

Windows VPN

Virtual Private Networking (VPN) software is used to remotely connect to the campus network, and yet appear to on-line resources as though you are directly connected. This software also helps secure your computer on the network so that traffic to and from your computer is encrypted.

The provider for VPN software is Cisco AnyConnect. It is available at both the CWRU Software Center (softwarecenter.case.edu) or at the CWRU VPNSetup website at vpnsetup.cwru.edu

Procedure

Use these directions to install the Cisco AnyConnect VPN Client on a Windows machine.

Step	Action
1.	From the VPN installation webpage, click the Windows button.
2.	The file download window appears. Click the Save button.
3.	Select an appropriate location for the installation file to be saved and click Save .
4.	Return to your Desktop and locate the VPN Client installation file. Double click the file.
5.	Click the OK button. The installation file will begin to open.
6.	The Setup Wizard appears. Click the Next > button.
7.	The End-User License Agreement screen appears. Click the I accept the terms in the License Agreement option.
8.	Click the Next > button.
9.	Click the Install button.
10.	When the setup is complete, click the Finish button.
11.	Click the start button or Windows button.
12.	Point to the All Programs button.

Step	Action
13.	Point to the Cisco menu.
14.	Point to the Cisco AnyConnect VPN Client menu.
15.	Click the Cisco AnyConnect VPN Client menu.
16.	The Cisco AnyConnect VPN Client appears. In the Connect to field, enter " vpn.case.edu ".
17.	Click the Select button to be taken to the login screen. Log into the VPN with your Case Network ID and its associated password.
18.	This completes the process of installing the Cisco AnyConnect VPN client onto a Windows machine. End of Procedure.
