

Thunderbird

Thunderbird is a free application for reading email that is available from the Mozilla Project at <http://www.mozilla.org/en-US/thunderbird/>.

To use your CWRU Google Apps email with Thunderbird, use the directions linked below.

First, set up your Google account to allow your email to be viewed in an email client. We highly suggest using an IMAP server connection for the sake of convenience – it will allow you to read your email online, on a mobile device, and in Thunderbird.

[IMAP Server Settings for Google Mail](#)

[POP Server Settings for Google Mail](#)

Then, set up Thunderbird according to the server (IMAP or POP) that you chose.
