs and interests and to encourage close cooperation with the faculty in planning a course of study.

An undergraduate major in English prepares one first and foremost to be a thoughtful, responsible person and a lifelong learner. A major in English also prepares one for various sorts of careers. Three paths are common:

• English leads readily to careers that put a premium on writing skills and on the ability to analyze complex human situations. In addition to the fields that have often been of first interest to English majors (writing and publishing, journalism, advertising, the film industry, public relations, and teaching), significant opportunities exist in the corporate world, in government, and in nonprofit organizations such as those devoted to social service, the environment, or the arts.

• The B.A. in English is usually essential to anyone expecting to do graduate work in English or to pursue a career as a teacher or a scholar in the field.

• The B.A. in English traditionally has been an important steppingstone to success in professional school, and many of our English majors choose this path. A significant number go on to law school, many to medical or business school, and some to nursing, journalism, social work, or library school, as well as directly into the business world.

DEPARTMENT FACULTY

William R. Siebenschu, Ph.D.
(University of California, Berkeley)
Professor and Chair
18th- and 19th-century British literature; biography and autobiography

Kimberly Emmons, Ph.D.
(University of Washington)
Assistant Professor
Rhetoric; composition; gender and language

Christopher Flint, Ph.D.
(University of Pennsylvania)
Associate Professor; Director of Graduate Studies
18th-century English literature; history of the book

T. Kenneth Fountain, Ph.D.
(University of Minnesota)
Assistant Professor
Scientific and technical communication; vi-
sual rhetoric
Mary Grimm, M.A.
(Cleveland State University)
Associate Professor
Creative writing (fiction); contemporary literature

Megan Swihart Jewell, Ph.D.
(Duquesne University)
Instructor; Director, Writing Resource Center
19th-century American literature; poetics

Kurt Koenigsberger, Ph.D.
(Vanderbilt University)
Associate Professor; Associate Director, Society for Critical Exchange
19th- and 20th-century British literature; post-colonial literature

James Kuzner, Ph.D.
(Johns Hopkins University)
Assistant Professor
Renaissance literature: Shakespeare

William H. Marling, Ph.D.
(University of California, Santa Barbara)
Professor
American literature; modernism

John M. Orlock, M.E.A.
(Pennsylvania State University)
Samuel R. and Virginia C. Knight Professor of Humanities
Playwriting; screenwriting

Judith Oster, Ph.D.
(Case Western Reserve University)
Professor
The teaching of English; American literature; poetry

Robert Spadoni, Ph.D.
(University of Chicago)
Assistant Professor
Film studies

Gary Lee Stonum, Ph.D.
(Johns Hopkins University)
Osiiatt Professor
American literature; literary theory

Thirty Umrigar, Ph.D.
(Kent State University)
Associate Professor
Creative writing (fiction and memoir); journalism; African-American literature

Athena Vrettos, Ph.D.
(University of Pennsylvania)
Associate Professor
19th-century English literature, women’s studies

Martha Woodmansee, Ph.D.
(Stanford University)
Professor
Literary theory; 18th- and 19th-century literature; comparative literature; intellectual property

FACILITIES
In Strosacker Auditorium, the Film Society maintains facilities capable of projecting 35mm and 16mm films. In addition to manuscript and rare-book holdings in the Special Collections Division, Kelvin Smith Library has strengths in Renaissance literature, 18th- and 19th-century English literature, and American literature. The library also houses an outstanding collection of several thousand films and other audiovisual materials, supported in part by English department endowment funds. In the library’s Freedman Center, students have access to video cameras, state-of-the-art digital editing software, and stations where it is possible to view audiovisual materials from the library collection.

UNDERGRADUATE PROGRAMS
Major
The major in English includes two tracks. The primary track consists of at least 30 semester hours in English above the 100 level (including 15 hours at the 300 level or above). The required courses are ENGL 300 (English Literature to 1800); either ENGL 302 (English Literature since 1800) or ENGL 308 (American Literature); ENGL 380 (Departmental Seminar); ENGL 395 (Senior Capstone); and one course from the following list of courses dealing with literature before 1800: ENGL 310 (History of the English Language), ENGL 312 (Chaucer), ENGL 320 (Renaissance Literature), ENGL 323 (Milton), ENGL 324 (Shakespeare I), ENGL 325 (Shakespeare II), ENGL 326 (17th-Century Literature), ENGL 327 (18th-Century Literature), ENGL 328 (18th-Century Studies), and ENGL 329 (English Literature 1780-1837).

Because of the flexibility of departmental requirements and the variety of career paths to which the major may lead, all students should confer frequently and closely with advisors. No courses outside the department are required for the major, but the department recommends courses in comparative literature, history, philosophy, history and criticism of the fine arts, theater, and literature in other languages. Students planning to go to graduate school are reminded of the importance of foreign language study.

Completion of the University composition requirement (ENGL 150 or SAGES First Seminar) is a prerequisite for most English courses at the 200 level and above.

Departmental Honors
To qualify for honors, English majors follow a track consisting of at least 36 hours above the 100 level, including the general requirements for the major (see above); ENGL 387 (Critical Theory), or approved substitute; at least 18 hours of approved electives in literary and cultural studies; and one of the following language courses: FRCH 202, GREK 202, GRMN 202, JAPN 202, LATN 202, SPAN 202, or equivalent in a language for which 300-level literature courses are available. The award of honors requires a minimum GPA of 3.5 in courses taken for the Honors Program.

Teacher Licensure in Integrated Language Arts
A special program is available that leads to the B.A. and candidacy for licensure by the State of Ohio to teach Integrated Language Arts in grades 7-12 (Adolescents to Young Adults). The teaching credential is valid in Ohio, and it is honored in many other states. The program consists of a more prescriptive form of the normal English major and a series of education courses that includes student teaching in a local school. (See the program description for Teacher Licensure elsewhere in this bulletin.) Because of the student teaching and because some of the education courses must be taken at John Carroll University, early and careful planning is vital. Consult Judith Oster, the English advisor, for details about this program.

The subject area requirements for teacher licensure (42 credit hours) are as follows: ENGL 150, 200, 202, 204, 256, 300, 380, 390, 393; ENGL 255 or 257K; ENGL 259; ENGL 301, 307, 379, or COSI 313; two of ENGL 257B, 270, 362H, 365E, 365Q, 366G; ENGL 368A, 368B, or 368C. Recommended Electives: ENGL 203, 214, 303, 304, 310, 317, 392, 480.

Integrated Graduate Studies
The Department of English participates in the Integrated Graduate Studies program, which makes it possible to complete both a B.A. and an M.A. in English in about five years of full-time study. The department particularly recommends the program to qualified stu-
GRADUATE PROGRAMS
The Department of English offers programs in American and English literature and language leading to the Master of Arts and Doctor of Philosophy degrees. At either the M.A. or Ph.D. level, students may elect a concentration in Writing History and Theory. The department also collaborates with the Department of Modern Languages and Literatures in offering a Master of Arts in comparative literature.

COURSES DESCRIPTIONS

ENGL 148. Introduction to Composition (3) Practice and training in various modes and genres of writing. Undergraduate CIM students placed into ENGL 148 must complete the course with a grade of C or higher in order to enroll in ENGL 150.

ENGL 150. Expository Writing (3) Substantial training and practice in academic writing.

ENGL 180. Writing Tutorial (1-2) Substantial scheduled tutorial work in writing.

ENGL 181. Reading Tutorial (1) Scheduled tutorial in reading for those who need work beyond ENGL 148 or who come to the Writing Center seeking substantial help. May be repeated in special instances, but only one semester hour will count toward the degree.

ENGL 183. Academic Writing Studio (1) A course exploring basic issues and techniques of academic writing. Students who take it as early in the sequence as possible will be required to make up deficiencies without graduate credit. The department requires all candidates for admission to submit their scores on aptitude sections of the Graduate Record Examination. Candidates are also required to submit a writing sample, consisting of at least 15 pages of academic writing. Students whose native language is not English are normally admitted only as provisional students. After 12 semester hours of satisfactory work, they are granted regular status.

New and continuing graduate students may apply for graduate student assistantships, teaching is viewed as part of the education of every graduate student. The department provides opportunities for graduate assistants to gain teaching experience in a variety of English courses. Other teaching opportunities exist elsewhere in the university and in Greater Cleveland.

Although not formally a requirement for graduate degrees, teaching is viewed as part of the education of every graduate student. The department provides opportunities for graduate assistants to gain teaching experience in a variety of English courses. Other teaching opportunities exist elsewhere in the university and in Greater Cleveland.

New and continuing graduate students may apply for graduate student assistantships, which are awarded by the dean on recommendation of the department. Applicants with previous teaching experience are preferred. Graduate assistants without previous teaching experience are preferred. Applicants with previous teaching experience are preferred. The department provides opportunities for graduate assistants to gain teaching experience in a variety of English courses. Other teaching opportunities exist elsewhere in the university and in Greater Cleveland.

New and continuing graduate students may apply for graduate student assistantships, which are awarded by the dean on recommendation of the department. Applicants with previous teaching experience are preferred. Graduate assistants without previous teaching experience will be invited to consider some of the characteristic forms and functions imaginative literature has taken, together with some of the changes that have taken place in what and how readers read. Recommended preparation: Concurrent enrollment in ENGL 150 or USFS 100.

ENGL 200. Literature in English (3) This course introduces students to the reading of literature in the English language. Through close attention to the practice of reading, students are invited to consider some of the characteristic forms and functions imaginative literature has taken, together with some of the changes that have taken place in what and how readers read. Recommended preparation: Concurrent enrollment in ENGL 150 or USFS 100.

ENGL 202. Expository Writing (3) A course exploring basic issues and techniques of academic writing. Students who take it as early in the sequence as possible will be required to make up deficiencies without graduate credit. The department requires all candidates for admission to submit their scores on aptitude sections of the Graduate Record Examination. Candidates are also required to submit a writing sample, consisting of at least 15 pages of academic writing. Students whose native language is not English are normally admitted only as provisional students. After 12 semester hours of satisfactory work, they are granted regular status.

Recommended preparation: Concurrent enrollment in ENGL 150 or USFS 100.

ENGL 204. Introduction to Journalism (3) A course exploring basic issues and techniques of writing narrative prose and verse through exercises, analysis, and experiment. For students who wish to try their abilities across a spectrum of genres. Recommended preparation: ENGL 150 or USFS 100.

ENGL 213. Introduction to Fiction Writing (3) A beginning workshop in fiction writing, introducing such concepts as voice, point of view, plot, characterization, dialogue, description, and the like. May include discussion of literary examples,
both classic and contemporary, along with student work. Recommended preparation: ENGL 150 or USFS 100.

ENGL 214. Introduction to Poetry Writing (3)
A beginning workshop, focusing on such elements of poetry as verse-form, syntax, figures, sound, tone. May include discussion of literary examples as well as student work. Recommended preparation: ENGL 150 or USFS 100.

ENGL 217B. Writing for the Health Professions (3)
This course offers practice and training in the professional and technical writing skills common to health professions (e.g., medicine, nursing, dentistry). Attention will be paid to the writing processes of drafting, revising, and editing. Typical assignments include letters, resumes, personal science, professional communication genres (e.g., e-mail, reports, patient charts, and histories), and scholarly genres (e.g., abstracts, articles, and reviews). Recommended preparation: FSCC 100 or equivalent.

ENGL 255. Major British Writers (3)
Introduction to literary studies and survey of selected English authors from the Medieval period to the present. Recommended preparation: Concurrent enrollment in ENGL 150 or USFS 100.

ENGL 256. Major American Writers (3)
Introduction to literary studies and survey of literature of the United States from colonial times to the present. Recommended preparation: Concurrent enrollment in ENGL 150 or USFS 100.

ENGL 257A. The Novel (3)
Introductory readings in the novel. May be organized chronologically or thematically. Some attention to the novel as a historically situated genre.

ENGL 257B. Poetry (3)
Introductory readings in poetry. May be organized chronologically or thematically. Attention to the formal qualities of poetry in relation to meaning, expressivity, etc.

ENGL 270. Introduction to Gender Studies (3)
This course introduces women and men students to the methods and concepts of gender studies, women’s studies, and feminist theory. An interdisciplinary course, it covers approaches used in literary criticism, history, philosophy, political science, sociology, anthropology, psychology, film studies, cultural studies, art history, and religion. It is the required introductory course for students taking the women’s studies major. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 270, HSTY 270, PHIL 270, RLGN 270, and WGST 201.
Global & Cultural Diversity

ENGL 285. Special Topics Seminar (1)
One-credit seminars on special topics in literature or language; see departmental listings for topics each term. Maximum of 3 credits. Recommended preparation: ENGL 150 or USFS 100.

ENGL 290. Masterpieces of Continental Fiction (3)
Major works of fiction from the 19th century and earlier. Offered as ENGL 290 and WLIT 290.

ENGL 291. Masterpieces of Modern Fiction (3)
Major works of fiction of the 20th century. Offered as ENGL 291 and WLIT 291.

ENGL 300. English Literature to 1800 (3)
A survey of major British authors from Chaucer to Milton and Dryden. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 301. Linguistic Analysis (3)
Analysis of modern English from various theoretical perspectives: structural, generative, discourse analytical, sociolinguistic, psycholinguistic, and cognitive linguistic. Some attention to the major dialects of American English. Offered as ENGL 301 and ENGL 401. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 302. English Literature from 1800 to the 20th Century (3)
A survey of major British authors from Wordsworth to the present. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 303. Intermediate Writing Workshop: Fiction (3)
Continues developing the concepts and practice of the introductory courses, with reading, writing, and discussion of fiction in various forms, including the short story, the novella; and the novel. Maximum 6 credits. Prereq: ENGL 203 or ENGL 213.

ENGL 304. Intermediate Writing Workshop: Poetry (3)
Continues developing the concepts and practice of the introductory courses, with emphasis on the reading and revision as well as consideration of poetic genres through examples from established poets. Maximum 6 credits. Prereq: ENGL 203 or ENGL 214.

ENGL 305. Playwriting (3)
Theory and practice of dramatic writing, in the context of examples, classic and contemporary. Recommended preparation: ENGL 203 or ENGL 213 or ENGL 214 or ENGL 303 or ENGL 304. Offered as ENGL 305 and THTR 312.

ENGL 306. Intermediate Writing Workshop: Creative Non-Fiction (3)
A writing workshop that focuses on non-fiction (journals, memoirs, etc.) Students will study and write narrative journalism, the memoir, and the personal essay. Prereq: ENGL 203 or ENGL 213 or ENGL 214.

ENGL 307. Intermediate Writing Workshop: Journalism (3)
Continues developing the concepts and practices of the introductory course, with emphasis on feature writing for magazines, story structure, and reportorial techniques. Prereq: ENGL 204 and either ENGL 150 or 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 308. American Literature (3)
A survey of major American authors from the puritans to the present. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 309. Topics in Journalism (3)
Study and practice of specialized forms of journalism. Maximum of six credits. Recommended preparation: ENGL 150 or USFS 100.

ENGL 310. History of the English Language (3)
An introductory course covering the major periods of English language development: Old, Middle, and Modern. Students will examine both the linguistic forms and the cultures in which the forms were used. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 310 and ENGL 410.

ENGL 312. Chaucer (3)
An introduction to the work of Geoffrey Chaucer, with emphasis on “The Canterbury Tales.” Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 314. Advanced Playwriting (3)
Theory and practice of dramatic writing with special focus on the craft of writing a full-length play. Offered as ENGL 314 and THTR 314. Prereq: ENGL 305 or THTR 312.

ENGL 316. Screenwriting (3)
A critical exploration of the craft of writing for film, in which reading and practicum assignments will culminate in the student submitting an original full-length screenplay. Offered as ENGL 316 and THTR 316.

ENGL 317. Business and Technical Writing (3)
Professional communication in theory and practice, including audience analysis, logic and strategy applied to the writing of technical reports, proposals, manuals, progress and feasibility studies, memoranda, and letters. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 320. Renaissance Literature (3)
Aspects of English Renaissance literature and its contexts from 1500-ca. 1620. Genres studied might include poetry, drama, prose fiction, expository and polemic writing, or some works from Continental Europe. Writers such as Skelton, More, Erasmus, Wyatt, Sidney, Spenser, Marlowe, Lanier, Wroth, Shakespeare, Donne. Maximum 6 credits. Offered as ENGL 320 and ENGL 420. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 323. Milton (3) Poetry and selected prose, including the careful study of "Paradise Lost." Offered as ENGL 323 and ENGL 423. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 324. Shakespeare: Histories and Tragedies (3) Close reading of a selection of Shakespeare's tragedies and history plays (e.g., "Richard the Third," "Julius Caesar," "Hamlet," "King Lear"). Topics of discussion may include Renaissance drama as a social institution, the nature of tragedy, national history, gender roles, sexual politics, the state and its opponents, theatrical conventions. Assessment may include opportunities for performance. Offered as ENGL 324, ENGL 424, and THTR 334. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 325. Shakespeare: Comedies and Romances (3) Close reading of selected plays of Shakespeare in the genres of comedy and romance (e.g., "The Merchant of Venice," "Twelfth Night," "Measure for Measure," "The Tempest"). Topics of discussion may include issues of sexual desire, gender roles, marriage, the family, genre conventions. Assessment may include opportunities for performance. Offered as ENGL 325, ENGL 425, and THTR 335. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 327. Eighteenth-Century Literature (3) Survey of a variety of writings from or relevant to the eighteenth century. Writers discussed may include Dryden, Behn, Defoe, Pope, Swift, Gay, Fielding, Richardson, Burney, Wollstonecraft and others working in drama, lyric and epic poetry, biography and autobiography, political and philosophical writings and prose fiction. Thematic approaches may include: satire, journalism and literature, the rise of the novel. Maximum 6 credits. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 328. Studies in the Eighteenth Century (3) This course examines selected topics in the English literary culture of the eighteenth century, a culture which extended to the Americas and to other English colonies. Literary writings will be examined in relation to other aspects of the culture, which may include visual arts, marital institutions, the printing industry, property law, medicine, and other topics. Maximum 6 credits. Offered as ENGL 328 and ENGL 428. Prereq: 100 level first year seminar in USFS, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 329. English Literature, 1780-1837 (3) Aspects of English literature and its contexts in the early 19th century. Genres might include poetry, prose fiction, political and philosophical writing, literary theory of the period. Writers such as the Wordsworth, Coleridge, Blake, Austen, Byron, the Shelleys. Maximum 6 credits. Offered as ENGL 329 and ENGL 429. Prereq: 100 level first year seminar in USFS, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 330. Victorian Literature (3) Aspects of English literature and its contexts during the reign of Queen Victoria. Genres studied might include poetry, prose fiction, political and philosophical writing. Writers such as the Brontes, Gaskell, Dickens, Eliot, Hardy, Tennyson, the Brownings, Arnold, Carlyle, Ruskin, Goss, Swinburne, and Hopkins. Maximum 6 credits. Prereq: 100 level first year seminar in USFS, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 331. Studies in the Nineteenth-Century (3) Individual topics in English literary culture of the 19th century. Topics might be thematic or formal, such as literature and science, medicine, labor, sexuality, or Empire; literature and other arts; Gothic fiction, decadence. Maximum 6 credits. Offered as ENGL 331 and ENGL 431. Prereq: 100 level first year seminar in USFS, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 332. Twentieth-Century British Literature (3) Aspects of British literature (broadly interpreted) and its contexts during the 20th century. Genres studied might include poetry, fiction, and drama. Such writers as Joyce, Woolf, Conrad, Ford, Lawrence, Mann, Shaw, Beckett, Stoppard, Yeats, Edward or Dylan Thomas, Stevie Smith, Bowen, Spark. Maximum 6 credits. Offered as ENGL 332 and ENGL 432. Prereq: 100 level first year seminar in USFS, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 333. Studies in the Twentieth Century (3) Individual topics in twentieth-century literary culture. Particular issues and topics may cross national boundaries and genre lines as well as explore political, psychological, and social themes, such as movements, comparative studies across the arts, literature and war, literature and occultism. Maximum 6 credits. Offered as ENGL 333 and ENGL 433. Prereq: 100 level first year seminar in USFS, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 334. Shakespeare: Histories and Tragedies (3) Offered as ENGL 324, ENGL 424, and THTR 334. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGLISH 335. Major Writers (3) Close and detailed study of the work of one or two writers: development, social and aesthetic contexts, reception, interpretation, significance. Maximum 6 credits. Offered as ENGL 353 and ENGL 453. Prereq: 100 level first year seminar in USFS, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 336. American Literature Before 1865 (3) Aspects of American literature and its contexts from the colonial period through the end of the Civil War. Writers such as Bradstreet, Taylor, Franklin, Poe, Stowe, Alcott, Melville, Hawthorne, Emerson, Douglass. Maximum 6 credits. Offered as ENGL 356 and ENGL 456. Prereq: 100 level first year seminar in USFS, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 337. American Literature 1865-1914 (3) Aspects of American literature and its contexts from the Civil War to the First World War. Writers such as Whitman and Dickinson, Twain, Howells, James, Chopin, Wharton. Maximum 6 credits. Offered as ENGL 357 and ENGL 457. Prereq: 100 level first year seminar in USFS, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 338. American Literature 1914-1960 (3) Aspects of American literature and its contexts from the First World War to the Cold War. Genres studied might include fiction, poetry, drama, polemics. Writers such as T.S. Eliot, Pound, Stevens, Moore, W.C. Williams, Dos Passos, West, Fitzgerald, Hemingway, Cather, Faulkner, Barnes, Miller, T. Williams, O’Neill. Maximum 6 credits. Offered as ENGL 358 and ENGL 458. Prereq: 100 level first year seminar in USFS, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 339. Studies in Contemporary American Literature (3) Individual topics in literary culture since the 1960s. Topics may include the Beats, literature of the Vietnam war, post-modern fiction, contemporary poetry, the documentary novel. Maximum 6 credits. Offered as ENGL 359 and ENGL 459. Prereq: 100 level first year seminar in USFS, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 340. Studies in American Literature (3) Individual topics in American literary culture such as regionalism, realism, impressionism, literature and popular culture, transcendentalism, the lyric, proletarian literature, the legacy of the Civil War. Maximum 6 credits. Prereq: 100 level first year seminar in USFS, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 341. Modern American Literature (3) Offered as ENGL 341 and ENGL 441. Prereq: 100 level first year seminar in USFS, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.
ENGL 363H. African-American Literature (3)
A historical approach to African-American literature. Such writers as Wheatley, Equiano, Douglass, Jacobs, DuBois, Hurston, Hughes, Wright, Baldwin, Ellison, Morrison. Topics covered may include slave narratives, African-American autobiography, the Harlem Renaissance, the Black Aesthetic, literature or protest and assimilation. Maximum 6 credits. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 363H, ETHS 363H, WLIT 363H, ENGL 463H, and WLIT 463H. Global & Cultural Diversity

ENGL 365E. The Immigrant Experience (3)
Study of fictional and/or autobiographical narrative by authors whose families have experienced immigration to the U.S. Among the ethnic groups represented are Asian-American, Jewish-American, Hispanic-American. May include several ethnic groups or focus on a single one. Attention is paid to historical and social aspects of immigration and ethnicity. Maximum 6 credits. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 365E, WLIT 365E, ENGL 465E, and WLIT 465E. Global & Cultural Diversity

ENGL 365N. Topics in African-American Literature (3)
Selected topics and writers from nineteenth and twentieth-century African-American literature. May focus on a genre, a single author or a group of authors, a theme or themes. Maximum 6 credits. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 365N, ETHS 365N, WLIT 365N, ENGL 465N, and WLIT 465N. Global & Cultural Diversity

ENGL 365Q. Post-Colonial Literature (3)
Readings in national and regional literatures from former European colonies such as Australia and African countries. Maximum 6 credits. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 365Q, ETHS 365Q, WLIT 365Q, ENGL 465Q, and WLIT 465Q. Global & Cultural Diversity

ENGL 366G. Minority Literatures (3)
A course dealing with literature produced by ethnic and racial minority groups within the U.S. Individual offerings may include works from several groups studied comparatively, or focus on a single group, such as Native Americans, Chicano/Chicana, Asian-Americans, Caribbean-Americans. African-American works may also be included. May cover the entire history of the U.S. or shorter periods. Maximum 6 credits. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 366G, WLIT 466G, ENGL 466G, and WLIT 466G. Global & Cultural Diversity

ENGL 367. Introduction to Film (3)
An introduction to the aesthetics of film form. We will analyze the elements that make up a film, screening films that facilitate our discussion of how these elements interact with one another to constitute whole formal systems that generate meanings and other effects. We will bring various theoretical and historical considerations to bear as we explore and appreciate the art of cinema. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 367 and ENGL 467.

ENGL 368A. Film History, Theory, and Criticism (3)
This course is an introduction to the three major approaches to cinema that together constitute the field of film studies. The course will be broken into three units: film theory; film criticism; and film history. Screening one film per week, we will consider each film in light of the particular unit’s and week’s focus. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 368A, WLIT 368A, ENGL 468A, and WLIT 468A.

ENGL 368B. History of Film (3)
Analysis of selected topics in film history, such as film before 1940, American cinema 1940 to the present. European or Asian cinema since 1940. Maximum 6 credits. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 368B and ENGL 468B.

ENGL 368C. Topics in Film (3)
Individual topics in film, such as a particular national cinema, images of women in film, film comedy, New Wave film, literature and film. Maximum 12 credits. Offered as ENGL 368C, WLIT 368C, ENGL 468C, and WLIT 468C.

ENGL 371. Topics in Women’s Studies (3)
Individual topics and issues in women’s studies relating to writing by and about women, such as feminist theory and criticism; the politics of gender and sexuality; women in popular culture; women in the writing business. Maximum 6 credits. Offered as ENGL 371 and ENGL 471. Prereq: 100 level first year seminar in USFS, FSNA, FSNO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 372. Studies in the Novel (3)
Selected topics in the history and formal development of the novel, such as detective novels; science fiction; epistolary novels; the rise of the novel; the stream of consciousness novel; the Bildungsroman in English. Maximum 6 credits. Offered as ENGL 372 and ENGL 472. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSNO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 373. Studies in Poetry (3)
Selected topics and issues in the study of poetry, such as reading poetry, the elegy, pastoral poetry, love poetry, the long poem, form and meter in poetry. Maximum 6 credits. Offered as ENGL 373 and ENGL 473.

ENGL 374. Internship in Journalism (3–6)
Students work as interns at area newspapers, magazines, trade publications, radio or television and meet as a class to share their experiences as interns and to focus on editorial issues—reporting, writing, fact-checking, editing—that are a part of any journalistic enterprise. Students are responsible for pre-arranging their internship prior to the semester they intend to take the class but can expect guidance from the instructor in this regard. Recommended preparation: ENGL 204 or permission of the department.

ENGL 375. Internship in Technical Communication (3–6)
Students create technical and professional documents in a selected corporate or organizational setting, do assigned reading, and meet as a class to participate in seminar discussions and review of work. Students must pre-arrange internship assignment with instructor prior to semester. Recommended preparation: ENGL 317 or ENGL 398N and permission of department.

ENGL 376. Studies in Genre (3)
Topics in literary genres, such as comedy, biography and autobiography, satire, allegory, the short story, the apologue, narrative poetry. May cross over the prose/poetry boundary. Maximum 6 credits. Offered as ENGL 376 and ENGL 476. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSNO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 379. Topics in Language Studies (3)
Aspects of contemporary language studies. Topics such as history of rhetoric, Saussurean linguistics, generative grammar, psycholinguistics, sociolinguistics, cognitive and construction grammars, metaphor, language acquisition, stylistics. Maximum 9 credits. Offered as ENGL 379 and ENGL 479. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSNO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 380. Departmental Seminar (3)
The English departmental seminar, recommended for the junior year. A topical course, emphasizing disciplinary forms of writing. The class will incorporate an advising function, so that students are prepared for choosing a project for their Capstone Seminar. Prereq or Coreq: ENGL 300. SAGES Dept Seminar

ENGL 385. Special Topics in Literature (3)
Close study of a theme or aspect of literature not covered by traditional generic or period rubrics, such as “spatial imagination,” “semiotics of fashion in literature,” “epistolary.” Maximum 9 credits. Offered as ENGL 385 and ENGL 485. Prereq: 100 level first year seminar in USFS, FSCC,
ENGL 386. Studies in Literature and Culture (3)
Boundary-crossing study of the relations between literary and other aspects of a particular culture or society, including theoretical and critical issues raised by such study. For example, literature and medicine, gay and lesbian literature, Asian/ Western literary relations, emotion in literature, philosophy and literature, literature and music. Maximum 9 credits. Offered as ENGL 366 and ENGL 466. Prereq: 100 level first year seminar in USFS, FSCE, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 387. Literary and Critical Theory (3)
A survey of major schools and texts of literary and critical theory. May be historically or thematically organized. Maximum 6 credits. Offered as ENGL 387, WLLT 387, ENGL 487, and WLLT 487. Prereq: 100 level first year seminar in USFS, FSCE, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 390. Independent Study and Creative Projects (1-6)
Up to six semester hours of independent study may be taken in a single semester. Must have prior approval of faculty member directing the project. Projects may be critical or creative in nature.

ENGL 392. Classroom Teaching (3)
For undergraduate students who assist in the teaching of ENGL 150, 180, or 181. Interested students should check with the director of composition (for ENGL 150, 180, or 181) before the beginning of the semester in which they wish to participate. May be repeated only once; not more than three semester hours in ENGL 392 may be counted toward the major. Prereq: ENGL 382. Offered as ENGL 382, USFS 100.

ENGL 395. Capstone Seminar (3)
Capstone course, to be taken in the senior year. Open to non-English majors. Required for the English Honors Track. Features individual projects in a workshop environment; students have the option of a research-based or a creative writing project. Prereq: ENGL 300 and ENGL 380. SAGES Senior Cap

ENGL 398. Professional Communication for Engineers (2)
A writing course for Engineering students only, covering academic and professional genres of written and oral communication. Taken in conjunction with Engineering 398, English 398 constitutes an approved SAGES Departmental Seminar. Prereq: ENGL 150 or 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS. Coreq: ENGR 398. SAGES Dept Seminar

ENGL 398N. Professional Communication for Engineers (3)
Principles and practices of effective communication in the workplace, with an emphasis on computer-mediated communication. Topics include analyzing audience needs in context, visual communication, computer-mediated documents, ethics, and team writing. Typical assignments include e-mail, memos, letters, reports, documentation, and oral presentations. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS or ENGL 150.

ENGL 399. Senior Thesis (3)
Elective research or creative project. Should be used for Honors Projects option. By department approval only. Maximum 6 credits.

ENGL 400. Rhetoric and Teaching of Writing (3)
Classical and modern theories of rhetoric; their application in the classroom. Required of graduate assistants and tutors who have had no prior experience in the teaching of composition. Prereq: Graduate standing.

ENGL 401. Linguistic Analysis (3)
Analysis of modern English from various theoretical perspectives: structural, generative, discourse analytical, sociolinguistic, psycholinguistic, and cognitive linguistic. Some attention to the major dialects of American English. Offered as ENGL 301 and ENGL 401.

ENGL 406. Advanced Creative Writing (3)
Workshop for serious undergraduate and graduate writers. Offered alternate years; alternates between poetry and fiction. Admission requires review of writing sample by faculty. Maximum 6 credits.

ENGL 410. History of the English Language (3)
An introductory course covering the major periods of English language development: Old, Middle, and Modern. Students will examine both the linguistic forms and the cultures in which the forms were used. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 310 and ENGL 410.

ENGL 420. Renaissance Literature (3)
Aspects of English Renaissance literature and its contexts from 1500-ca. 1620. Genres studied might include poetry, drama, prose fiction, expository and polemic writing, or some works from Continental Europe. Writers such as Skelton, More, Erasmus, Wyatt, Sidney, Spenser, Marlowe, Lanier, Wroth, Shakespeare, Donne. Maximum 6 credits. Offered as ENGL 320 and ENGL 420.

ENGL 423. Milton (3)
Poetry and selected prose, including the careful study of “Paradise Lost.” Offered as ENGL 323 and ENGL 423.

ENGL 424. Shakespeare: Histories and Tragedies (3)
Close reading of a selection of Shakespeare’s tragedies and history plays (e.g., “Richard the Third,” “Julius Caesar,” “Hamlet,” “King Lear”). Topics of discussion may include Renaissance drama as a social institution, the nature of tragedy, national history, gender roles, sexual politics, the state and its opponents, theatrical conventions. Assessment may include opportunities for performance. Offered as ENGL 324, ENGL 424, and THTR 334.

ENGL 425. Shakespeare: Comedies and Romances (3)
Close reading of selected plays of Shakespeare in the genres of comedy and romance (e.g., “The Merchant of Venice,” “Twelfth Night,” “Measure for Measure,” “The Tempest”). Topics of discussion may include issues of sexual desire, gender roles, marriage, the family, genre conventions. Assessment may include opportunities for performance. Offered as ENGL 325, ENGL 425, and THTR 335.

ENGL 428. Studies in the Eighteenth Century (3)
This course examines selected topics in the English literary culture of the eighteenth century, a culture which extended to the Americas and to other English colonies. Literary writings will be examined in relation to other aspects of the century culture, which may include visual arts, marital institutions, the printing industry, property law, medicine, and other topics. Maximum 6 credits. Offered as ENGL 328 and ENGL 428.

ENGL 429. English Literature, 1780-1837 (3)
Aspects of English literature and its contexts in the early 19th century. Genres might include poetry, prose fiction, political and philosophical writing, literary theory of the period. Writers such as the Wordsworth, Coleridge, Blake, Austen, Byron, the Shelleys. Maximum 6 credits. Offered as ENGL 329 and ENGL 429.

ENGL 431. Studies in the Nineteenth-Century (3)
Individual topics in English literary culture of the 19th century. Topics might be thematic or formal, such as literature and science, medicine, labor, sexuality, or Empire; literature and other arts; Gothic fiction, decadence. Maximum 6 credits. Offered as ENGL 331 and ENGL 431.

ENGL 432. Twentieth-Century British Literature (3)
Aspects of British literature (broadly interpreted) and its contexts during the 20th century. Genres studied might include poetry, fiction, and drama. Such writers as Joyce, Woolf, Conrad, Ford, Lawrence, Mansfield, Shaw, Beckett, Stoppard, Yeats, Edward or Dylan Thomas, Stevie Smith, Bowen, Spark. Maximum 6 credits. Offered as ENGL 332 and ENGL 432.
ENGL 433. Studies in the Twentieth Century (3)
Individual topics in twentieth-century literary culture. Particular issues and topics may cross national boundaries and genre lines as well as explore political, psychological, and social themes, such as movements, comparative studies across the arts, literature and war, literature and occultism. Maximum 6 credits. Offered as ENGL 333 and ENGL 433.

ENGL 453. Major Writers (3)
Close and detailed study of the work of one or two writers: development, social and aesthetic contexts, reception, interpretation, significance. Maximum 6 credits. Offered as ENGL 353 and ENGL 453.

ENGL 456. American Literature Before 1865 (3)
Aspects of American literature and its contexts from the colonial period through the end of the Civil War. Writers such as Bradstreet, Taylor, Franklin, Poe, Stowe, Alcott, Melville, Hawthorne, Emerson, Douglass. Maximum 6 credits. Offered as ENGL 356 and ENGL 456.

ENGL 457. American Literature 1865–1914 (3)
Aspects of American literature and its contexts from the Civil War to the First World War. Writers such as Whitman and Dickinson, Twain, Howells, James, Chopin, Wharton. Maximum 6 credits. Offered as ENGL 357 and ENGL 457.

ENGL 458. American Literature 1914–1960 (3)
Aspects of American literature and its contexts from the First World War to the Cold War. Genres studies might include fiction, poetry, drama, polemics. Writers such as T.S. Eliot, Pound, Stevens, Moore, W.C. Williams, Dos Passos, West, Fitzgerald, Hemingway, Cather, Faulkner, Barnes, Miller, T. Williams, O’Neill. Maximum 6 credits. Offered as ENGL 358 and ENGL 458.

ENGL 459. Studies in Contemporary American Literature (3)
Individual topics in literary culture since the 1960s. Topics may include the Beats, literature of the Vietnam war, post-modern fiction, contemporary poetry, the documentary novel. Maximum 6 credits. Offered as ENGL 359 and ENGL 459.

ENGL 463H. African-American Literature (3)
A historical approach to African-American literature. Such writers as Wheatley, Equiano, Douglass, Jacobs, DuBois, Hurston, Hughes, Wright, Baldwin, Ellison, Morrison. Topics covered may include slave narratives, African-American autobiography, the Harlem Renaissance, the Black Aesthetic, literature or protest and to assimilation. Maximum 6 credits. Recommended preparation: ENGL 150 or USFS 100.

ENGL 465E. The Immigrant Experience (3)
Study of fictional and/or autobiographical narrative by authors whose families have experienced immigration to the U.S. Among the ethnic groups represented are Asian-American, Jewish-American, Hispanic-American. May include several ethnic groups or focus on a single one. Attention is paid to historical and social aspects of immigration and ethnicity. Maximum 6 credits. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 365E, WLIT 365E, ENGL 465E, and WLIT 465E.

ENGL 465N, Topics in African–American Literature (3)
Selected topics and writers from nineteenth and twentieth-century African-American literature. May focus on a genre, a single author or a group of authors, a theme or themes. Maximum 6 credits. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 365N, WLIT 365N, ENGL 465N, and WLIT 465N.

ENGL 465Q, Post-Colonial Literature (3)
Readings in national and regional literatures from former European colonies such as Australia and African countries. Maximum 6 credits. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 365Q, WLIT 365Q, WLIT 365Q, ENGL 465Q, and WLIT 465Q.

ENGL 466G. Minority Literatures (3)
A course dealing with literature produced by ethnic and racial minority groups within the U.S. Individual offerings may include works from several groups studied comparatively, or focus on a single group, such as Native Americans, Chicanos/Chicanas, Asian-Americans, Caribbean-Americans. African-American works may also be included. May cover the entire history of the U.S. or shorter periods. Maximum 6 credits. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 366G, WLIT 466G, ENGL 466G, and WLIT 466G.

ENGL 467. Introduction to Film (3)
An introduction to the aesthetics of film form. We will analyze the elements that make up a film, screening films that facilitate our discussion of how these elements interact with one another to constitute whole formal systems that generate meanings and other effects. We will bring various theoretical and historical considerations to bear as we explore and appreciate the art of cinema. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 367 and ENGL 467.

ENGL 468A. Film History, Theory, and Criticism (3)
This course is an introduction to the three major approaches to cinema that together constitute the field of film studies. The course will be broken into three units: film theory; film criticism; and film history. Screening one film per week, we will consider each film in light of the particular unit’s and week’s focus. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 368A, WLIT 368A, ENGL 468A, and WLIT 468A.

ENGL 468B. History of Film (3)
Analysis of selected topics in film history, such as film before 1940, American cinema 1940 to the present, European or Asian cinema since 1940. Maximum 6 credits. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 368B and ENGL 468B.

ENGL 468C. Topics in Film (3)
Individual topics in film, such as a particular national cinema, images of women in film, film comedy, New Wave film, literature and film. Maximum 12 credits. Offered as ENGL 368C, WLIT 368C, ENGL 468C, and WLIT 468C.

ENGL 471. Topics in Women’s Studies (3)
Individual topics and issues in women’s studies relating to writing by and about women, such as feminist theory and criticism; the politics of gender and sexuality; women in popular culture; women in the writing business. Maximum 6 credits. Offered as ENGL 371 and ENGL 471.

ENGL 472. Studies in the Novel (3)
Selected topics in the history and formal development of the novel, such as detective novels; science fiction; episiotary novels; the rise of the novel; the stream of consciousness novel; the Bildungsroman in English. Maximum 6 credits. Offered as ENGL 372 and ENGL 472.

ENGL 473. Studies in Poetry (3)
Selected topics and issues in the study of poetry, such as reading poetry, the elegy, pastoral poetry, love poetry, the long poem, form and meter in poetry. Maximum 6 credits. Offered as ENGL 373 and ENGL 473.

ENGL 476. Studies in Genre (3)
Topics in literary genres, such as comedy, biography and autobiography, satire, allegory, the short story, the apologue, narrative poetry. May cross over the prose/poetry boundary. Maximum 6 credits. Offered as ENGL 376 and ENGL 476.

ENGL 479. Topics in Language Studies (3)
Aspects of contemporary language studies. Topics such as history of rhetoric, Saussurean linguistics, generative grammar, psycholinguistics, sociolinguistics, cognitive and construction grammars, metaphor, language acquisition, stylistics. Maximum 9 credits. Offered as ENGL 379 and ENGL 479.

ENGL 480. ESL Composition Theory (3)
Study of theories related to teaching ESL composition, including second language acquisition;
specialized grammar related to common ESL problems; cultural and affective issues; different Englishes; composition theory and research as it relates to ESL.

ENGL 485. Special Topics in Literature (3)
Close study of a theme or aspect of literature not covered by traditional generic or period rubrics, such as “spatial imagination,” “semiotics of fashion in literature,” “epistolariology.” Maximum 9 credits. Offered as ENGL 385 and ENGL 485.

ENGL 486. Studies in Literature and Culture (3)
Boundary-crossing study of the relations between literary and other aspects of a particular culture or society, including theoretical and critical issues raised by such study. For example, literature and medicine, gay and lesbian literature, Asian/Western literary relations, emotion in literature, philosophy and literature, literature and music. Maximum 9 credits. Offered as ENGL 386 and ENGL 486.

ENGL 487. Literary and Critical Theory (3)
A survey of major schools and texts of literary and critical theory. May be historically or thematically organized. Maximum 6 credits. Offered as ENGL 387, WLIT 387, ENGL 487, and WLIT 487.

ENGL 501. Theories of Rhetoric (3)

ENGL 502. Critical Theory (3)
Theories and methods of contemporary literary study. Required of all graduate degree-seeking students.

ENGL 506. Professional Writing: Theory and Practice (3)
Prepares graduate students to teach disciplinary forms of writing, including technical and professional writing, in academic and non-academic settings. Prereq: ENGL 400.

ENGL 508. Seminar: English Literature 1550–1660 (3)

ENGL 510. Research Methods (3)
This course focuses on methods and resources for research in English, including substantial treatments of narrative, poetic, and close-reading skills. It introduces graduate students to questions of textuality, genre, medium, authorship, reception, historiography, and bibliography. It features an introduction to libraries, special collections, InterLibrary Loan, and print and computer databases (including internet resources and the Oxford English Dictionary). The Research Methods course invites students to develop professional attitudes toward the study of English language and literature and offers a common base and vocabulary to students whose professional interests will inevitably diverge in the course of their study.

ENGL 517. Seminar: American Literature (3)
ENGL 518. Seminar: English Literature 1660–1800 (3)
ENGL 519. Seminar: English Literature 1800–1900 (3)
ENGL 520. Seminar: 20th Century Literature (3)
ENGL 521. Seminar: The Novel (3)
ENGL 522. Seminar: Topics in Poetry (3)
ENGL 524. Seminar: Criticism and Other Special Topics (3)
ENGL 525. Intellectual Property and the Construction of Authorship (3)
“Authorship” and “invention” are among the West’s most powerful ideas—the categories by which creative production has been defined and valued for the last two centuries. We will investigate the emergence and consolidation of these ideas in the context of some of the institutions, technologies, and practices that have fostered and been fostered by them, such as printing and publishing, copyright and patent law, education curricula and disciplinary pedagogies. Then we will turn our attention to the varieties of authorship and invention in operation today—from the solitary ethos characteristic of the arts and humanities to the collaborative, even corporate, forms in ascendance in science and industry. How are ideas of authorship and invention employed in the various discursive spheres to assign credit and responsibility? May tensions be found with creative practice? What are the stakes? Who wins, who loses? And what will be the consequences of digitization and globalization? Our study will culminate in attendance at an interdisciplinary conference on “Con/texts of Invention” which will take place at Case Western Reserve on April 21-23. The goal of our study will be to identify worthy research topics within students’ own areas of interest. Prereq: ENGL 525 and HSTY 525.

ENGL 519. Seminar: English Literature 1800–1900 (3)

ENGL 518. Seminar: English Literature 1660–1800 (3)

ENGL 517. Seminar: American Literature (3)

ENGL 519. Seminar: English Literature 1800–1900 (3)

ENGL 520. Seminar: 20th Century Literature (3)

ENGL 521. Seminar: The Novel (3)

ENGL 522. Seminar: Topics in Poetry (3)

ENGL 524. Seminar: Criticism and Other Special Topics (3)

ENGL 525. Intellectual Property and the Construction of Authorship (3)

PROGRAM ADVISORY COMMITTEE
Peter L. McCall, J.D., Ph.D.
Professor of Geological Sciences; Director, Environmental Studies Program
John Broich, Ph.D.
Assistant Professor of History
Joseph E. Koonce, Ph.D.
Professor of Biology
Gerald Matisoff, Ph.D.
Professor of Geological Sciences
John Ruhl, Ph.D.
Professor of Physics
Peter Shulman, Ph.D.
Assistant Professor of History
Theodore Steinberg, Ph.D.
Adeline Barry Davee Distinguished Professor of History; Professor, Case Western Reserve University School of Law
Sara Waller, Ph.D.
Assistant Professor of Philosophy
Joseph White, Ph.D.
Luxembourg Family Professor of Public Policy, Department of Political Science

UNDERGRADUATE PROGRAMS

ENGL 701. Dissertation Ph.D. (1-18)
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

ENVIRONMENTAL STUDIES PROGRAM
211 A. W. Smith Building
www.case.edu/artsci/estd
Phone: 216-368-3676; Fax: 216-368-3691
Peter L. McCall, Director
E-mail: peter.mccall@case.edu

Environmental Studies is a multidisciplinary program that introduces students to the societal determinants and implications of environmental problems. The program emphasizes the moral, cultural, and political dimensions of environmental problems and solutions that arise from scientific understanding of the environment, bringing to bear the issues and methods of the humanities and social sciences as well as those of the sciences and the professions. The program is designed to serve the needs of students seeking a liberal education or a broad intellectual base for more technical training in environmental sciences. Students can pursue a major or a minor in environmental studies.

ENGL 651. Thesiss M.A. (1-18)
Prereq: Dissertation research consent or advanced to M.A. candidacy milestone.
Major
The Environmental Studies program offers a major (30 credit hours) leading to the Bachelor of Arts degree. However, it may be elected only as a second major. The double major is required so that the multidisciplinary perspective offered by the program will be complemented by a concentrated disciplinary major. To declare the major, students should have declared a first major and have sophomore or junior standing. Up to six credits in required and elective courses taken by students for their first major may be applied to their environmental studies major. None of the required courses may be taken pass/no pass.

The required courses are:
- ESTD 101. Introduction to Environmental Thinking
- ESTD 398. Environmental Seminar

In addition, one course from each of the following disciplinary groups is required:

HUMANITIES
- PHIL 414. Animal Cognition and Consciousness
- HSTY 378. History of the American Environment
- HSTY 327. Comparative Environmental History

SOCIAL POLICY
- ECON 368. Environmental Economics
- GEOL 303/POSC 303. Environmental Law

SCIENCE AND ENGINEERING
- EECs 342. Introduction to Global Issues
- BIOL 351. Principles of Ecology
- GEOL 202. Global Environmental Problems

If a required course is not offered, substitution of a course to fulfill the distribution requirement is possible only with permission of the program director.

At least 15 credit hours must be taken from a list of approved electives. This list will change from time to time as departmental offerings change; please consult the program director for updated information. An approved Washington Study internship or summer field course may be used to satisfy part or all of the elective requirement. All programs of study must be approved by the director.

Minor
The minor in environmental studies (15 credit hours) consists of:
- ESTD 101
- one course each from two of the three disciplinary groups above
- two of the approved electives, which may include courses from the third disciplinary group

COURSE DESCRIPTIONS

ESTD 101. Introduction to Environmental Thinking (3)
Critical comparison of scientific, historical, religious, and literary conceptions of nature. Theories of environmental ethics, legal, and economic conceptions of environmental goods. Current controversies concerning human population growth, energy use, the consumer society, and attitudes towards animals.

ESTD 398. Seminar in Environmental Studies (3)
Small group discussion and student presentations concerning the cultural determinants of environmental attitudes. Each student presents two seminars on current environmental issues, one local and one global. Recommended preparation: ESTD 101.

ETHNIC STUDIES PROGRAM
204 Guilford House
www.case.edu/arts/ethnic
Phone: 216-368-4885; Fax: 216-368-2216
Gilbert Doho, Director
E-mail: gilbert.doho@case.edu

The goal of the Ethnic Studies program is to expand and enhance the university’s course offerings on ethnicity and race in the United States. The program’s objectives are: (1) to examine relationships among racial/ethnic groups, the processes of racial/ethnic formation, and their interactions with class, gender, and sexuality at the personal and collective levels; (2) to foster the development of research skills in a broad range of disciplines in the humanities; (3) to contribute to an interdisciplinary knowledge of the challenges and contributions of ethnic minorities in the United States; (4) to impart to students a deep knowledge of the cultures of Africa and Latin America; (5) to help students develop competencies for working with people of different racial/ethnic backgrounds and to foster an understanding of racial/ethnic diversity; (6) to support students and faculty in the transmission of knowledge, in the discovery and development of new ideas, and in research and writing in the field of ethnic studies; (7) to inculcate in students an understanding of the complexity and challenges of multiethnic societies, and to prepare them for careers in education, business, law, government service, social work, social welfare, health care, teaching, public policy, law enforcement, urban and community development, and the arts.

