Notes:								
1.	To enable you to take full advantage of Case's Gigabit Ethernet network, your computer must have built-in Gigabit Ethernet (10/100/1000) capability.							
2.	Since processor speeds increase frequently, these specifications will change periodically to reflect the most current "top of the line" processor available.							
3.	The University supports 802.11B/G in all locations. In some locations, the University also supports 802.11A. The University does NOT recommend wireless as your primary method of connection if you reside on campus.							
4.	The University makes Microsoft Office Professional, Symantec Antivirus, and Adobe Acrobat Professional available to students through the Software Center on the Case network at no charge. However, you will not be able to download the software until you have been accepted as a student and registered for classes. If you purchase and use your computer before you come to campus, you should also obtain an anti-virus program to keep your system free of damaging and persistent viruses which may impact your ability to connect to our network.							
5.	Modems are not needed on campus, but may be needed when your system is off-campus and you do not have DSL or cable modems.							
6.	When you are accepted at Case, you will be able to purchase specially configured computer systems from Dell at a significant discount. At no additional cost, recommended Dell systems purchased through the Case e-store come loaded with many premium software programs including Microsoft Office Professional, Adobe Acrobat Professional, and Symantec Antivirus. Systems from Apple are also available through our e-store. You can find our e-store at www.case.edu/its/estore .
