

Research Database Services

ITS Advanced Research Computing offers services to assist faculty in creating and operating databases and related applications connected to their research. These services include Oracle database hosting and administration services operated by ITS on centrally supported clustered servers.

Advanced Research Computing also provides database design and programming services for the creation of databases and applications connected with faculty research projects. Typically these services are provided via salary support from funded research grants but these services are also available on a weekly, daily, or hourly basis. Please visit <https://sites.google.com/a/case.edu/advanced-research-computing/Home/research-database-services> for more information.