Ethnic Studies is an interdisciplinary program. The program aims to develop fundamental skills in critical and global thinking and in comparative analysis, as well as an understanding of the interactions of race, class, gender, and sexuality in the experiences of a range of social groups. It is designed to bring together a community of students, faculty, and staff devoted to the transmission of knowledge and the discovery of new ideas in the field of ethnic studies. Ethnic Studies also offers diverse perspectives that challenge monolithic thinking about the formation of identities and societies.

The program’s core courses focus on the exploration and comparison of the cultures, history, politics, and economics of Africa, Latin America, and their diasporas. Program offerings explore ethnicity and cross-cultural exchange globally and in postcolonial frames. Ethnic Studies supports research pertinent to the field and encourages cultural and academic exchange among scholars and students.

The program is part of the university’s mission to enhance the recruitment, retention, and excellence of a diverse faculty and student body. Our long-term goals are to extend program offerings to encompass other ethnic minority groups and to develop a center that will foster an appreciation of ethnic diversity and difference in the learning and research communities of Case Western Reserve University.

PROGRAM ADVISORY COMMITTEE
Gilbert Doho, Ph.D.
Associate Professor of Modern Languages and Literatures; Director, Ethnic Studies Program

Alice Bach, Ph.D.
Archbishop Paul J. Hallinan Professor of Catholic Studies, Department of Religious Studies

Joy Bostic, Ph.D.
Assistant Professor of Religious Studies

M. Gabriela Copertari, Ph.D.
Assistant Professor of Modern Languages and Literatures

Atwood D. Gaines, Ph.D., M.P.H.
Professor of Anthropology

Kurt Koenigsberger, Ph.D.

CASE WESTERN RESERVE UNIVERSITY
UNDERGRADUATE PROGRAMS

Minor
The ethnic studies minor is open to all undergraduate students. It requires a minimum of 15 credit hours. Students are required to take 6 credits from among ethnic studies core courses and 9 credits in their chosen areas of concentration. Community projects are strongly recommended, and students are encouraged to carry out field research in their areas of concentration.

I. Core Courses (6 credits)
The core courses are designed to introduce students to the interdisciplinary field of ethnic studies. Courses may be individually or team taught and will sometimes be conducted in seminar format. Students are encouraged to use the tools and perspectives of several disciplines (history, literature, art history, anthropology, film, sociology, and political science, for example) to address the experiences of African-Americans and Latino/a Americans. Courses center on the examination of social, cultural, political, and economic structures that shape the life of these ethnic minorities in the United States. They examine how race, class, and gender have impacted their identities as well as their economic, social, political, and cultural productions. Assignments and courses make maximum use of the archives and collections of University Circle institutions.

- ETHS 251 Introduction to the Study of Race and Ethnicity (3)
- ETHS 252 Introduction to African-American Studies (3)
- ETHS 252B Introduction to Latino/a Studies (3)
- ETHS 253A Introduction to Modern African History (3) (Cross-listed with HSTY 135)
- ETHS 253B Introduction to Latin American History (3)

II. Areas of Concentration (9 credits)

African Studies Concentration

- ANTH 322 Living Africa (3)
- ARTH 290 Introduction to the Art of Sub-Saharan Africa (3)
- ETHS 235 Theater and Identities (3)
- ETHS 251A Oral Performances and Ethnic Identities (3)
- ETHS 252 African Feminisms (3)
- ETHS 259 Religions and Cultures in Africa and African Diasporas (3)
- FRCH/ETHS 338 The Cameroon Experience
- HSTY258 History of Southern Africa (3)
- HSTY 268 Colonialism in African (3)
- FRCH/WLIT 295 The Francophone World (3)
- FRCH/WLIT 308 The Paris Experience (3)
- ETHS 394 The Poetics of War in Africa (3)
- POSC 366 Government and Politics of Africa (3)
- COSI 260 Multicultural Aspects of Human Communication (3)
- COSI 328 Media Effects and Literacy (3)
- ECON 375 Economics of Developing Countries (3)

African-American Studies Concentration

- ETHS 222 African-American Religions
- HSTY 261 African-American History 1865-1945 (3)
- ENGL 365N Topics in African-American Literature (3)
- ENGL 368H African-American Literature (3)
- HSTY 260 Slavery and Emancipation (3)
- HSTY 262 African-American History since 1945 (3)
- HSTY 318 History of Black Women in U.S. (3)
- COSI 260 Multicultural Aspects of Human Communication (3)
- COSI 328 Media Effects and Literacy (3)
- ECON 375 Economics of Developing Countries (3)

Latin America and Caribbean Studies Concentration

- ETHS 336 Struggle for Justice in Latin America (3)
- ETHS 287 Drugs, Wars, and Coffee: A History of Modern Colombia (3)
- ETHS 390 The Poetics of Gender in Latin America (3)
- SPAN/WLIT 205 The Hispanophone World (3)
- SPAN 385 Hispanic Literature in English (3)
- SPAN 336 Chicano/a Literature (3)
- SPAN 370 Latin American Cinema (3)
- ECON 375 Economics of Developing Countries (3)
- SPAN 303 Latin American Cultural Conflicts (3)
- SPAN 322 Latin American Short Story (3)
- SPAN 326 The Fantastic in Latin American Prose (3)
- SPAN 339 Latin American Poetic Revolt (3)
- SPAN 342 Latin American Feminist Voices (3)
- SPAN 343 The New Drama in Latin America (3)
- POSC 364 Dictatorship and Democracy in 20th-Century Latin America (3)
- COSI 260 Multicultural Aspects of Human Communication (3)
- COSI 328 Media Effects and Literacy (3)
- ECON 375 Economics of Developing Countries (3)

Global Ethnic Studies Concentration

- ANTH 314 Cultures of the United States (3)
- ANTH 388 Globalization, Development, and Underdevelopment (3)
- WGST/ETHS 301 Women, Creativity, and the Arts
- FRCH/ETHS/WLIT/WGST 335 Women in Developing Countries (3)
- ANTH 345 Ethnicity, Gender, and Mental Health (3)
- ANTH 357 Native American Cultures (3)
- ANTH 530 Race, Class and Gender in Place (3)
- COSI 260 Multicultural Aspects of Human Communication (3)
- COSI 328 Media Effects and Literacy (3)
- ETHS 259 Religion and Cultures in Africa and African Diasporas (3)
- ECON 375 Economics of Developing Countries (3)
ETHS 214. Comparative Slavery (3)
People around the world have been enslaving one another since the beginning of time. From the seventeenth to the nineteenth centuries, millions of African chattel labored on southern plantations, supporting the “peculiar institution” whose terrible legacy remains with us today. For hundreds of years before European slave traders began ferrying human cargo across the Atlantic, however, coercive bondage was a well-entrenched feature of Mediterranean civilizations, justified by religious and secular law alike. This course will explore diverse types of unfree labor, from slavery in ancient Greece and Rome, serfdom in medieval Europe, captivity in North Africa and indentured servitude in colonial America. Did earlier systems of domination around the Mediterranean prepare the way for the establishment of Atlantic slavery? How did ideologies about religious difference, ethnicity, and race help justify this ultimate form of human degradation?
Offered as ETHS 214, HSTY 214

ETHS 218. Jews in Early Modern Europe (3)
This course surveys the history of Jews in Europe and the wider world from the Spanish expulsion through the French Revolution. Tracking peregrinations out of the Iberian Peninsula to the British Isles, France, Holland, Italy, Germany, Poland-Lithuania, the Ottoman Empire and the American colonies, it examines the diverse ways Jews organized their communities, interacted with their non-Jewish neighbors and negotiated their social, economic and legal status within different states and empires. What role did Jews play and what symbolic place did they occupy during a period of European expansion, technological innovation, artistic experimentation, and religious and political turmoil? What internal and external dynamics affected Jewish experiences in the sixteenth, seventeenth and eighteenth centuries? Through a selection of inquisitorial transcripts, government records, memoirs and historical literature, we will explore topics such as persecution, conversion, messianic, toleration, emancipation and assimilation.
Offered as HSTY 218 and JDST 218, ETHS 218.

ETHS 220. The Early Modern Mediterranean (3)
For centuries before Columbus crossed the Atlantic Ocean, travelers and traders, pirates and pilgrims, mercenaries and missionaries explored the coasts of the Mediterranean Sea—and engaged in commerce, as well as religious, economic and military competition. If religion and ethnicity divided Muslims, Christians and Jews from Algiers to Athens, did shared geography, foodstuffs, and cultural values bind them together? This course examines the unity and diversity of this maritime region by considering the peoples, beliefs, commodities and diseases that circulated through it during the sixteenth, seventeenth, and eighteenth centuries. Does the early modern Mediterranean showcase a clash of civilizations or provide an enduring model for coexistence? Topics include merchant culture, diplomacy, honor and shame, slavery and colonization.
Offered as ETHS 220, HSTY 220.

ETHS 222. African-American Religions (3)
This course is an exploration of the rich diversity of African American religions from the colonial period to the present. Attention will be given to key figures, institutional expressions, and significant movements in African American religious history. Major themes include African traditions in American religions, slavery and religion, sacred music, social protest, Black Nationalism in religion, Islam, African American women and religion, and black and womanist theologies. Course requirements will include field trips to local religious sites.
Offered as ETHS 222 and RLGN 222.

ETHS 234. France and Islam (3)
This seminar examines French encounters with the Muslim world from the Middle Ages to the present. Over the last millennium, France has viewed Saracens, Moriscos, Turks, Berbers, and Arabs with admiration and fear, disdain and incomprehension. Between the eleventh and thirteenth centuries, French soldiers battled in the Holy Land; for several hundred years after that, France and the Ottoman Empire exchanged diplomats, traders and slaves. The colonial occupation of Algeria that began in 1830 ended violently in 1962. By then, the empire that struck back had also come home through large waves of immigration. Today, the social and economic status, religious affiliation, political significance and cultural impact of French citizens of North African descent are the subject of burning national debate. Taking a long view on Franco-Muslim relations, the course will explore such topics as the Crusades, Mediterranean piracy and captivity, Napoleon’s Egyptian campaign, the Algerian War of Independence, the “veil affair,” riots in the suburbs of Paris and World Cup soccer.
Offered as ETHS 234, HSTY 234. SAGES Dept Seminar

ETHS 235. Theater and Identity (3)
This course aims at surveying identities in dramatic and performance texts in the modern era. It will help students develop skills to study plays and related theatrical forms, to analyze images for their social and political meanings, to investigate issues of identity, to appreciate the complexities of identity and images of self and other as related in theater, media and the larger political and social contexts. African and African-American identities, Latina/o-American and Latin American identities, Native-American identities, Asian-American and Asian identities, Gender identities will be examined.

ETHS 251. Perspectives in Ethnicity, Race, Religion and Gender (3)
This course is designed to introduce students to the study of ethnicity. Basic concepts such as race, gender, class, and identity construction will be examined. Students are encouraged to use the tools and perspectives of several disciplines to address the experiences of ethnic groups in the United States.
Offered as ETHS 251 and RLGN 251. Global & Cultural Diversity

ETHS 251A. Oral Performances and Ethnic Identities (3)
This course is an in-depth study of performances that have helped to shape and anchor the identities of different non-Western ethnic groups. The course will explore the multi-generic composition of the oral epic, which combines forms as diverse as narrative, song, praise poetry, theater, music and historical oratory. ETHS 251A will provide a comprehensive overview of oral performances while focusing on a particular area or areas of Africa, Asia, the United States, or Latin America. In the African continent, for example, the focus will be on the Madinka Sundjata corpus, dealing with the empire of Mali; the life of Shaka, the Zulu in South Africa; while in the United States, the narrative life of Frederick Douglas, blues and negro-spiritual will be considered at the sites of ethnic discourse. Using a comparative approach, the course will examine aesthetic issues of oral performance, the written word, interactions between music and voice, and interaction between poetic and prose narrative forms. The performance texts will be augmented by field recordings and in-class demonstrations by griots and other storytellers from Africa and the United States.

ETHS 252A. Introduction to African-American Studies (3)
This course is designed to introduce students to the study of Black History, cultures, economics, and politics. Students will learn about the development of the field by exploring theoretical questions, methodological approaches, and major themes that have shaped the study of black people, primarily in the U.S. context. This is a seminar-style, discussion-based course that emphasizes critical analysis and expository writing.
Offered as ETHS 252A and HSTY 252A. Global & Cultural Diversity

ETHS 252B. Introduction to Latina/o Studies (3)
Interdisciplinary introduction to the basis for a
Latin/o ethnicity through an exploration of commonalities and differences in the peoples of Latin American and Caribbean origin within the continental United States. Topics include methodological and theoretical formulations central to the field (e.g., racial, gender, and sexual formations, modes and relations of production and class, nation and transnational), history and contemporary issues of identity, family, community, immigration, and the potential for a pan-ethnic identity. Discussions will focus on major demographic, social, economic and political trends: historical roots of Latinas/os in the U.S.; the evolution of Latin/o ethnicity and identity; immigration and the formation of Latin/o communities; schooling and language usage; tendencies and determinants of socioeconomic and labor force status; discrimination, segregation and bias in contemporary America; racial and gender relations; and political behavior among Latinas/os.

Global & Cultural Diversity

ETHS 253A. Introduction to Modern African History (3)
A general introduction to major themes in modern African history, with an emphasis on the nineteenth and twentieth centuries. Topics include oral tradition and narrative, economic structure and dynamics, religious movements, colonialism, nationalism, and the dilemmas of independent African states.
Offered as ETHS 253A and HSTY 135.
Global & Cultural Diversity

ETHS 253B. Introduction to Latin American History (3)
This course provides an introduction to the historical and cultural development of Latin America, in an attempt to identify the forces, both internal and external, which shape the social, economic and political realities in present day Latin America. Beginning with its pre-Columbian civilizations, the course moves through the conquest and colonial period of the Americas, the wars of independence and the emergence of nation-states in the nineteenth century, and the issues confronting the region throughout the turbulent twentieth century, such as migration and urbanization, popular protest and revolution, environmental degradation, great power intervention, the drug trade and corruption, and the integration of the region into the global economy.
Offered as ETHS 253B and HSTY 136.
Global & Cultural Diversity

ETHS 258. History of Southern Africa (3)
A survey of southern Africa from about 1600. Topics include the social structure of pre-colonial African societies, the beginnings of European settlement, the rise of Shaka, the discovery of minerals and the development of industry, Zimbabwe's guerrilla war and independence, and the rise and apparent demise of apartheid.
Offered as ETHS 258 and HSTY 258.
Global & Cultural Diversity

ETHS 259. Tricksters, Conjurers, and Gods: Religion in West Africa and Diaspora (3)
This course will present a portrait of West African religious history framed in the religious themes common to the rest of the world. We will focus upon the traditional religions that provided the philosophical, religious, and the ethical basis of the African cultures. Focusing primarily on traditional West African religions and their related myths, rituals, divinities, and religious art, the course will consider African indigenous religions as well as those beliefs, traditions, and ritualism that have become part of the religious life in the diaspora in the Americas.
Offered as ETHS 259 and RLGN 259.
Global & Cultural Diversity

ETHS 260. U.S. Slavery and Emancipation (3)
Begins with the African encounter with Europeans during the emergence of the modern slave trade. Students are introduced to the documents and secondary literature on the creation and maintenance of slavery, first in colonial America, and then in the United States. The course concludes with the destruction of slavery.
Offered as ETHS 260 and HSTY 260.
Global & Cultural Diversity

ETHS 261. African-American History 1865-1945 (3)
Explores the formation of a modern African-American culture between emancipation and the end of World War II. Emergence of a northern-based leadership, the challenge of segregation, emergence of bourgeois culture, the fashioning of racial consciousness and black nationalism, the shift from a primarily southern and rural population to one increasingly northern and urban, the creation and contours of a modern African-American culture, the construction of racial/gender and racial/class consciousness.
Offered as ETHS 261 and HSTY 261.
Global & Cultural Diversity

ETHS 262. African-American History Since 1945 (3)
Completes the three-term sequence of the African-American history survey (although the first two courses are not prerequisites for this course). Explores some of the key events and developments shaping African-American social, political, and cultural history since 1945.
Offered as HSTY 262 and ETHS 262.
Global & Cultural Diversity

ETHS 265. Colonialism in Africa (3)
Examines the immense social and cultural changes which took place in Africa as a result of colonial occupations, in the period roughly from 1880 to 1965. It is organized around three major rubrics which were central to the colonial experience: the spread of Christianity, economic forces which led to new forms of labor, and the growth of nationalist resistance.
Offered as ETHS 268 and HSTY 268.
Global & Cultural Diversity

ETHS 287. State, War, Drugs, and Coffee in Colombia: History of Modern Colombia (3)
This course will analyze the major forces that have shaped Colombian history from the 19th century to the present. Colombia is one of the largest and most fascinating countries in Latin America. It has been intricately linked to the U.S. market as a major coffee producer and, more recently, as a major supplier of illicit drugs. Colombia has always been one of the wealthier Latin American countries, and it has a high degree of electoral democracy. Paradoxically, however, Colombia has also experienced rather high levels of regionalism and political violence. This course seeks to explore the history of these paradoxes. It will situate Colombia’s contemporary conflicts within a larger historical perspective.
Offered as ETHS 287 and HSTY 287.
Global & Cultural Diversity

ETHS 295. The Francophone World (3)
The course offers an introduction to the Francophone World from a historical, cultural, and literary perspective. The Francophone World includes countries and regions around the globe with a substantial French-speaking population (and where French is sometimes, but not always, an official language): North America (Louisiana, Quebec, and Acadia); North Africa (Tunisia, Morocco, Algeria, and Egypt); the Middle-East (Lebanon, Syria); the Caribbean (Martinique, Guadeloupe, Haiti); South-East Asia (Vietnam); and Europe (France, Belgium, Switzerland, and Luxembourg).
FRCH 295 provides a comprehensive overview of the Francophone World, while focusing on a particular area or areas in any given semester. In this particular semester we will focus on the Caribbean, the Maghreb, and select countries of Sub-Saharan Africa (Senegal, Cameroon). Our inquiry will include the study of their colonization histories, of the Independences period (broadly speaking, the 1960s), and of the post colonial era through film, literature, and readings of significant political/theoretical texts.
Offered as ETHS 295, FRCH 295, and WLIT 295.
Global & Cultural Diversity

ETHS 301. Women, Creativity and the Arts (3)
WGST301/ETHS301 is one of two core courses for the program in Women's and Gender Studies and an elective course for the ETHS minor. All WGST majors are to take one course concentrating on the subject of women and the arts specifically. This course also fulfills the cultural diversity requirement. In this course, students will focus on two areas of study: a) women and creativity and b) women and activism through the arts. A history of women in the arts will be covered, but the general focus of the course is on women in the arts since the 1960s in particular, and on artwork that reflects or provokes social change. “Arts” are defined in the broadest of sense. That is, students will study women's production in painting, photography, graphic design, sculpture, dance, film, music, and theater. A variety of learning techniques will
be applied: Students will look at feminist theories on art, be introduced to the notion of cyberfeminism, study actual artwork and its reproductions, understand the role of art in feminist activism and how women "create" differently from men, and work closely with several feminist artists/activists through various programs on campus and the community in order to facilitate the planning and carrying out of artistic production. Subsequently, students will interact with children in Cleveland schools in conjunction with these artists giving master classes, and be exposed to art exhibits abroad through videoconferencing with the Algerian Cultural Center in Paris and locally through University Circle Institutions. Offered as WGST 301 and ETHS 301.

ETHS 314. Cultures of the United States (3)
This course considers the rich ethnic diversity of the U.S. from the perspective of social/cultural anthropology. Conquest, immigration, problems of conflicts and accommodation, and the character of the diverse regional and ethnic cultures are considered as are forms of racism, discrimination, and their consequences. Groups of interest include various Latina/o and Native peoples, African-American groups, and specific ethnic groups of Pacific, Mediterranean, European, Asian, and Caribbean origin.
Offered as ANTH 314, ETHS 314, and ANTH 414.

Global & Cultural Diversity

ETHS 316. African Political Thought (3)
Introduction to select themes in the work of contemporary African philosophers, with special emphasis on political thought. In this course, students will learn something about factors affecting the creation and flow of knowledge and ideas about Africa and discuss the relative importance of the "nation-state" as an idea in Europe, pre-colonial Africa, and postcolonial Africa.
Offered as PHIL 316/416 and ETHS 316/416.

Global & Cultural Diversity

ETHS 318. History of Black Women in the U.S. (3)
Chronologically arranged around specific issues in black women's history organizations, participation in community and political movements, labor experiences, and expressive culture. The course will use a variety of materials, including autobiography, literature, music, and film.
Offered as ETHS 318, HSTY 318, and WGST 318.

ETHS 335. Women in Developing Countries (3)
This course will feature case studies, theory, and literature of current issues concerning women in developing countries primarily of the French-speaking world. Discussion and research topics include matriarchal traditions and FGM in Africa, the Tunisian feminist movement, women, Islam, and tradition in the Middle East, women-centered power structures in India (Kerala, Pondicherry), and poverty and women in Vietnam, Laos, and Cambodia. Guest speakers and special projects are important elements of the course. Seminar-style format, taught in English, with significant disciplinary writing in English for WGST, ETHS, and some WLIT students, and writing in French for FRCH and WLIT students. Writing assignments include two shorter essays and a substantial research paper.
Offered as ETHS 335, FRCH 335, WLIT 335, WGST 335, FRCH 435 and WLIT 435. SAGES Dept Seminar
Global & Cultural Diversity

ETHS 336. The Struggle for Justice in Latin America (3)
This course looks at how indigenous peoples, women, workers, workers, peasants, and Afro-Latin Americans struggled for justice in Latin America. It will study how notions of justice have changed from colonial times to the present. It will also examine how different sectors of Latin American society understood the meaning of justice and how that understanding evolved through time. This class seeks to familiarize students with the history of the idea of justice in Latin America. At the end of this course students will understand the complex intellectual and political differences behind Latin America's apparent chaotic and tumultuous political history. Second, it seeks to develop students' critical thinking by examining how an abstract term, such as justice, changes across time and space.
Offered as ETHS 336 and HSTY 336.
Global & Cultural Diversity

ETHS 338. The Cameroon Experience (3)
Three-week immersion learning experience living and studying in Cameroon. The focus of the course is the culture, literature, and language of Anglophone Cameroon, with some emphasis on Anglophone Cameroon. Students spend a minimum of fifteen hours per week visiting cultural sites and attending arranged courses at the University of Buea. Students will prepare a research paper. Course work is in French. To do course work in English, students should enroll in WLIT 338 or ETHS 338.
Offered as ETHS 338, FRCH 338, WLIT 338, ETHS 438, FRCH 438, and WLIT 438.
Global & Cultural Diversity

ETHS 352. African Feminisms (3)
This course traces the history of African feminism from its origins within traditions through to a more contemporary theoretical analysis of gender, marriage, and motherhood seen from a Afrocentric perspective. Approaches studied are those that pertain to anthropology, history, literature, sociology, and culture. African feminist theory of scholars such as Filomina Steady, Cheikh Anta Diop, Buchi Emecheta, Ifi Amadiume, Oyono Amate, and Calixthe Beyala will be studied and there will be some comparative analysis of Western theories to show how African feminisms are clearly distinct. Theories of these scholars will be presented, and in the process, students will look at cases of women in Cameroon, Nigeria, Ghana, Kenya, and Senegal. It is commonly believed that African women are defined for a long time according to constructs of Western anthropology. This course will thus look at social institutions such as woman-to-woman marriage, matriarchy, and various women's rituals in order to identify African constructs of gender, family, kinship, marriage, and motherhood.
Offered as ETHS 352 and WGST 352.

The major focus of this seminar will range from the ongoing questions of peace and justice in Israel and occupied Palestine to the land and border questions; Green line, crossing points, the wall; to interpretations from biblical to contemporary texts, reflecting a multiplicity of agendas. Our primary focus will be the analysis of recent research and scholarship on issues of mass violence, contested space and land, gender, race and ethnicity, religious sectarianism, colonialism/imperialism. Through our readings we will identify the bias and concerns of various interpretive communities involved in the ongoing struggles in this very small area. With two peoples claiming the same land for different reasons, can this conflict ever be resolved? Recommended preparation: One course about the Middle East.
Offered as ETHS 359 and RLGN 320.

ETHS 362. Politics of Central Asia (3)
Once an unfamiliar region to many people of the world, Central Asia took center stage in the fall of 2001 as a result of the U.S. campaign against terrorism. This course will introduce students to the politics of Central Asia, focusing on the region today composed of Uzbekistan, Turkmenistan, Tajikistan, Kyrgyzistan, and Kazakhstan. We will review the nationalism, foreign relations, religion, ethnicity, and economics of the region.
Offered as ETHS 362, POSC 362, and POSC 462.

Global & Cultural Diversity

ETHS 363H. African-American Literature (3)
A historical approach to African-American literature. Such writers as Wheatley, Equiano, Douglass, Jacobs, DuBois, Hurston, Hughes, Wright, Baldwin, Ellison, Morrison. Topics covered may include slave narratives, African-American autobiography, the Harlem Renaissance, the Black Aesthetic, literature or protest and to assimilation. Maximum 6 credits. Recommended preparation: ENGL 150 or USFS 100.
Offered as ENGL 363H, ETHS 363H, WLIT 363H, ENGL 463H, and WLIT 463H.

Global & Cultural Diversity

ETHS 364. Dictatorship and Democracy in Modern Latin America (3)
Examination of political leadership in 20th-century Latin America, exploring the nature, causes, and consequences of dictatorship and democracy in the region, moving from the collapse of oligarchic rule and the emergence of populism in the 1930s and...
1940s, to the end of democracy and establishment of military regimes in the 1960s and 1970s, and ultimately to the contemporary processes of democratization and economic liberalization.

Offered as ETHS 364, POSC 364, and POSC 464.

Global & Cultural Diversity

ETHS 365N. Topics in African-American Literature (3)
Selected topics and writers from nineteenth and twentieth-century African-American literature. May focus on a genre, a single author or a group of authors, a theme or themes. Maximum 6 credits. Recommended preparation: ENGL 150 or USFS 100.

Offered as ENGL 365N, ETHS 365N, WLIT 365N, ENGL 465N, and WLIT 465N.

Global & Cultural Diversity

ETHS 365Q, Post-Colonial Literature (3)
Readings in national and regional literatures from former European colonies such as Australia and African countries. Maximum 6 credits. Recommended preparation: ENGL 150 or USFS 100.

Offered as ENGL 365Q, ETHS 365Q, WLIT 365Q, ENGL 465Q, and WLIT 465Q.

Global & Cultural Diversity

ETHS 366. Government and Politics of Africa (3)
Comparative analysis of the political forces and organizations currently functioning in Africa, as well as a survey of the formal government institutions. Special emphasis on single-party rule, military rule, and the political ramifications of African socialism, tribalism and the problems of national integration.

Offered as ETHS 366, POSC 366, and POSC 466.

Global & Cultural Diversity

ETHS 369. Current Controversies in Latin American Politics and Society (3)
In addition to questions about race, religion, abortion, the drug industry, immigration, democracy, private property, and free trade, the course will tackle Latin America’s apparent shift to the political and ideological left, Chavez’s “Imperialism,” and Cuba’s humanitarian aid.

Offered as ETHS 369, POSC 369 and POSC 469.

Global & Cultural Diversity

ETHS 370K. Nationalism, Ethnicity, and Religion in World Politics (3)
Examination of the post-Cold War surge in conflicts among nationalism, ethnic groups, and religions with particular attention to the former Yugoslavia, Ireland, India, Africa, and the Middle East.

Offered as ETHS 370K, POSC 370K, and POSC 470K.

Global & Cultural Diversity

ETHS 374. Politics of Development in the

Global South (3)
Exploration of the post-World War II emergence of the Global South nations of Africa, Asia, the Middle East, Latin America, and Eastern Europe arena.

Offered as ETHS 374, POSC 374, and POSC 474.

Global & Cultural Diversity

ETHS 385. Hispanic Literature in Translation (3)
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel Garcia Marquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required.

Offered as ETHS 385, ETHS 485, SPAN 385, SPAN 485, WLIT 385, and WLIT 485.

Global & Cultural Diversity

ETHS 394. The Subaltern and The Poetics of War in Africa (3)
This course is a seminar on major war writers and filmmakers in Africa such as Chinua Achebe, Ngugi wa Thiong’o, Emmanuel Dongola, Iweala Uzodinma, Ismael Beah, Semenebe Ousmane, Ingrid Sinclair etc. Students will be asked to use postcolonial theory to critically read and view films and texts on war in Africa. They will engage in discussion with guest scholars in the field of African studies. In addition to a final research paper, students are also required to write short papers on selected books and films read and/or viewed during the semester.

ETHS 399. Independent Study (0-3)
This course focuses on topics in ethnicity. In consultation with the program director and instructors, students pick topics in their concentrations and make a list of books and films for personal and intensive reading. Some of these projects might be Arts and Identity in post-independent Africa [African Concentration], films, literatures and human rights in Latin America [Latin America and Caribbean Concentration], civil rights through music and songs [African-American Concentration] etc. Travel may be a component of this course depending on the nature of the students’ interests. Weekly reports are required for the instructors to measure the students progress.

ETHS 416. African Political Thought (3)
Introduction to select themes in the work of contemporary African philosophers, with special emphasis on political thought. In this course, students will learn something about factors affecting the creation and flow of knowledge and ideas about Africa and discuss the relative importance of the “nation-state” as an idea in Europe, pre-colonial Africa, and postcolonial Africa.

Offered as PHIL 316/416 and ETHS 316/416.

ETHS 438. The Cameroon Experience (3)
Three-week immersion learning experience living and studying in Cameroon. The focus of the course is the culture, literature, and language of Francophone Cameroon, with some emphasis on Anglophone Cameroon. Students spend a minimum of fifteen hours per week visiting cultural sites and attending arranged courses at the University of Buea. Students will prepare a research paper. Course work is in French. To do course work in English, students should enroll in WLIT 338 or ETHS 338.

Offered as ETHS 338, FRCH 338, WLIT 338, ETHS 438, FRCH 438, and WLIT 438.

ETHS 485. Hispanic Literature in Translation (3)
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel Garcia Marquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required.

Offered as ETHS 385, ETHS 485, SPAN 385, SPAN 485, WLIT 385, and WLIT 485.

EVALUATION BIOLOGY
PROGRAM

238 Mather Memorial
www.case.edu/artsci/evolutionarybiology
Phone: 216-368-2264; Fax: 216-368-5334
Cynthia Beall, Chair
E-mail: cynthia.beall@case.edu

The program in Evolutionary Biology is designed to provide students with knowledge of macro- and micro-evolutionary processes underlying the evolution and diversification of life on Earth and an understanding of the meta-scientific issues involved in this unique field of study.

The program includes grounding in the history and philosophy of evolutionary thought and alternative conceptualizations of the mechanisms, patterns, and processes of evolution. It emphasizes evolutionary theory, foundations of ecology and genetics, focused study of particular organisms or groups of organisms, and the dynamics of evolutionary principles in scientific inquiry.

PROGRAM STEERING COMMITTEE

Cynthia Beall, Ph.D.
Professor of Anthropology; Director, Evolutionary Biology Program

Mark D. Adams, Ph.D.

GENERAL BULLETIN 2009-2011 273
Associate Professor of Genetics, School of Medicine
Radhika Atit, Ph.D.
Warren E. Rupp Distinguished Assistant Professor, Department of Biology
Darin Croft, Ph.D.
Assistant Professor of Anatomy, School of Medicine
Yohannes Haile-Selassie, Ph.D.
Curator and Head of Physical Anthropology, Cleveland Museum of Natural History
Joseph Koonce, Ph.D.
Professor of Biology
Bruce Latimer, Ph.D.
Associate Professor of Anatomy, School of Medicine
Peter McCall, J.D., Ph.D.
Professor of Geological Sciences
Scott Simpson, Ph.D.
Professor of Anatomy, School of Medicine
Mark Willis, Ph.D.
Associate Professor of Biology
Peter A. Zimmerman, Ph.D.
Associate Professor, Center for Global Health and Diseases, School of Medicine

UNDERGRADUATE PROGRAMS

Major
Evolutionary biology is a second major, to be pursued in conjunction with a conventional disciplinary major. Up to 12 credits in required and elective courses taken by students for their first major may be applied to their evolutionary biology major.

The 30-credit interdisciplinary major in evolutionary biology consists of:
1. Three foundation courses
2. One senior seminar
3. One course in ecology
4. One course in the philosophy/history of science
5. Four approved electives

The approved electives may include additional courses from the list of philosophy/history of science courses (see below). In consultation with a major advisor, students will tailor intensive study to suit particular interests within the major. Courses will be selected from the following list.

FOUNDATION COURSES

- BIOL 251 or 214 Intro to Organismal and Population Systems / Genes and Evolution
- GEOL 210 Historical Geology and Paleontology
- PHIL 225 Evolution

SENIOR SEMINAR

- PHIL 394 Seminar in Evolutionary Biology

PHILOSOPHY/HISTORY OF SCIENCE OPTIONS

- HSTY 201 Science in Western Thought I
- HSTY 202 Science in Western Thought II
- HSTY 394 History of Biology
- HSTY 402 Survey of the History of Science II
- PHIL 203 Natural Philosophy I
- PHIL 204 Natural Philosophy II
- PHIL 303 Topics in Philosophy of Science
- PHIL 309 Philosophical Issues in Genetics

ECOLOGY OPTIONS

- BIOL 216 Organisms and Ecosystems
- BIOL 336 Aquatic Biology
- BIOL 337 Marine Ecology
- BIOL 370 Ecology

APPROVED ELECTIVE COURSES

- ANAT 375 Human Evolution: The Fossil Evidence
- ANAT 377 Human Musculoskeletal Anatomy
- ANAT 383 Evolutionary Anatomy
- ANTH 103 Introduction to Human Evolution
- ANTH 105 Worldwide Variation in Human Biology
- ANTH 295 Comparative Primate Behavior
- ANTH 302 Darwinian Medicine
- ANTH/GEOL/PHIL 367/368 Capstone In Evolutionary Biology
- ANTH/PHIL 368/BIOL 369

Minor
The 15-credit interdisciplinary minor consists of three foundation courses and two approved electives. In consultation with a minor advisor, students will tailor intensive study to suit their particular interests.

FRENCH AND FRANCOPHONE STUDIES PROGRAM

203 Clark Hall
www.case.edu/artsci/fr_studies
Phone: 216-368-2633
Laura E. Hengehold, Director
E-mail: laura.hengehold@case.edu

Designed to develop cross-cultural awareness and to foster international understanding, the French and Francophone Studies (FFS) program adds an exciting dimension to the traditional liberal arts curriculum. The French
F10471_AandS.indd   275

GENERAL BULLETIN 2009-2011  275

should also discuss their choice of a minor or a second major with their advisor.

FFS majors should demonstrate French language ability by completing French 201-202 or the equivalent. They will also take at least one 300-level FRCH course (see Foundations in Culture courses below).

The major in French and Francophone Studies requires a minimum of 33 credit hours in the following areas:

1. Foundations in Language (8 hours)

For students entering at the 200-level of French language, completion of French 201 and 202. Students entering at the 300-level of language study complete 21 credits in III below.

2. Foundations in Culture (9 hours)

These courses introduce students to French and Francophone cultures. FRCH/ WLIT 295 (The Francophone World) is required. Beyond this, students select two courses from FRCH 316, 318, 319, and HSTY 310.

3. Electives: Related Courses in French and Other Disciplines (15-21 hours)

Students select from courses that focus on French and Francophone cultures in FRCH and other disciplines (art history, political science, history, etc.). These are chosen from the approved list (see below) and in conjunction with a program advisor. No more than 9 of these credits may be chosen from FRCH courses.

ANTHROPOLOGY
• ANTH 322 Living Africa
• ANTH 337 Comparative Medical Systems
• ANTH 356 Mediterranean Culture and Society
• ANTH 399 Independent Study (French content)

ART HISTORY
• ARTH 240 Introduction to Medieval Art
• ARTH 260 Art in the Age of Grandeur
• ARTH 280 Modern Art and Modern Science
• ARTH 284 History of Photography
• ARTH 290 Introduction to the Art of Sub-Saharan Africa
• ARTH 340 Issues in Non-Western Art
• ARTH 367 17th- and 18th-Century French Art
• ARTH 374 Impressionism to Symbolism

ECONOMICS
• ECON 372 International Finance
• ECON 373 International Trade

Courses offered in a given semester with a French and Francophone Studies component are posted in Guilford House at registration time and on the FFS Web site.

Minor
The minor requires 15-17 credits. Students entering at the 200 level of language competence take 201, 202, and three more courses in FRCH and from the approved list. At least 6 credits should be taken in disciplines other than FRCH. Students entering at the 300 level of language competence take five courses at the 200 and 300 levels in FRCH and from the approved list. At least 3 credits should be in courses from FRCH taught in the French language, and at least 6 credits should be taken in disciplines other than FRCH.

Teacher Licensure Option
Students participating in the teacher licensure program complete a 45- to 47-hour major in French, including course work in French language, culture, and literature, and a 35-hour sequence in professional education. Course work in French begins in the freshman year with a language course appropriate to the student’s proficiency level and continues until the student has completed a range of upper-level courses and has met the goals of the program. Students are strongly urged to complete some of their course work in a French-speaking country and are assisted in identifying opportunities for study abroad. Interested students should contact Professor Marie Lathers. The professional education component (see program description for Teacher Licensure elsewhere in this bulletin) begins with a sequence taken on campus, followed by 20 semester hours, including student teaching, at John Carroll University.

SUBJECT AREA REQUIREMENTS:

*Required only for students who begin their French major at the intermediate level
**Students at the intermediate (200) level select five courses (15 credit hours); students entering the program at the advanced (300) level select seven courses (21 credit hours).

Study Abroad
Study abroad in France, Belgium, Switzerland, French Canada, the Francophone Caribbean, or a Francophone African or Middle Eastern country is strongly encouraged but not required for FFS majors. The Department of Modern Languages and Literatures offers a summer study abroad program in Paris (FRCH/WLIT 308) in even-numbered years. A summer study abroad program in Cameroon (FRCH/WLIT/ETHS 338) is offered in odd-numbered years. FRCH 208 is a spring break service-learning excursion to Montreal.

DEPARTMENT OF GEOLOGICAL SCIENCES

112 A.W. Smith Building
http://geology.case.edu
Phone: 216-368-3690; Fax: 216-368-3691
Gerald Matisoff, Chair
E-mail: gerald.matisoff@case.edu

The geological sciences encompass a wide range of inquiries into the physical, chemical, and biological processes that shape the earth and the planets. Application of these inquiries to understanding a planet’s evolution through time is a unique attribute of geological investigations. Knowledge of the past and present reveals the constraints of our environment and serves as a guide for the future.

In recent years, significant advances have been made in the understanding of plate tectonics, properties of the earth’s interior, the nature of surface and near-surface processes, the history of the earth’s climate, the ecology of living and ancient organisms, and the comparative geology of other planets. Geologic knowledge is fundamental to resource conservation, land use planning, environmental geochemistry, hydrology, engineering construction works, and other environmental concerns.

Department faculty focus their research in four areas: surficial processes, planetary materials, geochemistry, and sedimentary basin analysis. The department offers degree programs leading to the B.A. and B.S. in Geological Sciences, B.A. in Environmental Geology, B.A. in Environmental Studies, Master of Science (M.S.), and Doctor of Philosophy...
The Environmental Studies program is described elsewhere in this bulletin.

DEPARTMENT FACULTY

Gerald Matisoff, Ph.D.
(Johns Hopkins University)
Professor and Chair
Sedimentary and environmental geochemistry

Ralph P. Harvey, Ph.D.
(University of Pittsburgh)
Associate Professor
Planetary geology

Steven A. Hauck, II, Ph.D.
(Washington University)
Assistant Professor
Geodynamics

Peter L. McCall, Ph.D., J.D.
(Yale University)
Professor; Director, Environmental Studies Program
Benthic ecology; paleoecology

Beverly Z. Saylor, Ph.D.
(Massachusetts Institute of Technology)
Associate Professor
Sedimentary geology

James A. Van Orman, Ph.D.
(Massachusetts Institute of Technology)
Associate Professor
Geochemistry

Peter J. Whiting, Ph.D.
(University of California, Berkeley)
Associate Professor and Associate Dean
Geomorphology; surface water hydrology; environmental geology

Adjunct Faculty

Philip O. Banks, Ph.D.
(California Institute of Technology)
Adjunct Associate Professor
Geology; geochronology

Enriqueta Barrera, Ph.D.
(Case Western Reserve University)
Adjunct Associate Professor
Geochemistry; paleoeclimatology

Andrew Dombard, Ph.D.
(Washington University-St. Louis)
Adjunct Associate Professor; University Illinois-Chicago
Planetary geophysics

Joseph T. Hannibal, Ph.D.
(Kent State University)
Adjunct Associate Professor; Cleveland Museum of Natural History
Invertebrate paleontology

Michael Ketterer, Ph.D.
(University of Colorado)
Adjunct Professor; Northern Arizona University
Analytical chemistry

David Saja, Ph.D.
(University of Pennsylvania)
Adjunct Assistant Professor; Cleveland Museum of Natural History
Minerology

Richard C. Schmidt, Ph.D.
(McGill University, Canada)
Adjunct Professor
Economic geology

Emeritus Faculty

Samuel M. Savin, Ph.D.
(California Institute of Technology)
Jesse Earl Hyde Professor Emeritus and Dean Emeritus of the College of Arts and Sciences
Isotope geochemistry

UNDERGRADUATE PROGRAMS

Majors

Students in geological sciences obtain a solid background in basic science and mathematics as well as intensive training in the major. In addition, because of the wide variety of ways in which geologic knowledge can be applied, all students are encouraged to take electives in subjects appropriate to their personal objectives, which may be as diverse as the engineering applications of geology or the socioeconomic and legal systems bearing on environmental issues. The undergraduate programs stress practical experience and fieldwork as well as classroom study. The environmental geology major combines courses in geological sciences with courses in basic and applied sciences to provide students with an understanding of environmental problems, with employable skills, and with a background for graduate study or professional school.

All students participate in a three-semester Senior Project sequence in which they propose a research project, conduct the research, write a thesis, and present it to the department.

GEOLOGICAL SCIENCES MAJOR

The minimum requirements include 8 hours each of chemistry, physics, and calculus, plus any one of GEOL 101, 110, and 115, plus GEOL 119, 210, 301, 315, 317, 341, 344, 360, 390, 391, and 392. GEOL 360 provides comprehensive field training in the summer between the junior and senior years (this course necessitates transfer credit, which must be approved by the department).

ENVIRONMENTAL GEOLOGY MAJOR

The minimum requirements include 8 hours each of chemistry and calculus, plus BIOL 114, ESTD 101, PHYS 115, and STAT 201, plus GEOL 110, 119, 210, 303, 305, 317, 321, 390, 391, and 392.

In the above majors, the student and his or her advisor will design the remainder of the curriculum based on individual interests, in accordance with departmental and college requirements. An integrated undergraduate-graduate program leading to a master’s degree in five years is available. Special programs, such as interdisciplinary majors, also may be arranged.

Minor

Students may complete a minor in geological sciences by taking up to three of GEOL 101, 110, 115, and 117, plus GEOL 119 and sufficient upper-level GEOL courses to total 15 hours.

GRADUATE PROGRAMS

Graduate programs leading to the Master of Science and Doctor of Philosophy degrees are offered. Both programs are flexible so as to meet the needs of the individual student. General areas of study include aquatic systems, aquatic and groundwater chemistry, environmental geochemistry, benthic ecology, biostatigraphy and paleontology, environmental and urban geology, geomorphology, limnology, paleoclimatology, petrology, sedimentary geochemistry, sedimentation and stratigraphy, stable isotope studies, meteoritics, planetary materials, geodynamics of planetary interiors, and planetary geology. More specific information is available from the departmental office, the departmental Web page, and the Office of Admission of the School of Graduate Studies.

FACILITIES

The department’s research facilities include thin sectioning and mineral separation facilities; laboratories for chemical analysis of water, including an ion chromatograph, colorimetric spectrometer, atomic absorption spectrophotometer, electrochemistry equipment, and an environmental glove box; alpha and gamma spectroscopic facilities for analysis of environmental nuclides; equipment for studying...
animal-sediment relations, including a scanning gamma spectrometer; scanning electron microscope; electron microprobe; chemical reactors and a diamond anvil press for high-temperature and high-pressure geochemical experiments; and high-speed computing equipment.

Also housed in the department are laboratories for paleontological and micropaleontological investigations and for work in ecology and sedimentology. A well-field owned by the university is available for groundwater sampling and analysis.

The department also contains a wide range of other equipment, such as reflected and transmitted light microscopes, fluid inclusion microscope, cathodoluminescence microscope, submicroon and clay-silt-sand particle size analyzers, high magnetic field mineral separator, X-ray diffractometer, and field equipment for groundwater and geophysical work, including resistivity meter, seismic refraction instrument, ground conductivity meter, magnetometer, and gravimeter and field equipment for soil and sediment sampling.

**COURSE DESCRIPTIONS**

**GEOL 101. The Earth and Planets (3)**
An examination of the geological processes that have shaped the planets and moons of the inner solar system, focusing on those with relevance to our own planet Earth. Following an introduction to the fundamentals of planetary geology, lectures and exercises will explore how the inner planets (the asteroids, Mercury, Venus, Earth, the Moon, and Mars) exhibit the effects of planetary differentiation, impact cratering, volcanic activity, tectonics, climate, and interactions with life.

**GEOL 110. Physical Geology (3)**
Introduction to geologic processes and materials that shape the world we live in. Hydrologic cycle and evolution of landscapes, Earthquakes, volcanoes, plate tectonics, and geologic resources. Students desiring laboratory experience should enroll in GEOL 119 concurrently.

**GEOL 115. Introduction to Oceanography (3)**
The sciences of oceanography. Physical, chemical, and geologic features and processes of the oceans. Differences and similarities between the oceans and large lakes including the Great Lakes. Required: Sunday field trip.

**GEOL 117. Weather and Climate (3)**
Introduction to the study of weather and climate. Covers the basics of meteorology, climate zones, the hydrologic cycle, and weather prediction. Lectures address timely topics including greenhouse warming, past global climates, and recent advances in meteorology.

**GEOL 119. Geology Laboratory (1)**
Principles and techniques common to the geological sciences including rock and mineral identification, map interpretation, land form analysis, application of geological information to engineering works, and more. One three-hour laboratory or field trip weekly. Recommended preparation: GEOL 110.

**GEOL 202. Global Environmental Problems (3)**
Science, policy and ethics of environmental problems that affect the entire planet. Examination of problems of current interest, such as population growth, climate change, ozone depletion, and fisheries, from a variety of viewpoints. Construction of simple computer models of a global process using Stella II. No previous computer experience or knowledge of numerical methods is required.

**GEOL 210. Historical Geology/Paleontology (3)**
History of life as recorded in sedimentary rocks. Case histories of important basins of deposition; the interrelationships of paleogeography, plate tectonics, and evolution. Two lectures and one laboratory weekly.

**GEOL 220. Environmental Geology (3)**

**GEOL 225. Evolution (3)**
Multidisciplinary study of the course and processes of organic evolution provides a broad understanding of the evolution of structural and functional diversity, the relationships among organisms and their environments, and the phylogenetic relationships among major groups of organisms. Topics include the genetic basis of micro- and macroevolutionary change, the concept of adaptation, natural selection, population dynamics, theories of species formation, principles of phylogenetic inference, biogeography, evolutionary rates, evolutionary convergence, homology, Darwinian medicine, and conceptual and philosophical issues in evolutionary theory.

**GEOL 301. Stratigraphy and Sedimentation (3)**
Formation, distribution, and composition of sediments and sedimentary rocks. Modern depositional environments and their ancient analogues; principles of stratigraphic and biostratigraphic correlation. Two lectures and one laboratory per week.

**GEOL 303. Environmental Law (3)**
Problems in the environmental geosciences and the legal response. Types of pollution regulation, regulation of petroleum and coal exploration and development, water rights, wildlife and public lands management, common law remedies, and the role of scientific experts. Topics of current social interest.

**GEOL 305. Geomorphology and Remote Sensing (3)**
Recognition and interpretation of land forms and their significance in revealing present and past geologic processes. Introduction to acquisition and analysis of data through aerial photography and satellite imagery. Two lectures and one laboratory weekly. Recommended preparation: GEOL 110 and GEOL 119.

**GEOL 307. Evolutionary Biology and Paleobiology of Invertebrates**
Important events in the evolution of invertebrate life; structure, function, and phylogeny of major invertebrate groups.

**GEOL 315. Structural Geology and Geodynamics (3)**
Theoretical analysis of deformation in earth materials, with illustrations of deformational styles in various tectonic settings and the dynamics of the Earth's interior. Recommended preparation: GEOL 110.

**GEOL 317. Introduction to Field Methods (3)**
Practice in field procedures, recognition and testing of hypotheses in the field, field mapping and analysis of sedimentary, igneous, and metamorphic rocks in deformed and tectonically active settings. Weekly meeting plus spring break field trip. Students required to pay partial cost of meals, lodging, and travel. Prereq: GEOL 119.

**GEOL 318. Topics in Field Methods (3)**
Field analysis of geological and environmental problems. Topics and locations will vary. Requires preparatory meetings and week-long field trip, usually during spring break. Students required to pay partial cost of meals, lodging, and travel. Recommended preparation: GEOL 119 or permission of instructor.

**GEOL 321. Hydrogeology**
Basic and applied concepts pertaining to the occurrence and movement of groundwater. Definitions, basic equations, applications to a variety of geologic settings, wells. Requires one Saturday field trip to make field measurements, collect and analyze data, and prepare a report. Offered as GEOL 321 and GEOL 421.

**GEOL 330. Geophysical Field Methods and Laboratory (4)**
Use of seismic refraction and reflection, gravity, electrical, magnetic, and electromagnetic meth-
ods to infer the earth’s structure and composition. Application of inverse theory to estimate model parameters. Requires students to make field measurements, analyze data, and prepare a report. Includes several required Saturday field trips.
Offered as GEOL 330, GEOL 430.

GEOL 336. Aquatic Chemistry (4)
Chemical equilibria occurring in natural waters. Quantitative methods of describing acid-base, metal ion/ligand, precipitation/dissolution, and oxidation/reduction reactions. Geochemical cycling of trace metals and nutrients.
Offered as GEOL 336 and GEOL 436.

GEOL 341. Mineralogy (4)
Crystallography, hand specimen mineralogy and petrology, principles of crystal structure and crystal chemistry, elementary thermodynamics and phase diagrams, and an introduction to the petrographic microscope. Three lectures and one three-hour laboratory weekly. Recommended preparation: GEOL 119.

GEOL 344. Igneous and Metamorphic Petrology (4)
Composition, classification, and genesis of igneous and metamorphic rocks, emphasizing physical and chemical principles governing their origin. Laboratory study of rocks in thin section. Two lectures and two three-hour laboratories weekly. Prerequisite: GEOL 341.

GEOL 345. Planetary Materials (1–3)
An introduction to the materials that make up the solid matter of the solar system. Student presentations will review our current understanding of accessible primitive materials such as meteorites, cosmic dust, lunar and ancient terrestrial rocks, and their relationship to modern natural materials and solar system processes.
Offered as GEOL 345 and GEOL 445.

GEOL 349. Geological Problems (1–3)
Special work arranged according to the qualifications of the student.

GEOL 350. Geochemistry (3)
Introduction to geochemistry. Properties of the elements, elemental and isotopic fractionation, element transport, geochemical systems, geochronology, mineral reactions, the solid Earth, Earth in the solar system. A quantitative approach to modeling geochemical processes will be emphasized throughout.
Offered as GEOL 350 and GEOL 450.

GEOL 360. Summer Field Camp (6)
Six-week course in geologic field methods and mapping. Not offered at Case Western Reserve University; must be taken at another college or university. Credits will be transferred.

GEOL 367. Topics in Evolutionary Biology (3)
The focus for this course on a special topic of interest in evolutionary biology will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution. ANAT/ANTH/GEOL/PHIL 467/Biol 468 will require a longer, more sophisticated term paper, and additional class presentation.
Offered as ANTH 367, BIOL 368, GEOL 367, PHIL 367, ANAT 467, ANTH 467, BIOL 468, GEOL 467, and PHIL 467.

GEOL 390. Introduction to Geological Research (3)
Examination of factors in the selection, design, and conduct of research projects and in the analysis and interpretation of research results. Consideration of ethical issues in scientific research. Practice in proposal writing and oral presentation. Consultations with department faculty in preparation for individual Senior Project proposals. Research initiation.
SAGES Dept Seminar

GEOL 391. Senior Project (2)
Research project required of all department majors, based on formal project proposals presented to department faculty. Proposals may be submitted prior to the semester in which GEOL 391 is taken. Emphasis is on independence, initiative, and follow-through in planning and conducting the project. Grading deferred until completion of GEOL 392 (required). This course is the first of a 2-semester Senior Capstone (GEOL 391, 392) sequence. Recommended preparation: GEOL 390. SAGES Senior Cap

GEOL 392. Professional Presentation (2)
Preparation and presentation of final written and oral reports on individual Senior Projects. Class meetings focus on group discussion of problem areas in analysis and interpretation of project results, and in styles of writing poster and oral presentations as demonstrated by practice examples. This course is the second in a two-course (GEOL 391, 392) Senior Capstone sequence. Recommended preparation: GEOL 391. SAGES Senior Cap

GEOL 394. Seminar in Evolutionary Biology (3)
This seminar investigates 20th-century evolutionary theory, especially the Modern Evolutionary synthesis and subsequent expansions of and challenges to that synthesis. The course encompasses the multidisciplinary nature of the science of evolution, demonstrating how disciplinary background influences practitioners’ conceptualizations of pattern and process. This course emphasizes practical writing and research skills, including formulation of testable theses, grant proposal techniques, and the implementation of original research using the facilities on campus and at the Cleveland Museum of Natural History.
Offered as ANTH 394, BIOL 394, GEOL 394, HSTY 394, PHIL 394, ANTH 494, BIOL 494, GEOL 494, HSTY 494, and PHIL 494.

GEOL 396. Undergraduate Research in Evolutionary Biology (3)
Students propose and conduct guided research on an aspect of evolutionary biology. The research will be sponsored and supervised by a member of the CASE faculty or other qualified professional. A written report must be submitted to the Evolutionary Biology Steering Committee before credit is granted.
Offered as ANTH 396, BIOL 396, GEOL 396, and PHIL 396.

GEOL 405. Geomorphology and Remote Sensing (3)
Recognition and interpretation of land forms and their significance in revealing present and past geologic processes. Introduction to acquisition and analysis of data through aerial photography and satellite imagery. Two lectures and one laboratory weekly. Recommended preparation: GEOL 110 and GEOL 119.
Offered as GEOL 305 and GEOL 405.

GEOL 415. Structural Geology and Geodynamics (3)
Theoretical analysis of deformation in earth materials with illustrations of deformational styles in various tectonic settings and the dynamics of the Earth’s interior. Recommended preparation: GEOL 110.
Offered as GEOL 315 and GEOL 415.

GEOL 421. Hydrogeology (3)
Basic and applied concepts pertaining to the occurrence and movement of groundwater. Definitions, basic equations, applications to a variety of geologic settings, wells. Requires one Saturday field trip to make field measurements, collect and analyze data, and prepare a report.
Offered as GEOL 321 and GEOL 421.

GEOL 425. Geotectonics (3)
Interpretation of the major crustal features of the earth in terms of plate tectonics and associated phenomena.

GEOL 430. Geophysical Field Methods and Laboratory (4)
Use of seismic refraction and reflection, gravity, electrical, magnetic, and electromagnetic methods to infer the earth’s structure and composition. Application of inverse theory to estimate model parameters. Requires students to make field measurements, analyze data, and prepare a report. Includes several required Saturday field trips.
Offered as GEOL 330, GEOL 430.

GEOL 436. Aquatic Chemistry (4)
Chemical equilibria occurring in natural waters. Quantitative methods of describing acid-base, metal ion/ligand, precipitation/dissolution, and oxidation/reduction reactions. Geochemical cycling of trace metals and nutrients.
Offered as GEOL 336 and GEOL 436.

GEOL 437. Chemistry of Natural Waters (3)
Advanced topics in aquatic chemistry. Thermodynamics models for ion/ligand speciation in natural waters; origin and composition of seawater, chemical and mineralogical sequence during evaporation, chemical weathering, groundwater and river water chemistry, chemical cycling and a global mass balances; perturbations on natural systems by man. Predictive capabilities of box models.

GEOL 444. Flow and Sediment Transport (3)
This course focuses on open channel flow and sediment transport mechanics. A mathematical framework for the description of free surface flow and various modes of particle transport is built. This framework is used in discussions of geomorphic and sedimentologic processes and features. Specific topics covered include dimensional analysis, forces on settling particles, fluid flow, initiation of particle movement, bedload and suspended load transport and their calculation, and channel form.

GEOL 445. Planetary Materials (1–3)
An introduction to the materials that make up the solid matter of the solar system. Student presentations will review our current understanding of accessible primitive materials such as meteorites, cosmic dust, lunar and ancient terrestrial rocks, and their relationship to modern natural materials and solar system processes. Offered as GEOL 345 and GEOL 445.

GEOL 450. Geochemistry (3)
Introduction to geochemistry. Properties of the elements, elemental and isotopic fractionation, element transport, geochemical systems, geochronology, mineral reactions, the solid Earth, Earth in the solar system. A quantitative approach to modeling geochemical processes will be emphasized throughout.
Offered as GEOL 350 and GEOL 450.

GEOL 455. Isotope Geochemistry (3)
Principles and applications of naturally occurring variations of isotopic abundances in geologic, hydrologic, and biologic systems. Includes consideration of radioactive and radiogenic isotopes and their use in geochronology and as tracers; consideration of isotopic fractionations (especially of light stable isotopes), their thermodynamic and kinetic causes, and their use in understanding mechanisms and conditions of geologic processes and as tracers.

GEOL 467. Topics in Evolutionary Biology (3)
The focus for this course on a special topic of interest in evolutionary biology will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution, ANAT/ANTH/GEOL/PHIL 467/BIOL 468 will require a longer, more sophisticated term paper, and additional class presentation.
Offered as ANTH 367, BIOL 368, GEOL 367, PHIL 367, ANAT 467, ANTH 467, BIOL 468, GEOL 467, and PHIL 467.

GEOL 494. Seminar in Evolutionary Biology (3)
This seminar investigates 20th-century evolutionary theory, especially the Modern Evolutionary synthesis and subsequent expansions of and challenges to that synthesis. The course encompasses the multidisciplinary nature of the science of evolution, demonstrating how disciplinary background influences practitioners' conceptualizations of pattern and process. This course emphasizes practical writing and research skills, including formulation of testable theses, grant proposal techniques, and the implementation of original research using the facilities on campus and at the Cleveland Museum of Natural History.
Offered as ANTH 394, BIOL 394, GEOL 394, HSTY 394, PHIL 394, ANTH 494, BIOL 494, GEOL 494, HSTY 494, and PHIL 494.

GEOL 503. Seminar: Geomorphology/Glacial Geology (1)

GEOL 504. Seminar: Geochemistry (1)

GEOL 506. Seminar in Geophysics (1–3)
Selected topics in geophysics: advanced research issues, classical papers, current state of the field, advanced techniques. Course content will vary depending on interests of students and faculty.

GEOL 509. Seminar: Graduate Research (1)

GEOL 511. Special Readings in Geology (1–6)
Detailed study of a selected topic in geology under the guidance of a faculty member.

GEOL 512. Special Readings in Geology (1–6)
Detailed study of a selected topic in geology under the guidance of a faculty member.

GEOL 536. Seminar in Great Lakes Issues (1–3)
Selected topics related to Great Lakes basin studies: research problems, scientific processes, classic research papers, current events, policy issues, and legislative initiatives. Course content will vary depending on interests of students and faculty.
Offered as BIOL 536 and GEOL 536.

GEOL 601. Special Problems and Research (1–18)
(Credit as arranged.)

GEOL 651. Thesis M.S. (1–18)
(Credit as arranged.)

GEOL 701. Dissertation Ph.D. (1–18)
(Credit as arranged.)
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.
Jerry Piven, Ph.D.
Lecturer in Philosophy

David Rothenberg, Ph.D.
Assistant Professor of Music

Susanne Vees-Gulani, Ph.D.
Assistant Professor of Modern Languages and Literatures; Associate Director, Max Kade Center for German Studies

UNDERGRADUATE PROGRAMS

Major
The major in German Studies, which includes a German language requirement, concentrates on the study of the German cultural tradition in history, philosophy, the fine arts, music, film studies, politics, and culture. The major is particularly suited to students wishing to combine interests in German language and culture with a major in another discipline.

The major requires 30 hours, to be distributed as follows:

1. Required courses (6 hours):
   German 303 and German 396 (Senior Capstone) or equivalent

2. Electives (24 hours):
   Eight additional 300-level courses from the approved list of German Studies courses, no more than three of which may be in any one department.

The list of approved courses includes offerings from several departments and programs, including Art History and Art, Economics, English, History, Modern Languages and Literatures, Music, Philosophy, Political Science, Religious Studies, Theater, and World Literature. For the latest information about approved courses, please consult the program director.

Possible concentrations for the German Studies major include history and philosophy; German literature and theater history; political science and history; art history; music history; and religious studies. Within the program requirements, students are free to shape the major as they wish, based on their own intellectual interests.

Minor
The course requirements for the minor (15 hours) are as follows:

1. At least German 303 or 311 (3 hours)

2. Four additional 300-level courses from the approved list of German Studies courses, chosen from any two departments, or a thematic course of study approved in advance by the program director (12 hours)

GERONTOLOGICAL STUDIES PROGRAM

226 Mather Memorial
www.case.edu/artsci/soci/gerontological.html
Phone: 216-368-2703; Fax: 216-368-2676
Dale Dannefer and Gary T. Deimling, Directors
E-mail: dale.dannefer@case.edu; gary.deimling@case.edu

The Gerontological Studies program is a multidisciplinary program designed to integrate research and theory from multiple disciplines about aging, old age, and the life course. Prompted in part by broad social and technological changes that include the “graying” of the world’s population, humanists, scientists, social scientists, and professionals have become interested in understanding the position of the aged in society, the aging process in various contexts, and the meaning of aging to individuals. The program draws on the most recent thinking and research in a variety of disciplines to provide students with a background that will be helpful after graduation, both in work and in graduate or professional school.

In keeping with the interdisciplinary nature of the program, the core courses are drawn from five departments: Anthropology, Communication Sciences, History, Psychology, and Sociology. Students may choose from a variety of courses according to their own interests. Most of the electives are not specifically gerontology courses but cover topics that contribute to the understanding of aging and the aged. The perspectives gained in the core courses will provide the student with the background needed to relate the material in the more general courses to gerontological issues. The program is firmly grounded in the liberal arts and thus provides the student with the challenge to think and communicate effectively and to integrate diverse information, theories, and practice.

Gerontological Studies is an appropriate major or minor for students with a wide variety of career goals. The aging of the population has made available entry-level positions for persons with baccalaureate degrees in organizations that provide services to and formulate policy for the elderly. Many graduate programs now include an emphasis on aging for which a degree in Gerontological Studies would serve as a useful background. Students planning to pursue professional degrees will find that an increasing number of their clients or patients will be older adults and that problems with which they must deal will be related to the aged. The perspective provided by participating in the Gerontological Studies program provides students with excellent background in working with older populations. This background is particularly important for students who plan to pursue careers in human services, business, law, medicine, academics, or the sciences.

Faculty members associated with the program are engaged in a variety of funded research projects. These include studies of Alzheimer’s disease; cancer survivorship; patterns of care for the urban elderly in China; visual perception changes that accompany aging; the impact of high levels of physical activity on the biological aging process; grandparent-grandchild relationships; and stress, coping, and adaptation among urban community and institutionalized elderly.

PROGRAM ADVISORY COMMITTEE

Dale Dannefer, Ph.D.
Selah Chamberlain Professor and Chair, Department of Sociology, Co-Director, Gerontological Studies Program

Gary T. Deimling, Ph.D.
Professor of Sociology, Co-Director, Gerontological Studies Program

Charlotte Ikels, Ph.D.
Professor of Anthropology

T. J. McCallum, Ph.D.
Associate Professor of Psychology

UNDERGRADUATE PROGRAMS

Major
The Gerontological Studies program offers a major that leads to the Bachelor of Arts degree. However, it may be selected only as a second major, the first major being in a traditional academic department. The major consists of a minimum of 30 credits; 15 are in required courses and 15 are in approved elective courses. The required courses are:

- ANTH 304 Anthropology of Aging (3)
- COSI 345 Communication and Aging (3)
• PSCL 369 Adult Development and Aging
• SOCI 369 Aging in American Society (3)
• SOCI 496 Public Policy and Aging (3)

At least 15 credit hours must be earned in the approved electives listed below. This list changes from time to time as departmental offerings change. Check with a program director for current information.

• ANTH 215 Health, Culture, and Disease: An Introduction to Medical Anthropology (3)
• ANTH 301/401 Biological Aging in Humans (3)
• ANTH 318 Death and Dying (3)
• SOCI 269 Young and Old Face the Twenty-first Century (3)
• SOCI 311 Health, Illness, and Social Behavior (3)
• SOCI 313 Sociology of Stress and Coping (3)
• SOCI 319 Sociology of Institutional Care (3)
• SOCI 370 Family Structure and Process (3)
• GERO 397 Special Studies in Gerontology (1–3)
• GERO 398 Seminar in Gerontological Studies (3)
• GERO 399 Independent Studies in Gerontology (1–3)

Minor
The minor consists of 15 credits, including at least two of the core gerontology courses (ANTH 304, COSI 345, PSCL 369, SOCI 369, and SOCI 396), and any three of the approved electives or remaining core courses.

GRADUATE CERTIFICATE PROGRAM IN GERONTOLOGY
University Center on Aging and Health
1420 Frances Payne Bolton School of Nursing
http://fpb.case.edu/Centers/UCAH/program.shtml
Phone: 368-2692; Fax: 216-368-6389
May L. Wykle, Director
E-mail: may.wykle@case.edu

The University Center on Aging and Health is dedicated to the premise that aging is a developmental process spanning the entire life cycle, and brings together social and behavioral sciences, health sciences, and the humanities to encourage teaching and research activities in every unit of the University. The Center sponsors a certificate program in gerontology for graduate and professional students and for those who already hold graduate degrees.

A student interested in a graduate certificate in gerontology must be enrolled in a master’s or doctoral program, or be a special non-degree student with at least a master’s degree (or equivalent). To receive a certificate in gerontology, a student must submit a formal application, be approved by the University Center on Aging and Health, and take 12 credit hours of course work.

The student must complete the following courses:

1. Two three-credit courses in gerontology within the student’s discipline, one of which can be an independent study.
2. One three-credit course in gerontology or independent study outside the student’s discipline.
3. A three-credit seminar in gerontology offered by the center.

Any departures from the requirements must be approved by the center director. For further information, contact the University Center on Aging and Health at the address given above.

COURSE DESCRIPTIONS

GERO 397. Special Studies in Gerontology (1–3)
Independent study. Limited to junior and senior majors and minors.

GERO 496. Public Policy and Aging (3)
(See EPBI 408.) Cross-listed as EPBI 408.

GERO 498. Seminar in Gerontological Studies (3)
Major themes in gerontology. Seminar members choose a problem area, explore the relevant literature from a multi-disciplinary perspective, and develop a research project using knowledge gained through community observation and library exploration.

GERO 601. Independent Study (1–3)
For students enrolled in the graduate certificate program in gerontology.

HISTORY AND PHILOSOPHY OF SCIENCE PROGRAM
204 Mather House
www.case.edu/artsci/hpst
Phone: 216-368-2614
Alan Rocke, Director
E-mail: alan.rocke@case.edu

The Department of Philosophy and the Department of History together offer an undergraduate major in the history and philosophy of science. The purpose of the major is to develop a humanistic understanding of the nature and development of science through the combined use of philosophical and historical methods. The major provides a foundation for graduate study in a range of academic disciplines and for careers in such areas as business, medicine, law, public policy, and science journalism. It also may be profitably combined with a program in one of the sciences. Within the major, a student may seek an emphasis on the philosophy of science, the history of the physical sciences, or the history of the biological and medically related sciences.

PROGRAM ADVISORY COMMITTEE
Alan J. Rocke, Ph.D.
Henry Eldridge Bourne Professor of History; Director, History and Philosophy of Science Program

James M. Edmonson, Ph.D.
Adjunct Associate Professor of History; Director, Dittrick Medical History Center

Miriam R. Levin, Ph.D.
Professor of History

Colin McLarty, Ph.D.
Truman P. Haidt Professor of Intellectual Philosophy; Associate Professor of Philosophy

Jonathan Sadowsky, Ph.D.
Theodore J. Castele Professor; Associate Professor of History

UNDERGRADUATE PROGRAMS

Major
The history and philosophy of science major requires 30 credit hours from courses in philosophy and in history of science and technology. Required are PHIL 101, 204, and 302; HSTY 151 and 202; HSTY/PHIL 203; HSTY/PHIL 390; and three electives approved by the major advisor. Students who major in the history and philosophy of science are not permitted to take a second major in philosophy or to minor in philosophy.

Minor
The minor in history and philosophy of science consists of HSTY 202, PHIL/HSTY 203, and PHIL 204, plus two electives approved by the minor advisor.
The Department of History offers comprehensive undergraduate and graduate programs, with particular emphases on American history; the history of science, technology, environment, and medicine; and social history and policy. Historical studies are sometimes categorized among humanistic studies and sometimes among the social sciences. Allied with both traditions, historians seek an understanding of the past by analyzing societies and how they change over time.

The Department of History offers instruction within the customary frameworks that have formed the basis of historical studies, and it also has developed special emphases in social, cultural, political, and economic perspectives that allow instruction and research on such topics as the African-American experience, the environment, business and economy, technology and science, medicine, women’s history and gender studies, legal history, and comparative social history. Courses in history, or a formal major or minor in history, traditionally have been attractive to students as preparation for a wide variety of career and professional interests, including teaching, law, government, and journalism, and such public history activities as archival administration, historical museum administration, restoration and preservation of historic sites, and writing.

DEPARTMENT FACULTY
Jonathan Sadowsky, Ph.D.  
(Johns Hopkins University)  
Theodore J. Castele Professor; Associate Professor and Chair; Adjunct Associate Professor of Global Health and Diseases, School of Medicine  
Medical history; African history; comparative history
Molly W. Berger, Ph.D.  
(Case Western Reserve University)  
Instructor; Associate Dean, College of Arts and Sciences  
History of technology; U.S. cultural history; nineteenth and twentieth centuries
John Broich, Ph.D.  
(Stanford University)  
Assistant Professor  
British history; British Empire; environmental history; history of public health
Daniel Cohen, Ph.D.  
(Brandeis University)  
Associate Professor  
Colonial America; U.S. cultural history
David C. Himmack, Ph.D.  
(Columbia University)  
Hiram C. Hayden Professor of History  
American social and urban history; economic history
Marina Lasso, Ph.D.  
(University of Florida)  
Assistant Professor  
Latin American and Caribbean history; race and nationalism
Kenneth F. Ledford, Ph.D., J.D.  
(Johns Hopkins University, University of North Carolina)  
Associate Professor  
Modern German history; Modern European history; European legal history; history of the professions
Miriam R. Levin, Ph.D.  
(University of Massachusetts)  
Professor  
Industrial culture; European technology; French cultural history
Alan Rocke, Ph.D.  
(University of Wisconsin, Madison)  
Henry Elridge Bourne Professor of History; Director, History and Philosophy of Science Program  
History of science; science, technology, and society
Renée M. Sentilles, Ph.D.  
(College of William and Mary)  
Associate Professor; Director, American Studies Program  
American women’s history; U.S. cultural history; American studies
Peter Shulman, Ph.D.  
(Massachusetts Institute of Technology)  
Assistant Professor  
History of technology and science; environmental history; United States foreign relations
Theodore L. Steinberg, Ph.D.  
(Brandeis University)  
Adeline Barry Davie Distinguished Professor of History; Professor of Law  
U.S. environmental and legal history
Gillian L. Weiss, Ph.D.  
(Stanford University)  
Assistant Professor  
Early modern France; comparative slavery; the Mediterranean
Rhonda Y. Williams, Ph.D.  
(University of Pennsylvania)  
Associate Professor  
African American history; U.S. social history

Secondary Faculty
Rachel Sternberg  
(Bryn Mawr College)  
Associate Professor of Classics  
Greek language and literature; Greek social history; history of emotion; reception of the classical tradition in the age of Jefferson
Peter J. Whitehouse, M.D., Ph.D.  
(Johns Hopkins University)  
Professor of Neurology  
Geriatric neurology; behavioral neurology; dementia; history of neurology

Adjunct Faculty
James M. Edmonson, Ph.D.  
(University of Delaware)  
Adjunct Associate Professor; Director, Dittrick Medical History Center  
Medical history
John Grabowski, Ph.D.  
(Case Western Reserve University)  
Krieger-Mueller Associate Professor in Applied History  
U.S. history; immigration and ethnicity; local history
Gladys Haddad, Ph.D.  
(Case Western Reserve University)  
Adjunct Professor  
American studies; women’s education
John Vacha, M.A.  
(Case Western Reserve University)  
Adjunct Assistant Professor  
Theater history

UNDERGRADUATE PROGRAMS

Major
The history major may be elected in one of two formats: (1) the regular major, and (2) the teacher licensure major.

1) The regular major requires a minimum of 30 hours in history courses, including HSTY 112, HSTY 113, HSTY 250 (Issues and Methods in History), and HSTY 398 (Senior Research Seminar), as well as six additional courses in history, four of which must be agreed upon in consultation with the departmental advisor to form a coherent field of historical inquiry. The
focus might be geographical (for example, European history), chronological (for example, 20th-century history), topical (for example, women’s history), or some combination of these. The remaining two courses are open electives, and with permission, a course outside of History, in a related discipline, may be accepted towards the hours for the major.

2) The teacher licensure major requires 30 hours of history, including the same four courses required for the regular major and a minimum of six semester hours in each of three focus areas: United States history, World/European studies, and Asian, African, and Latin American studies. Candidates for teacher licensure (Integrated Social Studies, Adolescents and Young Adults) must also take courses in economics, political science, and sociology (9 hours), and 35 hours in education courses offered through Case Western Reserve and John Carroll University (see Teacher Licensure description elsewhere in this bulletin), culminating in student teaching. Students interested in pursuing this option should confer with the department’s undergraduate advisor.

Subject area requirements (39 hours):
HSTY 112, 113, 250, 398; two of HSTY 152, 206, 253, 255, 256, 257, 260, 262, 266, 325, 353, 354, 355, 356, 358, 378; two of HSTY 151, 200, 211, 212, 221, 222, 223, 254, 308, 309, 310, 334, 335, 342; two of HSTY 131, 135, 258, 268, 280, 281, 282, 285, 382, 383; one of ECON 102 or 103 or POSC 260; one of SOCI 112A, 112B, 113A, 113B, 302, 310. (With advisor approval, economics requirement may be met with HSTY 255, sociology requirement may be met with HSTY 262 or HSTY 325, and political science requirement may be met with HSTY 256.)

Integrated Graduate Studies

The Department of History participates in the Integrated Graduate Studies program. Interested students should note the general requirements and procedures of the Graduate School, but must also consult the departmental advisor about the specific requirements, guidelines, and opportunities for IGS in history.

Minor

A minor in history is available to all undergraduate students. It consists of 15 hours in history, including HSTY 112-113 (history core courses) and three additional courses, chosen in consultation with the departmental advisor; the courses must form a coherent field of historical inquiry.

Advanced Placement Credit

Students with Advanced Placement (AP) scores of 4 or better will receive three semester hours of college credit, applicable to the total number of credits required for graduation as well as to any major, minor, or sequence in history. AP credit may not be applied to the HSTY 112 and 113 core courses. Credit by way of AP examination in U.S. history is given for HSTY 256 (American Political History) and in European history for HSTY 212 (Modern European History).

GRADUATE PROGRAMS

The Department of History offers both the M.A. and the Ph.D. in history, but it emphasizes its two focused Ph.D. programs, in Social History and Policy and in the History of Science, Technology, Environment and Medicine. In practice, these two programs are closely related. The department also joins with the Law School to offer an M.A./J.D. dual-degree program. Informally, students can combine graduate study in history with the certificate or degree programs of the Mandel Center for Nonprofit Organizations. All applicants for graduate degrees in history must submit transcripts from all previous undergraduate, graduate, and professional study, scores on the GRE or a comparable standardized test, and three letters of recommendation. The department recommends, but does not require, an undergraduate major in history.

Master of Arts

The M.A. in history requires 27 hours of course work, including 6 hours of carefully supervised work on a master’s thesis (a work of original research based on primary sources). For the joint J.D./M.A. program, students must be admitted to both the History graduate program and the law school. They can earn the degree in either three and one-half years or three years and two summers of study, completing a total of 106 hours (including double credits of up to nine hours).

Doctor of Philosophy

Students are admitted into the History Department’s graduate programs with or without a master’s or professional degree. Students who do not have a master’s degree in history may be required to complete that degree in the department before moving on to the Ph.D.; those who have earned graduate or professional degrees closely related to their Ph.D. programs may petition for direct admission to the Ph.D. program. Students who first complete their M.A. in history at Case Western Reserve must complete an additional 24 hours of course work, pass the qualifying exams required by their program of study, and prepare a Ph.D. dissertation while enrolling in at least 18 hours of supervised dissertation-writing work. Students who have completed their master’s-level work before coming to Case Western Reserve must complete at least 24 hours of course work before taking their qualifying exams. All Ph.D. students are required to take HSTY 470 (Historiography, Method, and Theory), HSTY 477 (Seminar in Comparative History), and HSTY 479 (Historical Research and Writing).

Program in Social History and Policy

The Social History and Policy program is designed to prepare students for careers either as analysts and administrators of social policy, or as teachers and researchers in colleges and universities. The program defines social policy broadly to include not only welfare, family and juvenile matters, aging, health care, and medicine, but also education, urban history, environmental history, cultural policies regarding museums, libraries and similar agencies, and labor. The program recognizes that social policies are made and put into practice by private, nonprofit organizations and through legal institutions as well as through federal, state, and local legislatures and executives.

Applicants for the Social History and Policy program must submit GRE scores and three letters of recommendation. The program does not require an M.A. in history, and has admitted several students with J.D., M.S.W., library science, or other degrees, but it often requires students with limited backgrounds in U.S. history to take extra course work. More tightly structured than the traditional Ph.D., the Social History and Policy program requires 18 hours of course work (and possibly additional hours to prepare for examinations); qualifying examinations in U.S. history and in the history of social policy; a cognate field; and a dissertation. The program also includes an option for the student to complete a policy-related internship; recent internships have been conducted with the Cleveland Federation for Community Planning, the Interchurch Council of Greater Cleveland, the Bureau of Jewish Education, the Sisters of Charity of St.
Augustine, and the Hathaway Brown School.

Program in the History of Science, Technology, Environment and Medicine

The History of Science, Technology, Environment and Medicine program was established in 1961 as the first in the nation to emphasize the history of technology as well as the history of science. The program's areas of particular strength include the social and cultural history of technology, both American and European, technology and science policy, the history of the physical sciences since the Renaissance, gender issues in technology and science, the history of medicine, and the history of the environment. The course of study for the Ph.D. includes the M.A. requirements, written and oral qualifying examinations, and a dissertation. While most graduates of the program teach in universities, others work in museums or archives, or deal with science policy questions.

The Department of History also offers a traditional Ph.D. program in U.S. history. For this program, which does not admit students every year, an M.A. in history is strongly recommended. This program requires 24 hours of course work beyond the M.A. as well as comprehensive oral examinations in the general field (U.S. history from the colonial period to the present), in a major field (a period or subfield of U.S. history), and in two cognate fields, at least one of which is a field other than U.S. history.

FACILITIES

Case Western Reserve University, the other institutions in the University Circle neighborhood, and the Cleveland area in general offer excellent facilities for historical research. These facilities are especially strong in the fields of social history and policy and in the history of medicine, health care, nonprofit organizations, technology, and science. The university library's extensive collections in these fields are significantly augmented by the holdings of the nationally ranked Allen Memorial Library in the history of medicine and health care, and of the equally distinguished Western Reserve Historical Society in regional economic, social, nonprofit, ethnic, African-American, and Jewish history. Both the Allen Memorial Library and the Western Reserve Historical Society library are adjacent to the campus. The Cleveland Public Library, just five miles from campus in downtown Cleveland, is the third largest public library in the U.S.; it maintains excellent research collections in Ohio, U.S., and British history, technology, and business. The University has also pioneered in the development of electronic connections to other libraries and to research resources in general; Ohio's many colleges and universities have one of the nation's leading interlibrary loan programs.

COURSE DESCRIPTIONS

HSTY 106. Introduction to Early American History (3)

History of colonial British North America and the early United States through 1860. Focuses on contrasting social systems in different colonies and regions; causes and consequences of the American Revolution; political, religious, and economic transformations between 1790 and 1860. Students will examine various scholarly approaches and methods, but will particularly explore the lives and values of early Americans through personal writings such as diaries and autobiographies.

HSTY 110. Roman Civilization (3)

The enduring significance of the Romans studied through their history, literature, art, and philosophy. Lectures and discussion. Offered as CLSC 112 and HSTY 110.

HSTY 111. Greek Civilization (3)

This course constitutes the first half of a year-long sequence on classical civilization. It examines the enduring significance of the Greeks studied through their history, literature, art, and philosophy. Lectures and discussion. (For the second course in the sequence, see CLSC 112.) Offered as CLSC 111 and HSTY 111.

HSTY 112. Introduction to American History (3)

History of the United States from the first settlements to the present. Emphasis on themes such as political and social revolution, slavery and race relations, industrialism, and national cultures.

HSTY 113. Introduction to Modern World History (3)

The history of the nineteenth and twentieth centuries in global context. Emphasis on the forces that have created or shaped the modern world: industrialization and technological change; political ideas and movements such as nationalism; European imperialism and decolonization; and the interplay of cultural values.

Global & Cultural Diversity

HSTY 117. Introduction to American Studies (3)

This course is designed to introduce students to the interdisciplinary field of American Studies while also empowering them to use the tools and perspectives of several disciplines, such as history, literature, art history, and anthropology. This course aims to introduce students to the various disciplines that constitute American Studies while paying special attention to the ways in which these disciplines can work together to illuminate the study of American cultures, past and present. Students will combine different methodologies in the process of completing assignments designed to make use of a variety of University Circle institutions. For the purposes of this course, biography is treated as a constructed genre that comes in a variety of forms, including autobiography, biographical novels, oral histories, and film. The class will discuss how certain biographies have created archetypal American identities, and how gender/race/class/historical context, etc. have affected the writing and reading of biography and restructured notions of identity. Offered as AMST 117 and HSTY 117.

HSTY 133. Introduction to Chinese History and Civilization (3)

This course explains the continuities and discontinuities in the history of China by stressing the development and distinctive adaptations of cultural, religious, and political patterns from the origins of the Chinese civilization to the present. By focusing on major cultural, socio-economic, and political issues such as Confucianism, Buddhism, trade relations, imperialism, and intellectual discourse in the overall Asian context (with particular reference to Korea and Japan), we discuss the historical development of China and its situation on entering the 21st century. Taking into account the key historical events in the last century, we examine the emergence of China as a modern nation-state and the fundamental transformation of Chinese society in the post-war period. Offered as ASIA 133 and HSTY 133.

Global & Cultural Diversity

HSTY 134. Introduction to Japanese History and Civilization (3)

This course provides an introduction to various aspects of Japanese civilization, from its origins to the present. By focusing on major cultural, socio-economic, and political issues such as the adaptation and transformation of Confucianism, Buddhism, Shintoism, social structures, material culture, foreign relations, militarism, nationalism, and intellectual discourse in the overall Asian context (with particular reference to Korea and China), we discuss the historical development of Japan and the country’s position on entering the 21st century. We examine the emergence of Japan as a modern nation-state and the fundamental transformation of its society in the post-war period. Offered as ASIA 134 and HSTY 134.

Global & Cultural Diversity

HSTY 135. Introduction to Modern African History (3)

A general introduction to major themes in modern African history, with an emphasis on the nineteenth and twentieth centuries. Topics include oral tradition and narrative, economic structure and dynamics, religious movements, colonialism,

HSTY 136. Introduction to Latin American History (3)
This course provides an introduction to the historical and cultural development of Latin America, in an attempt to identify the forces, both internal and external, which shape the social, economic and political realities in present day Latin America. Beginning with its pre-Columbian civilizations, the course moves through the conquest and colonial period of the Americas, the wars of independence and the emergence of nation-states in the nineteenth century, and the issues confronting the region throughout the turbulent twentieth century, such as migration and urbanization, popular protest and revolution, environmental degradation, great power intervention, the drug trade and corruption, and the integration of the region into the global economy. Offered as ETHS 253B and HSTY 136. Global & Cultural Diversity

HSTY 151. Technology in European Civilization (3)
The history of technology in ancient Mediterranean, medieval, and modern European society until the First World War. The course introduces students to the relationship between technology and its social, political, and cultural settings, and to the values invested in technology at significant historical moments. There will be visits to local industrial sites, architectural and engineering monuments, and the Cleveland Museum of Art. Offered as ETHS 253B and HSTY 136.

HSTY 152. Technology in America (3)
Origins and significance of technological developments in American history, from the first settlements to the present. Emphasis on the social, cultural, political, and economic significance of technology in American history. Offered as ETHS 253B and HSTY 136.

HSTY 163. Modern Britain and Its Empire (3)
This lecture and discussion course covers the history of Britain at the height of its political and industrial power and the history of the expanding and contracting British Empire. Britain was a nation of great technological, economic, and military power, but it also experienced extraordinary stresses. Industrialization meant material prosperity for some, but hardship and dehumanization for others. Many questioned how overwhelming poverty and ignorance could be allowed to stand beside such vast affluence. And subjects of the British in India, Ireland, and elsewhere struggled for independence from an empire that claimed to bring freedom, reason, and equality. The British learned to their cost, too, that decolonization often meant being caught in the crossfire of ethnic rivals. This course will explore the many paradoxes of the history of the British at their most dominant.

HSTY 200. The Ancient World (3)
Ancient Western history from the origins of civilization in Mesopotamia to the dissolution of the Roman Empire in the West. Offered as CLSC 201 and HSTY 200.

HSTY 201. Science in Western Thought I (3)
The development of Western thinking about the natural world and our relation to it, as part of culture, from pre-classical civilizations to the age of Newton.

HSTY 202. Science in Western Thought II (3)
The development of Western thinking about the natural world and our relation to it, as part of culture, from Newton to the modern age. HSTY 201 is not a prerequisite.

HSTY 203. Natural Philosophy I (3)
Historical and philosophical interpretation of some epochal events in development of science. Copernican revolution, Newtonian mechanics, Einstein’s relativity physics, quantum mechanics, and evolutionary theory; patterns of scientific growth; structure of scientific “revolutions;” science and “pseudo-science.” First half of a year-long sequence. Offered as HSTY 203 and PHIL 203.

HSTY 204. Introduction to the Nonprofit Sector (3)
The United States has by far the largest and most important “nonprofit sector” in the world, a sector consisting of voluntary non-governmental organizations that provide health care, education and social services as well as arts, religious, and advocacy activities. Using mostly primary sources, this course considers the significance of the nonprofit sector in the U.S., its advantages and disadvantages, its uses for different groups of Americans, and current trends. Students have the option of writing either a standard term paper, or a study of strategic challenges facing a contemporary nonprofit organization. Offered as HSTY 204 and PHIL 204.

SAGES Dept Seminar

HSTY 207. Natural Philosophy II (3)
Conceptual, methodological, and epistemological issues about science: concept formation, explanation, prediction, confirmation, theory construction and status of unobservables; metaphysical presuppositions and implications of science; semantics of scientific language; illustrations from special sciences. Second half of a year-long sequence. Offered as HSTY 207 and PHIL 204.

HSTY 208. Social History of Crime (3)
This course explores the relationship between law and history in American society. It uses social history methodology to suggest new ways of understanding how the law works as a system of power to advance certain interests at the expense of less powerful groups. Emphasis is on issues of pressing concern to America’s poor and working class, including the death penalty, abortion, rape, the war on drugs, and the prison industry.

HSTY 210. Byzantine World 300-1453 (3)
Development of the Byzantine empire from the emperor Constantine’s conversion to Christianity and founding of the eastern capital at Constantinople to the fall of Constantinople to Turkish forces in 1453. Offered as CLSC 210 and HSTY 210.

HSTY 211. The Medieval World, 300-1500 (3)
Medieval history and civilization from the fall of the Roman Empire to the age of the Renaissance. Interactions between medieval Europe and other Mediterranean and Eurasian cultures.

HSTY 212. Modern European History (3)
The history of Europe from the late eighteenth century to the present. Themes include political upheavals and movements, as well as industrial, social, intellectual, and cultural changes. This course provides a solid foundation for those wishing to take more specialized courses in European history.

HSTY 213. Earthquake, Flood, and Fire: Natural Disaster in History (3)
The wind blows, mobile homes take flight, and people die. Natural disasters are that simple. Or are they? This course employs a historical approach to penetrate the mythology of natural disaster, focusing on the human dimension behind these so-called natural acts. By peeling back the layers of obfuscation, deposited there by successive generations of city boosters and technocrats, we learn that there is nothing simple or natural behind hurricane, tornado, flood, and earthquake calamities.

HSTY 214. Comparative Slavery (3)
People around the world have been enslaving one another since the beginning of time. From the seventeenth to the nineteenth centuries, millions of African chattel labored on southern plantations, supporting the “peculiar institution” whose terrible legacy remains with us today. For hundreds of years before European slave traders began ferrying human cargo across the Atlantic, however, coercive bondage was a well-entrenched feature of Mediterranean civilizations, justified by religious and secular law alike. This course will explore diverse types of unfree labor, from slavery in ancient Greece and Rome, serfdom in medieval Europe, captivity in North Africa and indentured servitude in colonial America. Did earlier systems of domination around the Mediterranean prepare the way for the establishment of Atlantic slavery? How did ideologies about religious difference, ethnicity, and race help justify this ultimate form of human degradation? Offered as: EHTS 214, HSTY 214

HSTY 215. Europe in the 20th Century (3)
The twentieth century has seen stupendous transformations in the internal structures of European politics, economics, society, and culture and in
Europe’s place in the world. This course traces Europe’s transition from a continent of sovereign nation-states or empires ruled by monarchs with starkly hierarchical social structures, through wars, revolution, dictatorships, destruction, division, and destitution, to a conflicted present. The contradictory combination of peace, freedom, and pluralism combined with cultural critique of the very consumer society that has reduced conflict challenges students’ linear notions of historical development.

HSTY 216. Vikings and Medieval Scandinavia (3)
A survey of the history of the Vikings and medieval Scandinavia, covering approximately the eighteenth to the fifteenth centuries AD. Topics explored include: causes of the “outbreak” and cessation of Viking expeditions, the role of the Vikings as raiders and/or traders in Western Europe, the role of the Vikings in the emerging states of Russia, Iceland and medieval Scandinavian law, the historicity of the saga literature, and Viking descendents—Normans and “Rus.”

HSTY 217. History of Corporate America (3)
This course will explore the origins and evolution of big business’s role in American society. It is not a course about the history of corporations but rather a course that examines how corporate entities have affected fundamental aspects of political, social, and economic life. It will deal with the period from the late nineteenth century to the present and cover such topics as diverse as labor struggles, capitalism, and slavery and colonization.

HSTY 218. Jews in Early Modern Europe (3)
This course surveys the history of Jews in Europe and the wider world from the Spanish expulsion through the French Revolution. Tracking peregrinations out of the Iberian Peninsula to the British Isles, France, Holland, Italy, Germany, Poland-Lithuania, the Ottoman Empire and the American colonies, it examines the diverse ways Jews organized their communities, interacted with their non-Jewish neighbors and negotiated their social, economic and legal status within different states and empires. What role did Jews play and what symbolic place did they occupy during a period of European expansion, technological innovation, artistic experimentation, and religious and political turmoil? What internal and external dynamics affected Jewish experiences in the sixteenth, seventeenth and eighteenth centuries? Through a selection of inquisitorial transcripts, government records, memoirs and historical literature, we will explore topics such as persecution, conversion, messianism, toleration, emancipation and assimilation.

HSTY 220. The Early Modern Mediterranean (3)
For centuries before Columbus crossed the Atlantic Ocean, travelers and traders, pirates and pilgrims, mercenaries and missionaries explored the contours of the Mediterranean Sea—and engaged in commerce, as well as religious, economic and military competition. If religion and ethnicity divided Muslims, Christians and Jews from Algiers to Athens, did shared geography, foodstuffs, and cultural values bind them together? This course examines the unity and diversity of this maritime region by considering the peoples, beliefs, commodities and diseases that circulated through it during the sixteenth, seventeenth, and eighteenth centuries. Does the early modern Mediterranean showcase a clash of civilizations or provide an enduring model for coexistence? Topics include merchant culture, diplomacy, honor and shame, slavery and colonization.

HSTY 221. Medieval and Tudor/Stuart England (3)
English history from Anglo-Saxon times through the Tudor and Stuart age; kings and kingship, the growth of Parliament, the common law, international politics, and England’s relations with Celtic Britain.

HSTY 222. Early Modern Europe (3)
Europe has not always existed. To find out who created it and when, this course will ask two fundamental questions: First, how did the geographic, linguistic, religious and ethnic characteristics of European identity develop over the course of the sixteenth, seventeenth and eighteenth centuries? Second, how did Europeans in this period influence other parts of the world? Through close readings of memoirs, treaties and chronicles, and discussions of secondary literature, we will explore the political, social, and religious history of Europe from roughly 1500 to 1800. Topics include: exploration and conquest; Protestant and Catholic reformations; witchcraft and popular culture; science and medicine; Enlightenment and Revolution.

HSTY 223. Evolution (3)
Multidisciplinary study of the course and processes of organic evolution provides a broad understanding of the evolution of structural and functional diversity, the relationships among organisms and their environments, and the phylogenetic relationships among major groups of organisms. Topics include the genetic basis of micro- and macro-evolutionary change, the concept of adaptation, natural selection, population dynamics, theories of species formation, principles of phylogenetic inference, biogeography, evolutionary rates, evolutionary convergence, homology, Darwinian medicine, and conceptual and philosophical issues in evolutionary theory.

HSTY 224. Jews in the Modern World (3)
Investigation of the impact of modernity on the Jewish community. In particular, the course will examine the influence of the Emancipation and Enlightenment on the social situation of the Jews in Europe and America and the corresponding changes in Judaic religion, philosophy, social structure, and culture. Attention will be paid to the creation of a modern Jewish identity in the secular culture of the post-Medieval world.

HSTY 225. People and the Land in Pre-Modern Europe (3)
This course explores the relationship between the peoples of Europe and their environments as Europe changed from a backwater of the Roman Empire into the seat of a number of globe-spanning empires. It examines how Europeans changed the land over time in order to derive a subsistence, produce surplus, and, later, to fuel the growth and power of early modern state. The course will delve into the ways that Europeans thought about nature and with admiration and fear, disdain and incomprehension. Between the eleventh and thirteenth centuries, French soldiers battled in the Holy Land; for several hundred years after that, France and the Ottoman Empire exchanged diplomats, traders and slaves. The colonial occupation of Algeria that began in 1830 ended violently in 1962. By then, the empire that struck back had also come home through large waves of immigration. Today, the social and economic status, religious affiliation, political significance and cultural impact of French citizens of North African descent are the subject of burning national debate. Taking a long view on Franco-Muslim relations, the course will explore such topics as the Crusades, Mediterranean piracy and captivity, Napoleon’s Egyptian campaign, the Algerian War of Independence, the “veil affair,” riots in the suburbs of Paris and World Cup soccer.
themes that have shaped the study of black people, questions, methodological approaches, and major politics. Students will learn about the study of Black History, cultures, econom-

HSTY 252A. Introduction to African-American Studies (3)
This course is designed to introduce students to the study of Black History, cultures, econom-
ics, and politics. Students will learn about the development of the field by exploring theoretical questions, methodological approaches, and major themes that have shaped the study of black people, primarily in the U.S. context. This is a seminar-

HSTY 252. History and American Culture (3)
American technology is a cultural phenomenon, a part of, rather than separate from, more general concerns. Examines technology through historical writings, literature, images, and both material and popular culture.

HSTY 254. The Holocaust (3)
History of racism in European society from 18th to 20th century; investigation, from perspectives of history, psychology, literature, philosophy, and religion, of how bureaucracy could exterminate six million Jews; responses of individuals, groups, institutions, and nations to deliberate extermination of nearly a whole people. Offered as HSTY 254 and RLGN 254.

HSTY 255. Economic History of the United States (3)
The growth of the American economy from the colonial period to the present. Competing explana-
tions of economic growth; significant attention to the political and legal environment in which the U.S. economy developed; “lessons” of past experi-
ence for contemporary policy; some attention to inequality and the changing distribution of wealth and income. Offered as ECON 255 and HSTY 255.

HSTY 256. American Political History (3)
From the origins of American politics in the colonial period to the present. The Revolution and Constitutional debate; presidential politics and leadership; voters and voting patterns; Congress and the courts. Emphasis both on the ideas that animated American politics and on the relation of politics to society.

HSTY 257. Immigrants in America (3)
Immigration to America has constantly reshaped the way the nation views itself. This course exam-

HSTY 258. History of Southern Africa (3)
A survey of southern Africa from about 1600. Topics include the social structure of pre-colonial African societies, the beginnings of European settle-

HSTY 259. U.S. Slavery and Emancipation (3)
Beginning with the African encounter with Europeans during the emergence of the modern slave trade. Students are introduced to the documents and secondary literature on the creation and maintenance of slavery, first in colonial America, and then in the United States. The course concludes with the destruction of slavery. Offered as ETHS 259 and HSTY 260.

HSTY 260. U.S. Slavery and Emancipation (3)
Explores the fashioning of a modern African-American culture between emancipation and the end of World War II. Emergence of a northern-based leadership, the challenge of segregation, emergence of bourgeois culture, the fashioning of racial consciousness and black nationalism, the shift from a primarily southern and rural popula-
tion to one increasingly northern and urban, the creation and contours of a modern African-American culture, the construction of racial/gender and racial/class consciousness. Offered as ETHS 260.

HSTY 261. African-American History 1865-1945 (3)
Examines the immense social and cultural changes which took place in Africa as a result of colonial occupations, in the period roughly from 1880 to 1965. It is organized around three major rubrics which were central to the colonial experience: the spread of Christianity, economic forces which led to new forms of labor, and the growth of nationalist resistance. Offered as ETHS 261.

HSTY 262. African-American History Since 1945 (3)
Completes the three-term sequence of the African-American history survey (although the first two courses are not prerequisites for this course). Explores some of the key events and developments shaping African-American social, political, and cultural history since 1945. Offered as HSTY 262 and ETHS 262.

HSTY 263. History of the Professions (3)
Professions are one of the central occupational structures of modern society. This course teaches about the historical context of the professions that many students will seek to join. It covers the three classic “learned” professions of clergy, law, and medicine, and newer ones such as accountancy, engineering, management, and nursing. It is compar-

HSTY 264. The Engineer in America (3)
History, culture, politics, ethical considerations, and gender issues of the engineering profession in the United States.

HSTY 265. History of the Professions (3)
This course introduces women and men students to the methods and concepts of gender studies, women’s studies, and feminist theory. An interdisci-

HSTY 266. Colonialism in Africa (3)
Examines the immense social and cultural changes which took place in Africa as a result of colonial occupations, in the period roughly from 1880 to 1965. It is organized around three major rubrics which were central to the colonial experience: the spread of Christianity, economic forces which led to new forms of labor, and the growth of nationalist resistance. Offered as ETHS 268.

HSTY 267. Global & Cultural Diversity

HSTY 268. Global & Cultural Diversity

HSTY 269. Global & Cultural Diversity

HSTY 270. Introduction to Gender Studies (3)
This course reviews the history of sports in America from the colonial period to the present. It gives particular attention to the evolution of sports as a major business and to the roles of gender, ethnicity, and race in the history of America sport, as well as to the emergence of sports as a major defining characteristic of America life and society.

HSTY 271. Contemporary China (3)
Beginning with the Opium Wars, we review the historical development of intellectual discourse, public reaction, and political protest in late Im-
perial and Republican China from the early 19th century to the communist revolution in 1949. In contrast to the conventional description of China from a Western point of view, this course tries to explain the emergence of modern China in the
context of its intellectual, political, and socio-economic transformation as experienced by Chinese in the 19th and 20th century. By discussing the influence of the West, domestic rebellions, and political radicalism, we examine how the Chinese state and society interacted in search for modernization and reforms, how these reforms were continued during the Republican period, and to what extent historical patterns can be identified in China's present-day development.

Global & Cultural Diversity

HSTY 284. Daily Life in Imperial China (3)
This course is an interdisciplinary study of Chinese society using methodological approaches from the fields of social, cultural, economic, and art history. In order to explore the fabric of society in Imperial China (from the beginning to the early 20th century) in a creative, interactive way— including folk customs, life at the court, in city and countryside, religious activities, gender roles, material culture, consumption, entertainment, and social hierarchies—we use the excellent Chinese collection in the Cleveland Museum of Art and various visual aids such as slides and CD-ROMs in the classroom.

Offered as ASIA 284 and HSTY 284.
Global & Cultural Diversity

HSTY 285. Modern Japan (3)
This course introduces students to the many changes that characterize the social, political, economic, and intellectual history of modern Japan from the mid-19th century to the present. We discuss to what extent the Meiji state was built upon Japan's "traditional" heritage, how modernization and Western influence were implemented in and perceived by society, and which factors led the government to adopt extreme imperialist and militarist policies in the early 20th century. Looking at the emergence of a new Japan after World War II, we focus on employment structures, mass culture, urbanization, gender roles, and social patterns in order to understand the transformation of modern Japanese society.

Global & Cultural Diversity

HSTY 287. State, War, Drugs, and Coffee in Colombia: History of Modern Colombia (3)
This course will analyze the major forces that have shaped Colombian history from the 19th century to the present. Colombia is one of the largest and most fascinating countries in Latin America. It has been intricately linked to the U.S. market as a major coffee producer and, more recently, as a major supplier of illicit drugs. Colombia has always been one of the wealthier Latin American countries, and it has a high degree of electoral democracy. Paradoxically, however, Colombia has also experienced rather high levels of regionalism and political violence. This course seeks to explore the history of these paradoxes. It will situate Colombia's contemporary conflicts within a larger historical perspective.

Offered as ETHS 287 and HSTY 287.
Global & Cultural Diversity

HSTY 298. Departmental Seminar (3)
The Department of History Departmental Seminar. A topical course, emphasizing disciplinary forms of writing, it is recommended for students before the end of their junior years. The class will advance the goals of SAGES within the disciplinary context of history by focusing on close readings of texts, analytical writing, and intensive seminar-style classroom discussions.

SAGES Dept Seminar

HSTY 299. Topics in History (3)
Subject matter will vary with instructor but will focus on some particular topic or historical approach. Course description available from departmental office.

HSTY 302. Ancient Greece: Archaic, Classical, and Hellenistic Periods (3)
The rise of Hellenic thought and institutions from the eighth to the third centuries B.C., the rise of the polis, the evolution of democracy at Athens, the crises of the Persian and Peloponnesian Wars, fifth century historiography, the growth of individualism, and the revival of monarchy in the Hellenistic period.

Offered as CLSC 302 and HSTY 302.

HSTY 303. History of the Early Church: First Through Fourth Centuries (3)
Explores the development of the diverse traditions of Christianity in the Roman Empire from the first through the fourth centuries C.E. A variety of New Testament and extra-Biblical sources are examined in translation. Emphasis is placed on the place of Christianity in the larger Roman society, and the variety of early Christian ideals of salvation, the church, and Church leadership.

Offered as HSTY 303 and RLGN 373.

HSTY 304. Ancient Rome: Republic and Empire (3)
Growth and development of the Roman state from the unification of Italy in the early third century B.C. to the establishment of the oriental despotism under Diocletian and Constantine. The growth of empire in the Punic Wars, the uncertain steps toward an eastern hegemony, the crisis in the Republic from the Gracchi to Caesar, the new regime of Augustus, the transformation of the leadership class in the early Empire, and the increasing dominance of the military over the civil structure.

Offered as CLSC 304 and HSTY 304.

HSTY 306. History Museums: Theory and Reality (3)
This course is an intensive summer internship (10 hours per week) at the Western Reserve Historical Society, complemented by extensive readings in museum/archival theory and public historical perception. It is designed both to introduce students to museum/archival work and to compare theoretical concepts with actual museum situations. Interns will be assigned a specific project within one of the Society's curatorial or administrative divisions, but will have the opportunity to work on ancillary tasks throughout the History's headquarters in University Circle.

Off ered as HSTY 306 and HSTY 406.

HSTY 307. Development of Chemistry and Chemical Engineering (3)
The development of chemical ideas; theories of matter, composition, structure, and reaction; the application of chemistry and chemical theory from antiquity to the 20th century; all considered in social context.

HSTY 308. Italian Renaissance 1350-1600 (3)
Political and cultural history of Renaissance Italy, Florence, Venice, Rome, and the development of Humanism. Extensive reading of major writers such as Machiavelli.

HSTY 309. Reformation Europe, 1500-1650 (3)
Origins and development of Protestantism, the Catholic Counter-Reformation, and the interaction between secular power and religious identity in Christian Europe.

Offered as HSTY 309 and RLGN 374.

HSTY 310. The French Revolutionary Era (3)
Causes, progress, and results of the internal transformation of France from 1789 to 1815; impact of revolutionary ideas on other European and non-European societies.

HSTY 311. Seminar: Modern American Historiography (3)
This seminar examines the approaches that professional historians of the United States have taken to the writing of American history in the past fifty years, with emphasis on changes in historical concerns, master debates among historians, and contemporary interests. Topics covered include national politics and government, economic development, social history, the history of ethnicity, race, and gender, and foreign policy and international relations. Each student will read widely and will prepare a series of reports on selected books and authors.

Offered as HSTY 311 and HSTY 411.

HSTY 312. European Legal History (3)
Examines the development of the legal systems of Central and Western Europe since the reception of Roman law. Focus will fall upon the alliance of Roman law and the absolutist state, the rise of bureaucratic absolutism, codification and the rise of liberal constitutional and legal thought, the Central European Rechtsstaat tradition, the historical school and legal positivism, the differing trajectories of development of bars in private practice, and the shape of modern European civil law systems, all in their social contexts.

HSTY 314. Impostors in Early Modern Europe (3)
Religious persecution during the early modern period (16th-18th centuries) compelled Jews to attend Mass, Muslims to baptize their children and
Protestants of count Hail Marys on a rosary. Eu-
ropean exploration of Asia, Africa and the Ameri-
cas inspired an Englishman to pass himself off as
Tawianese and an African to present himself as
a European. The choice between marriage and a
convent led one woman to cut off her hair, sew her
skirt into britches and make herself into a conquis-
tador in Peru. In pursuit of social mobility, court-
iers remade themselves to suit the conventions of
the court. Posing, passing and pretending, these
early modern Europeans crossed lines of religion,
gender, race and class. Today we might call some
of these figures impostors but praise others as self-
made men and women. What was the difference
between lying and self-fashioning in early modern
Europe? What forces and phenomena compelled
people to remake themselves? Was the early mod-
ern period the age of dissimulation? This course ex-
plores these questions by reading memoirs, hand-
books, inquisitorial documents and plays from the
period of light of contemporary theoretical litera-
ture.

HSTY 315. Heresy and Dissidence in the
Middle Ages (3)
Survey of heretical individuals and groups in
Western Europe from 500 - 1500 A.D., focusing
on popular rather than academic heresies. The de-
velopment of intolerance in medieval society and the
problems of doing history from hostile sources
will also be explored.
Offered as HSTY 315 and RLGN 315.

HSTY 318. History of Black Women in the
U.S. (3)
Chronologically arranged around specific issues in
black women’s history organizations, participation in
community and political movements, labor ex-
périences, and expressive culture. The course will
use a variety of materials, including autobiography,
literature, music, and film.
Offered as ETHS 318, HSTY 318, and WGST
318.

HSTY 319. The Crusades (3)
This course is a survey of the history of the idea of
“crusade,” the expeditions of Western Europeans
to the East known as crusades, the Muslim and
Eastern Christian cultures against which these
movements were directed, as well as the culture of
the Latin East and other consequences of these
crusades.
Offered as HSTY 319 and RLGN 319.

HSTY 322. Feminist Theory, Women’s His-
 tory, Gender History (3)
A reading seminar designed to expose students to
current theory and methods in feminist history, as
well as feminist scholarship more generally. It
includes a variety of topics representative of inter-
est and concerns shared by feminist historians,
as well as a range of methodological approaches
and theoretical debates. The course aims to im-
port a sense of the ways in which feminist theory
has been applied to and has transformed historical
scholarship.
Offered as HSTY 322, WGST 322, HSTY 422,
and WGST 422.

HSTY 325. U.S. Politics, Culture, and Soci-
ety: 1787-1865 (3)
Explores politics, culture, and society in the Unit-
ed States between the War for Independence and
the Civil War. Topics include the transformation
of political ideology, the political process, capital-
 ist development in cities, factories, and the coun-
tryside, and changing dynamics of class, race, and
 gender in both the North and South.

HSTY 327. Comparative Environmental
History (3)
Environmental history is the study of how humans
have influenced the environments around them
and how the environment itself has influenced the
course of human societies. This course provides
students with the skill to identify and analyze
these interactions. It introduces course partici-
pants to the main themes of environmental his-
tory literature and the driving questions guiding
environmental history research by examining case
studies drawn around the globe, including Pre-
Columbian America, Medieval Japan, Colonial
Africa, and Modern Germany. This course will
help course participants recognize the important
patterns and developments that have led to present
day human-environmental relationships.
Offered as HSTY 327 and HSTY 427.

HSTY 329. Museums and Globalization (3)
Museums are everywhere contested spaces today.
Historically designed as agents of public education
and community formation, now they are centers of
public controversy on a global scale. From Paris to
Nairobi museums figure in conflicts over urban re-
development, national identity, cultural diversity,
and global tourism. Questions we will consider in
this course: what are the fundamental features of
museums as institutions; how have they been
structured; what ties have linked them to wider
national and international communities, politi-
cal, economic and social concerns; how have they
used resources such as research, collecting, build-
ings, display technologies, and geographic location
to carry out these functions; how do museums in
Asia, Africa the Middle East and Latin America
figure in the current international contention over
the issue of heritage: This is an innovative course
offered jointly by JHU and CWRU using web-
based technologies that allow students to collab-
orate on projects and access museums across the
globe through internet resources with “visitors”
from other countries participating on-line and
students buildings web links for their presenta-
tions and written projects. This is an innovative
course using web-based technologies that allow
discussions between students and “visitors” from
other countries, as well as student collaboration
on projects and access to museums across the globe
through internet resources. Offered as HSTY 329
and HSTY 429.

HSTY 332. European Diplomacy in the Age
of Nationalism: 1789-1945 (3)
Preseets a broad interpretation of the development
of the international system in Europe between the
French Revolution of 1789 and the end of the Eu-
ropean era in 1945. It explains why and how the
closed European state system at the beginning of
the nineteenth century evolved into an interna-
tional transcontinental system by the early twenty-
ith century. Approved SAGES Departmental
Seminar.
SAGES Dept Seminar

HSTY 334. History of 19th Century Ger-
many (3)
Examines the political, social, economic, and cul-
tural history of Germany from the late eighteenth
century to 1914. Explores the intellectual and so-
cial background to the rise of German liberalism
and nationalism, the struggle with bureaucratic
absolutism, the revolutions of 1848, industrial
capitalism and the emergence of a class society,
unification under Bismarck, the role of the state,
culture, religion, and changes of mentality, the
development of mass politics, and the coming of
World War I.

HSTY 335. History of 20th Century Germany
(3)
Examines the tumultuous history of Germany
from 1914 to the unification of the two Germanys
in 1989-1990. From the totalizing and traumatic
experience of World War I, through a failed revo-
lution, the republican experiment of Weimar, the
National Socialist dictatorship under Hitler and
the divided Germany suspended between the su-
perpowers, to the newly unified democratic Feder-
al Republic. Examines the ways in which Germans
have tried to reconcile the state to their society,
economy, and individual lives.

HSTY 336. The Struggle for Justice in Latin
America (3)
This course looks at how indigenous peoples,
women, students, workers, peasants, and Afro-
Latin Americans struggled for justice in Latin
America. It will study how notions of justice have
changed from colonial times to the present. It will
also examine how different sectors of Latin Ameri-
can society understood the meaning of justice and
how that understanding evolved through time.
This class seeks to familiarize students with the
history of the idea of justice in Latin America. At
the end of this course students will understand the
complex intellectual and political differences be-
hind Latin America’s apparent chaotic and tumult-
uous political history. Second, it seeks to develop
students’ critical thinking by examining how an
abstract term, such as justice, changes across time
and space.
Offered as ETHS 336 and HSTY 336.

Global & Cultural Diversity

HSTY 342. Water (3)
This seminar will explore the history of the mean-
ing of water—that is, the social, cultural, and/or po-
itical significance placed on water by individuals
and governments in different times and places. It
will also examine how humans have acted upon
water, and how it has acted upon humans, with

C10471_AandS.indd 290
5/26/09 11:53:26 AM
HSTY 344. Origins of the British Empire 1450-1570 (3)
How did early modern England come to rule an empire upon which the sun never set? What compelled individuals to seek their fortunes abroad, planting the flag of St. George in the outlying areas of the archipelago and hallway across the globe? This course examines the troubled birth of an empire and of a place called “Britain” at the same time. This seminar provides history majors with an experience of working with early modern primary documents of a wide variety; essays and book chapters will be paired with documents from early modern England itself. How do documents, images, and quantitative analyses help historians explain how the British Empire came into being? Offered as HSTY 344 and HSTY 444.

HSTY 348. History of Modern Political and Social Thought (3)
This course explores the responses of philosophers, economic theorists, culture critics, and public policy makers to changes in western society wrought by industrialization by focusing on their concerns with technological change. Offered as HSTY 348 and POSC 348.

HSTY 351. Colonial America 1607-1763 (3)
The formative years of American society and culture. Slavery and racism, expansionism, regionalism, the family, pluralism, sense of mission, and republican ideology.

HSTY 352. The Era of the American Revolution, 1763 - 1815 (3)
The causes and consequences of the American Revolution, the formation of the American Republic, and the early years of the new nation. Federalism and republicanism as theories and in application, and the role of the Americas’ experience in the age of democratic revolutions.

HSTY 353. Women in American History I (3)
The images and realities of women’s social, political, and economic lives in early America. Uses primary documents and biographers to observe individuals and groups of women in relation to legal, religious, and social restrictions. Offered as HSTY 353, WGST 353, and HSTY 453.

HSTY 354. Women in American History II (3)
With HSTY 353, forms a two-semester introduction to women’s studies. The politics of suffrage and the modern woman’s efforts to balance marriage, motherhood, and career. (HSTY 353 not a prerequisite.) Offered as HSTY 354, WGST 354, and HSTY 454.

HSTY 355. Age of American Civil War 1815-80 (3)
This course examines the causes and consequences of the Civil War, focusing on the rise of sectionalism, the dynamics of conflict, and reconstruction. Heavy emphasis is placed on archival research in relevant first person accounts from the period.

HSTY 356. Industrial America: 1880-1940 (3)
The social, economic, and political adaptation of American society to the industrial age. The impact of industrialism on such recurrent historical problems as technological change, race relations, social reform, urbanization, and political participation.

HSTY 358. America Since 1940 (3)
A comprehensive introduction to the recent history of the United States, organized around changes in national policy and politics. Special emphasis on the impact of World War II and the Cold War; the expansion of the federal government through the Great Society and beyond; the Civil Rights and Women’s Rights movements; challenges to the legitimacy of politics; and the efforts to maintain economic growth.

HSTY 360. American Foreign Policy since 1900 (3)
The underlying economic, political, and cultural forces that influenced policy formation from the end of the Spanish-American War through the aftermath of the Vietnam War. The development and function of the national and international apparatus of foreign relations from the consular service, world court and cartels to the CIA, United Nations, and international corporations.

HSTY 361. Crime and Popular Culture in Early America (3)
This course explores the intersection of crime, punishment, and popular culture in colonial British America and the early United States through 1860 by closely examining a series of popular crime genres, including execution sermons, criminal conviction narratives, criminal autobiographies, and trial reports. Readings in modern scholarship - drawing on several disciplines — will shed light on the popular literature and on underlying patterns of crime and punishment, while students will critically evaluate modern scholarly interpretations in light of the early crime publications. Types of crimes explored in the readings include witchcraft, piracy, burglary, robbery, and various types of murder, such as infanticide, filicide (cases of men murdering their wives and children), and sexual homicide. Each student will write several short analytical papers drawn from the shared readings and, at the end of the semester, produce an independent research paper. Offered as HSTY 361 and HSTY 461.

HSTY 362. American Social and Cultural History since 1865 (3)
The social and cultural history of the United States, organized around changes in national policy and politics. Special emphasis on the impact of World War II and the Cold War; the expansion of the federal government through the Great Society and beyond; the Civil Rights and Women’s Rights movements; challenges to the legitimacy of politics; and the efforts to maintain economic growth.

HSTY 366. Science, Technology, and Government (3)
Traces the development and influence of federal technology and science policies from colonial times to the present, with emphasis on the 20th century. Offered as HSTY 366 and POSC 365.

HSTY 368. Modern American Legal History (3)
Examines the workings of the modern American legal system from the Civil War to the present. Focus on the relationships between the law and social, economic, and professional change. Lectures, discussions, and analysis of legal documents.

HSTY 373. Advanced Topics in American Women’s History (3)
This advanced seminar is designed to allow students to investigate aspects of American women’s history that are not deeply explored in other courses. The two central purposes of the course are to move students forward in their study of American women’s history and to provide advanced study for graduate students and other students interested in women-focused topics. The topic is subject to change, but may be any of the following or something similar: women and medicine, images of women in popular culture, growing up female, women and political movements, women and war, etc. Recommended preparation: HSTY 353/453. Offered as HSTY 373, WGST 373, and HSTY 473.

HSTY 377. Nuclear Weapons and Arms Control (3)
National and international problems concerning nuclear weapons, and the past and present attempts both to control their spread and to prevent their use. Topics covered include the science and technology of fusion and fusion warheads and delivery vehicles; history, domestic policies, and international relations concerning nuclear weapons; and arms control treaties and their verification. Offered as HSTY 377 and POSC 375.

HSTY 378. Environmental History of North America (3)
Explores the way nature has shaped history as well as the ecological consequences of development. Focus is on the relationship between the natural and the cultural with special attention to such topics as economic growth, wilderness, disease, environmental justice, and the conquest of the American West.

HSTY 379. America in the '50s (3)
American life and culture in the decade of Elvis, Eisenhower, McCarthy and the beginnings of the Civil Rights Movement. Films, novels and recordings will supplement lectures and discussions on such topics as the Cold War, conformity, the role of women, television, the Korean War, and beatniks.

HSTY 380. The Sixties in America (3)
This course examines social, cultural, and political changes in the United States during the 1960s. We begin by examining the economic prosperity and “fragile” political consensus of the post-WWII period, as well as the undercurrent of poverty, dissent, and Cold War fears. We then cover the civil rights movement, student activism, the women’s movement, the growth of Liberal America and the welfare state, the Vietnam War, the counterculture and conservative youth movements, the growth of a national consumer-driven, mass-mediated market, and the music, art, and pop culture—as well as their growing reliance on technological intervention—during this period of creative efflorescence. We will do this through reading books, but also through “reading” contemporary evidence of life in America, including listening to music, viewing films, analyzing pictures and artifacts.

HSTY 381. City as Classroom (3)
In this course, the city is the classroom. We will engage with the urban terrain. We will meet weekly off-campus, interact with community members, and interface—both literally and figuratively—with the city as a way to examine the linkages between historical, conceptual, and contemporary issues, with particular attention paid to race and class dynamics, inequality, and social justice. This course will have four intersecting components, primarily focusing on American cities since the 1930s: the social and physical construction of urban space, the built environment, life and culture in the city, and social movements and grassroots struggles. Offered as HSTY 381, POSC 381, SOCI 381, HSTY 481, POSC 481, and SOCI 481.

HSTY 382. Chinese Business and Economic History (3)
This course explores China’s business and economic history from the opening of the treaty ports in the early 19th century to the post-war socialist economy, the market reforms in the 1980s and 1990s, and the most recent developments in the context of China’s social political transformation. One major focus of the course is a comparative approach to the issue of industrialization and the introduction of modern enterprises and economic structures into China. By examining the socio-economic background of Chinese business from family and personal networks to property rights, students learn about the institutional, cultural, and social aspects which are still relevant for business transactions and institutions in China today.

HSTY 383. The People’s Republic of China (3)
Now more than ever, the Chinese state and society are facing tremendous economic, social, and political challenges. This course presents an overview of the development of Chinese Communist theory and practice from 1949 to the present day. Among the topics covered are the Great Leap Forward, the Cultural Revolution, the economic reforms of the 1980s, the Tiananmen student protests, the Communist party’s crisis of legitimacy, the Taiwan problem, ecological challenges, the new socialist market economy, and current social and cultural developments from domestic migration to youth culture and new forms of nationalism. The class involves a mixture of lectures and discussion and draws on a combination of primary and secondary sources, including current news reports, films, documentaries, and fiction in translation. Offered as HSTY 383 and POSC 368.

HSTY 389. Senior Research Seminar in History of Philosophy of Science (3)
Directed independent research seminar for seniors who are majors in the History and Philosophy of Science program. The goal of the course is to develop and demonstrate command of B.A.-level factual content, methodologies, research strategies, historiography, and theory relevant to the field of history of science and/or philosophy of science. The course includes both written and oral components. Offered as HSTY 380 and PHIL 390. SAGES Senior Cap

HSTY 391. Food in History (3)
Food is inextricably interconnected with the development of agriculture and other technologies, with the rise and fall of empires, with increasing understanding of diet and nutrition, with laws and regulations, with the arts, with economic development and consumer culture, and with religious and ethnic identities. By examining selective and representative episodes pertaining to each of these topics, this course explores the global history of food, from the agricultural revolution of the neolithic era to the consumer revolution of the last generation. Offered as HSTY 391 and HSTY 491.

HSTY 392. Chinese Business and Economic History (3)
This seminar investigates 20th-century evolutionary theory, especially the Modern Evolutionary synthesis and subsequent expansions of and challenges to that synthesis. The course encompasses the multidisciplinary nature of the science of evolution, demonstrating how disciplinary background influences practitioners’ conceptualizations of pattern and process. This course emphasizes practical writing and research skills, including formulation of testable theses, grant proposal techniques, and the implementation of original research using the facilities on campus and at the Cleveland Museum of Natural History. Offered as ANTH 394, BIOL 394, GEOL 394, HSTY 394, PHIL 394, ANTH 494, BIOL 494, GEOL 494, HSTY 494, and PHIL 494.

HSTY 395. History of Medicine (3)
This course treats selected topics in the history of medicine, with an emphasis on social and cultural history. Focusing on the modern period, we examine illnesses, patients, and healers, with attention to the ways sickness and medicine touch larger questions of politics, social relations and identity. Offered as HSTY 395 and HSTY 495.

HSTY 397. Undergraduate Tutorial (1-3)
Individual instruction with members of the history faculty. Recommended preparation: 12 hours of History.

HSTY 398. Senior Research Seminar (3)
Training in the nature and methods of historical writing and research. Prereq: Majors only, Senior standing. SAGES Senior Cap

HSTY 399. Advanced Readings in Black History (3)
This is an advanced readings course that may change from semester to semester. This course will provide students with an opportunity to more deeply explore special themes and theoretical issues in the field of black history that are often quickly and briefly covered in broad survey courses. Readings may be organized around specific topics such as resistance and social protest, black intellectual history, black nationalism and identity, black film and historical literacy. Black cultural forms and politics, black urban history, or some such other combination. Students may take this course more than once and receive credit as long as the course topic differs. Students should contact the History Department for more details on course content during any given semester. Offered as HSTY 399, HSTY 499.

HSTY 400. Graduate Topical Seminar (3)
A rotating graduate seminar, offered every semester by a different faculty member. Each semester focuses on a topic of central historiographical or methodological importance.

HSTY 402. Survey of the History of Science
A graduate-level historiographic review of the history of the sciences from the seventeenth century to the present.

HSTY 404. Introduction to the Nonprofit Sector (3)
The United States has by far the largest and most important “nonprofit sector” in the world, a sector consisting of voluntary non-governmental organizations that provide health care, education and social services as well as arts, religious, and advocacy activities. Using mostly primary sources, this course considers the significance of the nonprofit sector in the U.S., its advantages and disadvantages, its uses for different groups of Americans, and current trends. Students have the option of writing either a standard term paper, or a study of strategic challenges facing a contemporary nonprofit organization.

Offered as HSTY 204 and HSTY 404.

HSTY 406. History Museums: Theory and Reality (3)
This course is an intensive summer internship (10 hours per week) at the Western Reserve Historical Society, complemented by extensive readings in museum/archival theory and public historical perception. It is designed both to introduce students to museum/archival work and to compare theoretical concepts with actual museum situations.

Interns will be assigned a specific project within one of the Society’s curatorial or administrative divisions, but will have the opportunity to work on ancillary tasks throughout the Historical Society’s headquarters in University Circle.

Offered as HSTY 306 and HSTY 406.

HSTY 410. Seminar: Early American Historiography (3)
This seminar examines the historiography of early America. It is designed to acquaint history doctoral students with the major themes, methods, and scholars of American history from the seventeenth century to the mid-nineteenth century. Students will be expected to read and report on major works in the field.

HSTY 411. Seminar: Modern American Historiography (3)
This seminar examines the approaches that professional historians of the United States have taken to the writing of American history in the past fifty years, with emphasis on changes in historical concerns, master debates among historians, and contemporary interests. Topics covered include national politics and government, economic development, social history, the history of ethnicity, race, and gender, and foreign policy and international relations. Each student will read widely and will prepare a series of reports on selected books and authors.

Offered as HSTY 311 and HSTY 411.

HSTY 422. Feminist Theory, Women’s History, Gender History (3)
A reading seminar designed to expose students to current theory and methods in feminist history, as well as feminist scholarship more generally. It includes a variety of topics representative of interests and concerns shared by feminist historians, as well as a range of methodological approaches and theoretical debates. The course aims to impart a sense of the ways in which feminist theory has been applied to and has transformed historical scholarship.

Offered as HSTY 322, WGST 322, HSTY 422, and WGST 422.

HSTY 427. Comparative Environmental History (3)
Environmental history is the study of how humans have influenced the environments around them and how the environment itself has influenced the course of human societies. This course provides students with the skill to identify and analyze these interactions. It introduces course participants to the main themes of environmental history literature and the driving questions guiding environmental history research by examining case studies drawn around the globe, including Pre-Columbian America, Medieval Japan, Colonial Africa, and Modern Germany. This course will help course participants recognize the important patterns and developments that have led to present day human-environmental relationships.

Offered as HSTY 327 and HSTY 427.

HSTY 429. Museums and Globalization
Museums are everywhere contested spaces today. Historically designed as agents of public education and community formation, now they are centers of public controversy on a global scale. From Paris to Nairobi museums figure in conflicts over urban redevelopment, national identity, cultural diversity, and global tourism. Questions we will consider in this course: what are the fundamental features of museums as institutions; how have they been structured; what ties have linked them to wider national and international communities, political, economic and social concerns; how have they used resources such as research, collecting, building, display technologies, and geographic location to carry out these functions; how do museums in Asia, Africa the Middle East and Latin America figure in the current international contention over the issue of heritage: This is an innovative course offered jointly by JHU and CWRU using web-based technologies that allow students to collaborate on projects and access museums across the globe through internet resources.

Offered as HSTY 329 and HSTY 429.

HSTY 440. Science and Society Through Literature (3)
This course will examine the interaction of scientific investigation and discovery with the society it occurred in. What is the effect of science on society and, as importantly, what is the effect of society on science? An introduction will consider the biocentric controversy with focus on Galileo. Two broad areas, tuberculosis and the Frankenstein myth, will then be discussed covering the period 1800-present. With tuberculosis, fiction, art and music will be examined to understand the changing views of society towards the disease, how society’s perception of tuberculosis victims changed, and how this influenced their treatments and research. With Frankenstein, the original novel in its historical context will be examined. Using fiction and film, the transformation of the original story into myth with different connotations and implications will be discussed. Most classes will be extensive discussions coupled with student presentations of assigned materials.

Offered as PHRM 340, BETH 440, PHRM 440, and HSTY 440.

HSTY 442. Water (3)
This seminar will explore the history of the meaning of water—that is, the social, cultural, and/or political significance placed on water by individuals and governments in different times and places. It will also examine how humans have acted upon water, and how it has acted upon humans, with great consequences for human life. This seminar will look at the history of water in the context of science, technology and society; public health; political science; and environmental history. Case studies will be drawn from a wide chronological and geographical range; from the ancient world to Renaissance Italy, nineteenth century India, modern Britain, Egypt, and the U.S. The course provides a wide perspective on the themes of the history of human-water interactions, but will also focus closely on some critical cases. Seminar participants will write a research paper on the topic of their choice in the environmental history of water.

Offered as: HSTY 342, HSTY 442, POSC 342, POSC 442.

HSTY 451. Seminar in the History of European Technology (3)
A graduate-level, research seminar on the history of European technology from the Industrial Revolution to the present. Special emphasis is on cultural history of technology with a transatlantic view. The themes of the seminar vary from year to year, but include: communications, industrialization, control, cultural and intellectual approaches to the history of technology. Required work includes a research paper based on original sources.

HSTY 452. Readings in the History of American Technology (3)
A graduate-level review of the history of American technology.

HSTY 453. Women in American History I (3)
The images and realities of women’s social, political, and economic lives in early America. Uses primary documents and biographers to observe indi-
An introduction to comparative method for historians. The topics will vary year to year, but the course will require exposure to historical contexts outside of the United States.

HSTY 477. Modern Policy History of the United States (3)
This course offers a historical perspective on policy and policy making in the United States since the late nineteenth century. It emphasizes the increasing role of the federal government, the persisting importance of the states, the significance of the courts, the revolutionary impact of the women’s and civil rights movements, and the consequences of the growth and transformation of the American economy. Each student selects a policy area for detailed exploration; students often choose topics related to civil rights, women’s rights, health care, environmental reform, non-profit and non-governmental organizations, the arts, and education, but other topics are also appropriate.

HSTY 479. Historical Research and Writing (3)
A research seminar for historians. Students will produce a research paper based on primary sources. There will be substantial attention to the mechanics of writing.

HSTY 480. Public Policy and Aging (3)
Overview of aging and the aged. Concepts in the study of public policy. Policies on aging and conditions that they address. The politics of policies on aging. Emergent trends and issues. Offered as ANTH 498, BETH 496, EPBI 408, GERO 496, HSTY 480, MPHP 408, NURS 479, NURS 579, POSC 480, and SOCI 496.

HSTY 481. City as Classroom (3)
In this course, the city is the classroom. We will engage with the urban terrain. We will meet weekly off-campus, interact with community members, and interface—both literally and figuratively—with the city as a way to examine the linkages between historical, conceptual, and contemporary issues, with particular attention paid to race and class dynamics, inequality, and social justice. This course will have four intersecting components, primarily focusing on American cities since the 1930s: the social and physical construction of urban space, the built environment, life and culture in the city, and social movements and grassroots struggles. Offered as HSTY 381, POSC 381, SOCI 381, HSTY 481, POSC 481, and SOCI 481.

HSTY 491. Food in History (3)
Food is inextricably interconnected with the development of agriculture and other technologies, with the rise and fall of empires, with increasing understanding of diet and nutrition, with laws and regulations, with the arts, with economic development and consumer culture, and with religious and ethnic identities. By examining selective and representative episodes pertaining to each of these topics, this course explores the global history of food, from the agricultural revolution of the neolithic era to the consumer revolution of the last generation. Offered as HSTY 391 and HSTY 491.

HSTY 494. Seminar in Evolutionary Biology (3)
This seminar investigates 20th-century evolutionary theory, especially the Modern Evolutionary synthesis and subsequent expansions of and challenges to that synthesis. The course encompasses the multidisciplinary nature of the science of evolution, demonstrating how disciplinary background influences practitioners’ conceptualizations of pattern and process. This course emphasizes practical writing and research skills, including formulation of testable theses, grant proposal techniques, and the implementation of original research using the facilities on campus and at the Cleveland Museum of Natural History. Offered as ANTH 394, BIOL 394, GEOI 394, HSTY 394, PHIL 394, ANTH 494, BIOL 494, GEOI 494, HSTY 494, and PHIL 494.

HSTY 495. History of Medicine (3)
This course treats selected topics in the history of medicine, with an emphasis on social and cultural history. Focusing on the modern period, we examine illnesses, patients, and healers, with attention to the ways sickness and medicine touch larger questions of politics, social relations and identity. Offered as HSTY 395 and HSTY 495.

HSTY 496. Graduate Independent Study (1-3)
Independent reading and research programs with individual members of the faculty.

HSTY 499. Advanced Readings in Black History (3)
This is an advanced readings course that may change from semester to semester. This course will provide students with an opportunity to more deeply explore special themes and theoretical issues in the field of black history that are often quickly and briefly covered in broad survey courses. Readings may be organized around specific topics such as resistance and social protest, black intellectual history, black nationalism and identity, black film and historical literacy black cultural forms and politics, black urban history, or some such other combination. Students may take this course more than once and receive credit as long as the course topic differs. Students should contact the History Department for more details on course content during any given semester. Offered as HSTY 399, HSTY 499.

HSTY 525. Intellectual Property and the Construction of Authorship (3)
“Authorship” and “invention” are among the West’s most powerful ideas—the categories by which creative production has been defined and valued for the last two centuries. We will investigate the emergence and consolidation of these ideas in the context of some of the institutions, technologies, and practices that have fostered and been fostered by them, such as printing and publishing, copy-
right and patent law, education curricula and disciplinary pedagogies. Then we will turn our attention to the varieties of authorship and invention in operation today—from the solitary ethos characteristic of the arts and humanities to the collaborative, even corporate, forms in ascendance in science and industry. How are ideas of authorship and invention employed in the various discursive spheres to assign credit and responsibility? May tensions be found with creative practice? What are the stakes? Who wins, who loses? And what will be the consequences of digitization and globalization? Our study will culminate in attendance at an interdisciplinary conference on “Con/texts of Invention” which will take place at Case Western Reserve on April 21-23. The goal of our study will be to identify worthy research topics within students’ own areas of interest.

HSTY 601. Independent Studies (1-18)
(Credit as arranged.)

HSTY 611. Introduction to Historiography (3)
Required seminar for all M.A. and Ph.D. students. Introduces students to historiographical and methodological issues. Recommended preparation: Graduate standing.

HSTY 651. Thesis M.A. (1-18)
(Credit as arranged.)

HSTY 701. Dissertation Ph.D. (1-18)
(Credit as arranged.) Limited to Ph.D. candidates actively engaged in the research and writing of their dissertations. Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

INTERNATIONAL STUDIES PROGRAM
111 Mather House
http://politicalscience.case.edu/international
Phone: 216-368-2425; Fax: 216-368-4681
Vincent E. McHale, Director
E-mail: vincent.mchale@case.edu

The International Studies program is a multidisciplinary program leading to the B.A. degree. Study in the program provides students with the ability to read beyond the headlines—to see world events in terms of how they got to be that way, how they fit into broader issues and systems, and how one might imagine their place in shaping the future. To attain this goal, students are introduced to the methods of conceptualizing international and global issues, as well as to the study of a society other than their own. They learn to think critically about contending and complementary methods and theories, developing an appreciation of both traditional disciplinary approaches and newer, cross-disciplinary approaches. Students also acquire skills that will enable them to recognize and deal with complexity: communicative and analytical skills in a language other than English (or other than their native language), and skills in statistics, computer-based global analysis, or negotiation.

It is strongly recommended that all international studies students participate in at least one of several off-campus programs that facilitate the international perspective: junior year abroad, summer internships in Washington, D.C., or professional, practicum-type work experiences in Cleveland that involve an international context. It is also recommended that students have a solid foundation in economics.

In addition to forming the groundwork for an evolving understanding of and lifelong engagement with the modern world, a background in international studies provides excellent, practical preparation for careers that deal with the emerging needs of our world. International studies majors go on to careers in international marketing and management, diplomatic service, health, law, social services, and journalism, as well as careers within the academic disciplines. The professional schools of business, medicine, nursing, law, and applied social sciences at Case Western Reserve all have significant international foci, and our students can explore careers in these areas during their undergraduate years. The skills, analytic abilities, and critical approaches of international studies should equip students as well for new employment patterns which may not fit into existing career descriptions.

PROGRAM ADVISORY COMMITTEE

Vincent E. McHale, Ph.D.
M. A. Hanna Professor of Political Science
Director, International Studies Program

Bo A. Carlsson, Ph.D.
Frank Tracy Carlton Professor of Economics

Kenneth E. Ledford, Ph.D., J.D.
Associate Professor of History

Kelly M. McMann, Ph.D.
Assistant Professor of Political Science

Mihajlo D. Mesarovic, Ph.D.
Cady Staley Professor of Systems Engineering
Case School of Engineering

UNDERGRADUATE PROGRAM

Major

The major in international studies requires a minimum of 33 credit hours, chosen from the list of approved topical and area studies courses, plus satisfaction of a language competency requirement. Each student will prepare a program of study indicating specific course selections to meet the six area requirements below. This plan must be approved by a member of the faculty advisory committee. Students should also discuss the choice of their minor or a second major with their advisor. Their course selections should include at least one course which involves the development of skills in computer applications, economic analysis, statistics, or other quantitative methods. Normally, no more than two courses taken for international studies credit may count simultaneously toward a minor or another major. Courses taken to satisfy the language competency requirement are exempted from this rule, and several international studies courses contribute to the completion of the Arts and Sciences General Education Requirements.

Requirements for the Major

1. Multidisciplinary Foundations (required courses; 12 hours). These courses provide an introduction to four major disciplinary understandings of society and culture, principles of economics, change over time, and interactions among nations, while exposing students to a variety of world societies and issues. International studies majors will be expected to have completed the multidisciplinary foundations courses before embarking on a study abroad program. These courses are:

   • ANTH 102 Being Human: An Introduction to Social and Cultural Anthropology (3)
   • ECON 102 Principles of Microeconomics (3)
   • HSTY 113 Introduction to Modern World History (3)
   • POSC 272 Introduction to International Relations (3)

2. Area Focus (6 hours): Two courses that concentrate on a single geographic or cultural area. Examples include Africa, North America, East Asia, Europe, Latin America, and the Middle East.

3. Topical Focus (6 hours): A related pair of courses that provide a discrete perspective on global issues and foster an appreciation for complexity through the study of particular issues and the methods appropriate to them. Examples include pairs of courses dealing with ethnicity, international health,
international economics, global and environmental analysis, or international relations. Cross-disciplinary approaches are encouraged.

4. Elective Area or Topical Courses (6 hours): Two additional courses within the topical and area studies course listings, providing an opportunity to experiment or to tailor the program toward particular interests in international or global issues, methodology, or other cultures.

5. Senior Colloquium (required course, 3 hours): The integration of prior topical and area foci in a colloquium (INTL 398) taken in the fall semester of the senior year and involving the writing of a substantial research paper. Selection of the topic and the research and writing are under the supervision of a faculty tutor. Peer evaluation will be obtained through regular sessions, supervised by the colloquium coordinator, at which students present their initial concepts, outlines, research, and drafts. Students will be expected to identify their faculty directors and topics by the end of their junior year. Exceptional papers may be considered for honors.

6. Language Competency (0 to 16 credit hours): In addition to the 33 credit hours of international studies course work, students must demonstrate competence in a language other than their native language. This may be done by (a) completing a language course at the 300 level or above, (b) demonstrating to the Department of Modern Languages and Literatures a non-native language competency equivalent to that attained by completing a 300-level or above course, or (c) completing four semesters in a single language.

The International Studies program currently recognizes more than 150 courses from which students may choose to satisfy the area and topical foci requirements. Course lists are available from the program advisors. Additional courses may be selected on the basis of individual student interest, in consultation with the faculty advisor. Courses may also be selected from within existing area studies programs: American Studies, Asian Studies, French and Francophone Studies, German Studies, and Japanese Studies.

There is no minor in international studies.

**COURSE DESCRIPTIONS**

**INTL 396. International Independent Study**

(1-3) Study of a topic within the scope of international studies. The student must complete a prospectus form, approved and signed by the supervising faculty member, no later than the second week of classes. The prospectus must outline the goals of the project and the research methodology to be used and is part of the basis for grading. Open to juniors and seniors majoring in international studies.

**INTL 398. International Senior Colloquium**

(3) Individual work with a faculty tutor leading to the writing of a major research paper. Regular class sessions are supervised by the colloquium coordinator, in which students present their initial concepts, outlines, research, and drafts. Open only to seniors majoring in international studies.

**JAPANESE STUDIES PROGRAM**

103 Guilford House  
www.case.edu/artsci/dmll/japanese.htm  
Phone: 216-368-2232, 216-368-6188; Fax: 216-368-2216  
Linda C. Ehrlich and Takao Hagiwara, Directors  
E-mail: linda.ehrlich@case.edu; takao.hagiwara@case.edu

Today’s students find themselves in a world of increasingly multi-ethnic, multi-religious, multicultural contexts. Through a long history of receiving, reworking, and incorporating influences from nearby cultural centers on the Asian mainland and surrounding Pacific islands and from the world beyond, including Europe and the Americas, Japan has developed a tradition of multiculturalism—a tradition that is best understood through interdisciplinary study. Following this thread, the Japanese Studies program seeks to foster the student’s global and interdisciplinary perspectives, while at the same time maintaining a flexibility that allows individuals to pursue their own areas of interest. To further foster the students’ linguistic and cultural development, the Japanese Studies program strongly encourages study abroad in Japan for a year, a semester, or a summer.

Students may pursue a major or a minor in Japanese Studies. The program offers a variety of courses to fulfill the requirements, ranging from four levels of the Japanese language to courses about Japanese cinema, literature, and pop culture. Besides these core courses, we encourage the student to take related courses in such interdisciplinary areas as Asian art, cinema, comparative literature of Japan and the West, Japanese religion and history, and international business. Taking advantage of the varied resources of the University and University Circle institutions, the Japanese Studies program makes the study of Japanese culture an integral part of the student’s undergraduate education. Furthermore, the Japanese Studies program provides an excellent foundation for graduate or professional school or for careers in international business and finance, careers involving technological or medical exchange, and careers in law, journalism, foreign service, or the arts.

**PROGRAM FACULTY**

Linda C. Ehrlich, Ph.D.  
Associate Professor of Modern Languages and Literatures; Co-Director, Japanese Studies Program

Takao Hagiwara, Ph.D.  
Associate Professor of Modern Languages and Literatures; Co-Director, Japanese Studies Program

Margaret M. Fitzgerald, M.A.  
Lecturer in Modern Languages and Literatures

Yoshiko Kishi, M.A.  
Lecturer in Modern Languages and Literatures

Hiroko Takada Amick, M.A.  
Lecturer in Modern Languages and Literatures

**PROGRAM ADVISORY COMMITTEE**

William E. Deal, Ph.D.  
Severance Professor of the History of Religion, Department of Religious Studies

Charlotte Ikels, Ph.D.  
Professor of Anthropology

Leonard H. Lynn, Ph.D.  
Professor of Management Policy, Weatherhead School of Management

**UNDERGRADUATE PROGRAM**

**Major**

The B.A. major in Japanese Studies requires a minimum of 33 credit hours. For students beginning the major at the 200 level, the course requirements are as follows:

1. JAPN 201 and 202 – Intermediate Japanese I, II
2. JAPN 301 and 302 – Advanced Japanese I, II
3. JAPN 350 and 351 – Contemporary Japanese Texts I, II (JAPN 350 and/or 351 may be replaced with JAPN 450 and/or 451 – Japanese in Cultural Context I, II. Permission of the instructor is required.)
4. JAPN 397 and 398 – Honors Thesis I, II (this course requires a substantial research paper in Japanese or English. Students are required to identify their faculty advisors and the topic of their paper by the end of the junior year. Exceptional papers may be considered for honors.)

5. Four Asian Studies, World Literature, or other related courses. “Other related courses” may include courses in Japanese literature, film, theater, art history, anthropology, philosophy, religion, sociology, political science, or history.

Students beginning the major at the 300 level do not take JAPN 201/202, but do take one “directed reading” in Japanese in an area related to their major research. All other requirements for the B.A. are the same.

Courses in other disciplines also form an important component of the Japanese Studies program. They provide an international, as well as interdisciplinary, perspective on Japanese culture. A faculty advisor supervises each student’s selection of these courses.

In addition to the courses required for the major, the following courses are offered in the Japanese Studies program:

- JAPN/WLIT 225 Japanese Popular Culture
- JAPN/WLIT 255 Modern Japanese Literature in Translation
- JAPN/WLIT 245 Classical Japanese Literature in Translation
- JAPN/WLIT 345 Japanese Women Writers
- JAPN/WLIT 355 Modern Japanese Novels and the West
- JAPN 399 Independent Study

PROGRAM HONORS

Exceptional papers written for the senior colloquium may qualify for program honors.

STUDY ABROAD

A year of study in Japan is highly recommended, as is additional study in another language. All efforts are made to grant appropriate credit for courses taken at a Japanese university during the year abroad.

Minor

For students beginning Japanese at the introductory level, the course requirements for the minor are as follows: JAPN 101, 102, 201, 202, and one 300-level course.

For students beginning Japanese at the 200 level, the requirements for the minor are five courses at the 200 and 300 level, approved by a program director.

JUDAIC STUDIES PROGRAM

110 Mather House
www.case.edu/artsci/jdst
Phone: 216-368-2741
Peter J. Haas, Director
E-mail: peter.haas@case.edu

The Judaic Studies Program offers an interdisciplinary approach to the study of the history, religion, social experience, and culture of the Jewish people. By bringing a variety of fields and disciplines to bear on its subject, the program intends to convey to students the complex interaction of forces that create and express Jewish ethnic identity. Students completing the program will have broad knowledge of the field along with the tools necessary for continued study of Jewish civilization in all its manifestations.

PROGRAM STEERING COMMITTEE

- Peter J. Haas, Ph.D.
  Abba Hillel Silver Professor of Jewish Studies, Department of Religious Studies; Director, Judaic Studies Program
- Ellen G. Landau, Ph.D.
  Severance Professor of the History of Religion, Department of Religious Studies
- Andrew W. Mellon Professor of the Humanities, Department of Art History and Art
- Miriam Levin, Ph.D.
  Professor of History
- Judith Neulander, Ph.D.
  Lecturer in Religious Studies
- Judith Oster, Ph.D.
  Professor of English
- Gillian Weiss, Ph.D.
  Assistant Professor of History
- Joseph White, Ph.D.
  Luxenberg Family Professor of Public Policy, Department of Political Science
- Yoram Daon, M.B.A.
  Lecturer in Modern Languages and Literatures

Only one course may be in the Department of Religious Studies. If the Rosenthal Visiting Professor’s course is cross-listed in RLGN, this will count as the one course.

1. Introduction to Judaic Studies (JDST 201)
2. Nine additional credit hours of courses with at least 1/3 Jewish content (no more than one from RLGN)

Currently offered courses that fulfill this requirement include:

- JDST 220 Jewish Traditional Art & Architecture
- JDST 228 The Jewish Image in Popular Film
- JDST 233 Introduction to Jewish Folklore
- JDST 350 Jewish Ethics
- JDST 392 Independent Research in Judaic Studies
- HBRW 201 Intermediate Modern Hebrew I
- HBRW 202 Intermediate Modern Hebrew II
- HBRW 301 Advanced Hebrew I
- HBRW 302 Advanced Hebrew II
- ENGL 365E Immigrant Experience
- ENGL 366G American Jewish Literature or Blacks and Jews in American Literature
- HSTY/JDST 218 Jews in Early Modern Europe
- HSTY 254 The Holocaust
- HSTY 257 Immigrants in America
- POSC 370K Nationalism, Ethnicity and Religion in World Politics
- POSC 379 Middle East: Politics, Economics and American Policy
- RLGN 223 Middle East Conflict
- RLGN 231 Jews in the Modern World
- RLGN 268 Women in the Bible
- SOCI 302 Race and Ethnic Minorities
- SOCI 355 Sociology of Religion

3. Two semesters of Hebrew (HBRW 101 and HBRW 102). Students who place out of both semesters of Hebrew must take another course from among those listed above.

COURSE DESCRIPTIONS

JDST 201. Introduction to Judaic Studies (3)

An introduction to the academic study of Judaic religion and culture, this course does not presuppose any previous study of, or experience with, Judaism. The course takes an interdisciplinary approach to Judaic Studies, drawing on a variety of
methods to examine the diverse issues that make up the current field of Judaic Studies. The course will examine the Jewish experience across time and space, and my include some “field” experience, such as a visit to a synagogue or to the Matz Mu-}

cuseum of Jewish Heritage. Required for the minor in Judaic Studies.

**JDST 218. Jews in Early Modern Europe (3)**
This course surveys the history of Jews in Europe and the wider world from the Spanish expulsion through the French Revolution. Tracking peregrinations out of the Iberian Peninsula to the British Isles, France, Holland, Italy, Germany, Poland-Lithuania, the Ottoman Empire and the Ameri-}
can colonies, it examines the diverse ways Jews organized their communities, interacted with their non-Jewish neighbors and negotiated their social, economic and legal status within different states and empires. What role did Jews play and what symbolic place did they occupy during a period of European expansion, technological innovation, artistic experimentation, and religious and politi-
cal turmoil? What internal and external dynam-}
ics affected Jewish experiences in the sixteenth, seventeenth and eighteenth centuries? Through a selection of inquisitorial transcripts, government records, memoirs and historical literature, we will explore topics such as persecution, conversion, messianic, toleration, emancipation and assimila-
tion. Offered as HSTY 218 and JDST 218, ETHES 218.

**JDST 220. Jewish Traditional Art and Architecture (3)**
Tradition and transformation in Jewish artistic expression over time and across space. Course will begin with the biblical period and continue down to the present day in Israel and America. Exami-
nation of how concepts such as “Jewish” and “art” undergo change within the Jewish community over this period. Offered as ARTH 220 and JDST 220. Global & Cultural Diversity

**JDST 228. The Jewish Image in Popular Film (3)**
Explores film as social practice for its makers and its audience from the silent era through Holly-
wood’s Golden Age, to the technological dazzle of the present day. Notes views of the Jews as stereo-
typical “Racial Other,” not only capable of Jewish self-representation, but also capable of representing any group widely believed to be non-white, non-
Christian or otherwise “alien.” By studying select films in historical context, the course will trace changes in this stereotype. By the end of the semes-
ter, students will understand how film is shaped by, and how it actively shapes, our constructions of American Selves vs. Ethnic Others. Global & Cultural Diversity

**JDST 231. Jews in the Modern World (3)**
Investigation of the impact of modernity on the Jewish community. In particular the course will examine the influence of the Emancipation and Enlightenment on the social situation of the Jews in Europe and America and the correspond-
ing changes in Judaic religion, philosophy, social structure, and culture. Attention will be paid to the creation of a modern Jewish identity in the secular culture of the post-Modern world. Offered as HSTY 231, JDST 231, and RLGN 231.

**JDST 233. Introduction to Jewish Folklore (3)**
Exploration of a variety of genres, research meth-
ods and interpretations of Jewish folklore, from antiquity to the present. Emphasis on how Jewish folk traditions and culture give us access to the spirit and mentality of the many different genera-
tions of the Jewish ethnic group, illuminating its past and informing the direction of its future de-
velopment. Offered as ANTH 233 and JDST 233. Global & Cultural Diversity

**JDST 280. Religion and Politics in the Middle East (3)**
An in-depth look at the relationship between poli-
tics and religion in the Middle East. Students will spend the first week on the Case Western Reserve campus and the last three weeks in Israel, where time will be divided between classroom teaching, guest lectures, and “field trips” to important sites. Students will have the opportunity to interact directly with members of the region’s diverse relig-
ious groups within the political, social, and cul-
tural contexts in which they live. A final research paper will be required. Knowledge of Hebrew is not necessary. Offered as JDST 280 and RLGN 280. Global & Cultural Diversity

**JDST 330. Classical Jewish Religious Thought (3)**
The thought of some major biblical and Rabbinic writings and of the classic age of medieval Jewish philosophy. Offered as JDST 330, PHIL 332, and RLGN 330.

**JDST 350. Jewish Ethics (3)**
An exploration of Jewish moral and ethical dis-
course. The first half of the course will be devoted to studying the structure and content of classical Jewish ethics on issues including marriage, abor-
tion, euthanasia and social justice. Students will read and react to primary Jewish religious texts. The second half of the course will focus on various modern forms of Judaism and the diversity of mor-
al rhetoric in the Jewish community today. Read-
ings will include such modern thinkers as Martin Buber and Abraham Joshua Heschel. Offered as JDST 350, RLGN 350, and RLGN 450. SAGES Dept Seminar

**JDST 392. Independent Study (1-3)**
Up to three semester hours of independent study may be taken in a single semester.

**DEPARTMENT OF MATHEMATICS**
220 Yost Hall

www.case.edu/artsci/math
Phone: 216-368-2880; Fax: 216-368-5163
Daniela Calvetti, Chair
E-mail: daniela.calvetti@case.edu

The Department of Mathematics at Case Western Reserve University is an active center for mathematical research. Faculty members conduct research in algebra, analysis, applied mathematics, convexity, dynamical systems, geometry, imaging, inverse problems, life sciences applications, mathematical biology, modeling, numerical analysis, probability, scientific computing, stochastic systems, and other areas.

The department offers a variety of programs leading to both undergraduate and graduate degrees in traditional and applied mathemat-
ics. Undergraduate degrees are Bachelor of Arts, Bachelor of Science in Mathematics, and Bachelor of Science in Applied Mathematics. Graduate degrees are Master of Science and Doctor of Philosophy. The BS/MS program allows a student to obtain a Bachelor of Sci-
ence in Applied Mathematics with a master’s degree from Mathematics or another depart-
ment in five years. The department, in coopera-
tion with John Carroll University, offers a program for individuals interested in pre-col-
lege teaching. It also offers a specialized pro-
gram with the Department of Physics.

Mathematics plays a central role in the physi-
cal, biological, economic, and social sciences. Because of this, employment prospects are always strong for individuals with degrees in mathematics, and there are excellent career opportunities. A bachelor’s degree in mathe-
matics offers a strong background for graduate school in many areas (including computer sci-
ence, medicine, and law, in addition to mathemat-
ics and science) or a position in the pri-
ivate sector. A master’s degree (in mathematics or applied mathematics, or an undergraduate degree in applied mathematics combined with a master’s in a different area) is an excellent basis for employment in the private sector in a technical field. A Ph.D. degree is usually nec-

erary for college teaching and research.

Students, both undergraduate and graduate, have opportunities to interact personally with faculty and other students, and research and other activities are available. In addition, under-
graduates can obtain teaching experience via the Department’s supplemental instruc-
tion program.

**DEPARTMENT FACULTY**
Daniela Calvetti, Ph.D.
(University of North Carolina)  
Professor and Chair  
Scientific computing; imaging, inverse problems; modeling and simulation in life science  
James C. Alexander, Ph.D.  
(Johns Hopkins University)  
Professor  
Dynamics; applied mathematics  
Christopher Butler, M.S.  
(Case Western Reserve University)  
Instructor  
Teaching of mathematics  
David Gurarie, Ph.D.  
(Hebrew University, Jerusalem, Israel)  
Professor  
Infectious diseases; epidemiology; mathematical biology; differential equations; gallery of fluid motions  
Michael Hurley, Ph.D.  
(Northwestern University)  
Professor  
Dynamical systems; dynamics of cellular automata; dynamics of numerical methods  
Steven H. Izen, Ph.D.  
(Massachusetts Institute of Technology)  
Professor  
Image reconstruction from projections, both theoretically and in applied situations  
Peter Kotelnikov, Ph.D.  
(University of Bremen)  
Professor  
Stochastic partial and ordinary differential equations; transitions from microscopic to macroscopic equations for particle systems; correlated Brownian motions and depletion phenomena in colloids; stochastic models in nanotechnology and complex systems  
Joel Langer, Ph.D.  
(University of California, Santa Cruz)  
Professor  
Static and dynamics of curves and related physical models; the interplay between geometry and integrable Hamiltonian systems; geometry of finite and infinite dimensional spaces of curves  
Marshall J. Leitman, Ph.D.  
(Brown University)  
Professor  
Continuum physics; integral equations; functional analysis; mechanics of materials  
Elizabeth Meckes, Ph.D.  
(Stanford University)  
Assistant Professor  
Quantitative limit theorems in probability; Stein’s method; high-dimensional phenomena in probability; geometry; statistics  
Mark Meckes, Ph.D.  
(Case Western Reserve University)  
Assistant Professor  
Geometry in high dimensions; random matrix theory; geometry probability  
David A. Singer, Ph.D.  
(University of Pennsylvania)  
Professor  
Geometry; dynamical systems; variational problems  
Erkki Somersalo, Ph.D.  
(University of Helsinki)  
Professor  
Modeling and simulation of complex biological systems; inverse problems and Bayesian scientific computing; medical imaging  
Stanislaw J. Szarek, Ph.D.  
(Mathematical Institute, Polish Academy of Science)  
Levi Kerr Professor in Mathematics  
Convex geometry; analysis; probability; applications to approximation theory, mathematical physics, quantum information theory  
Richard Varga, Ph.D.  
(University of Michigan)  
Adjunct Professor  
Computational electromagnetism; partial differential equation  
Carsten Schütt, Ph.D.  
(Christian-Albrecht Universität, Kiel)  
Adjunct Professor  
Convex geometry; analysis; probability; applications to approximation theory, mathematical physics, quantum information theory  
Mark Meckes, Ph.D.  
(Christian-Albrecht Universität, Kiel)  
Adjunct Professor  
Teaching of mathematics  
Instructor  
Case Western Reserve University. All undergraduate mathematics degrees are based on a four-course sequence in calculus and differential equations and a five-course mathematics core in analysis and algebra.  
UNDERGRADUATE PROGRAMS  
 Majors  
A Bachelor of Arts in Mathematics, a Bachelor of Science in Mathematics, a Bachelor of Science in Mathematics and Physics, and a Bachelor of Science in Applied Mathematics are available to students at Case Western Reserve University. All undergraduate mathematics degrees are based on a four-course sequence in calculus and differential equations and a five-course mathematics core in analysis and algebra.  
BACHELOR OF ARTS IN MATHEMATICS  
(1) Mathematics Requirements  
The B.A. degree requires at least 38 hours of mathematics courses, including:  
(a) MATH 121, 122, 223, and 224, or an equivalent sequence  
(b) Core mathematics for the B.A.  
(i) MATH 307, 308, 321, 322  
(ii) MATH 324 or 425  
(c) Three approved technical electives (9 credit hours), no more than one of which can be from outside the department  
(2) Non-Mathematics Requirements  
A 3-credit hour course in computer science (ENGR 131 or other approved course)  
TEACHER LICENSURE  
High school teaching certification is available
in the B.A. program in mathematics through a joint program with John Carroll University. The requirements are:

(a) Completion of the B.A. program in mathematics, including MATH 150, MATH 304, and STAT 312 as the three approved technical electives.

(b) The completion of a second major in teacher education. Students interested in this option should consult the description of the Teacher Licensure program elsewhere in this bulletin or contact the director of teacher education.

BACHELOR OF SCIENCE IN MATHEMATICS

(1) Mathematics Requirements

The B.S. degree in mathematics requires at least 50 hours of mathematics courses, including:

(a) MATH 121, 122, 223, and 224, or an equivalent sequence

(b) Core mathematics for the B.S. in mathematics
   i) MATH 307, 308, 321, 322
   ii) MATH 324 or 425

(c) 21 hours (normally seven courses) of approved technical electives, no more than 9 hours of which may be from outside the department

(2) Non-Mathematics Requirements

The B.S. degree in mathematics requires the following non-mathematics courses:

(a) PHYS 121, 122, 221, or an equivalent sequence

(b) A two-course science sequence from the following list of physical sciences: ASTR 201-202, CHEM 105-106, CHEM 111-ENGR 145, GEOL 110 and either 115 or 210

(c) A 3-credit hour course in computer science (ENGR 131 or other approved course).

(d) An approved science lab (usually 2 credit hours) (BIOC 314, BIOL 111, CHEM 113, GEOL 119, or PHYS 203)

BACHELOR OF SCIENCE IN APPLIED MATHEMATICS

The B.S. degree in Applied Mathematics requires at least 50 hours of course work in mathematics and related subjects, in addition to a professional core that is specific to the area of application of interest to the student. A student in this degree program must design a program of study in consultation with his or her academic advisor. This program of study must explicitly list the technical electives and the professional core in the area of application.

(1) Mathematics Requirements

(a) MATH 121, 122, 223, and 224, or an equivalent sequence

(b) Core mathematics for applied mathematics
   i) MATH 304, 307, 321, 322, 330
   ii) MATH 324 or 425

(c) Technical Electives: 18 credit hours (normally six courses) of technical electives as follows:
   i) Four approved courses, specific to the concentration area of interest to the student
   ii) Two other courses of MATH at the 300 level or higher

(2) Professional Core Requirement

The professional core requires 12 credit hours of course work specific to the area of application. This requirement is intended to promote scientific breadth and encourage application of mathematics to other fields.

(3) Non-Mathematics Requirements

The B.S. degree in applied mathematics requires the following non-mathematics courses:

(a) PHYS 121, 122, 221, or an equivalent sequence

(b) A two-course science sequence from the following list of physical sciences: ASTR 201-202, CHEM 105-106, CHEM 107-108, GEOL 110 and either 115 or 210

(c) A 3-credit hour course in computer science (ENGR 131 or other approved course)

(d) An approved science lab (usually 2 credit hours) (BIOC 314, BIOL 111, CHEM 113, GEOL 119, or PHYS 203)

Areas of research in applied mathematics well represented in the department include:

- Applied dynamical systems
- Applied probability and stochastic processes
- Imaging
- Life science
- Scientific computing

Study plans with emphasis on areas of application closely related to mathematics but centered in other departments will be also considered. Such areas might include engineering applications, biology, cognitive science, or economics.

BACHELOR OF SCIENCE IN MATHEMATICS AND PHYSICS

In contrast to an applied mathematics degree or the B.S. in physics with a mathematical physics concentration, this is a synergistic, coherent, and parallel education in mathematics and physics. To a close approximation, the challenging course work corresponds to combining the mathematics and physics cores, with the Physics Laboratory cluster replaced by a single, fourth-year laboratory semester. A student in this new program may use either of two official advisors, one available from each department, who would also constitute a committee for the administration of the degree and the approval of curriculum petitions.

The total number of required credits is 126 (35 MATH, 38 PHYS, 6 senior project, 11-13 ENGR and CHEM). There are 14 to 16 credits of open electives.

**An advanced physics course to be selected from the following list: PHYS 315, 316, 326, 328, 336, 365.

***The “M&P group” of four courses corresponds to two physics courses and two mathematics courses. The physics courses would be chosen from PHYS 315, 316, or 326, 328, and the mathematics courses are subject to approval by the advisory committee and are thereby referred to as ‘approved electives.’ They may be chosen from the general list of mathematics courses at the 300 level or higher. Also, subject to approval, students may choose a course from outside the mathematics and physics departments as a substitute in the M&P group.

****If approved by the M&P committee, other science sequence courses may be substituted.

*****The number of open electives will vary depending on whether students choose 3-credit or 4-credit courses to fulfill the chemistry/science requirement.

INTEGRATED B.S./M.S. PROGRAM IN MATHEMATICS AND/OR APPLIED MATHEMATICS

The integrated B.S./M.S. program is intended for highly motivated candidates for the B.S. in mathematics and applied mathematics who wish to pursue an advanced degree. Application to the B.S./M.S. program must be made after completion of 75 semester hours of course work and prior to attaining senior status (completion of 90 semester hours). Generally, this means that a student will submit the application during his/her sixth semester of undergraduate course enrollment and will have no fewer than two semesters of remaining B.S. requirements to complete. Applicants should consult the dean of undergraduate studies.

A student admitted to the program may, in the senior year, take up to nine hours of graduate courses (400 level and above) that will count towards both B.S. and M.S. requirements. The courses to be doubled-counted must be specified at the time of application. Any undergraduate course work that is to be applied to the M.S. must be beyond that used to satisfy B.S. degree requirements and must conform to university, graduate school, and department rules. Students may petition to transfer graduate course work taken prior to application to the B.S./M.S. Program subject to the rules of the graduate school.

Students for whom the master’s project or thesis is a continuation and development of the senior project should register for MATH 651 Thesis (or the appropriate project course) during the senior year and are expected to complete all other courses for the B.S. before enrolling in further M.S. course work and thesis (continuing the senior project). Students for whom the master’s thesis or project is distinct from the senior project will be expected to complete the B.S. degree before taking further graduate courses for the master’s degree.

MINORS

A minor in mathematics is available to all undergraduates. It consists of 17 credit hours of approved course work in mathematics. No more than two courses can be used to satisfy both minor requirements and the requirements of the student’s major field (meaning departmental degree requirements, including departmental technical electives and common course requirements of the student’s school). The 17 hours must be among the following MATH courses: 121 or 123 or 125, 122 or 124 or 126, 223 or 227, 224 or 228, 150, 201, 301, 302, 303, 304, 307, 308, 321, 322, 323, 324, 331, 338, 343, 345, 380, or any 400-level MATH course (only one of 201, 307).

GRADUATE PROGRAMS

The department offers programs leading to the Master of Science and Doctor of Philosophy degrees. At the master’s and at the doctoral levels, there are two degrees: the degree of Master of Science in Mathematics and the degree of Master of Science in Applied Math-
A student must satisfy all of the general requirements of the graduate school as well as the more specific requirements of the department to earn either a master’s or doctoral degree. Each graduate student is assigned an advisory committee consisting of faculty members during the first year of study. The committee’s primary responsibility is to help the student plan an appropriate and sufficiently broad program of course work and study, which will satisfy both the degree requirements and the special interests of the student. With the aid of the advisory committee, each student must present a study plan indicating how he or she intends to satisfy the requirements for a graduate degree.

The main requirements are as follows.

MASTER OF SCIENCE IN MATHEMATICS

A minimum of 27 credit hours of approved course work, at least 18 of which must be at the 400 level or higher, is required for the M.S. degree in mathematics. Courses in two of the following three basic areas must be included among the 27 credit hours required for graduation: Abstract Algebra (MATH 401 and MATH 402), Analysis (MATH 423 and one of MATH 424 or MATH 425), and Topology (MATH 461).

The student must pass a comprehensive oral examination on three areas, two of which must be selected from the basic ones listed above (although no particular courses are specified). The third area for the examination may be any approved subject.

A student in the M.S. program in mathematics may substitute the comprehensive exam examination requirement with an expository or original thesis, which will count as 6 credit hours of course work. The thesis will be defended in the course of an oral examination, during which the student will be questioned about the thesis and related topics. These two variants correspond to plan A and plan B in the graduate school literature.

MASTER OF SCIENCE IN APPLIED MATHEMATICS

The department offers specialized programs in applied mathematics. For each of the programs, there is a minimum requirement of 27 credit hours of course work, at least 18 of which must be at the 400 level or higher. Students in the program must complete course work requirement in each of the following disjoint groups:

- At least 15 hours offered by the Department of Mathematics
- At least 6 hours of courses offered outside the Department of Mathematics
- 6 hours of thesis work (see below) or successfully passing a comprehensive exam

Although individual programs of course work leading to a master’s degree in applied mathematics cannot have a large common core of requirements because of the great diversity of topics used in applications, all students pursuing a Master of Science in Applied Mathematics are strongly advised to take Introduction to Numerical Analysis (MATH 431) and Mathematical Modeling (MATH 441). In addition, to add breadth to the student’s education, the set of courses taken within the department must include three credit hours of approved course work in at least three of the following seven subjects. The courses listed are examples of suitable courses on the given subject. A course can be used to satisfy only one breadth area.

APPLIED MATHEMATICS BREADTH AREAS

- **Analysis and Linear Analysis.** MATH 471 (not suitable for credit towards the Ph.D. requirements), MATH 423, or MATH 405
- **Probability and its Applications.** MATH 439 (Bayesian Scientific Computing), MATH 487 (Stochastic Processes in Engineering and Science), or MATH 491 (Probability)
- **Numerical Analysis and Scientific Computing.** MATH 431 (Intro to Numerical Analysis), MATH 432 (Numerical Differential Equations), or MATH 433 (Numerical Optimization)
- **Differential Equations.** MATH 435 (Ordinary Differential Equations), MATH 445 (Intro to Partial Differential Equations), MATH 448 (Applied Partial Differential Equations), or MATH 449 (Dynamical Systems for Biology and Medicine)
- **Inverse Problems and Imaging.** MATH 439 (Bayesian Scientific Computing), MATH 440 (Computational Inverse Problems), or MATH 475 (Mathematics of Imaging)
- **Logic and Discrete Mathematics.** MATH 406 (Math Logic and Model Theory), MATH 408 (Cryptography), or MATH 410 (Automata and Formal Languages)
- **Life Science.** MATH 441 (Mathematical Modeling), MATH 449 (Dynamical Systems for Biology and Medicine), MATH 478 (Computational Neuroscience), or MATH 487 (Stochastic Processes in Engineering and Science)

Other suitable courses for students in applied mathematics include MATH 413 (Graph Theory), MATH 424 (Functional Analysis), MATH 425 (Complex Analysis), MATH 427 (Convexity), MATH 428 (Fourier Analysis), MATH 444 (Data mining and Pattern Recognition), MATH 469 (Calculus of Variations), MATH 475 (Mathematics of Imaging), MATH 492 (Probability), and MATH 495 (Combinatorics).

The student must pass a comprehensive oral examination on three areas, two of which must be in the list for the breadth requirement (although no particular courses are specified). The third area for the examination may be any approved subject.

A student in the M.S. program in applied mathematics may substitute the comprehensive examination requirement with an expository or original thesis, which will count as 6 credit hours of course work. The thesis will be defended in the course of an oral examination, during which the student will be questioned about the thesis and related topics. These two variants correspond to plan A and plan B in the graduate school literature.

MASTER OF SCIENCE IN APPLIED MATHEMATICS—ENTREPRENEURIAL TRACK

The Master of Science in Applied Mathematics—Entrepreneurial Track, obtained through the Entrepreneurial Program in Mathematics and Computation, is a degree designed to provide training in applied mathematics for entrepreneurs who have a business idea that depends heavily on mathematics. They wish to learn enough mathematics to refine their business idea and, at the same time, acquire the business skills needed to bring this idea to the marketplace. The Master of Science in Applied Mathematics—Entrepreneurial Track is also appropriate for industrial mathematicians who need to effectively utilize mathematical tools in a business context. It expands our basic Master of Applied Mathematics program by tightly integrating business training into the curriculum. The Entrepreneurial Track provides instruction and real business-world experience to students who have a background in mathematics and a vision for new
Candidates for the M.S. in Mathematics—Entrepreneurial Track must complete at least 27 hours of course work and present a master’s thesis. It is expected that a business plan be an integral part of the thesis. The two-year program includes these course requirements:

**MATH 483-4** Mathematics for Innovation I and II (6 hours)
**MATH 651** Thesis (9 hours)
**ENTP 429** New Venture Creation (3 hours)
**ENTP 441** Technology Entrepreneurship (3 hours)
Mathematics Technical Elective (3 hours)
Restricted Elective (3 hours)

The New Venture Creation and Technology Entrepreneurship courses will be offered by the Weatherhead School of Management. The Technical Elective is a 400-level or higher mathematics course or other technical elective appropriate to an individual student’s program of study, as approved by the Mathematics Entrepreneurship Program Committee. The Restricted Elective is a course in mathematics, science, engineering, or management appropriate to an individual student’s program of study, as approved by the Mathematics Entrepreneurship Program Committee.

**PH.D. PROGRAM**

The doctorate is conferred not merely upon completion of a stipulated course of study, but rather upon clear demonstration of scholarly attainment and capability of original research work in mathematics. A doctoral student may plan either a traditional program of studies in mathematics (mathematics track) or a program of studies oriented toward applied mathematics (applied mathematics track). In either case, each student must take 36 credit hours of approved courses with a grade average of B or better. For students entering with a master’s degree in a mathematical subject compatible with our program, as determined by the graduate committee, this requirement is reduced to 18 credit hours of approved courses.

In addition to the course work, all Ph.D. students in both tracks must complete the following specific requirements:

- **Pass the Ph.D. qualifying examination**, which consists of examinations on three different subjects. All examinations are general proficiency examinations which may or may not be connected to specific courses. The topics for each subject are spelled out in a syllabus, periodically updated, which is available to the student. Students are expected to take the qualifying examination by the end of the second year of study and to successfully pass all parts of it by the beginning of their sixth semester in the Ph.D. program. Each track requires examination in a different set of subjects. More specifically:
  - **Mathematics Track**: A doctoral student in this track must take examinations on abstract algebra and real analysis. The third subject is to be selected from the following list: complex analysis, control and calculus of variations, differential equations, dynamical systems, functional analysis, geometry, probability, and topology. The choice of the examination subjects should be finalized by the end of the first year of study.
  - **Applied Mathematics Track**: A doctoral student in this track must take examinations in an area of computational mathematics and in an area of mathematical modeling. The third area of examination may be a more applied subject, including but not restricted to fluid mechanics, statistical mechanics, epidemiology, neuroscience, or a more traditional field of mathematics.

- **Write an acceptable thesis that constitutes an original contribution to mathematical knowledge. It is the responsibility of the student to find a thesis advisor who is willing to help plan a program and guide his or her research. This should be done immediately after passing the qualifying examination. A copy of a student’s thesis is to be available no later than 10 days prior to the final oral examination (see below), and the student is required to deliver an expository lecture on the subject of his or her thesis sometime prior to the final oral examination. This lecture is open to all students and faculty.**

- **Pass a final oral examination consisting of a defense of the thesis. The examination committee, which consists of not fewer than four members of the faculty, including one whose appointment is outside the mathematics department, is responsible for certifying that the material presented in the thesis meets acceptable scholarly standards. The examination may also include an inquiry into the student’s competence in the major and related fields. All faculty members are welcome to attend.**

**COURSE WORK REQUIREMENTS**

**Mathematics Track**: A student in the traditional mathematics program must demonstrate knowledge of the basic concepts and techniques of algebra, analysis (real and complex), and topology. This must be done by taking all courses in the three basic areas: abstract algebra (MATH 401-MATH 402), analysis (MATH 423-MATH 424 and MATH 425), and topology (MATH 461). In addition, the student is required to take a minimum of 18 credit hours of approved course work.

A student with a master’s degree in a mathematical subject compatible with our program, as determined by the graduate committee, must take 18 credit hours of approved courses. The graduate committee will determine which of the specific course work requirements stated above have been satisfied by the master’s course work.

**Applied Mathematics Track**: A student in the applied mathematics track must demonstrate knowledge of scientific computing, mathematical modeling, and differential equations. This may be done by taking:

- **Introduction to Numerical Analysis** (MATH 431) and at least one of Numerical Differential Equations (MATH 432) or Numerical Nonlinear Systems and Optimization (MATH 433);
- **Mathematical Modeling** (MATH 441) and at least one of Ordinary Differential Equations (MATH 445), Introduction to Partial Differential Equations (MATH 445), or Partial Differential Equations (MATH 448).

In addition, a student in this track must take at least 24 credit hours of approved courses, which must include at least 9 credit hours of courses offered outside the Department of Mathematics, and at least 9 credit hours offered by the Department of Mathematics.

A student with a master’s degree in a mathematical subject compatible with our program, as determined by the graduate committee, must take 18 credit hours of approved courses, which must include at least 6 credit hours of courses offered outside the Department of Mathematics and at least 9 credit hours offered by the Department of Mathematics. The graduate committee will determine which of
the specific course work requirements stated above have been satisfied by the master’s course work.

Sample study plans for students with concentrations in scientific computing, imaging, mathematical biology, and stochastics follow. The graduate committee will entertain ideas for other serious study plans or qualifying exam subjects in addition to the most common variants specifically suggested.

Ph.D. students entering with a bachelor’s degree are also subject to the breadth requirements for students in the program for the M.S. degree in applied mathematics.

PETITIONS
Any exceptions to departmental regulations or requirements must have the formal approval of the graduate committee of the department. Such exceptions are to be sought by a written petition, approved by the student’s advisory committee or thesis advisor, to the graduate committee.

Any exception to university rules and regulations must be approved by the dean of graduate studies. Such exceptions are to be sought by presenting a written petition to the graduate committee for departmental endorsement and approval prior to forwarding the petition to the dean.

COURSE DESCRIPTIONS

MATH 110. Introduction to Mathematical Communication and Software (1)

MATH 120. Elementary Functions and Analytic Geometry (3)
Polynomial, rational, exponential, logarithmic, and trigonometric functions (emphasis on computation, graphing, and location of roots) straight lines and conic sections. Primarily a precalculus course for the student without a good background in trigonometric functions and graphing and/or analytic geometry. Not open to students with credit for MATH 121 or MATH 125. Prereq: Three years of high school mathematics.

MATH 121. Calculus for Science and Engineering I (4)
Functions, analytic geometry of lines and polynomials, limits, derivatives of algebraic and trigonometric functions. Definite integral, antiderivatives, fundamental theorem of calculus, change of variables. Prereq: Three and one half years of high school mathematics.

MATH 122. Calculus for Science and Engineering II (4)
Continuation of MATH 121. Exponentials and logarithms, growth and decay, inverse trigonometric functions, related rates, basic techniques of integration, area and volume, polar coordinates, parametric equations. Taylor polynomials and Taylor’s theorem. Prereq: MATH 121 or MATH 123 or MATH 126.

MATH 123. Calculus I (4)
Limits, continuity, derivatives of algebraic and transcendental functions, including applications, basic properties of integration. Techniques of integration and applications. Students must have 31/2 years of high school mathematics.

MATH 124. Calculus II (4)

MATH 125. Math and Calculus Applications for Life, Managerial, and Social Sci I (4)
Discrete and continuous probability; differential and integral calculus of one variable; graphing, related rates, maxima and minima. Integration techniques, numerical methods, volumes, areas. Applications to the physical, life, and social sciences. Students planning to take more than two semesters of introductory mathematics should take MATH 121. Prereq: Three and one half years of high school mathematics.

MATH 126. Math and Calculus Applications for Life, Managerial, and Social Sci II (4)
Continuation of MATH 125 covering differential equations, multivariable calculus, discrete methods. Partial derivatives, maxima and minima for functions of two variables, linear regression. Differential equations; first and second order equations, systems, Taylor series methods; Newton’s method; difference equations. Prereq: MATH 121 or MATH 123 or MATH 125.

MATH 150. Mathematics from a Mathematician’s Perspective (3)
An interesting and accessible mathematical topic not covered in the standard curriculum is developed. Students are exposed to methods of mathematical reasoning and historical progression of mathematical concepts. Introduction to the way mathematicians work and their attitude toward their profession. Should be taken in freshman year to count toward a major in mathematics. Prereq: Three and one half years of high school mathematics.

MATH 201. Introduction to Linear Algebra (3)
Matrix operations, systems of linear equations, vector spaces, subspaces, bases and linear independence, eigenvalues and eigenvectors, diagonalization of matrices, linear transformations, determinants. Less theoretical than MATH 308. May not be taken for credit by mathematics majors. Only one of MATH 201 or MATH 308 may be taken for credit.
Prereq: MATH 122 or MATH 124 or MATH 126.

MATH 223. Calculus for Science and Engineering III (3)
Introduction to vector algebra; lines and planes. Functions of several variables: partial derivatives, gradients, chain rule, directional derivative, maxima/minima. Multiple integrals, cylindrical and spherical coordinates. Derivatives of vector valued functions, velocity and acceleration. Vector fields, line integrals, Green’s theorem.
Prereq: MATH 122 or MATH 124.

MATH 224. Elementary Differential Equations (3)
A first course in ordinary differential equations. First order equations and applications, linear equations with constant coefficients, linear systems, Laplace transforms, numerical methods of solution.
Prereq: MATH 223 or MATH 227.

MATH 227. Calculus III (3)
Prereq: MATH 124 or placement by the department.

MATH 228. Differential Equations (3)
Elementary ordinary differential equations: first order equations; linear systems; applications; numerical methods of solution.
Prereq: MATH 227 or placement by the department.

MATH 301. Undergraduate Reading Course (1-3)
Students must obtain the approval of a supervising professor before registration. More than one credit hour must be approved by the undergraduate committee of the department.

MATH 302. Departmental Seminar (3)
A seminar devoted to understanding the formulation and solution of mathematical problems. SAGES Department Seminar. Students will investigate, from different possible viewpoints, via case studies, how mathematics advances as a discipline—what mathematicians do. The course will largely be in a seminar format. There will be two assignments involving writing in the style of the discipline. Enrollment by permission (limited to majors depending on demand).

SAGES Dept Seminar

MATH 303. Elementary Number Theory (3)
Primes and divisibility, theory of congruencies, and number theoretic functions. Diophantine equations, quadratic residue theory, and other topics determined by student interest. Emphasis on problem solving (formulating conjectures and justifying them).
Prereq: MATH 122 or MATH 124.

MATH 304. Discrete Mathematics (3)
A general introduction to basic mathematical terminology and the techniques of abstract mathematics in the context of discrete mathematics. Topics introduced are mathematical reasoning, Boolean connectives, deduction, mathematical induction, sets, functions and relations, algorithms, graphs, combinatorial reasoning.
Offered as EECS 302 and MATH 304.
Prereq: MATH 122 or MATH 124 or MATH 126.

MATH 307. Introduction to Abstract Algebra I (3)
First semester of an integrated, two-semester theoretical course in abstract and linear algebra, studied on an axiomatic basis. The major algebraic structures studied are groups, rings, fields, modules, vector spaces, and inner product spaces. Topics include homomorphisms and quotient structures, the theory of polynomials, canonical forms for linear transformations and the principal axis theorem. This course is required of all students majoring in mathematics. Only one of MATH 201 or MATH 307 may be taken for credit.
Prereq: MATH 122 or MATH 124.

MATH 308. Introduction to Abstract Algebra II (3)
Continuation of MATH 307.
Prereq: MATH 307.

MATH 319. Applied Probability and Stochastic Processes for Biology (3)
Applications of probability and stochastic processes to biological systems. Mathematical topics will include: introduction to discrete and continuous probability spaces (including numerical generation of pseudo random samples from specified probability distributions), Markov processes in discrete and continuous time with discrete and continuous sample spaces, process types including homogeneous and inhomogeneous Poisson processes and Markov chains on graphs, and diffusion processes including Brownian motion and the Ornstein-Uhlenbeck process. Biological topics will be determined by the interests of the students and the instructor. Likely topics include: stochastic ion channels, molecular motors and stochastic ratchets, actin and tubulin polymerization, random walk models for neural spike trains, bacterial chemotaxis, signaling and genetic regulatory networks, and stochastic predator-prey dynamics. The emphasis will be on practical simulation and analysis of stochastic phenomena in biological systems. Numerical methods will be developed using both MATLAB and the R statistical package. Student projects will comprise a major part of the course.
Offered as BIOL 319, EECS 319, MATH 319, BIOL 419, EBM 419, and PHOL 419.
Prereq: MATH 224 or MATH 228 or BIOL 300 or BIOL 306.

MATH 321. Fundamentals of Analysis I (3)
Abstract mathematical reasoning in the context of analysis in Euclidean space. Introduction to formal reasoning, sets and functions, and the number systems. Sequences and series; Cauchy sequences and convergence. Required for all mathematics majors. Additional work required for graduate students. (May not be taken for graduate credit by graduate students in the Department of Mathematics.)
Offered as MATH 321 and MATH 421.
Prereq: MATH 223 or MATH 227.

MATH 322. Fundamentals of Analysis II (3)
Continuation of MATH 321. Point-set topology in metric spaces with attention to n-dimensional space; completeness, compactness, connectedness, and continuity of functions. Topics in sequences, series of functions, uniform convergence, Fourier series and polynomial approximation. Theoretical development of differentiation and Riemann integration. Required for all mathematics majors. Additional work required for graduate students. (May not be taken for graduate credit by graduate students in the Department of Mathematics.)
Offered as MATH 322 and MATH 422.
Prereq: MATH 321.

MATH 324. Introduction to Complex Analysis (3)
Properties, singularities, and representations of analytic functions, complex integration. Cauchy’s theorems, series residues, conformal mapping and analytic continuation, Riemann surfaces. Relevance to the theory of physical problems.
Prereq: MATH 224 or MATH 228.

MATH 326. Geometry and Complex Analysis (3)
The theme of this course will be the interplay between geometry and complex analysis, algebra and other fields of mathematics. An effort will be made to highlight significant, unexpected connections between major fields, illustrating the unity of mathematics. The choice of text(s) and syllabus itself will be flexible, to be adapted to the range of interests and backgrounds of pre-enrolled students. Possible topics include: the Mobius group and its subgroups, hyperbolic geometry, elliptic functions, Riemann surfaces, applications of conformal mapping, and potential theory in classical physical models.
Offered as MATH 326 and MATH 426.
Prereq: MATH 324.

MATH 327. Convexity and Optimization (3)
Introduction to the theory of convex sets and functions and to the extremes in problems in areas of mathematics where convexity plays a role. Among the topics discussed are basic properties of convex
sets (extreme points, facial structure of polytopes), separation theorems, duality and polars, properties of convex functions, minima and maxima of convex functions over convex set, various optimization problems.

Offered as MATH 327, MATH 427, and OPRE 427.

Prereq: MATH 223 or MATH 227.

**MATH 330. Introduction of Scientific Computing (3)**

Among the topics which will be covered in the course are solutions of linear systems and least squares, approximation and interpolation, solution of nonlinear systems, numerical integration and differentiation, and numerical solution of differential equations. Projects where the numerical methods are used to solve problems from various application areas will be assigned throughout the semester.

Prereq or Coreq: MATH 224 or MATH 228.

**MATH 338. Introduction to Dynamical Systems (3)**

Nonlinear discrete dynamical systems in one and two dimensions. Chaotic dynamics, elementary bifurcation theory, hyperbolicity, symbolic dynamics, structural stability, stable manifold theory.

Prereq: MATH 223 or MATH 227.

**MATH 342. Introduction to Research in Mathematical Biology (1)**

The purpose of this seminar is to introduce students to some of the research being done at Case Western Reserve that explores questions at the intersection of mathematics and biology. Students will explore roughly five research collaborations, spending two weeks with each research group. In the first three classes of each two-week block, students will read and discuss relevant papers, guided by members of that research group, and the two-week period will culminate in a talk in which a member of the research group will present a potential undergraduate project in that area. After the final group’s talk, students will divide themselves into groups of two to four people and choose one project for further exploration. Together, they will write up this project as a research proposal, introducing the problem, explaining how it connects to broader scientific questions, and outlining the proposed work. It is expected that students will use the associated research group as a resource, but the proposal should be their own work. Students will submit a first draft, receive feedback, and then submit a revised draft.

Offered as BIOL 309 and MATH 342.

**MATH 343. Theoretical Computer Science (3)**

Introduction to mathematical logic, different classes of automata and their correspondence to different classes of formal languages, recursive functions and computability, assertions and program verification, denotational semantics. MATH/ECECS 343 and MATH 410 cannot both be taken for credit.

Offered as ECECS 343 and MATH 343.

**MATH 351. Senior Project for the Mathematics and Physics Program (2)**

A two-semester course (2 credits per semester) in the joint B.S. in Mathematics and Physics program. Project based on numerical and/or theoretical research under the supervision of a mathematics faculty member, possibly jointly with a faculty member from physics. Study of the techniques utilized in a specific research area and of recent literature associated with the project. Work leading to meaningful results which are to be presented as a term paper and an oral report at the end of the second semester. Supervising faculty will review progress with the student on a regular basis, including detailed progress reports made twice each semester, to ensure successful completion of the work.

SAGES Senior Cap

**MATH 352. Mathematics Capstone (3)**

Mathematics Senior Project. Students pursue a project based on experimental, theoretical or teaching research under the supervision of a mathematics faculty member, faculty members from another Case Western Reserve department or a research scientist or engineer from another institution. A departmental Senior Project Coordinator must approve all project proposals and this same person will receive regular oral and written progress reports. Final results are presented at the end of the second semester as a paper in a style suitable for publication in a professional journal as well as an oral report in a public Mathematics Capstone symposium.

SAGES Senior Cap

**MATH 361. Geometry I (3)**

An introduction to the various two-dimensional geometries, including Euclidean, spherical, hyperbolic, projective, and affine. The course will examine the axiomatic basis of geometry, with an emphasis on transformations. Topics include the parallel postulate and its alternatives, isometries and transformation groups, tilings, the hyperbolic plane and its models, spherical geometry, affine and projective transformations, and other topics. We will examine the role of complex and hypercomplex numbers in the algebraic representation of transformations. The course is self-contained.

SAGE: Dept Seminar

**MATH 363. Knot Theory (3)**

An introduction to the mathematical theory of knots and links, with emphasis on the modern combinatorial methods. Reidemeister moves on link projections, ambient and regular isotopies, linking number tricolorability, rational tangles, braids, torus knots, seifert surfaces and genus, the knot polynomials (bracket, X, Jones, Alexander, HOMFLY), crossing numbers of alternating knots and amphicheirality. Connections to theoretical physics, molecular biology, and other scientific applications will be pursued in term projects, as appropriate to the background and interests of the students.

Prereq: MATH 223 or MATH 227.

**MATH 378. Computational Neuroscience (3)**

Computer simulations and mathematical analysis of neurons and neural circuits, and the computational properties of nervous systems. Students are taught a range of models for neurons and neural circuits, and are asked to implement and explore the computational and dynamic properties of these models. The course introduces students to dynamical systems theory for the analysis of neurons and neural learning, models of brain systems, and their relationship to artificial and neural networks. Term project required. Students enrolled in MATH 478 will make arrangements with the instructor to attend additional lectures and complete additional assignments addressing mathematical topics related to the course. Recommended preparation: MATH 223 and MATH 224 or BIOL 300 and BIOL 306.

Offered as BIOL 378, COGS 378, MATH 378, BIOL 478, EMBE 478, ECECS 478, MATH 478 and NEUR 478.

**MATH 380. Introduction to Probability (3)**

Prereq: MATH 223 or MATH 227.

**MATH 381. Introduction to Mathematical Methods in Finance (3)**

Prereq: MATH 380.

**MATH 399. Special Topics (3)**

MATH 434. Optimization of Dynamic Systems (3)

MATH 435. Ordinary Differential Equations (3)
MATH 435 is a second course in ordinary equations. The course will begin with a quick review of one-dimensional ODE's with the idea of introducing tools for studying general systems that will be developed later in the course (this is the get-acquainted part of the course; topics will be selected from Parts I and II of the text). After this introduction we will turn to general features of abstract ODE's existence and uniqueness of solutions, dependence of solutions on parameters, and the idea of a flow. Next we will consider linear systems. The remainder of the semester will be spent on nonlinear systems: topics that will be discussed are linearization, stability, the Poincaré-Bendixson theory and bifurcations. Prereq: MATH 224 and either MATH 201 or MATH 367.

MATH 439. Integrated Numerical and Statistical Computations (3)
This course will embed numerical methods into a Bayesian framework. The statistical framework will make it possible to integrate a priori information about the unknowns and the error in the data directly into the most efficient numerical methods. A lot of emphasis will be put on understanding the role of the priors, their encoding into fast numerical solvers, and how to translate qualitative or sample-based information—or lack thereof—into a numerical scheme. Confidence on computed results will also be discussed from a Bayesian perspective, at the light of the given data and a priori information. The course should be of interest to anyone working on signal and image processing statistics, numerical analysis and modeling. Recommended Preparation: Math 431. Offered as MATH 439 and STAT 439.

MATH 440. Computational Inverse Problems (3)
This course will introduce various computational methods for solving inverse problems under different conditions. First the classical regularization methods will be introduced, and the computational challenges which they pose, will be addressed. Following this, the statistical methods for solving inverse problems will be studied and their computer implementation discussed. We will combine the two approaches to best exploit their potentials. Applications arising from various areas of science, engineering, and medicine will be discussed throughout the course.

MATH 441. Mathematical Modeling (3)
Mathematics is a powerful language for describing real world phenomena and providing predictions that otherwise are hard or impossible to obtain. The course gives the students prerequisites for translating qualitative descriptions given in the professional non-mathematical language into the quantitative language for mathematics. While the variety in the subject matter is wide, some general principles and methodologies that a modeler can pursue are similar in many applications. The course focuses on these similarities. The course is based on representative case studies that are discussed and analyzed in the classroom, the emphasis being on general principles of developing and analyzing mathematical models. The examples will be taken from different fields of science and engineering, including life sciences, environmental sciences, biomedical engineering and physical sciences. Modeling relies increasingly on computation, so the students should have basic skills for using computers and programs like Matlab or Mathematica. Prereq: MATH 224 or MATH 228.

MATH 444. Mathematics of Data Mining and Pattern Recognition (3)
This course will give an introduction to a class of mathematical and computational methods for the solution of data mining and pattern recognition problems. By understanding the mathematical concepts behind algorithms designed for mining data and identifying patterns, students will be able to modify to make them suitable for specific applications. Particular emphasis will be given to matrix factorization techniques. The course requires that the students have a working knowledge of basic linear algebra and proficiency in a computer language. Prereq: MATH 224 or MATH 228.

MATH 445. Introduction to Partial Differential Equations (3)
This course will give an introduction to a class of mathematical and computational methods for the solution of data mining and pattern recognition problems. By understanding the mathematical concepts behind algorithms designed for mining data and identifying patterns, students will be able to modify to make them suitable for specific applications. Particular emphasis will be given to matrix factorization techniques. The course requires that the students have a working knowledge of basic linear algebra and proficiency in a computer language. Prereq: MATH 224 or MATH 228.

MATH 446. Differential Geometry (3)
Manifolds and differentiable geometry. Vector fields; Riemannian metrics; curvature; intrinsic and extrinsic geometry of surfaces and curves; structural equations of Riemannian geometry; the Gauss-Bonnet theorem. Prereq: MATH 321.

MATH 447. Differentiable Manifolds (3)
Differentiable manifolds and structures on manifolds. Tangent and cotangent bundle; vector fields; differential forms; tensor calculus; integration and Stokes' theorem. May include Hamiltonian systems and their formulation on manifolds; symplectic structures; connections and curvature; foliations and integrability. Prereq: MATH 322.
MATH 469. Calculus of Variations (3)
Examples of variational problems; variation of a functional; linear spaces; Frechet derivative; Euler-Lagrange equations; Lagrange multipliers; Hamiltonian formulation; canonical coordinates; Noether's theorem; second variation; conjugate points; direct methods. Other topics such as existence and regularity of solutions; Sobolev spaces; depending on audience.
Prereq: MATH 224 or MATH 228.

MATH 471. Advanced Engineering Mathematics (3)
Prereq: MATH 224 or MATH 228.

MATH 475. Mathematics of Imaging in Industry and Medicine (3)
The mathematics of image reconstruction; properties of radon transform, relation to Fourier transform; inversion methods, including convolution, backprojection, rho-filtered layergram, algebraic reconstruction technique (ART), and orthogonal polynomial expansions. Reconstruction from fan beam geometry, limited angle techniques used in MRI; survey of applications. Recommended preparation: PHYS 431 or MATH 471.

MATH 478. Computational Neuroscience (3)
Computer simulations and mathematical analysis of neurons and neural circuits, and the computational properties of nervous systems. Students are taught a range of models for neurons and neural circuits, and are asked to implement and explore the computational and dynamic properties of these models. The course introduces students to dynamical systems theory for the analysis of neurons and neural learning, models of brain systems, and their relationship to artificial and neural networks. Term project required. Students enrolled in MATH 478 will make arrangements with the instructor to attend additional lectures and complete additional assignments addressing mathematical topics related to the course. Recommended preparation: MATH 223 and MATH 224 or BIOL 300 and BIOL 306.
Offered as BIOL 378, COGS 378, MATH 378, BIOL 478, EMBE 478, EECG 478, MATH 478 and NEUR 478.

MATH 481. Introduction to Mathematical Methods in Finance (3)
The pricing formula for European call options. Offered as MATH 381 and MATH 481.

MATH 487. Stochastic Processes in Engineering and Sciences (3)
Prereq: MATH 322.

MATH 491. Probability I (3)
Prereq: MATH 423.

MATH 492. Probability II (3)
Prereq: MATH 491.

MATH 495. Combinatorics (3)
Prereq: MATH 307.

MATH 499. Special Topics (3)
Special topics in mathematics.

MATH 501. Topics in Algebra (3)
Selected topics from fields, rings, and modules.
Prereq: MATH 402.

MATH 527. Functional Analysis (3)

MATH 528. Analysis Seminar (1-3)
Continuing seminar on areas of current interest in analysis. Allows graduate and advanced undergraduate students to become involved in research. Topics will reflect interests and expertise of the faculty and may include functional analysis, convexity theory, and their applications. May be taken more than once for credit. Consent of department required.

MATH 535. Applied Mathematics Seminar (1-3)
Continuing seminar on areas of current interest in applied mathematics. Allows graduate and advanced undergraduate students to become involved in research. Topics will reflect interests and expertise of the faculty and may include topics in applied probability and stochastic processes, continuum mechanics, numerical analysis, mathematical physics or mathematical biology. May be taken more than once for credit.

MATH 563. Topology Seminar (1-3)
Continuing seminar on areas of current interest in topology and geometry. Topics may include: minimal submanifolds; hyperbolic geometry and diffeomorphisms of surfaces; global analysis; discrete dynamical systems; gauge theory; symplectic geometry; closed geodesics. May be taken more than once for credit.

MATH 601. Reading and Research Problems (1-18)
Presentation of individual research, discussion, and investigation of research papers in a specialized field of mathematics.

MATH 651. Thesis (M.S.) (1-18)
Prereq: Predoctoral research consent or advanced undergraduate status. Allows graduate and advanced undergraduate students to become informed and liberally educated citizens of the world. Through the acquisition of language skills and cultural awareness, our students prepare for careers that have an international dimension. To that end, we strongly encourage them to spend their junior year abroad in order to immerse themselves in a foreign culture and perfect their language skills.
skills. We also run our own study abroad programs: one German program (“The Munich Experience”); two French programs (“The Paris Experience” and “The Montreal Experience”), two Spanish programs (“The Buenos Aires Experience” and “Advanced Spanish in Spain”), and one in Italy.

We work closely with other university departments and interdisciplinary programs as well as with the cultural institutions of University Circle to provide students with a broad understanding of the many opportunities that language and culture study offer. The department has strong interdisciplinary ties with Asian Studies, French and Francophone Studies, German Studies, International Studies, Women’s and Gender Studies, and World Literature. Students also gain practical experience in different cultural and language environments through service learning in the Spanish, French, and Russian communities of Cleveland.

DEPARTMENT FACULTY
Antonio Candau, Ph.D.
(University of Massachusetts, Amherst)
Associate Professor and Chair
19th- to 21st-century Peninsular Spanish culture; Golden Age literature

Per Aage Brandt, Docteur d’Etat
(Sorbonne I, Paris)
Emile B. de Sausset Professor of Modern Languages and Literatures
Romance philology; general and romance linguistics; comparative literature; structural linguistics and structural semantics, cognitive semiotics; cognitive poetics

Christine Cano, Ph.D.
(Yale University)
Associate Professor
19th- and 20th-century French literature and culture

Denise Caterinacci, M.A.
(Kent State University)
Instructor
Italian language and culture; language pedagogy; the role of motivation in language learning

M. Gabriela Copertari, Ph.D.
(Georgetown University)
Assistant Professor
Latin American literature and film, especially Argentinian; women’s writing; the modernista novel

Margaretmary Daley, Ph.D.
(Yale University)
Associate Professor
18th- and 19th-century German literature; German women writers; women’s studies; feminist literary criticism

Gilbert Doho, Docteur d’Etat
(University of the Sorbonne Nouvelle)
Associate Professor
French drama; African Francophone theater and film; people theater and social movements; playwriting; African performing arts

Linda C. Ehrlich, Ph.D.
(University of Hawaii/East-West Center)
Associate Professor
Asian (Japanese) cinema; traditional Asian theatre; set design, landscape architecture, and film; Japanese poetry; literature and film; cinema of Spain

Takao Hagiwara, Ph.D.
(University of British Columbia)
Associate Professor
Japanese literature, especially modern prose and poetry; classical and modern Japanese literature; pre-modern Japanese sensibilities and (post) modernism

Jutta Ittner, Ph.D.
(University of Hamburg)
Associate Professor
20th-century German literature; contemporary women writers; poetry; literary translation; German culture; representation of animals in contemporary literature

Marie Lathers, Ph.D.
(Brown University)
Elizabeth M. and William C. Treuhaft Professor of Humanities
Women and the visual arts; 19th-century French literature and the arts (painting, sculpture, photography, film); gender, science, and technology; feminist theory; space studies

Yuxiu Liang, M.A.
(Cleveland State University, Case Western Reserve University)
Instructor
Chinese language and culture; social theory

Jacqueline C. Nanfio, Ph.D.
(University of California, Los Angeles)
Associate Professor
Colonial and 19th-century Latin American literature; Golden Age Hispanic literature; literary theory; Chicano literature; contemporary Latin American women writers

Cheryl Toman, Ph.D.
(University of Illinois, Urbana-Champaign)
Assistant Professor
African and Middle Eastern Francophone literature, especially Cameroon; women’s writing; immigrant communities in France

Susanne Vees-Gulani, Ph.D.
(University of Illinois, Urbana-Champaign)
Assistant Professor
20th- and 21st-century literature and literary movements; German cultural studies; science and literature; medicine and literature; trauma studies; victim discourses; literary and cultural responses to World War II; German civil defense strategies in World War II

Peter Jianhua Yang, Ph.D.
(University of Utah)
Instructor
German literature, emphasis on 20th-century German literature; German theater; technology-enhanced language teaching; teaching pedagogy; business German; theatricality

Tatiana Zilotina, Ph.D.
(University of Virginia)
Lecturer
Russian literature, especially poetry; the poetry of Marina Tsvetaeva; women writers; Russian culture

Lecturers and Adjunct Faculty
Bernadette Beroud, M.A.
(Université Jean Moulin, Lyon III)
Lecturer (French)

Yoram Daon, M.B.A.
(Keller Graduate School of Management, DeVry University)
Lecturer (Hebrew)

Mauricio Duarte, M.A.
(Arizona State University)
Lecturer (Spanish)

Elena Fernández, M.A.
(Cleveland State University)
Lecturer (Spanish)

Margaret M. Fitzgerald, M.A.
(The Ohio State University)
Lecturer (Japanese)

Ramez Islambouli, M.A.
(Case Western Reserve University)
Lecturer (Arabic)

Yoshiko Kishi, M.A.
(New York University)
Lecturer (Japanese)

Clara Lipszyc-Arroyo, M.A.
(University of Western Ontario)
Lecturer (Portuguese and Spanish)
Enno Lohmeyer, Ph.D.  
(Lecture (German))

Carolina Perera Olivares, M.A.  
(University of South Florida)  
(Lecture (Spanish))

Fabienne Pizot-Haymore, M.A.  
(Université Paul Valéry, Montpellier III)  
(Lecture (French))

UNDERGRADUATE PROGRAMS
The Department of Modern Languages and Literatures offers courses of study leading to the Bachelor of Arts in French, German, Japanese Studies, and Spanish. In addition, the department offers minors in Chinese, Hebrew, Italian, and Russian, as well as course work in Arabic and Portuguese. Except in the case of courses cross-listed with the World Literature program, all courses in modern languages and literatures are taught primarily in the target language. In addition to class meetings, work outside of class with audio materials is an integral part of all elementary and intermediate language courses taught by the department. Career opportunities exist in college and university teaching, translation and interpretation, diplomatic and other government service, business, international nonprofit agencies, and the arts, and are often enhanced by a double major.

PLACEMENT PROCEDURE
Students with prior experience in French, German, or Spanish, however gained (e.g., in high school, with or without AP courses, at another institution, via study abroad), must take a placement examination before the first week of the semester in which they enroll in one of those languages. Placement depends both on examination results and on consultation with individual faculty members. The academic policy of Case Western Reserve University is to award credit for a 101 course in any language only upon completion of 102 in that language.

Majors
FRENCH, GERMAN, JAPANESE STUDIES, AND SPANISH
Majors in French, German, Japanese Studies, and Spanish are expected: 1) to acquire the ability to understand, speak, read, and write the language(s) of their choice; and 2) to develop a sound understanding of the relevant cultures and literatures. The major in French, German, Japanese Studies, or Spanish consists of 30-32 hours of course work and will vary based on students’ background in the language. Individual counseling and placement tests are provided by the department.

COURSE REQUIREMENTS ARE AS FOLLOWS:

For students placed into the 200 level: 201-202 and eight courses at the 300 level taught in the target language, or six 300-level courses plus two related courses

For students placed into the 300-level: ten 300-level courses taught in the language, or eight 300-level courses plus two related courses

Related courses are those outside the department which are closely related to French, German, Japanese, and Spanish cultures, as well as those departmental courses cross-listed with World Literature.

Departmental Honors
The departmental honors program is for especially talented and dedicated majors. Requirements for honors in modern languages and literatures are: 1) a GPA of at least 3.5 in the major, and 2) an honors thesis (FRCH, GRMN, JAPN, or SPAN 397 and 398, beyond the 30-32 hours required for the major) devoted to the investigation of a literary, linguistic, or cultural topic. The thesis is written in the target language, except in the case of Japanese Studies, which may permit papers in English. It must be read and approved by two readers and will be accepted for honors only if it achieves a grade of B or better. Students who qualify receive their degree “with Honors in Modern Languages and Literatures.” A registration form for students electing honors is available in the departmental office.

Integrated Graduate Studies (French)
The department participates in the Integrated Graduate Studies program, which makes it possible to complete both a B.A. and an M.A. in French in about five years of full-time study. The department particularly recommends the program to qualified students who are interested in seeking admission to highly competitive professional schools or Ph.D. programs. Interested students should note the general requirements and the admission procedures listed elsewhere in this publication.

Teacher Licensure Option (French and Spanish)
A program leading to Teacher Licensure in French and Spanish (K-12) is also available. Students participating in the teacher licensure program complete a 45- to 47-semester-hour major in French or Spanish, including course work in French or Spanish language, culture, and literature, and a 35-hour sequence in professional education. Course work in French and Spanish begins in the freshman year with a language course appropriate to the student’s proficiency level and continues until the student has completed a range of upper level courses and has met the goals of the program. Students are strongly urged to complete some of their course work in a French or Spanish-speaking country and are assisted in identifying opportunities for study abroad. Interested students should contact Professors Antonio Candau (Spanish) or Christine Cano (French). The professional education component (see Teacher Licensure description elsewhere in this bulletin) begins with a sequence taken at Case Western Reserve, followed by 20 semester hours (including student teaching) at John Carroll University.

SUBJECT AREA REQUIREMENTS

*Required only for students who begin their French major at the intermediate level.
**Students at the intermediate (200) level select five courses (15 credit hours); students entering the program at the advanced (300) level select seven courses (21 credit hours).

*Required only for students who begin their Spanish major at the intermediate level.
**Students at the intermediate (200) level select five courses (15 credit hours); students entering the program at the advanced (300) level select seven courses (21 credit hours).

Minors
CHINESE, FRENCH, GERMAN, HEBREW, ITALIAN, JAPANESE STUDIES, RUSSIAN, SPANISH
Course requirements for the minors are as fol-
For students placed into the introductory level (no previous knowledge of the language): 101, 102, 201, 202, and one 300-level course

For students placed into the 200 level or higher: five courses at the 200 and 300 levels

Hebrew language courses may also count toward the minor in Judaic Studies.

**GRADUATE PROGRAMS**

The department offers the Master of Arts degree in French and, together with the Departments of English and Classics, the Master of Arts degree in world literature.

- The M.A. in French requires 27-28 semester hours. The M.A. in French with a minor concentration in German, Japanese, or Spanish requires 36 hours.
- The M.A. in world literature (French and English) requires 27 hours.

Full-time students are expected to complete the M.A. within two academic years.

**COURSE DESCRIPTIONS**

**ARAB 101. Beginning Arabic I (4)**

The course introduces learners of Arabic to the sound and writing systems of this language and provides them with basic structural and lexical knowledge to enable them to say things in Arabic, such as greeting others, thanking someone, introducing oneself, describing one’s background, seeking and providing information and so forth. The ability to perform these language functions in real-life or lifelike situations is developed by engaging the learner in structured functional activities and grammatical exercises.

**ARAB 102. Beginning Arabic II (4)**

Arabic 102 builds on the proficiency that students should have acquired in Arabic 101. The course follows a student-centered communicative approach in which class time is used in active learning through pair or group activities, role-play, games, selective listening and reading and other activities. The course emphasizes the four basic skills, reading, speaking, listening and writing. Students will be exposed to real audiovisual material in order to enhance comprehension and they will have to develop short oral and written responses about it. Aspects of culture across the Arab world will be included as a element of learning the language. Recommended preparation: ARAB 101

**ARAB 201. Intermediate Arabic I (4)**

Intensive review of grammar and conversational skills in modern Arabic through readings, discussions and other activities that explore contemporary Arabic life and culture. Recommended preparation: ARAB 102 or equivalent.

**ARAB 202. Intermediate Arabic II (4)**

ARAB 202 is a continuation of ARAB 201 and will enable the students to develop advanced communicative skills for the use of Modern Arabic. It will focus on speaking, listening, reading and writing skills, and emphasize creative use of the language. Recommended preparation: ARAB 201 or equivalent.

**ARAB 301. Advanced Arabic I (3)**

This is a higher level of Arabic study. The course objectives are to enhance the student’s language skills and to develop ability to use high-level Arabic effectively. It is designed to help students move from the intermediate level of proficiency, which centers on daily life and the immediate world, to the advanced, which broadens to include topics of general and professional interest. Recommended preparation: ARAB 202 or equivalent.

**CHIN 101. Elementary Chinese I (4)**

(Credit for CHIN 101 only upon completion of CHIN 102.) Introductory course in speaking, understanding, reading and writing Chinese. Students are expected to achieve control of the sound system and basic sentence patterns of standard Mandarin Chinese. The course emphasizes speaking and aural comprehension.

**CHIN 102. Elementary Chinese II (4)**

Continuation of CHIN 101. Recommended preparation: Consent of department.

**CHIN 201. Intermediate Chinese I (4)**

Emphasizes basic structures of standard Mandarin Chinese; helps students improve reading, writing, listening and speaking abilities. Chinese culture, society, and people introduced through supplementary materials and activities. Recommended preparation: CHIN 102 or equivalent.

**CHIN 202. Intermediate Chinese II (4)**

Continuation of CHIN 201. Students must use course material offered by the Online Language Learning Center in addition to class meetings. Recommended preparation: CHIN 201.

**CHIN 301. Advanced Chinese I (4)**

Students work to achieve fluency in listening, speaking, reading and writing. Students must attend Language Resource Center in addition to class meetings. Recommended preparation: CHIN 202 or equivalent.

**CHIN 302. Advanced Chinese II (4)**

Continuation of CHIN 301.

**CHIN 303. Topics in Chinese (3)**

**CHIN 304. Topics in Chinese (3)**

**CHIN 315. Business Chinese (3)**

The Business Chinese course is designed to enhance students’ listening, speaking, reading, and writing skills in Chinese through a variety of activities. It will focus on China’s contemporary international business issues and practices. At the end of the semester, the students will have a basic knowledge of China’s socio-cultural values, trade policy, and role in the world economy after its entry into the WTO and the ability to hold conversations on selected business topics with correct business vocabulary and in a culturally appropriate manner; to read business-related materials; and to write basic business communications including letters, reports and resumes. It is taught in Chinese and English. Offered as CHIN 315 and CHIN 415. Prereq: CHIN 202 or equivalent.

**CHIN 399. Independent Study (1-3)**

Directed study for those students who have progressed beyond available course offerings.

**CHIN 415. Business Chinese (3)**

The Business Chinese course is designed to enhance students’ listening, speaking, reading, and writing skills in Chinese through a variety of activities. It will focus on China’s contemporary international business issues and practices. At the end of the semester, the students will have a basic knowledge of China’s socio-cultural values, trade policy, and role in the world economy after its entry into the WTO and the ability to hold conversations on selected business topics with correct business vocabulary and in a culturally appropriate manner; to read business-related materials; and to write basic business communications including letters, reports and resumes. It is taught in Chinese and English. Offered as CHIN 315 and CHIN 415. Prereq: CHIN 202 or equivalent.

**FRCH 101. Elementary French I (4)**

(Credit for FRCH 101 only upon completion of FRCH 102.) Emphasizes conversational skills. Students are expected to achieve control of sound system and basic sentence structures of French. Students must use the course material offered by the On-Line Language Learning Center in addition to scheduled class meetings.

**FRCH 201. Intermediate French I (4)**

Intensive review of grammar and usage through readings, discussions and other activities that emphasize contemporary French life. Students must attend Language Resource Center in addition to scheduled class meetings. Recommended preparation: FRCH 102 or equivalent.

**FRCH 202. Intermediate French II (4)**

A continuation of FRCH 201, the course focuses...
on the acquisition of intermediate-level skills in language and culture. Participation in multi-media activities in Language Resource Center is a requirement. Recommended preparation: FRCH 201 or equivalent.

FRCH 208. The Montreal Experience (1)
One-week immersion learning experience performing community service in Montreal, Canada. Students meet several times for orientation before spending spring break in French-speaking Montreal. Community service may include volunteering in a homeless center, a hospital, or school. Application available from Department office. This course may be repeated once. Prermq or Coreq: FRCH 202 or equivalent.

FRCH 295. The Francophone World (3)
The course offers an introduction to the Francophone World from a historical, cultural, and literary perspective. The Francophone World includes countries and regions around the globe with a substantial French-speaking population (and where French is sometimes, but not always, an official language): North America (Louisiana, Quebec, and Acadia); North Africa (Tunisia, Morocco, Algeria, and Egypt); the Middle-East (Lebanon, Syria); the Caribbean (Martinique, Guadeloupe, Haiti); South-East Asia (Vietnam); and Europe (France, Belgium, Switzerland, and Luxembourg).
FRCH 295 provides a comprehensive overview of the Francophone World, while focusing on a particular area or areas in any given semester. In this particular semester we will focus on the Caribbean, the Maghreb, and select countries of Sub-Saharan Africa (Senegal, Cameroon). Our inquiry will include the study of their colonization histories, of the Independences period (broadly speaking, the 1960s), and of the post colonial era through film, literature, and readings of significant political/theoretical texts. Offered as ETHS 295, FRCH 295, and WLIT 295.

Global & Cultural Diversity

FRCH 308. The Paris Experience (3)
Three-week immersion learning experience living and studying in Paris. The focus of the course is the literature and culture of the African, Arab, and Asian communities of Paris. Students spend a minimum of fifteen hours per week visiting cultural centers and museums and interviewing authors and students about the immigrant experience. Assigned readings complement course activities. Students enrolled in FRCH 308 do course work in French. WLIT 308 students have the option of completing course work in English. Graduate students have additional course requirements than those of undergraduates.
Offered as FRCH 308, WLIT 308, FRCH 408, and WLIT 408. Prermq: FRCH 202.

Global & Cultural Diversity

FRCH 310. Advanced Composition and Reading (3)
An initiation to the literature of Francophone ex-
pression with a focus on close reading. Students engage in the discussion of authentic, unabridged literary texts of compelling interest and progressive length and learn how to express their ideas both orally and in written form. Prermq: FRCH 202 or equivalent.

FRCH 311. Advanced Conversation I (3)
Designed to enhance pronunciation, speaking and listening-comprehension through the discussion of French literature and media for children. Required for Teacher Licensure candidates. Prermq: FRCH 202 or equivalent.

FRCH 312. Advanced Conversation II (3)
A functional approach to conversation. Students work to develop fluency in spoken French using current colloquial vocabulary and focusing on current issues. Practice in using speech appropriate to a variety of situations, including public debates. Prermq: FRCH 202 or equivalent.

FRCH 314. Translation Techniques (3)
Contrastive grammar analysis and stylistics are used to foster linguistic awareness and to introduce students to the methods and skills of translation. Recommended preparation: FRCH 310. Prermq: FRCH 202.

FRCH 315. Business French (3)
Business French is an upper-level course with a focus on the economic life of France and other Francophone countries. Students gain knowledge of the economic structures and the business organization of Francophone countries as they enhance the linguistic skills used in professional communication. Prermq: FRCH 202 or equivalent.

FRCH 316. Contemporary France (3)
A study of contemporary France, this course features discussions and lectures on a variety of topics (geography, political and social life, contemporary culture) to develop factual knowledge about France and a sound understanding of current issues as presented in the media. Prermq: FRCH 202 or equivalent.

FRCH 317. French Cinema (3)

FRCH 318. The Origins of France (3)
Examination through texts, films, and other media of major historical, intellectual, and artistic influences that have shaped the evolution of French civilization. Students will attempt to identify the values and myths that have contributed to the formation of modern France and continue to influence French actions. Recommended preparation: FRCH 310. Prermq: FRCH 202.

FRCH 319. Modern France (3)
A study of France’s political, social and cultural history from the French Revolution to World War II, with emphasis on the events, movements, and people that have shaped Modern France. Highly recommended for students of Nineteenth- and Twentieth-Century French culture. Recommended preparation: FRCH 310. Prermq: FRCH 202.

FRCH 320. Introduction to French Literature (3)
Taught in French. An introduction to literary analysis through the study of important works of French literature. Written assignments are designed to develop skills in close reading, to introduce students to literary terminology in French, and to develop a capacity for clear, precise communication of an argument. Classes are discussion-based. Recommended preparation: FRCH 310. Prermq: FRCH 202 or equivalent.

SAGES Dept Seminar

FRCH 331. Seventeenth-Century French Literature (3)
The Age of Classicism, from Racine to Mme de Lafayette. Authors, works and topics may vary. Prermq: FRCH 320.

FRCH 335. Women in Developing Countries (3)
This course will feature case studies, theory, and literature of current issues concerning women in developing countries primarily of the French-speaking world. Discussion and research topics include matriarchal traditions and FGM in Africa, the Tunisian feminist movement, women, Islam, and tradition in the Middle East, women-centered power structures in India (Kerala, Pondicherry), and poverty and women in Vietnam, Laos, and Cambodia. Guest speakers and special projects are important elements of the course. Seminar-style format, taught in English, with significant disciplinary writing in English for WGST, ETHS, and some WLIT students, and writing in French for FRCH and WLIT students. Writing assignments include two shorter essays and a substantial research paper. Offered as ETHS 335, FRCH 335, WLIT 335, WGST 335, FRCH 435 and WLIT 435.

SAGES Dept Seminar

FRCH 338. The Cameroon Experience (3)
Three-week immersion learning experience living and studying in Cameroon. The focus of the course is the culture, literature, and language of Francophone Cameroon, with some emphasis on Anglophone Cameroon. Students spend a minimum of fifteen hours per week visiting cultural sites and attending arranged courses at the University of Buea. Students will prepare a research paper. Course work is in French. To do course work in English, students should enroll in WLIT 338 or ETHS 338.
Global & Cultural Diversity

FRCH 341. Eighteenth Century French Literature (3)
Topics from the Age of Enlightenment, from libertinage to revolution. Authors and works may vary. Offered as FRCH 341 and FRCH 441. Prereq or Coreq: FRCH 320.

FRCH 351. Nineteenth-Century French Literature (3)
Romanticism, realism, and naturalism in the novel and the drama. Authors, works, and topics may vary. Offered as FRCH 351 and FRCH 451. Prereq or Coreq: FRCH 320.

FRCH 361. Twentieth-Century French Literature (3)
Study of representative novelists (e.g., Proust, Gide, Colette, Sartre, Beauvoir) and playwrights (e.g., Claudel, Beckett, Genet) in historical context. Authors, works, and topics vary. Offered as FRCH 361 and FRCH 461. Prereq or Coreq: FRCH 320.

FRCH 372. Topics in French Drama (3)
A topical approach to issues and problems specific to drama. Plays, playwrights, aesthetic theories, and historical periods studied in this course may vary. Offered as FRCH 372 and FRCH 472. Prereq or Coreq: FRCH 320.

FRCH 373. The Novel and the Novella (3)
A study of narrative fiction focused on either the analysis of a particular genre (the novel, the short story) or a particular type of novel (e.g., psychological novel, realist novel, detective novel); the tale (the fantastic tale, the fairytale) or novella. Offered as FRCH 373 and FRCH 473. Prereq or Coreq: FRCH 320.

FRCH 375. Francophone Literature (3)
An examination of Francophone literature focused on the problematic of identity within the colonial and post-colonial context. Writers and works may vary. Offered as FRCH 375 and FRCH 475. Prereq or Coreq: FRCH 320. Global & Cultural Diversity

FRCH 376. Women Writers (3)
Examination of important literary texts by French and Francophone women writers. Critical essays are also studied to introduce historical and theoretical perspectives. Offered as FRCH 376 and FRCH 476. Prereq or Coreq: FRCH 320.

FRCH 377. Special Topics (3)
The special topics course is designed to provide a forum for specific themes or subjects not otherwise covered in the curriculum. Approaches and content will vary. Maximum 6 credits. Offered as FRCH 377 and FRCH 477.

FRCH 379. Independent Study (1-3)
The course is for students who have special interests and commitments that are not addressed in regular courses, and who wish to work independently. Offered as FRCH 379, WLIT 379, FRCH 389, FRCH 489, and WLIT 489. Prereq: Graduate standing.

FRCH 408. The Paris Experience (3)
Three-week immersion learning experience living and studying in Paris. The focus of the course is the literature and culture of the African, Arab, and Asian communities of Paris. Students spend a minimum of fifteen hours per week visiting cultural centers and museums and interviewing authors and students about the immigrant experience. Assigned readings complement course activities. Students enrolled in FRCH 308 do course work in French. WLIT 308 students have the option of completing course work in English. Graduate students have additional course requirements than those of undergraduates. Offered as FRCH 308, WLIT 308, FRCH 408, and WLIT 408. Prereq: Graduate standing.

FRCH 435. Women in Developing Countries (3)
This course will feature case studies, theory, and literature of current issues concerning women in developing countries primarily of the French-speaking world. Discussion and research topics include matriarchal traditions and FGM in Africa, the Tunisian feminist movement, women, Islam, and tradition in the Middle East, women-centered power structures in India (Kerala, Pondicherry), and poverty and women in Vietnam, Laos, and Cambodia. Guest speakers and special projects are important elements of the course. Seminar-style format, taught in English, with significant disciplinary writing in English for WGST, ETHS, and some WLIT students, and writing in French for FRCH and WLIT students. Writing assignments include two shorter essays and a substantial research paper. Offered as ETHS 335, FRCH 335, WLIT 335, WGST 335, FRCH 435 and WLIT 435.

FRCH 438. The Cameroon Experience (3)
Three-week immersion learning experience living and studying in Cameroon. The focus of the course is the culture, literature, and language of Francophone Cameroon, with some emphasis on Anglophone Cameroon. Students spend a minimum of fifteen hours per week visiting cultural sites and attending arranged courses at the University of Buea. Students will prepare a research paper. Course work is in French. To do course work in English, students should enroll in WLIT 338 or ETHS 338. Offered as ETHS 338, FRCH 338, WLIT 338, ETHS 438, FRCH 438, and WLIT 438.

FRCH 441. Eighteenth Century French Literature (3)
Topics from the Age of Enlightenment, from libertinage to revolution. Authors and works may vary. Offered as FRCH 341 and FRCH 441.

FRCH 451. Nineteenth-Century French Literature (3)
Romanticism, realism, and naturalism in the novel and the drama. Authors, works, and topics may vary. Offered as FRCH 351 and FRCH 451.

FRCH 461. Twentieth-Century French Literature (3)
Study of representative novelists (e.g., Proust, Gide, Colette, Sartre, Beauvoir) and playwrights (e.g., Claudel, Beckett, Genet) in historical context. Authors, works, and topics vary. Offered as FRCH 361 and FRCH 461.

FRCH 471. Topics in French Poetry (3)
Nineteenth- and twentieth-century poetry. Topics include French romanticism, symbolism, and surrealism. Prereq: Graduate standing.

FRCH 472. Topics in French Drama (3)
A topical approach to issues and problems specific to drama. Plays, playwrights, aesthetic theories, and historical periods studied in this course may vary. Offered as FRCH 372 and FRCH 472.
FRCH 473. The Novel and the Novella (3)
A study of narrative fiction focused on either the analysis of a particular genre (the novel, the short story) or a particular type of novel (e.g., psychological novel, realist novel, detective novel); the tale (the fantastic tale, the fairy tale) or novella. Offered as FRCH 373 and FRCH 473.

FRCH 474. Major Writers and Literary Movements (3)
In-depth study of the work of a major writer, filmmaker, or intellectual figure; or of a significant literary, intellectual, or artistic movement. Approaches, content, and instructor will vary. Prereq: Graduate standing.

FRCH 475. Francophone Literature (3)
An examination of Francophone literature focused on the problems of identity within the colonial and post-colonial context. Writers and works may vary. Offered as FRCH 375 and FRCH 475.

FRCH 476. Women Writers (3)
Examination of important literary texts by French and Francophone women writers. Critical essays are also studied to introduce historical and theoretical perspectives. Offered as FRCH 376 and FRCH 476.

FRCH 477. Special Topics (3)
The special topics course is designed to provide a forum for specific themes or subjects not otherwise covered in the curriculum. Approaches and content will vary. Maximum 6 credits. Offered as FRCH 377 and FRCH 477.

FRCH 495. French Literature in Translation (3)
Topics vary according to student and faculty interest. May include Francophone literature, literature and cinema, women writers, contemporary literature. Counts toward French major only as related course. No knowledge of French required. Offered as FRCH 395, WLIT 395, FRCH 495, and WLIT 495. Coreq: Graduate standing.

FRCH 500. Seminar: Topics in Modern Literature and Culture (3)
Introduction to German literature and the cultural life through seminar discussions of texts, films, and other media. Along with oral presentations and essay tests, students must select a research topic of interest to the discipline and write an analytic essay in German on the topic. Prereq: Graduate standing.

FRCH 651. Thesis M.A. (6-9)
Thesis M.A. serves the graduate plan A of the Graduate Handbook.

GRMN 101. Elementary German I (4)
(Credit for GRMN 101 only upon completion of GRMN 102.) Introductory course emphasizing conversational skills. Students achieve control of the sound system and basic sentence structures of spoken and written German. Students must use the course material offered by the Online Language Learning Center in addition to class meetings.

GRMN 102. Elementary German II (4)
Continuation of GRMN 101, emphasizing conversational skills.

GRMN 201. Intermediate German I (4)
Emphasizes both language and culture and is taught in German. Review of grammar and usage of German while studying texts and videotapes which focus on contemporary life in Germany. Prereq: GRMN 102 or equivalent.

GRMN 202. Intermediate German II (4)
Continuation of GRMN 201; conducted in German. Study of texts and videotapes which focus on contemporary life in Germany. Prereq: GRMN 201 or equivalent.

GRMN 208. The Munich Experience: Intermediate Level (3)
A semester seminar class, conducted in German, which culminates with a three-week immersion learning experience spent living and studying in Munich. Students reside with German families, study German daily in a formal setting, and practice comprehension, speaking, reading, and writing. Regular visits to museums, galleries, and cultural events; first-hand observation of history, life, and architecture of a major cultural center; day trips to cultural phenomena and events in the German countryside.

GRMN 300. German Culture & Civilization (3)
Examines aspects of contemporary Germany, including political and social systems and cultural life through seminar discussions of texts, films, and other media. Along with oral presentations and essay tests, students must select a research topic of interest to the discipline and write an analytic essay in German on the topic. Prereq: GRMN 202.

GRMN 303. German Culture & Civilization (3)
Examines aspects of contemporary Germany, including political and social systems and cultural life through seminar discussions of texts, films, and other media. Along with oral presentations and essay tests, students must select a research topic of interest to the discipline and write an analytic essay in German on the topic. Prereq: GRMN 202.

GRMN 308. The Munich Experience: Intermediate Level (3)
A semester seminar class, conducted in German, which culminates with a three-week immersion learning experience spent living and studying in Munich. Students reside with German families, study German daily in a formal setting, and practice comprehension, speaking, reading, and writing. Regular visits to museums, galleries, and cultural events; first-hand observation of history, life, and architecture of a major cultural center; day trips to cultural phenomena and events in the German countryside.

GRMN 310. Advanced German Reading and Composition (3)
An advanced-level skills course focusing on reading and writing for students who have already studied intermediate German. Develops abilities to read authentic, unabridged texts, such as contemporary newspaper and magazine articles; readings increase progressively in length and vary in genre. Also practices composition skills by composing academic prose such as objective summaries, reviews, precis, letters, short creative texts, and analytic written forms such as short essays to produce increasingly sophisticated analytical compositions in German. Includes instruction on use of English- and German-language research tools, German-German dictionaries, and study guides. Taught in German.

GRMN 311. Advanced Conversation (3)
Students work to improve fluency in spoken German. Topics include contemporary issues; current vocabulary is stressed. Students practice using speech appropriate to various situations.

GRMN 312. German Proficiency Through Drama (3)
Readings begin with single scenes and progress to full length radio plays and theater plays which gradually increase in linguistic difficulty and complexity of central themes. Introduction to the elements of drama such as dialogue, character and dramatic structure, as well as the genres of tragedy, comedy, and tragicomedy. Focus: effective communication of critical, interpretative, and analytic ideas in discussion and in writing.

GRMN 313. Intro to German Literature (3)
Introduction to German literature and the cultural issues it addresses. Readings include the main literary and folk genres (short texts or excerpts), gradually increasing in linguistic difficulty and complexity of central themes. They cover the major literary periods from the 18th to the 21st centuries. Focus: effective communication of critical, interpretative, and analytic ideas in discussion and in writing.

GRMN 315. Business German (3)
This course is taught in German. It is designed to enhance students’ German listening, speaking, reading, and writing skills through a variety of activities. It also aims at developing students’ cross-
cultural awareness and communicative competence in the specialized field of German for Business and Economics in an increasingly global workplace. The course will explore German demography and economic geography; the European Union, the Euro, and Germany’s role in this union; German economic systems, industries, banking systems, advertising and sales, transportation and tourism; Germany’s corporate culture, industrial relations, codetermination in German companies, etc.

Prereq: GRMN 202 or equivalent.

GRMN 320. Topics in Narrative (3)
This course examines representative prose works (tales, novellas, short novels, letters, and essays) chosen to present reactions and impressions to social and aesthetic conditions in German-speaking countries and to introduce students to different styles and varieties of German prose.

Prereq: One 300-level GRMN course.

GRMN 326. Witches, Weddings, and Wolves (3)
Intensive study of German Folk Tales as collected and altered by the Brothers Grimm. The Maerchen as both children’s and adult literature.

Prereq: One 300-level GRMN course.

GRMN 330. Topics in German Cinema (3)
Overview of German Cinema from the beginning to the present. Film selection representative of major directors, major periods (such as expressionism or The New German Cinema), particular themes from different historical perspectives, and literature in film. All films are in German. Taught in German.

Prereq: One 300-level GRMN course.

GRMN 340. Topics in German Drama (3)
Overview of German drama from the beginning to the present. Explores German plays by applying different disciplinary approaches such as historical, cultural, and literary analyses. All plays are in German. Taught in German.

Prereq: One 300-level GRMN course.

GRMN 350. Topics in German Lyric (3)
This course presents a detailed study of German lyric through the frequent writing of critical papers and literary analysis of the formal elements of poetry: rhyme schemes, diction, meter, figures of speech. The poems selected cover a variety of styles, a range of historical periods, and a sampling of authors. Readings and discussions in German.

Prereq: One 300-level GRMN course.

GRMN 360. Topics in Major German Authors (3)
Concentrates on a specific author or small group of authors within an aesthetic or historical context, for example: Goethe, Heine, Bachmann, Junges Deutschland, or die Gruppe 47. Examines the breadth of themes and styles and may include literary, philosophical, biographical, and other kinds of texts. Readings and discussions in German.

Prereq: One 300-level GRMN course.

GRMN 365. German Literature in Translation (3)
Goethe defined “World Literature” (Weltliteratur) as “Intellectual Trade Relations” (geistiger Handelsverkehr). This course gives students the opportunity to study German literary works in translation and thus to trade intellectual relations with a literary culture previously unknown to them. Counts toward the German major only as a related course. No knowledge of German required. Offered as GRMN 365 and WLIT 365.

GRMN 367. German Classicism/Romanticism (3)
Selected works of Goethe, Schiller, Hoelderlin, von Kleist, and others.

Prereq: One 300-level GRMN course.

GRMN 370. Topics in Literary Periods (3)
Overview of German literary periods from the beginning to the present. Explores German literary works in all three major genres from the historical, social, and literary perspectives. All works are in German. Taught in German.

Prereq: One 300-level GRMN course.

GRMN 380. Topics in Advanced German Culture Studies (3)
Exploration of the culture of the arts, political culture, and the cultural self-expression of the German-speaking countries from their beginnings to the present. Focus: The cultural changes within certain historical periods. Examination of particular aspects such as culture as mass deception in fascist Germany and the GDR, the reflection of contemporary culture in literature and cinema, problems of cultural identity and multiculturalism, and the role of postmodern culture industry and the critical discourse today. Taught in German.

Prereq: One 300-level GRMN course.

GRMN 395. Special Topics in German Literature (3)
For majors and advanced students upon presentation of a written plan of investigation. Consent of department required.

Prereq: One 300-level GRMN course.

GRMN 396. Senior Capstone - German (3)
The Senior Capstone in German is an independent research project chosen in consultation with a capstone advisor. The capstone project should reflect both the student’s interest within German and/or German studies and the courses he or she has taken to fulfill the major. The project requires independent research using and approved bibliography and plan of action. In addition to written research, the student will also present the capstone project in a public forum that agreed upon by the project advisor and the students.

Prereq: One 300-level GRMN course.

SAGES Senior Cap

GRMN 397. Honors Thesis I (3)
Intensive study of a literary, linguistic, or cultural topic with a faculty member, leading to the writing of a research paper in German. Limited to senior majors. Permit required.

Prereq: One 300-level GRMN course.

GRMN 398. Honors Thesis II (3)
Continuation of GRMN 397. Limited to senior majors. Permit required.

Prereq: GRMN 397.

GRMN 399. Independent Study in German (1-3)
For majors and advanced students under special circumstances. Permit required.

HBRW 101. Elementary Modern Hebrew I (4)
Credit for HBRW 101 will be received only upon completion of HBRW 102. The course objective is to enable students to develop basic communicative skills in standard Modern Hebrew. Students will become acquainted with the Hebrew alphabet and vowels, and with basic grammar and vocabulary.

HBRW 102. Elementary Modern Hebrew II (4)
The course objective is to continue to develop the students’ basic communicative skills in standard Modern Hebrew. Students will be introduced to more complex grammatical constructs, linguistic forms and vocabulary.

Prereq: HBRW 101 or consent of department.

HBRW 201. Intermediate Modern Hebrew I (4)
The course objective is to advance the students’ Hebrew communicative skills by studying the language in its cultural context. The focus will be on speaking, reading, and writing, with an emphasis on the use of the language as reflected in Israeli culture.

Prereq: HBRW 102 or consent of department.

HBRW 202. Intermediate Modern Hebrew II (4)
The course objectives are to enhance the students’ language skills and to develop their ability to use an advanced level of Hebrew effectively. Classes will be conducted in Hebrew, and will focus on speaking, reading, and writing with an emphasis on active and creative use of the language.

Prereq: HBRW 202 or consent of department.

HBRW 301. Advanced Modern Hebrew I (3)
The course objectives are to enhance the students’ language skills and to develop their ability to use an advanced level of Hebrew effectively. Classes will be conducted in Hebrew, and will focus on speaking, reading, and writing with an emphasis on active and creative use of the language.

Prereq: HBRW 202 or consent of department.

HBRW 302. Advanced Modern Hebrew II (3)
The course objectives are to enhance the students’ language skills within the domain of Modern Hebrew literature, and to enable them to use their
Hebrew skills to perform detailed literary analyses in Hebrew. Classes will be conducted in Hebrew. Prereq: HBRW 301 or consent of department.

HBRW 399. Independent Studies (1-3)
The course is for students with special interests and commitments that are not fully addressed in regular courses, and who wish to work independently. Prereq: HBRW 301 or consent of department.

ITAL 101. Elementary Italian I (4)
(Credit for ITAL 101 only upon completion of ITAL 102.) Introductory course; stress on mastery of the sound system and basic sentence structure of spoken and written Italian. Independent laboratory practice is a requirement.

ITAL 102. Elementary Italian II (4)
Continuation of ITAL 101; independent laboratory practice is required in addition to scheduled class meetings.
Prereq: ITAL 101.

ITAL 201. Review and Progress in Italian (4)
Emphasizes language and culture. Review of Italian grammar and usage while studying written forms. Independent laboratory practice is required in addition to scheduled class meetings.
Prereq: ITAL 102 or equivalent.

ITAL 202. Read and Discuss Italian Texts (4)
Focus on increasing proficiency acquired in elementary Italian and on mastering short narratives. Review of Italian grammar and usage through reading, conversation, and media. Independent laboratory practice is required in addition to scheduled class meetings.
Prereq: ITAL 201 or equivalent.

ITAL 308. The Italian Experience (3)
A three-week summer study abroad course spent at a university in an Italian city well-known for its cultural and linguistic heritage and at other important sites during travel. Focus: Language immersion and processing of cultural experience. Main features: 1. Intense collaboration with an Italian university. Students interact with Italian peers; seminars are co-taught by Italian faculty. 2. Creation of an individual journal that synthesizes students’ perception of and reflections on their experience, records the progress of their final project, and documents their improvement in language proficiency. 3. Final project. Students meet M-F in a formal setting for advanced language study designed to improve proficiency in speaking, comprehension, reading, and writing. They attend seminars on varied topics in literature, history, and civilization. Visits to museums, galleries, and attendance at cultural events are included.
Prereq: ITAL 202 or equivalent.

ITAL 311. Conversation in Italian (3)
Focused on oral communication, ITAL 311 is designed to enhance listening/comprehension skills in Italian. Using audio-visual materials, students acquire the skills necessary to understand conversations between native-speakers and to emulate them. The situational and functional approach to the course facilitates progress towards advanced-level fluency in Italian.
Prereq: ITAL 202 or equivalent.

ITAL 370. Special Topics in Italian Literature (3)
Special topics in Italian literature, literary criticism, and culture.
Prereq: ITAL 202 or equivalent.

ITAL 399. Independent Study (1-3)
The course is for students with special interests and commitments that are not fully addressed in regular courses, and who wish to work independently.

JAPN 101. Elementary Japanese I (4)
(Credit for JAPN 101 only upon completion of JAPN 102.) Introduction to understanding, speaking, reading, and writing Japanese. Students learn to read and write hiragana and katakana syllabaries and 50 kanji characters. Students are expected to achieve control of the sound system and basic structure of the language. Emphasizes aural comprehension and speaking.

JAPN 102. Elementary Japanese II (4)

JAPN 201. Intermediate Japanese I (4)
Further study of fundamental structures of Japanese. Students improve aural comprehension, speaking, reading, and writing abilities and learn approximately 100 new characters. Recommended preparation: JAPN 102 or equivalent.

JAPN 202. Intermediate Japanese II (4)
Continuation of JAPN 201. Students learn an additional 100 kanji characters. With the completion of JAPN 201 - 202, students should have control of the fundamentals of modern Japanese and a firm foundation in the writing system. Recommended preparation: JAPN 201 or equivalent.

JAPN 225. Japanese Popular Culture (3)
This course highlights salient aspects of modern Japanese popular culture as expressed in animation, comics and literature. The works examined include films by Hayao Miyazaki, writings by Kenji Miyazawa, Haruki Murakami and Banana Yoshimoto, among others. The course introduces students to essential aspects of modern Japanese popular culture and sensibility. Offered as JAPN 225 and WLIT 225. Global & Cultural Diversity

JAPN 245. Classical Japanese Literature in Translation (3)
Readings, in English translation, of classical Japanese poetry, essays, narratives, and drama to illustrate essential aspects of Japanese culture and sensibility before the Meiji Restoration (1868).

Lectures explore the sociohistorical contexts and the character of major literary genres; discussions focus on interpreting the central images of human value within each period. Japanese sensibilities compared to and contrasted with those of Western and other cultures.
Offered as JAPN 245 and WLIT 245.

JAPN 255. Modern Japanese Literature in Translation (3)
Focus on the major genres of modern Japanese literature, including poetry, short story, and novel (shosetsu). No knowledge of Japanese language or history is assumed. Lectures, readings, and discussions are in English. Films and slides complement course readings.
Offered as JAPN 255 and WLIT 255.

JAPN 301. Advanced Japanese I (4)
Emphasizes conversational proficiency and reading. Students must use the course material offered by the Online Language Learning Center in addition to class meetings. Recommended preparation: JAPN 202 or equivalent.

JAPN 302. Advanced Japanese II (4)
Continuation of JAPN 301; emphasizes conversational proficiency and reading. Japanese life and culture introduced through supplemental materials and activities. Students must use the course material offered by the Online Language Learning Center in addition to class meetings. Recommended preparation: JAPN 301 or equivalent.

JAPN 345. Japanese Women Writers (3)
Contributions of women writers to the literature of pre-modern and modern Japan; investigations of how their works exemplify and diverge from “mainstream” literary practices. Emphasis on the social and cultural contexts of the texts.
Offered as JAPN 345 and WLIT 345.

JAPN 350. Contemporary Japanese Texts I (3)
The primary aim of this course is to develop communication skills in Japanese based on those that the students have acquired in JAPN 302 or equivalent. The students will read and discuss various texts such as daily conversations, essays, and news scripts with the assistance of vocabulary and kanji (Chinese character) lists and formal grammar explanations. Attention also will be given to enhancing the students’ writing and aural/oral proficiencies through regularly assigned homework, presentations, tape listening, video viewing, and classroom discussion. Recommended preparation: JAPN 302 or equivalent.

JAPN 351. Contemporary Japanese Texts II (3)
This course is a continuation of JAPN 350 and its primary aim overlaps with that of JAPN 350: to develop more sophisticated communication skills in Japanese. Students will read and discuss various texts such as daily conversations, essays, and news scripts largely with the assistance of vocabulary and kanji (Chinese character) lists. Attention
The students will read and discuss various texts in the original, such as essays, news scripts, and literary works both classical and modern. Classroom instruction and discussion will be conducted in Japanese. The students also will be required to write a research paper of 6000-8000 letters/characters (15-20 genkoyoshi pages) in Japanese on a topic related to Japan and the student's specialty. Recommended preparation: JAPN 450 or equivalent.

RUSN 197. Honors Thesis I (3)
Intensive study of a literary, linguistic, or cultural topic with a faculty member, leading to the writing of a research paper in English or Japanese. Limited to seniors. Permit required.

RUSN 198. Honors Thesis II (3)
Continuation of RUSN 197. Limited to seniors. Prepr: RUSN 197.

RUSN 199. Independent Study (1-3)
Directed study for students who have progressed beyond available course offerings.

RUSN 450. Japanese in Cultural Context I (3)
The primary aim of this graduate course is to develop sophisticated communication skills (listening, speaking, reading, and writing) in Japanese. The students will read and discuss various texts in the original, such as essays, news scripts, and literary works. Classroom instruction and discussion will be conducted in Japanese. The students also will be required to write a research paper of 4000-6000 letters/characters (10-15 genkoyoshi pages) in Japanese on a topic related to Japan and the student's specialty. Recommended preparation: JAPN 351 or equivalent.

RUSN 451. Japanese in Cultural Context II (3)
This course is a continuation of JAPN 450 and it aims at a further development of sophisticated communication skills (listening, speaking, reading, and writing) in Japanese. The students will read and discuss various texts in the original, such as essays, news scripts, and literary works both classical and modern. Classroom instruction and discussion will be conducted in Japanese. The students also will be required to write a research paper of 6000-8000 letters/characters (15-20 genkoyoshi pages) in Japanese on a topic related to Japan and the student's specialty. Recommended preparation: JAPN 450 or equivalent.

RUSN 101. Elementary Russian I (4)
(Credit for RUSN 101 only upon completion of RUSN 102.) Introductory course emphasizing conversational skills. Students achieve control of alphabet, sound system, and basic structures in spoken and written Russian. Students must use the course material offered by the Online Language Learning Center in addition to class meetings.

RUSN 102. Elementary Russian II (4)

RUSN 201. Intermediate Russian (4)
Furthers students' ability in four basic language skills: understanding, speaking, reading and writing; expands knowledge of Russian grammar and vocabulary. Recommended preparation: RUSN 102.

RUSN 202. Introduction to Contemporary Civilization (4)
Continuation of RUSN 201; introduces contemporary Russian culture through readings and discussion. Recommended preparation: RUSN 201.

RUSN 311. Advanced Conversation (3)
Students work to improve fluency in spoken Russian. Topics of conversation include aspects of contemporary civilization; current vocabulary is stressed. Recommended preparation: RUSN 202.

RUSN 319. Life in Modern Russia (3)
Examines aspects of life in modern Russia, between the 1917 Revolution and the present, including political and social systems and cultural life through the study of texts, films and other media. Recommended preparation: RUSN 202.

RUSN 320. Introduction to Russian Literature (3)
Introduction to major literary movements, principal writers, and outstanding works of Russian literary works. Recommended preparation: RUSN 202 or equivalent.

RUSN 375. Russian Literature in Translation (3)
Topics vary according to student and faculty interest. May include Russian classical and modern literature, cinema, women writers, individual authors. May count towards Russian minor. No knowledge of Russian required. Offered as RUSN 375 and WLIT 375.

RUSN 399. Independent Study (1-3)

SPAN 101. Elementary Spanish I (4)
(Credit for SPAN 101 only upon completion of SPAN 102.) Introductory course, students achieve control of the sound system and basic sentence structures of spoken and written Spanish. Students must use the course material offered by the Online Language Learning Center in addition to class meetings.

SPAN 102. Elementary Spanish II (4)
Continuation of SPAN 101, emphasizing conversational skills. Recommended preparation: SPAN 101.

SPAN 201. Intermediate Spanish I (4)
Intensive review of grammar and usage through readings, discussions, and other activities. Recommended preparation: SPAN 102 or equivalent.

SPAN 202. Intermediate Spanish II (4)
Continues grammar review of SPAN 201. Students will study texts and cultural documents which focus on contemporary life in Spanish countries. Recommended preparation: SPAN 201 or equivalent.

SPAN 285. The Hispanophone World (3)
A survey of the imaginative literatures in a variety of genres from the Spanish-speaking world, including texts authored by Hispanics living in the United States. The selections will help students gain a greater understanding and appreciation of the impact and adaptation of Spanish language and culture among diverse populations of the world over the past centuries. Counts towards Spanish major as related course. No knowledge of Spanish required. Offered as SPAN 285 and WLIT 285.

SPAN 308. Advanced Spanish in Spain (3)
Three week study-abroad intensive course that takes place in Valladolid, Spain. The course combines the unique advantages of a total immersion environment in Spanish with a classroom curriculum that includes grammar review, conversational practice, and study of relevant cultural issues. The focus of the course curriculum is the study of Spain's key historical moments through the city of Valladolid and nearby communities: their literature, visual arts, films, and music. The cultural component is enhanced by visits to historic and cultural sites and museums. Four different one-hour orientation meetings during Spring semester. Prepr: SPAN 202 or equivalent.

SPAN 309. The Buenos Aires Experience (3)
Three week study-abroad intensive course that takes place in Buenos Aires, Argentina. The course combines the unique advantages of a total immersion environment in Spanish with a classroom cur-
riculum that includes grammar review, conversation practice, and study of relevant cultural issues. The focus of the culture curriculum is the study of the city of Buenos Aires' history and culture through its literature, visual arts, films, and music. The cultural component is enhanced by visits to historic and cultural sites and museums. Four different one-hour orientation meetings during Spring semester. Prereq: SPAN 202 or equivalent.

SPAN 310. Advanced Composition and Reading (3)
Designed to facilitate the transition between lower and upper division courses in Spanish, and focus upon the simultaneous development of the reading and writing skills expected of students in all advanced Spanish courses. Prereq: SPAN 202.

SPAN 311. Advanced Spanish Conversation (3)
Engages students in conversation so that they develop oral proficiency. Short essays and newspaper articles dealing with everyday activities, socio-cultural roles and experiences, and self-awareness and life goals discussed; some literary materials discussed. Prereq: SPAN 202.

SPAN 313. Spanish for Health Professionals (3)
Designed for students who are majoring in, or considering a major in, a health-related field. Focus on the vocabulary and expressions needed for the workplace, task-based practical skills, and grammatical structures. Prereq: SPAN 202 or equivalent.

SPAN 314. Practice of Translation (3)
Students learn necessary skills and techniques for solving linguistic problems in translation. Texts with a variety of contents, including articles from current press, will be translated from English into Spanish and occasionally from Spanish into English. Prereq: SPAN 202.

SPAN 315. Latin American Cultural Conflicts (3)
Evolution of Latin American socioeconomic characteristics and artistic production up to the present. Class discussions of diverse literary works, social research essays, and testimonials focus on conflicting elements in class structures, ethnicity, and urban modernization as well as family ethos, religious trends, cultural identity, and educational problems. Prereq: SPAN 202. Global & Cultural Diversity

SPAN 316. Studies in Civilization (3)
Major historical, intellectual, and artistic influences that have shaped the evolution of Spanish civilization. Prereq: SPAN 202.

SPAN 317. Contemporary Latin American Culture (3)
An intensive study of Latin American culture and civilization through the examination of its arts: literature, music, film, painting, photography, popular art. Designed to bring together the various strands of Latin American realities, emphasis is placed on the predominant view among Latin American intellectuals that artists and intellectuals have the power and the obligation to modify society. Prereq: SPAN 202.

SPAN 318. Contemporary Spanish Culture (3)
Study of several key historical moments and several key aspects in contemporary Spain: Spanish civil war, Franco’s dictatorship, and democratic Spain; rural-urban differences, industrialization and migratory movements; nationalism and terrorism; foreign immigration and tourism, the cultural renaissance and the cultural wars in Madrid and Barcelona. Feature films and literary texts will illustrate the issues under study. Prereq: SPAN 202.

SPAN 320. Introduction to Readings in Hispanic Literature (3)
Introduction to major literary movements and genres, and the works of outstanding authors of Spanish and Latin American literature through close readings and seminar-based discussions of the texts, as well as to disciplinary modes of inquiry and presentation. Requirements include active participation in seminar discussions, oral presentations, tests, and several written assignments, such as response papers, in-class writing exercises, and an analytic essay in Spanish on a research topic of interest to the discipline. Prereq: SPAN 202. SAGES Dept Seminar

SPAN 322. Latin American Short Story (3)
The history and development of the Latin American short story from the nineteenth century to the present. Intertextuality, rise of the Nuevo Cuento, and major characteristics of the works. Prereq: SPAN 320.

SPAN 326. The Fantastic in Latin American Prose (3)
Introduction to a distinctive trend in contemporary Latin American literature, the prose portrayal of the “fantastic,” a new narrative mode in Latin America. Critical examination of selected texts reveals new concepts of space and time and an increasing complexity of structure and style, one which juxtaposes and analyzes fantasy and reality. Offered as SPAN 326 and SPAN 426. Prereq: SPAN 320.

SPAN 331. Spanish Golden Age Literature (3)
Through close reading and discussion of representative texts, we will study different examples of Spanish and Latin American writing from the Middle Ages, Renaissance and Baroque periods. We will stress connections between Spain and Latin America, as well as cultural and literary topics of special relevance for contemporary Hispanic cultures. Prereq: SPAN 320.

SPAN 333. Contemporary Caribbean Literature (3)
In addition to developing a general familiarity with the literature and history of this region, students will acquire an awareness of the interrelation of national identity, memory, and language in the texts produced by contemporary Caribbean authors, and of the cultural hybridity characteristic of this production. The themes treated by these authors include colonialism and postcolonialism, cultural and religious syncretism, and sexual politics. Prereq: SPAN 320.

SPAN 336. Chicana/o Literature (3)
An introduction to Chicana/o literature written after 1945. Literary history, clarification of terminology and an examination of the cultural components of each work. Readings, discussions, and lectures in Spanish. Prereq: SPAN 320.

SPAN 339. Latin American Poetic Revolt (3)
Introduction to most important poets in contemporary Latin America, a region home to a significant number of eminent poets, including Nobel Laureates from Chile, Gabriela Mistral and Pablo Neruda. The course focuses on detailed textual analysis of pivotal works, combined with historical-literary perspective, so students gain insight into the diverse styles and tendencies that reflect the tumultuous history of poetry’s development in a relentless search for a Latin American cultural identity. Prereq: SPAN 320. Global & Cultural Diversity

SPAN 340. Contemporary Latin-American Narrative (3)
Students explore the most significant narrative techniques since 1945 in Latin American fiction: Borges, Cortazar, Garcia Marquez, Vargas Llosa, Isabel Allende. Prereq: SPAN 320.

SPAN 342. Latin American Feminist Voices (3)
Examination of the awakening of feminine and feminist consciousness in the literary production of Latin American women writers, particularly from the 1920s to the present. Close attention paid to the dominant themes of love and dependency; imagination as evasion; alienation and rebellion; sexuality and power; the search for identity and the self-preservation of subjectivity. Readings include prose, poetry, and dramatic texts of female Latin American writers contributing to the emerging of feminist ideologies and the mapping of feminist
identities. Prereq: SPAN 320. Global & Cultural Diversity

SPAN 343. The New Drama in Latin American (3)
Representative works of contemporary Latin American drama. Critical examination of selected dramatic works of twentieth-century Latin America provides students insight into the nature of drama and into the structural and stylistic strategies utilized by Latin American dramatists to create the “new theater,” one which is closely related to Latin American political history. Prereq: SPAN 320. Global & Cultural Diversity

SPAN 345. Hispanic Autobiographical Writing (3)
The course studies issues of self-representation through the reading of autobiographical works from different periods from Latin America, Spain, and the U.S., and of theoretical works that address topics of first-person narratives, autobiography, and sub-alternity. Offered as SPAN 345 and SPAN 445. Prereq: SPAN 320.

SPAN 350. Spanish Fiction (3)
Narrative masterpieces from Cervantes and the picaresque (El Lazarillo) to the short stories and novels of 19th and 20th century authors. Prereq: SPAN 320.

SPAN 351. Hispanic Turn of the Century Literature (3)
Cultural and political transitions between 19th and 20th Century, between Spain and Latin America, and between literary models. Study of Spanish and Latin American writers and their literary connections (Generation of 1898, modernistas) in the context of colonial conflicts and economic changes. Offered as SPAN 351 and SPAN 451. Prereq: SPAN 320.

SPAN 353. Transatlantic Vanguard (3)
Presentation of transatlantic tendencies of the early vanguard movements represented by poets from Spain, Central and South America. Beginning with the advent of Modernism in Latin America and Symbolism in Spain, this course will trace the development of resulting movements in the early twentieth century. Surrealism, Creationism, Futurism, Ultraism and Dadaism forged a vital link between poets and artists from the Americas and their European counterparts. We will focus on the similarities and differences between these “isms” while drawing conclusions about the uniqueness of vanguard movements on both sides of the Atlantic. Offered as SPAN 353 and SPAN 453. Prereq: SPAN 320.

SPAN 356. Afro-Hispanic Literature (3)
This course will survey the literary and cultural production of writers and artists of African descent in Latin America and the Caribbean, paying attention to both their creative and theoretical texts. Discussion of questions of race and ethnicity will allow students to explore the ways in which these texts reframe the idea of national identity and cultural belonging in the context of the nation-state, whose traditional centrality is being weakened through the effects of migration and exile. Readings include works by writers from Cuba, Puerto Rico, Dominican Republic, Costa Rica, Colombia, Panama, Ecuador, and Peru. Prereq: SPAN 320 or equivalent. Global & Cultural Diversity

SPAN 358. Latin American Cinema (3)
This course is designed to introduce students to the basic tools of film analysis as well as to the major trends and movements in Latin American cinema from the 1960s to the present. Through the analysis of representative films from Latin America, the course will examine the development of a variety of cinematic styles, paying particular attention to the historical contexts in which the films were produced and to the political, cultural, and aesthetic debates that surrounded their production. Prereq: SPAN 320 or equivalent.

SPAN 370. Special Topics in Spanish (3)
This course is designed to respond to students’ and faculty interest in specific themes or issues not otherwise covered in the curriculum. Approaches, content, and instructor will vary and this course may have a focus that crosses generic, artistic, historical, disciplinary, and geographical boundaries. The honing of analytical and interpretative skills as well as the further development of Spanish language skills also are integral objectives of this course. The class is conducted in Spanish. Prereq: SPAN 320 or equivalent.

SPAN 385. Hispanic Literature in Translation (3)
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel Garcia Marquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required. Offered as ETHS 385, ETHS 485, SPAN 385, SPAN 485, WLIT 385, and WLIT 485.

SPAN 396. Senior Capstone - Spanish (3)
The Senior Capstone in Spanish is an independent study project chosen in consultation with a capstone advisor. The capstone project should reflect both the student’s interest within Spanish and the courses he or she has taken to fulfill the major. The project requires independent research using an approved bibliography and plan of action. In addition to written research, the student will also present the capstone project in a public forum that is agreed upon by the project advisor and the student. Senior status required. Major in Spanish required. SAGES Senior Cap

SPAN 397. Honors Thesis I (3)
Intensive study of a literary, linguistic, or cultural topic with a faculty member, leading to the writing of a research paper in Spanish. Limited to senior majors.

SPAN 398. Honors Thesis II (3)
Continuation of SPAN 397. Limited to senior majors. Permit required. Prereq: SPAN 397.

SPAN 399. Independent Study (1-3)
The course is for students with special interests and commitments that are not fully addressed in regular courses, and who wish to work independently.

SPAN 426. The Fantastic in Latin American Prose (3)
Introduction to a distinctive trend in contemporary Latin American literature, the prose portrayal of the “fantastic,” a new narrative mode in Latin America. Critical examination of selected texts reveals new concepts of space and time and an increasing complexity of structure and style, one which juxtaposes and analyzes fantasy and reality. Offered as SPAN 326 and SPAN 426.

SPAN 445. Hispanic Autobiographical Writing (3)
The course studies issues of self-representation through the reading of autobiographical works from different periods from Latin America, Spain, and the U.S., and of theoretical works that address topics of first-person narratives, autobiography, and sub-alternity. Offered as SPAN 345 and SPAN 445.

SPAN 451. Hispanic Turn of the Century Literature (3)
Cultural and political transitions between 19th and 20th Century, between Spain and Latin America, and between literary models. Study of Spanish and Latin American writers and their literary connections (Generation of 1898, modernistas) in the context of colonial conflicts and economic changes. Offered as SPAN 351 and SPAN 451.

SPAN 453. Transatlantic Vanguard (3)
Presentation of transatlantic tendencies of the early vanguard movements represented by poets from Spain, Central and South America. Beginning with the advent of Modernism in Latin America and Symbolism in Spain, this course will trace the development of resulting movements in the early twentieth century. Surrealism, Creationism, Futurism, Ultraism and Dadaism forged a vital link between poets and artists from the Americas and their European counterparts. We will focus on the similarities and differences between these “isms” while drawing conclusions about the uniqueness of vanguard movements on both sides of the Atlantic.

Face Western Reserve University
the Cleveland Museum of Art, the Cleveland Music School Settlement, and some forty other cultural institutions.

The department offers special areas of concentration at both the undergraduate and the graduate levels. One such area is early music performance practices, where musical research in early music, instruments, and performance problems is directly applied to performance. The supporting performance organizations are the Case Western Reserve University Collegium Musicum, the Case/CIM Baroque Orchestra, and the Case Early Music Singers. Faculty, staff and visiting artists provide professional instruction and coaching. The Collegium Musicum and Case/CIM Baroque Orchestra use the Kulas Collection of Historical Instruments.

William I. Bauer, Director
E-mail: william.bauer@case.edu

The Department of Music provides a range of educational opportunities and professional programs that balance humanistic knowledge of music with excellence in performance. The department offers the following degree programs:

- Music (Bachelor of Arts within the context of liberal arts; see list of concentrations under "Majors" below)
- Music education (Bachelor of Science, Master of Arts, Master of Arts for Teacher Licensure, Doctor of Philosophy)
- Early music performance practices (Master of Arts, Doctor of Philosophy, Doctor of Musical Arts)
- Music history and literature (Master of Arts)
- Musicology (Doctor of Philosophy)

Since 1968, the department has participated in a Joint Music Program with the Cleveland Institute of Music (CIM), which allows undergraduate and graduate students at both institutions to pursue studies at both schools. Students thus benefit from the specialization of a professional conservatory and the resources of a major university. Both institutions share a campus setting in University Circle, one of the nation’s richest concentrations of cultural life, which is home to the Cleveland Orches-

SPAN 485. Hispanic Literature in Translation (3)
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel García Márquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required. 
Offered as ETHS 385, ETHS 485, SPAN 385, SPAN 485, WLIT 385, and WLIT 485. Prereq: Graduate standing.

DEPARTMENT FACULTY

Mary E. Davis, Ph.D.
(Harvard University)
Associate Professor and Chair
20th-century music; music and fashion; popular music

William I. Bauer, Ph.D.
(Kent State University)
Associate Professor; Director, Music Education
Music teacher education; research; technology

L. Peter Bennett, D Phil
(Oxford University)
Assistant Professor
17th-century French music; early music performance

Francesca Brittan, Ph.D.
(Cornell University)
Assistant Professor
19th-century France; Romantic aesthetics; popular music

Gary M. Ciepluch, Ph.D.
(University of Wisconsin, Madison)
Associate Professor
Director of bands; conducting; music teacher education

Georgia J. Cowart, Ph.D.
(Rutgers University)
Professor
17th and 18th centuries; music, the arts, and politics

Ross W. Duffin, D.M.A.
(Stanford University)
Fynette H. Kulas Professor
Early music performance practices; Shakespeare

Daniel Goldmark, Ph.D.
(UCLA)
Associate Professor
American popular music; film music; history of the music industry

Stephen E. Heffing, Ph.D.
(Yale University)
Professor
Mahler; 18th and 19th centuries; chamber music; analysis

Kathleen A. Horvath, Ph.D.
(Ohio State University)
Associate Professor
Music teacher education; string education and pedagogy

Lisa L. Koops, Ph.D.
(Michigan State University)
Assistant Professor
Music teacher education; general music

David J. Rothenberg, Ph.D.
(Yale University)
Assistant Professor
Medieval; Renaissance; musical symbolism

Full-time Lecturers

Julie Andrijeski, D.M.A.
(Case Western Reserve University)
Jazz ensembles; jazz history; performance practice

Paul Ferguson, M.M.
(Eastman School of Music)
Jazz ensembles; jazz history; orchestration

Juanita Karpf, D.M.A.
(University of Georgia)
Music history; admissions and undergraduate advising

Adjunct Instructor

Bruce Egge
(Northwestern University)
Audio recording

Cleveland Institute of Music Academic Faculty

UNDERGRADUATE PROGRAMS

Majors

Students who wish to major in music must pass a performance audition on an acceptable instrument or in voice and take a music theory placement test. Arrangements for this audition and test must be made directly with the department. Once admitted as a music
major, a student is required to participate in one or more of the university’s musical organizations each semester and to attend recital class. Performance juries and other requirements are detailed in the Undergraduate Music Handbook.

Double Major and Dual-Degree Opportunities. The department encourages qualified students to consider a double or dual major in music and another subject. More than one half of music majors at Case Western Reserve pursue a double major. Typical combinations include the Bachelor of Arts in music with theater, English, classics, psychology, sociology, or the natural sciences. Once the Arts and Sciences SAGES requirements (39 hours) have been met, a B.A. student can add another major by meeting the course and hour requirements found in this bulletin under the appropriate department. In most cases, it is possible to finish a double major with music in four years.

It is also possible to receive two degrees, although this usually takes five years. Typical combinations of dual degrees include the Bachelor of Arts in music with the Bachelor of Science in engineering, or the Bachelor of Science in music education with the Bachelor of Music degree from the Cleveland Institute of Music. All admissions requirements must be met for each school, and course and hour requirements for each degree must be fulfilled. Students interested in dual degrees should declare their intent as early as possible and receive advice from faculty about both degrees.

BACHELOR OF ARTS IN MUSIC

The Bachelor of Arts degree in music stresses a humanistic orientation and situates music study in the context of the liberal arts.

Approximately one half of the total 120 semester credit hours necessary for the degree are devoted to music study, with the remaining credits devoted to the SAGES requirements (39 hours), a possible minor program, and a liberal selection of elective courses. The specific program of study differs from student to student.

The department offers several concentrations within the music portion of the degree: music history, music theory, early music performance practices, performance, general musicianship, and audio recording technology. The general musicianship concentration is particularly suitable for students interested in music as part of a double major or dual degree.

Core courses for the Bachelor of Arts in music are as follows:

1. Music theory: MUTH 107, 108, 207, 208 (or 101/105, 102/106, 201/205, 202/206), and 320 (19 hours)
2. Music history and literature: MUHI 301, 302, and 303 (9 hours)
3. Performance instruction: MUAP (applied music) for a minimum of 10 semester hours
4. Additional requirements:
   - Participation in assigned musical ensemble every semester of major (6 semesters for audio concentration)
   - Participation in additional musical ensemble for one year (audio concentration excepted)
   - Recital class attendance and performance every year of principal MUAP study
   - Two semesters of eurhythmics (fulfills physical education requirement)

Additional course requirements for each concentration are as follows:

MUSIC HISTORY
1. Additional applied music study at the 200 level (2)
2. Three electives from music history or literature courses at the 300 level or above (9
3. Foreign language (6-8)

MUSIC THEORY
1. Additional applied music study at the 200 level (2)
2. MUTH 311, 312, Counterpoint I and II (4)
3. One elective from music history or literature courses at the 300 level or above (3)

EARLY MUSIC PERFORMANCE PRACTICES
1. Additional applied music study at the 200 level (2)
2. MUHI 341, Introduction to Early Music Performance Practices (3)
3. MUHI 342, Seminar in Early Music Performance Practices (3)
4. One elective from music history or literature courses at the 300 level or above (3)
5. Foreign language (6-8)

PERFORMANCE
1. Additional applied music study at the 300 and 400 levels (6)
2. One elective from music history or literature courses at the 300 level or above (3)
3. Foreign language (6-8)

GENERAL MUSICIANSHIP
1. One elective from music history or literature courses at the 300 level or above (3)

AUDIO RECORDING TECHNOLOGY
1. MUAR 151B, 152B, 153B, 154B, Case Audio Internship I, II, III, IV (1,1,1,1)
2. MUAR 251B, 252B, 253B, 254B, Case Audio Recording Internship I, II, III, IV (0,0,0,0)
3. MUAR 200, 201, Audio Recording I and II (2,2)
4. MUAR 300, 301, Advanced Recording Techniques I and II (2,2)
5. MUAR 302, 303, Multi-track Recording Techniques I and II (2,2)
6. MUAR 310, 311, Recording Studio Maintenance I and II (1,1)
7. MUAR 380, Junior Audio Recording Thesis (3)
8. MUAR 390, Senior Audio Recording Thesis (6)
9. MUAR 320, 321, Acoustics of Music I and II (1,1)
10. MUAR 385, Recording Studio Internship (Commercial) (4)
11. MUAR 322, 323, Recording Workshop I and II (1,1)

A minor in electronics is available from the Department of Electrical Engineering and Computer Science in the Case School of Engineering. A five-year, dual-degree program is also available in which the student earns a B.A. in music/audio and a B.S. in an elective field of engineering.

BACHELOR OF SCIENCE IN MUSIC EDUCATION

The mission of the Music Education program is to prepare proactive scholar-practitioners who will develop into leaders, teachers, and talented musicians in the field of music education. The nationally recognized program faculty specialize in research in music education, music technology, string pedagogy, and wind conducting and repertoire. The faculty are ac-
tive in their respective professional organizations and as clinicians, conductors, lecturers, and authors.

The Bachelor of Science degree in music education requires a total of 122 credits and is designed to educate professional teachers of music education for public and private schools. The program meets the requirements of the Ohio Department of Education to prepare students to take the state-mandated teacher exam (Praxis II) and apply for teaching licensure. Most states recognize the Ohio teaching license through reciprocity.

Music education students benefit from a wide range of instrumental, vocal, and general classroom methods courses. As an additional part of the program, students benefit from plentiful “hands-on” experiences by teaching sample lessons and conducting rehearsals in actual teaching situations.

Requirements for the Bachelor of Science in music education are as follows:

A. Core courses (51 hours):
1. Music theory/musicianship; eurhythmics (19)
   MUTH 107 (4) or (101/105)
   MUTH 108 (4) or (102/106)
   MUTH 207 (4) or (201/205)
   MUTH 208 (4) or (202/206)
   MUTH 320 (3)
   MUDE 101 [Fulfills SAGES Phys Ed requirement]
   MUDE 102 [Fulfills SAGES Phys Ed requirement]
2. Music history/literature (9 hours)
   MUHI 302 [Fulfills SAGES Arts and Humanities requirement]
   MUHI 303 [Fulfills SAGES Arts and Humanities requirement]
   MUED 305 [Fulfills SAGES Global and Cultural Diversity requirement]
3. Applied music lessons (14 hours, every semester except student teaching)
   MUAP 121 (2), 122 (2), 221 (2), 222 (2), 321 (2), 322 (2), 421 (2)
4. Recital Class (MUAP 011 - 0 hours - every semester except student teaching)
5. Ensembles (MUEN - 9 Hours)
   • Required Home Ensemble* (7 hours, required every semester except student teaching)
   • Added ensemble (2 hours, one full year) (keyboard students may sign up for 386 as their added ensemble)
      (Voice students must also sign up for MURP 387, Voice Rep Seminar, but it does not count as an added ensemble)
   *Home Ensembles:
      • Strings: Case University Circle Orchestra (MUEN 385) or Case Camerata Chamber Orchestra (MUEN 386)
      • Winds/Percussion: Symphonic Winds (MUEN 383)
      • Piano: Keyboard Seminar (MURP 386)
      • Voice: Case Concert Choir (MUEN 382) or University Singers (MUEN 387); in some cases Early Music Singers (MUEN 396)
      • Guitar: Guitar Ensemble (MUEN 355)

B. Music Education Sequence (40 hours):
1. Methods (15 hours)
   MUED 240 (3)
   MUED 320 (3)
   MUED 350 (3)
   MUED 355 (3) [Fulfills SAGES Departmental Seminar requirement]
   MUED 352 (3) or MUED 353 (3)
2. Conducting and arranging (7 hours)
   MUED 275 (2), MUED 276 (2), MUED 310 (3)
3. Secondary instrument classes (6 hours required)
   MUED 200A Basic Skills & Pedagogy: Voice (1)
   MUED 200B Basic Skills & Pedagogy: Guitar (1)
   MUED 200C Basic Skills & Pedagogy: Upper Brass (1)
   MUED 200D Basic Skills & Pedagogy: Low Brass (1)
   MUED 200E Basic Skills & Pedagogy: Clarinet & Saxophone (1)
   MUED 200F Basic Skills & Pedagogy: Double Reeds & Flute (1)
   MUED 200G Basic Skills & Pedagogy: Violin (1)
   MUED 200H Basic Skills & Pedagogy: Strings (1)
   MUED 200P Basic Skills & Pedagogy: Percussion (1)

C. Professional Education Courses (9 hours):
   • MUED 352

D. Student Teaching (12 hours)
   MUED 396A (9), MUED 396B (3) [Fulfills SAGES Senior Capstone]

E. Professional Education Courses (9 hours):
   • EDUC 301 (3)
   • EDUC 304 [Fulfills SAGES Social Sciences requirement; PSCL 101 is a prerequisite (3)]
   • EDCC 255 (3)

SAGES Requirements (22 hours in addition to those major courses that fulfill SAGES requirements)

Admission and Retention in Music Education

There are four decision points in the Music Education program. For each of the decision
points, there are three possible outcomes: unconditional admission; conditional admission with a prescribed remedial plan which when successfully completed will result in unconditional admission; or denial of admission. Denial of admission at any decision point means the student is no longer able to pursue a music education degree at Case Western Reserve.

DEcision Point 1: Application for Admission to the Program
Official admission to the Music Education program generally occurs at the end of the freshman year. Admission to the program requires: (1) being accepted to Case Western Reserve; (2) being accepted as a music major through an audition process before matriculation; (3) successful completion of MUED 240, Foundations of Music Education, including evaluation of an initial Teaching ePortfolio; (4) a cumulative Case Western Reserve GPA of 2.5 or better; (5) submission of a signed Statement of Assurance of Good Moral Character, and (6) a satisfactory interview with music education faculty, documented on the Teacher Licensure Admission Assessment Form.

DEcision Point 2: Application for Advanced Standing
Application for Advanced Standing should be submitted by week 10 of the second semester after Decision Point 1 (usually the spring of the sophomore year). Application for Advanced Standing requires: (1) a successful review of the updated Teaching ePortfolio; (2) submission of a current Academic Requirements report documenting the following: a cumulative GPA of 2.5 or better, a music GPA of 2.5 or better, and an education GPA of 3.0 or better; (3) a passing score on the Candidate Disposition Assessment Inventory completed by the music education faculty; (4) an audition process before matriculation; (5) successful completion of MUED 240, Foundations of Music Education, including evaluation of an initial Teaching ePortfolio; (6) a cumulative GPA of 2.5 or better; (7) submission of a signed Statement of Assurance of Good Moral Character, and (8) a satisfactory interview with music education faculty, documented on the Teacher Licensure Admission Assessment Form.

DEcision Point 3: Application for Student Teaching
Application for Student Teaching should be completed by Week 4 of the semester prior to student teaching. The application requires: (1) a successful review of the updated Teaching ePortfolio; (2) submission of a current Academic Requirements report documenting the following: a cumulative GPA of 2.5 or better, a music GPA of 2.5 or better, and an education GPA of 3.0 or better; (3) a passing score on the Candidate Disposition Assessment Inventory completed by the music education faculty; (4) passing a TB test; (5) presenting documentation of Hepatitis B vaccination; and (6) passing an official criminal background check.

DEcision Point 4: Application for Initial Licensure
Application for Initial Licensure occurs after successful completion of all degree requirements. Application for Initial Licensure must be submitted by week 10 of the second semester after Decision Point 1 (usually the spring of the sophomore year). Application for Initial Licensure requires: (1) a successful review of the updated Teaching ePortfolio; (2) submission of a current Academic Requirements report documenting the following: a cumulative GPA of 2.5 or better, a music GPA of 2.5 or better, and an education GPA of 3.0 or better; (3) a passing score on the Candidate Disposition Assessment Inventory completed by the music education faculty; (4) achievement of state-mandated scores on the two Praxis II national teacher exams; (5) completion of the Case Student Teaching Final Assessment by the cooperating teacher and university supervisor with a grade of B or better (MUED 396A and 396B; 496A and 496B for master’s students seeking licensure); and (6) completion of the Case Teacher Licensure Exit Interview and Survey.
After successfully completing all requirements at the four decision points, the student is recommended by the university’s director of teacher education for the Ohio Provisional Music (Pre-K-12) License to teach music in the public schools in Ohio and more than 40 reciprocating states.
Completion of the Bachelor of Science degree exists separately from the assurance that the State of Ohio music teacher license will be awarded. Additional information is available from the Teacher Licensure program.

Departmental Honors
Departmental honors programs for the Bachelor of Arts and Bachelor of Science degrees have the following admission and completion requirements:
For all students, admission to honors status requires an overall GPA of at least 3.2, a music GPA of at least 3.5, evidence of exceptional musicianship and scholarly interests, petition to the music faculty, nomination by a faculty member, and acceptance by the music faculty. The honors project must first be approved by the faculty project advisor, with the specific project timeline to be determined in consultation with the advisor. The student must submit a proposal to the faculty before the project start date, typically by the midpoint of the spring semester preceding the senior year.
For B.A. students, second-semester sophomore or junior standing is required for admission to honors status. The honors project should then be completed as part of the SAGES Capstone Seminar. For B.S. students, admission to honors status requires advanced standing in music education. The student must register for independent study or an approved seminar during the project period, and the honors project may not be pursued or completed during student teaching.

Minor
A minor in music requires a minimum of 15 credit hours, usually 6 in music theory (generally MUTH 103, 104), 6 in music history (either MUGN 201 and MUGN 202, or MUHI 301 and MUHI 302), and at least 3 additional hours of credit, which may be in applied music or ensembles (MUAP, MUEN). A minor in music education may be devised in consultation with a music education advisor. CIM students may pursue a minor in music history by taking 15 hours of MUHI courses. The department welcomes students’ initiative in the development of minor programs suited to their needs.

Electives for Non-Music Majors
Electives designed for students not majoring in music are MUTH 103, 104, and MUGN 201, 202, and 215. MUGN 308 is designed for music majors but is open to non-music majors with the permission of the instructor. Non-music majors may also audition for admission to music ensembles (MUEN). Individual instruction (MUAP) in keyboard, voice, and orchestral instruments is available with consent of the department. See further information below under Applied Music.

GRADUATE PROGRAMS
The following graduate degree programs, administered by the university, are offered as part of the Joint Music Program with The Cleveland Institute of Music. General descriptions are given here; complete information on all degrees is available from the department. Admission to each degree follows established guidelines of the School of Graduate Studies. Scores from the Graduate Record Examination are required for admission to programs in music history, musicology, and early music performance practices, and an audition is necessary for students interested in the early music performance practices program.

Master of Arts Degree
The Master of Arts degree is offered in the
fields of (1) music history and literature, and
(2) music education. Within music history and literature, students may choose concen-
trations in music history and literature or in early music performance practices. Master’s
degree candidates in music education may also choose to add course work that will qual-
ify them to take teaching licensure exams for the State of Ohio.

MASTER OF ARTS IN MUSIC HISTORY AND LITERATURE

The concentration in music history and litera-
ture emphasizes research, history, literature, and
the theory of music. Within the 30 hours
required, the following are minimum require-
ments: music history (9 hours); research (6-9
hours); theory-analysis (6 hours); electives
(6-9 hours).

The concentration in early music performance practices presupposes the same strong liberal
arts training as the music history and litera-
ture concentration, plus a strong performance interest and background. Research and its ap-
lication to music performance are stressed.

Within the 27 hours required, the following are minimum requirements: bibliography
and research (3 hours); performance practice (6 hours); notation theory (6 hours); lecture-
tical and document (6 hours).

In both concentrations, remaining hours are
freely elected in music history and research
with advisor’s approval. For students pursu-
ing the degree in early music performance practices, however, at least two semesters of
applied music (0 credits) are required, in addi-
tion to the 6 hours of lecture-rectical and doc-
ument (MUAP 651), near the completion of
the degree program. Ensemble participation is also required for performance practices stu-
dents but does not earn credit hours toward
the degree.

Examinations include initial placement tests
in history and theory, and a reading test in
a foreign language pertinent to the student’s field. In addition, performance practices stu-
dents must audition as part of the admissions
process. At least 18 credit hours must be at the
400 level or higher.

FAST TRACK M.A./PH.D. PROGRAM

Students in the M.A. in music history and litera-
ture program are eligible for a fast track
option to the Ph.D. in historical musicology.
To qualify for this option, students must com-
plete 36 hours in the M.A. program and are
advised to pursue the thesis option. By the
end of the third semester of study (prior to the
completion of the 36 hours), the student must
inform the director of graduate studies of his/
her desire to enter the Ph.D. program, and, in
consultation with the director, must present a
petition to the musicology faculty for candi-
dacy. Once faculty consent is secured, all re-
mainning requirements of the degree program,
as detailed above, remain the same.

MASTER OF ARTS IN MUSIC EDUCATION

This degree is built on a set of foundation
courses in philosophy, curriculum, psychol-
ogy, research, evaluation, and musicianship.

Additional courses and independent studies
enable students to tailor programs to their in-
terests and needs.

Three degree options are available. Students
who choose Plan A (thesis option) write a the-

sis based on original research and defend the
thesis in an oral examination. Students who
choose Plan B (comprehensive exam option)
complete a comprehensive examination in
music education. Applicants for Plans A or B
should have a bachelor’s degree in music educa-
ation, an undergraduate GPA of 3.0 or better,
and at least one year of successful music teach-
ing experience, usually in the public schools.

Students seeking teacher licensure credentials
pursue Plan C (M.A. for Licensure, or MAL).

The program includes a core of graduate mu-
sic education courses, graduate music courses,
undergraduate music education methods
courses, and one semester of student teaching.

Applicants for MAL should have a bachelor’s
degree in music (B.A. or B.M.), an under-
graduate GPA of 3.0 or better, and some prior
experience in working with children. The
regulations for students in the B.S. program
regarding advanced standing, grade point av-
erages, and the Praxis II exam apply to gradu-
ate students in Plan C as well. Completion of
the Plan C degree exists separately from the
assurance that the State of Ohio music teacher
license will be awarded.

Foundation courses for Plan A and Plan B in-
clude a music education core of philosophy,
curriculum, and research (12 hours); a music
core of history, theory, and applied music (9-
12 hours); and electives (0-9 hours). Students
in Plan A receive 6 credit hours for thesis re-
search. Students in Plan B complete a compre-
hensive written examination at the conclusion
of course work, whereas students in Plan C
complete a comprehensive oral examination.

A minimum of 30 credit hours is required for

Plans A and B. Plan C requires a minimum of
65 hours, including a music education li-
censure core (35 hours), a teacher licensure
professional education core (9 hours), a gradu-
ate music education core (12 hours), and a
graduate music core (9 hours). To remain in
Plan C’s MAL program, students must meet
GPA and professional standards each year.

For more information, contact the director of
music education.

Doctor of Philosophy Degree

The Doctor of Philosophy degree is offered
in two fields: (1) musicology (with concentra-
tions in music history and early music perfor-
mance practices), and (2) music education.

Doctor of Philosophy in Musicology

The Ph.D. in historical musicology is granted
in recognition of superior scholarly ability and
attainment. Award of the degree is based not
only on computation of time or enumeration of
courses, but also upon distinguished work.

Highly qualified applicants may enter this pro-
gram directly upon completion of a bachelor’s
degree. All programs of study are formulated
to suit the individual needs of the student and
require the consent of the advisor.

Music History Concentration. The Ph.D.
requires 36 credit hours of course work and an
additional 18 hours of dissertation research
credit hours. Required course work includes
MUHI 610 (Bibliography) and MUTH 424
(Schenkerian Analysis) as well as three doc-
toral seminars. In the first two years, students
will be expected to take three courses (or 9
credits) per semester, for a total of 36 hours.

Students admitted to the program will take
diagnostic examinations prior to the start of
classes in their first year. Based on these ex-
aminations, students may be required to enroll in
specific courses to address deficiencies; these
course credits may be applied toward the de-
gree requirements. At the end of the first year
of study, the musicology faculty will conduct
a formal review with each student. This pro-
cess will include an evaluation of progress to
date and advisement regarding the remainder
of the program.

A written summary of this review, along with
course grades and materials, will constitute
the beginnings of the portfolio maintained
by the director of graduate studies that will
be the basis for considering each student’s ad-
vancement into the Ph.D. program.

At the end of the second year of course work,
Examinations include initial placement tests, which will be added to the portfolio. At the beginning of the fall in the third year of study, students will take comprehensive examinations, which will also function as qualifying exams for advancement to the Ph.D. program. These examinations will consist of written and oral sections, and will be conducted and evaluated by the musicology faculty. Following the examinations, the faculty will review each student’s portfolio and, based on work contained therein, make a decision regarding advancement to candidacy in the Ph.D. program. Students who do not advance but who have done satisfactory work will be eligible to receive the M.A. in music history at this juncture.

Students who advance to candidacy for the Ph.D. will register for dissertation research credits and begin research for the dissertation. Working with a faculty advisor, each student will develop a proposal for the dissertation, which will be presented in writing to the faculty no later than the end of the third year of study. It is expected that the fourth and possibly fifth year of study will be devoted to work on the dissertation. Upon completion of the thesis, each student will present a formal defense to the musicology faculty.

Under the rules of the School of Graduate Studies, a student must complete the thesis no later than five years after registering for the first dissertation research (701) credits.

Early Music Performance Practices Concentration. The Ph.D. in historical musicology with a concentration in early music performance practices requires a minimum of 36 hours of course work, seminars, and tutorials, and an additional 18 hours of dissertation research credit hours. Course distribution is as follows: bibliography and research (3 hours); performance practices (9 hours); notation-theory (9 hours); doctoral seminars (6 hours); lecture-recital (MUAP 751) (3 hours). Remaining hours are freely elected in music history and research with the advisor’s approval. At least three semesters of applied music (0 credits) are required. Ensemble participation is also required for performance practices students but does not earn credit hours toward the degree.

For other musicology students, private lessons at the 400 level, although not required, may be counted up to a maximum of six credits, at the discretion of the advisor.

Examinations include initial placement tests in history and theory; reading tests in two foreign languages pertinent to the student’s field; and comprehensive examinations in history and theory, including written and oral sections, prior to admission to candidacy. Upon completion of the dissertation, an oral defense is held. In addition, performance practices students must audition as part of the admissions process. The candidate must teach a college-level course in music history and literature (or early music performance practices) under the supervision of a faculty member, or have had the equivalent experience before the dissertation is completed.

Doctor of Philosophy in Music Education

The doctorate in music education is offered to persons who have shown a strong and continuing dedication to music teaching and scholarship. Applicants must have completed at least three years of full-time music teaching, usually in the public schools. The degree is designed to prepare professionals to assume leadership in elementary, secondary, and collegiate instruction. Prior to graduation, doctoral students demonstrate competence in teaching, research, and musicianship. Every effort will be made to plan a program based on individual student needs and interests while maintaining standards of musical and scholarly excellence. Electives, therefore, will be chosen in consultation with a faculty advisor in order to ensure a balance between individual interests and traditional graduate expectations. To remain in the program, students must meet GPA and professional standards each year. For more information, contact the director of music education.

A total of 60 credit hours is required for the doctoral degree beyond the master’s level. Courses include:

1. Music education: research, philosophy, cognition/psychology, curriculum, and assessment (15 hours)
2. Music: theory, history, applied music (9-12 hours)
3. Outside cognate (6 hours)
4. Music education electives (9-12 hours)
5. Dissertation (18 hours)

A comprehensive examination follows the completion of course work, prior to beginning research for the dissertation. Upon completion of the dissertation, an oral defense is held. The dissertation topic is chosen by the student in consultation with the faculty.

Doctor of Musical Arts in Early Music

This doctorate is granted in recognition of outstanding performing ability in early music combined with superior scholarly ability in the field of early music performance practices. All programs are formulated to suit the needs of the individual student and require the consent of a faculty advisor.

A minimum of 36 hours of course work, seminars, and tutorials is required. Distribution is as follows: bibliography and research (3 hours); performance practices (6-9 hours); notation-theory (9 hours); doctoral seminars (3-6 hours); first two lecture-recitals and documents (MUAP 751, 752) (6 hours). Remaining hours are freely elected in music history and research with advisor’s approval. In addition, the final lecture-recital and document (MUAP 753) must be taken for 6 hours, as well as applied music for zero credit every semester the student is on campus. Ensemble participation is required but does not earn credit hours toward the degree.

Examinations include a performance audition; initial placement tests in history and theory; reading tests in two foreign languages pertinent to the student’s field; and a comprehensive examination with history, theory, performance practices, and oral sections. Exceptional students may be admitted to a combined M.A./D.M.A. degree program in early music.

FACILITIES

Harkness Chapel

Harkness Chapel, built in 1902, features neo-Gothic architecture, antique oak and Georgia pine woodwork, and Tiffany windows. It is a warm, intimate, and acoustically resonant space for the performance of vocal and instrumental chamber music. The building provides space for concerts, music classes, and departmental recitals, and is the home of the department’s early music concert series.

Kulas Music Library

Kulas Music Library is a satellite library of Kelvin Smith Library, the university’s main library. It contains more than 45,000 items, including music scores, books on music, sound recordings, video recordings, microforms, and music periodicals. The library also contains a listening room for the use of the sound recording and video collections. Music majors at the university also have access to the Robinson Music Library of the Cleveland Institute of Music. The Case Western Reserve University Kulas Music Li-
library and the CIM Robinson Music Library coordinate acquisitions and services, and their collections reflect institutional strengths as well as support the CWRU-CIM Joint Music Program.

Center for Music and Technology

The Department of Music’s Center for Music and Technology houses ten Macintosh computers and is classified as a level II Technology-Enhanced Classroom. By supporting the most current music notation software, the center provides a resource for the production of professional typeset-quality scores and papers by faculty and students. The center also works closely with faculty in providing support facilities for the department’s technology-related courses. For example, students enrolled in Computers and Music (MUGN 308) use the center to explore computerized notation, music sequencing, film scoring, and internet multimedia creation, while students enrolled in Technology Assisted Teaching and Learning (MUED 3/420) discuss and experience new ways to incorporate technology into their K-12 music classrooms. While it is designed to meet music-specific needs, the center supports an array of non-musical software, including word processing, graphic and web design, and video editing. It also provides state-of-the-art video and audio recording equipment and a professional video editing workstation.

Kulas Collection of Early Instruments

The department maintains an impressive collection of modern reproductions of early instruments. The instruments are used by the Collegium Musicum, the Case/CIM Baroque Orchestra, and the department’s program in early music performance practices. The collection includes medieval, Renaissance, and baroque strings, as well as brass, woodwinds, and keyboards.

Music Education Resource Center

The department provides a resource center for music education students to prepare educational materials and research projects. The center contains a variety of audiovisual media, including a library of education-oriented music software. Students may borrow items from a large collection of music textbooks, educational recordings, testing materials, vocal and instrumental books, curriculum guides, and classroom instruments.

The Music Education and Technology Software Registry (MET) is a collection of instructional software packages designed for all ages of learners and for a wide range of musical tasks. Both Macintosh and PC workstations are available to all music education students and area music teachers so they can use and evaluate most of the music software that is commercially marketed today. Use of the MET is encouraged, and sometimes required, for many of the projects and assignments in courses throughout the music education curriculum.

APPLIED MUSIC

Private Instruction

The Department of Music offers private instruction on the usual orchestral instruments, piano, and voice, as well as on Renaissance and baroque instruments. Students have the opportunity to study with outstanding teachers, most of whom are faculty at the Cleveland Institute of Music. Music majors should consult with their advisors before registering for lessons. Non-major students interested in private instruction should visit the department office (Haydn 201) to begin the lesson registration process and learn further details.

Private lessons carrying credit are available to all university students. Permission for study, level of study, and amount of credit are determined by the faculty of the Department of Music in consultation with the Cleveland Institute of Music. Charges for private lessons are covered by the university tuition rate for undergraduate music and music education majors only; all other students pay an additional fee. The amount of the fee depends on the faculty involved and the length of the lessons. For fee schedule, contact the Cleveland Institute of Music. Students normally earn 1 or 2 semester hours of credit for private instruction based on either half-hour or hour lessons.

All Master of Arts and Doctor of Philosophy degree students in the department must satisfy the applied music requirements specified in their degree programs. Undergraduate students who anticipate private lesson instruction in their programs should consult an advisor before registration. Students register for individual applied music instruction in courses titled Principal Performance Area and Secondary Performance Area.

Ensembles

A number of music ensembles are open to all students. Entrance into ensembles may be subject to space limitations, and an audition may be required. Students may elect to earn one credit per semester for participation. Auditions for ensembles are generally held during the first week of classes each semester. Dates and times are available from the department.

MUED 200A. Basic Skills and Pedagogy: Voice (1)

Designed for music education majors to provide the fundamentals of teaching methods for various

MUED 200B. Basic Skills and Pedagogy: Guitar (1)
Designed for music education majors to provide the fundamentals of teaching methods for various instruments. Recommended preparation: Music education majors. Non-music majors accepted with consent of department.

MUED 200C. Basic Skills and Pedagogy: Upper Brass (1)
Designed for music education majors to provide the fundamentals of teaching methods for various instruments. Recommended preparation: Music education majors. Non-music majors accepted with consent of department.

MUED 200D. Basic Skills and Pedagogy: Lower Brass (1)
Designed for music education majors to provide the fundamentals of teaching methods for various instruments. Recommended preparation: Music education majors. Non-music majors accepted with consent of department.

MUED 200E. Basic Skills and Pedagogy: Clarinet and Saxophone (1)
Designed for music education majors to provide the fundamentals of teaching methods for various instruments. Recommended preparation: Music education majors. Non-music majors accepted with consent of department.

MUED 200F. Basic Skills and Pedagogy: Double Reeds and Flute (1)
Designed for music education majors to provide the fundamentals of teaching methods for various instruments. Recommended preparation: Music education majors. Non-music majors accepted with consent of department.

MUED 200G. Basic Skills and Pedagogy: Violin (1)
Designed for music education majors to provide the fundamentals of teaching methods for various instruments. Recommended preparation: Music education majors. Non-music majors accepted with consent of department.

MUED 200H. Basic Skills and Pedagogy: Strings (1)
Designed for music education majors to provide the fundamentals of teaching methods for various instruments. Recommended preparation: Music education majors. Non-music majors accepted with consent of department.

MUED 200P. Basic Skills and Pedagogy: Percussion (1)
Designed for music education majors to provide the fundamentals of teaching methods for various instruments. Recommended preparation: Music education majors. Non-music majors accepted with consent of department.

MUED 240. Foundations of Music Education (3)
An introduction to and overview of the music education profession. Philosophical, historical, and psychological perspectives on music education in schools, including contemporary topics and trends. Introduction of Ohio academic content standards and curriculum model for music, along with K-12 National Music Standards. Observation of area music teachers and peer-teaching experience. Recommended preparation: Music education major or permission.

MUED 275. Elements of Conducting (2)
This course is designed to develop the physical tools, and philosophical and aesthetic ideologies necessary for students to conduct in an effective and appropriate manner. Students develop baton technique through systematic physical pattern exercises, and class and field conducting experiences (elementary through adult). Observations and written evaluations of Cleveland Orchestra rehearsals and concerts, along with video analysis/self-evaluation of personal conducting experiences are among the activities required in this course. Topics and content include: philosophical foundations for the conductor, considerations for selecting repertoire and creating a supportive learning environment; rehearsal techniques; planning for the rehearsal and record keeping; rehearsal management; group motivation; score analysis and preparation; participation in professional activities; effective use of technology for the conductor; and national, state, and professional standards. Clinical/Field experiences (all ages) required.

MUED 276. Advanced Conducting (2)
This course continues in-depth development of the physical tools, and philosophical and aesthetic ideologies presented in MUED 275. Students develop baton techniques (with experiences in complex and changing time signatures) through systematic physical/pattern exercises, along with continuous evaluations, from their class and field conducting experiences (elementary through adult), observations and written evaluations of Cleveland Orchestra Rehearsals and Concerts, written critiques from historically significant Master Conductors (from videos in the University’s Music Library), along with video analysis of personal class and field conducting, are among the activities required in this course. Topics and content include: philosophical foundations for the conductor, considerations for selecting repertoire and creating a supportive learning environment; rehearsal techniques; planning for the rehearsal and record keeping; rehearsal management; group motivation; score analysis and preparation; participation in professional activities; effective use of technology for the conductor; and national and state standards. Clinical/Field experiences (all ages) required.

MUED 305. World Music in Education (3)
This course acquaints students with the use of world music, or multicultural music, in the music education classroom. Students are given an overview of the history of world music within American music education, discuss topics related to world music in education, research diverse world music practices, and lead lessons based on this research. Topics and content include: definitions of world/multicultural music; philosophical basis for world music in education; diversity in our Cleveland community; authenticity; ethnomusicology; informal/formal music learning; international perspectives; pedagogical approaches; addressing the State and National Standards through world music in education; and the development of culturally informed music pedagogy based on the study of diverse music. Throughout the course students will become acquainted with the music of diverse cultures and people groups; these will be chosen in part based on student’s own research interests. In addition to the musical cultures chosen by students for study and presentation, the music of The Gambia, West Africa; the Caribbean; and India will be highlighted during in-class activities and lessons. Recommended preparation: MUED 240. Global & Cultural Diversity

MUED 310. Instrumental and Choral Arranging (3)
Techniques of writing and arranging for instruments of the band and orchestra and voice. Study of scoring problems for school instrumental and vocal groups of all ages and abilities.

MUED 320. Technology Assisted Music Teaching and Learning (3)
Fundamental concepts and skills for using technology in music teaching and learning. This project-oriented class will develop knowledge and competencies related to electronic musical instruments, MIDI sequencing, music notation software, computer-assisted instruction, digital media, the Internet, information processing, computer systems, and lab management as they relate to music education in K-12 schools. Recommended preparation: MUED 240. Offered as MUED 320 and MUED 420.

MUED 350. General Music Methods A (3)
General Music A introduces student to methods and materials for planning and implementing general music experiences for all ages, with concentration on Pre-K through sixth grade children. Topics of the course include: multiple meanings of music for children; characteristics/needs of young children and creating a supportive learning environment; theories of music learning and teaching; learning styles and collaborative learning; assorted teaching methods, rhythm, pitch, listening, movement, performing, composing; curriculum design; technology for music instruction; multicultural music; music for exceptional children; integrating music with the arts and other curricula; motivation and classroom management; lesson planning and record keeping; developing a personal philosophy of music education, professional, state and professional standards; and assessment. Clinical/Field experiences (Clinical-all ages; Field-focus on Pre-K through elementary) required.
MUED 352. Instrumental Methods and Materials (3)
This course acquaints students with effective ways to develop, organize and maintain a successful instrumental program for any age group, based on a comprehensive instrumental music education model. Students are given a "womb to tomb" view of the instrumentalists' development, including physiological development and age appropriate instrumental exceptions. Topics and content include: philosophical basis for music education, considerations for selecting repertoire including multicultural music; rehearsal techniques; assessment and record keeping; planning for the rehearsal; recruitment; auditioning, and placement; motivation and classroom management; team teaching and collaborative learning; managing an instrumental program; participation in professional activities; effective use of technology in the instrumental program; philosophy; and national, state, and professional standards. Clinical/Field experiences (all ages) required.

MUED 353. Choral Methods and Materials (3)
This course acquaints students with effective ways to develop a successful choral program for any age group, based on a comprehensive choral music education model. Students are given a "womb to tomb" view of the singing voice, including physiological development, age appropriate vocal expectations, and establishing and maintaining vocal health. Topics include: philosophical basis for vocal music education; the child voice, the adolescent voice, and the adult voice; vocal tone; considerations for selecting repertoire including ensemble assembly, music evaluation, and multicultural music; rehearsal techniques, collaborative learning, and motivation; planning for the rehearsal; developing conducting technique; recruitment, auditioning, placement, score analysis and preparation; classroom management; managing a choral program; participation in professional activities; effective use of technology in a choral program; and national state, and professional standards. Clinical/Field experiences (all ages) required. Recommended preparation: MUED 276.

MUED 355. Instructional Design in Music Education (3)
This Music Education Department Seminar brings together all strands of the Music Education program by focusing on curriculum as the organizational element of instruction. Topics and content include: understanding the issues presented by special learners; techniques for integrating special learners into the music teaching environment; developing learning outcomes; designing instruction; planning classroom experiences; defining assessment and measurement; assessment techniques and instruments for the music classroom; and exploring elements of school music program organization and administration. Professional writing and clinical and field experiences will be a large part of the activities in this course. This course is presented in a seminar format that provides for discussions of classroom topics and commentary on field experiences. SAGES Dept Seminar

MUED 396A. Student Teaching in Music Education (9)
Teaching music in both elementary and secondary schools, full-time five days a week for 15 weeks. Closely supervised field experiences of all types with a wide variety of students. Emphasis on planning lessons and organizing materials, teaching methodologies, motivation, and student assessment. Topics addressed include communications and the arts, technology in learning, interdisciplinary organization of instruction, collaborative learning and teaching, creating a supportive environment, and professional development. Development of skills needed for self-assessment as well as student assessment. Clinical/Field experiences (all ages) required. Recommended preparation: Concurrent enrollment in MUED 396B.
Offered as MUED 396A and MUED 496A.
SAGES Senior Cap

MUED 396B. Student Teaching Seminar in Music Education (3)
This is the SAGES Senior Capstone requirement for students majoring in Music Education. Taken at the same time as the student teaching experience (MUED 396A/496A), this seminar will guide students through preparation for entering the professional world of music education, and mentor them in their preparation of their Senior Capstone Project and Presentation. Recommended preparation: Concurrent enrollment in MUED 496A.
Offered as MUED 396B and MUED 496B.
SAGES Senior Cap

MUED 399. Undergraduate Independent Studies (1-3)
Each student develops a topic of interest to be explored with a faculty member.

MUED 400. Clinical/Field Experience (3)
This provides clinical/field experiences with all ages of students in all teaching areas. Students from a variety of socioeconomic and cultural backgrounds are encountered. Clinical/Field experiences (all ages) required.

MUED 420. Technology Assisted Music Teaching and Learning (3)
Fundamental concepts and skills for using technology in music teaching and learning. This project-oriented class will develop knowledge and competencies related to electronic musical instruments, MIDI sequencing, music notation software, computer-assisted instruction, digital media, the Internet, information processing, computer systems, and lab management as they relate to music education in K-12 schools. Recommended preparation: MUED 249.
Offered as MUED 320 and MUED 420.

MUED 441. Philosophical Foundations of Music Education (3)
In this course, students explore major aesthetic philosophies that have influenced contemporary music education, and discuss current issues central to our field. Among topics included: basic views about art/music; creating art/music; meaning in art/music, experiencing art/music; music and aesthetic education; criticism in music; multicultural music; and critical theories and inquiry regarding music education. Students are asked to assess their own roles in music education, as well as their obligations and potential capacities for leadership in the profession. Students will work toward development of a personal professional philosophy of music education.

MUED 442. Curriculum and Assessment in Music Education (3)
This course is designed to give graduate music education students thorough knowledge of the overarching role of curriculum and assessment as the organizational elements of instruction. In depth coverage of such topics as: the role of assessment and measurement in teaching; epistemology; scope and sequence; backward design; instructional goals; validity; reliability; performance assessments; measuring assessment; curriculum design; and teaching for understanding. These concepts and procedures will be explored in depth to give daily music instruction a global framework in the larger organizational structure of profession, state, national, and accreditation standards for P-12 and college music settings.

MUED 443. Music Cognition and Learning (3)
Survey and critical review of the literature as it relates to music teaching and learning, and music performance. Specific topics may include basic psychoacoustical processes, auditory perception, cognitive organization of musical sound, tonal and musical memory, neuromusical research, affective and physiological responses to music, learning theory, musical aptitude, developmental processes, and motivation.

MUED 444. Research in Music Education (3)
Paradigms and methods in music education research. Specific topics and assignments include research-related resources, tools and materials; research problems; research literature; research procedures, research proposals; qualitative and quantitative research studies; computer-assisted data analysis; and empirical research reports.

MUED 496A. Student Teaching in Music Education (9)
Teaching music in both elementary and secondary schools, full-time five days a week for 15 weeks. Closely supervised field experiences of all types with a wide variety of students. Emphasis on planning lessons and organizing materials, teaching methodologies, motivation, and student assessment. Topics addressed include communications and the arts, technology in learning, interdisciplinary learning, collaborative learning and teaching, creating a supportive environment, and professional development. Development of skills needed for self-assessment as well as student assessment.
Clinical/Field experiences (all ages) required. Recommended preparation: Concurrent enrollment in MUED 396B.
Offered as MUED 396A and MUED 496A.
SAGES Senior Cap

MUEN 496B. Student Teaching Seminar in Music Education (3)
This is the SAGES Senior Capstone requirement for students majoring in Music Education. Taken at the same time as the student teaching experience (MUED 396A/496A), this seminar will guide students through preparation for entering the professional world of music education, and mentor them in their preparation of their Senior Capstone Project and Presentation. Recommended preparation: Concurrent enrollment in MUED 496A.
Offered as MUED 396B and MUED 496B.
SAGES Senior Cap

MUED 501. Special Reading (M.A. and M.M.) (1–18)

MUED 544. Advanced Research in Music Education (3)
Advanced studies in models and methods of music education research. Research projects using data analysis. In-depth examination of selected quantitative and/or qualitative research designs according to student interests. Discussion of thesis and dissertation proposal format process. Recommended preparation: MUED 444.

MUED 591. Music Education Seminar in Conducting (3)
In this course, students focus on advanced score study, preparation, and analysis. In depth conducting techniques on contemporary music and mixed meter compositions, along with the development of a comprehensive conducting bibliography are the major components in this seminar. Historical research, analytical evaluation, and the practical elements of the physical techniques required for one to conduct a chosen composition are all addressed for each composition studies. Seminar discussions include aesthetic and philosophical ideologies, and the practical issues a conductor faces when put in control of the advanced ensemble.

MUED 601. Special Readings (Ph.D./D.M.A.) (1–18)

MUED 651. Thesis (M.A. and M.M.) (1–6)

MUED 696. College Teaching Practicum (0)

MUED 701. Dissertation Ph.D. (1–18)
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

MUEN 324. Case Percussion Ensemble (0–2)
The Case Percussion Ensemble is open to all interested Case-affiliated individuals who seek to continue their musical development by performing percussion ensemble literature. Membership is contingent on an audition that demonstrates moderate percussion ability and the ability to read music. Audition materials can be acquired through the director. Recommended preparation: Audition required.

MUEN 356. University Circle Wind Ensemble (1)
Designed for the most advanced woodwind, brass, and percussion players. Stresses the single-performance concept utilizing only players needed for a given piece. Audition required.

MUEN 373. Jazz Ensemble I (0–1)
Recommended preparation: Audition required.

MUEN 374. Jazz Ensemble II (0–1)

MUEN 382. Case Concert Choir (0–1)
This select choral group performs a wide variety of a cappella and accompanied choral works. Membership is gained only through an audition with the director. Recommended preparation: Audition required.

MUEN 383. Symphonic Winds (0–1)
Performance of advanced symphonic band repertoire. Open to all Case students, faculty and staff. Audition required for part placement only.

MUEN 384. Spartan Marching Band (0–1)

MUEN 385. Case/University Circle Orchestra (0–1)
The orchestra is comprised of Case students, faculty and staff and community players who play strings, woodwinds, brass and percussion. Recommended preparation: Audition required.

MUEN 386. Case Camerata Chamber Orchestra (0–1)
This chamber string ensemble is open to all interested Case affiliated individuals who seek to continue their music development by performing orchestral literature. Each person is required to audition to determine initial placement, section assignment, and seating. All members are required to perform a minimum of 2 concerts per academic year. Recommended preparation: Audition required.

MUEN 387. University Singers (0–1)
Chorus performing a wide variety of traditional and popular choral works. Open to all Case students. No audition required.

MUEN 393. Baroque Chamber Ensembles (0–1)
Designed for students interested in exploring baroque music in a chamber setting on historical instruments. Prereq: Audition required.

MUEN 394. Baroque Dance Ensemble (0–1)
This course allows musicians and dancers alike to explore historical dance steps and notation. History of dance and its relationships to music will be emphasized as students learn and perform historical dances. Prereq: MUH 342 or MUH 442 or permission of Instructor.

MUEN 395. Collegium Musicum (0–1)
Recommended preparation: Audition required.

MUEN 396. Early Music Singers (0–1)
Recommended preparation: Audition required.

MUEN 397. Baroque Orchestra (0–1)
Recommended preparation: Audition required.

MUEN 398. Cleveland Orchestra Chorus (0–1)
Recommended preparation: Audition required.

MUGN 201. Introduction to Music: Listening Experience I (3)
A flexible approach to the study of the materials and literature of music. Aural and analytical skills primarily for classical music.

MUGN 202. Introduction to Music: Listening Experience II (3)
Application of the skills developed in MUGN 201 to the understanding of historical and stylistic content of Western music. Focus is on particular works in context of the era of composition. Recommended preparation: MUGN 201 or consent of department.

MUGN 215. History and Styles of Jazz (3)
Musical styles and structures of jazz and American popular music since 1900. Recommended preparation: MUGN 201.

MUGN 308. Computers and Music (3)
Emphasis on development of music notation and sequencing skills with some attention to word-processing and graphics. Introduction to data management and page layout software. Designed primarily for music majors but also open to non-majors with sufficient background in music theory. Use of the University’s software library, CWRU Net and the music department’s Center for Music and Technology. No formal training in computers required. Recommended preparation: Music majors only.

MUGN 319. Jazz Skills I (3)
This class is designed to teach students basic skills in jazz improvisation, jazz keyboard, arranging/composition and pedagogy. Basic theory is required. Students will eventually arrange their own composition for big band, which will feature them as the improvising soloist. Recommended preparation: MUTH 102/MUTH 106, MUH 108 or permission of instructor.

MUGN 320. Jazz Skills II (3)
This course will build on the foundational skills developed in Jazz Skills I, providing a more intensive study of jazz harmony, improvisation and me-
lodic construction. It is designed to give students an advanced experiential understanding of the theory and performance of jazz. Recommended preparation: MUGN 319.

MUGN 399. Undergraduate Independent Studies (1–3)
Each student develops a topic of interest to be explored with a faculty member.

MUGN 501. Special Reading (M.A. and M.M.) (1–18)

MUGN 651. Thesis: (M.A. and M.M.) (1–6)

MUGN 751. Recital Document I-D.M.A. (1–3)

MUGN 752. Recital Document II - D.M.A. (1–3)

MUHI 301. History of Western Music I (3)
Developments in Western music from early Christian times to c1700. Recommended preparation or concurrent enrollment: MUTH 102, MUTH 104, or MUTH 108.

MUHI 302. History of Western Music II (3)
Developments in Western music from c1700 to c1900. Recommended preparation: MUTH 102, MUTH 104, or MUTH 108.

MUHI 303. History of Western Music III (3)
Music of the twentieth century, covering history, analysis, and aesthetic issues. Recommended preparation: MUHI 301 or MUHI 302, MUTH 104 or MUTH 108.

MUHI 310. Music Cultures of the World: Music of Asia and Africa (3)
A one-semester introduction to musics of Asia and Africa, focusing on the relationship of musical traditions and practices to culture and society. Recommended preparation: MUTH 106.

Global & Cultural Diversity

MUHI 311. Music Cultures of the World II: Music of the Americas (3)
Introduction to selected multicultural musics of North America and Latin America, focusing on the relationship of musical traditions and practices to culture and society. Recommended preparation: MUTH 106.

Global & Cultural Diversity

MUHI 315. History of Jazz and American Popular Music (3)
Musical styles and structures of jazz and American popular music; emphasis on music since 1900. Recommended preparation: MUTH 202 or MUHI 302.

MUHI 341. Introduction to Early Music Performance Practice (3)
Summary and perspective of the problems and issues associated with the field of early music performance practices. Recommended preparation: MUHI 301 and MUHI 302.

Offered as MUHI 341 and MUHI 441.

MUHI 342. Seminar in Early Music Performance Practice (3)
Seminar in a specific instrument and/or vocal area of performance practices, such as baroque vocal, instrumental, or keyboard practices. May be repeated because topics vary. Recommended preparation: MUHI 301.

Offered as MUHI 342 and MUHI 442.

MUHI 350. Topics in Music History (3)
Close study of a theme or aspect of music such as “Music and Gender,” “Symphonies of Mahler,” and “Wagner’s Ring.” Offered as MUHI 350 and MUHI 450.

MUHI 390. Undergraduate Seminar in Music History (3)
An intensive research seminar in music history for music majors. SAGES Dept Seminar

MUHI 395. SAGES Capstone for Music Majors (3–6)
Required for music majors, except in the case of double majors or dual-degree candidates who opt to fulfill the capstone in the area of the second major. Course consists of projects varying according to the student’s area of study and interests, but each must include a document of appropriate length and scope. The project must be presented publicly in an appropriate forum. SAGES Senior Cap

MUHI 399. Undergraduate Independent Studies (1–3)
Each student develops a topic of interest to be explored with a faculty member.

MUHI 401. Methodologies of Music History (3)
Introduction to the scholarly study of music, including principles of music bibliography, techniques of library research, and evaluation of editions. Special emphasis given to the relationship between musical performance and research in the history and criticism of music. Attention will also be given to design of program notes and essays. Required of first-year students in the Master of Music degree program.

MUHI 405. Topics in Music History (3)
Close study of a theme or aspect of music such as “Music and Gender,” “Symphonies of Mahler,” and “Wagner’s Ring.” Offered as MUHI 350 and MUHI 450.

MUHI 414. Introduction to Early Music Performance Practice (3)
Summary and perspective of the problems and issues associated with the field of early music performance practices. Recommended preparation: MUHI 301 and MUHI 302.

Offered as MUHI 341 and MUHI 441.

MUHI 441. Seminar in Early Music Performance Practice (3)
Seminar in a specific instrument and/or vocal area of performance practices, such as baroque vocal, instrumental, or keyboard practices. May be repeated because topics vary. Recommended preparation: MUHI 301.

Offered as MUHI 342 and MUHI 442.

MUHI 445. Medieval/Renaissance Notation (3)
Theory of chant, modal, mensural, and tablature notations. Practice in making literal transcriptions, editing, and preparing scores for performances.

MUHI 450. Topics in Music History (3)
Close study of a theme or aspect of music such as “Music and Gender,” “Symphonies of Mahler,” and “Wagner’s Ring.” Offered as MUHI 350 and MUHI 450.

MUHI 501. Special Reading (M.A. and M.M.) (1–18)

MUHI 590. Seminar in Musicology (3)
Problems in musical criticism, aesthetics, and analysis, as well as interdisciplinary methodologies.

MUHI 601. Special Readings Ph.D./D.M.A. (1–18)

MUHI 610. Bibliography and Research Methods in Music (3)
Seminar in research methods and techniques, stressing the analytic and functional approaches to Vocal polyphonic music from the Burgundian school through the Elizabethan madrigal.

MUHI 433. Music of the Baroque (3)
Musical developments from Monteverdi to Bach and Handel.

MUHI 434. Viennese Classicism (3)
Development of the symphony, concerto, chamber music, and opera in the works of the Mannheim composers, Haydn, Mozart, and Beethoven.

MUHI 435. Nineteenth Century Music (3)
Romanticism and other 19th century trends in music up to impressionism.

MUHI 436. Twentieth Century Music (3)
Critical and analytical study of music since 1900. Examination and discussion of stylistic characteristics and aesthetic aims of contemporary composers.

MUHI 441. Introduction to Early Music Performance Practice (3)
Summary and perspective of the problems and issues associated with the field of early music performance practices. Recommended preparation: MUHI 301 and MUHI 302.

Offered as MUHI 341 and MUHI 441.

MUHI 442. Seminar in Early Music Performance Practice (3)
Seminar in a specific instrument and/or vocal area of performance practices, such as baroque vocal, instrumental, or keyboard practices. May be repeated because topics vary. Recommended preparation: MUHI 301.

Offered as MUHI 342 and MUHI 442.

MUHI 443. Medieval/Renaissance Notation (3)
Theory of chant, modal, mensural, and tablature notations. Practice in making literal transcriptions, editing, and preparing scores for performances.

MUHI 450. Topics in Music History (3)
Close study of a theme or aspect of music such as “Music and Gender,” “Symphonies of Mahler,” and “Wagner’s Ring.” Offered as MUHI 350 and MUHI 450.

MUHI 501. Special Reading (M.A. and M.M.) (1–18)

MUHI 590. Seminar in Musicology (3)
Problems in musical criticism, aesthetics, and analysis, as well as interdisciplinary methodologies.

MUHI 601. Special Readings Ph.D./D.M.A. (1–18)

MUHI 610. Bibliography and Research Methods in Music (3)
Seminar in research methods and techniques, stressing the analytic and functional approaches to Vocal polyphonic music from the Burgundian school through the Elizabethan madrigal.
bibliography.

MUHI 611. Doctor of Musical Arts Seminar (3)
Recommended preparation: MUHI 610.

MUHI 651. Thesis (M.A. and M.M.) (1–6)

MUHI 701. Dissertation Ph.D. (1–18)
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

MUHI 751. Recital Document I - D.M.A. (1–3)

MUHI 752. Recital Document II - D.M.A. (1–3)

MUHI 753. Recital Document III - D.M.A. (1–6)

MULI 399. Undergraduate Independent Studies (0)
Each student develops a topic of interest to be explored with a faculty member.

MUDP 363. Principles of String Playing and Teaching I (2)
This course is designed to give an overview of historical pedagogy and its relationship to contemporary teaching practice. Students will survey teaching methodologies in relation to the foundational elements of performance technique for their instrument and investigate how to impart this information in an instructional setting. All students enrolled in the course will have the opportunity to teach students in a supervised situation and implement the concepts covered in class. Offered as MUDP 363 and MUDP 463.

MUDP 364. Principles of String Playing and Teaching II (2)
This course is a continuation of MUDP 363/463 and will foster further integration of the application of pedagogy to the teaching environment by the development of a conceptual rubric for instruction. This will include: expanding teaching strategies for a specific instructional environment or element of technique: principles of delivery; picking repertoire; diagnostic evaluation and assessment; and the creation of a personal style of teaching and reflection. Offered as MUDP 364 and MUDP 464.

MUDP 501. Special Reading (M.A. and M.M.) (1–18)

MURP 386. Keyboard Repertory Seminar (0–1)
Intensive study of the repertory for keyboard instruments, including solo literature, chamber music, and other collaborative genres. Master class format with regular performances by enrolled students. Enrollment limited to Case Western Reserve keyboard majors.

MUTH 399. Undergraduate Independent Studies (1–3)
Each student develops a topic of interest to be explored with a faculty member.

MUTH 416. Pre-common Practice Theory and Analysis (3)
An exploration of treatises and analytical methods appropriate to music of the Medieval and Renaissance eras.

MUTH 501. Special Reading (M.A. and M.M.) (1–18)

NATURAL SCIENCES PROGRAM

Natural sciences is available as a second major for the B.A.; the first major must be in a department or program within the arts, humanities, or social sciences, excluding the programs in American Studies, Asian Studies (Track 2), Environmental Studies, Gerontological Studies, Pre-Architecture, and Women’s and Gender Studies. For a student who completes a B.S. degree in management or accounting, natural sciences may serve as the sole major for the B.A. degree.

The program requires a minimum of 50 semester hours of work in natural sciences and mathematics. The departments included in the major are Astronomy, Biology, Chemistry, Geological Sciences, and Physics. The student must complete a minimum of 20 hours in one of these departments, a minimum of 8 hours in each of the two other departments, and 3 hours each in the remaining two departments. In addition, all natural sciences majors must complete MATH 125 and 126 or MATH 121 and 122. The courses used to satisfy the natural sciences major should be courses that would satisfy requirements of an existing science major. However, any 200-level or higher astronomy course is acceptable for the natural sciences major.

Minor

A minor is achieved through completion of the requirements listed below in any four of the six participating departments.

ASTRONOMY
One of the following sequences:
ASTR 201 and any other 200-level ASTR course
ASTR 221 and 222

BIOLOGY
Any two of the following:
BIOL 214 and 214L
BIOL 215 and 215L
BIOL 216 and 216L

CHEMISTRY
One of the following sequences:
CHEM 105, 106, 113
CHEM 111, 113, ENGR 145

GEOLOGICAL SCIENCES
Any one of GEOL 101, 110, 115 or 117; and
GEOL 119; and any one additional GEOL course (can be one of those listed or any other GEOL course)

MATHEMATICS
One of the following sequences:
MATH 125 and 126
MATH 121 and 122

PHYSICS
One of the following sequences:
PHYS 115 and 116
PHYS 121, 122, 221

NUTRITION
The College of Arts and Sciences awards the Bachelor of Arts and Bachelor of Science degrees in nutrition and nutritional biochemistry and metabolism. The required courses for the majors and minor are offered by the Department of Nutrition in the School of Medicine. For details about the department’s undergraduate programs, please consult the School of Medicine section of this bulletin.

DEPARTMENT OF PHILOSOPHY
203 Clark Hall
www.case.edu/artsci/phil
Phone: 216-368-2810; Fax: 216-368-0814
Colin McLarty, Chair
E-mail: colin.mclarty@case.edu

The Department of Philosophy offers an undergraduate major leading to the Bachelor of Arts degree. A student majoring in philosophy must satisfy the Arts and Sciences General Education Requirements. The department also offers minor programs for undergraduates as well as graduate-level courses for candidates for the Master of Arts degree in such fields as biomedical ethics, history, English, mathematics, and the sciences.

The department’s course offerings are designed not only to provide knowledge and skills required for students whose main interest is in philosophy, but also to educate students in general about the intellectual issues that a reflective person is likely to encounter in various contexts of civilized life. The department emphasizes the relevance of philosophy to mathematics, computer science, the natural sciences, the social sciences, the humanities and arts, and law.

The major program in philosophy, besides offering a solid foundation for advanced study in philosophy and enriching programs in other disciplines, develops the skills for analytical and critical thinking, effective communication, and rational decision making needed in a wide range of endeavors. The program thus provides majors with unusual flexibility in the choice of subsequent careers, including law, medicine, and management, while complementing the pursuit of career objectives with a greater perspective and a richer quality of intellectual life.

In collaboration with the Department of History, the department participates in an interdisciplinary major program in the history and philosophy of science and technology, leading to the Bachelor of Arts degree. The department also participates in, and contributes courses to, the interdisciplinary minor in artificial intelligence.

DEPARTMENT FACULTY
Colin McLarty, Ph.D.
(Case Western Reserve University)
Truman P. Handy Professor of Intellectual Philosophy; Associate Professor and Chair
Logic; philosophy of logic; philosophy of mathematics; philosophy of science; contemporary French philosophy

Shannon D. French, Ph.D.
(Brown University)
Inamori Professor of Ethics; Associate Professor
Military ethics; leadership ethics; professional ethics; moral psychology; biomedical and environmental ethics

Laura E. Hengehold, Ph.D.
(Loyola University)
Associate Professor
Political and social philosophy; philosophy of feminism; Foucault; contemporary continental philosophy

Chin-Tai Kim, Ph.D.
(University of Michigan)
Professor
History of philosophy (17th, 18th, and 19th centuries); theory of knowledge; metaphysics; ethics; phenomenology

Adjunct Faculty
Joel Levin, D. Phil.
(University of Oxford, U.K.)
Adjunct Associate Professor; Adjunct Professor,
Case Western Reserve University School of Law
Philosophy of law; political philosophy; ethical theory

Rosalind Simson, Ph.D.
(Yale University)

Adjunct Associate Professor; Associate Professor,
Case Western Reserve University School of Law
Theory of knowledge; feminist philosophy; issues at the interface of law and philosophy

Secondary Faculty
Anthony Jack, Ph.D.
(University College London)
Assistant Professor of Cognitive Science
Cross-cultural study of theory of mind and moral reasoning

Deepak Sarma, Ph.D.
(University of Chicago)
Associate Professor of Religious Studies
Hinduism; Indian philosophy; philosophy of religion; method and theory

Lecturer
Jerry S. Piven
(Syracuse University)
Comparative myth and religion; psychoanalytic theory; psychology and philosophy of religion; psychohistory

Visiting Faculty
Stephenson, Jeffrey E.
(City University of New York)
Visiting Assistant Professor
Ethical theory; social and political philosophy; professional ethics

UNDERGRADUATE PROGRAMS

Major
The major consists of 30 hours (ten 3-credit courses) in philosophy, including PHIL 101, 201, 301, 302, and six other elective philosophy courses to be determined in consultation with the department’s undergraduate advisor. However, a student may request permission to take up to 6 hours (two 3-credit courses) of the required 18 hours of philosophy electives in another field or other fields. Such a request should be supported by considerations showing how the substitution(s) would strengthen the student’s major in philosophy. The advisor must approve the substitution(s) in advance.

Departmental Honors
The department offers an honors program for students pursuing a major in philosophy. Students in this program must complete a substantial thesis, pass an oral examination on the thesis, and maintain a B average in philosophy courses. To be eligible for admission, a student should have an overall grade point average of B or better, and a grade of B or better in each philosophy course already taken.
A student normally should have taken at least four, and at most seven, philosophy courses at the time of application for admission. An honors student should register for PHIL 399, Directed Study (3), to do honors work. Interested students should apply for admission to the program during the first semester of junior year.

Minor

The department offers a range of possible minor programs, each of which must include PHIL 101 and four other courses in philosophy at the 200 or 300 level (excluding PHIL 390 and 399), chosen to meet the specific needs of students majoring in other fields. The undergraduate advisor will assist students in devising minor programs.

COURSE DESCRIPTIONS

PHIL 101. Introduction to Philosophy (3)
Basic problems of philosophy and methods of philosophical thinking. Problems raised by science, morality, religion, politics, and art. Readings from classical and contemporary philosophers. Normally given in multiple sections with different instructors and possibly with different texts. All sections share core materials in theory of knowledge, metaphysics, and ethics despite differences that may exist in emphasis.

PHIL 102. Ethics, An Interdisciplinary Introduction (3)
This course will introduce methods and literature of several disciplines, including philosophy, that bear on contemporary ethical issues. The goal is to prepare students for a lifetime of ethical reflection, discussion, and problem-solving, as well as to more advanced study in the disciplines introduced by enhancing their understanding of ethical concepts and moral reasoning. Topics include lying, moral responsibility, and power, specifically rights and responsibilities of citizens, students, teachers, engineers, health care providers, and accountants.

PHIL 201. Introduction to Logic (3)
Presentation, application, and evaluation of formal methods for determining the validity of arguments. Discussion of the relationship between logic and other disciplines.

PHIL 203. Natural Philosophy I (3)
Historical and philosophical interpretation of some epochal events in development of science. Copernican revolution, Newtonian mechanics, Einstein’s relativity physics, quantum mechanics, and evolutionary theory; patterns of scientific growth; structure of scientific “revolutions” in science and “pseudo-science.” First half of a year-long sequence. Offered as HSTY 203 and PHIL 203.

PHIL 204. Natural Philosophy II (3)
Conceptual, methodological, and epistemological issues about science: concept formation, explanation, prediction, confirmation, theory construction and status of unobservables; metaphysical presuppositions and implications of science; semantics of scientific language; illustrations from special sciences. Second half of a year-long sequence. Offered as HSTY 207 and PHIL 204.

PHIL 205. Contemporary Moral Problems (3)
Examination of selected contemporary moral problems and contemporary faces of perennial moral problems such as: when, if ever, lying is justified; the value of honesty and of confidentiality; under what circumstances, if any, various types of killing (suicide, execution, in war, euthanasia, killing of lower animals or ecosystems) are justified. Additional moral problems raised by new knowledge (such as genetic information) or new technology (such as rights to digital information, or the ability to), and responsible uses of these and other sources of power. Clarification of the concepts of value, ethical evaluation and justification, ethical argument, moral relevance, and the notion of a moral problem itself. Readings will draw on classical and contemporary sources in philosophy.

PHIL 221. Indian Philosophy (3)
A survey of Indian philosophical thought with emphasis on the Vedas, early Hindu, and Jain literature. Offered as PHIL 221 and RLGN 221. Global & Cultural Diversity

PHIL 225. Evolution (3)
Multidisciplinary study of the course and processes of organic evolution provides a broad understanding of the evolution of structural and functional diversity, the relationships among organisms and their environments, and the phylogenetic relationships among major groups of organisms. Topics include the genetic basis of micro- and macro-evolutionary change, the concept of adaptation, natural selection, population dynamics, theories of species formation, principles of phylogenetic inference, biogeography, evolutionary rates, evolutionary convergence, homology, Darwinian medicine, and conceptual and philosophical issues in evolutionary theory. Offered as ANTH 225, BIOL 225, GEOL 225, HSTY 225, and PHIL 225.

PHIL 270. Introduction to Gender Studies (3)
This course introduces women and men students to the methods and concepts of gender studies, women’s studies, and feministic theory. An interdisciplinary course, it covers approaches used in literary criticism, history, philosophy, political science, sociology, anthropology, psychology, film studies, cultural studies, art history, and religion. It is the required introductory course for students taking the women’s studies major. Recommended preparation: ENGL 150 or USFS 100. Offered as ENGL 270, HSTY 270, PHIL 270, RLGN 270, and WGST 201. Global & Cultural Diversity

PHIL 271. Bioethics: Dilemmas (3)
We have the genetic technology to change nature and human nature, but should we? We have the medical technology to extend almost any human life, but is this always good? Should we clone humans? Should we allow doctor-assisted suicide for the terminally ill? This course invites students from all academic disciplines and fields to examine current and future issues in bioethics—e.g., theory and methods in bioethics; death and dying; organ transplantation; genetics; aging, and dementia; fertility and reproduction; distributive justice in health care access. The course will include guest lecturers from nationally-known Bioethics faculty. Offered as BETH 271, PHIL 271.

PHIL 301. Ancient Philosophy (3)
Western philosophy from the early Greeks to the Skeptics. Emphasis on the pre-Socratics, Plato and Aristotle. Recommended preparation: PHIL 101 and consent of department. Offered as CLSC 301 and PHIL 301.

PHIL 302. Modern Philosophy (3)

PHIL 303. Topics in Philosophy of Science (3)
In-depth study of selected topics in general philosophy of science or philosophy of physical, biological, or social science. Topics may include: theories of explanation, prediction, and confirmation; semantics of scientific language; reductionism; space, time and relativity; philosophical issues about quantum mechanics; philosophical issues about life sciences (e.g., evolution, teleology, and functional explanation); explanation and understanding in social sciences; value in social science. Recommended preparation: PHIL 101 or PHIL 201 or PHIL 203. Offered as PHIL 303 and PHIL 304.

PHIL 304. Science and Engineering Ethics (3)
This course prepares students to recognize ethical problems that commonly arise in the scientific and engineering workplace, to understand ethical concepts, to evaluate ethical arguments, and to critically examine responses to problems and their ethical ramifications. It addresses questions such as: What are the criteria of fairness in crediting contributions to research? How safe is safe enough? What are professional responsibilities, and how do they change over time? What is research misconduct? When is ignorance culpable? What is intellectual property and what protections does it deserve? When is biological testing of workers justified? What are responsible ways of raising concerns, and what supports do good organizations give for raising them? What treatment counts as harassment or as an expression of prejudice? What are good means for controlling it? What are scientists’ and engineers’ responsibilities for environmental protection? What is a "conflict
of interest" and how is it controlled? What protections for human research subjects are warranted? What, if any, use of animals in research is justified? Recommended preparation: PHIL 101 or PHIL 102 or PHIL 205. Offered as PHIL 304 and PHIL 404.

PHIL 305. Ethics (3)
Analysis of ethical theories and concepts of goodness, right, and obligation. Discussion of nature of justice, problem of justification of moral principles, and relation between facts and values. Recommended preparation: PHIL 101, PHIL 102 or PHIL 205. Offered as PHIL 305 and PHIL 405.

PHIL 306. Mathematical Logic and Model Theory (3)
Propositional calculus and quantification theory; consistency and completeness theorems; godel incompleteness results and their philosophical significance; introduction to basic concepts of model theory; problems of formulation of arguments in philosophy and the sciences. Offered as PHIL 306, MATH 406 and PHIL 406.

PHIL 309. Philosophical Issues in Genetics (3)
A philosophical examination of the history and cultural connections of the science of genetics and its precursors. Genetics is a phenomenon of the twentieth century. Thus, it is new. Yet, its implications and dilemmas are enmeshed in old traditions and stereotypes, and the dynamics of cultural change. To explore the breadth of philosophical repercussions of genetics, this course will draw on science, technology, medicine, and their histories, but will also range wider to include aspects of the social history of racism and class relations, changing attitudes toward sexuality, the intricacies of big business and international cooperation, and other such diverse areas. Recommended preparation: PHIL 101 or PHIL 203 or PHIL 204. Offered as PHIL 309 and PHIL 409.

PHIL 313. Philosophy of Mathematics (3)
Logical paradoxes and their effects on foundations of mathematics. Status of mathematical entities and nature of mathematical truths. Formalist, logicist, and intuitionist positions. Recommended preparation: PHIL 101 or PHIL 201. Offered as PHIL 313 and PHIL 413.

PHIL 314. Animal Cognition and Consciousness (4)
This course examines the notions of intelligence, cognition, reasoning, consciousness, and mental content as they appear in the philosophical views and empirical studies of animals in individual and social contexts. We will review scientific findings that suggest striking likenesses and intriguing differences in the (apparent) thought processes of humans and animals, and ask whether the research techniques that brought us these results are fully adequate to measuring such unobservable entities as conscious experience and thought. Techniques of measurement range from naturalistic observation, to the processing of vocalizations, to memory and problem solving tasks, and the imaging of brain processes through fMRI scans, etc. Students will face the challenges and rewards of practicing these techniques and reworking philosophical theories in the service component of the course. Students will participate in veterinary or shelter work to provide needed animal care while studying animal behavior using cognitive ethological methods. We will compare methods for measuring consciousness and intelligence in animals to those used for human beings, and ask questions about the possibility of machine consciousness and the emergent property of group consciousness. Offered as BIOL 314, COGS 314, PHIL 314 and PHIL 414.

PHIL 315. Selected Topics in Philosophy (3)
Examination of views of a major philosopher or philosophical school, a significant philosophical topic, or a topic that relates to philosophy and other discipline. Recommended preparation: PHIL 101. Offered as PHIL 315 and PHIL 415.

PHIL 316. African Political Thought (3)
Introduction to select themes in the work of contemporary African philosophers, with special emphasis on political thought. In this course, students will learn something about factors affecting the creation and flow of knowledge and ideas about Africa and discuss the relative importance of the “nation-state” as an idea in Europe, pre-colonial Africa, and postcolonial Africa. Offered as PHIL 316/416 and ETHS 316/416. Prereq: PHIL 101.

PHIL 320. The Phenomenological Tradition (3)
The background of phenomenology: Descartes, Kant, and Brentano. The epistemological rationale of Husserl’s phenomenology and its ontological implications; the powers and limits of the phenomenological method. Heidegger’s transformation of phenomenology to interpretive ontology of human existence. The development of interpretation theory as the foundation of all human existence. The development of interpretation theory as the foundation of all human sciences in Gadamer and Ricoeur. Recommended preparation: PHIL 101. Offered as PHIL 320 and PHIL 420.

PHIL 325. Philosophy of Feminism (3)
Dimensions of gender difference. Definition of feminism. Critical examination of feminist critiques of culture, including especially politics, ideology, epistemology, ethics, and psychology. Readings from traditional and contemporary sources. Offered as PHIL 325 and PHIL 425 and WGST 325. Prereq: PHIL 101.

PHIL 330. Topics in Ethics (3)
Examination of views in ethics of a major philosopher or philosophical school, a significant philosophical topic in ethics, or a topic that relates ethics to philosophy and another discipline. Recommended preparation: PHIL 101, PHIL 102, or PHIL 205. Offered as PHIL 330 and PHIL 430.

PHIL 332. Classical Jewish Religious Thought (3)
The thought of some major biblical and Rabbinic writings and of the classic age of medieval Jewish philosophy. Offered as JDST 330, PHIL 352, and RLGN 330.

PHIL 333. Philosophy of Religion (3)
Topics include: classical and contemporary arguments for God’s existence; divine foreknowledge and human freedom; the problem of evil and theodicy; nature and significance of religious experience; mysticism; varieties of religious metaphysics; knowledge, belief and faith; nature of religious discourse. Readings from traditional and contemporary sources. Recommended preparation for PHIL 433 and RLGN 433: PHIL 101 or RLGN 102. Offered as PHIL 333, RLGN 333, PHIL 433, and RLGN 433.

PHIL 334. Political and Social Philosophy (3)
Justification of social institutions, primarily political ones. Such distinctions as that between de jure and legitimate authority; analysis of criteria for evaluation, such as social justice and equality; inquiry into theories of justification of the state; theory of democratic government and its alternatives. Readings from classical and contemporary sources. Recommended preparation: PHIL 101. Offered as PHIL 334, POSC 354, PHIL 434, and POSC 454.

PHIL 335. Philosophy of Law (3)
This is an examination of the general nature of law, the broad concerns of jurisprudence, the study of comparative law, and many of the issues raised in the literature of legal philosophy. Students will examine the principles of legal positivism, mitigated natural law, and rights theory. Selected readings and cases will illustrate these theories, which will also be examined in the context of rule selection by new governments in developing or revolutionary societies. The course also looks at the general nature of legal systems: how politics, morality, and individual views of justice and rights affect particular court cases and the course and development of law generally. Topics will include abortion, obscenity and sin, civil disobedience, affirmative action, surrogatehood, and the death penalty. This is unlike any other of the legal theory or jurisprudence courses, and those who have sampled legal theory elsewhere in a different form are welcome and encouraged to enroll. Recommended preparation: PHIL 101. Offered as LAWS 353, PHIL 335, and PHIL 435.

PHIL 345. Epistemology and Metaphysics (3)
Traditional problems of epistemology, such as definition of knowledge, justification of belief, nature of evidence and foundationalism, skepticism, the a

Offered as PHIL 345 and PHIL 445.

PHIL 355. 19th and Early 20th Century Philosophy (3)

History of philosophy after Kant up to and including logical empiricism. Interpretation and comparison of important philosophers and philosophical schools of the period in terms of common methods, problems, themes, doctrines, and ideologies. Emphasis on Schopenhauer, Hegel, Kierkegaard, Marx, and Nietzsche. Recommended preparation: PHIL 101.

Offered as PHIL 355 and PHIL 455.

PHIL 363. Philosophy and Social Neuroscience (3)

A philosophical examination of recent research in human cognition and emotion at the intersection of the social sciences and neurological sciences. The course provides the student with background knowledge of brain processes underlying such social and cultural phenomena as bonding, aggression, imitation, mind-attribute, language, sexual behavior, moral action, and creativity. The approach of this course is at once scientific (comparing methods, findings and questions as they arise in clinical and experimental neuropsychology, brain imaging, neurolinguistics, and behavioral neuroscience) and humanistic, asking critical questions about the nature and methods of a science of cognition, and surveying moral responses from a neurologic and philosophic perspective. Recommended preparation: PHIL 101 or COGS 201.

Offered as COGS 363 and PHIL 363.

PHIL 365. Philosophy of Mind (3)

Traditional problems such as the relation of mind and body, knowledge of other minds, free will and determination, and nature of psychological explanation. Analysis of chief theories of mind. Analysis of mental concepts such as intention, action, decision, emotion, and will. Recommended preparation: PHIL 101.

Offered as PHIL 365 and PHIL 465.

PHIL 367. Topics in Evolutionary Biology (3)

The focus for this course on a special topic of interest in evolutionary biology will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution. Students will participate in discussions and lead class seminars on evolutionary topics and in collaboration with an advisor or advisors, select a topic for a research paper or project. Each student will write a major research report or complete a major project and will make a public presentation of her/his findings.

Offered as ANTH 368, BIOL 369, PHIL 368. SAGES Senior Cap

PHIL 373. Intelligence and Cognition (3)

This course will focus on the notion and meaning of intelligence. What is intelligence? How is it measured, and are these measures adequate to the task? Is there more than one kind of intelligence? What is the relationship between individuals, genetic factors, biological factors, and socio-cultural-economic factors in the development of intelligence? How are language and thought related to intelligence? What is the difference between intelligence and talent? Intelligence seems to be necessary for culture, art, religious belief, the creation of theories and the quest for knowledge, truth and morality; thus intelligence is a necessary condition for the study of itself. To attempt to understand intelligence is an undertaking in which we will ask questions about the self and the common nature of humanity, while simultaneously examining the abilities of animals and machines. What is the mark of intelligence? Recommended preparation: PHIL 101 or COGS 201.

Offered as COGS 373 and PHIL 373.

PHIL 381. Philosophy and Cognitive Neuroscience (3)

This course will focus on the various methodologies used in the cognitive neuroscience, and explore their strengths and weaknesses from scientific and philosophical standpoints. We will begin by examining baseline measures (including IQ tests, tasks of cognitive flexibility, verbal and visual memory, causal/sequential thinking and narrative tasks) and their experimental design. Lesion methods will follow, with an eye toward understanding the strength of inferences that can be drawn from such data. The course will also focus on imaging techniques (CAT, PET, SPECT, fMRI, TMS, etc.) as well as measures of electrical activity such as EGG and single-cell recordings. Students will become familiar with many fundamental assumptions necessary for the implementation of each method, and philosophical questions associated with these endeavors and their potential impact on our knowledge and society. Recommended preparation: PHIL 101 or COGS 201.

Offered as COGS 381 and PHIL 381.

PHIL 383L. Vocalization and Cognition Lab (1)
